COMPLETE GUIDE · SETUP AND EVERY SCREEN

Queue and Token System for Odoo 19

A touch kiosk, a TV that calls the numbers and a counter bar for staff, on ordinary Windows PCs, with every ticket, customer and waiting time in Odoo. Branches, pairing, services and counters, the live dashboard, the token timeline, appointments, reports and the phone page, shown on a live demo. No Odoo background needed.

START

About this guide

A waiting room tells a customer how much you respect their time before anyone has said a word. A queue system puts an order on it: a number, a screen that calls it, and a counter that knows who is coming. This guide walks the WT Queue and Token System from the ticket machine to the manager's report, one screen at a time. You do not need to have used Odoo before.

Who it is for

The owner or branch manager setting the queue up, the reception lead who watches the waiting room, the IT person installing the PCs, and anyone being shown the system for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and a short thing to try on the live demo, then walks every field and every button.

The live demo

Tealbrook Medical Centre, an invented clinic group in Dubai with two working branches, one waiting to open and one closed, and three months of queue history. Open it and follow along.

HOW IT WORKS

The demo business

Address	**queue-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Business	Tealbrook Medical Centre · Al Qusais Clinic (6 counters) and Jumeirah Clinic (4 counters), Al Nahda opening soon, Karama closed
Runs on	Odoo 19, Community edition, with Contacts and Calendar
Languages	English, Arabic and Urdu on the kiosk; calls in English and Arabic

Every company, person and number on the demo is invented. The demo has no hub PC in a real branch behind it, so the branches show as **Offline** and no new tickets arrive while you look. The history was loaded through the same import the hub uses.

What is in the guide

PART 1	How a queue works	PART 2	The parts and the menus
PART 3	The hub, and working without internet	PART 4	Branches and pairing the hub
PART 5	Services and counters	PART 6	Branding, languages and the TV media
PART 7	The live dashboard	PART 8	Tokens and their timeline
PART 9	Customers and appointments	PART 10	Reporting
PART 11	What the customer sees	PART 12	A fifteen minute walk-through
PART 13	The menu map		

PART 1 How a queue works

Five minutes on the ideas, so the screens make sense.

IN THIS PART YOU WILL LEARN

- Services, ticket letters and why numbers restart every day
- Counters, and who serves what
- Priority, transfer, recall and no show
- The two times that matter: waiting and service

A ticket is a promise of order

A customer walks in, touches a service on the kiosk and gets a ticket: **A023**. The letter is the service (A for consultation, P for pharmacy, L for the lab), the number is their place in that service's line today. Numbers restart at midnight in the branch's own time zone, so every morning starts at A001. Three digits is the default; a busy branch can print four (A0023).

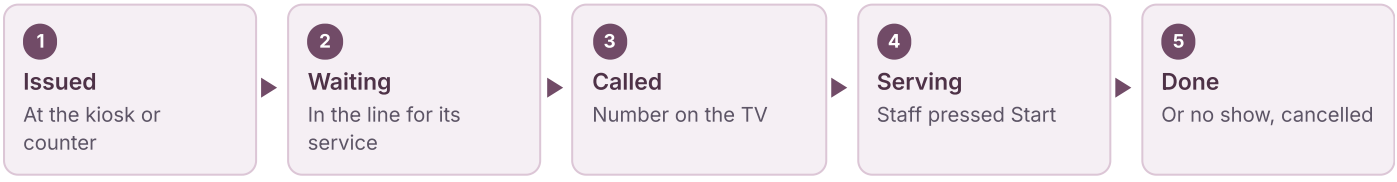

Counters serve services

A **counter** is any place a customer is called to: a reception desk, a doctor's room, a pharmacy window. Each counter lists the services it takes. When the person at Doctor room 3 presses **Call next**, the next ticket from any of that room's services is called, the TV shows the number and a voice reads it out.

WORD	WHAT IT MEANS HERE
Service	A line with its own letter, colour, average minutes and priority
Counter	A desk or room that calls tickets from one or more services
Priority	A higher number is called first at every counter that serves it, for example elderly care
Recall	Call the same number again because nobody came
No show	Give up on a ticket after calling it
Transfer	Send the customer to another service with the same number and the original time, so they do not go to the back
Hub	The one PC in the branch that gives out the numbers and talks to Odoo

Two times, measured for you

The life of a ticket

The **waiting time** runs from the ticket being issued to its first call. The **service time** runs from Start to Done, and only counts for tickets that were actually served. Those two numbers, by service, by counter and by member of staff, are what the dashboard and the reports are built on.

> A ticket is never edited by hand. Odoo keeps a timeline of what happened to it (issued, called, recalled, started, transferred, done) and works the state and the times out from that list. That is why the figures can be trusted.

PART 2 The parts and the menus

The queue has two halves: free Windows apps in the branch, and this module in Odoo.

IN THIS PART YOU WILL LEARN

- What runs in the branch and what runs in Odoo
- The Queue menu and who sees what
- Signing in to the demo

TRY IT YOURSELF ON THE DEMO

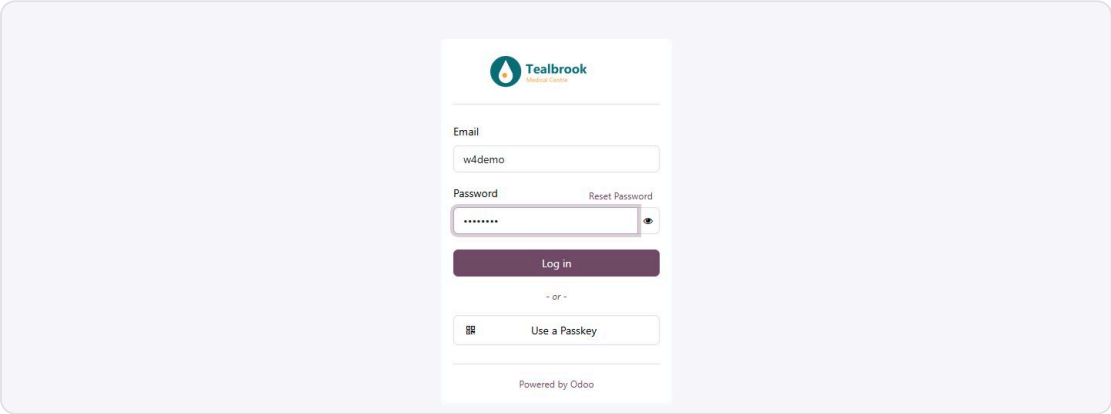

1. Sign in as w4demo and open the Queue app from the home screen.
2. Open each top menu and compare it with the map below.

In the branch

One installer, the free **WT Queue** app for Windows 10 and 11, gives three screens: the touch **kiosk**, the **TV display** and the staff **counter bar**. One PC is the **hub**: it issues the numbers for the whole branch and the other PCs find it on the local network. Tickets print on any ESC/POS thermal printer, 58 or 80 mm. Part 11 shows these screens.

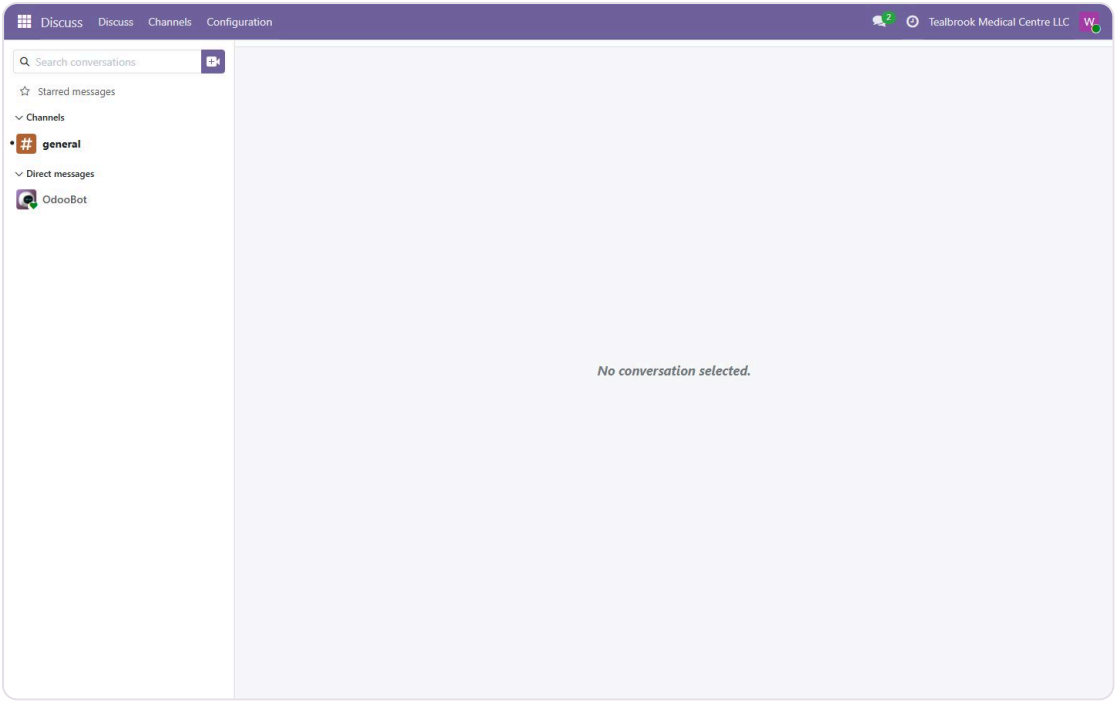

In Odoo

The module holds the branches, services, counters and display media, receives every ticket with its timeline, matches customers to contacts, checks appointments in, and gives the live dashboard, the analysis and the PDF report. It needs only Contacts and Calendar, both in Community.

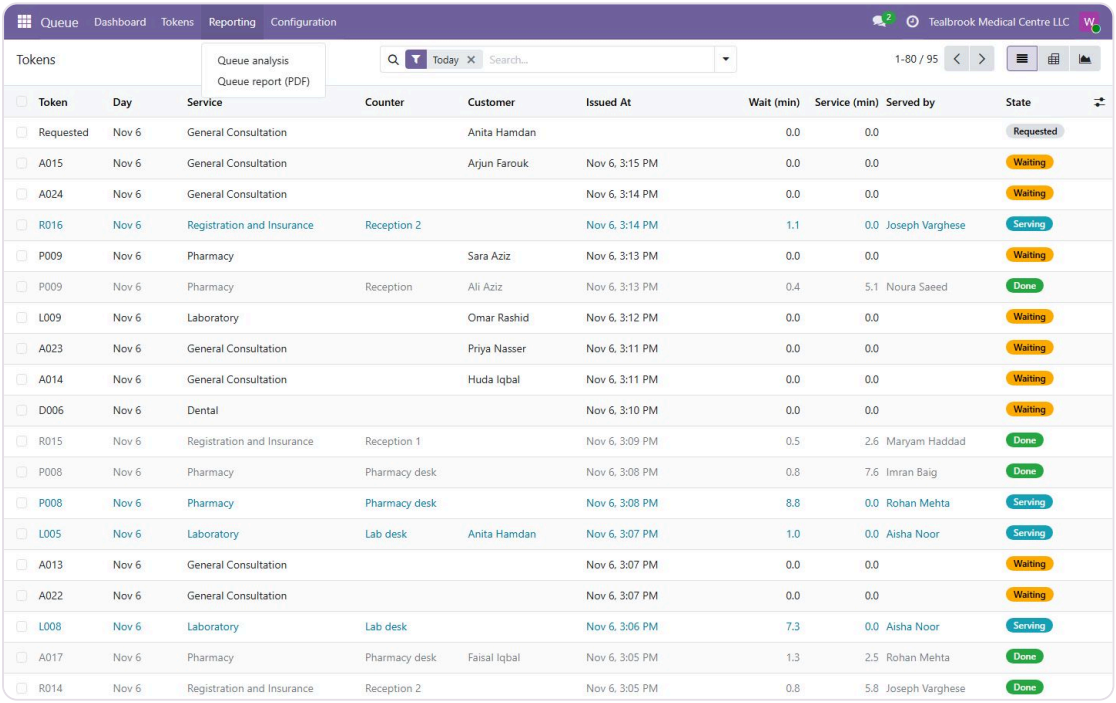

1 **Sign in**

Open **queue-demo.way4tech.com** and sign in with **w4demo** and **Demo2026**.

2 Open Queue

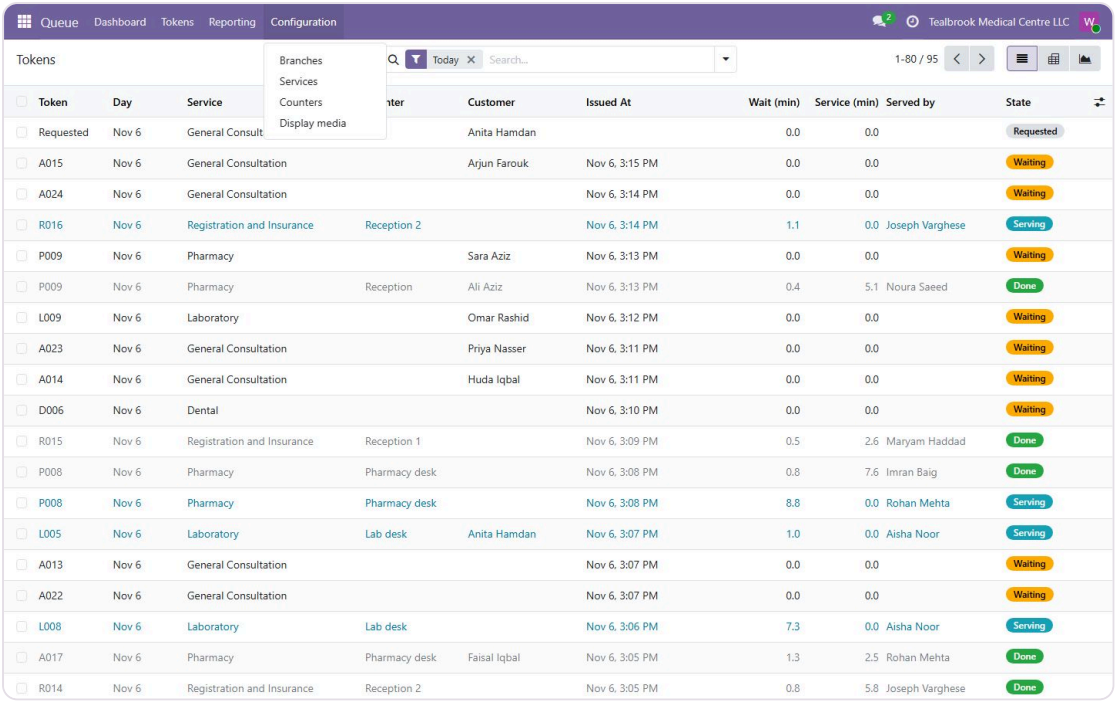

The Queue app sits on the home screen with Contacts, Calendar and Discuss.

Token	Day	Service	Counter	Customer	Issued At	Wait (min)	Service (min)	Served by	State
Requested	Nov 6	General Consultation		Anita Hamdan		0.0	0.0		Requested
A015	Nov 6	General Consultation		Arjun Farouk	Nov 6, 3:15 PM	0.0	0.0		Waiting
A024	Nov 6	General Consultation			Nov 6, 3:14 PM	0.0	0.0		Waiting
R016	Nov 6	Registration and Insurance	Reception 2		Nov 6, 3:14 PM	1.1	0.0	Joseph Varghese	Serving
P009	Nov 6	Pharmacy		Sara Aziz	Nov 6, 3:13 PM	0.0	0.0		Waiting
P009	Nov 6	Pharmacy	Reception	Ali Aziz	Nov 6, 3:13 PM	0.4	5.1	Noura Saeed	Done
L009	Nov 6	Laboratory		Omar Rashid	Nov 6, 3:12 PM	0.0	0.0		Waiting
A023	Nov 6	General Consultation		Priya Nasser	Nov 6, 3:11 PM	0.0	0.0		Waiting
A014	Nov 6	General Consultation		Huda Iqbal	Nov 6, 3:11 PM	0.0	0.0		Waiting
D006	Nov 6	Dental			Nov 6, 3:10 PM	0.0	0.0		Waiting
R015	Nov 6	Registration and Insurance	Reception 1		Nov 6, 3:09 PM	0.5	2.6	Maryam Haddad	Done
P008	Nov 6	Pharmacy	Pharmacy desk		Nov 6, 3:08 PM	0.8	7.6	Imran Baig	Done
P008	Nov 6	Pharmacy	Pharmacy desk		Nov 6, 3:08 PM	8.8	0.0	Rohan Mehta	Serving
L005	Nov 6	Laboratory	Lab desk	Anita Hamdan	Nov 6, 3:07 PM	1.0	0.0	Aisha Noor	Serving
A013	Nov 6	General Consultation			Nov 6, 3:07 PM	0.0	0.0		Waiting
A022	Nov 6	General Consultation			Nov 6, 3:07 PM	0.0	0.0		Waiting
L008	Nov 6	Laboratory	Lab desk		Nov 6, 3:06 PM	7.3	0.0	Aisha Noor	Serving
A017	Nov 6	Pharmacy	Pharmacy desk	Faisal Iqbal	Nov 6, 3:05 PM	1.3	2.5	Rohan Mehta	Done
R014	Nov 6	Registration and Insurance	Reception 2		Nov 6, 3:05 PM	0.8	5.8	Joseph Varghese	Done

3 Reporting

Queue analysis (pivot and graph) and the Queue report as a PDF.

4 **Configuration**
Branches, Services, Counters and Display media. Only a Queue Administrator sees this menu.

Two roles

ROLE	CAN DO
Queue User	Dashboard, tokens and customers in the queue; read the setup; check appointments in; print the report
Queue Administrator	Everything a user can, plus set up branches, services, counters and media, pair and revoke hubs

Every queue record carries its company, and record rules keep each company's branches, tokens and media apart in a multi-company database. Set the role on the user under Settings, Users, in the **Queue** line.

PART 3 The hub, and working without internet

Why the branch keeps calling numbers when the internet drops, and what Odoo does when it comes back.

IN THIS PART YOU WILL LEARN

- Why only one PC gives out numbers
- What the hub sends to Odoo and what it asks for
- How a ticket's state is rebuilt from its timeline

Most queue systems put the number counter on a server in the cloud. If the line goes down, the kiosk stops. Here the **hub PC in the branch** issues the numbers, so the kiosk, the TV and the counters only need the local network. Tickets are issued, called and served as normal, the hub keeps the timeline in its outbox, and sends it to Odoo when the connection is back.

What travels between the hub and Odoo

1. **Pair** — Once, with a single-use code
2. **Config** — Services, counters, texts, logo
3. **Events** — Batches of up to 500
4. **Heartbeat** — Every 30 seconds
5. **Partner** — Phone to customer card

CALL	WHAT IT DOES
Pair	The hub sends the pairing code. Odoo marks it used and returns a hub token, which it stores only as a sha256 hash. Ten failed codes from one address in ten minutes are refused for a while.
Config	The branch, its services, counters, media list, colours, texts, languages and the highest number already used today, so a replacement hub carries on after it.
Media	Each picture or video for the TV, only for the hub of that branch.
Events	Issued, called, recalled, serving, done, no show, transferred, cancelled. Each event has an id; a resent event is counted as a duplicate, a bad one is rejected on its own and never blocks the rest.
Partner	Looks up a phone number on the last nine digits and returns the customer card: name, phone, email, visits, last visit and the first lines of the contact notes.
Heartbeat	Hub PC name, app version, what is waiting to sync, the devices that joined and the LAN join code. The answer tells the hub if the setup changed and hands it any appointment check-ins.
Unpair	The hub disconnects itself; the branch goes back to Not paired.

A ticket rebuilds itself

Events can arrive late, twice or out of order after an outage. Odoo never patches a ticket step by step. Each time an event lands it sorts the ticket's whole timeline by time and works out the state, the counter, the member of staff, the times, the recall and transfer counts again. A late batch can never leave a ticket in the wrong state.

> Every request is a POST with a JSON body of at most 2 MB, signed with the hub token in the Authorization header. A revoked or unknown token gets a clear refusal, and the hub has to be paired again.

PART 4 Branches and pairing the hub

A branch is one site with its own queue and one hub PC. Everything else hangs off it.

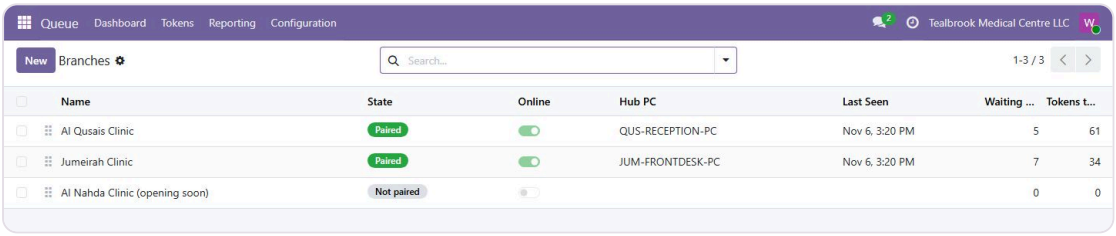

IN THIS PART YOU WILL LEARN

- Creating a branch and its time zone
- The pairing code, the invite link and the setup checklist
- Reading the Hub tab: online, outbox, devices
- New pairing code, Revoke hub, and an archived branch

TRY IT YOURSELF ON THE DEMO

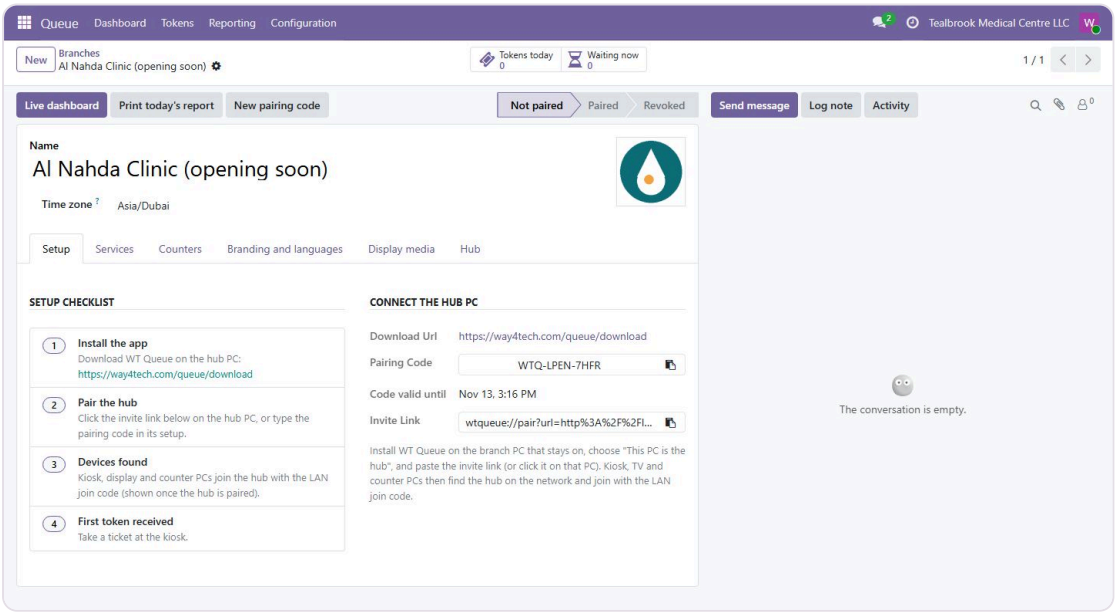

1. Configuration, Branches: compare Al Qusais (paired) with Al Nahda (not paired).
2. Open Al Qusais and read the Hub tab: the PCs and screens that joined.

There is no settings page for the queue. Everything is set per branch, so two sites of the same company can have different services, colours and languages. A new branch gets a **pairing code** at once, valid for seven days.

Configuration, Branches

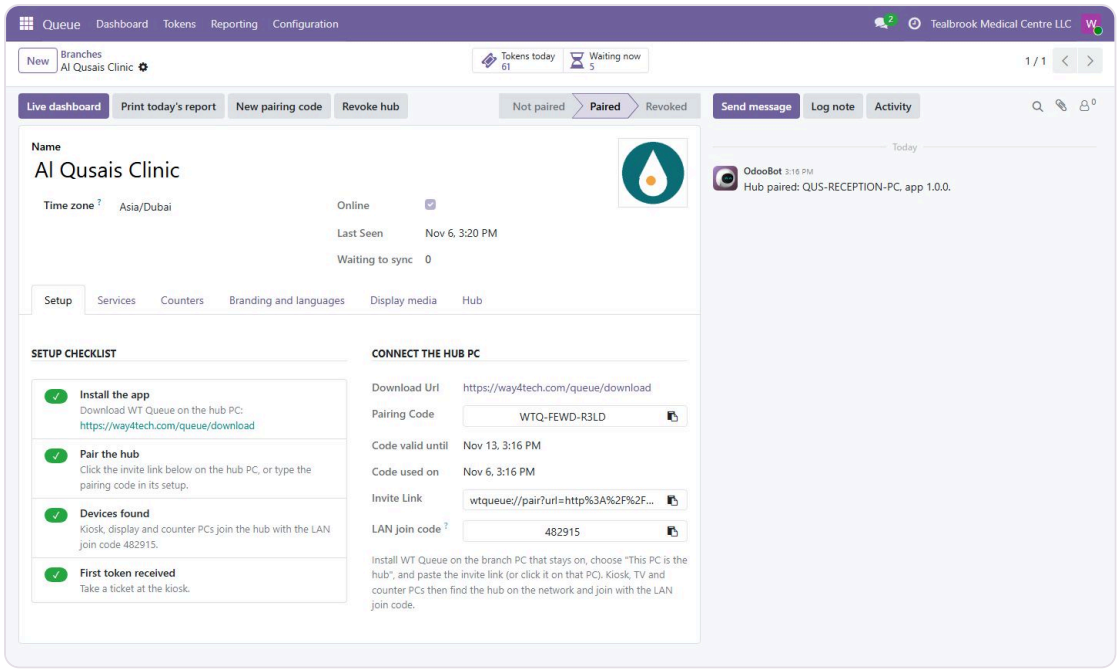

1 Each branch with its state, whether its hub is online, the hub PC's name, when it was last heard from, how many are waiting now and how many tickets were issued today. Filters: Paired, Offline, Archived.

A new branch

2 Al Nahda is **Not paired**. The Setup tab shows the checklist with nothing ticked yet, the download link for the app, the pairing code (WTQ and eight characters), when it expires and the invite link to click on the hub PC.

The time zone matters: numbers restart at midnight there, and the dashboard and reports count days in it.

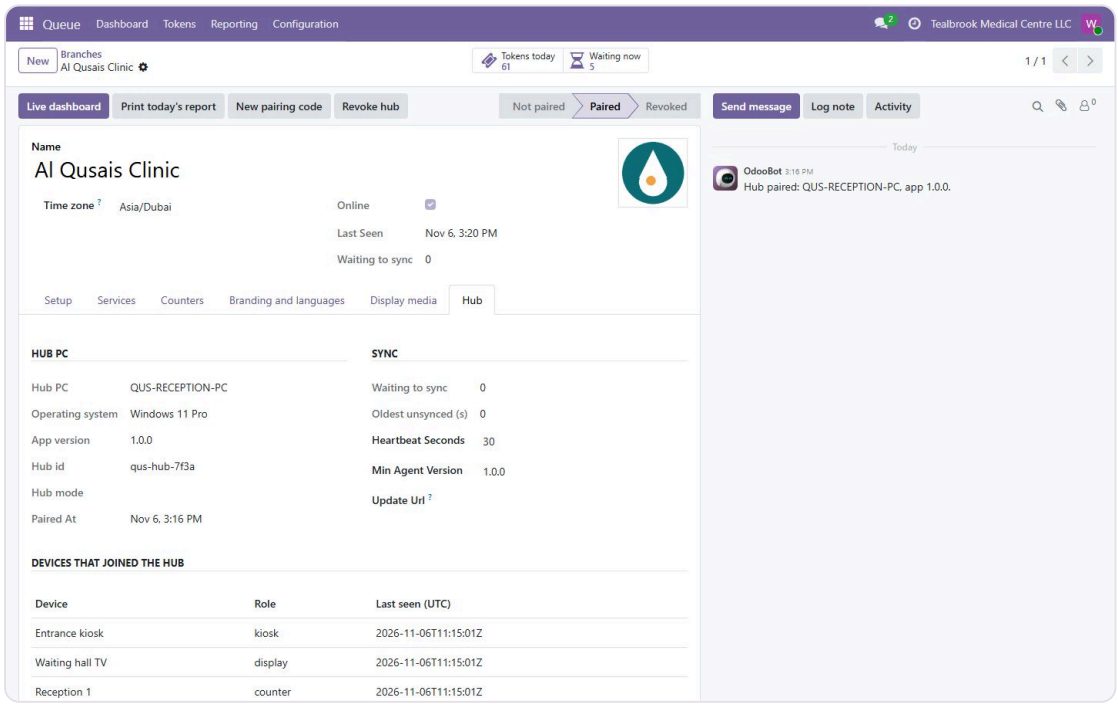

A paired branch

3

Al Qusais is **Paired**. The checklist has turned green: app installed, hub paired, devices found, first ticket received. The pairing code shows when it was used, and the six-digit **LAN join code** the other PCs typed to join the hub appears.

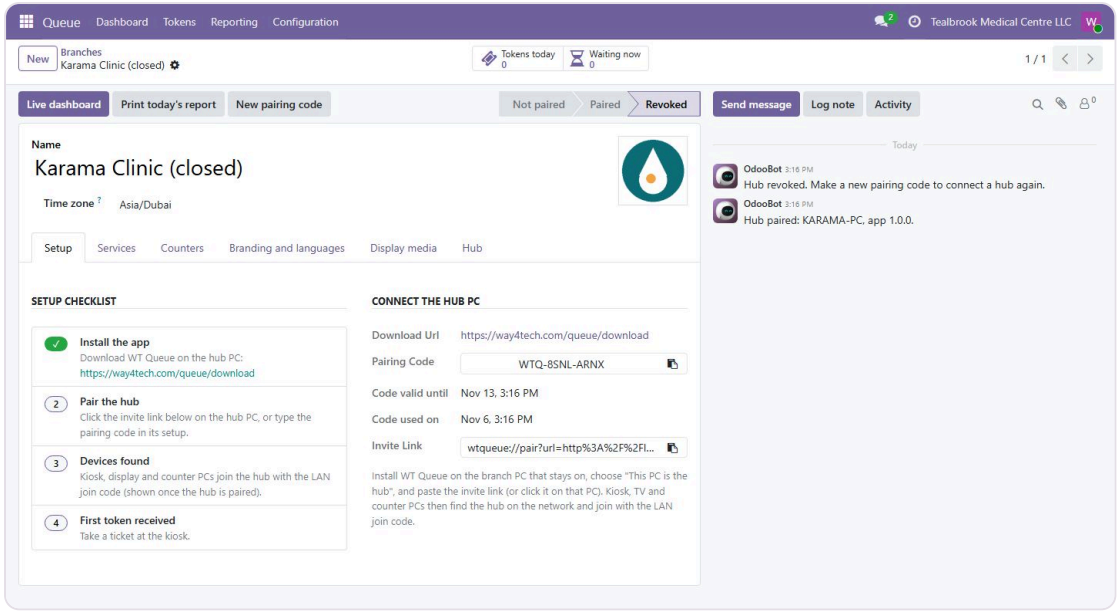

Online and Last seen come from the hub's heartbeat. When the hub goes quiet, an orange Offline ribbon appears on the form. The demo has no real hub, so it turns Offline a few minutes after the last update.

The Hub tab

4

The hub PC, its Windows version, the app version, the hub id, when it was paired, what is waiting to sync and the age of the oldest unsynced event, the heartbeat interval, the lowest app version allowed and an optional update feed. Below, every kiosk, display and counter that joined, with when it was last seen.

5 **A revoked, archived branch**

Karama closed. Its hub was **revoked** (it can no longer sync) and the branch archived, so it drops out of the lists but keeps its history.

The buttons on the branch

BUTTON	WHAT IT DOES
Live dashboard	Opens the dashboard on this branch (Part 7)
Print today's report	The PDF queue report for today (Part 10)
New pairing code	After a confirmation, issues a fresh code valid for seven days; the old code stops working. Needed to pair a replacement hub PC.
Revoke hub	Only on a paired branch. After a confirmation the hub token is wiped and the hub stops syncing until it is paired again.
Tokens today / Waiting now	Stat buttons with the counts; both open today's tokens for the branch

Pairing, step by step

#	WHERE	DO THIS
1	Odoo	*Create the branch with its time zone, services and counters*
2	Hub PC	*Install WT Queue from the download link and keep "This PC is the hub"*
3	Hub PC	*Click the invite link from the branch form, or paste the code, and pair. The services, colours and logo come down from Odoo*
4	Other PCs	*Install the app, choose the hub found on the network and type the six-digit join code*
5	Kiosk	*Take a ticket. The last checklist line turns green*

A scheduled action, **Queue: mark silent hubs offline**, runs every five minutes. A paired hub that has not been heard from for three heartbeats (at least a minute) is marked offline, which puts the ribbon on the branch and the Offline filter in the list.

PART 5 Services and counters

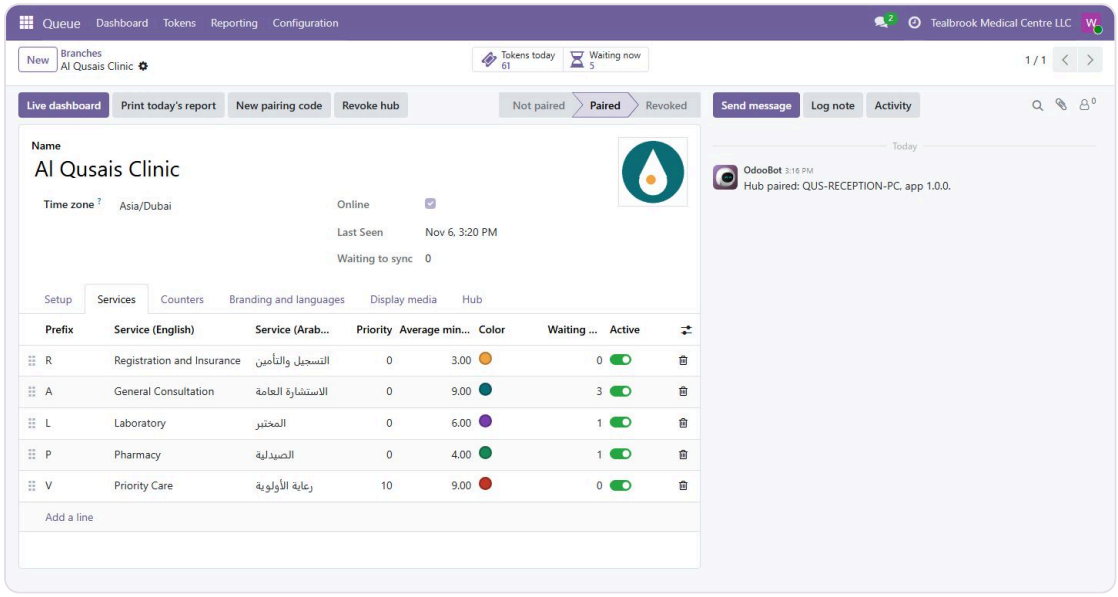

Services are the lines a customer can join. Counters are where they are called to.

IN THIS PART YOU WILL LEARN

- Ticket letter, priority, average minutes and colour
- Service names in Arabic and Urdu
- Which counter calls which services, and who works there

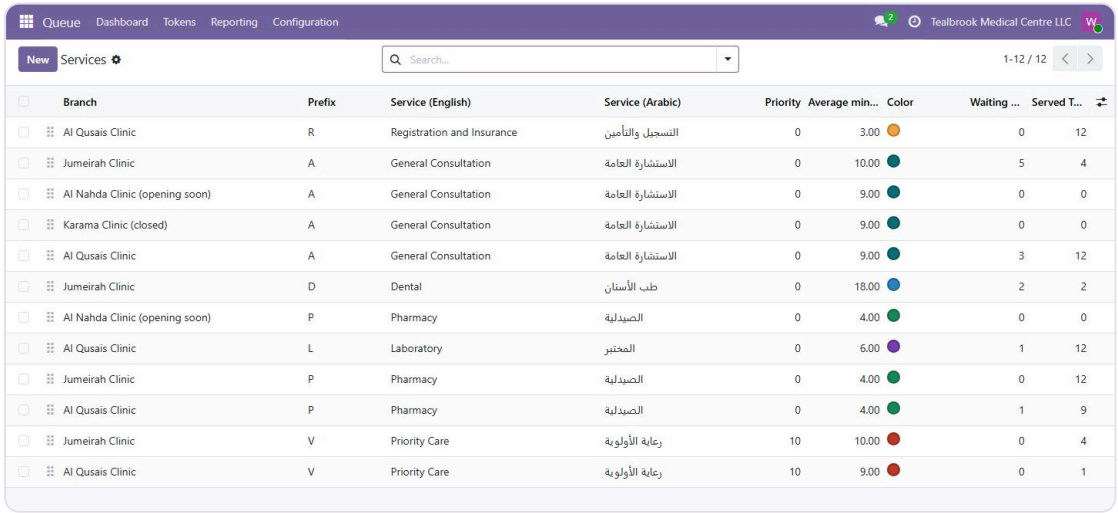

TRY IT YOURSELF ON THE DEMO

1. Configuration, Services: find Priority Care and its priority of 10.
2. Open Doctor room 3 under Counters and see which services it takes.

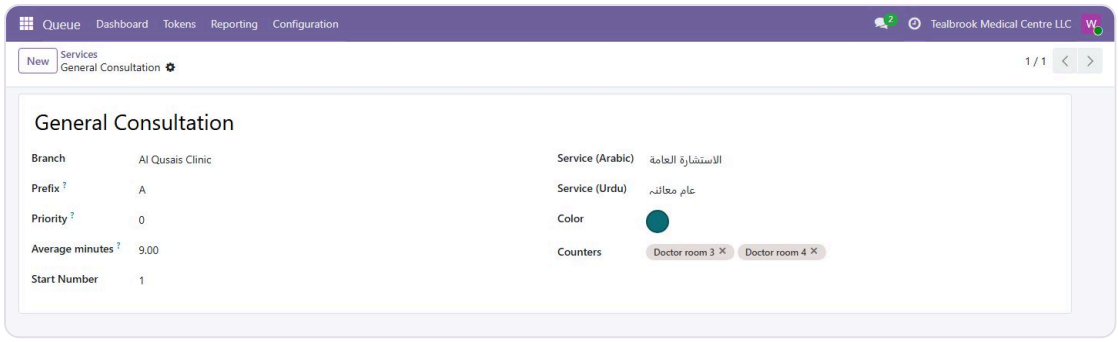

1 Services on the branch

The quickest place to set them: the Services tab of the branch, edited in the list. Drag the handle to change the order on the kiosk.

2 Configuration, Services

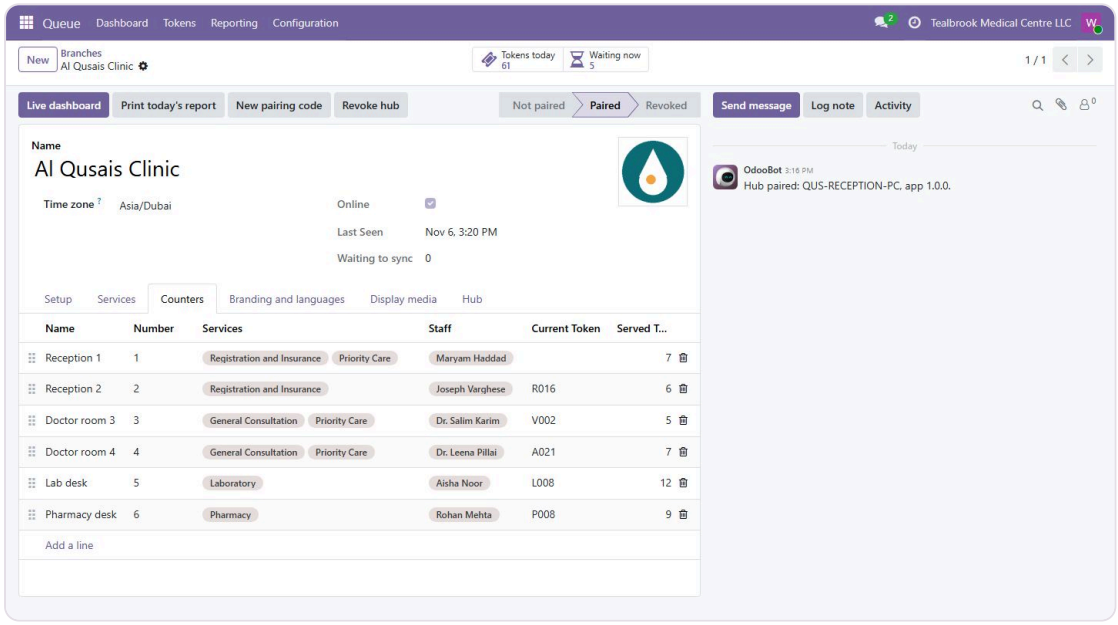

All services of all branches, with what is waiting now and what has been served today. Group by Branch or show archived ones (the old Covid PCR test line is archived).

A service

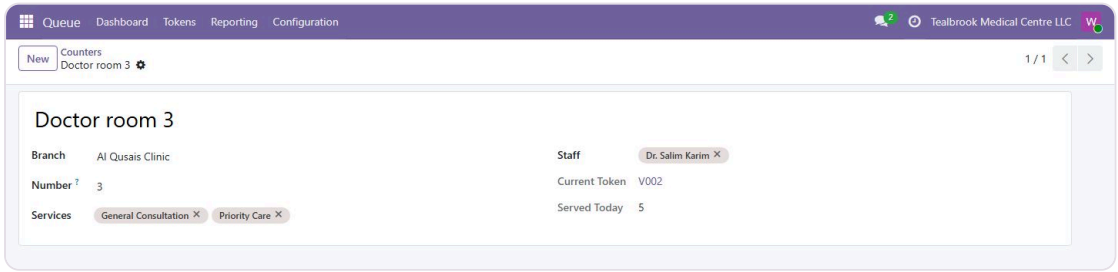

3 **Prefix** is the ticket letter, up to three letters or digits, stored in capitals and unique within the branch. **Priority**: higher is called first. **Average minutes** gives the waiting estimate on the ticket until real data exists. **Start number** is where the count begins each day. The Arabic and Urdu names show on the kiosk in those languages.

Archive a service rather than delete it: its old tickets keep pointing at it.

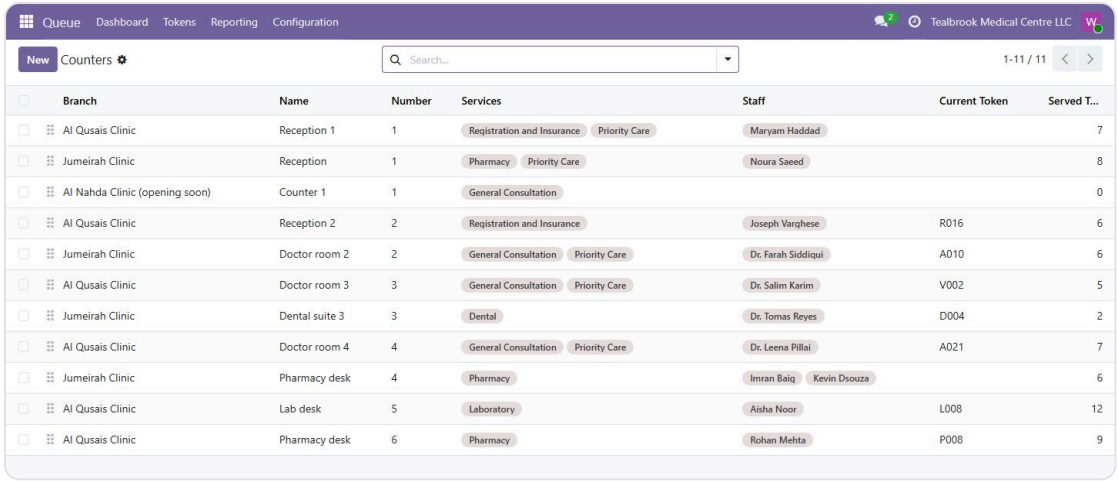

Counters on the branch

4 Each counter with the number shown and spoken, its services, its staff, the ticket at the counter right now and how many it has served today.

A counter

5 **Number** is what the TV shows and the voice says ("please go to counter 3"); leave it empty to use the name. **Services** are the lines it calls from. **Staff** are the internal users who work there, offered in the counter bar's staff list.

6 **Configuration, Counters**

Every counter of every branch, with the current ticket and served today.

The demo setup at Al Qusais

SERVICE	LETTER	PRIORITY	AVG MIN	CALLED AT
Registration and Insurance	R	0	3	Reception 1, Reception 2
General Consultation	A	0	9	Doctor rooms 3 and 4
Laboratory	L	0	6	Lab desk
Pharmacy	P	0	4	Pharmacy desk
Priority Care	V	10	9	Reception 1, Doctor rooms 3 and 4

Every change to a service, counter or media file flags the branch, and the next heartbeat tells the hub to fetch the new setup. You do not touch the branch PCs to change a service.

PART 6 Branding, languages and the TV media

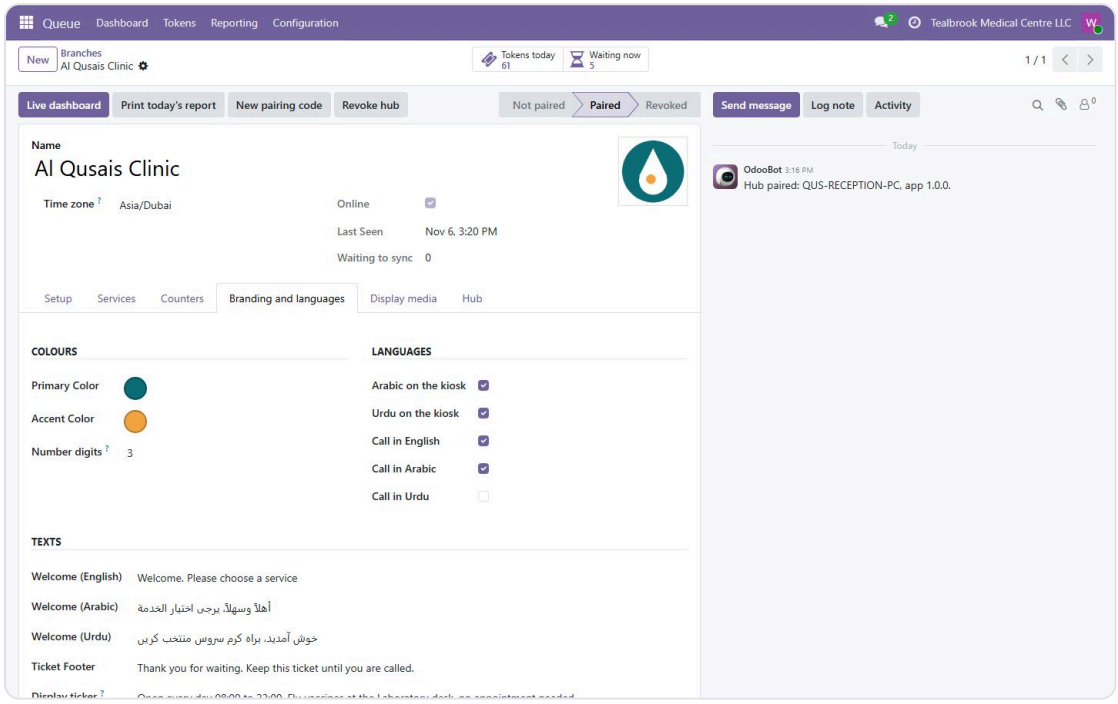

What the customer sees on the kiosk, the ticket and the TV is set here, in Odoo.

IN THIS PART YOU WILL LEARN

- Logo, colours and number digits
- Kiosk languages and call languages
- Welcome texts, the ticket footer and the TV ticker
- Pictures and videos for the TV loop

TRY IT YOURSELF ON THE DEMO

1. Open Al Qusais, Branding and languages tab: Arabic and Urdu are on.
2. Open Configuration, Display media and one of the slides.

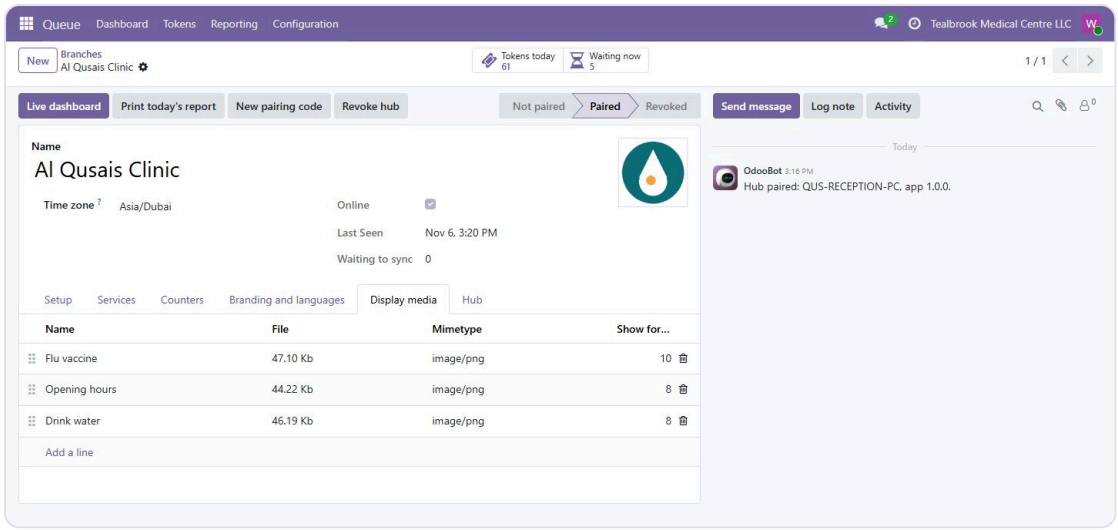

Branding and languages

1

Colours: the primary colour for the bars and buttons, the accent for highlights. **Number digits**: 3 prints A007, 4 prints A0007. **Languages**: English is always on; tick Arabic and Urdu for the kiosk, and tick the languages the TV should call numbers in. **Texts**: the welcome line in each language, the ticket footer and the ticker that scrolls along the bottom of the TV.

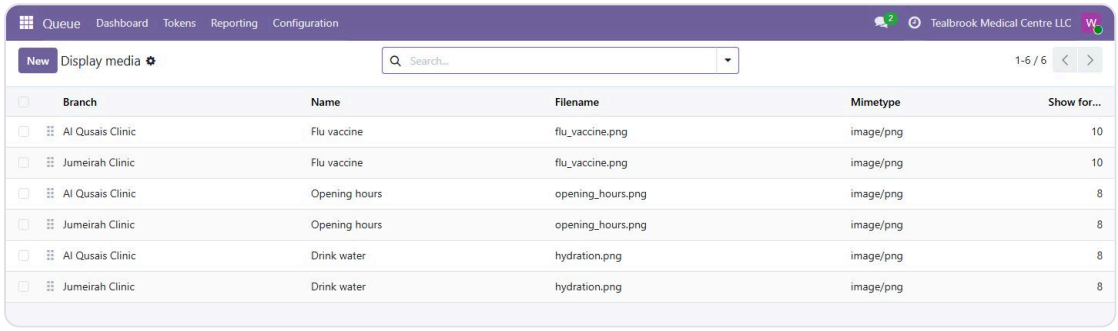

Arabic and Urdu calls need the Windows voice for that language on the display PC; without it, calls are made in English.

2

Display media on the branch

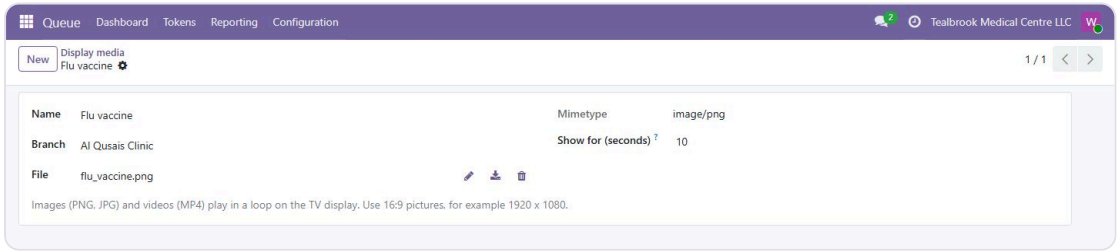

The pictures and videos the TV plays in a loop beside the calls, in order.

3

Configuration, Display media

Every file of every branch, with its type and how long it shows.

4

A media file

Upload a PNG, JPG or MP4. The type and a checksum are worked out from the file, so the hub only downloads what changed. **Show for (seconds)** applies to pictures; videos play to the end.

Use 16:9 pictures, for example 1920 by 1080.

The logo is taken from the branch (resized to at most 512 pixels) and printed on the kiosk header and the ticket.

PART 7 The live dashboard

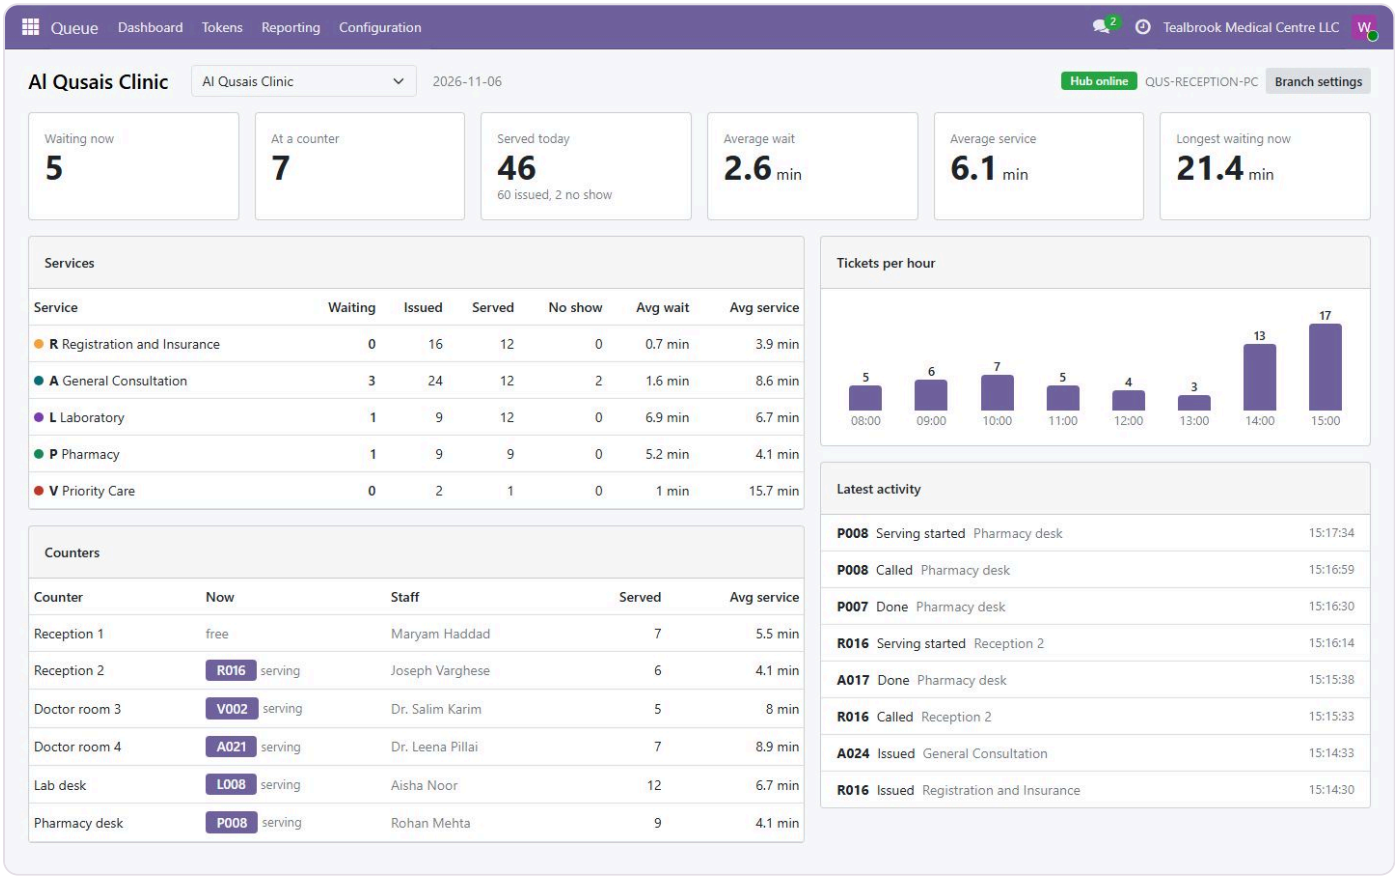

The screen a branch manager keeps open: who is waiting, who is being served, and how long it is taking, right now.

IN THIS PART YOU WILL LEARN

- The six numbers at the top and what each one counts
- Services and counters at a glance
- Tickets per hour and the latest activity

TRY IT YOURSELF ON THE DEMO

1. Queue, Dashboard. Switch the branch in the drop-down to Jumeirah Clinic.
2. Click Waiting now: the list of tickets behind the number opens.

Queue, Dashboard. Today at Al Qusais. It reloads by itself every ten seconds.

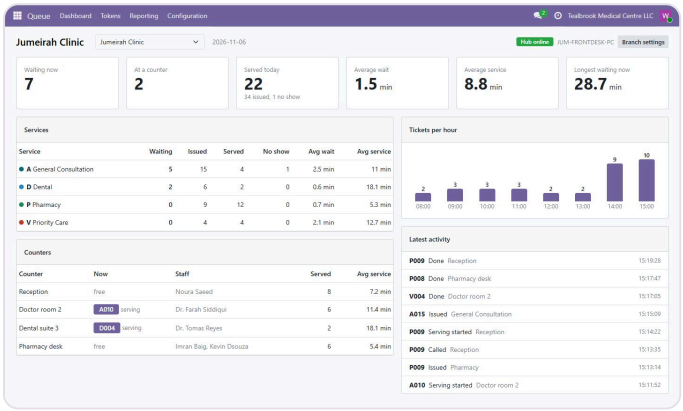

TILE	WHAT IT COUNTS (TODAY, IN THE BRANCH TIME ZONE)
Waiting now	Tickets in the line, not yet called. Click to open them
At a counter	Tickets called or being served. Click to open them
Served today	Tickets done, with how many were issued and how many were no shows. Click to open them
Average wait	Issue to first call, over every ticket called today
Average service	Start to Done, over every ticket served today
Longest waiting now	The oldest ticket still waiting, in minutes

Services and counters

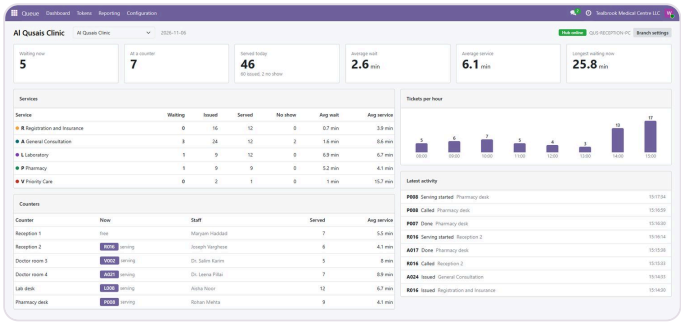

The **Services** table gives each line its waiting count, tickets issued, served and no shows, and its own average wait and service time. A ticket transferred in counts as waiting and served in the service it ended in, while issued and average wait stay with the service it was issued for. The **Counters** table shows the ticket at each counter now (or free), the member of staff, and what that counter has served today and how fast.

The hour chart and the activity feed

Tickets per hour shows when people arrive, which is how you decide when to open a second reception desk. **Latest activity** lists the last eight events of the branch with their counter and time. At the top right the hub badge says whether the hub is online and names the hub PC; **Branch settings** opens the branch form.

Jumeirah Clinic: Dental is the slow line, as expected.

The same dashboard on a 1920 by 1080 screen, for a manager's wall.

> The dashboard always shows today. To look at another day use Reporting (Part 10).

PART 8 Tokens and their timeline

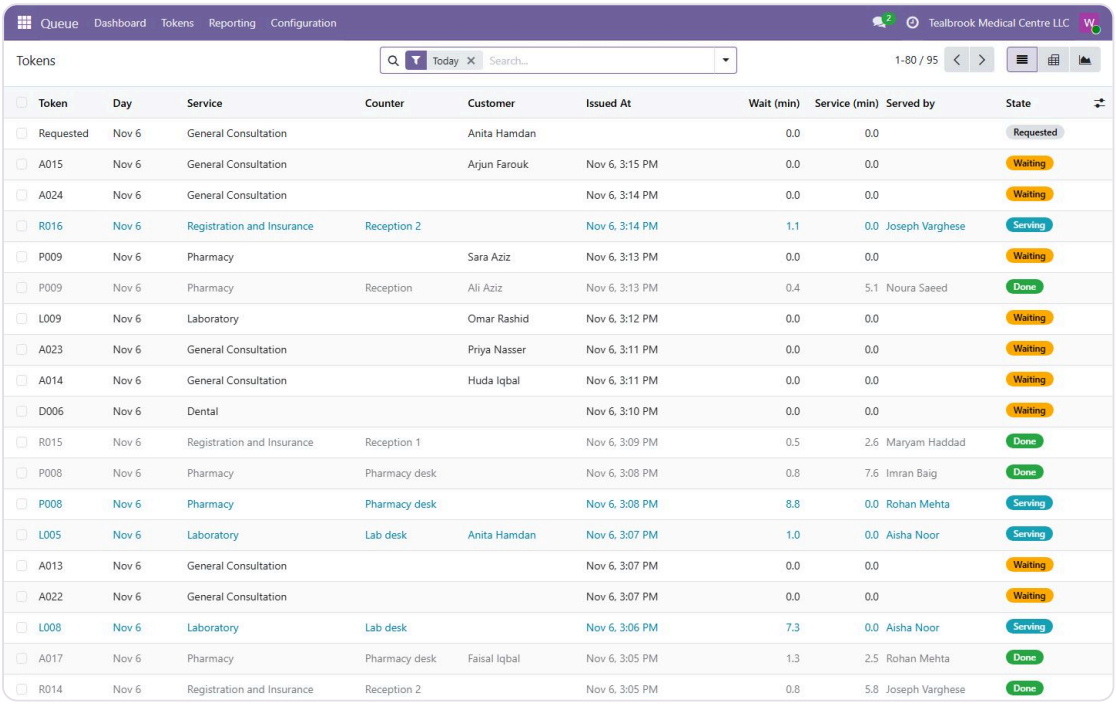

Every ticket the branch issued, who served it, and exactly what happened to it.

IN THIS PART YOU WILL LEARN

- The token list, its filters and groupings
- Each state a token can be in, with a real example
- Reading the timeline of a transferred ticket

TRY IT YOURSELF ON THE DEMO

1. Queue, Tokens. Remove the Today filter and group by Status.
2. Open a token with a transfer count of 1 and read its timeline.

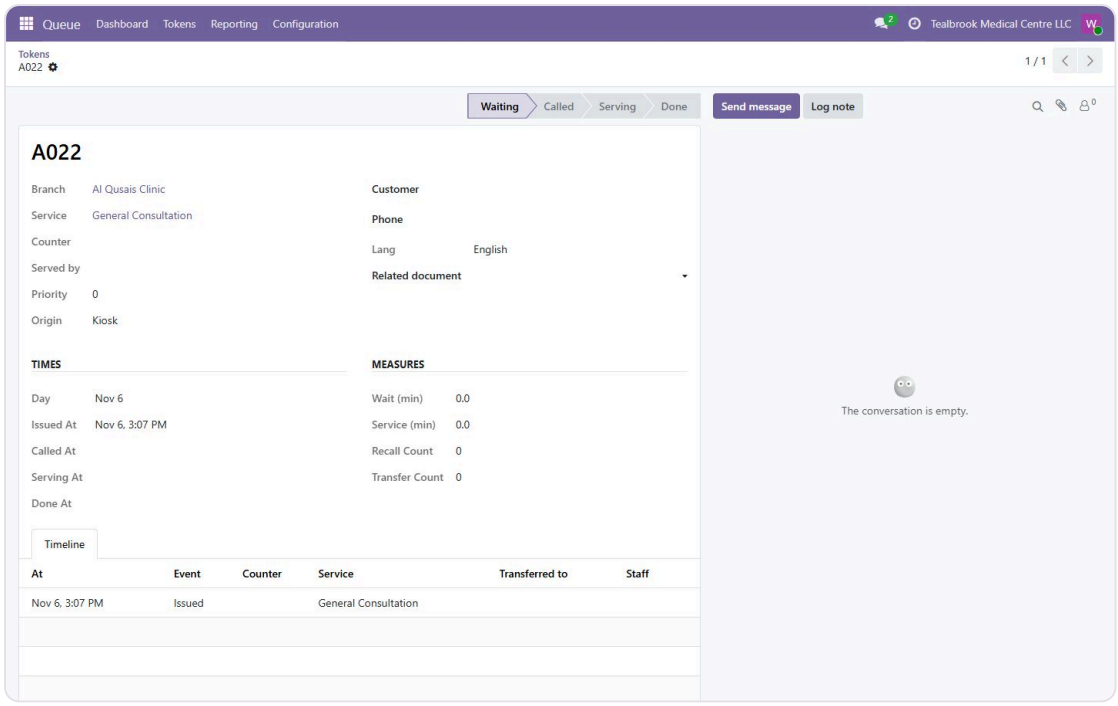

Token	Day	Service	Counter	Customer	Issued At	Wait (min)	Service (min)	Served by	State
Requested	Nov 6	General Consultation		Anita Hamdan		0.0	0.0		Requested
A015	Nov 6	General Consultation		Arjun Farouk	Nov 6, 3:15 PM	0.0	0.0		Waiting
A024	Nov 6	General Consultation			Nov 6, 3:14 PM	0.0	0.0		Waiting
R016	Nov 6	Registration and Insurance	Reception 2		Nov 6, 3:14 PM	1.1	0.0	Joseph Varghese	Serving
P009	Nov 6	Pharmacy		Sara Aziz	Nov 6, 3:13 PM	0.0	0.0		Waiting
P009	Nov 6	Pharmacy	Reception	Ali Aziz	Nov 6, 3:13 PM	0.4	5.1	Noura Saeed	Done
L009	Nov 6	Laboratory		Omar Rashid	Nov 6, 3:12 PM	0.0	0.0		Waiting
A023	Nov 6	General Consultation		Priya Nasser	Nov 6, 3:11 PM	0.0	0.0		Waiting
A014	Nov 6	General Consultation		Huda Iqbal	Nov 6, 3:11 PM	0.0	0.0		Waiting
D006	Nov 6	Dental			Nov 6, 3:10 PM	0.0	0.0		Waiting
R015	Nov 6	Registration and Insurance	Reception 1		Nov 6, 3:09 PM	0.5	2.6	Maryam Haddad	Done
P008	Nov 6	Pharmacy	Pharmacy desk		Nov 6, 3:08 PM	0.8	7.6	Imran Baig	Done
P008	Nov 6	Pharmacy	Pharmacy desk		Nov 6, 3:08 PM	8.8	0.0	Rohan Mehta	Serving
L005	Nov 6	Laboratory	Lab desk	Anita Hamdan	Nov 6, 3:07 PM	1.0	0.0	Aisha Noor	Serving
A013	Nov 6	General Consultation			Nov 6, 3:07 PM	0.0	0.0		Waiting
A022	Nov 6	General Consultation			Nov 6, 3:07 PM	0.0	0.0		Waiting
L008	Nov 6	Laboratory	Lab desk		Nov 6, 3:06 PM	7.3	0.0	Aisha Noor	Serving
A017	Nov 6	Pharmacy	Pharmacy desk	Faisal Iqbal	Nov 6, 3:05 PM	1.3	2.5	Rohan Mehta	Done
R014	Nov 6	Registration and Insurance	Reception 2		Nov 6, 3:05 PM	0.8	5.8	Joseph Varghese	Done

1

Queue, Tokens

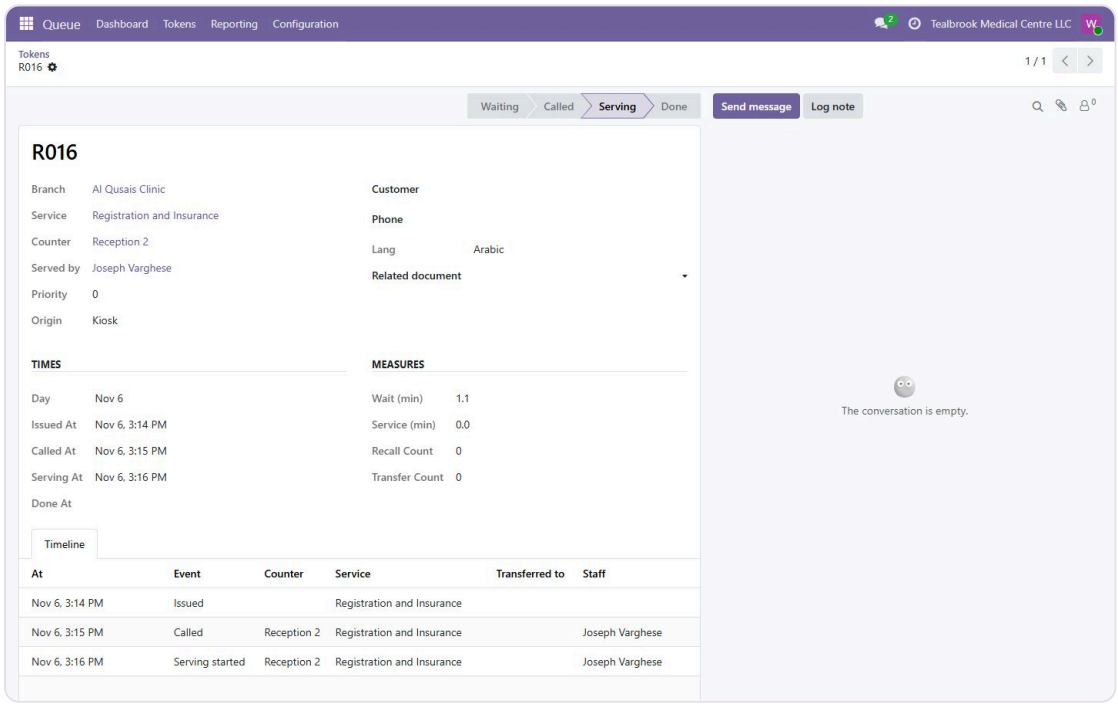

Opens on today. Each line has the number, service, counter, customer, issue time, wait and service minutes (with the average at the bottom), staff and status. Filters: Today, Last 7 days, Waiting, Called or serving, Done, No show, Requested from Odoo, With customer. Group by Service, Counter, Staff, Status or Day.

Tokens cannot be created here. They come from the hub, or from an appointment check-in.

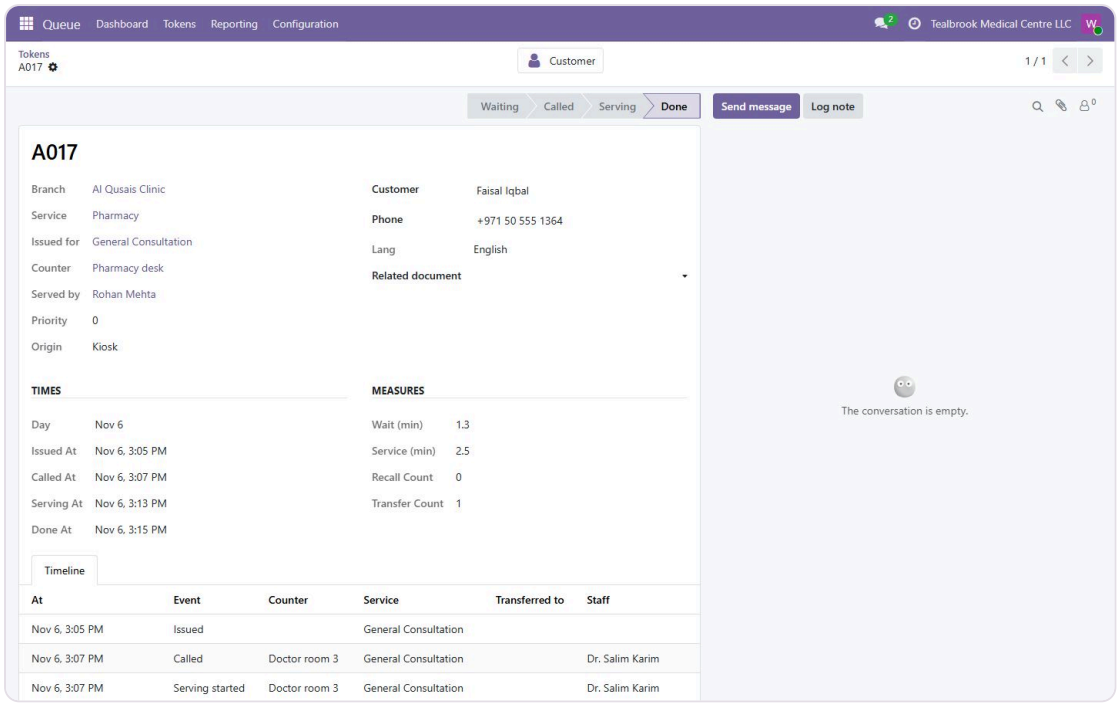

2 Waiting

Issued at the kiosk, in the line. No counter yet.

3 Serving

Called to a counter and started. The counter and the member of staff are filled from the event.

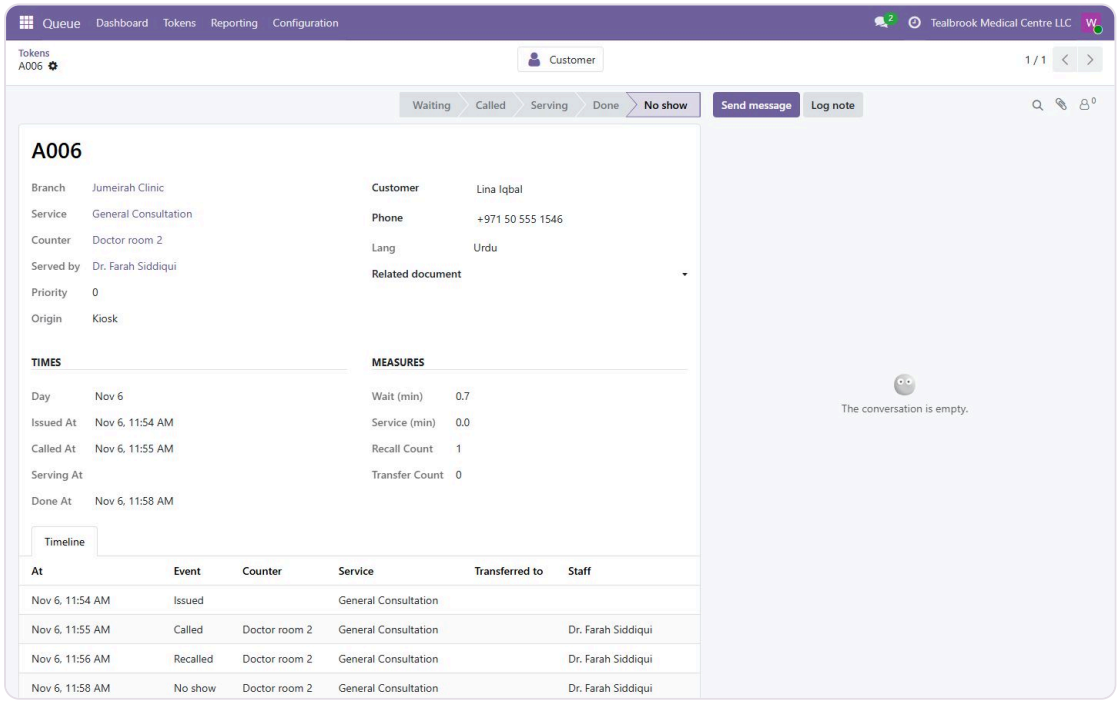

4

Done, after a transfer

Issued for General Consultation, seen in Doctor room 3, transferred to Pharmacy and finished at the Pharmacy desk. **Issued for** keeps the first service, **Service** shows the last. The wait counts to the first call; the transfer count is 1.

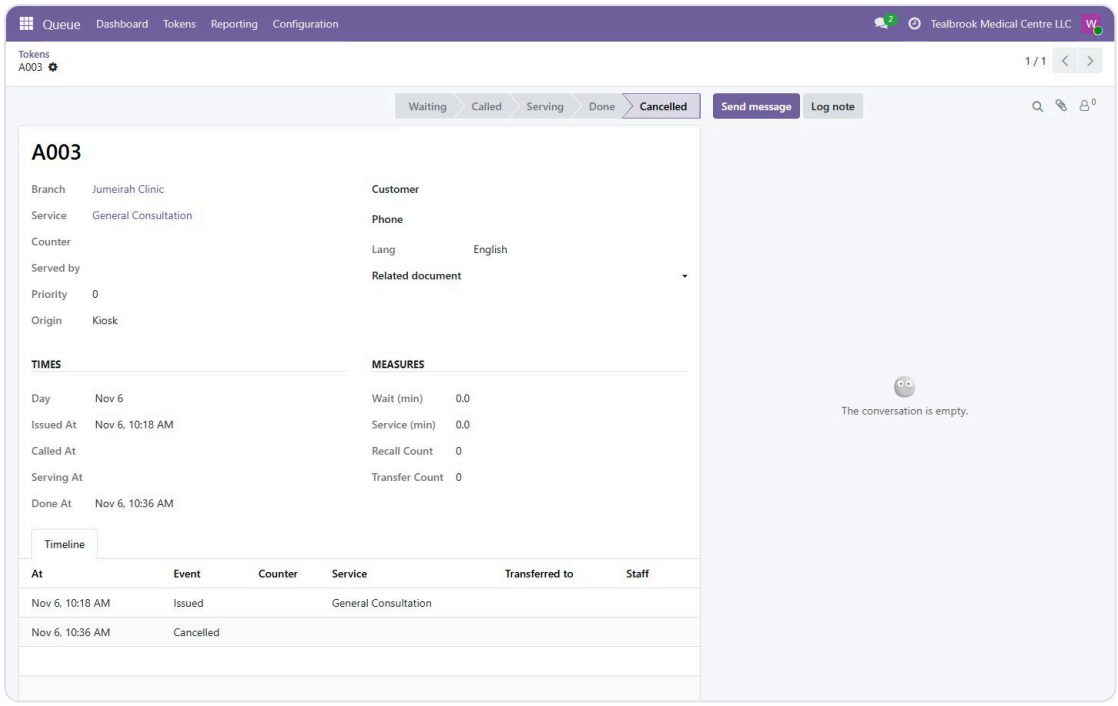

The customer kept the same number and the original time, so the pharmacy called them ahead of people who arrived later.

5

No show

Called, recalled once, then given up. The recall count shows on the token.

6 **Cancelled**

Cancelled before anyone called it.

Every field on the token

FIELD	MEANING
Branch, Service, Issued for	Where, which line now, which line at the kiosk
Counter, Served by	The last counter and the staff member who called it
Priority	The service priority; appointment check-ins get 5 more
Origin	Kiosk, Counter (issued by staff) or Odoo (appointment check-in)
Customer, Phone, Lang	The contact matched on the phone number, the number typed, and the kiosk language used
Appointment, Related document	The calendar event it came from, and an optional link to an appointment, task, helpdesk ticket, POS order or sales order where those apps are installed
Times	Day, issued, called, serving started and done
Measures	Wait and service minutes, recall count, transfer count

PART 9 Customers and appointments

The queue knows who is standing in it, and an appointment can join the line with one click.

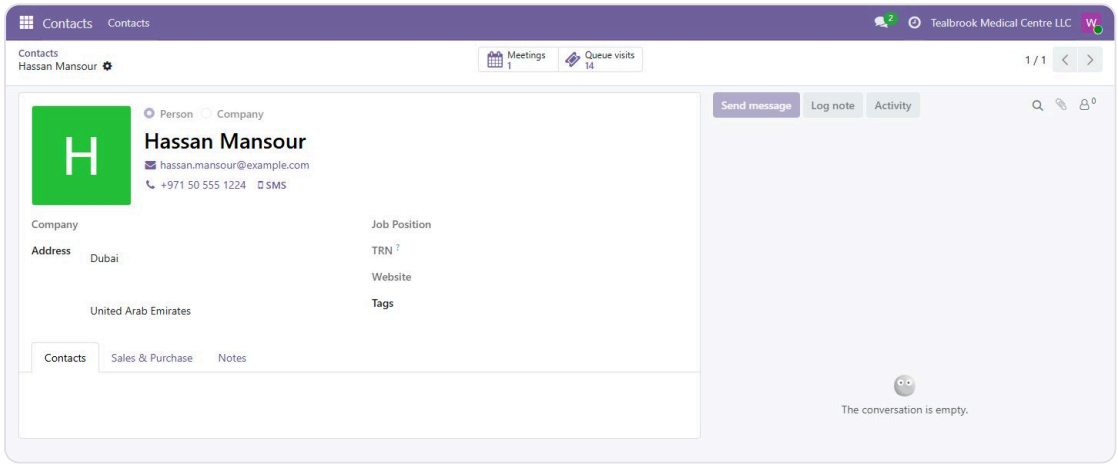

IN THIS PART YOU WILL LEARN

- How a phone number at the kiosk finds the Odoo contact
- Queue visits on a contact
- Checking an appointment in, and the Requested state

TRY IT YOURSELF ON THE DEMO

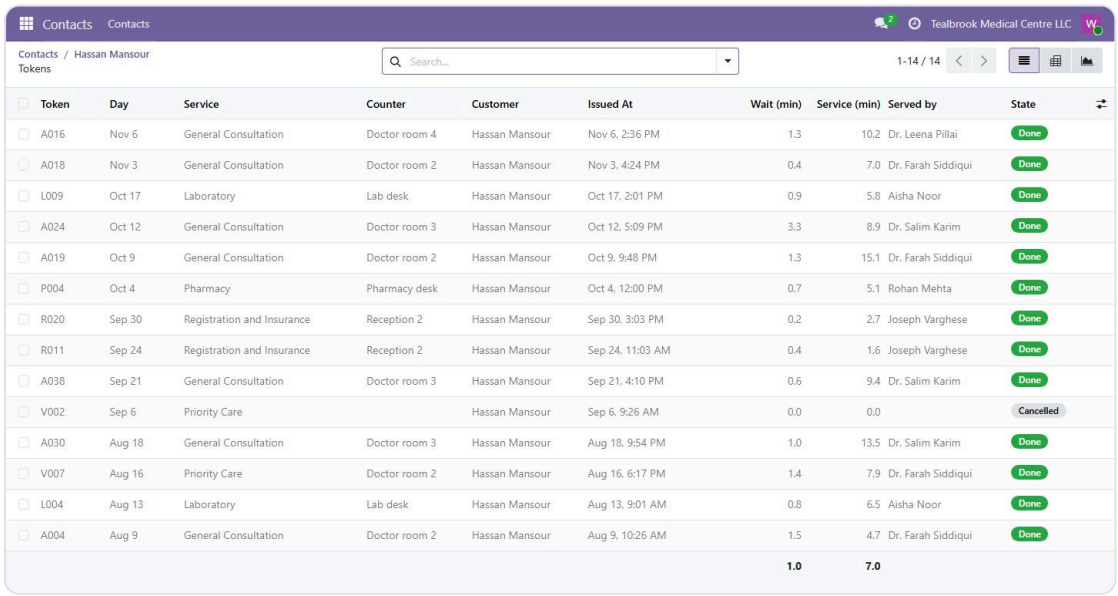

1. Open a contact with queue visits and click the Queue visits button.
2. Open this evening's appointment in Calendar and look for Check in to queue.

At the kiosk the customer may type a mobile number. Odoo compares the last nine digits with the phone on its contacts, so 050 555 1364 and +971 50 555 1364 are the same person. The ticket is linked to that contact, and when the counter calls it the counter bar shows the customer card: name, phone, email, how many visits were served, the last visit, and the first lines of the contact's internal notes.

1 Queue visits on a contact

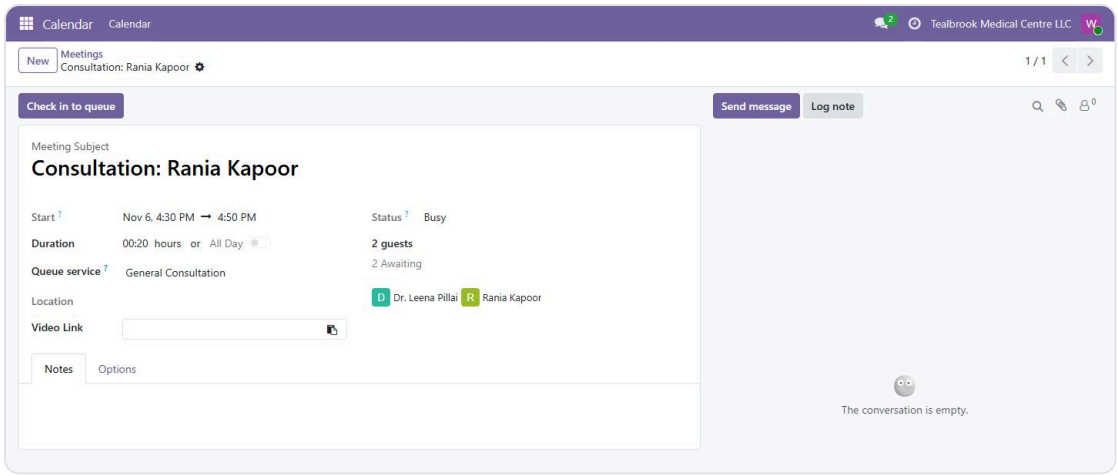

A **Queue visits** button appears on every contact who has taken a ticket. The notes on this contact are what the counter sees on the customer card.

Token	Day	Service	Counter	Customer	Issued At	Wait (min)	Service (min)	Served by	State
A016	Nov 6	General Consultation	Doctor room 4	Hassan Mansour	Nov 6, 2:36 PM	1.3	10.2	Dr. Leena Pillai	Done
A018	Nov 3	General Consultation	Doctor room 2	Hassan Mansour	Nov 3, 4:24 PM	0.4	7.0	Dr. Farah Siddiqui	Done
L009	Oct 17	Laboratory	Lab desk	Hassan Mansour	Oct 17, 2:01 PM	0.9	5.8	Aisha Noor	Done
A024	Oct 12	General Consultation	Doctor room 3	Hassan Mansour	Oct 12, 5:09 PM	3.3	8.9	Dr. Salim Karim	Done
A019	Oct 9	General Consultation	Doctor room 2	Hassan Mansour	Oct 9, 9:48 PM	1.3	15.1	Dr. Farah Siddiqui	Done
P004	Oct 4	Pharmacy	Pharmacy desk	Hassan Mansour	Oct 4, 12:00 PM	0.7	5.1	Rohan Mehta	Done
R020	Sep 30	Registration and Insurance	Reception 2	Hassan Mansour	Sep 30, 3:03 PM	0.2	2.7	Joseph Varghese	Done
R011	Sep 24	Registration and Insurance	Reception 2	Hassan Mansour	Sep 24, 11:03 AM	0.4	1.6	Joseph Varghese	Done
A038	Sep 21	General Consultation	Doctor room 3	Hassan Mansour	Sep 21, 4:10 PM	0.6	9.4	Dr. Salim Karim	Done
V002	Sep 6	Priority Care		Hassan Mansour	Sep 6, 9:26 AM	0.0	0.0		Cancelled
A030	Aug 18	General Consultation	Doctor room 3	Hassan Mansour	Aug 18, 9:54 PM	1.0	13.5	Dr. Salim Karim	Done
V007	Aug 16	Priority Care	Doctor room 2	Hassan Mansour	Aug 16, 6:17 PM	1.4	7.9	Dr. Farah Siddiqui	Done
L004	Aug 13	Laboratory	Lab desk	Hassan Mansour	Aug 13, 9:01 AM	0.8	6.5	Aisha Noor	Done
A004	Aug 9	General Consultation	Doctor room 2	Hassan Mansour	Aug 9, 10:26 AM	1.5	4.7	Dr. Farah Siddiqui	Done
						1.0	**7.0**		

2 The visits

Every ticket of that customer, at any branch, with service, counter, times and staff.

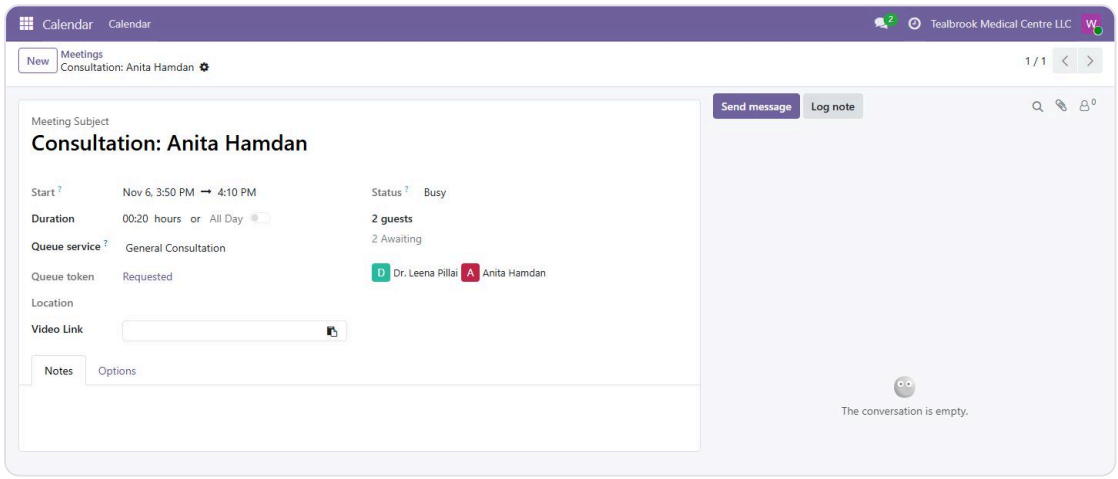

An appointment with a queue service

3

Set **Queue service** on a calendar event. When the customer arrives, click **Check in to queue**.

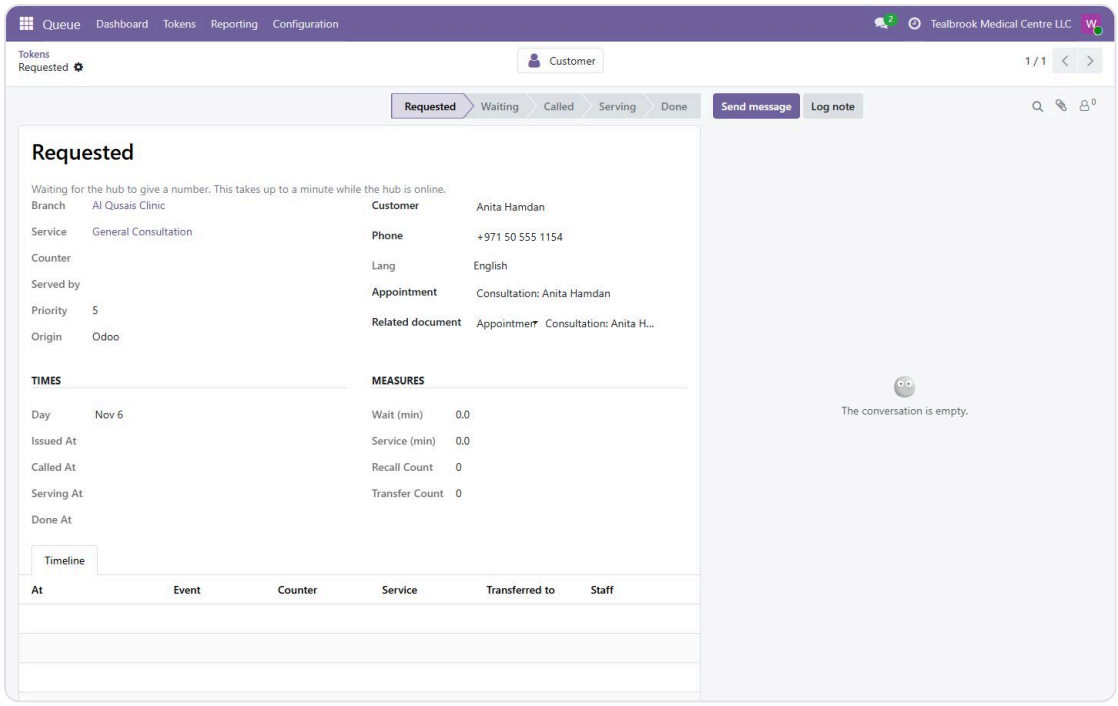

The button refuses if no queue service is set, if the appointment is already in the queue, or if the branch has no paired hub.

Checked in, waiting for a number

4

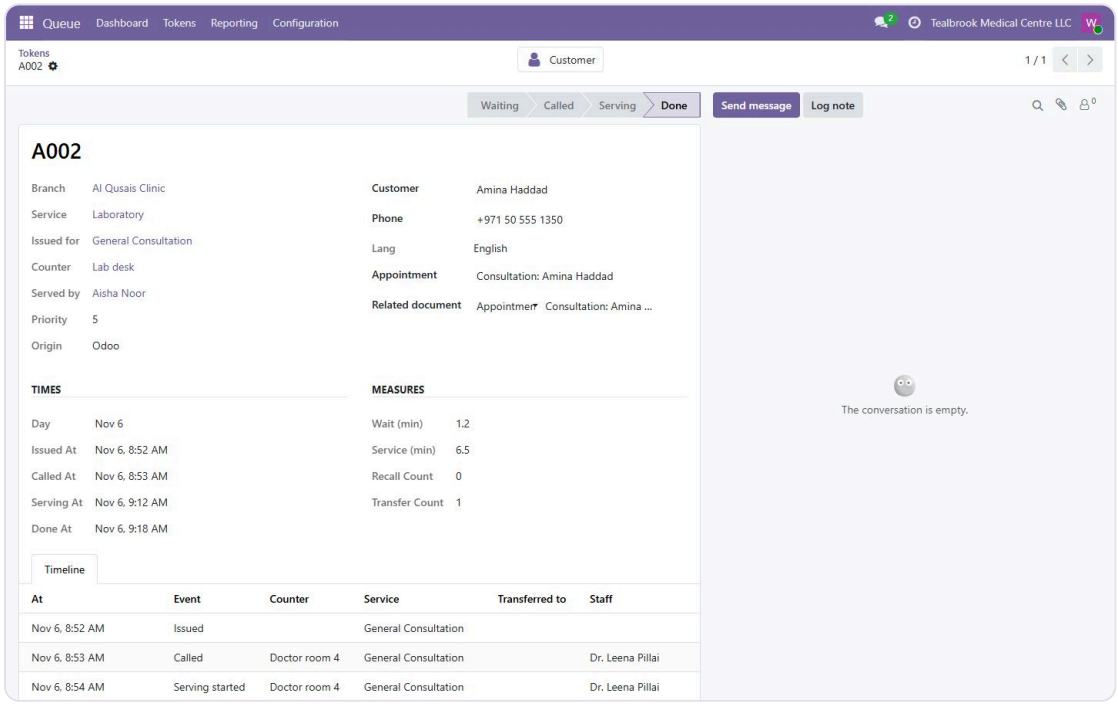

Check in creates a token in the **Requested** state and posts a note on the appointment. The button disappears and the Queue token field links to it.

The requested token

5 The hub picks requests up with its next heartbeat and gives a number within a minute, with priority 5 so the booked patient goes ahead of walk-ins.

On the demo this one stays Requested: there is no hub to collect it.

After the hub issued it

6 An earlier appointment: issued with origin Odoo, served, and linked back to its calendar event.

PART 10 Reporting

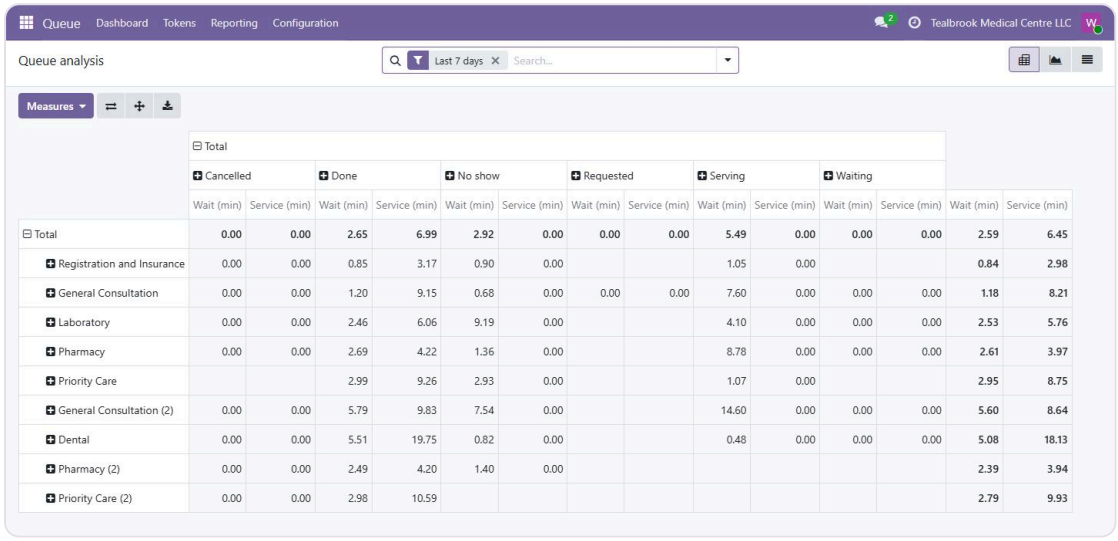

Waiting and service times by any cut you like, and a one-page PDF for the branch manager.

IN THIS PART YOU WILL LEARN

- Queue analysis as a pivot and a graph
- The Queue report PDF and what is on it

TRY IT YOURSELF ON THE DEMO

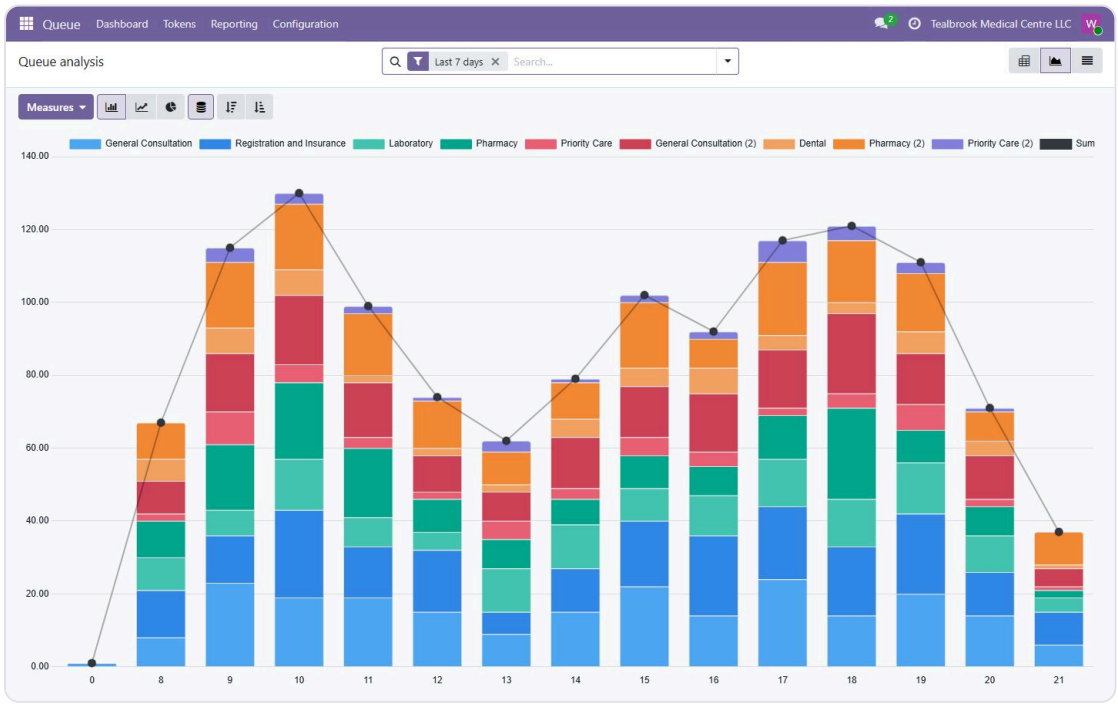

1. Reporting, Queue analysis. Swap the columns to Counter.
2. Reporting, Queue report (PDF): see the branch and dates, then Cancel.

	Total													
	Cancelled		Done		No show		Requested		Serving		Waiting			
	Wait (min)	Service (min)	Wait (min)	Service (min)	Wait (min)	Service (min)	Wait (min)	Service (min)	Wait (min)	Service (min)	Wait (min)	Service (min)	Wait (min)	Service (min)

Priority Care (2)	0.00	0.00	2.98	10.59									2.79	9.93

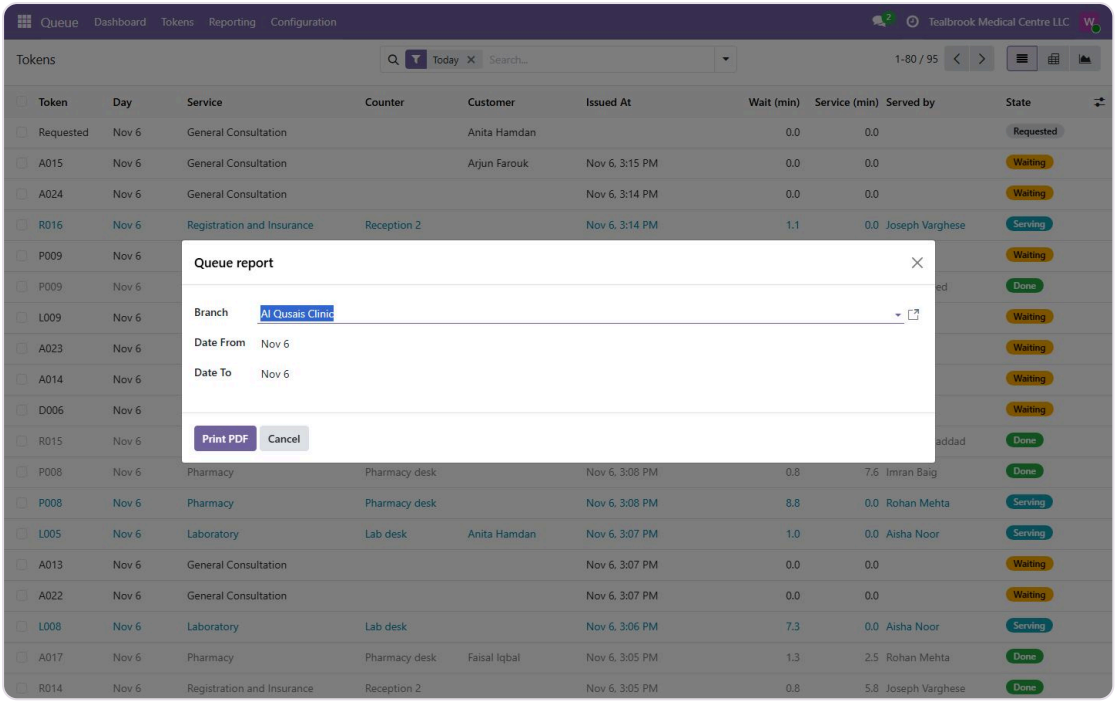

1 Queue analysis

Opens on the last seven days: services down the side, states across, with the average wait and service minutes. Group by counter, staff, day or hour instead.

2 Tickets by hour

The graph view stacks tickets per hour issued by service: the shape of the day.

Queue report (PDF)

3 Pick the branch and the dates (today by default) and click Print PDF. On the branch form, **Print today's report** does the same for today in one click.

By counter

Counter	Issued	Served	No show	Avg wait (min)	Longest wait (min)	Avg service (min)
Reception 1	554	523	31	1.2	5.0	4.0
Reception 2	504	482	22	0.9	4.6	3.0
Doctor room 3	537	511	26	1.5	13.0	8.9
Doctor room 4	513	493	20	1.5	15.6	9.0
Lab desk	596	576	20	2.4	28.3	6.0
Pharmacy desk	739	712	27	2.5	28.6	4.1

By staff

Staff	Issued	Served	No show	Avg wait (min)	Longest wait (min)	Avg service (min)
Dr. Salim Karim	537	511	26	1.5	13.0	8.9
Joseph Varghese	504	482	22	0.9	4.6	3.0
Dr. Leena Pillai	513	493	20	1.5	15.6	9.0
Maryam Haddad	554	523	31	1.2	5.0	4.0
Aisha Noor	596	576	20	2.4	28.3	6.0
Rohan Mehta	739	712	27	2.5	28.6	4.1

Tickets per hour

The Queue report for Al Qusais over the last 30 days: the branch total, then by service, by counter and by staff, each with issued, served, no shows, average and longest wait and average service, and a bar per hour.

> The PDF counts a ticket under the service it was issued for and the counter that last handled it. Requested tokens that never got a number are left out.

PART 11 What the customer sees

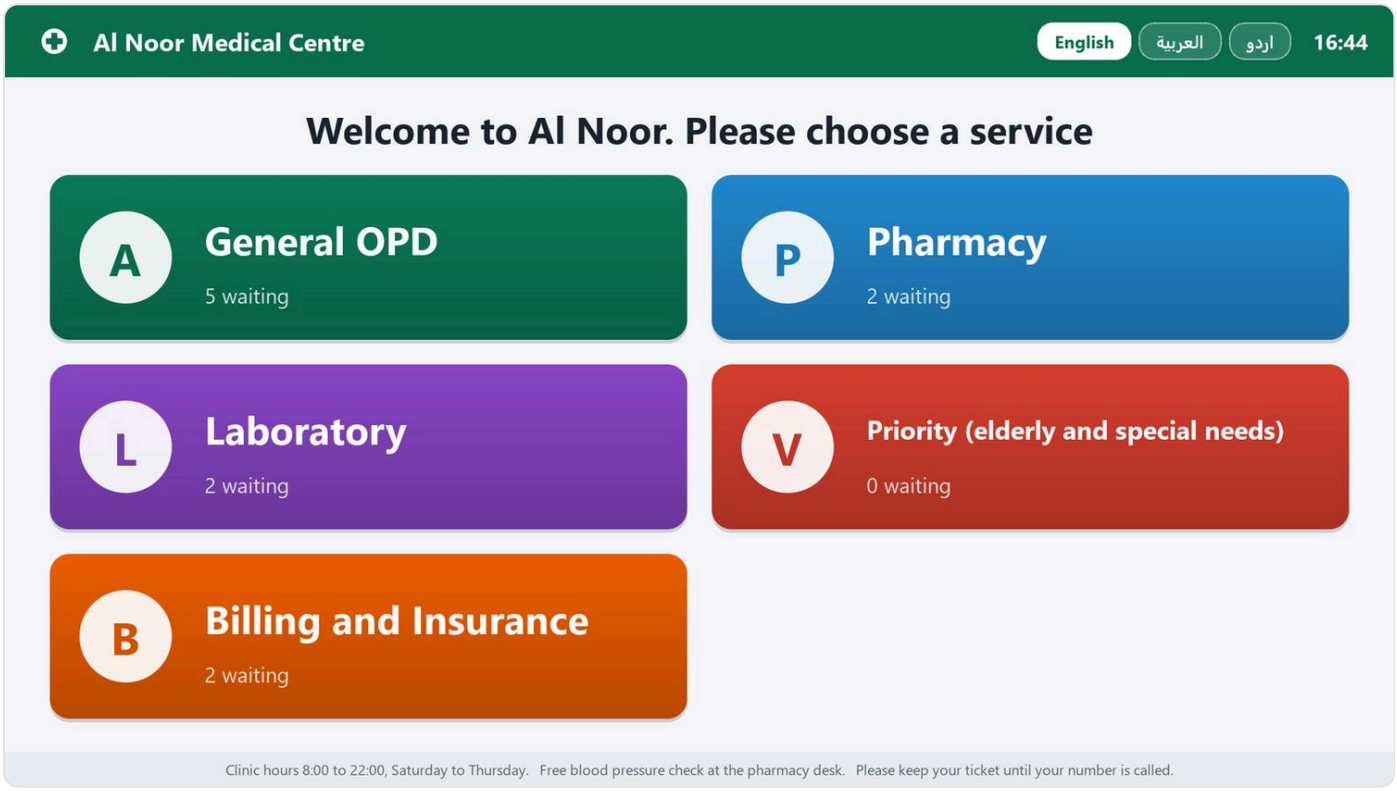

The kiosk, the ticket, the TV and the counter bar run in the free WT Queue app for Windows. The phone page behind the ticket's QR code is served by Odoo.

IN THIS PART YOU WILL LEARN

- The kiosk in three languages, landscape or portrait
- The printed ticket and its QR code
- The TV display and the counter bar
- Following your turn on a phone

> The kiosk, TV and counter pictures in this part are from the WT Queue app's own test branch (Al Noor Medical Centre, invented). In a real branch they carry your branch name, logo, colours and services from Odoo.

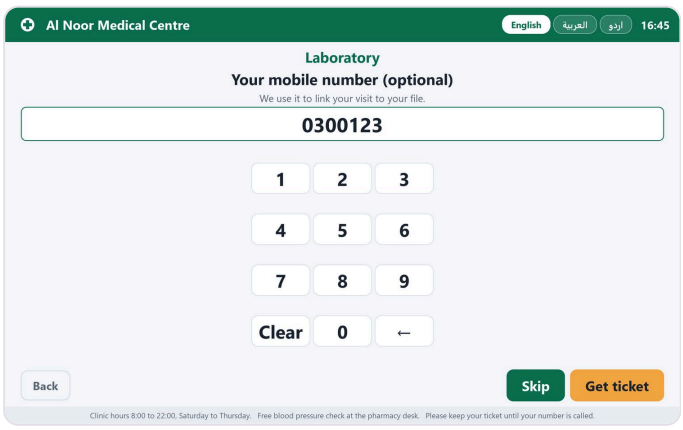

The kiosk

Kiosk, landscape. One big button per service with its letter and the number waiting.

Arabic, laid out right to left.

The optional mobile number, matched to the contact.

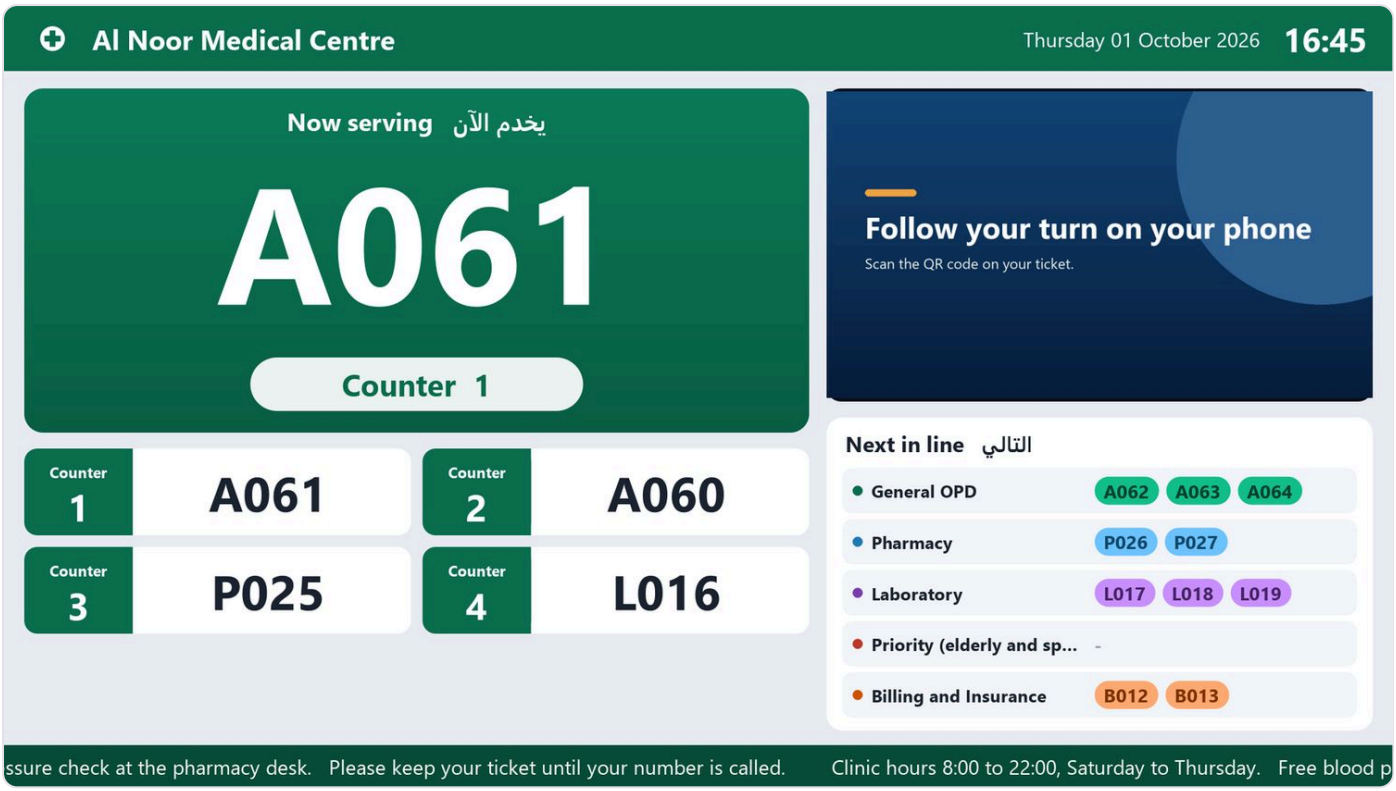

Portrait screen, in Urdu.

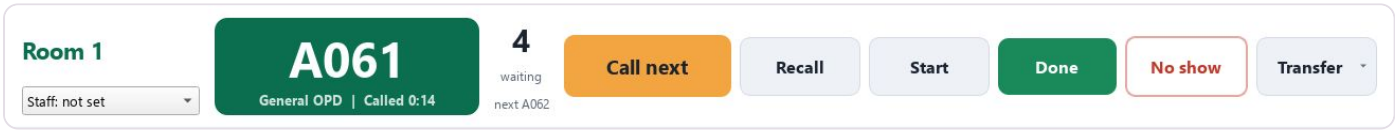

The printed ticket: number, people ahead, estimated wait, QR code. It prints as a picture, so Arabic and Urdu come out right.

The TV display

TV display. The number being called, big and flashing, with a chime and a spoken call; every counter; next in line per service; the media loop from Odoo; the ticker along the bottom.

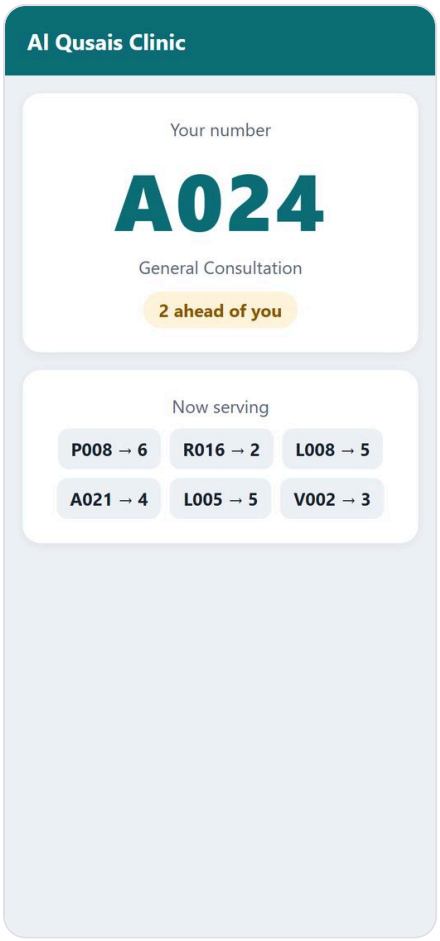

The counter bar

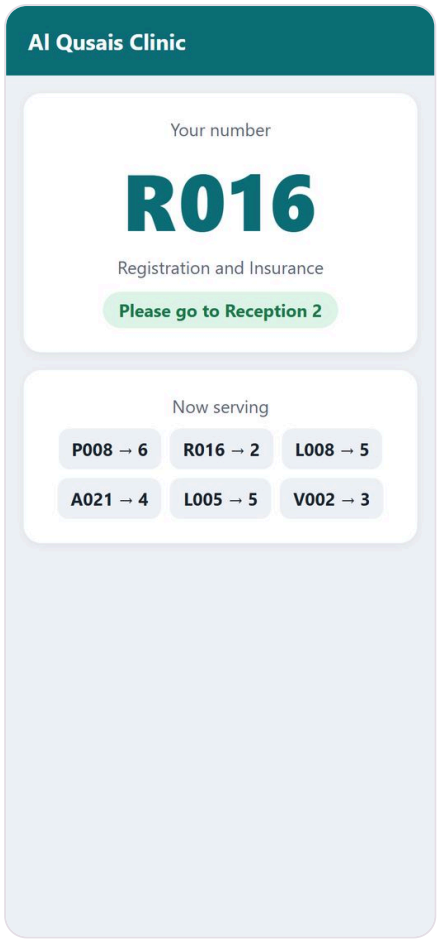

Counter bar. A thin window on top of the staff member's other work: Call next, Recall, Start, Done, No show and Transfer, with F1 to F5 shortcuts.

On the customer's phone

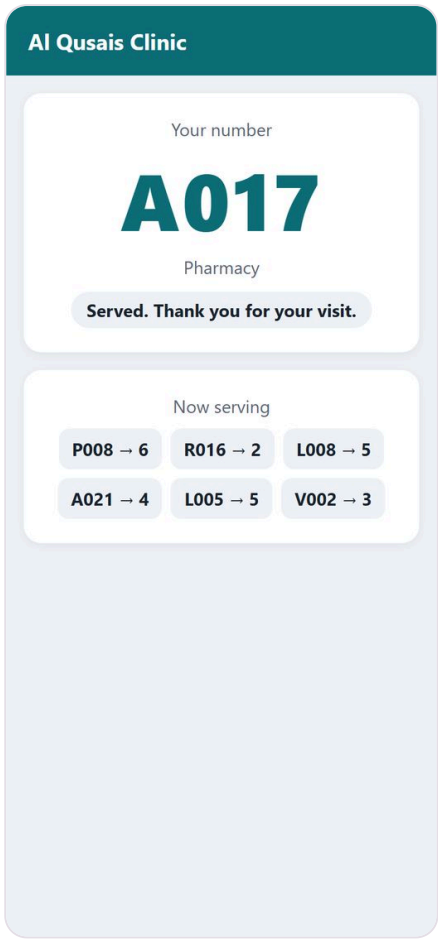

The QR code opens **/queue/track/** on your Odoo with the ticket and a short signature, so nobody can look up somebody else's ticket by guessing. The page refreshes every 20 seconds and is hidden from search engines.

Waiting: how many are ahead in the same line.

Called: which counter to go to.

Served, with the numbers being called now.

If the ticket has not reached Odoo yet, for example during an internet outage, the page says it is being registered and keeps refreshing.

PART 12 A fifteen minute walk-through

If you have the demo open and fifteen minutes, this path shows the whole system, and it is the order to show it to somebody else in.

#	DO THIS	AND NOTICE
1	Queue, Dashboard	*Waiting now, at a counter, served, the averages and the longest wait at Al Qusais today.*
2	Switch the drop-down to Jumeirah Clinic	*Dental is the slow line; the hour chart shows the afternoon rush.*
3	Click Waiting now	*The tickets behind the number, oldest first by issue time.*
4	Queue, Tokens, open a token with a transfer	*Issued for one service, finished in another, same number.*
5	Open a no show	*Called, recalled, given up: the timeline proves it.*
6	Open a customer from a token	*Queue visits on the contact, and the notes the counter sees.*
7	Calendar, an appointment this evening	*Queue service set, Check in to queue ready.*
8	The appointment already checked in	*A token in Requested, waiting for the hub to give a number.*
9	Configuration, Branches, Al Qusais	*Setup checklist, pairing code, LAN join code, the Hub tab with its devices.*
10	Branding and languages tab	*Colours, Arabic and Urdu, the call languages and the TV ticker.*
11	Reporting, Queue analysis	*Average wait and service by service, then by counter or staff.*
12	Part 11 of this guide	*The kiosk, the ticket, the TV and the phone page a customer sees.*

Questions people ask

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community and needs only Contacts and Calendar.
Is the Windows app paid?	No. WT Queue is a free download from way4tech.com and updates itself with signed releases.
What hardware do I need?	Windows 10 or 11 PCs on the branch network (one PC can drive several screens), any ESC/POS thermal printer of 58 or 80 mm, and a TV on HDMI.
What happens when the internet drops?	The branch carries on. The hub issues and serves as normal and sends the timeline to Odoo when the line is back.
And when the hub PC is off?	Kiosks show that service is paused and nothing is issued elsewhere, so numbers never clash. Start the hub again.
Can two PCs give out numbers for one branch?	No. One hub per branch. A replacement hub is paired with a new pairing code and carries on from the highest number used today.
Can a customer skip the line?	Give a service a higher priority, for example elderly care, and its tickets are called first. Appointment check-ins also go ahead of walk-ins.

Does a transferred customer go to the back?	No. Transfer keeps the number and the original time.
Does it send SMS or WhatsApp when a number is called?	No. The customer follows the turn on the phone page behind the QR code on the ticket.
Can I see yesterday on the dashboard?	No, the dashboard shows today. Use Queue analysis or the PDF report for any dates.

PART 13

The menu map

Every screen in the module, on one page.

Dashboard

Dashboard	Today per branch: waiting, at a counter, served, averages, per service and counter, per hour, latest activity

Tokens

Tokens	Every ticket with its customer, counter, staff, times and timeline

Reporting

Queue analysis	Pivot and graph of waiting and service times
Queue report (PDF)	Branch, dates: by service, counter, staff and hour

Configuration

Branches	Time zone, pairing, setup checklist, hub, branding, languages
Services	Letter, priority, average minutes, colour, names in three languages
Counters	Number, services, staff, current ticket
Display media	Pictures and videos for the TV loop

Elsewhere in Odoo

Contacts	Queue visits button on each contact
Calendar	Queue service and Check in to queue on an appointment
/queue/track/	The phone page behind the QR code on the ticket

Want this in your branches?

We set up the branches, services and counters with you, install WT Queue on the branch PCs, pair the hubs, set the printer, the voices and the TV media, and train reception and the counters. The same module runs one clinic or a network of branches.
