COMPLETE GUIDE · SETUP AND EVERY SCREEN

Helpdesk and Support Tickets for Odoo 19

Teams, stages and a kanban board, SLA policies with breach flagging, tickets from email and from the customer portal, closing reasons, ratings and reports, on Odoo Community. Every screen and every step, shown on a live demo. No Odoo background needed.

START

About this guide

A support desk lives or dies on three questions: who has this ticket, how long has the customer been waiting, and did we keep the promise we made. This guide walks the Helpdesk and Support Ticket Management module from the first email to the customer's rating, one screen at a time. You do not need to have used Odoo before.

Who it is for

The support manager setting the desk up, the agents who work the tickets every day, the owner who wants to see whether promises are kept, and anyone being shown the system for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and a short thing to try on the live demo, then walks every field and every button.

The live demo

Cedarlume Home Appliances, an invented appliance retailer in Dubai with four support teams, two private stages, eight SLA policies and four months of tickets, ratings and breaches. Open it and follow along.

HOW IT WORKS

The demo business

Address	**helpdesk-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Business	Cedarlume Home Appliances · Customer Care, Technical Support, Warranty and Returns, Installation Bookings
Runs on	Odoo 19, Community edition, with Discuss, Contacts and the customer portal
History	About 600 tickets since July, with ratings, closing reasons and SLA breaches

Every company, person, email address and phone number on the demo is invented. The demo sends no email. The customer portal pages in this guide were captured as one of the invented portal customers.

What is in the guide

PART 1	How a support desk works	PART 2	Signing in and the menus
PART 3	Teams: people, assignment, email and the portal	PART 4	Stages, email templates and tags
PART 5	The board and the ticket	PART 6	Assigning, closing and reopening
PART 7	SLA policies and breaches	PART 8	The customer portal
PART 9	Reporting and printed tickets	PART 10	A fifteen minute walk-through
PART 11	The menu map		

PART 1 How a support desk works

Five minutes on the ideas, so the screens make sense.

IN THIS PART YOU WILL LEARN

- Tickets, teams and stages
- What a service level agreement actually promises
- Where tickets come from
- Closing, rating and what the manager reads afterwards

One request, one ticket

A **ticket** is one request from one customer: a fridge that is not cooling, a double charge, a delivery date. It gets a reference such as **TKT/2026/00412**, sits in a **team** (the people who can answer it) and moves across the team's **stages** on a board, from New to Solved. Every email, reply and internal note lives on the ticket, so anyone who opens it sees the whole story.

The life of a ticket

1. **Raised** — Email, portal or typed in
2. **Assigned** — To an agent
3. **In progress** — Being worked
4. **Waiting** — On the customer
5. **Closed** — Solved or cancelled
6. **Rated** — By the customer

The promise: SLA policies

A **service level agreement** is a promise about speed: an urgent fault gets an engineer within two hours, a warranty claim is decided within five days. In this module a policy belongs to a team, applies from a minimum priority upwards (and optionally only to tickets with certain tags), and names a **target stage** and a number of **hours**. The clock starts when the ticket is opened and stops when the ticket reaches the target stage. If the deadline passes first, the ticket is **breached**.

WORD	WHAT IT MEANS HERE
Team	A group of agents with its own board, inbox, policies and rules
Stage	A column on the board; a closing stage finishes the ticket
Kanban state	In Progress, Ready (my part is done) or Waiting (held up outside the desk)
Priority	Low, Normal, High or Urgent, shown as stars
SLA policy	Team, minimum priority, tags, target stage and hours
Breached	The deadline passed before the target stage was reached
Rating	Very Poor to Very Good, given by the customer once the ticket is closed

Where tickets come from

Three doors: an **email** to the team's alias (care@, support@), the **customer portal** where a signed-in customer fills a form, or an agent typing a ticket in while on the phone. All three end up as the same kind of ticket on the same board.

> SLA hours are wall-clock hours from the moment the ticket was opened, not working hours. A 24 hour promise made on Thursday evening is due on Friday evening.

PART 2 Signing in and the menus

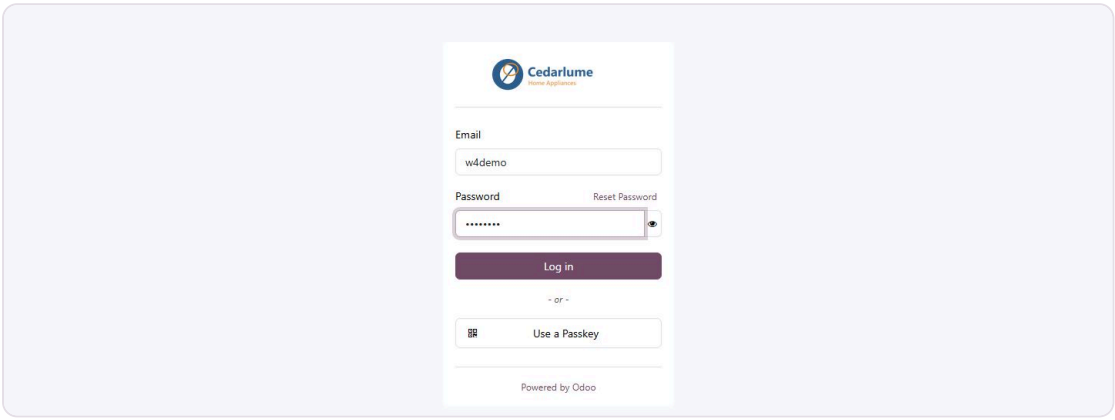

Where everything is, and who is allowed to see what.

IN THIS PART YOU WILL LEARN

- Signing in to the demo
- The Helpdesk menus
- The two roles, and what a portal customer can see

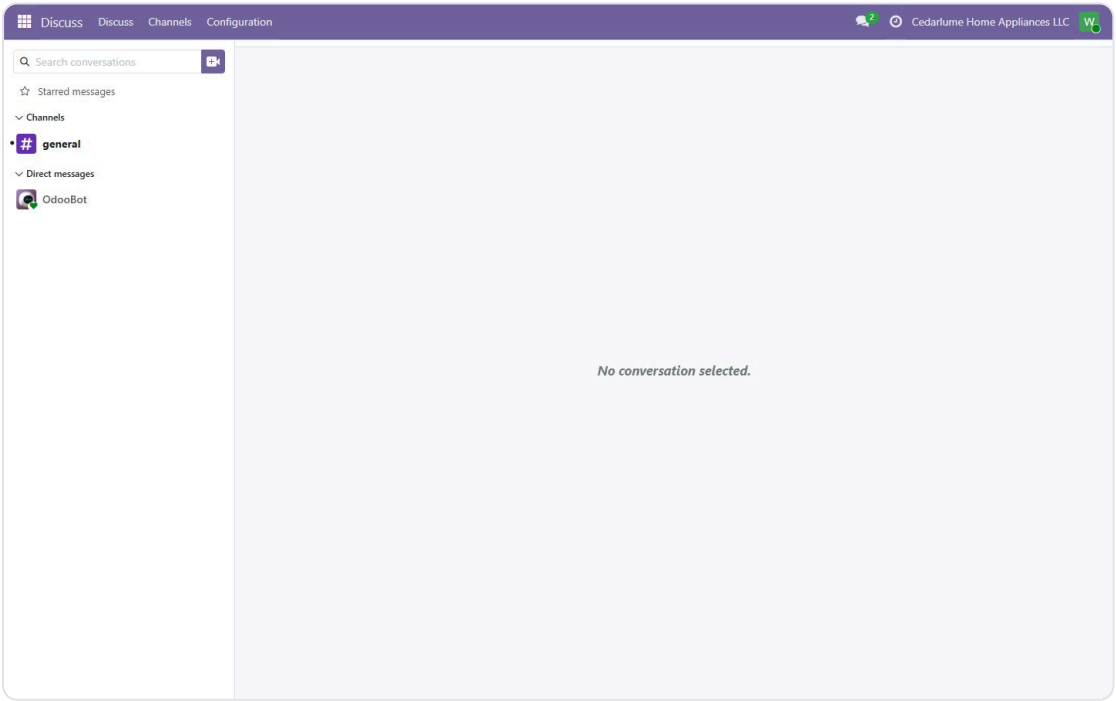

TRY IT YOURSELF ON THE DEMO

1. Sign in as w4demo and open Helpdesk from the home screen.
2. Open each top menu and compare it with the map at the end of the guide.

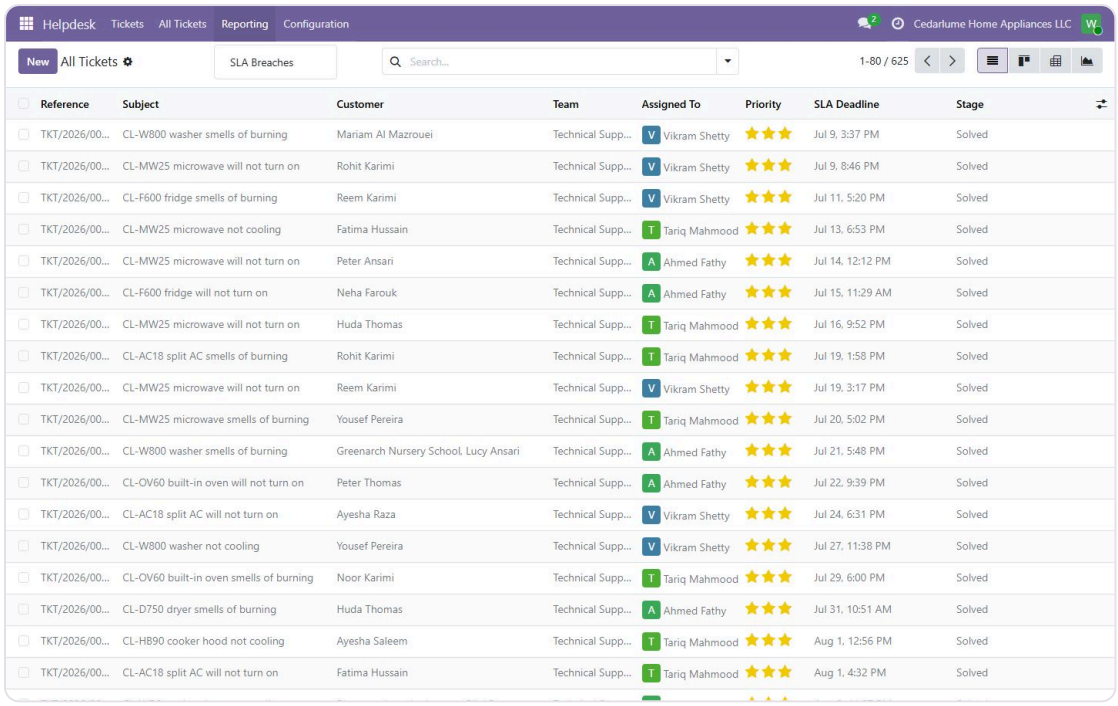

1 Sign in

Open **helpdesk-demo.way4tech.com** and sign in with **w4demo** and **Demo2026**.

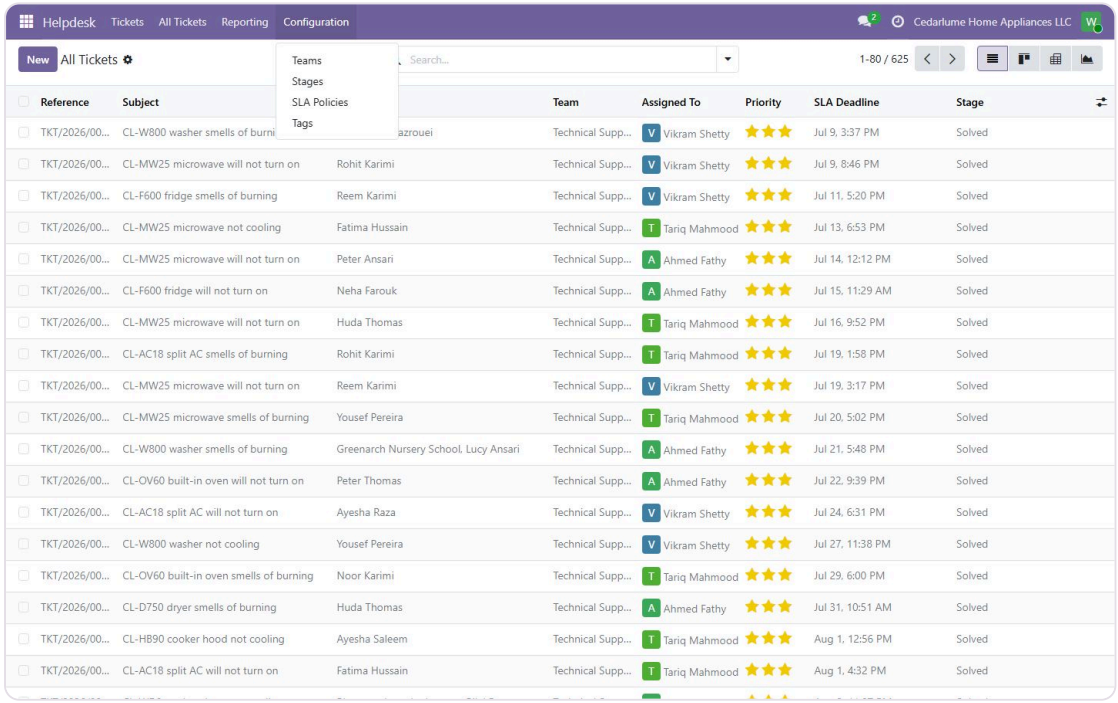

2 Open Helpdesk

The Helpdesk app sits on the home screen next to Discuss and Contacts.

3 Reporting

SLA Breaches: every ticket that missed its deadline. The pivot and graph views on the ticket lists carry the rest of the reporting.

4 Configuration

Teams, Stages, SLA Policies and Tags. Only a helpdesk manager sees this menu.

Two roles and the portal

ROLE	CAN DO
Handle Tickets	Work tickets: create, edit, assign, close, reopen, tag; read the teams, stages and policies
Configure Helpdesk	Everything above, plus create and change teams, stages, SLA policies and tags, and delete tickets

Portal customer	Sees only their own tickets on /my/tickets, replies, rates closed ones and raises new ones

Set the role on the user under Settings, Users, in the **Helpdesk** line. Every ticket, team and policy carries its company, so a multi-company database keeps each company's desk apart.

PART 3 Teams: people, assignment, email and the portal

Everything that decides how a ticket is handled hangs off its team.

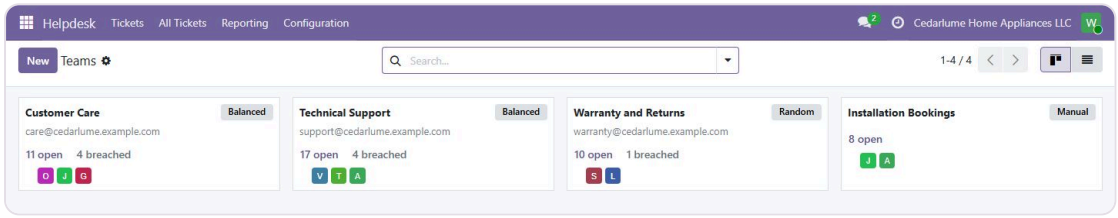

IN THIS PART YOU WILL LEARN

- Members, the leader and the three assignment methods
- The email alias that turns mail into tickets
- Portal submission and the portal description
- Auto close for tickets nobody touches

TRY IT YOURSELF ON THE DEMO

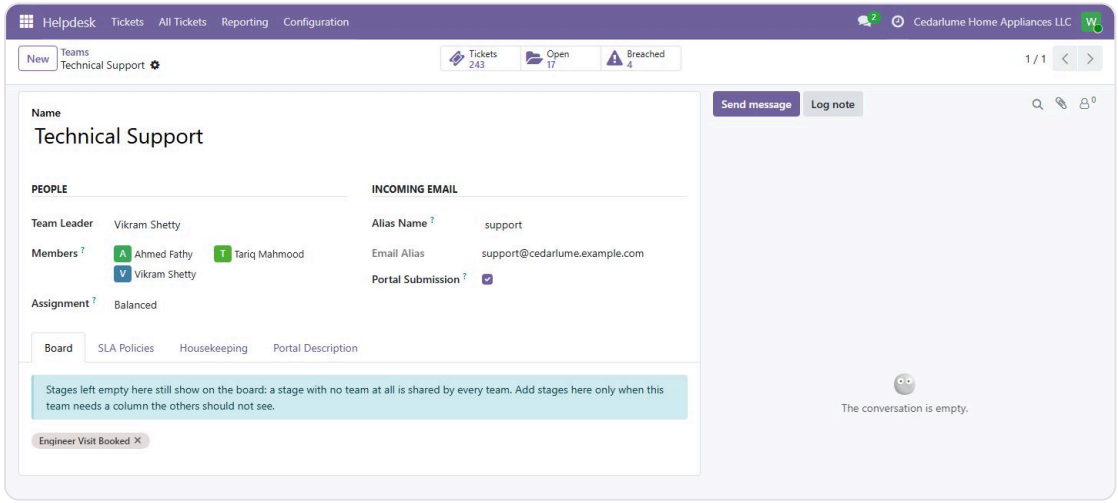

1. Configuration, Teams: compare the four team cards.
2. Open Technical Support and read its Board and SLA Policies tabs.

There is no settings page for the helpdesk. A team holds its members, how tickets are handed out, its inbox, whether customers can raise tickets for it on the portal, its board, its service promises and its housekeeping rule. The module installs one team, Customer Care.

1 Configuration, Teams

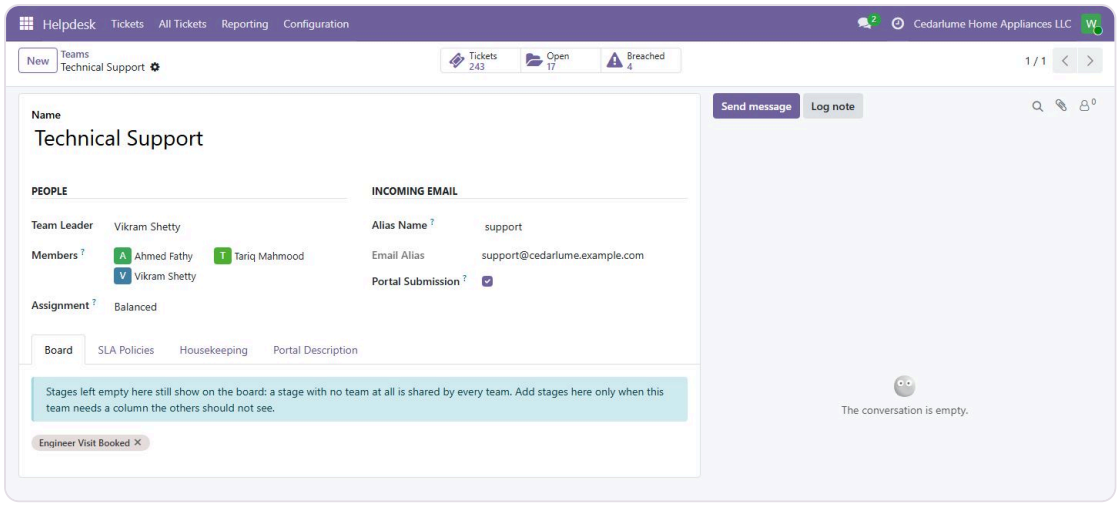

One card per team with its open and breached tickets; click either number to open them. Filters: My Teams, Has an Email Alias, Open to the Portal, Archived.

2 A team

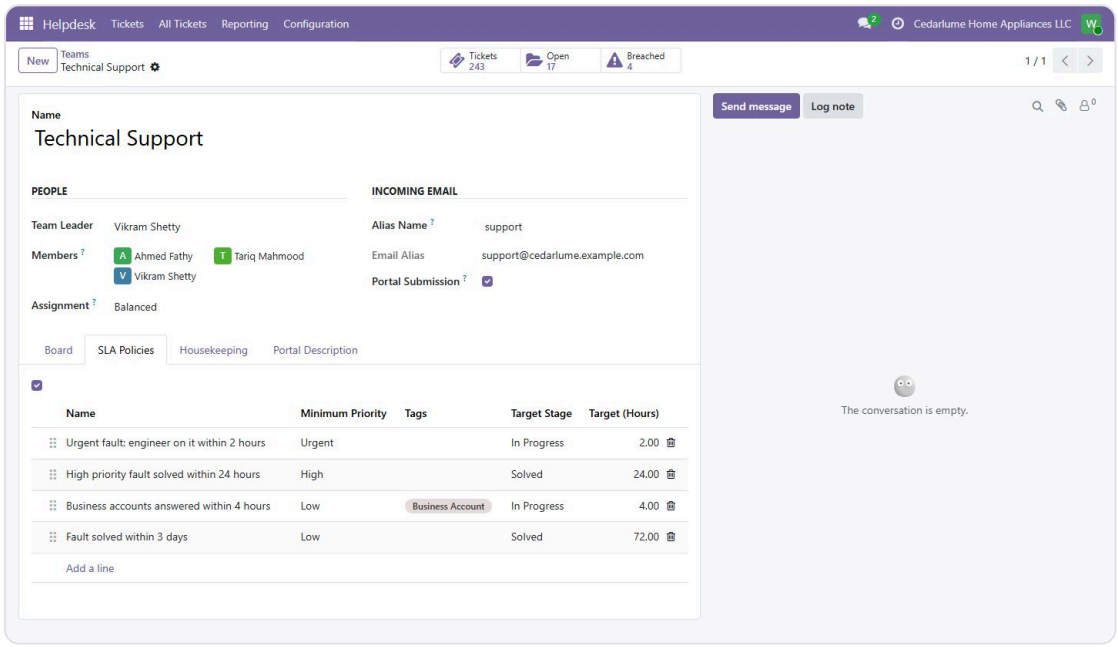

People: the leader (who has to be one of the members) and the members, the agents a ticket can be handed to. **Assignment**: Manual leaves new tickets unassigned, Balanced gives each one to the member with the fewest open tickets, Random picks any member. **Incoming Email**: the alias name and the full address. **Portal Submission** lets signed-in customers raise tickets for this team. Stat buttons give all, open and breached tickets.

Balanced counts open tickets only, so an agent who closed hundreds last month is not treated as busy today.

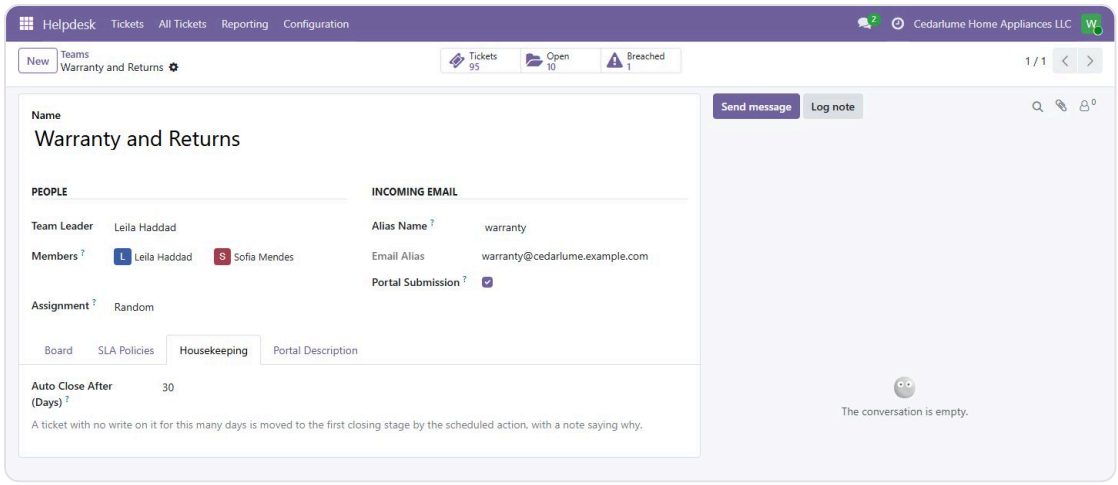

3 Board

Stages reserved for this team. Technical Support has Engineer Visit Booked; shared stages appear on every board as well.

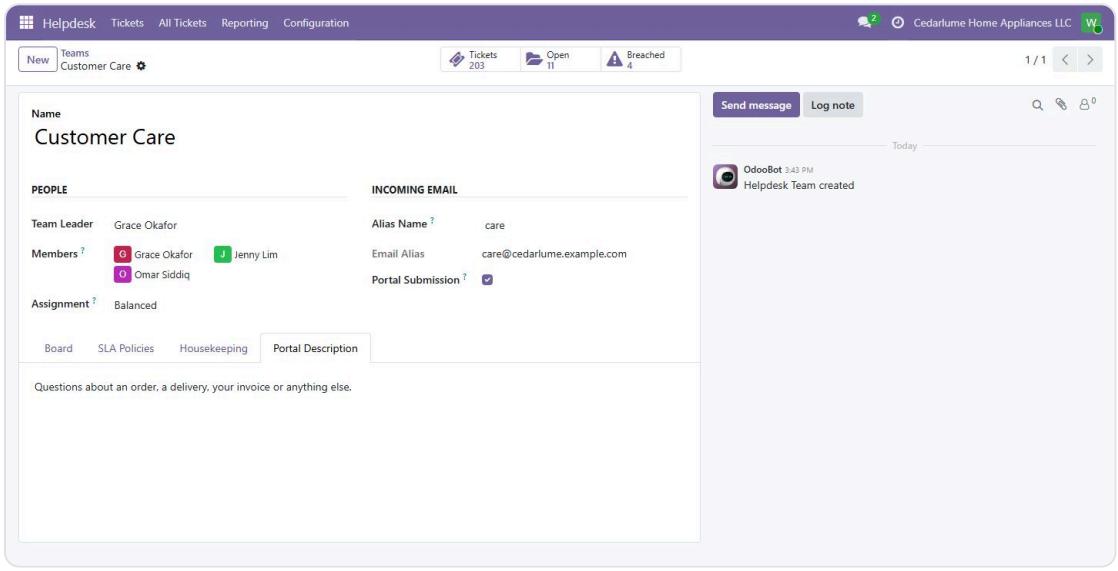

4 SLA Policies

Use SLA Policies switches deadlines on or off for the team; below, its policies in order (Part 7).

Housekeeping

5 **Auto Close After (Days)**: an open ticket with no change for that many days is moved to the team's closing stage by a daily scheduled action, with a note saying why. Zero switches it off. Warranty and Returns uses 30 days.

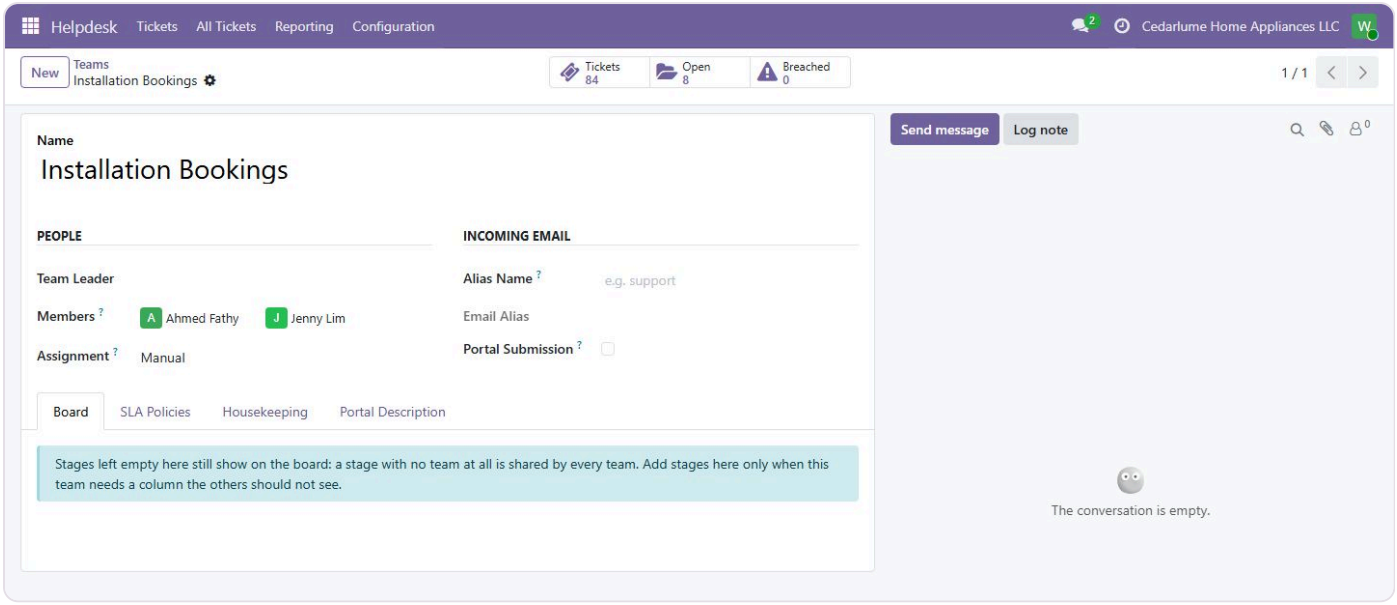

Portal Description

6 The text a customer sees under the team's name on the portal form, to help them pick the right team.

Email in, ticket out

Give a team an alias name, for example **support**, and every email sent to support@ your mail domain raises a ticket in that team. The subject becomes the ticket subject, the sender's address is kept as the contact email (split cleanly from the display name), and a sender who is already a contact is linked as the customer. Replies to the ticket go back to that address. On the demo, three of today's tickets arrived this way.

> The alias needs Odoo's incoming mail set up: a mail domain on the company and either an incoming mail server or a forward to Odoo. Until a domain exists the Email Alias field stays empty rather than showing half an address.

Installation Bookings is not open to the portal, uses manual assignment so the coordinator hands out the jobs, and auto closes after 21 days.

PART 4 Stages, email templates and tags

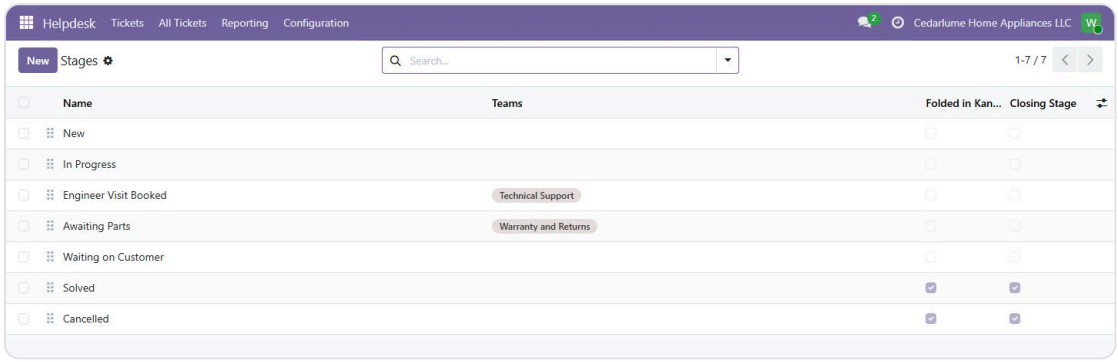

The columns of the board, what happens when a ticket enters one, and the labels the policies match on.

IN THIS PART YOU WILL LEARN

- Shared and private stages, closing and folded stages
- Sending an email when a ticket enters a stage
- Tags, and why they are records

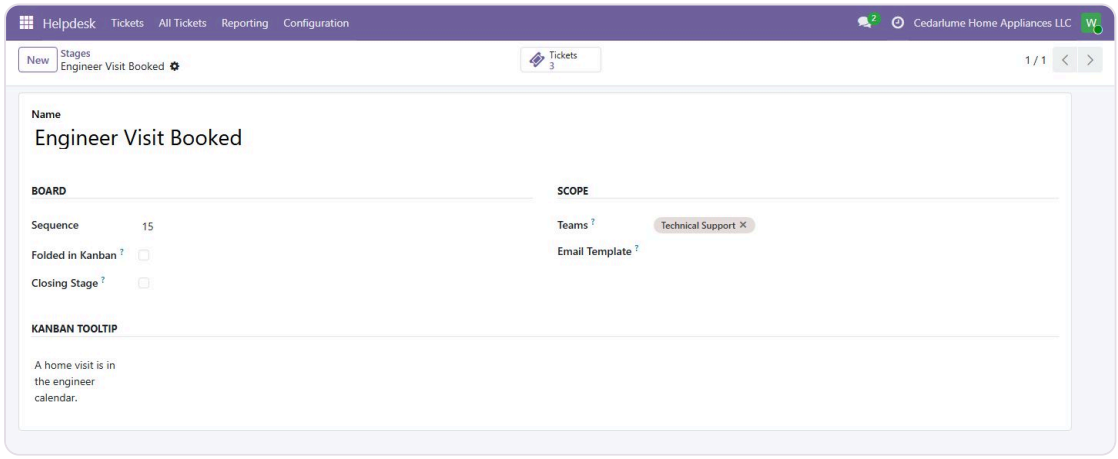

TRY IT YOURSELF ON THE DEMO

1. Configuration, Stages: find the two closing stages.
2. Open Solved and look at its email template.

Configuration, Stages

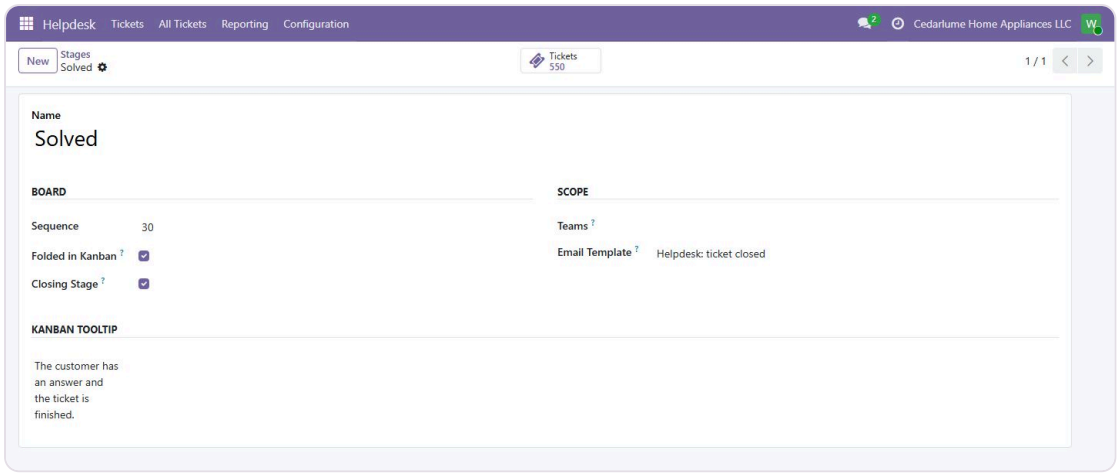

1 In board order. The module installs five shared stages: New, In Progress, Waiting on Customer, Solved and Cancelled; the last two are closing stages and folded on the board. Filters: Open Stages, Closing Stages, Shared by All Teams, Archived.

A private stage

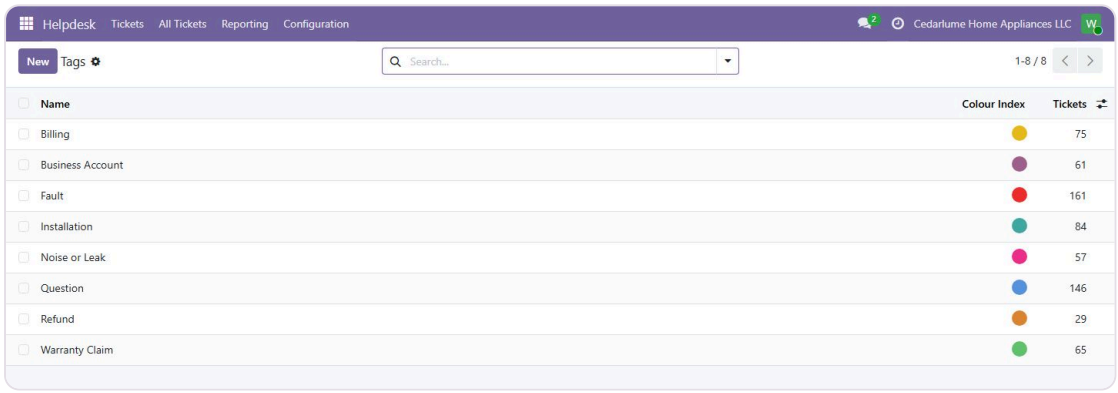

2 **Teams** filled makes the stage private to those teams. **Kanban Tooltip** is shown when an agent hovers the column: say what has to be true before a ticket may enter it.

A stage that still holds tickets cannot be deleted. Archive it instead.

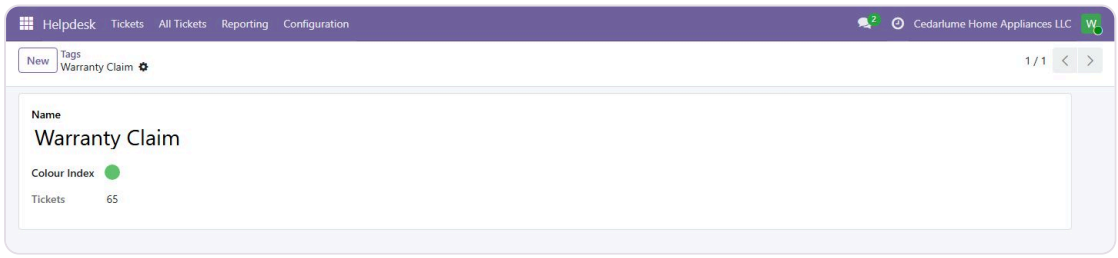

A closing stage with an email

3 **Closing Stage** means a ticket that enters it is closed: the close date and the user are stamped. **Email Template** is sent to the customer when a ticket enters the stage, as long as the ticket has an email address.

Configuration, Tags

4 Free labels with a colour. Two tags cannot share a name, whatever the capitals.

A tag

5 Each tag shows how many tickets carry it. SLA policies can match on tags, which is why a tag is a record rather than free text.

The two email templates

TEMPLATE	SUBJECT	USE IT ON
Helpdesk: ticket received	*reference* - we have your request	An open stage, for example when a ticket is moved to In Progress
Helpdesk: ticket closed	*reference* - closed	Solved

> A template goes out when a ticket **enters** a stage. A new ticket created straight into New does not trigger the template on New, so put the received message on the stage the agent moves the ticket to first.

PART 5 The board and the ticket

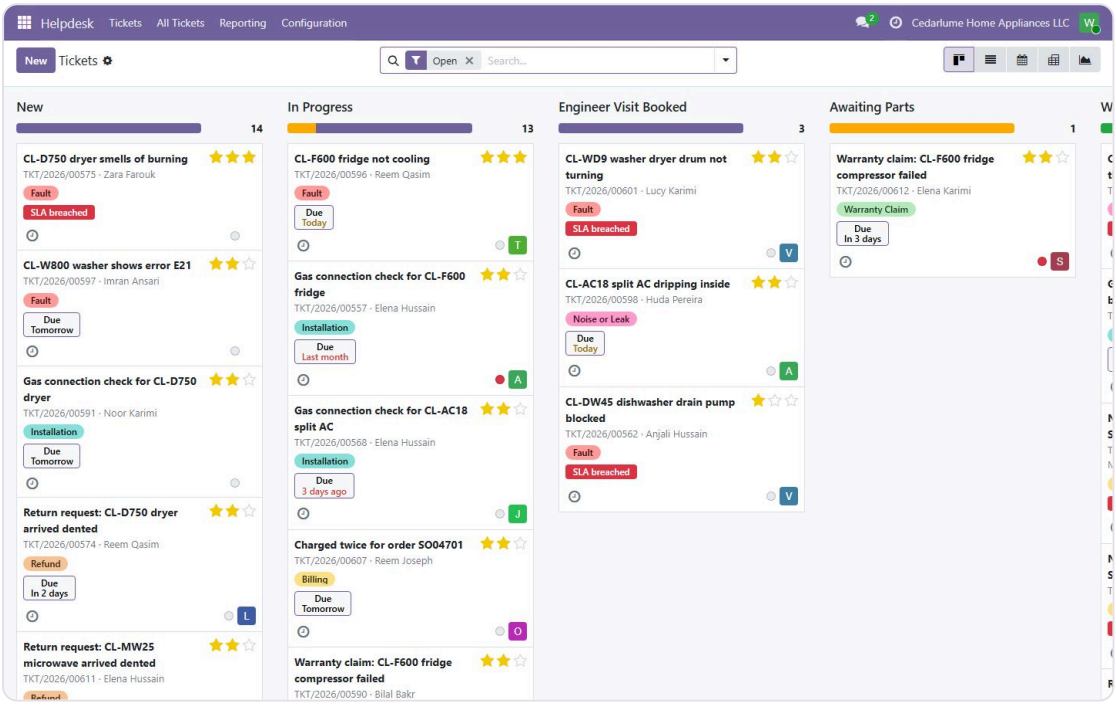

Where agents spend their day: the board of open tickets and the ticket form.

IN THIS PART YOU WILL LEARN

- Reading a card on the board
- Every field on the ticket form
- Filters and groupings that answer the daily questions

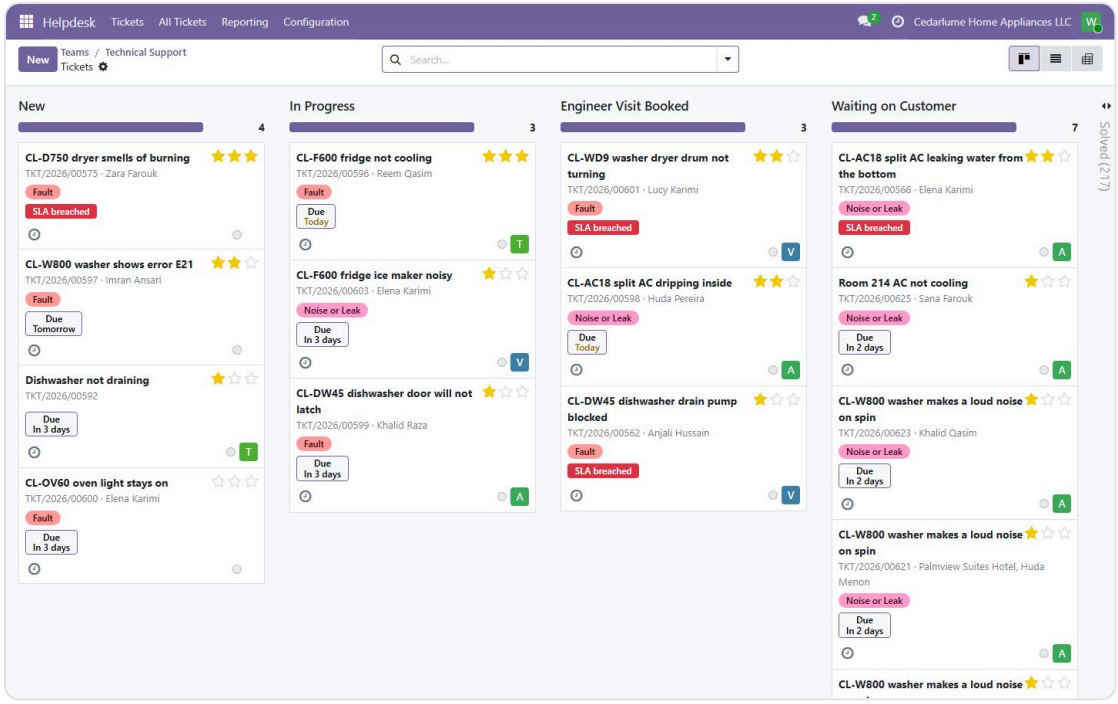

TRY IT YOURSELF ON THE DEMO

1. Helpdesk, Tickets. Filter on Unassigned, then on SLA Breached.
2. Open a ticket in Engineer Visit Booked and read its thread.

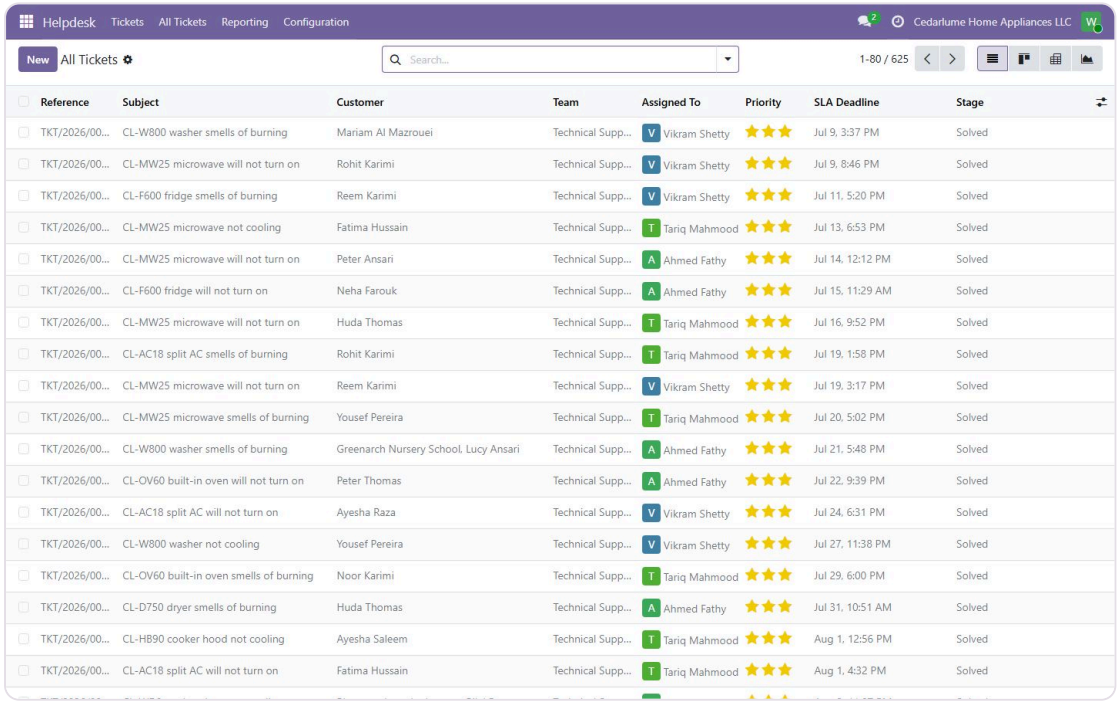

Helpdesk, Tickets

1 Opens on the open tickets, grouped by stage. Each card has the subject, priority stars, the reference and customer, the tags, the SLA deadline, activities and the assignee. The bar over each column splits it by kanban state: in progress, ready, waiting.

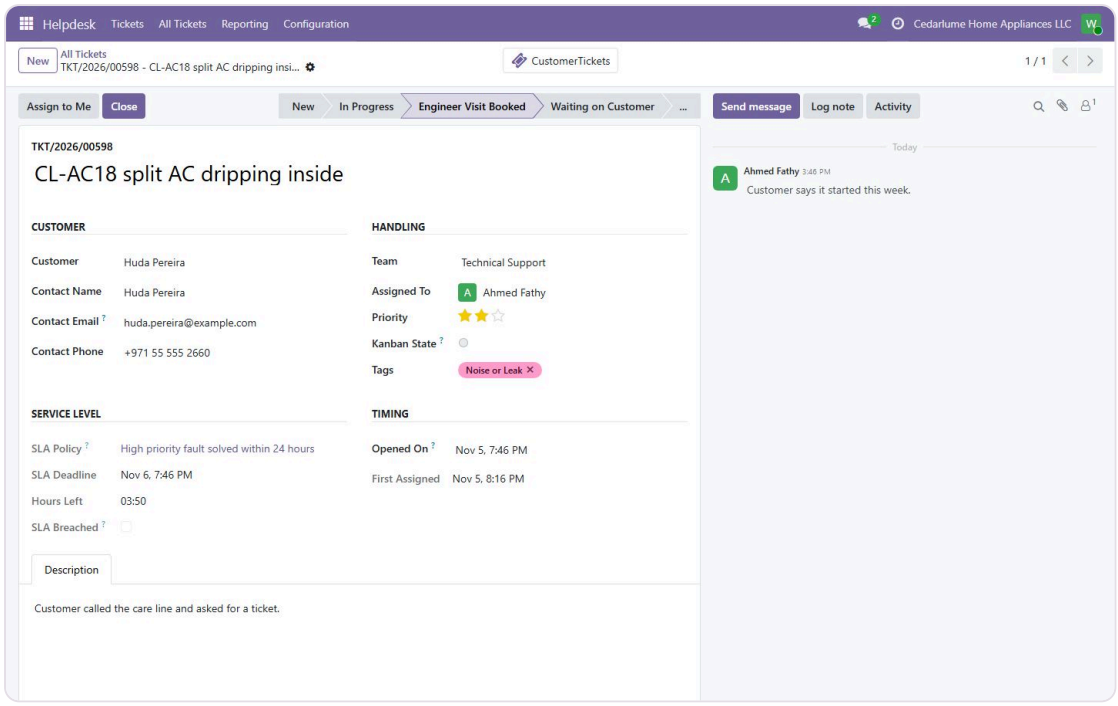

One team's board

2 Opened from a team, the board shows that team's private columns too, here Engineer Visit Booked.

All Tickets

3 Every ticket, open and closed, as a list. Filters: My Tickets, Unassigned, My Teams, Open, Closed, Urgent, Waiting, SLA Breached, Past the Deadline, Rated, Opened This Month, Archived. Group by Stage, Team, Assigned To, Customer, Priority, SLA Policy or Opened On.

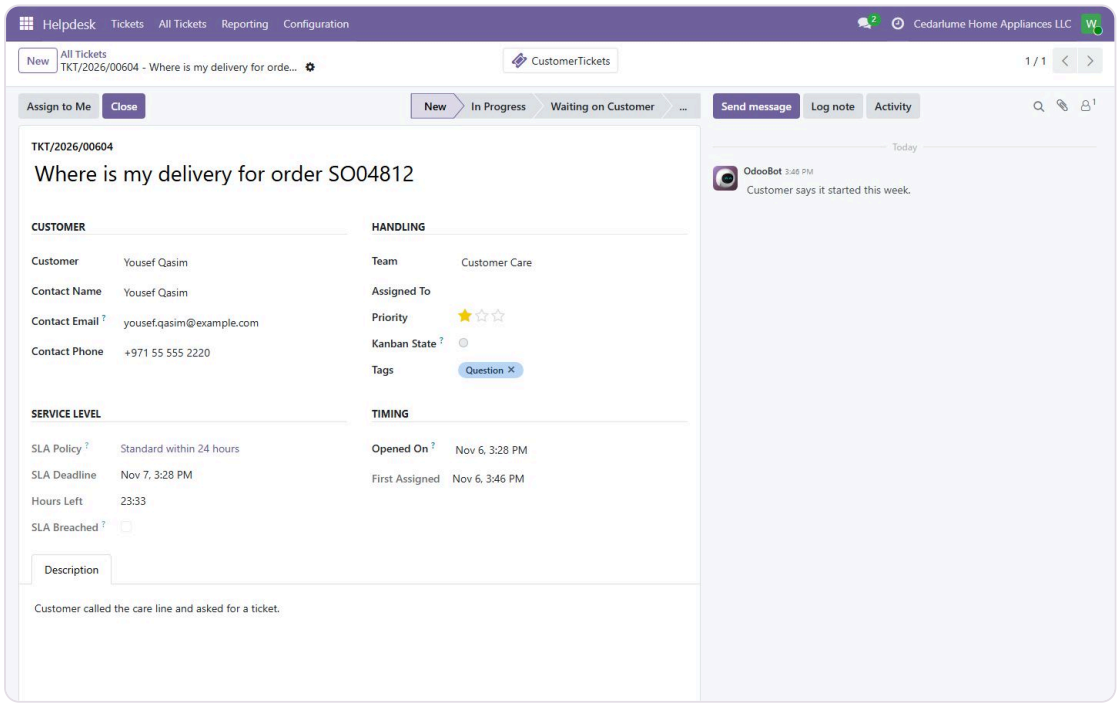

The ticket form

4

Customer: the contact, and the name, email and phone copied from it (kept even if the contact is blank later). **Handling**: team, assigned to, priority, kanban state and tags. **Service Level**: the policy, the deadline, hours left and whether it was breached. **Timing**: opened on, first assigned, closed on, closed by, hours to close. The thread on the right holds every email, reply and note.

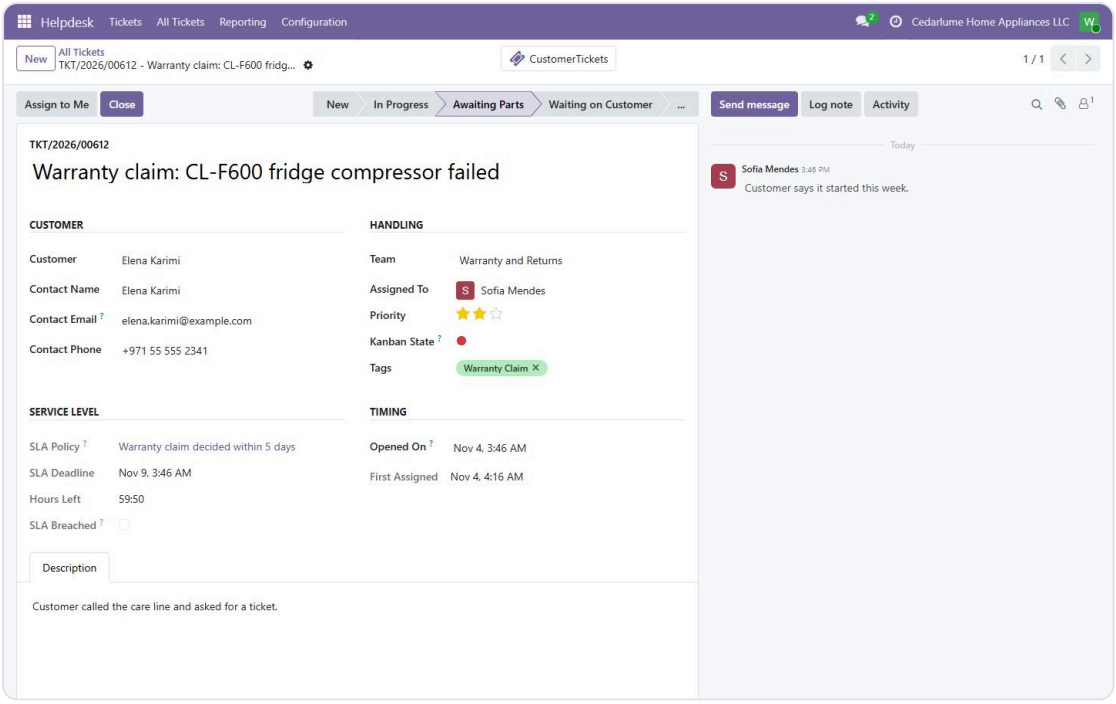

Opened On is editable: back-date a ticket typed in after a phone call and the SLA clock counts from when the customer really called.

New and unassigned

5

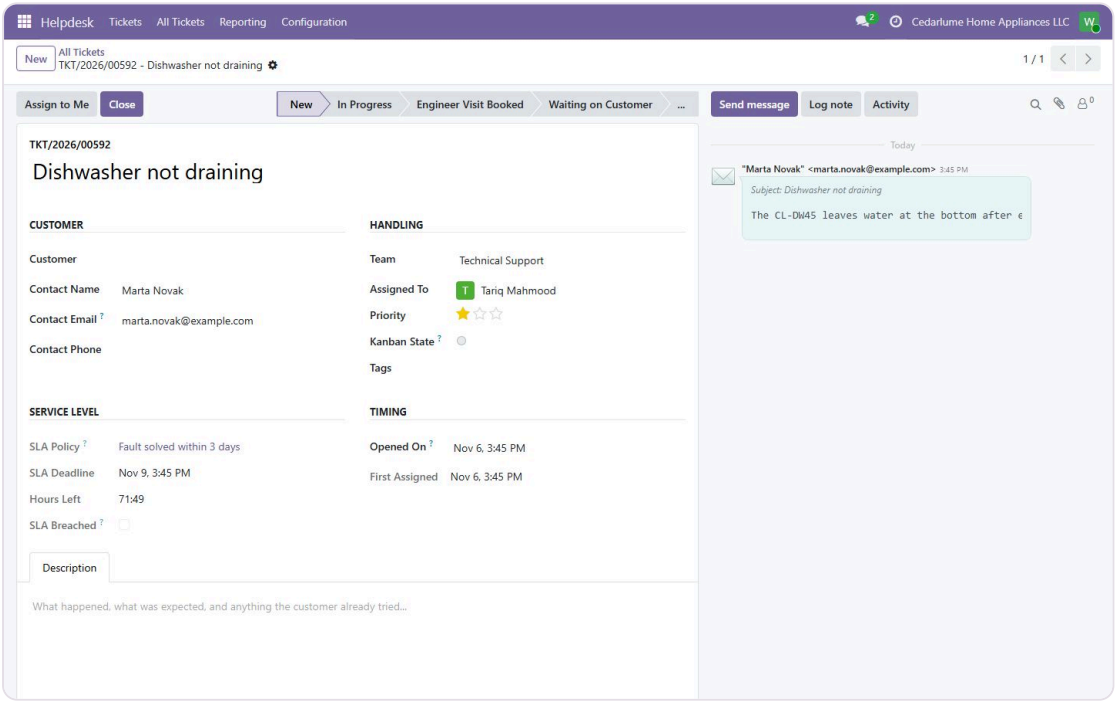

Raised a few minutes ago, nobody on it yet. Assign to Me in the header takes it.

6

Waiting on something outside

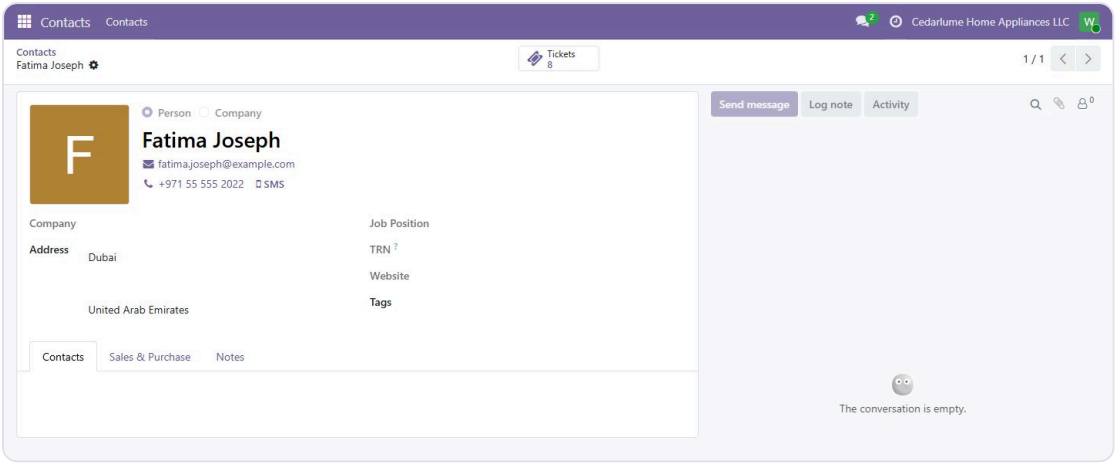

Awaiting Parts, a private stage of Warranty and Returns, with the kanban state set to Waiting.

7

Raised by email

No contact yet: the name and address come from the email, and answers go to that address.

Tickets on the contact

8 Every customer gets a **Tickets** button with all their tickets and how many are open; on a ticket, the Customer Tickets button does the same.

Changing the team on a ticket moves it to a stage the new team actually has, so it never disappears from both boards. Duplicating a closed ticket opens the copy on the first stage, not closed.

PART 6 Assigning, closing and reopening

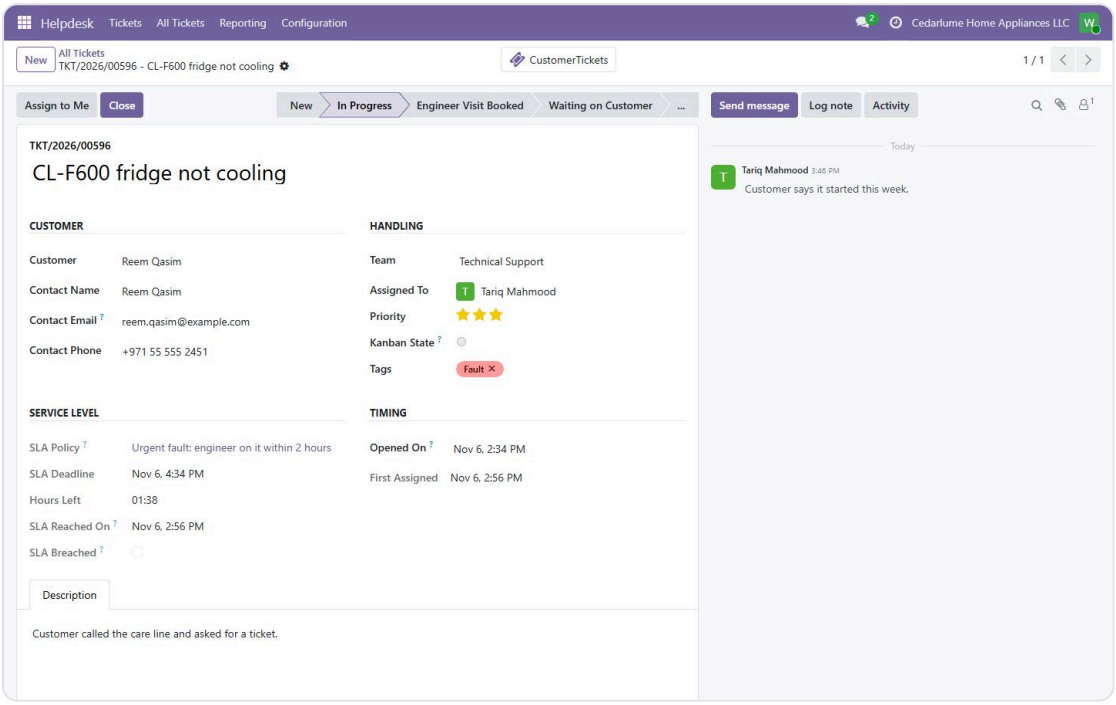

Handing work out, finishing it with a reason, and what happens when the customer writes back.

IN THIS PART YOU WILL LEARN

- Assign to Me and the Assign Tickets wizard
- Closing with a reason, and telling the customer
- Reopening, and replies on closed tickets

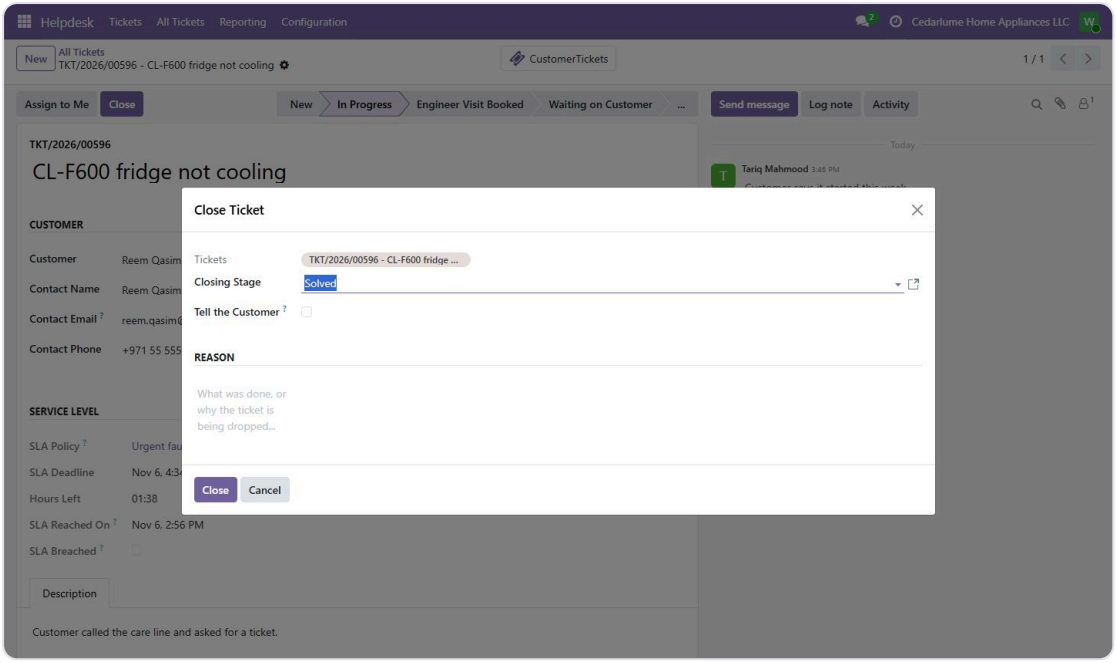

TRY IT YOURSELF ON THE DEMO

1. Open an In Progress ticket and click Close: read the wizard, then Cancel.
2. In the list, tick three tickets and open Actions, Assign Tickets, then Cancel.

1 Assign to Me and Close

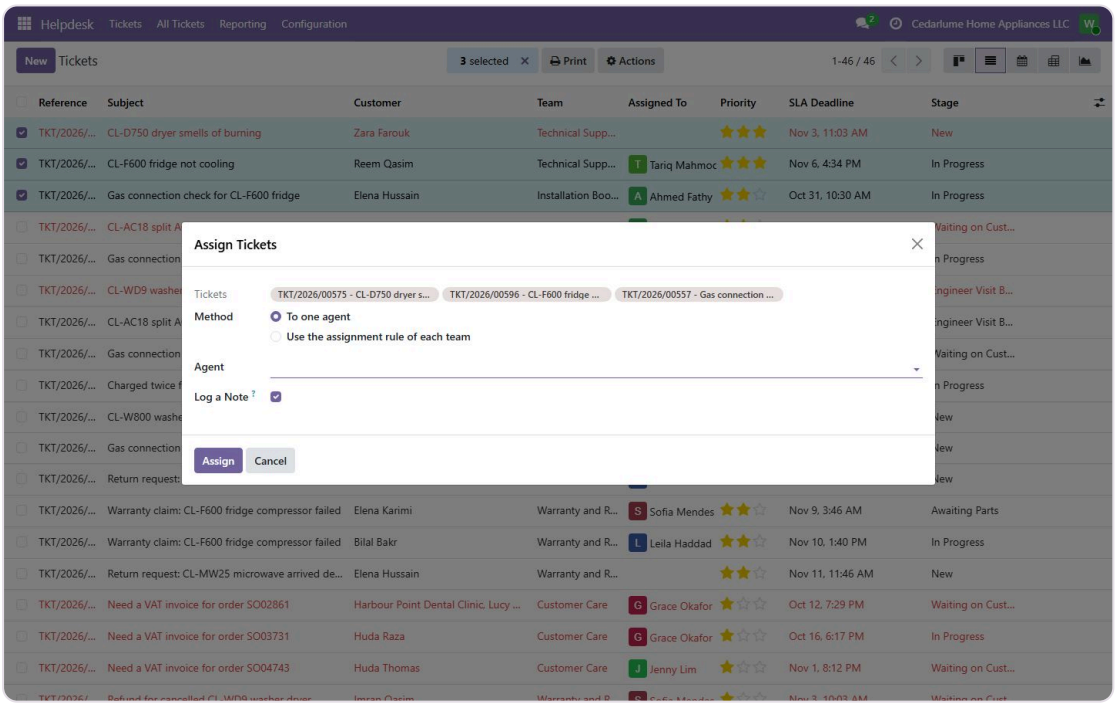

On an open ticket the header has **Assign to Me** and **Close**. The first assignment time is recorded once; reassigning later does not reset it.

The Close wizard

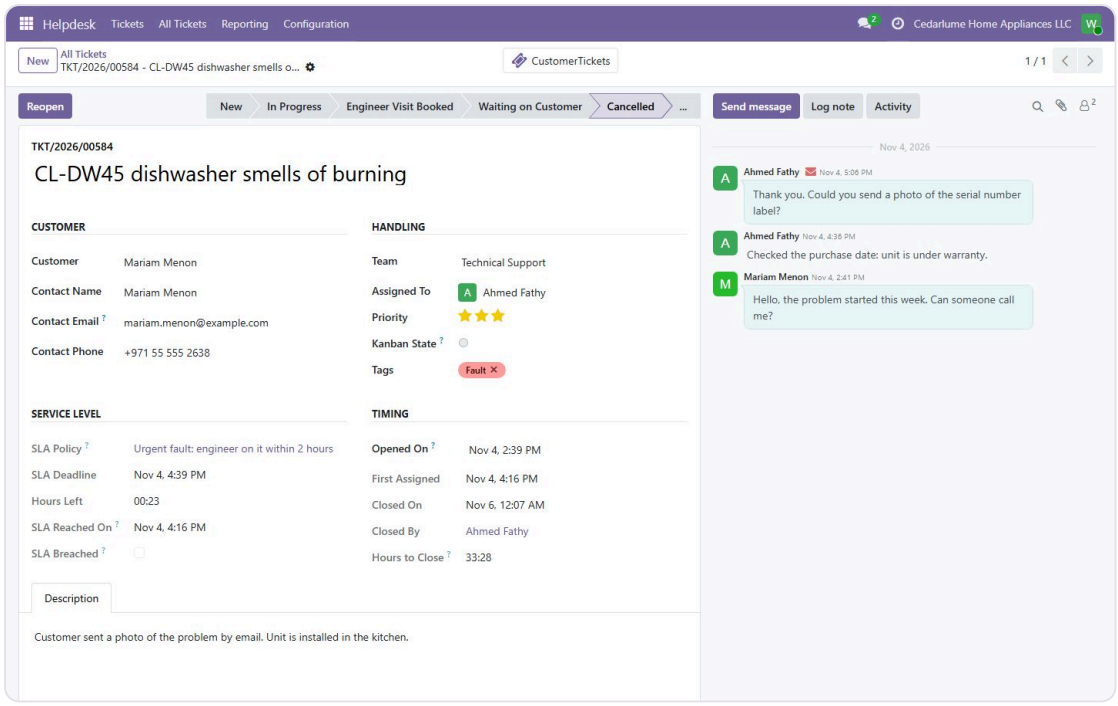

2 Pick the closing stage (Solved or Cancelled) and write the **reason**, which is required. The reason goes on the ticket thread as an internal note, or as a message to the customer when **Tell the Customer** is ticked. From the list, Actions, Close Tickets closes a whole selection with one reason.

The wizard refuses tickets that are already closed and names them.

Assign Tickets

3 From the list: tick the tickets, then Actions, Assign Tickets. Send them **To one agent**, or **Use the assignment rule of each team** so a mixed selection lands on the right desks. **Log a Note** writes who took each ticket to its thread.

Closed

4 Entering a closing stage stamps Closed On and Closed By and works out the hours to close. **Reopen** puts the ticket back on the team's first open stage, clears the closing stamp and resets the kanban state.

When the customer replies

A reply by email lands on the ticket's thread. On an open ticket it sets the kanban state back to In Progress, so the card stops showing as waiting. On a closed ticket it does **not** reopen it: a thank-you note should not put a finished ticket back on the board. If the customer reports the problem again, click Reopen.

> Dragging a card to Solved closes it too, but without a reason. Use the Close button when the reason matters to the person reading the ticket later.

PART 7 SLA policies and breaches

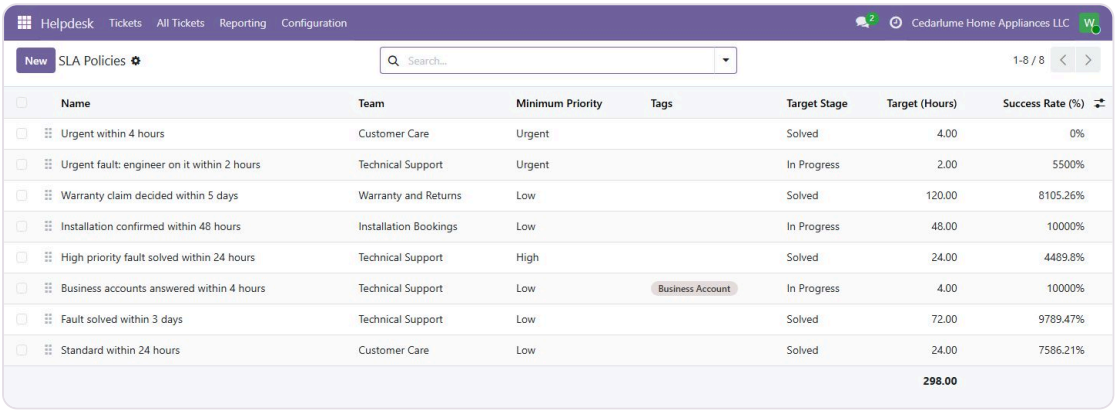

Writing the promises down, and seeing straight away when one is broken.

IN THIS PART YOU WILL LEARN

- How a policy is matched and the strictest one chosen
- When the clock stops
- How a breach is flagged, even on a ticket nobody opens

TRY IT YOURSELF ON THE DEMO

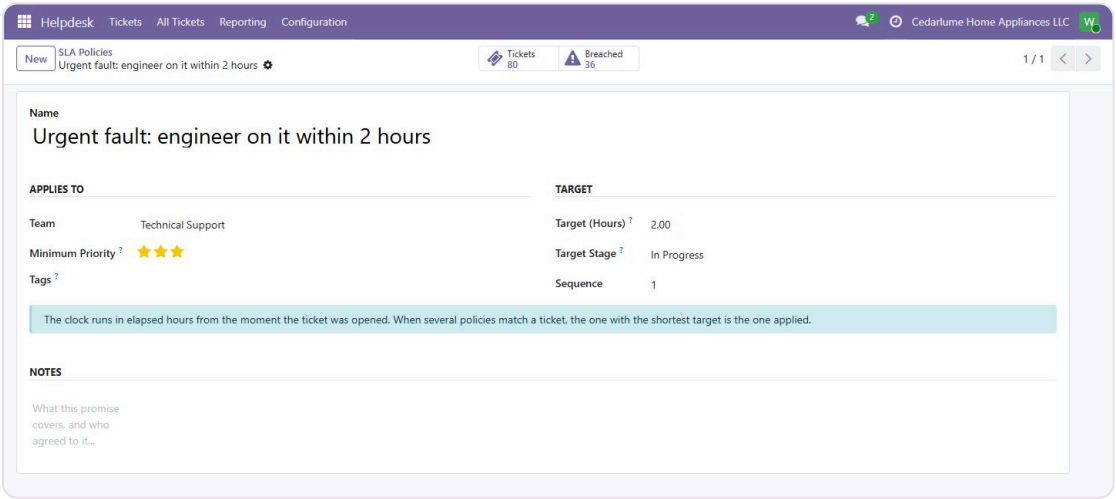

1. Configuration, SLA Policies: compare the policies of Technical Support.
2. Reporting, SLA Breaches: open one and find the red ribbon.

Name	Team	Minimum Priority	Tags	Target Stage	Target (Hours)	Success Rate (%)
Urgent within 4 hours	Customer Care	Urgent		Solved	4.00	0%
Urgent fault: engineer on it within 2 hours	Technical Support	Urgent		In Progress	2.00	5500%
Warranty claim decided within 5 days	Warranty and Returns	Low		Solved	120.00	8105.26%
Installation confirmed within 48 hours	Installation Bookings	Low		In Progress	48.00	10000%
High priority fault solved within 24 hours	Technical Support	High		Solved	24.00	4489.8%
Business accounts answered within 4 hours	Technical Support	Low	Business Account	In Progress	4.00	10000%
Fault solved within 3 days	Technical Support	Low		Solved	72.00	9789.47%
Standard within 24 hours	Customer Care	Low		Solved	24.00	7586.21%
					298.00	

1 Configuration, SLA Policies

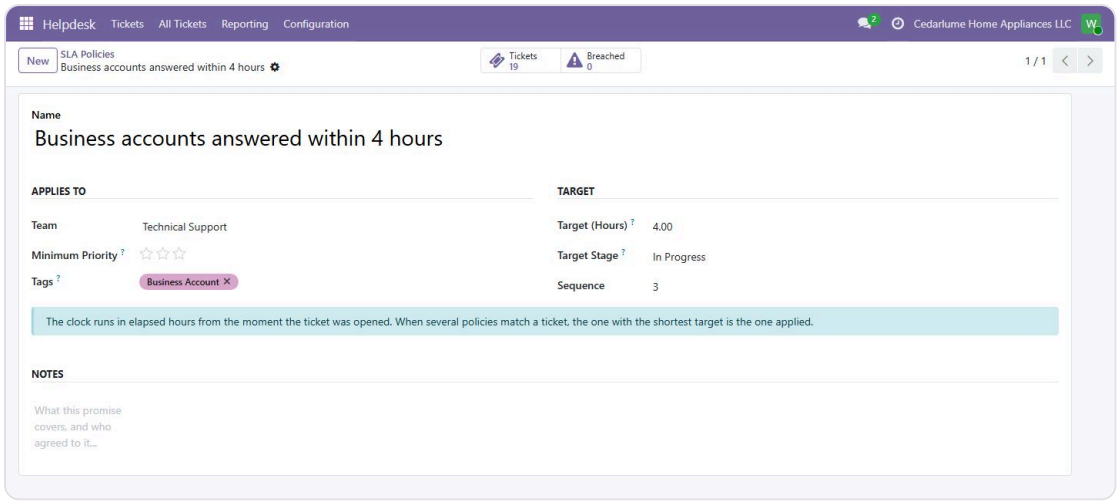

Every policy with its team, minimum priority, tags, target stage and hours. Filters: Urgent Only, Under 24 Hours, Archived. Group by Team, Priority or Target Stage.

2 A policy

Minimum Priority: the policy covers this priority and above, so High also covers Urgent. **Tags**: leave empty for every ticket, or the ticket must carry at least one. **Target Stage**: reaching it, or any later stage, stops the clock. **Target (Hours)**: from the moment the ticket was opened. Stat buttons give the tickets under the policy and how many breached; the list shows the success rate.

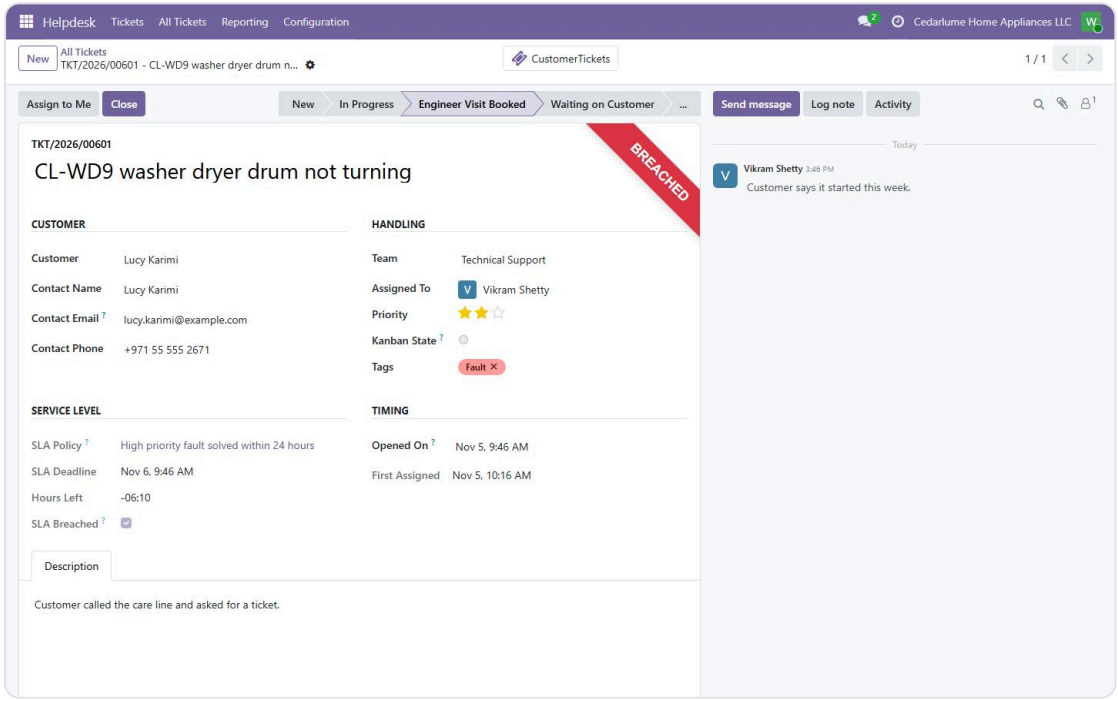

The target stage must be on the team's board, or the policy is refused.

A policy on a tag

3

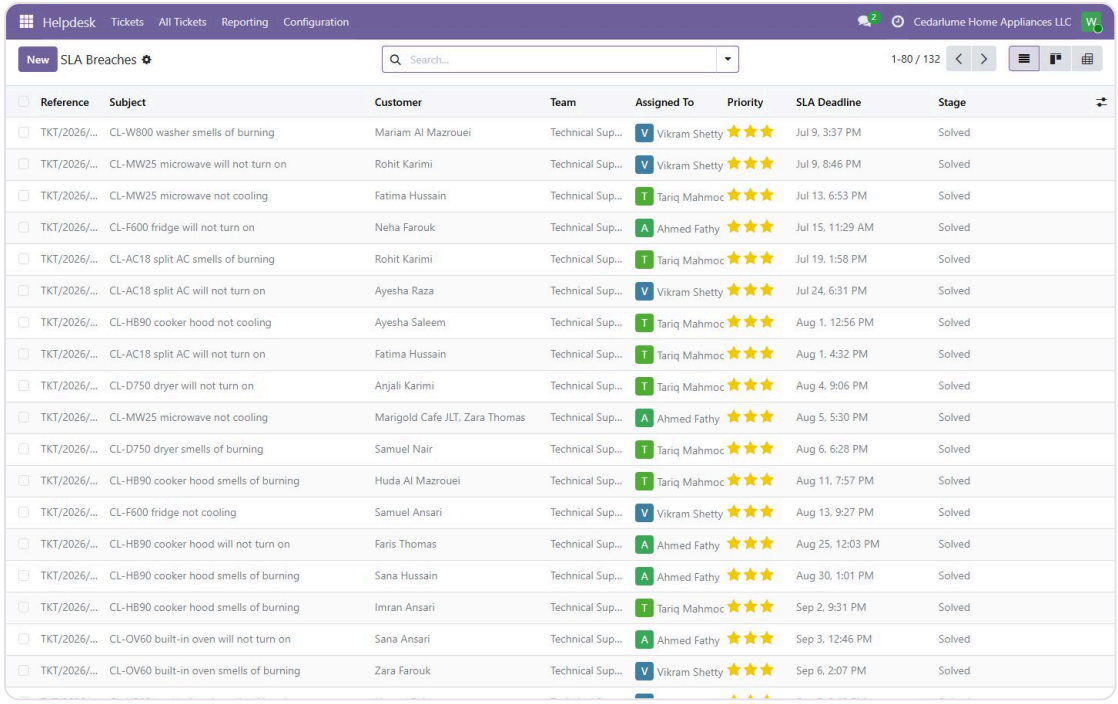

Business accounts get an engineer within four hours whatever the priority, because the policy matches on the Business Account tag.

A breached ticket

4

Past its deadline before reaching the target stage: the red **Breached** ribbon, the SLA Breached box ticked and hours left below zero.

5 **Reporting, SLA Breaches**

Every breached ticket, open and closed, ready to group by team, agent or policy.

Which policy wins

When a ticket is created, and again when its team, priority, tags or opening date change, the module looks at every active policy of the ticket's team, keeps those that match, and attaches the **strictest**: the one with the fewest target hours. The deadline is the opening time plus those hours.

TICKET IN TECHNICAL SUPPORT	MATCHING POLICIES	ATTACHED
Urgent fault, private customer	Urgent 2 h, High 24 h, Fault 3 days	Urgent 2 h
Normal fault, business account	Business 4 h, Fault 3 days	Business 4 h
Low question	Fault 3 days	Fault 3 days

When it counts as met or breached

SITUATION	JUDGED ON
Reached the target stage	Breached if it got there after the deadline
Closed without ever reaching it	Breached if it was closed after the deadline
Still open	Breached once the deadline has passed

The flag is updated on every change to the ticket and by the scheduled action **Helpdesk: flag tickets past their SLA deadline**, which runs every hour. A ticket nobody has opened still turns red within the hour.

> The clock runs in wall-clock hours, nights and weekends included. Cancelled comes after Solved on the board, so cancelling a ticket also stops a clock that targets Solved.

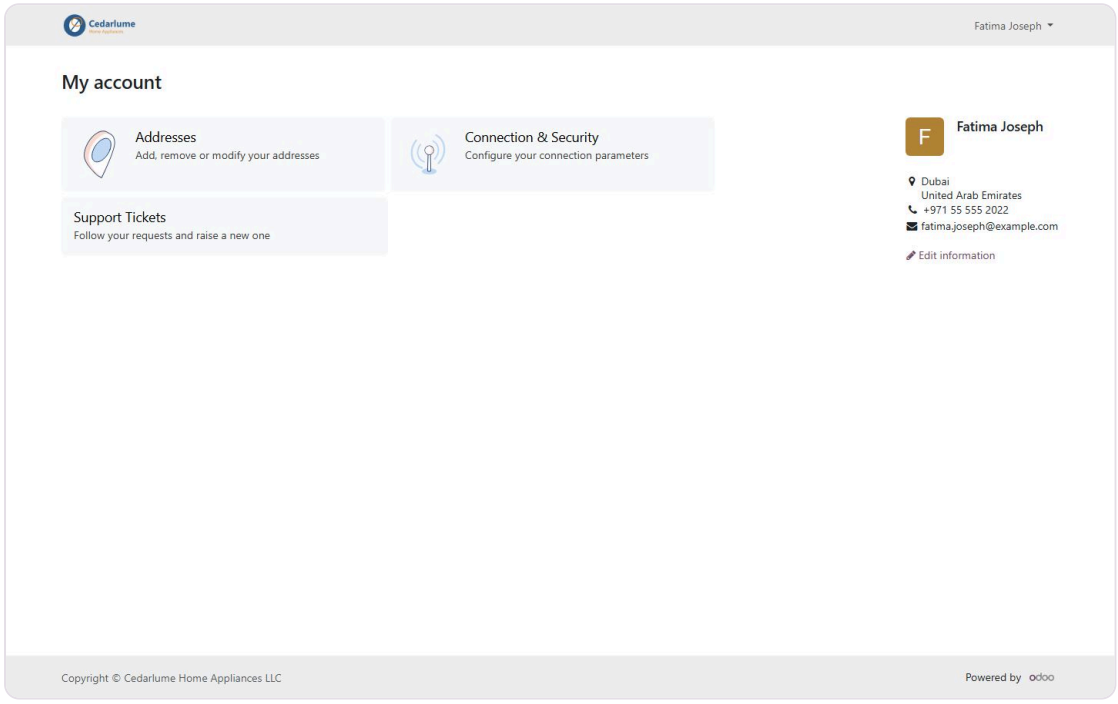

PART 8 The customer portal

Customers follow their own tickets, reply, raise new ones and rate the service, without phoning anyone.

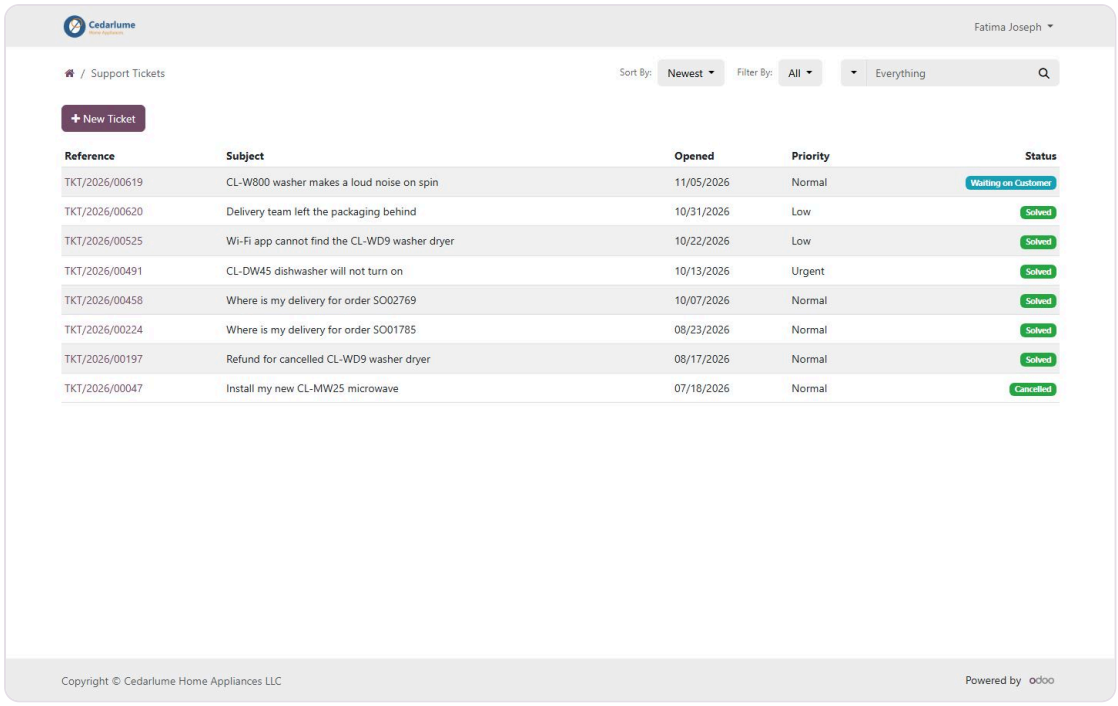

IN THIS PART YOU WILL LEARN

- The Support Tickets tile and list
- A ticket as the customer sees it, with the reply box
- Rating a closed ticket
- Raising a ticket from the form

A customer with a portal login sees **Support Tickets** on their account page. They only ever see tickets where they are the customer, even if they guess another ticket's number. Customers without a login can still open a ticket from the link in an email, which carries an access token.

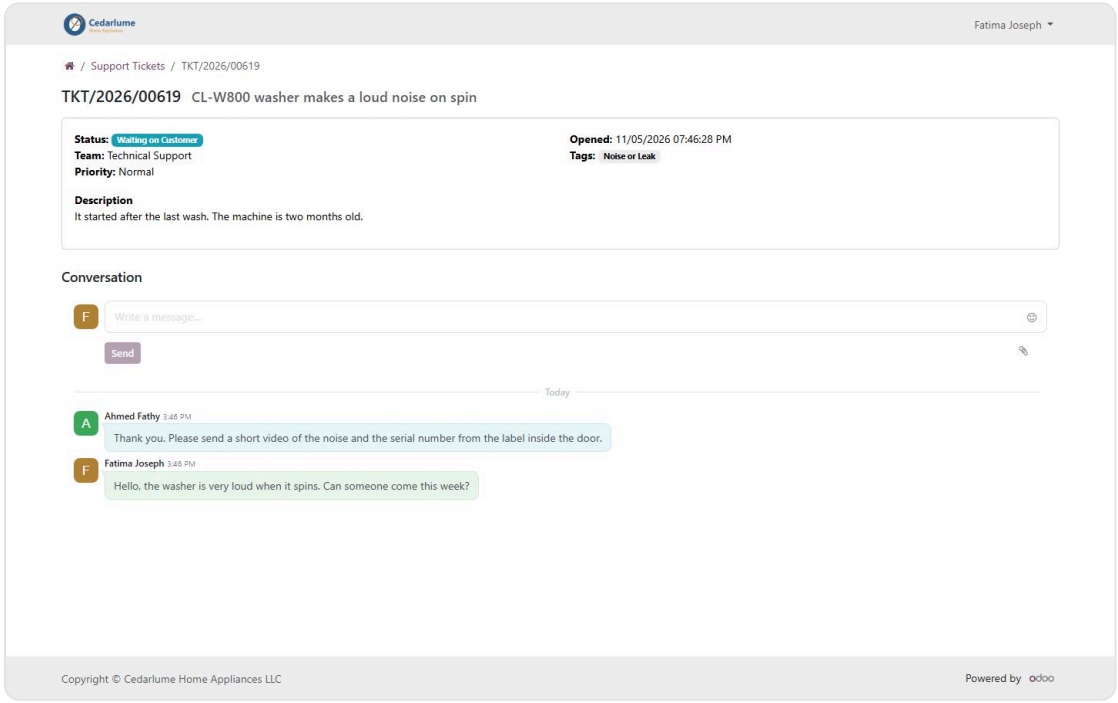

1 **My account**
The Support Tickets tile: follow your requests and raise a new one.

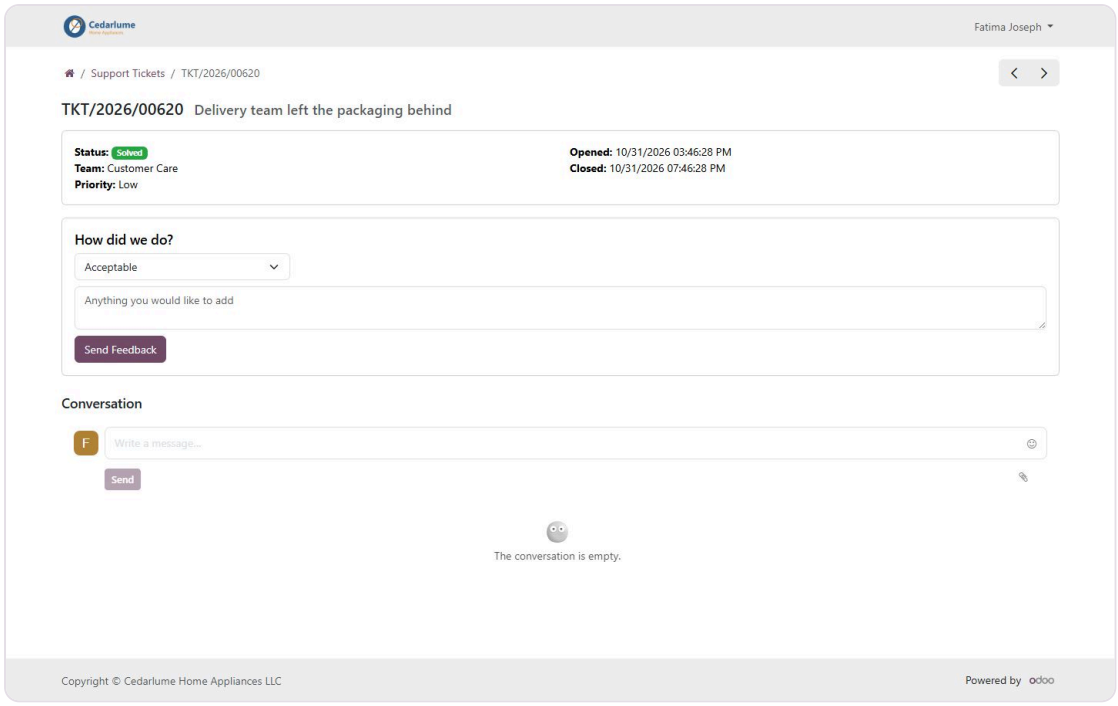

My tickets

2 Reference, subject, status and dates. Sort by Newest, Reference, Stage or Priority; filter All, Open or Closed; search in everything, the reference or the subject.

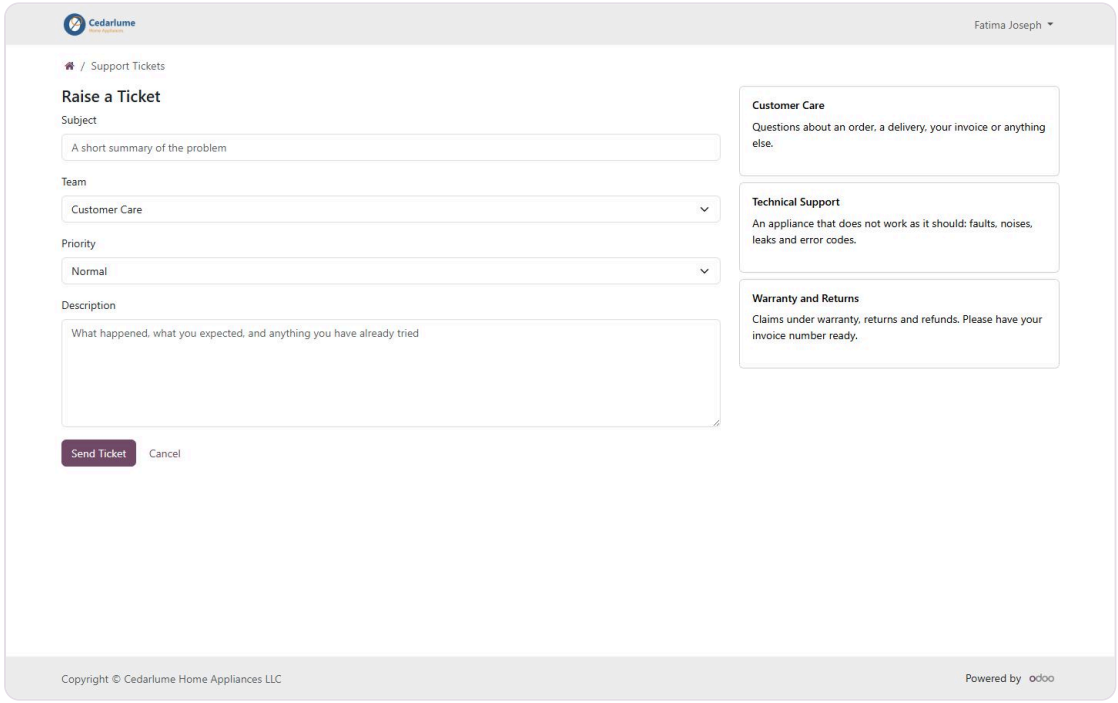

A ticket

3 Status, team, priority, dates and the description, then the conversation. The customer writes in the box above the messages and the message lands on the ticket's thread for the agent.

How did we do?

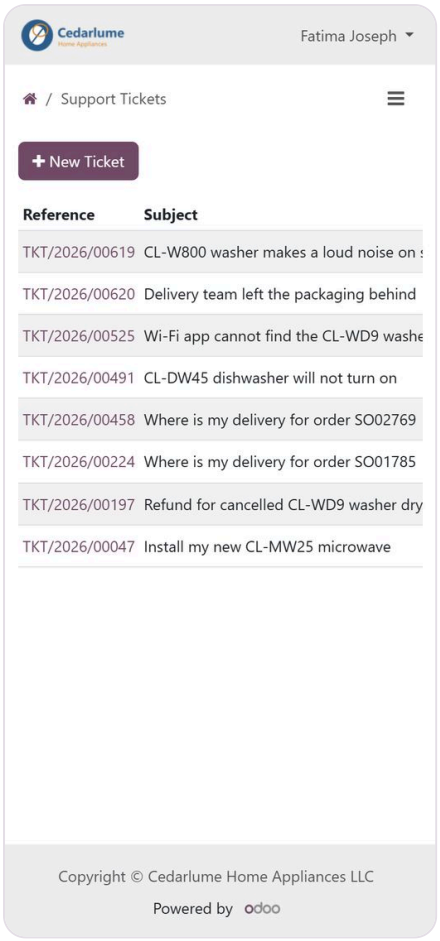

4 On a closed ticket that has no rating yet, the customer picks Very Poor to Very Good and may add a comment. It can be given once.

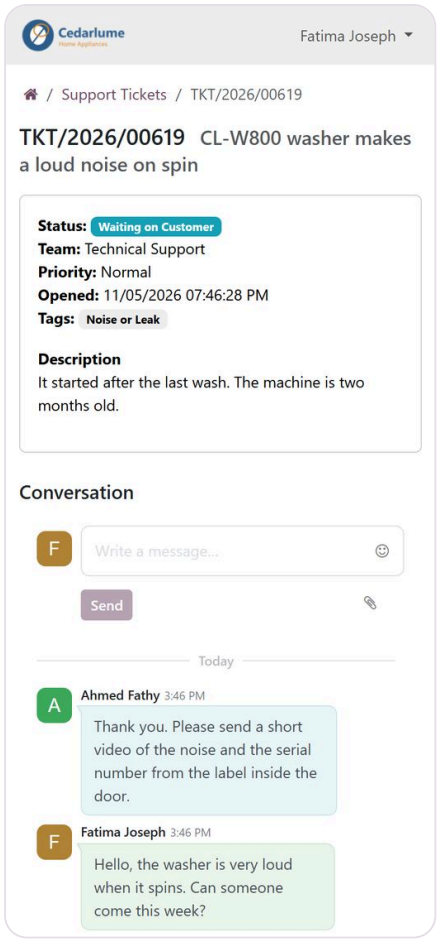

Raise a ticket

5 Choose the team (with its portal description), a subject, a priority up to High and the description. The ticket is created for the signed-in customer and opens straight away.

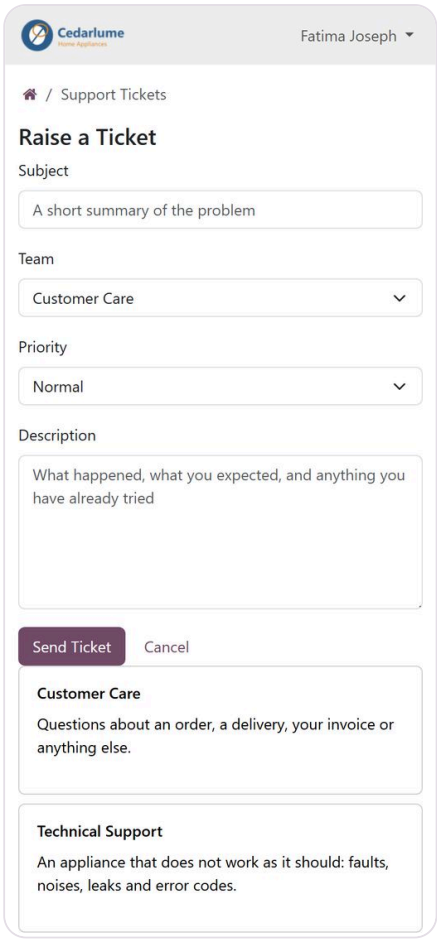

Urgent is not offered on the portal: a customer cannot jump the queue.

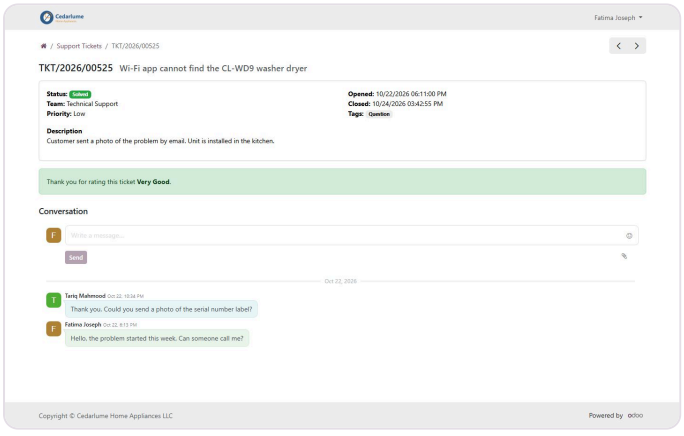

The list on a phone.

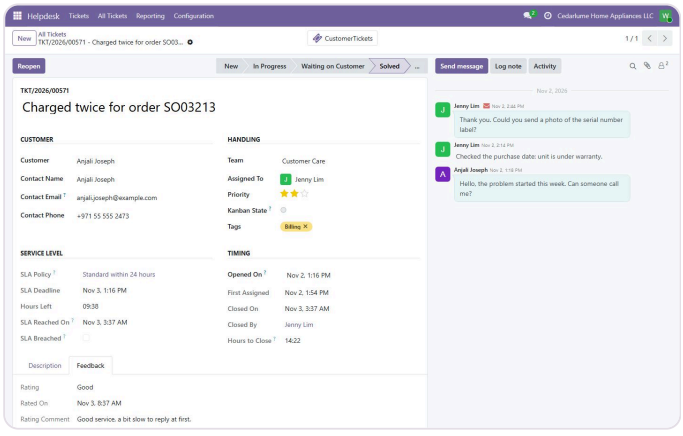

A ticket and its conversation.

Raising a ticket.

A rated ticket shows the customer's own feedback.

The same rating on the agent side, Feedback tab.

> There is no public website form. Raising a ticket needs a portal login; anyone else writes to the team's email alias.

PART 9 Reporting and printed tickets

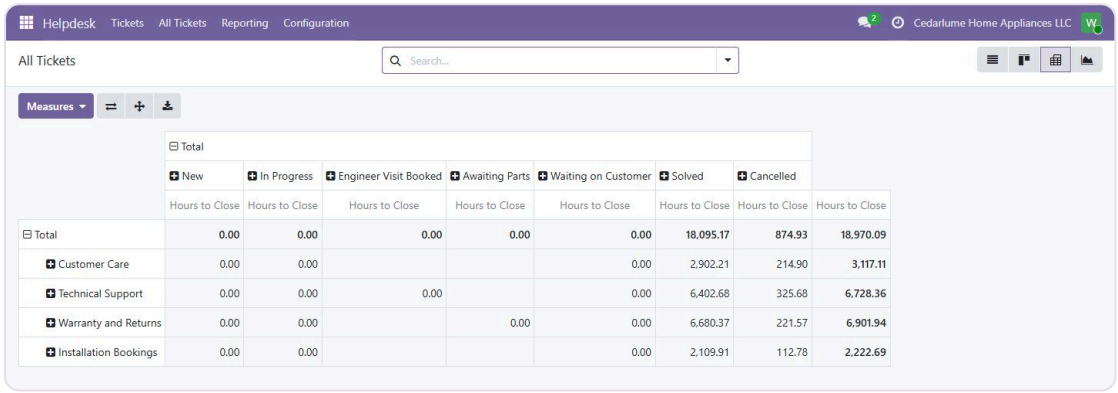

Volumes, speed and satisfaction, and a ticket on paper.

IN THIS PART YOU WILL LEARN

- Pivot, graph and the deadline calendar
- Ratings and low scores
- The internal ticket PDF and the customer copy

TRY IT YOURSELF ON THE DEMO

1. All Tickets, pivot view: put Team on the rows and Stage on the columns.
2. Filter Rated and group by Assigned To.

	Total							
	New	In Progress	Engineer Visit Booked	Awaiting Parts	Waiting on Customer	Solved	Cancelled	
	Hours to Close	Hours to Close	Hours to Close	Hours to Close	Hours to Close	Hours to Close	Hours to Close	Hours to Close
Total	0.00	0.00	0.00	0.00	0.00	18,095.17	874.93	18,970.09
Customer Care	0.00	0.00			0.00	2,902.21	214.90	3,117.11
Technical Support	0.00	0.00	0.00		0.00	6,402.68	325.68	6,728.36
Warranty and Returns	0.00	0.00		0.00	0.00	6,680.37	221.57	6,901.94
Installation Bookings	0.00	0.00			0.00	2,109.91	112.78	2,222.69

Pivot

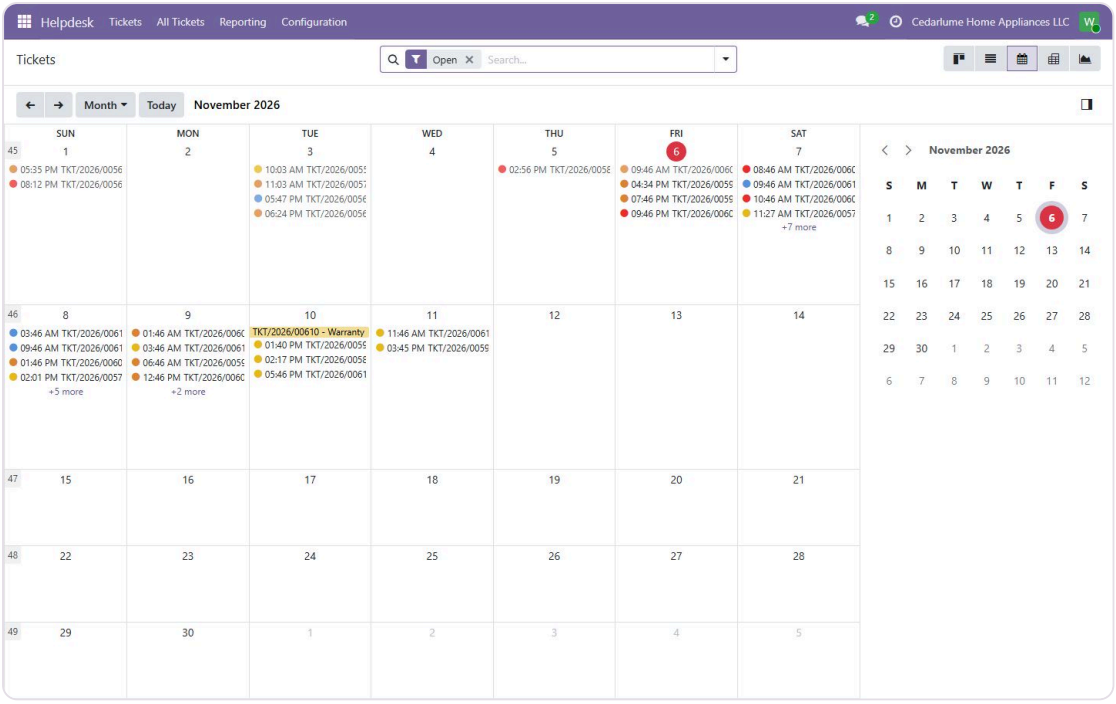

1 Opens with teams down the side and stages across, counting tickets and adding up the hours to close. Regroup by agent, customer, priority, SLA policy or month opened.

Hours to close is a total in the pivot, not an average: divide by the count, or look at single tickets.

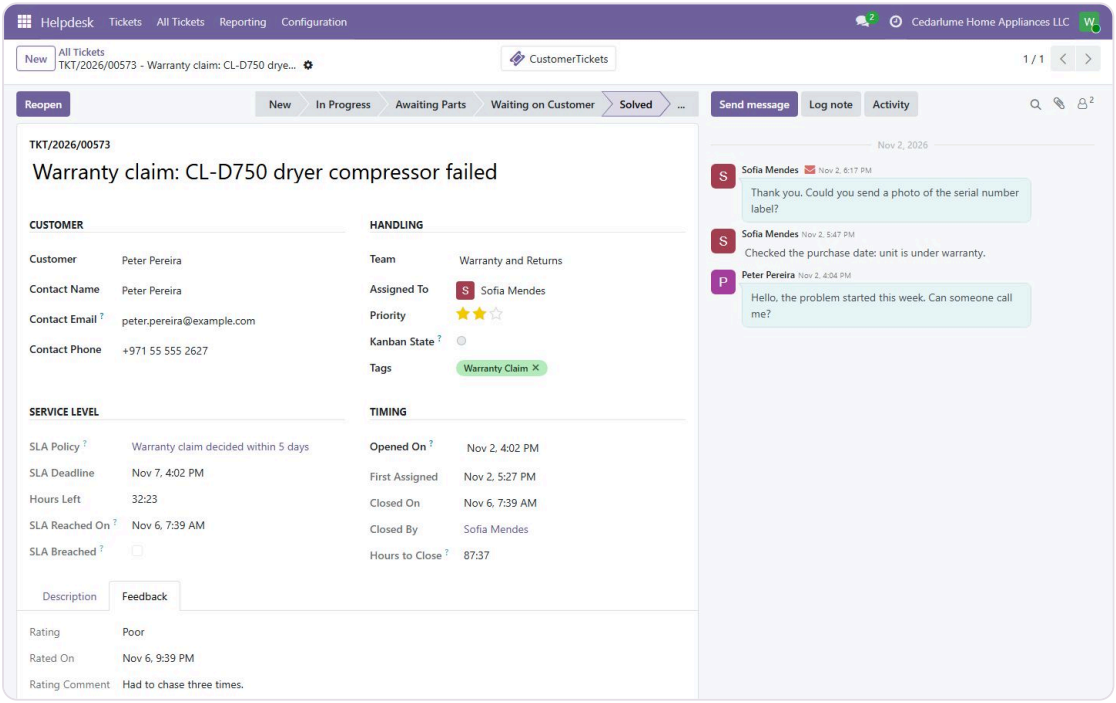

Graph

2 Tickets opened per week, split by priority.

3 Deadline calendar

Open tickets placed on their SLA deadline: the week ahead at a glance.

4 A low rating

A two-star rating with the customer's comment, on the Feedback tab. Filter Rated and group by Assigned To to see who gets the praise and who gets the complaints.

Description

Customer copy, served from the portal address of the ticket: no agent, policy or breach flag.

> The customer copy is a separate report on purpose: the internal one names the agent and the SLA policy, which customers should not see.

PART 10 A fifteen minute walk-through

If you have the demo open and fifteen minutes, this path shows the whole desk, and it is the order to show it to somebody else in.

#	DO THIS	AND NOTICE
1	Helpdesk, Tickets	*Open tickets by stage, priority stars, deadlines, the kanban state bar.*
2	Filter SLA Breached	*The tickets that missed their promise, in red.*
3	Open a breached ticket	*The ribbon, the policy, the deadline and negative hours left.*
4	Configuration, Teams, Technical Support	*Balanced assignment, the support@ alias, its private stage.*
5	Its SLA Policies tab	*Urgent 2 hours, business accounts 4 hours, faults 3 days.*
6	Open an In Progress ticket, click Close	*Closing stage, a required reason, Tell the Customer. Cancel.*
7	All Tickets list, tick three, Actions, Assign Tickets	*One agent or each team's rule. Cancel.*
8	A ticket raised by email today	*Name and address from the email, no contact needed.*
9	Filter Rated, group by Assigned To	*Who gets the five stars and who gets the comments.*
10	All Tickets, pivot	*Volumes by team and stage.*
11	Part 8 of this guide	*What the customer sees on /my/tickets, the form and the rating.*

Questions people ask

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community and needs only Discuss and the portal, both in Community.
Does it replace the Enterprise Helpdesk app?	It covers teams, stages, SLA policies, email tickets, the portal, ratings and reporting. It has no live chat, knowledge base, timesheets or website form.
Can customers raise tickets without a login?	By email to the team alias, yes. The portal form needs a portal login.
Are SLA hours working hours?	No. They are elapsed hours from the opening time, nights and weekends included.
Can one ticket carry two deadlines?	No. Of the matching policies, the strictest is attached.
Does a customer reply reopen a closed ticket?	No. It is added to the thread; an agent reopens the ticket if needed.
Can customers see internal notes?	No. They see messages sent to them; notes stay internal. The customer copy PDF leaves out the agent, policy and breach.
Is the rating asked for by email?	The ticket closed email template ends with a link to rate the ticket. The rating itself is given on the portal page of the closed ticket.
Do tickets close themselves?	Only in teams with Auto Close After (Days) set, after that many days without a change.

PART 11

The menu map

Every screen in the module, on one page.

Tickets

Tickets	Open tickets on the board, with list, calendar, pivot and graph
All Tickets	Every ticket, open and closed, list first

Reporting

SLA Breaches	Tickets that missed their policy deadline

Configuration

Teams	Members, assignment, alias, portal, board, SLA, auto close
Stages	Columns, closing stages, private stages, email templates
SLA Policies	Team, minimum priority, tags, target stage and hours
Tags	Labels the policies can match on

Elsewhere

Contacts	Tickets button on each customer
/my/tickets	Customer portal: list, detail, reply, rating
/my/tickets/new	Customer portal: raise a ticket

Want this for your support desk?

We set up your teams, stages and SLA policies with you, connect the support mailboxes, open the customer portal, bring across open tickets from your old tool and train the agents. It runs on Odoo 19 Community.
