COMPLETE GUIDE · SETUP, THE DISPLAY, TICKETS AND PREPARATION TIME

POS Kitchen Display System for Odoo 19

Replace the printed docket with a screen per station: orders from the Odoo Point of Sale split by category, colour-coded by how long they have waited, and timed to the second so you can see which dish slows the service. Every screen and every step, shown on a live demo.

START

About this guide

A printed docket tells the kitchen what to cook and nothing else. It cannot say how long an order has waited, cannot be split between the grill and the bar, and once it is in the bin the service cannot be measured. This module puts all three on a screen, using nothing but the Odoo Point of Sale.

Who it is for

The owner or manager setting up the screens, the chefs and bar staff who work them, and whoever reads the preparation times afterwards.

How to read it

Front to back the first time. Each part opens with what you will learn and something short to try on the demo.

The live demo

Bella Vista Bistro, a restaurant with a Kitchen screen for the grill and desserts and a Bar screen for drinks, a week of timed tickets and a live board.

HOW IT WORKS

The demo kitchen

Address	**kds-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Screens	Kitchen (KIT): Grill and Desserts · Bar (BAR): Bar
Runs on	Odoo 19 Community with Point of Sale and the restaurant features

The demo is shared and resets from time to time. Anything you tap on the display changes the ticket for the next visitor too.

Two Way4Tech kitchen displays. This guide covers **POS Kitchen Display System** (wt_pos_kitchen_display, USD 39), a single module for any Odoo Point of Sale. It is not the Restaurant Kitchen Display of the Way4Tech Restaurant Suite (w4_resto_kds, USD 149), which adds expo, kitchen printers and the suite's branch features, and has its own guide. Part 1 explains which fits which kitchen.

What is in the guide

PART 1	How a kitchen display works	PART 2	The module at a glance
PART 3	Open the demo and sign in	PART 4	Set the screens up from zero
PART 5	How an order reaches the kitchen	PART 6	The display
PART 7	Tickets in the back office	PART 8	Preparation time and the reports
PART 9	The kitchen docket	PART 10	A 10-minute demo script
PART 11	Questions people ask, and the limits	PART 12	Menu map

PART 1 How a kitchen display works

Three ideas carry the whole module: a screen is defined by what it cooks, one till order becomes one ticket per screen, and every time is stamped by the server.

IN THIS PART YOU WILL LEARN

- Screens, categories and tills
- Why one order becomes several tickets
- The four ticket states and what each one means in the kitchen
- Preparation time against time on the pass
- When to choose this module and when the Restaurant Suite

A screen is what it cooks

A **screen** is one display in the kitchen: the grill, the bar, desserts. It says which **POS categories** belong to it, and optionally which **tills** it listens to. The bar screen never shows a burger and the grill never shows a gin and tonic, because every item is routed by its POS category.

One order, one ticket per screen

A table orders a steak, a sea bass and two cocktails

1. **Till** — The order is saved in the Point of Sale
2. **Routing** — Each item is matched to the screens that cook its category
3. **Kitchen ticket** — Steak and sea bass, its own clock
4. **Bar ticket** — Two cocktails, its own clock

Each ticket carries only its own items and its own clock, so a slow bar does not make the grill look slow. A till order has at most one open ticket on each screen: send it again and the ticket is updated, never duplicated.

Four states

STATE	MEANS	STAMPED
New	Sent by the till, nobody has picked it up	Sent
Preparing	Somebody is cooking it	Started
Ready	Plated and on the pass	Ready
Served	Left the kitchen	Served
Cancelled	Nothing left to cook on this screen	

Each time is written by the server the moment the state changes. A tablet with a wrong clock cannot change a figure, and a cook cannot type a time in: only a user with the Configure Screens right may write the times directly.

Two numbers, not one

HOW IT WORKS

What the module measures

Preparation	sent to ready: how long the kitchen took
On the pass	ready to served: how long the plate waited for a waiter
Total	sent to served
Per item	sent to the moment that item was ticked done

Keeping the pass time apart means a slow front of house does not read as a slow kitchen. The per-item time is what tells you which dish holds a service up, rather than which order was unlucky.

This module or the Restaurant Suite

	POS KITCHEN DISPLAY SYSTEM (THIS GUIDE)	RESTAURANT KITCHEN DISPLAY (SUITE)
Technical name	wt_pos_kitchen_display	w4_resto_kds
Price	USD 39	USD 149, needs the free Suite Base
Needs	Point of Sale only	The Restaurant Suite base module
Routing	By POS category, per screen, optional per till	By station, with an expo view
Kitchen printers	A printable docket (PDF) only	Network and Windows printers through POS Print Anywhere
Timing reports	Per ticket, per dish, per hour, target per dish	Kitchen times per dish, station and hour
Fits	Any POS that wants screens and honest times, cheaply	Restaurants running the whole Suite

PART 2 The module at a glance

The module adds one app, Kitchen, with four menus. Two rights decide who sees what.

Work the Kitchen

Open the display, move tickets along, tick items off. Sees Display and Tickets. A cashier needs no kitchen right at all: orders still reach the screens.

Configure Screens

Everything above, plus Reporting and Configuration: screens, stages, target times on products, and the preparation figures. The administrator gets it on install.

Screens, tickets, items and stages are each limited to the companies the user may see, so a group with several companies keeps each kitchen apart.

> The demo login has Configure Screens so you can follow every part.

Kitchen

Display	The full-screen kitchen display. Pick a screen, work the tickets
Tickets	Every ticket: list, form, pivot and graph, with Start, Ready, Served

Configuration (Configure Screens)

Screens	Which tills and categories each screen takes, colour bands, clearing
Stages	Your own names for New, Preparing, Ready and Served

Reporting (Configure Screens)

Preparation Time	A date range, by screen, product or hour, with the slowest ticket
Tickets Analysis	Pivot and graph of tickets: preparation, pass and total time
Items by Product	Pivot and graph of items: which dish holds the service up

Elsewhere in Odoo

Product form	Target Preparation (min), in a Kitchen Display block
POS orders	Action menu: Send to Kitchen
Kitchen Docket	Printable ticket from any ticket
Scheduled action	"Kitchen Display: clear served tickets", every 5 minutes

PART 3 Open the demo and sign in

Everything in this guide can be followed on the live demo, a real Odoo 19 restaurant with two screens already working.

TRY IT YOURSELF ON THE DEMO

1. Open kds-demo.way4tech.com and sign in with w4demo and Demo2026
2. Click Kitchen on the home screen, then Display
3. Pick Kitchen in the box at the top right

1

Go to the kitchen

Open **kds-demo.way4tech.com**. The sign-in screen is the standard Odoo one.

Any tablet, phone or computer with a browser can be a kitchen screen. There is nothing to install on the device.

2

Sign in

User `w4demo`, password `Demo2026`.

The demo is shared. A tap on the display moves the ticket for everybody.

3

Find the app

The **Kitchen** app is on the home screen, next to Point of Sale. Inside it: Display, Tickets, Reporting and Configuration.

PART 4 Set the screens up from zero

A kitchen display needs three things before the first ticket: products in POS categories, a screen for each station that says which categories it cooks, and the people who will work it. Target times per dish are optional and worth the five minutes.

IN THIS PART YOU WILL LEARN

- Installing the module and the two user rights
- A screen, field by field: what it shows, how it behaves, colour bands
- Stages: your own names on the four states
- Target preparation time on a product
- The clean-up job that empties served tickets

TRY IT YOURSELF ON THE DEMO

1. Configuration, Screens, open Kitchen
2. Note it takes Grill and Desserts, turns amber at 5 and red at 10 minutes
3. Open Bar: amber at 3, red at 6

Install

The module is **POS Kitchen Display System**, technical name `wt_pos_kitchen_display`. It depends on Point of Sale and Discuss only, and works with the restaurant features of the Point of Sale or without them. On install it adds the Kitchen app, four stages, a ticket sequence KDS/, the docket report and a scheduled clean-up, and gives the administrator the Configure Screens right.

Then give each user a right under **Kitchen Display** on their user form: **Work the Kitchen** for chefs and bar staff, **Configure Screens** for the manager. Cashiers need neither.

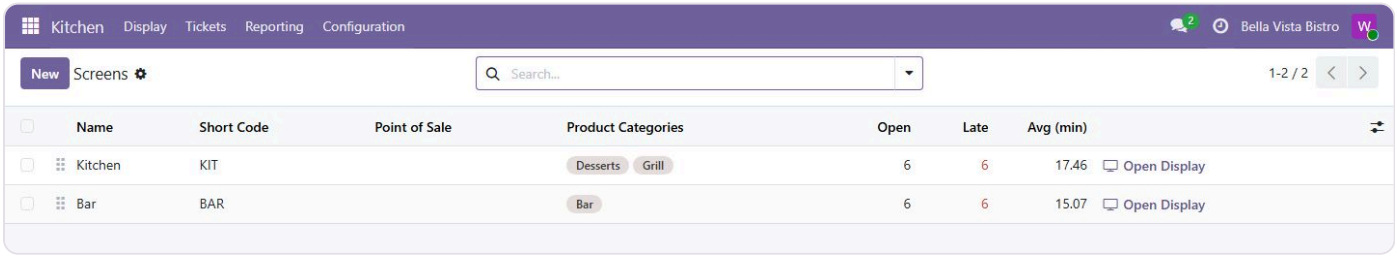

Products in POS categories

Routing is by POS category, so every product the kitchen cooks needs one: Grill, Bar, Desserts and so on, set on the product's Point of Sale tab. A screen that takes a parent category also takes its children.

A screen

1 Configuration, Screens

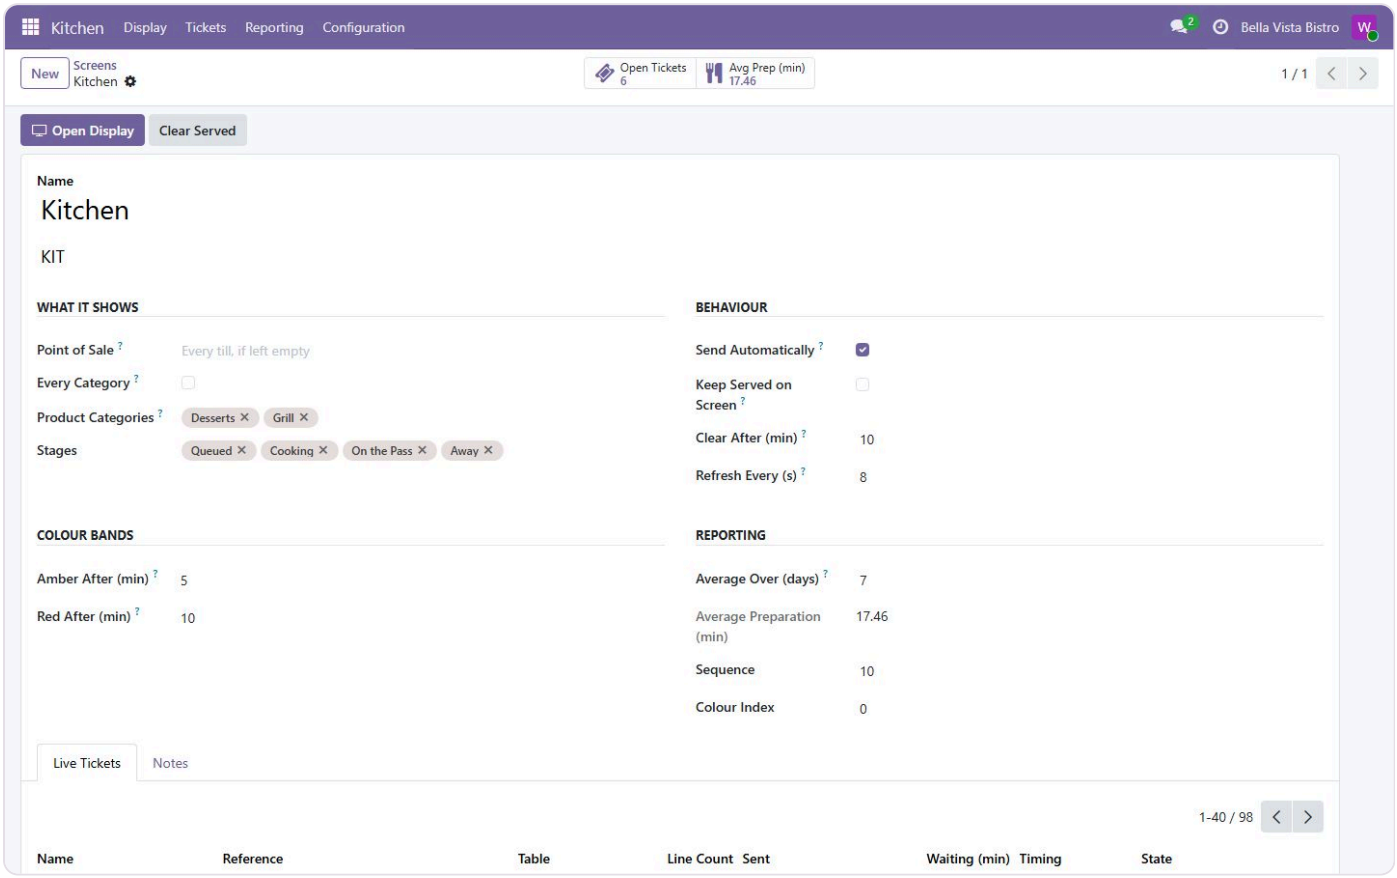

One line per physical display, with its code, the tills and categories it takes, how many tickets are open and late now, and its average preparation time. **Open Display** on each line opens that screen full size.

2 What it shows

Name and a two or three letter **code** printed on the docket. **Point of Sale**: the tills it listens to, empty for every till in the company. **Product Categories**: what it cooks. **Every Category**: show everything, for a single-screen kitchen or an expediter. **Stages**: the stage names it uses.

A screen with no categories and Every Category off would never show anything, so it cannot be saved. A till from another company is refused too, because it could never reach this screen.

3 Behaviour

Send Automatically: raise tickets as soon as the till saves an order (off for a screen you feed by hand). **Keep Served on Screen**: leave served tickets visible until they are cleared. **Clear After (min)**: how long after serving a ticket is archived, 10 by default, 0 to keep it. **Refresh Every (s)**: how often the display asks for new tickets, 8 by default.

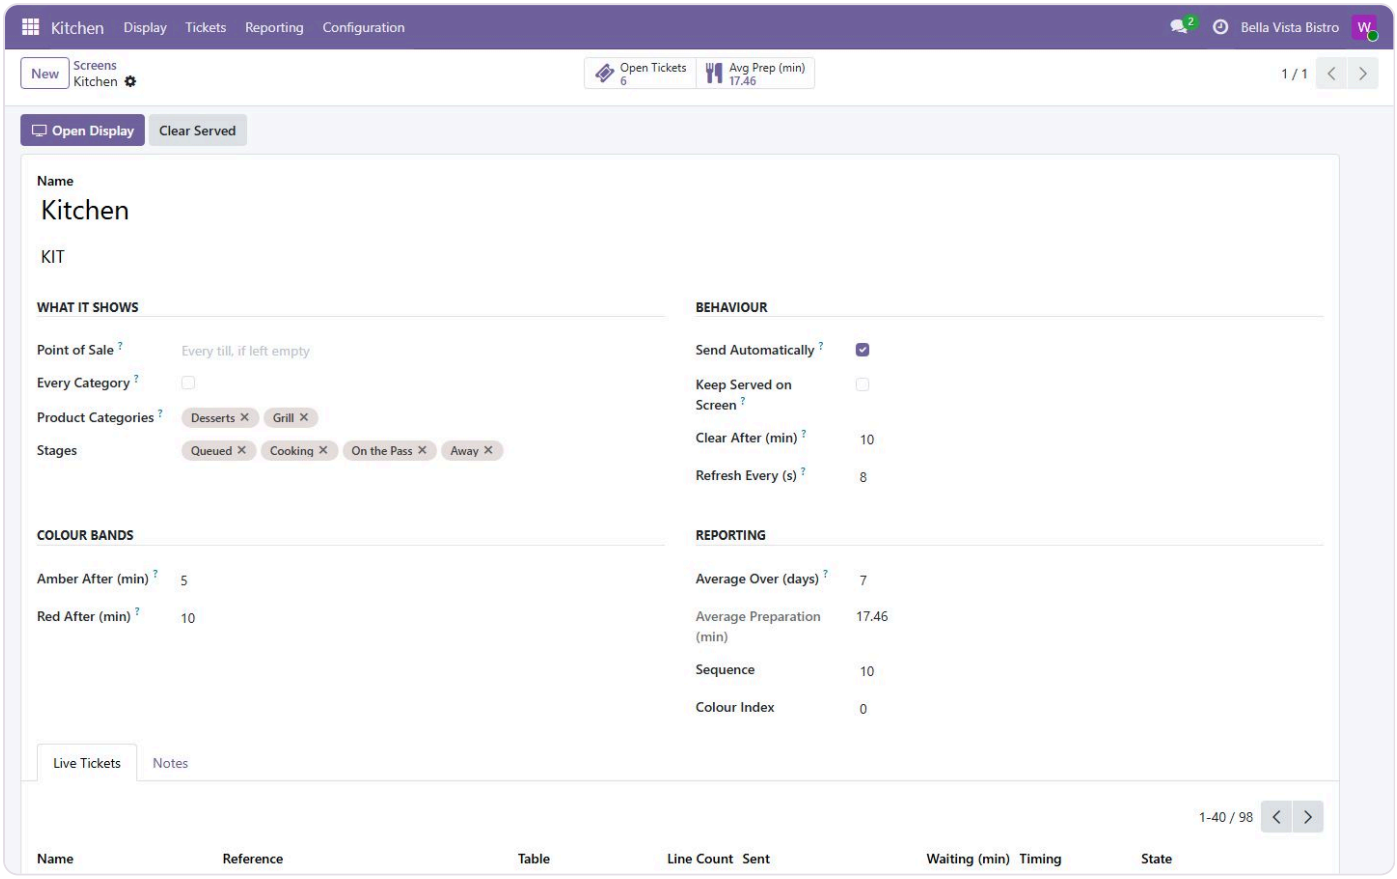

4 Colour bands and reporting

Amber After and **Red After** in minutes, per screen, because a bar and a grill do not work to the same clock. **Average Over (days)** is the window for the screen's average preparation time.

Red cannot be lower than amber, and neither can be negative. The display refresh cannot be set below one second, and the average window is at least one day.

5 Live Tickets and Notes

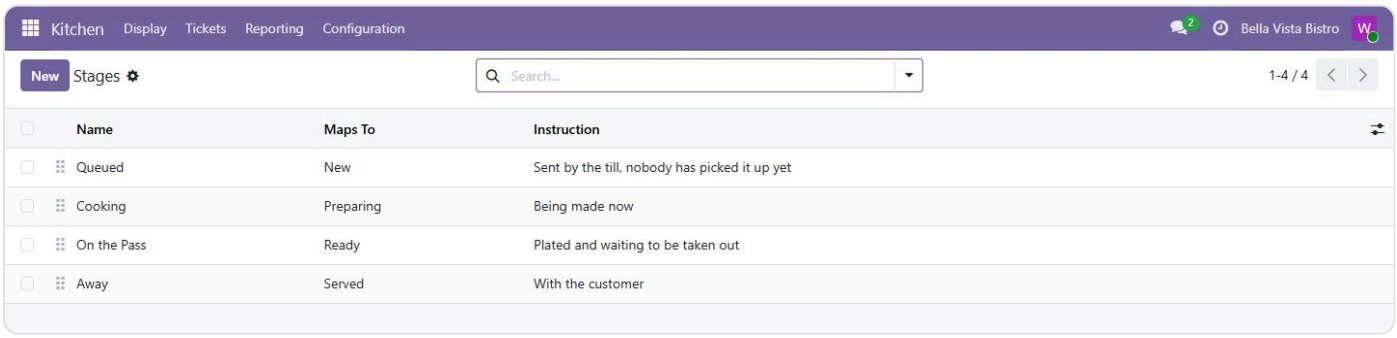

The screen's own tickets with reference, table, item count, sent time, minutes waiting, timing and state, and a free notes tab. **Clear Served** at the top archives every served and cancelled ticket on this screen at once.

Stages

6 Configuration, Stages

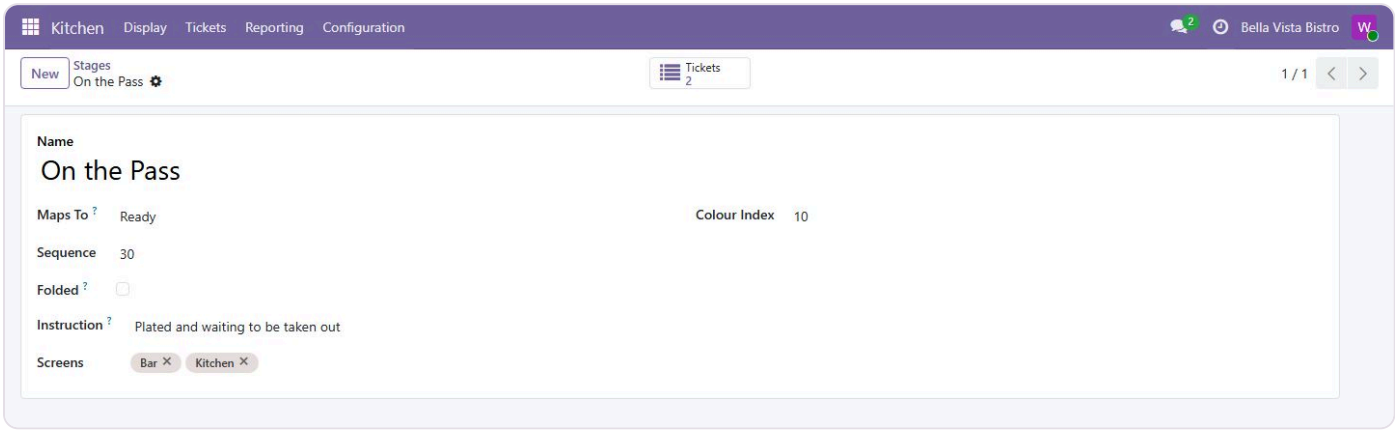

Four stages are loaded: **Queued** (New), **Cooking** (Preparing), **On the Pass** (Ready) and **Away** (Served, folded). A kitchen can rename them or add its own, as long as each **Maps To** one of the four states. Timing is measured on the state, so two sites with different column names still compare.

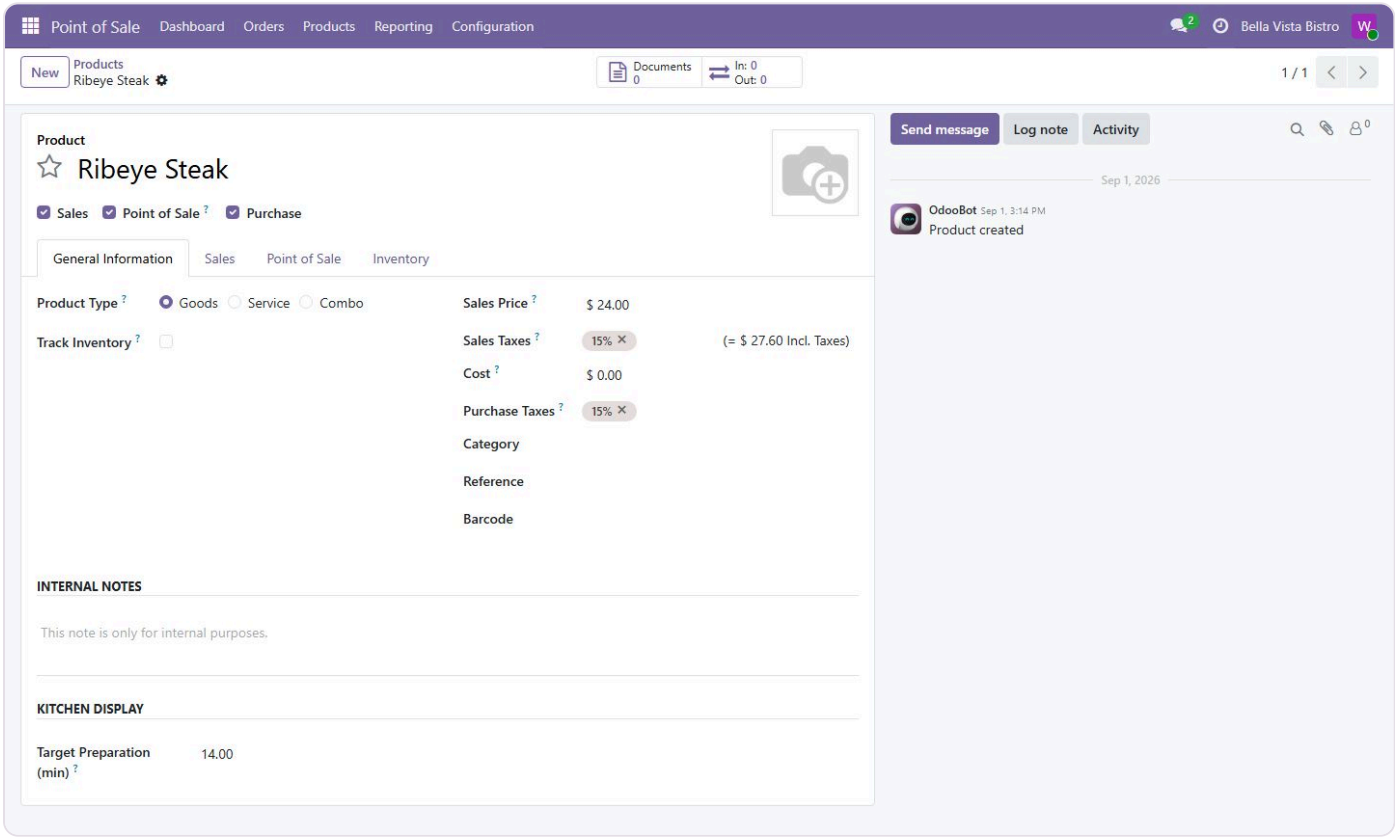

7 A stage

Name, sequence, the state it maps to, folded, colour, an **Instruction** line, an optional company, and the screens that use it. The Tickets button lists the tickets in it.

The full-screen display shows tickets as cards in a single grid, not in columns per stage, and does not show the instruction line. Stages show on the ticket form and in the reports.

Target time per dish

Point of Sale, Products, Ribeye Steak: the Kitchen Display block at the bottom of the form holds the Target Preparation (min). Only Configure Screens users see it.

A ticket's target is the longest target among its items. A ticket called ready after its target is **Over Target**, and so is any item ticked done after its own. Leave the target at zero for things you do not want measured, such as bottled drinks.

The clean-up job

Kitchen Display: clear served tickets runs every five minutes for every company. It archives served and cancelled tickets once their screen's Clear After delay has passed, so nobody tidies the screen mid service. Archived tickets stay in every report; the Archived filter on Tickets shows them.

PART 5 How an order reaches the kitchen

Nobody types a ticket. The till already knows what was ordered, so the module reads the order when the Point of Sale saves it and cuts it into one ticket per screen.

IN THIS PART YOU WILL LEARN

- When tickets are raised, and why a cashier needs no kitchen rights
- What a ticket takes from the till order
- What happens when the order changes after it was sent
- Send to Kitchen by hand from the POS orders list

Automatic, from the till

Whenever a POS order is created on the Odoo server, and whenever its lines change, the module works out which active screens of that company listen to that till and which of the order's items each screen cooks. A screen with something to do gets a ticket. This runs in the background with its own rights inside a safe block, so a cashier with no kitchen rights still feeds the kitchen, and a badly set up screen never stops a sale.

FROM THE TILL ORDER	ON THE TICKET
Receipt number	Reference
Table, or the collection number	Table
Customer	Customer
General note on the order	Order Note
Each line: product, quantity, name with options, note	One item each
Till and session	Point of Sale and Session (Source tab)

Refund lines, with a negative quantity, are left out: nobody cooks a refund. A cancelled order raises nothing.

When the order changes

- **Re-sent, never duplicated.** A till order has at most one open ticket per screen, so a second send updates it.
- **Cooked food is kept.** An item a chef has already ticked done is never changed or removed, whatever the till now says.
- **New food goes back in the queue.** An item added to a ticket that was already ready moves it back to Preparing.
- **Dropped items go.** An item removed at the till disappears from the ticket if it was not done yet.
- **Nothing left, ticket cancelled.** If a screen no longer has anything to cook on that order, and nothing was done, its ticket is cancelled.
- **Finished orders stay finished.** Once every ticket of an order is served, a late change at the till (a payment, say) does not put a fresh docket on the pass.

Send to Kitchen by hand

In **Point of Sale, Orders**, select one or more orders and choose **Send to Kitchen** from the Actions menu, or use it on an order form. It sends even to screens with Send Automatically off, and opens the tickets it touched. If no screen wanted anything, it says so: check that the products are in a category a screen takes. The demo's tickets were loaded directly, so its POS order list is empty.

PART 6 The display

The display is a full-screen page made for a tablet on the wall. It shows the screen's open tickets, rush first then oldest first, each with a clock and a colour that says how long it has waited.

IN THIS PART YOU WILL LEARN

- Opening a screen and picking which station it is
- What is on a ticket card and what the colours mean
- Start, Ready, Served and Recall
- Ticking items off one at a time

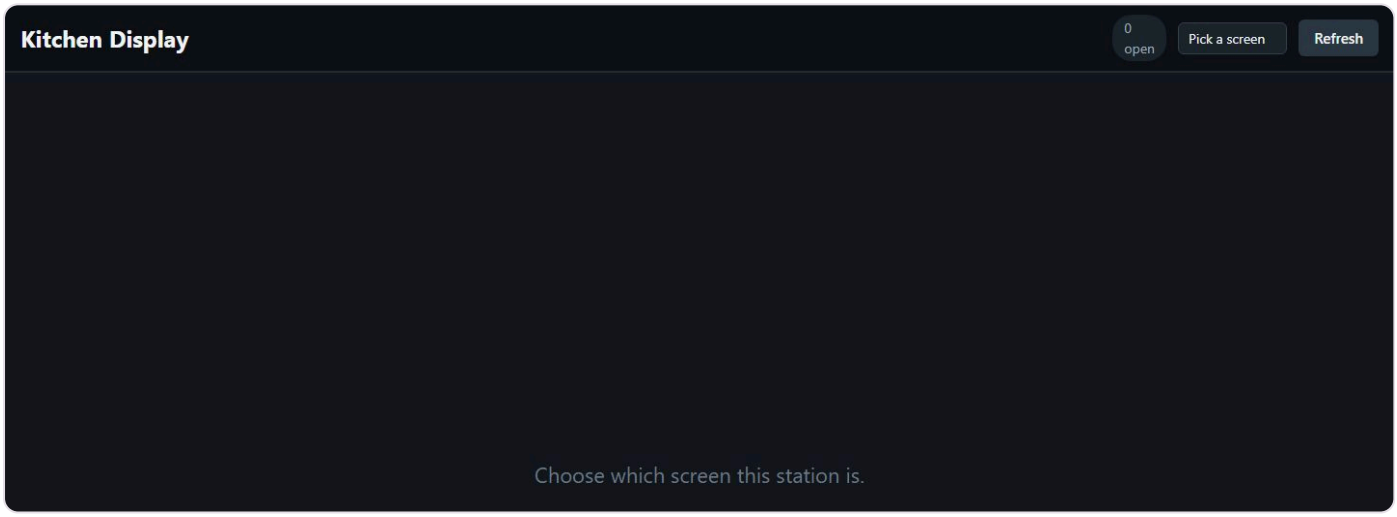

TRY IT YOURSELF ON THE DEMO

1. Kitchen, Display, pick Kitchen in the box at the top
2. Find the rush ticket KDS/00247 at the top left
3. Pick Bar and compare the thresholds: amber at 3 minutes, red at 6

1 Kitchen, Display

The first time, the page asks which screen this station is. Pick it in the box at the top right. If only one screen exists it opens directly, and Open Display on a screen opens that screen straight away.

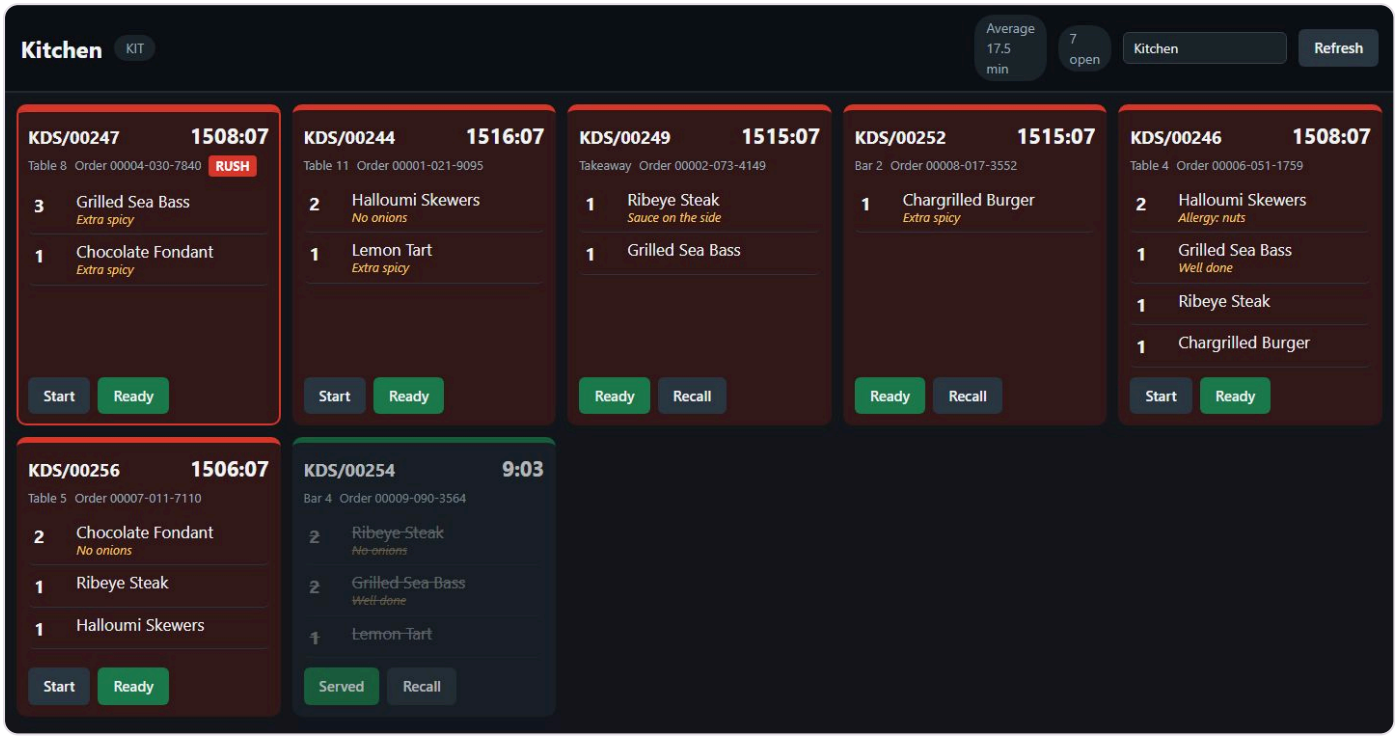

Bookmark the screen's Open Display page on the station's tablet so it always opens on the right one.

2 The Kitchen screen

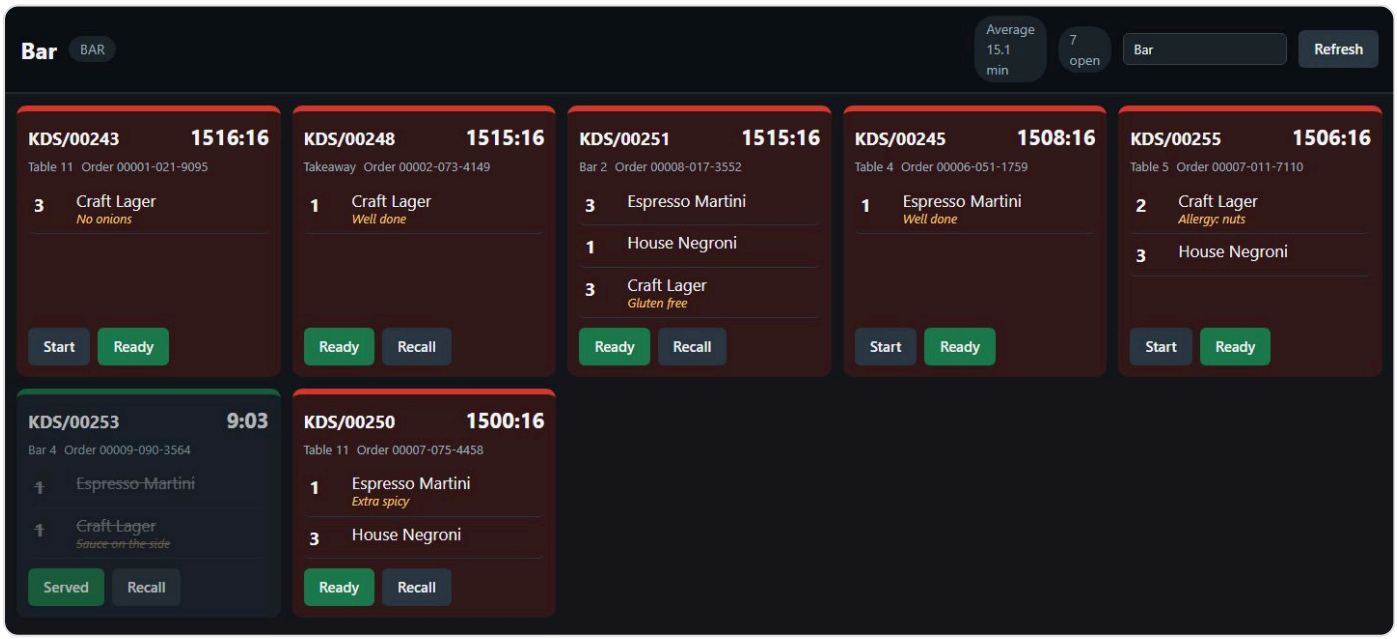

The top bar shows the screen name and code, the average preparation time, how many tickets are open, the picker and Refresh. Each card shows the ticket number and a running clock, the table and receipt number, RUSH if marked, each item with its quantity and note, the order note, and the buttons.

On the demo the open tickets were raised more than a day ago, so their clocks read over 1,500 minutes and every card is red. On a live service the clock starts from zero when the till sends the order.

3 The Bar screen

The same layout with only bar items. One table's order appears here and on the Kitchen screen as two tickets with their own clocks.

Colours

COLOUR	MEANS
Blue top edge	On time: waiting less than the amber threshold

Amber top edge, darker card	Slipping: past the screen's Amber After
Red top edge, dark red card	Late: past the screen's Red After
Green top edge, faded, items struck through	Ready: the clock has stopped at the preparation time
Red outline and RUSH tag	Marked rush: sorted to the top

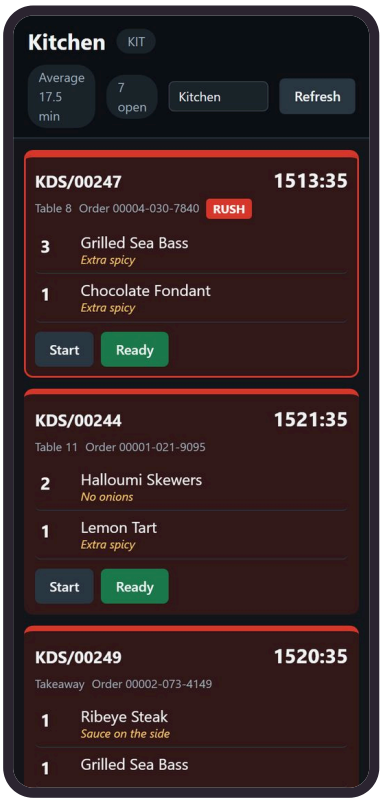

The colour is decided on the server and worked out again between refreshes, so a ticket turns red on time rather than up to a refresh late. The clock counts every second, and once a ticket is ready it shows the preparation time it actually took instead of carrying on.

The buttons

BUTTON	SHOWN ON	DOES
Start	New tickets	Moves the ticket to Preparing and stamps Started
Ready	New and preparing	Marks every item still open as done and stamps Ready
Served	Ready tickets	Stamps Served; the ticket leaves the screen
Recall	Anything but new	Sends the ticket back to New and clears its started, ready and served times
Tap an item	Any open ticket	Ticks it done, tap again to put it back
Refresh	Top bar	Asks the server now instead of waiting for the next refresh

Ticking the first item marks the ticket as started, because nobody in a kitchen stops to press Start. The ticket is not called ready automatically when the last item is ticked, because ready means somebody has checked the plate. An item cannot be changed on a served or cancelled ticket: recall it first.

> If the connection drops, the display keeps the last tickets on screen and shows the error in a bar at the top, then carries on at the next refresh.

The same Kitchen screen at phone width: the cards stack in one column.

PART 7 Tickets in the back office

Everything the display does can also be done from the Tickets screen, which is where a manager looks at one ticket's history, marks a rush, cancels or reprints.

IN THIS PART YOU WILL LEARN

- The Tickets list, its filters and groups
- A ticket form: order, timing, items, note and source
- Rush, tick everything off, cancel and back to queue

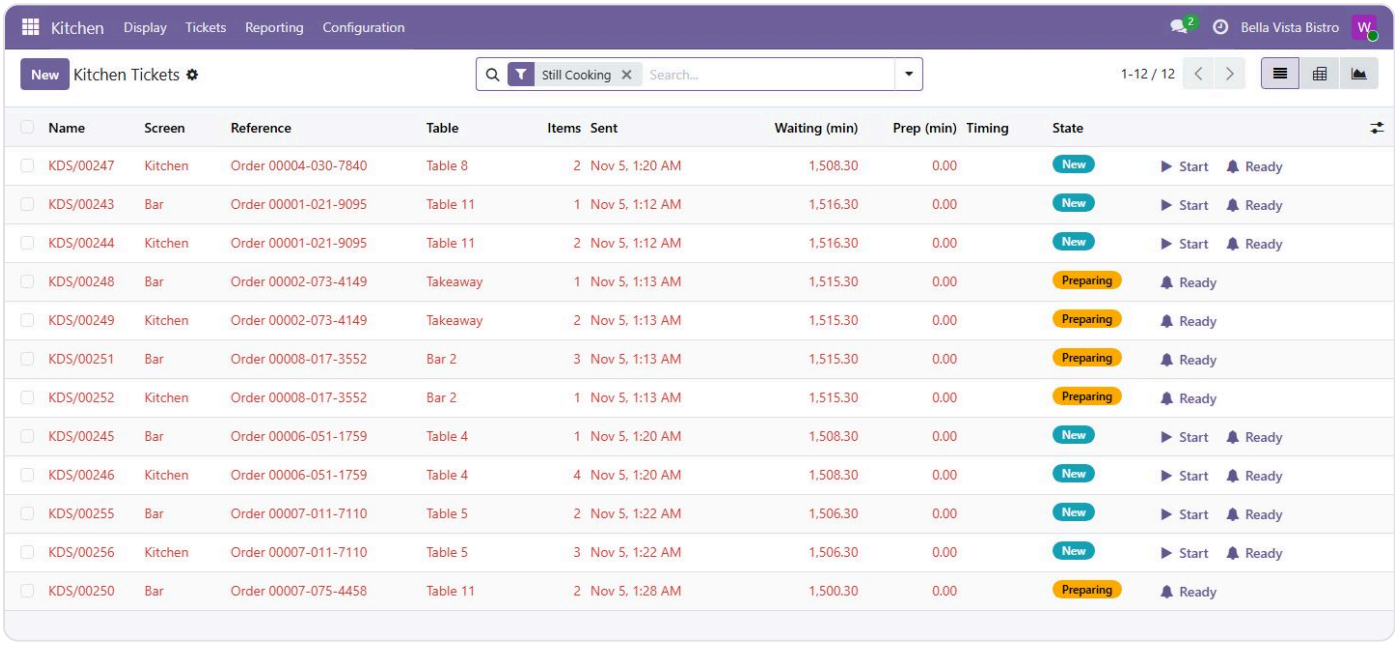

TRY IT YOURSELF ON THE DEMO

1. Kitchen, Tickets: twelve tickets still cooking
2. Open KDS/00247, the rush ticket
3. Open KDS/00120, a served ticket that went over its target

1 Kitchen, Tickets

Opens on **Still Cooking**: new and preparing tickets, with screen, reference, table, item count, sent time, minutes waiting, preparation minutes and state, and Start, Ready and Served buttons on each line.

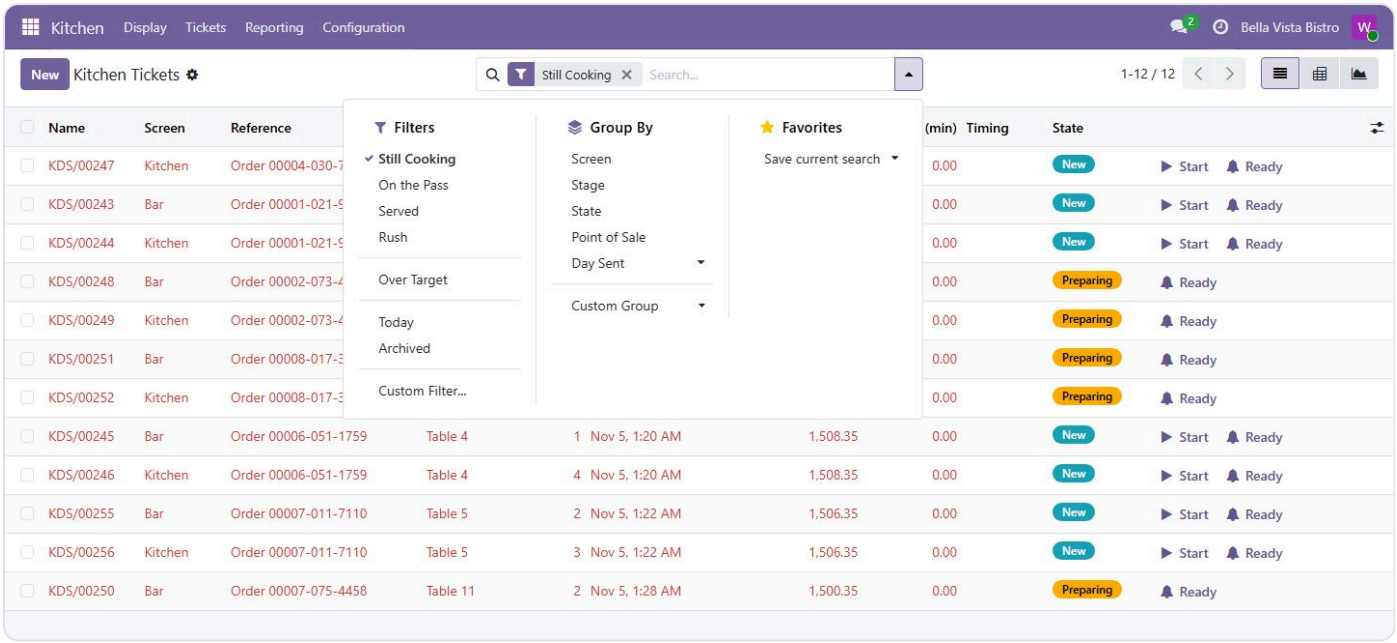

The list has a Timing column header that stays empty in this version; the colour band is shown on the display.

Name	Screen	Reference	Table	Items	Sent	Waiting (min)	Prep (min)	Timing	State	
KDS/00247	Kitchen	Order 00004-030-7840	Table 8	2	Nov 5, 1:20 AM	1,508.30	0.00		New	Start Ready
KDS/00243	Bar	Order 00001-021-9095	Table 11	1	Nov 5, 1:12 AM	1,516.30	0.00		New	Start Ready
KDS/00244	Kitchen	Order 00001-021-9095	Table 11	2	Nov 5, 1:12 AM	1,516.30	0.00		New	Start Ready
KDS/00248	Bar	Order 00002-073-4149	Takeaway	1	Nov 5, 1:13 AM	1,515.30	0.00		Preparing	Ready
KDS/00249	Kitchen	Order 00002-073-4149	Takeaway	2	Nov 5, 1:13 AM	1,515.30	0.00		Preparing	Ready
KDS/00251	Bar	Order 00008-017-3552	Bar 2	3	Nov 5, 1:13 AM	1,515.30	0.00		Preparing	Ready
KDS/00252	Kitchen	Order 00008-017-3552	Bar 2	1	Nov 5, 1:13 AM	1,515.30	0.00		Preparing	Ready
KDS/00245	Bar	Order 00006-051-1759	Table 4	1	Nov 5, 1:20 AM	1,508.30	0.00		New	Start Ready
KDS/00246	Kitchen	Order 00006-051-1759	Table 4	4	Nov 5, 1:20 AM	1,508.30	0.00		New	Start Ready
KDS/00255	Bar	Order 00007-011-7110	Table 5	2	Nov 5, 1:22 AM	1,506.30	0.00		New	Start Ready
KDS/00256	Kitchen	Order 00007-011-7110	Table 5	3	Nov 5, 1:22 AM	1,506.30	0.00		New	Start Ready
KDS/00250	Bar	Order 00007-075-4458	Table 11	2	Nov 5, 1:28 AM	1,500.30	0.00		Preparing	Ready

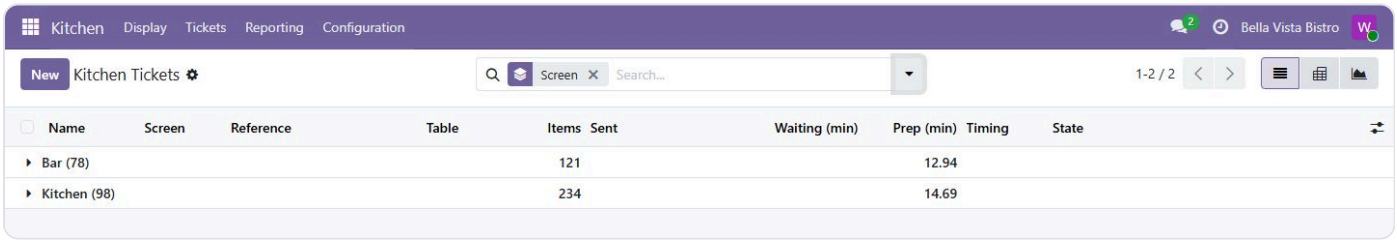

2 Filters and groups

Still Cooking, **On the Pass**, **Served**, **Rush**, **Over Target**, **Today** and **Archived**. Group by screen, stage, state, point of sale or day sent.

3 Grouped by screen

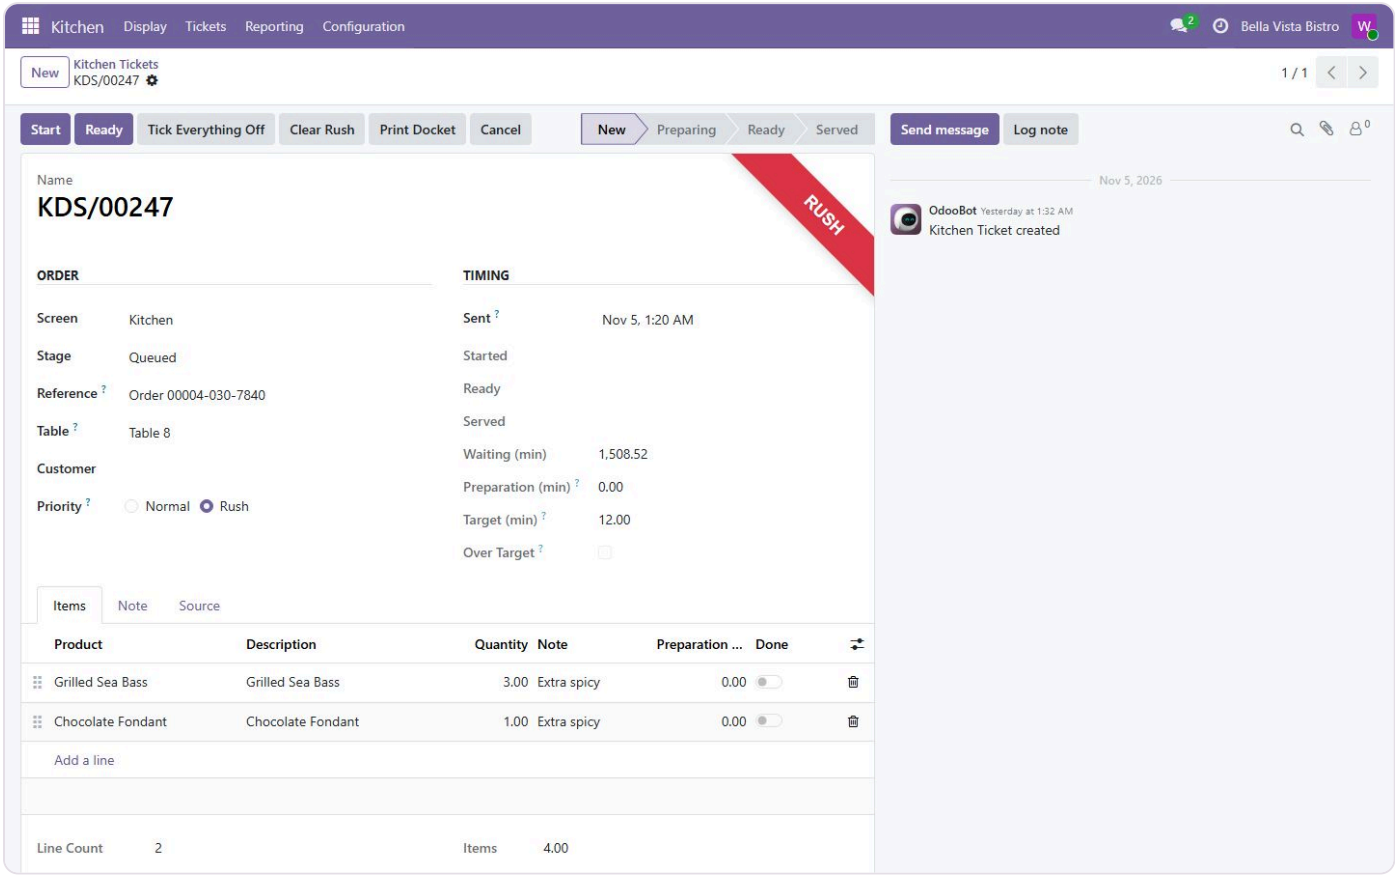

One group per screen shows at once which station has the queue.

A ticket

4 Order and timing

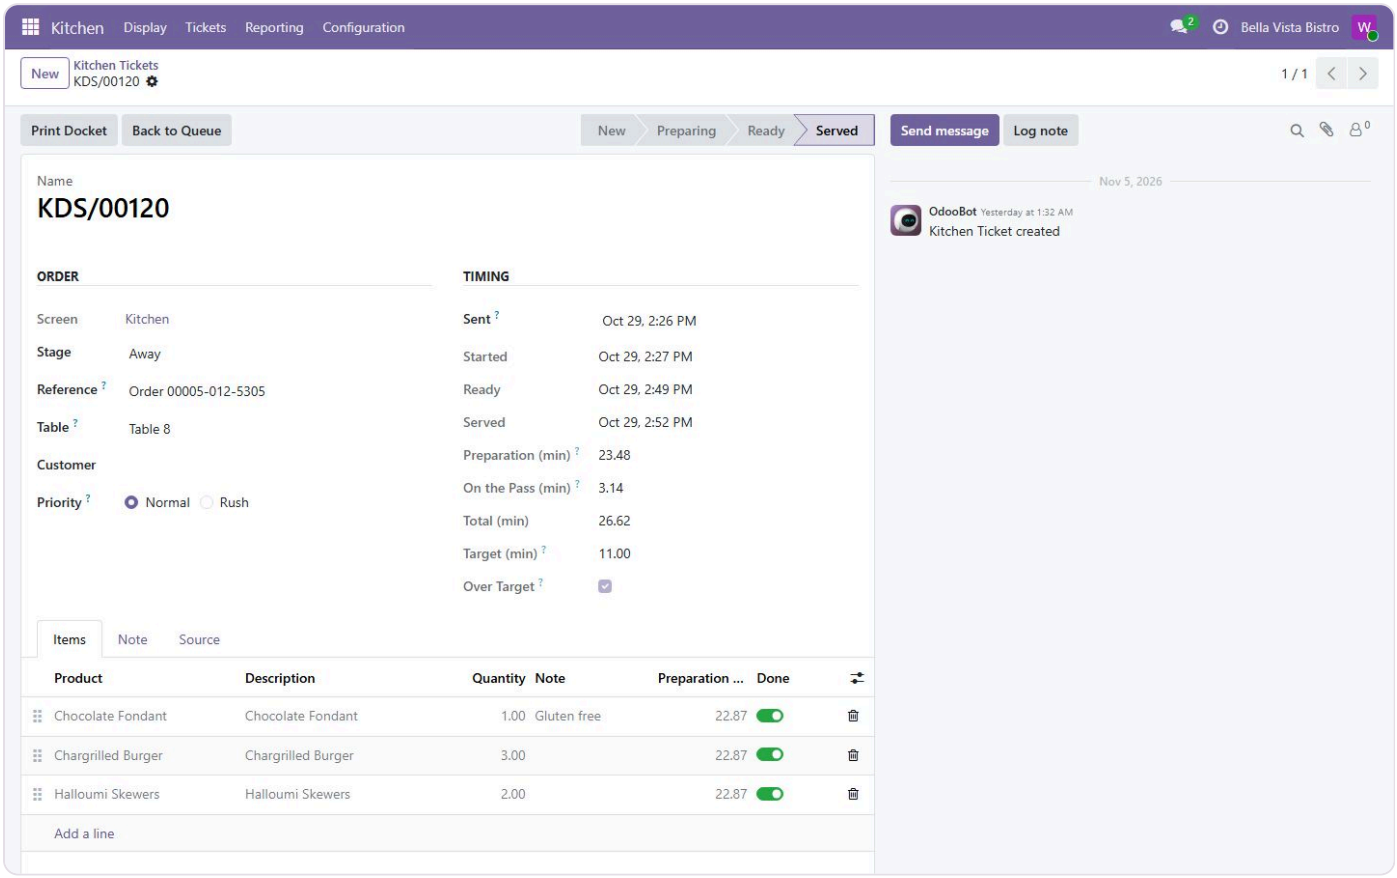

Order: screen, stage, the till's reference, table, customer and **Priority**, Normal or Rush. **Timing**: sent, the minutes it has been waiting while it is still in the kitchen, and the target. A rush ticket carries a ribbon.

5 A finished ticket

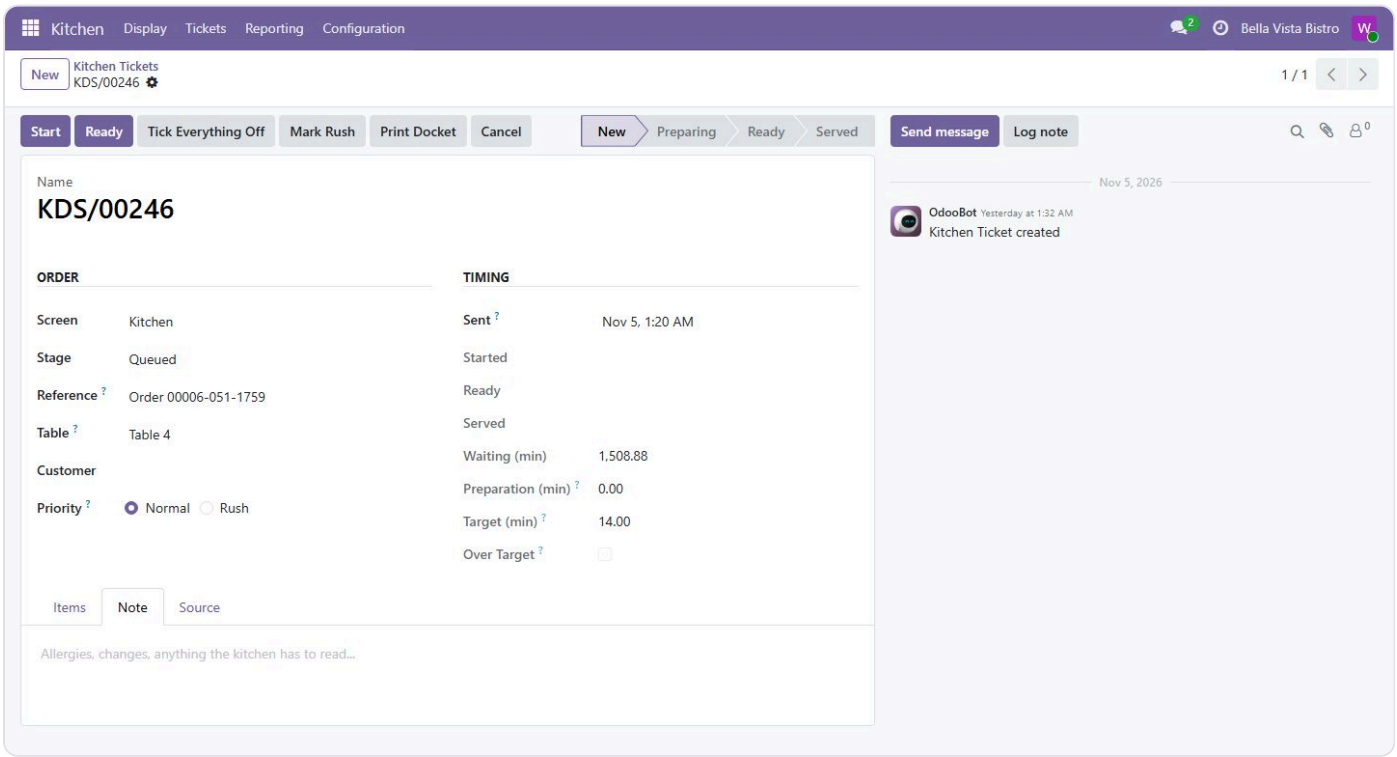

Once served the timing block shows **Sent**, **Started**, **Ready** and **Served**, **Preparation**, **On the Pass**, **Total**, the **Target** and **Over Target**. The items list shows each item's own preparation time and Done.

KDS/00120 took 23.48 minutes against a target of 11, the longest target on the ticket, so it is over target. The plate then waited 3.14 minutes on the pass.

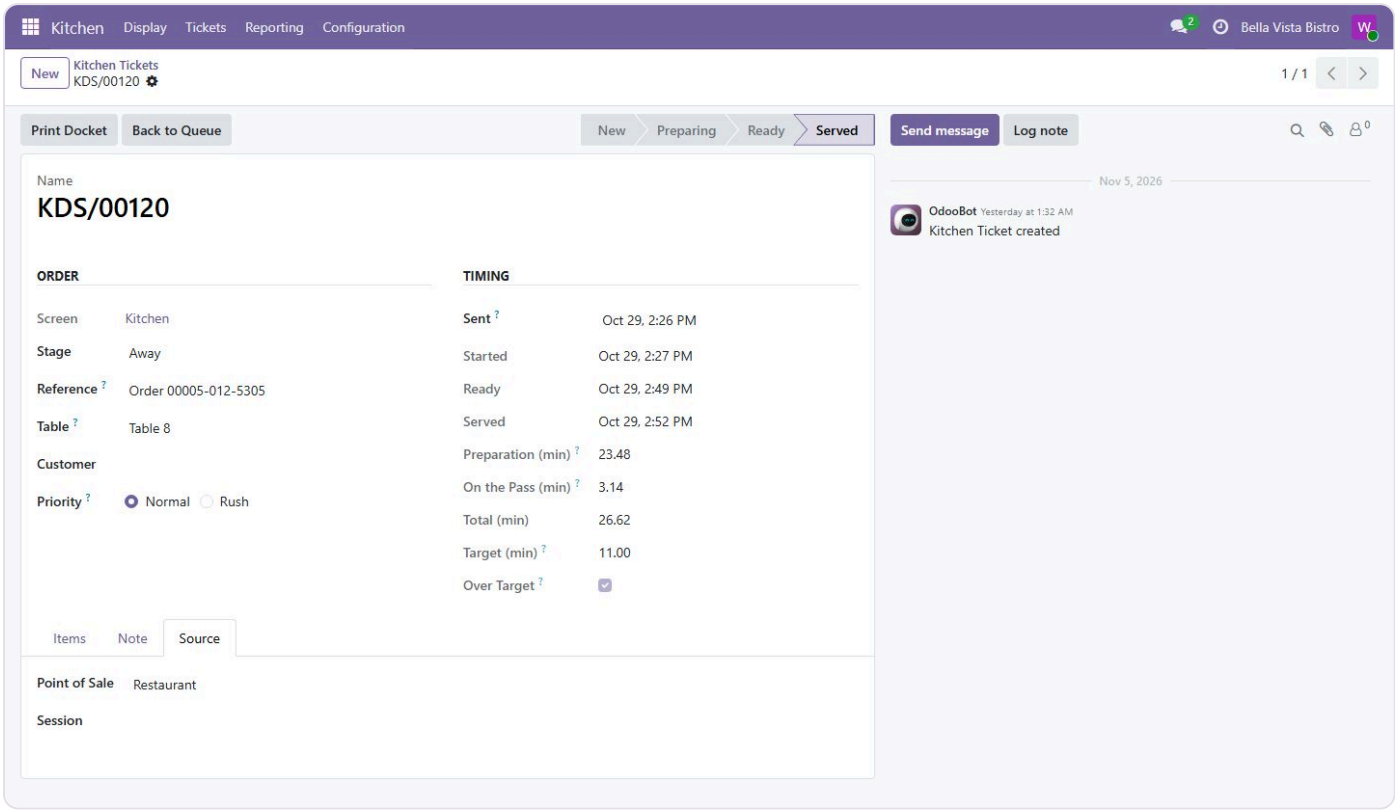

6 Note

The order's general note from the till.

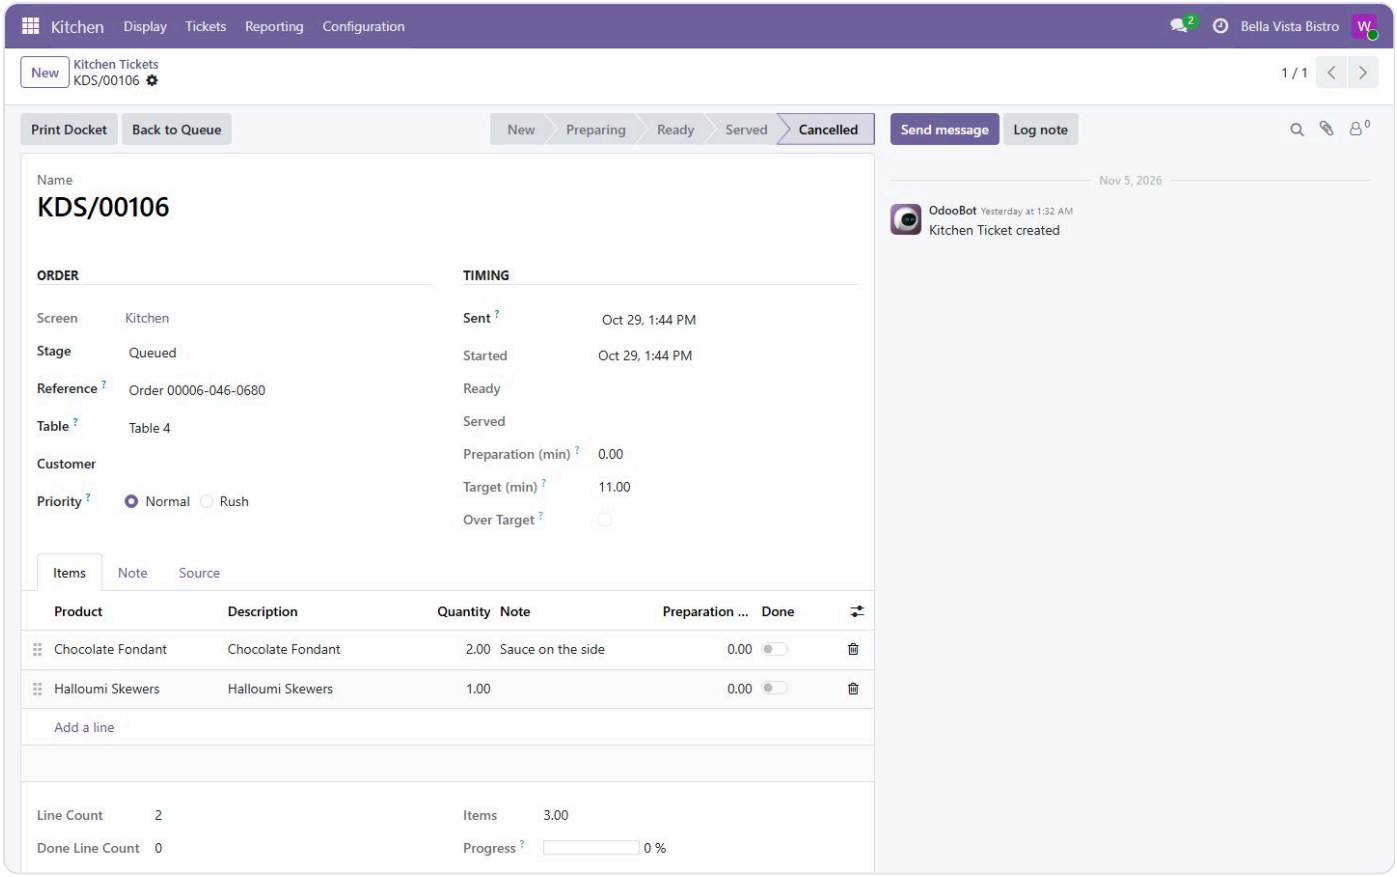

7 Source

The point of sale, session and POS order the ticket came from, and the company. A **POS Order** button opens the till order when there is one.

The buttons on a ticket

BUTTON	DOES
Start, Ready, Served	The same as on the display, with the same server stamps
Tick Everything Off	Marks every item done, each with the time now
Mark Rush, Clear Rush	Sets or clears the rush priority; rush sorts first everywhere
Print Docket	The printable ticket, Part 9
Cancel	Cancels the ticket. A served ticket cannot be cancelled
Back to Queue	Sends it back to New and clears started, ready and served (Recall on the display)

A cancelled ticket. It can only be put Back to Queue; its items cannot be ticked while it is cancelled.

> Times cannot be typed. A user with only Work the Kitchen who tries to write a sent, started, ready, served or item done time gets a message to use the buttons instead. Configure Screens users can correct them.

PART 8 Preparation time and the reports

Averages on their own only say what happened. With a target per dish, a split between kitchen and pass, and a time on every item, they say what to fix.

IN THIS PART YOU WILL LEARN

- The Preparation Time report: a date range, a breakdown, the slowest ticket
- Tickets Analysis: preparation, pass and total minutes
- Items by Product: which dish holds a service up
- The screen's own average

TRY IT YOURSELF ON THE DEMO

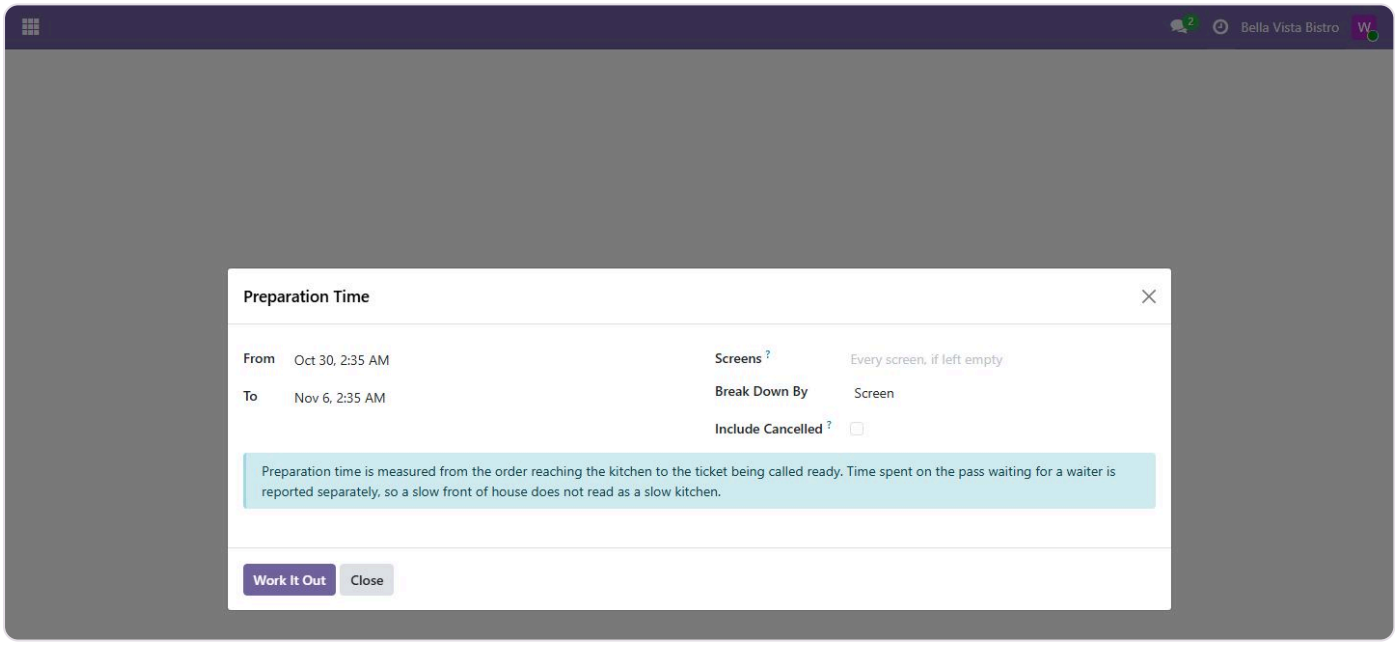

1. Reporting, Preparation Time, then Work It Out
2. Change Break Down By to Product and work it out again
3. Reporting, Items by Product

Preparation Time

1 Reporting, Preparation Time

A dialog with **From** and **To** (the last seven days by default), **Screens** (every screen if left empty), **Break Down By** Screen, Product or Hour, and **Include Cancelled**.

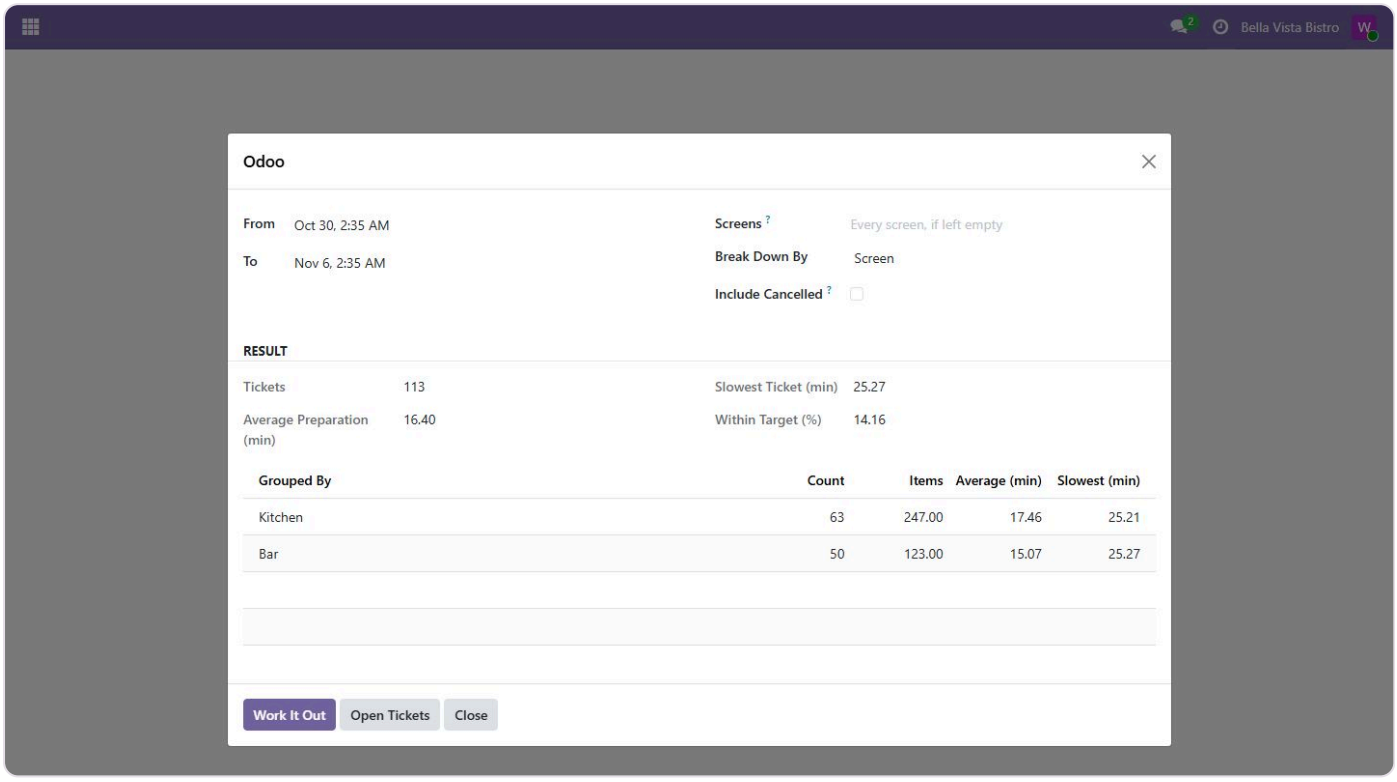

From cannot be after To.

2 Work It Out

The result: the number of **Tickets** called ready in the period, the **Average Preparation**, the **Slowest Ticket** and the share **Within Target**, then one row per screen, product or hour with count, items, average and slowest. **Open Tickets** lists the tickets behind the figures.

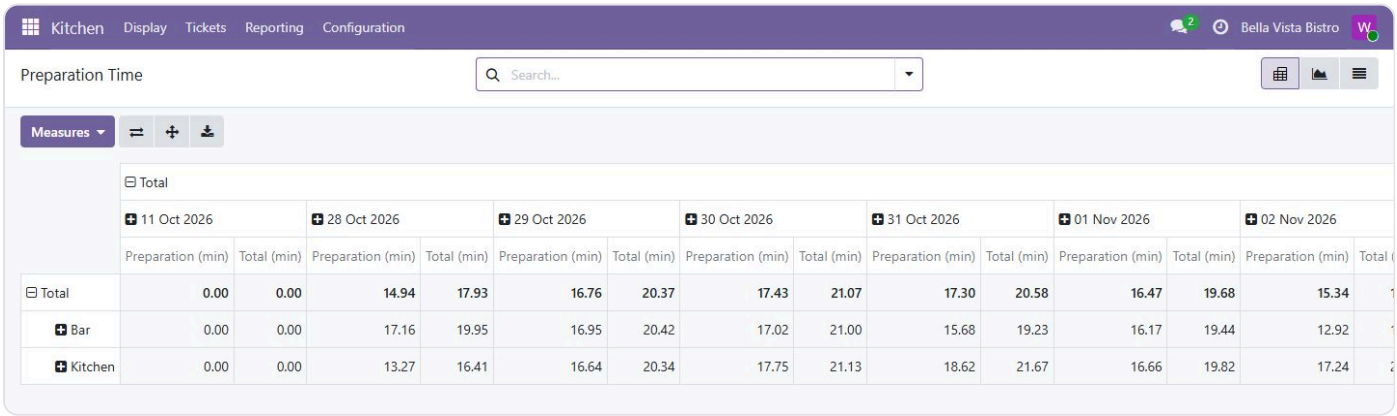

On the demo, 113 tickets over a week averaged 16.40 minutes and 14% came in on target, with the Kitchen slower than the Bar. By Hour uses your own timezone, so the busy hour is the one on the kitchen clock.

Tickets Analysis

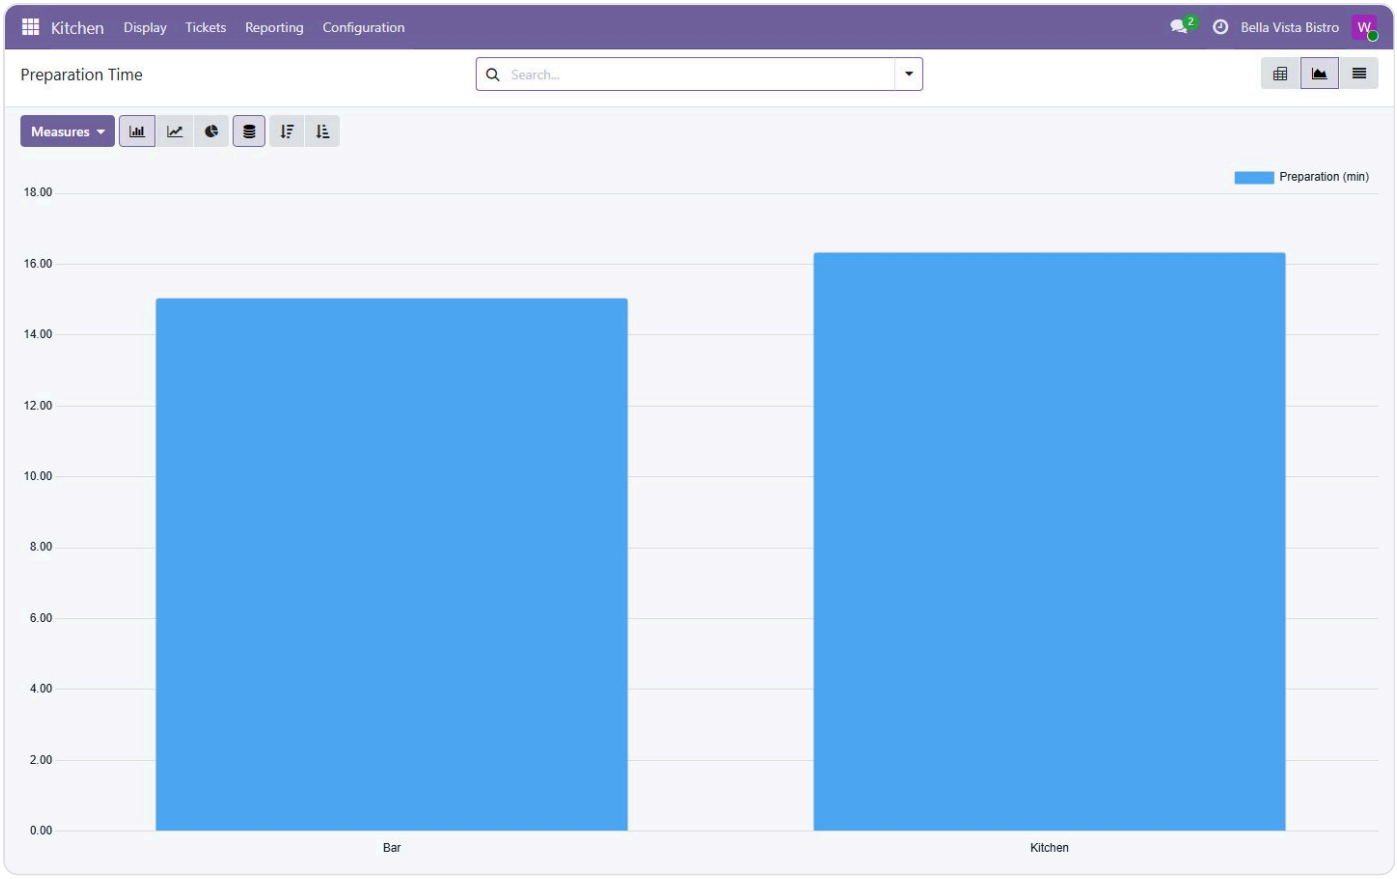

3 Reporting, Tickets Analysis

A pivot of tickets, opening on average preparation and total minutes by screen and day. Add On the Pass from Measures, or regroup by stage or point of sale. The page title reads Preparation Time.

4 As a graph

The same figures as a chart.

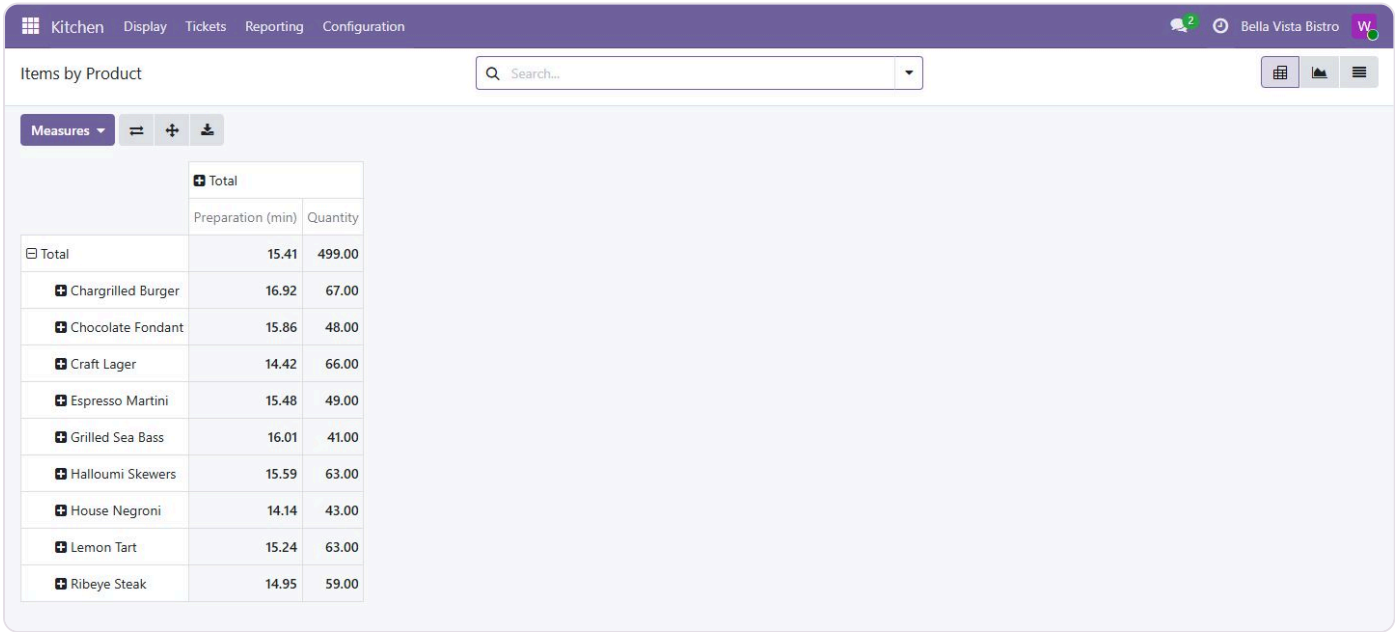

Items by Product

5 Reporting, Items by Product

Every item, grouped by product, with its average preparation and the quantity made. This is the number that tells you which dish is slow.

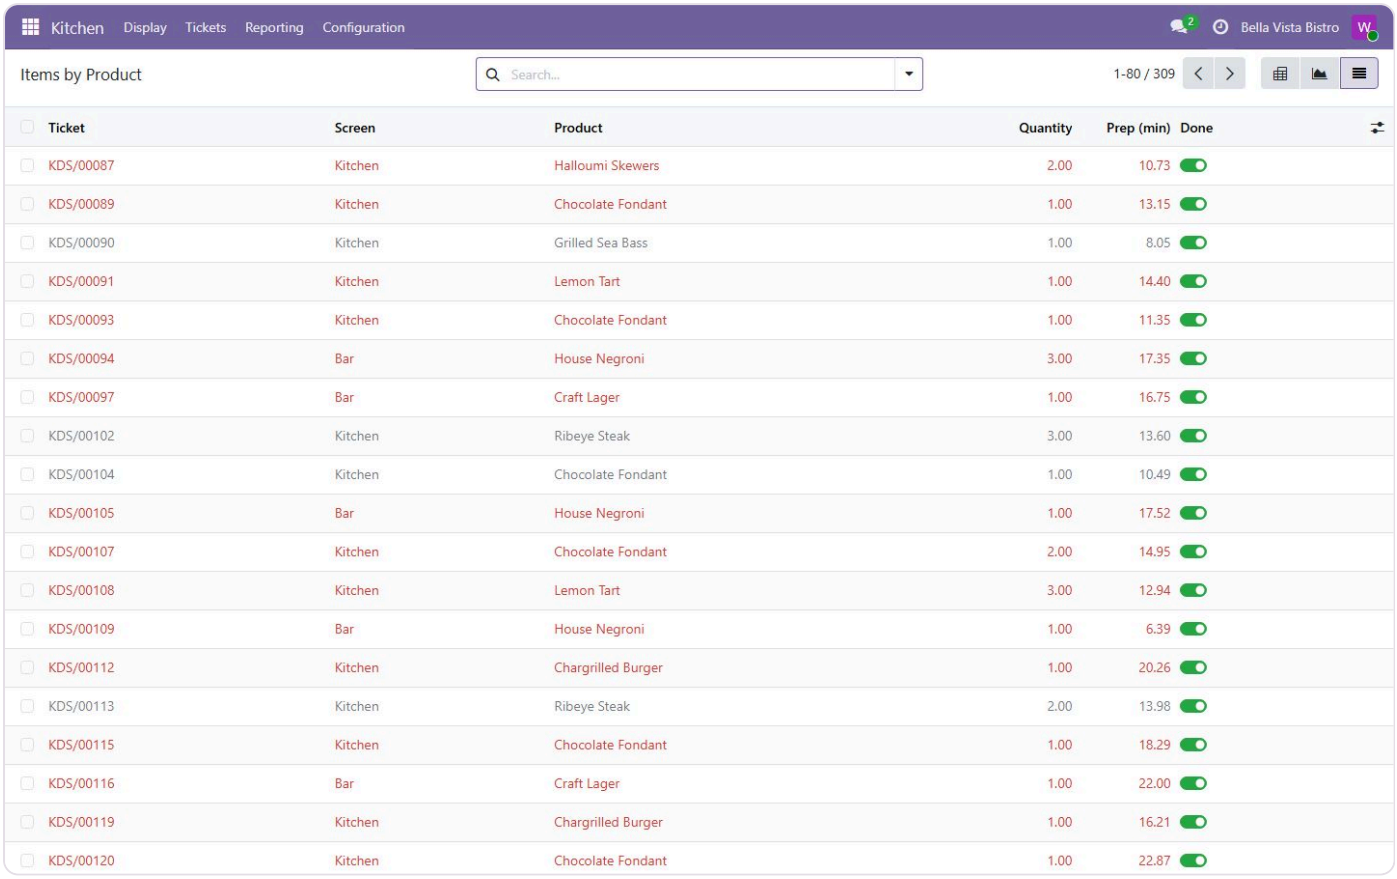

Each item is timed from the moment the ticket reached the kitchen to the moment that item was ticked done. If a kitchen ticks everything at the end with Ready, every item on the ticket gets the same time.

	Total	
	Preparation (min)	Quantity
Total	15.41	499.00
Chargrilled Burger	16.92	67.00
Chocolate Fondant	15.86	48.00
Craft Lager	14.42	66.00
Espresso Martini	15.48	49.00
Grilled Sea Bass	16.01	41.00
Halloumi Skewers	15.59	63.00
House Negroni	14.14	43.00
Lemon Tart	15.24	63.00
Ribeye Steak	14.95	59.00

6 The items list

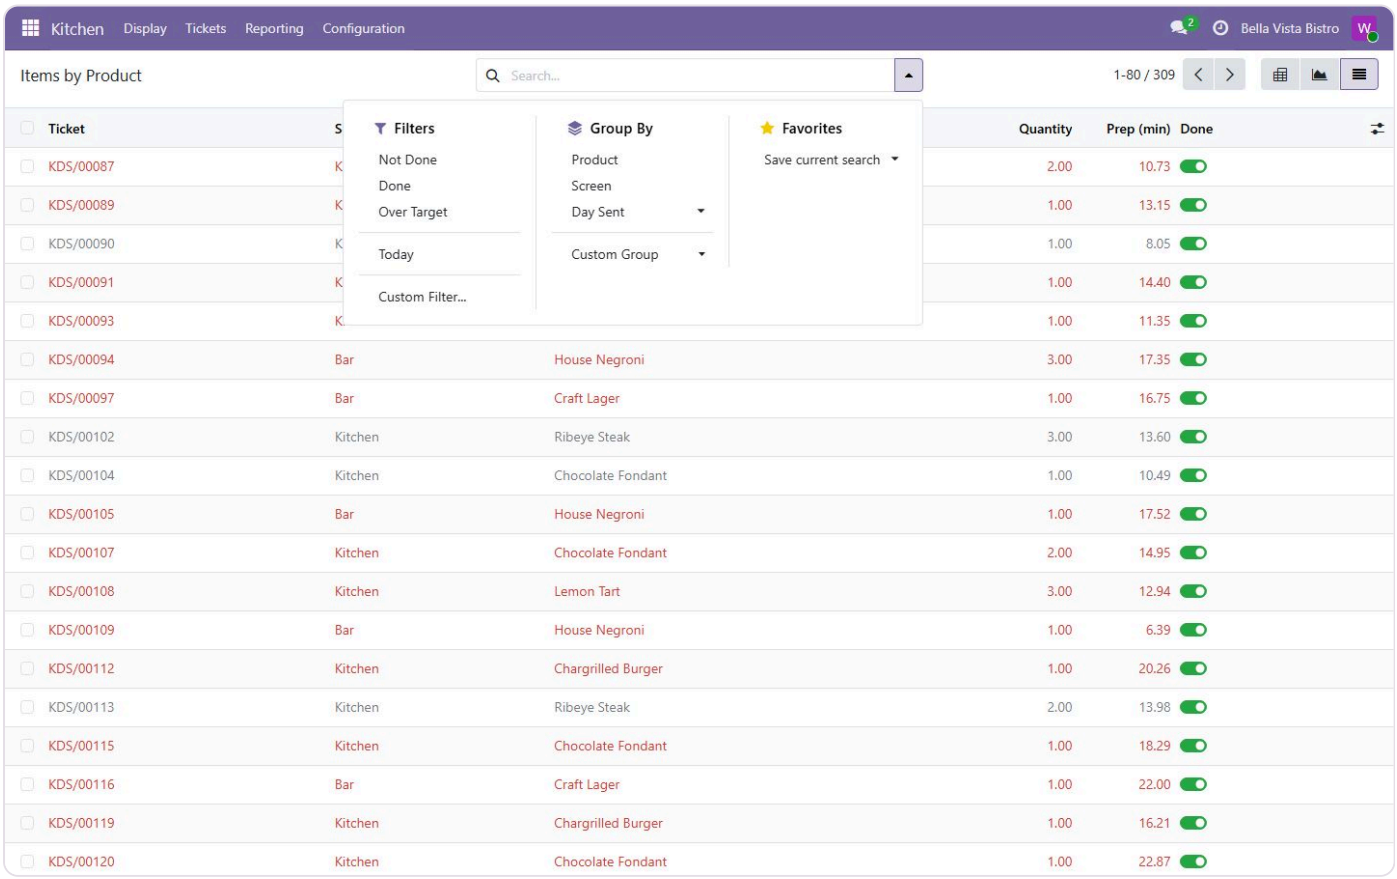

Item by item, with ticket, screen, sent, done at, preparation, target and over target.

Ticket	Screen	Product	Quantity	Prep (min)	Done
KDS/00087	Kitchen	Halloumi Skewers	2.00	10.73	
KDS/00089	Kitchen	Chocolate Fondant	1.00	13.15	
KDS/00090	Kitchen	Grilled Sea Bass	1.00	8.05	
KDS/00091	Kitchen	Lemon Tart	1.00	14.40	
KDS/00093	Kitchen	Chocolate Fondant	1.00	11.35	
KDS/00094	Bar	House Negroni	3.00	17.35	
KDS/00097	Bar	Craft Lager	1.00	16.75	
KDS/00102	Kitchen	Ribeye Steak	3.00	13.60	
KDS/00104	Kitchen	Chocolate Fondant	1.00	10.49	
KDS/00105	Bar	House Negroni	1.00	17.52	
KDS/00107	Kitchen	Chocolate Fondant	2.00	14.95	
KDS/00108	Kitchen	Lemon Tart	3.00	12.94	
KDS/00109	Bar	House Negroni	1.00	6.39	
KDS/00112	Kitchen	Chargrilled Burger	1.00	20.26	
KDS/00113	Kitchen	Ribeye Steak	2.00	13.98	
KDS/00115	Kitchen	Chocolate Fondant	1.00	18.29	
KDS/00116	Bar	Craft Lager	1.00	22.00	
KDS/00119	Kitchen	Chargrilled Burger	1.00	16.21	
KDS/00120	Kitchen	Chocolate Fondant	1.00	22.87	

7 Filters

Not Done, **Done**, **Over Target** and **Today**, grouped by product, screen or day sent.

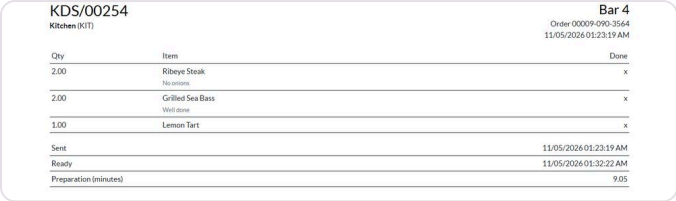

Ticket	Screen	Product	Quantity	Prep (min)	Done
KDS/00087	K		2.00	10.73	
KDS/00089	K		1.00	13.15	
KDS/00090	K		1.00	8.05	
KDS/00091	K		1.00	14.40	
KDS/00093	K		1.00	11.35	
KDS/00094	Bar	House Negroni	3.00	17.35	
KDS/00097	Bar	Craft Lager	1.00	16.75	
KDS/00102	Kitchen	Ribeye Steak	3.00	13.60	
KDS/00104	Kitchen	Chocolate Fondant	1.00	10.49	
KDS/00105	Bar	House Negroni	1.00	17.52	
KDS/00107	Kitchen	Chocolate Fondant	2.00	14.95	
KDS/00108	Kitchen	Lemon Tart	3.00	12.94	
KDS/00109	Bar	House Negroni	1.00	6.39	
KDS/00112	Kitchen	Chargrilled Burger	1.00	20.26	
KDS/00113	Kitchen	Ribeye Steak	2.00	13.98	
KDS/00115	Kitchen	Chocolate Fondant	1.00	18.29	
KDS/00116	Bar	Craft Lager	1.00	22.00	
KDS/00119	Kitchen	Chargrilled Burger	1.00	16.21	
KDS/00120	Kitchen	Chocolate Fondant	1.00	22.87	

Each screen also carries its own **Average Preparation** over its Average Over window, shown on the screen form, in the screens list and in the top bar of the display.

PART 9 The kitchen docket

For a site that still wants paper as a backup, every ticket prints as a docket.

Ready	11/05/2026 01:32:22 AM
Preparation (minutes)	9.05

Docket of a ready ticket: number, screen and code, table, reference, items with notes and a done mark, sent, ready and preparation minutes.

KDS/00247
Kitchen (KIT)
Table 8
Order 00004-030-7840
11/05/2026 01:20:19 AM

RUSH

Qty	Item	Done
3.00	Grilled Sea Bass Extra spicy	
1.00	Chocolate Fondant Extra spicy	

Sent	11/05/2026 01:20:19 AM

A rush docket for table 8.

Print it with **Print Docket** on the ticket or from the Print menu of the Tickets list. The file is named Docket - KDS/00254. It is a PDF from Odoo's report engine on a normal page, not a thermal roll layout, and the module does not send it to a printer by itself.

PART 10 A 10-minute demo script

The shortest path that shows what the module is for.

MIN	DO THIS	WHAT IT SHOWS
1	Kitchen, Display, pick Kitchen	*Tickets for the grill and desserts only, rush first, each with its clock and colour.*
2	Pick Bar	*The same tables, drinks only: one order, two tickets.*
3	Configuration, Screens, Kitchen	*Categories, colour thresholds, auto clear, refresh.*
5	Point of Sale, Products, Ribeye Steak	*The target preparation time of 14 minutes.*
6	Tickets, open KDS/00120	*Sent, started, ready and served, preparation against target, time on the pass.*
8	Reporting, Preparation Time, Work It Out	*Average, slowest and share on target, by screen, then by product.*
10	Reporting, Items by Product	*Which dish takes longest.*

PART 11 Questions people ask, and the limits

The answers come from the module's code, not from the listing.

QUESTION	ANSWER
Does it need Enterprise?	No. It needs the Odoo Point of Sale and Discuss, and runs on Community.
Does it need special hardware?	No. Any tablet or browser that can reach your Odoo can be a screen.
Can the bar and the grill see different things?	Yes. Each screen takes its own POS categories.
Can one screen show everything?	Yes, tick Every Category.
What if the till changes an order?	The ticket is updated, never duplicated. Items already done are kept; new items reopen a ready ticket.
Does a cashier need kitchen rights?	No.
Can staff change the times?	No. Times are stamped by the server. Only Configure Screens users can correct them.
Does it print to kitchen printers?	It prints a PDF docket. Direct thermal printing is not part of it.
Can I see how long plates wait for a waiter?	Yes, On the Pass minutes, kept apart from preparation.
Several companies?	Yes. Screens, tickets, items and stages follow the company.

Limits worth knowing

- **No stage columns on the display.** Stages name the states on the ticket and in reports; the display is one grid of cards.
- **No sound or flash** when a new ticket arrives; the display refreshes every few seconds.
- **No direct printer output.** The docket is a PDF on a normal page.
- **No expo or bump screen of its own;** a screen with Every Category on is the nearest thing.
- **Recall clears the times** of that ticket, so a recalled ticket is timed again from the original send.
- **Item times come from ticking.** A kitchen that only presses Ready gets the same time on every item.
- **Tickets come from orders saved on the server.** Items still being typed at the till are not on the screen yet.

PART 12

Menu map

Every menu and document the module adds, on one page.

Kitchen

Display	The full-screen kitchen display. Pick a screen, work the tickets
Tickets	Every ticket: list, form, pivot and graph, with Start, Ready, Served

Configuration (Configure Screens)

Screens	Which tills and categories each screen takes, colour bands, clearing
Stages	Your own names for New, Preparing, Ready and Served

Reporting (Configure Screens)

Preparation Time	A date range, by screen, product or hour, with the slowest ticket
Tickets Analysis	Pivot and graph of tickets: preparation, pass and total time
Items by Product	Pivot and graph of items: which dish holds the service up

Elsewhere in Odoo

Product form	Target Preparation (min), in a Kitchen Display block
POS orders	Action menu: Send to Kitchen
Kitchen Docket	Printable ticket from any ticket
Scheduled action	"Kitchen Display: clear served tickets", every 5 minutes

Want screens in your kitchen?

We set up a screen for each station with the categories it cooks, your colour thresholds and target times per dish, connect your tills, and show the kitchen how to work it in an hour. It needs nothing but the Odoo Point of Sale, and any tablet or browser that reaches your Odoo becomes a kitchen screen.
