COMPLETE GUIDE · SETUP, THE BOOKING PAGE AND EVERY SCREEN

Online Appointment Booking for Odoo 19

Let customers book time from your website, against your real calendar, and run every booking from the back office. Every screen and every step, shown on a live demo. No Odoo background needed.

START

About this guide

Odoo Community has a calendar but no way for a customer to book time from your website. This module adds that page, works out which slots are really free, and turns each booking into a normal Odoo Calendar meeting with emails either side of it. This guide walks every screen, the customer's side and yours, on a live demo.

Who it is for

The owner or office manager setting booking up, the front desk who works the bookings every day, and anyone being shown the module for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and something short to try on the demo, then walks every field, button and rule on the screen.

The live demo

Lumen & Frame, a worked example photography studio in Dubai with nine bookable services, three studios, four photographers, a drone kit and about fifty bookings in every status.

HOW IT WORKS

The demo studio

Back office	**photography.way4tech.com**, then Sign in
Sign in	**w4demo** / **Demo2026**
Booking page	**photography.way4tech.com/appointment**, no sign in needed
Business	Lumen & Frame Photography Studio, Dubai, timezone Asia/Dubai
Runs on	Odoo 19, Community edition, with Website and Calendar

The demo is shared and resets from time to time. Please do not submit real bookings on its website: anything you book is seen by the next visitor, and the emails go to whatever address you type.

What is in the guide

PART 1	How online booking works	PART 2	The app at a glance
PART 3	Open the demo and sign in	PART 4	Set it up from zero
PART 5	Appointment types, screen by screen	PART 6	Resources: rooms, chairs, studios and kit
PART 7	The booking page, as a customer sees it	PART 8	After booking: the customer's own page
PART 9	Working the bookings	PART 10	The emails and the reminder job
PART 11	Reports and printed documents	PART 12	A 15 minute demo script
PART 13	Questions people ask, and the limits	PART 14	Menu map

PART 1 How online booking works

Before any screen, the idea. A customer can only book a time that is really free, so everything in the module comes back to one question: is this slot free for somebody who can give this service?

IN THIS PART YOU WILL LEARN

- The four records the module adds and how they fit together
- How a free slot is worked out, step by step
- Staff against resources, and what blocks each of them
- What happens the moment a customer presses Confirm booking
- The five statuses a booking moves through

Four things to know

Appointment type

Something people can book: a consultation, a fitting, a studio hour. It holds the duration, the booking rules, the weekly hours, the questions and what happens afterwards.

Staff or resource

Who or what the time is booked with. Staff are Odoo users. Resources are things that are not people, such as a room, a chair or a studio, each with a capacity.

Booking

One booked appointment with a reference such as APT/00011, the customer's details and answers, and a status. Confirming it creates the calendar meeting.

The fourth is the **Calendar meeting** that every confirmed booking creates. It is an ordinary Odoo Calendar event, so the booking shows in the staff member's own calendar next to everything else they do.

How a free slot is worked out

From weekly hours to the slots a visitor sees

1. **Weekly bands** — Monday 09:00 to 17:00, written in the type's timezone
2. **Cut into slots** — Every "Slot Every" hours, each must finish inside its band
3. **Drop too soon / too far** — Minimum notice and the booking window
4. **Check who is free** — Existing meetings or bookings, with the buffers
5. **Apply the rule** — Anyone free, the chosen one, or everyone
6. **Show in visitor time** — Converted to the browser's timezone

Every step runs on the server each time the page loads. When the customer submits, the same check runs again before anything is written, so a slot taken by somebody else a moment earlier is refused with a friendly message instead of being double booked.

BOOKED WITH	WHAT MAKES A SLOT BUSY	CAPACITY
Staff	Any active meeting in Odoo Calendar where that user is an attendee, including meetings that have nothing to do with bookings, such as time off typed into the calendar	One booking at a time
Resources	Only other confirmed or attended bookings from this module on the same resource	As many overlapping bookings as the resource's capacity

Buffers widen the slot being checked. With a 30 minute buffer before, a meeting that ends at 11:00 still blocks a slot starting at 11:15, and a buffer after does the same at the other end. The buffer is only used for that check: the meeting itself is still exactly the duration of the type.

What happens when a customer books

Confirm booking, server side

1. **Check the form** — Name, a valid email, a slot, required answers
2. **Check the window** — Not too soon, not too far ahead
3. **Pick who** — Prove they are still free, buffers included
4. **Create the booking** — Reference, answers, a private link
5. **Confirm it** — Contact found or created, meeting made
6. **Email** — Confirmation with a link to change it

The five statuses

STATUS	MEANS	SET BY
Draft	Entered by hand in the back office and not confirmed yet. Holds no slot and has no meeting.	Creating a booking by hand
Confirmed	Booked. The meeting exists and the confirmation email has gone.	The website, or the Confirm button
Attended	The customer came.	The Attended button after the appointment
No Show	The customer did not come.	The No Show button
Cancelled	Called off by the customer or the team. The meeting is archived, so the slot frees up.	The customer's cancel link, or the Cancel button

PART 2 The app at a glance

The module adds one app, Appointments, with two menus, plus a set of public pages on your website. This part is the map, and who sees what.

Who sees what

There are two access levels, found on each user under the **Appointments** line of the Access Rights tab.

ACCESS LEVEL	CAN DO	TYPICAL USER
Handle Bookings	See the Appointments app and every booking. Create and change bookings and their answers, confirm, cancel, mark attended or no show. Can read appointment types and resources but not change them.	Front desk, staff who give the appointments
Configure Appointments	Everything above, plus the Configuration menu: create and change appointment types, weekly hours, questions and resources, and delete bookings.	Owner, office manager
Website visitors	See published appointment types and their free slots, book, and open their own booking through the private link in their email. Nothing else.	Customers, no login needed

> The Administrator account is given Configure Appointments when the module is installed. Visitors who are not signed in only ever see types that are **published**; an unpublished type does not exist for them.

The menus

Bookings

Bookings	Every booking: calendar, list, form and pivot. Opens on upcoming ones
Calendar view	Week or month, coloured by appointment type
Pivot view	Bookings per type per month, or per status

Configuration

Appointment Types	What can be booked: timing, rules, who, weekly hours, questions, follow-up
Resources	Rooms, chairs, studios or kit, each with a capacity

Website pages

/appointment	The booking index: every published type as a card
/appointment/<type>	One type: pick who, pick a slot, fill the form
/appointment/booking/<token>	The customer's own page: details, move, cancel
.../reschedule	The slot picker again, for an existing booking

Behind the scenes

Calendar	Every confirmed booking is an Odoo Calendar meeting
Email Templates	Confirmation, Reminder and Cancelled
Scheduled action	"Appointments: send reminders", every hour
Sequence	Booking references APT/00001 onwards

> On the demo, **w4demo** has Configure Appointments, so you can follow every part of this guide from the one login.

PART 3 Open the demo and sign in

The demo is a real Odoo 19 Community database with the module installed and filled with a photography studio's bookings. The booking pages need no login; the back office does.

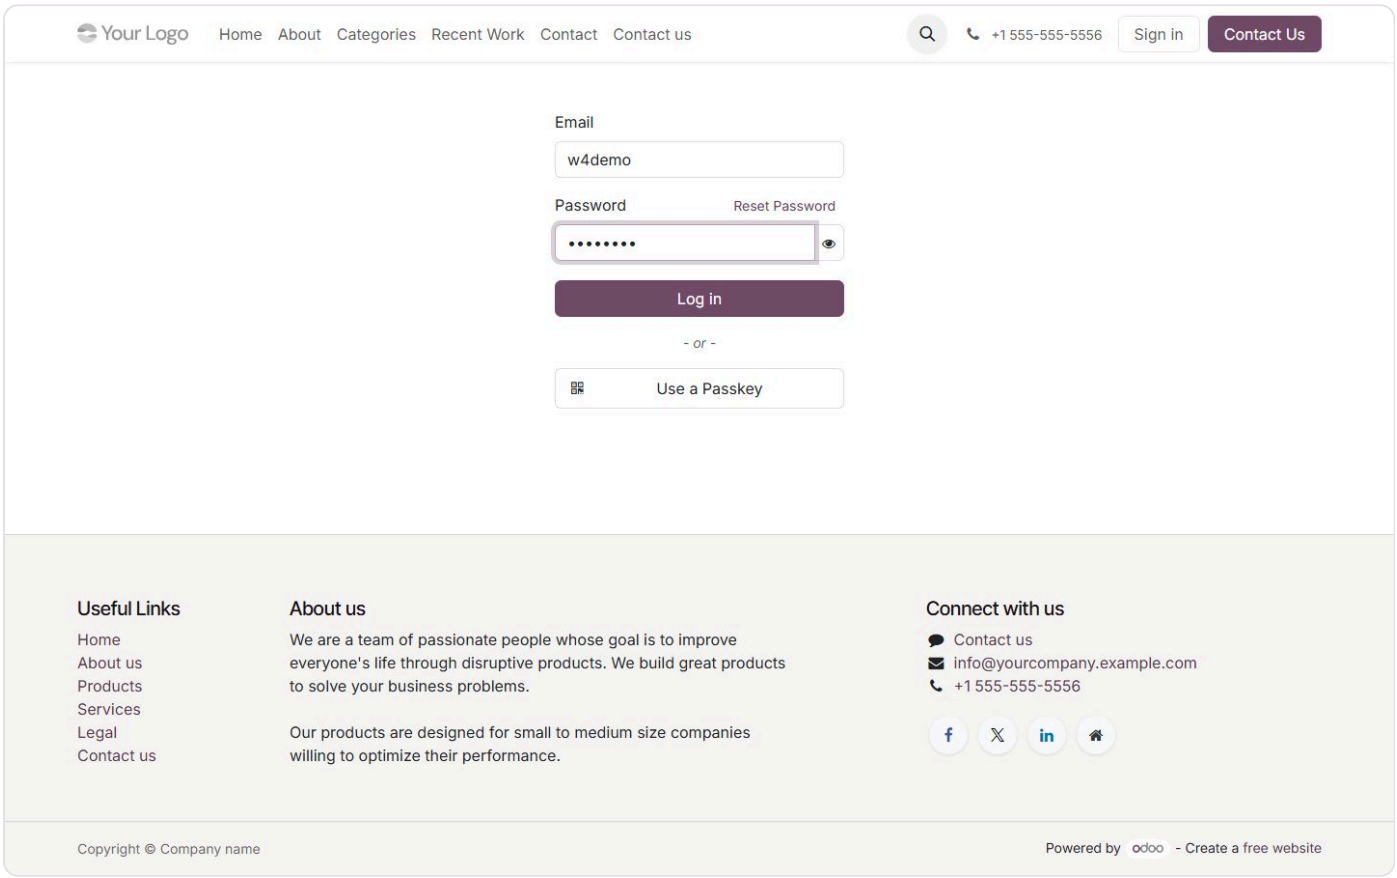

TRY IT YOURSELF ON THE DEMO

1. Open photography.way4tech.com/appointment in a private window to see what a customer sees
2. Open photography.way4tech.com/web/login and sign in with w4demo / Demo2026
3. Click Appointments in the app menu
4. You land on Bookings, in the week calendar, showing upcoming bookings

1 Go to the sign-in page

Open **photography.way4tech.com/web/login**. It is the standard Odoo sign-in page inside the studio's website. User `w4demo`, password `Demo2026`, then **Log in**.

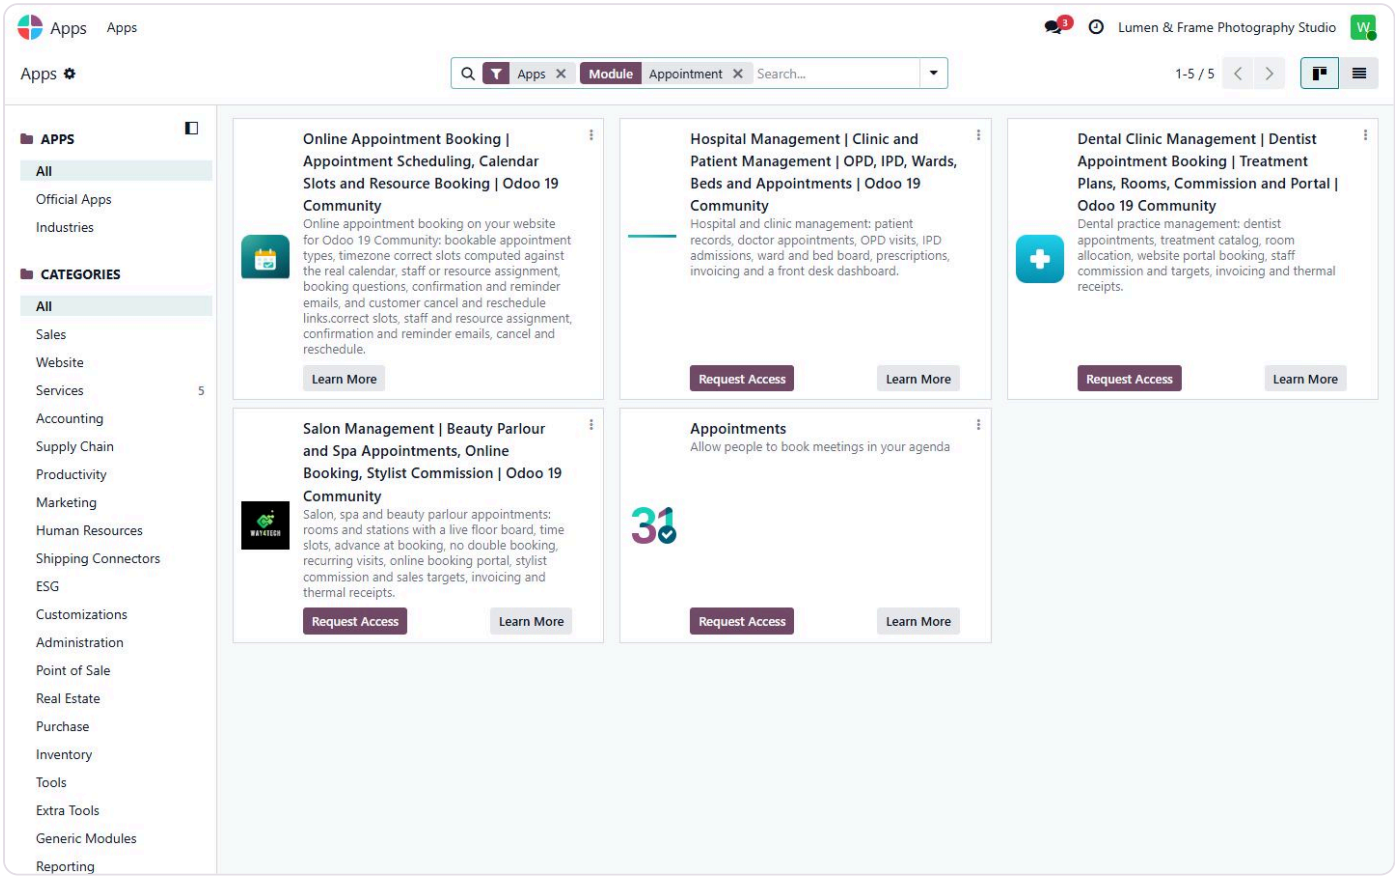

The demo is shared. Look around freely, but do not submit bookings on the public pages: the next visitor sees them, and the emails go to the address you type.

2 Find the app

The module is called **Online Appointment Booking** in Apps, and its menu is **Appointments**. It is installed on the demo. On your own database you would search for it here and press Install; it brings in Website and Calendar if they are not already there.

Apps also shows the store's other booking-style modules. This guide covers only Online Appointment Booking, the general one that works for any business that sells time.

PART 4 Set it up from zero

What a new business does on day one, before the first customer books: install, give the team access, and create the first appointment type. There is no separate settings page; every rule lives on the appointment type, so each service can follow its own.

IN THIS PART YOU WILL LEARN

- What the install adds to your database
- The two access levels and where to give them
- Every field on an appointment type, what it does and its default
- A checklist to run for each new type before you share the link

What the install adds

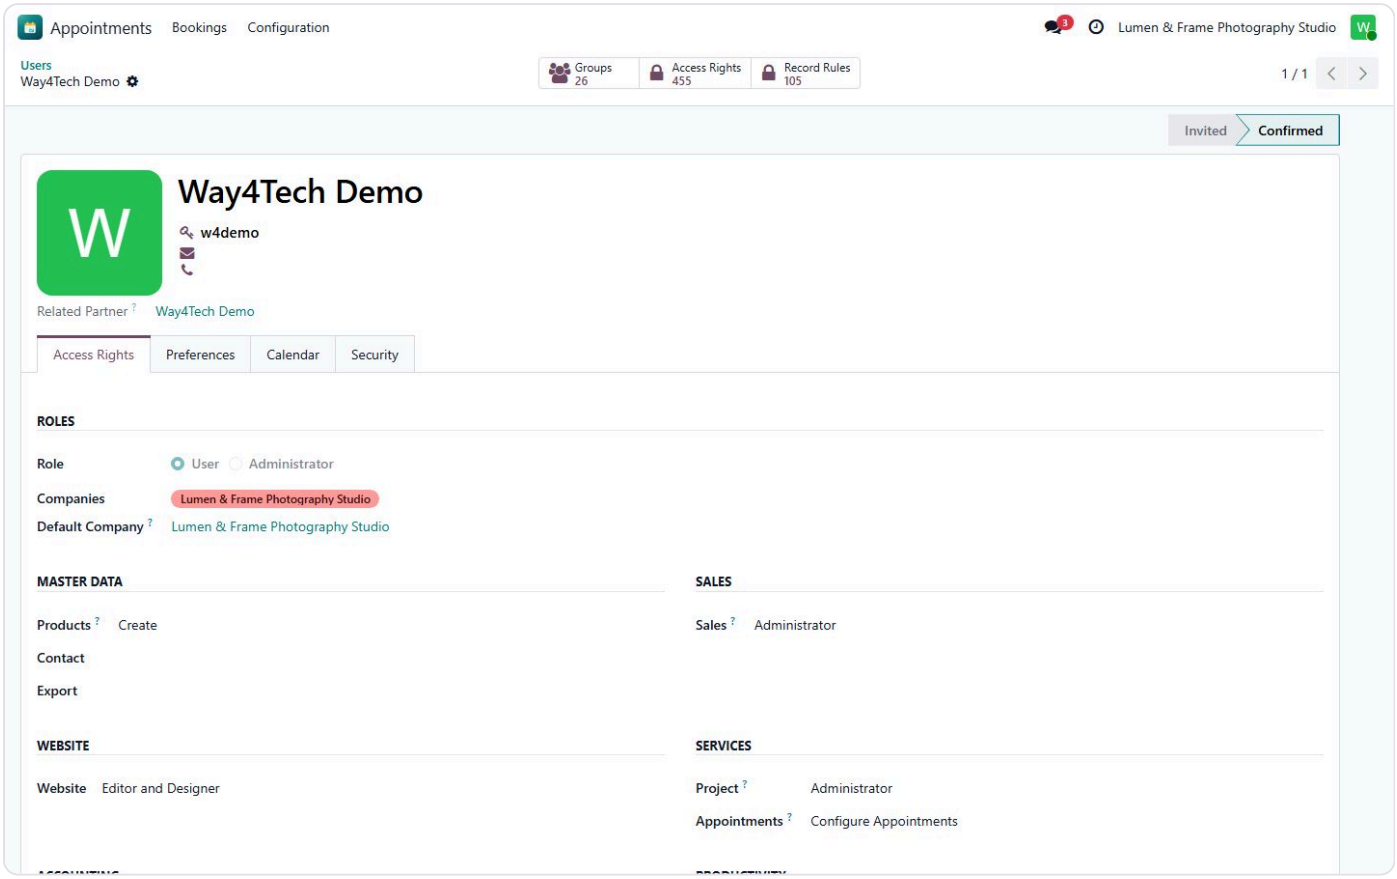

ADDED	WHAT IT IS
Appointments app	Bookings and Configuration menus
Website pages	/appointment, one page per type, and the customer's own booking page
Three email templates	Appointment: Confirmation, Appointment: Reminder, Appointment: Cancelled
A scheduled action	Appointments: send reminders, every hour
A sequence	Booking references APT/ followed by five digits
Two access levels	Handle Bookings and Configure Appointments
Record rules	Visitors see only published types; every record follows its company

Give the team access

1 Set the Appointments line on each user

Settings, Users, open the person, **Access Rights** tab. Under **Services** there is an **Appointments** line. Choose **Handle Bookings** for the front desk and the people who give the appointments, or **Configure Appointments** for whoever sets up the services. Leave it empty and the person does not see the app.

Staff that bookings are made with must be internal users. Portal users and share users cannot be picked as staff on a type.

Every field on an appointment type

Appointments, Configuration, Appointment Types, **New**. These are all the fields, in the order the form shows them, with the default a new type starts with.

FIELD	WHAT IT DOES	DEFAULT
Name	What the customer sees on the booking index and the page. Name it the way a customer would ask for it.	Required
Image	A picture for the type, kept on the record.	None
Duration	How long the appointment lasts. Must be more than zero and no more than 24 hours.	01:00
Slot Every	How often a slot can start. Empty means back to back, every Duration.	Empty
Buffer Before / After	Free time that must sit before and after, checked against other meetings.	00:00
Minimum Notice	How far ahead a booking must be made, in hours.	01:00
Booking Window	How many days ahead bookings are taken. At least one.	60 days

Timezone	The timezone the weekly hours are written in. Visitors still see their own time.	Your user's timezone
Is Published	Shows the type on the website. Unpublished types are invisible to visitors.	Off
Website URL	The type's own address, /appointment/<name>-<id>. Read only.	Set on save
Scheduled With	Staff (Odoo users) or Resources (rooms, chairs, kit).	Staff
Assignment	Visitor chooses, Assign automatically, or Everyone must be free.	Assign automatically
Staff / Resources	Who can take the booking. At least one is required for the kind chosen.	Required
Location	The address, shown on the pages and in the emails.	Empty
Video Call Link	A meeting link, put in the emails and on the calendar meeting.	Empty
Company	Only shown when you run several companies.	Current company
Availability tab	The weekly bands: day, from, to.	None
Questions tab	What to ask the customer at booking time.	None
Follow-up tab	Allow Cancellation and up to when, Allow Reschedule, Send Reminder and when.	All on, 24 hours
Description tab	Text shown to the visitor above the slots.	Empty

Archive a type to take it out of use without losing its history. The form shows a red Archived ribbon, and old bookings keep pointing at it. A type that still has bookings cannot be deleted.

A checklist for each new type

- Name it and write the description the customer will read above the slots.
- Set the duration, then decide Slot Every and the buffers together.
- Set Minimum Notice to the time you really need to prepare, and a Booking Window you will commit to.
- Set the timezone to where the work happens, not where the server is.
- Pick Staff or Resources, then the Assignment rule, then add the people or things.
- Add the weekly bands, with two bands on a day for a lunch break.
- Add questions and set the Follow-up tab.
- Tick Is Published, then open the Website URL in a private window to see what a customer sees.

PART 5 Appointment types, screen by screen

The appointment type is the heart of the module. This part opens the demo's types and walks every section and every tab of the form.

IN THIS PART YOU WILL LEARN

- Reading the list of types
- Timing: duration, slot interval and buffers
- Booking rules, timezone and publishing
- Staff or resources, and the three assignment rules
- Weekly availability, questions, follow-up and description
- Jumping from a type to its bookings

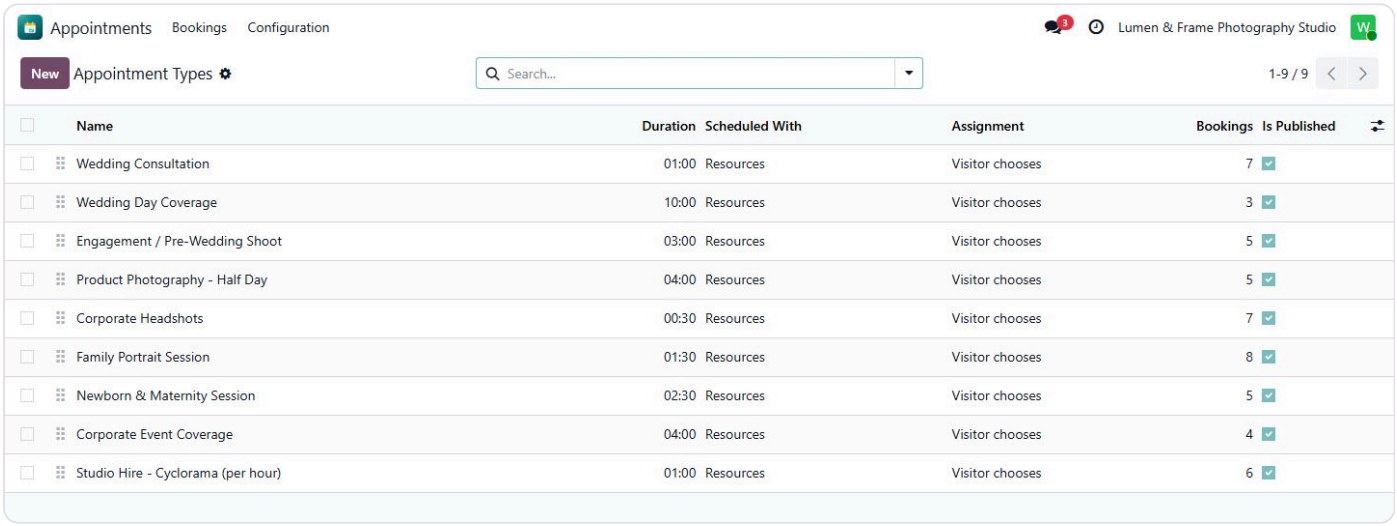

TRY IT YOURSELF ON THE DEMO

1. Appointments, Configuration, Appointment Types
2. Open Corporate Headshots and read the Timing and Booking Rules
3. Open Wedding Consultation, then the Questions tab, then click a question
4. Close the question with Discard

1 The list of types

Configuration, **Appointment Types**. Each line shows the duration, who the type is scheduled with, the assignment rule, how many bookings it has (cancelled ones are not counted) and whether it is published. Drag the handle on the left to change the order the website shows them in. Search filters: Published, Unpublished, With Staff, With Resources, and group by Scheduled With.

The demo studio has nine types, from a 30 minute headshot to a ten hour wedding day.

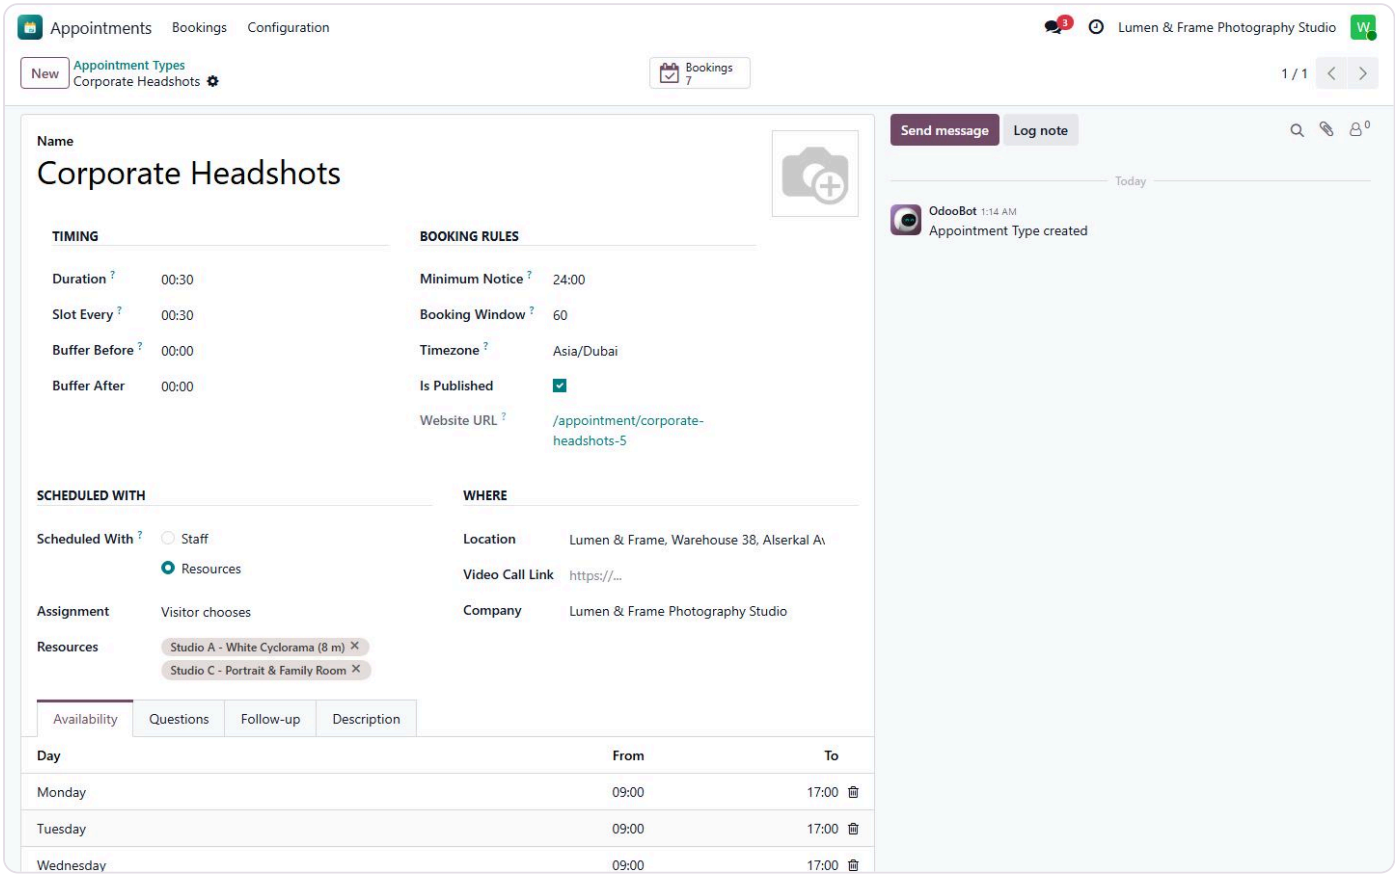

Name	Duration	Scheduled With	Assignment	Bookings	Is Published
Wedding Consultation	01:00	Resources	Visitor chooses	7	☑
Wedding Day Coverage	10:00	Resources	Visitor chooses	3	☑
Engagement / Pre-Wedding Shoot	03:00	Resources	Visitor chooses	5	☑
Product Photography - Half Day	04:00	Resources	Visitor chooses	5	☑
Corporate Headshots	00:30	Resources	Visitor chooses	7	☑
Family Portrait Session	01:30	Resources	Visitor chooses	8	☑
Newborn & Maternity Session	02:30	Resources	Visitor chooses	5	☑
Corporate Event Coverage	04:00	Resources	Visitor chooses	4	☑
Studio Hire - Cyclorama (per hour)	01:00	Resources	Visitor chooses	6	☑

2 Timing and booking rules

Open **Corporate Headshots**. **Duration** 00:30 and **Slot Every** 00:30 give a slot every half hour. With no buffers, two headshots can run back to back. **Minimum Notice** 24:00 stops anyone booking for later today, and the **Booking Window** of 60 days stops bookings more than two months out. The **Timezone** is Asia/Dubai, so the weekly hours are Dubai hours. **Is Published** is ticked, and **Website URL** is the page to link from your site.

Slot Every shorter than the duration gives overlapping start times, for example a one hour session offered every 30 minutes. That suits resources with a capacity above one.

Scheduled With and Assignment

Scheduled With decides what the time is booked against. On the headshots type it is **Resources**, with Studio A and Studio C. Pick **Staff** instead and the field becomes a list of Odoo users.

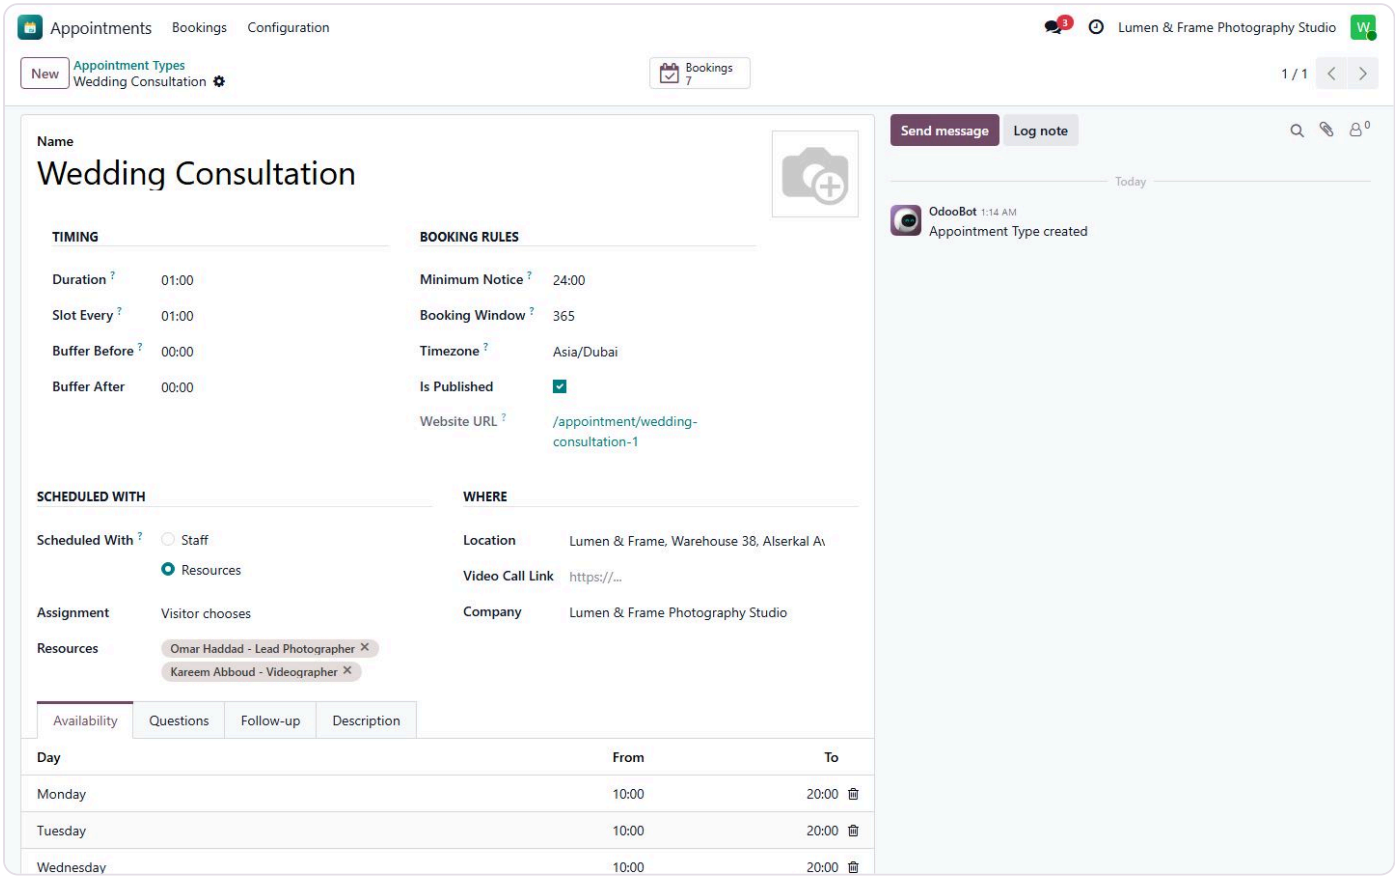

ASSIGNMENT	WHAT THE VISITOR SEES	WHO GETS THE BOOKING
Visitor chooses	A "Who would you like to see?" row of buttons, with Anyone first	The one they picked, or the first free one if they left it on Anyone
Assign automatically	No choice; just the slots	The first one free for that slot, in the order of the list
Everyone must be free	Only slots where every staff member or resource on the type is free	One of them. The others are not blocked for that time.

> "Everyone must be free" checks all of them but books one. If you need a panel of three people all held for the same hour, add the other two to the meeting by hand, or they can be booked again in that slot.

3 Availability tab: the weekly hours

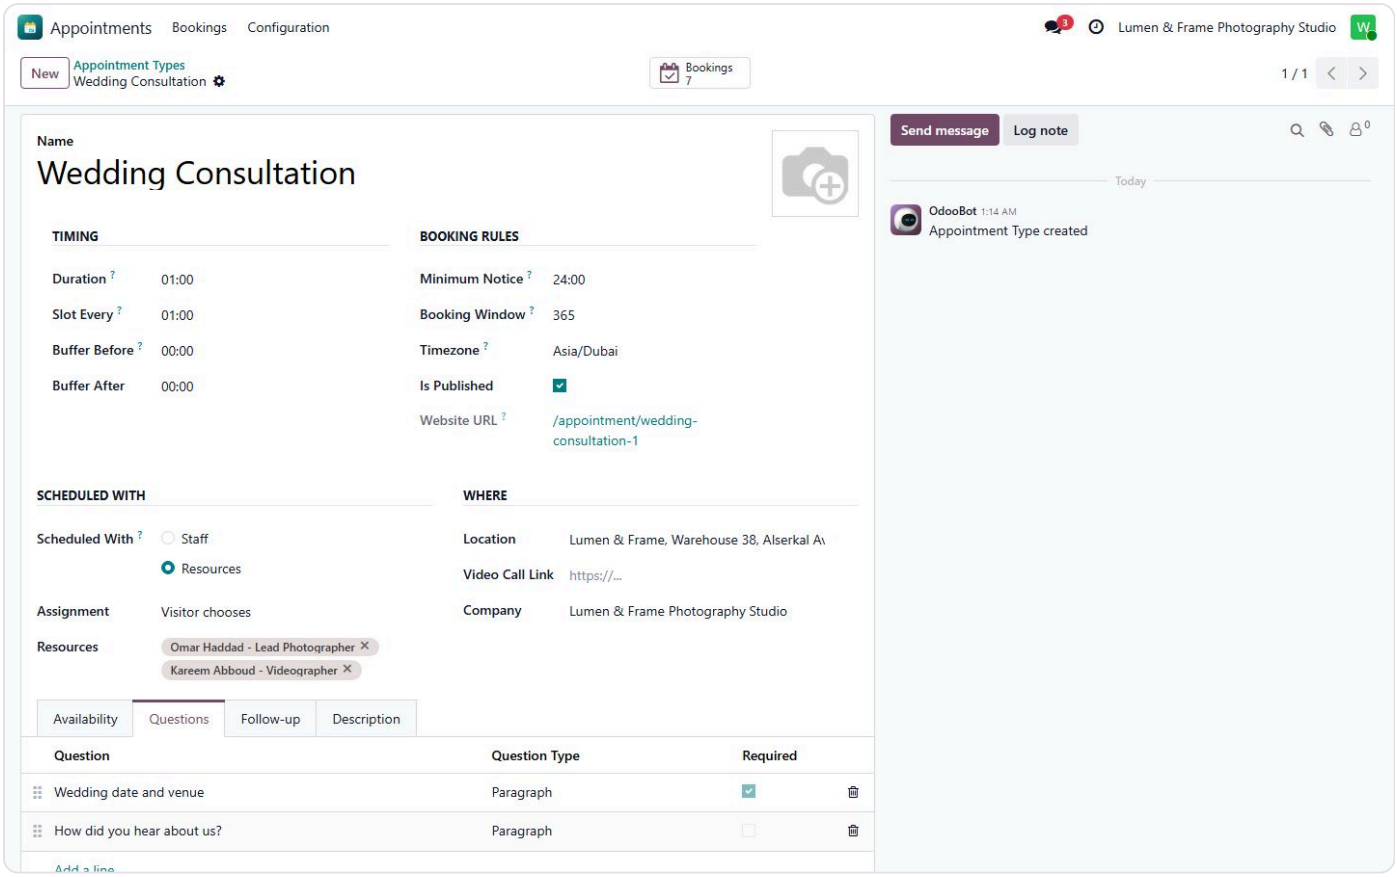

Each line is one band: a **Day**, **From** and **To**, written in the type's timezone. The Wedding Consultation is open Monday to Thursday 10:00 to 20:00 and Saturday 12:00 to 20:00. A slot is only offered if it finishes inside its band, so a one hour slot in a band ending at 20:00 starts no later than 19:00.

Two bands on the same day leave a gap, which is how you give a lunch break. A band must start before it ends and sit inside one day; Odoo refuses anything else.

4 Questions tab: what to ask the customer

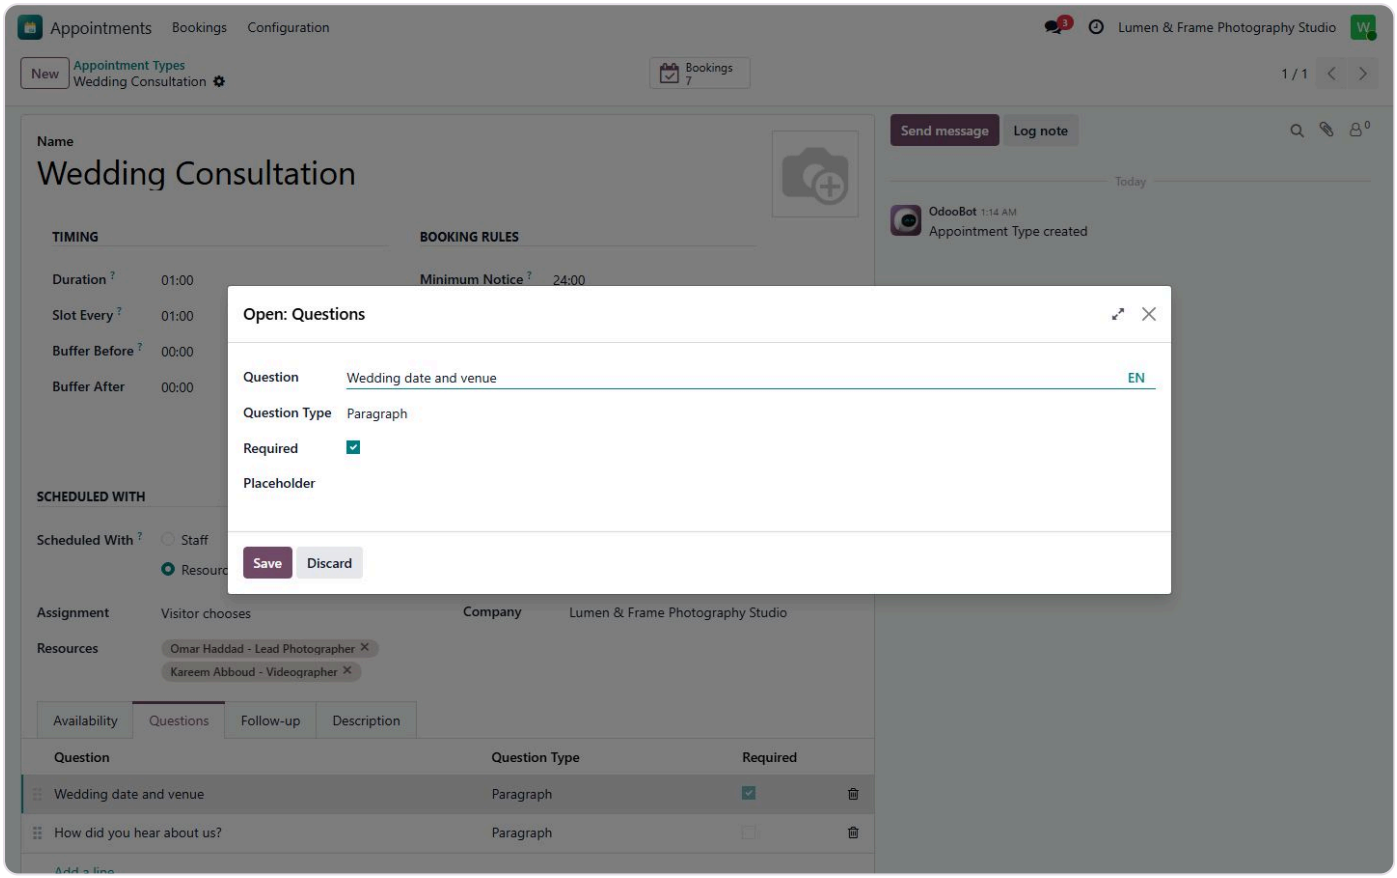

The list of questions shown on the booking form, in order. Drag the handle to reorder. Each has a type and a Required tick. The wedding consultation asks for the wedding date and venue, required, and how the customer heard about the studio, optional.

5 One question, opened

Click a question to open it. **Question** is the label. **Question Type** is one of Single line, Paragraph, Choose one or Yes / no. **Placeholder** is the grey hint inside the box, for single line and paragraph. For Choose one an **Options** list appears, and at least one option is required. Close with **Discard** on the demo.

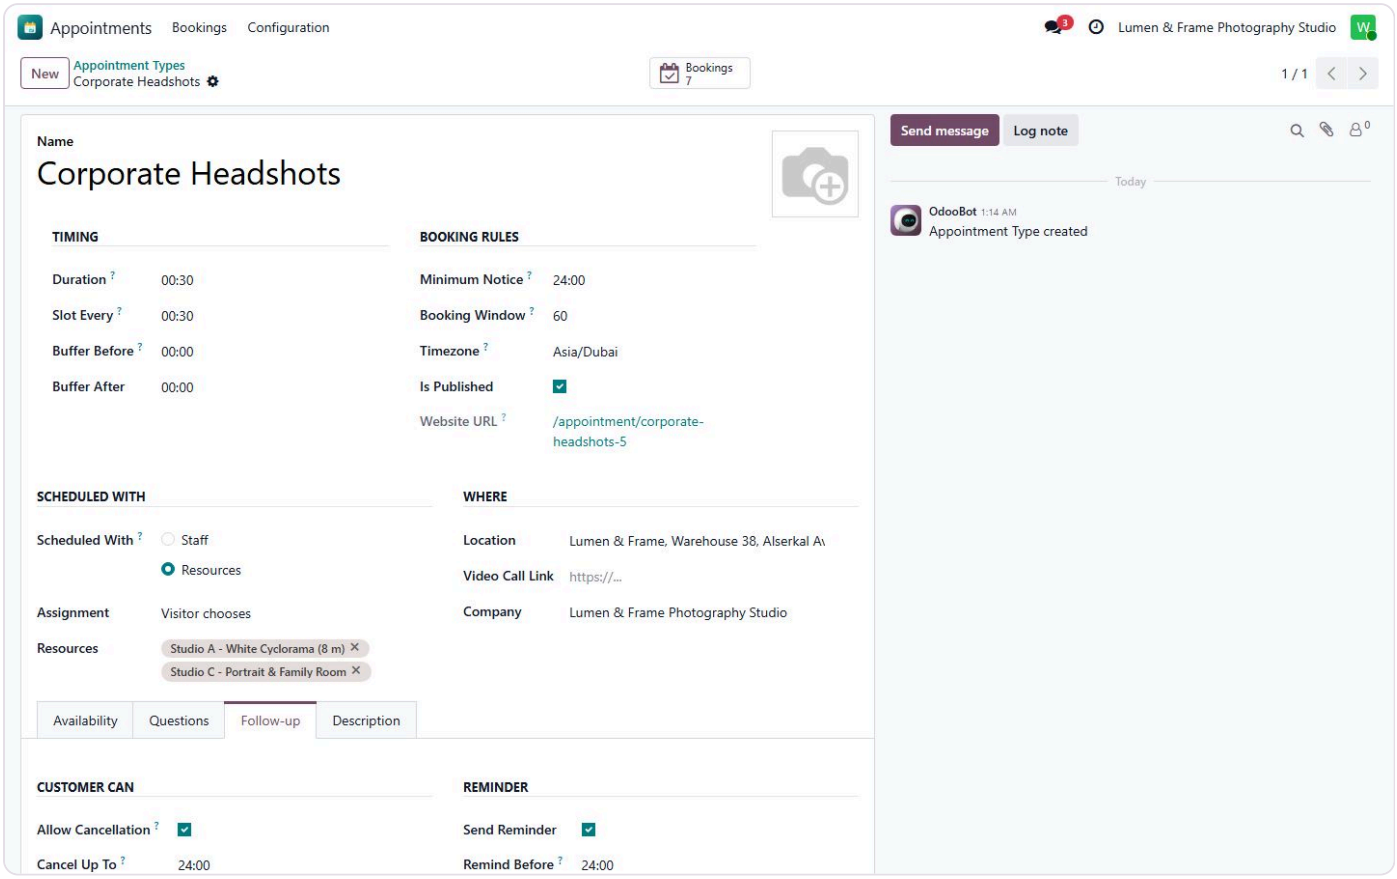

A Yes / no question is a tick box on the form. It is stored as Yes or No, so an unticked required Yes / no still counts as answered.

6 Follow-up tab: what the customer can do afterwards

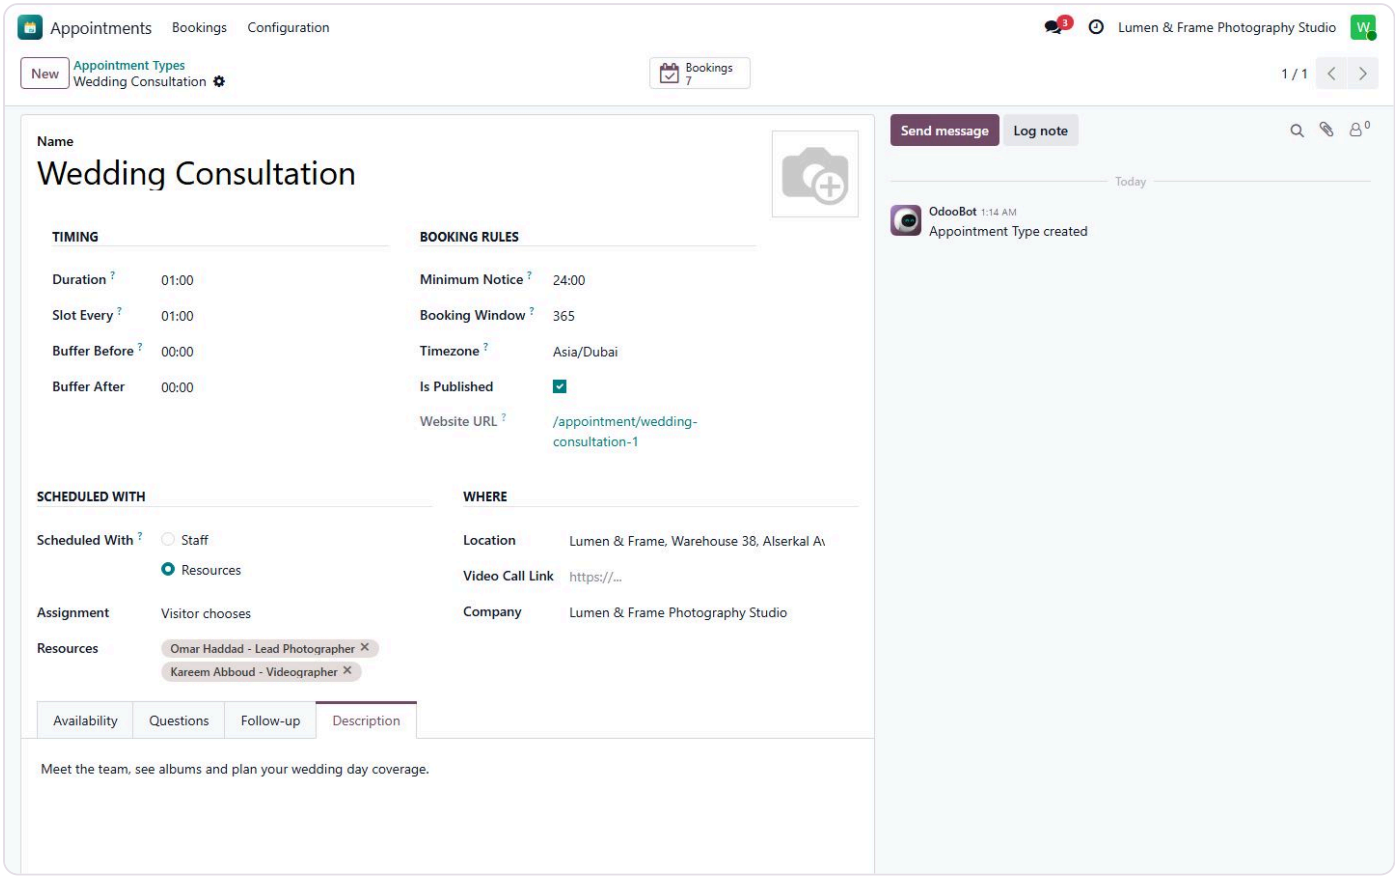

Allow Cancellation puts a Cancel button on the customer's booking page, and **Cancel Up To** closes it that many hours before the start, 24 by default. **Allow Reschedule** adds Move to another time. **Send Reminder** and **Remind Before** decide whether a reminder email goes and how many hours ahead.

The same Cancel Up To deadline also hides the Move to another time button on the customer's page once it has passed.

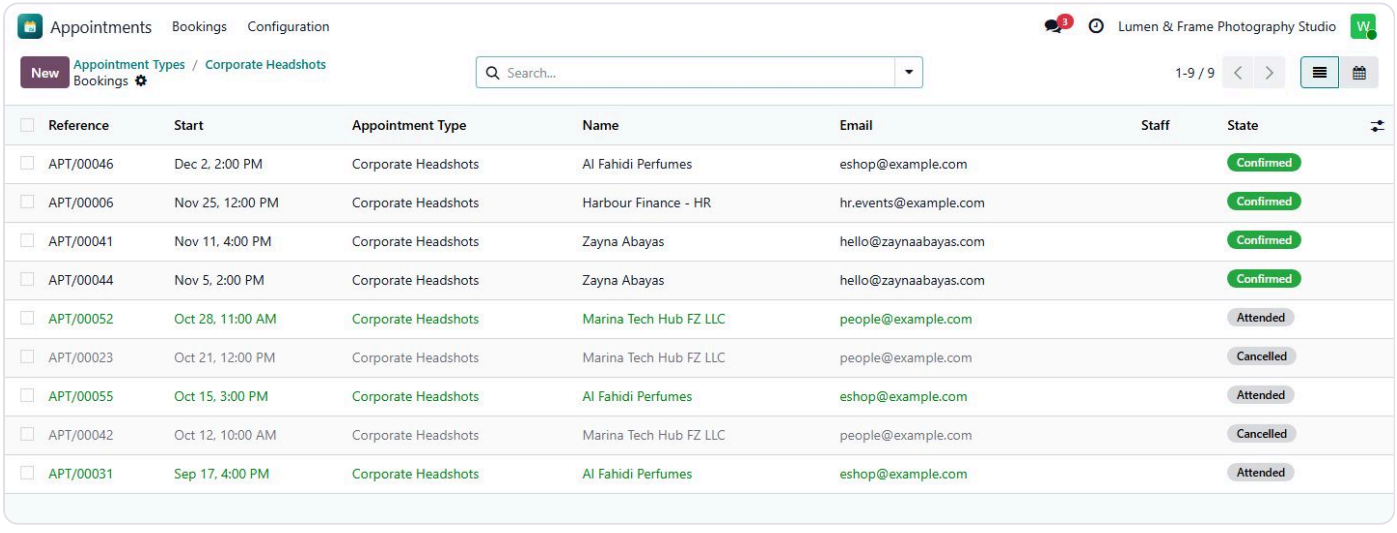

7 Description tab

Rich text shown to the visitor on the booking page, under the duration and location. Say what the appointment is, what to bring, and anything that would make a customer pick a different type.

8 From a type to its bookings

The **Bookings** button at the top of the type opens every booking for it, apart from cancelled ones in the count, in list, form or calendar. A new booking made from there starts with the type already filled in.

What Odoo refuses on a type

IF YOU TRY TO	ODOO SAYS
Save a duration of zero	An appointment has to last longer than nothing.
Save a duration over 24 hours	An appointment cannot run longer than a day.
Save Slot Every as zero or less	The slot interval has to be more than zero, or empty.

Save a Staff type with no staff	"<type>" is booked with staff, so at least one member of staff is needed.
Save a Resources type with no resources	"<type>" is booked with resources, so at least one resource is needed.
Set the Booking Window below 1	The booking window has to be at least one day.
Save a band that ends before it starts	Availability has to start before it ends. Check the <day> band.
Save a Choose one question with no options	"<question>" asks the visitor to choose one, so it needs at least one option.

PART 6 Resources: rooms, chairs, studios and kit

A resource is something bookable that is not an Odoo user. Use one for a room, a treatment chair, a car bay, a studio or a piece of equipment, or for a freelancer you do not want to make a user.

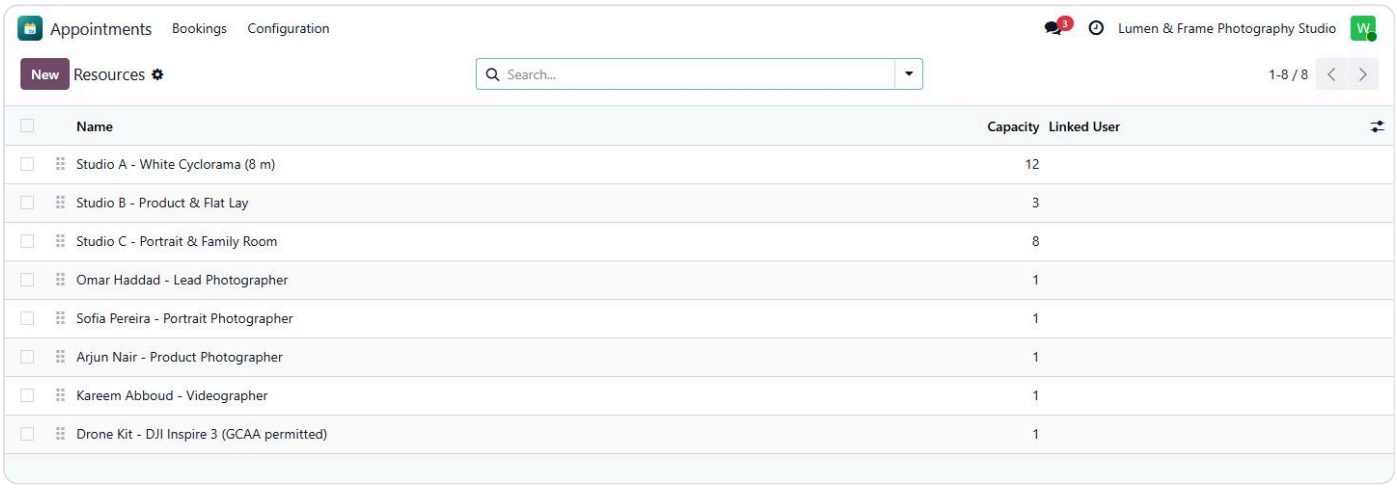

IN THIS PART YOU WILL LEARN

- The resource list and its inline editing
- Capacity, and how one resource takes several bookings at once
- Linking types to a resource from either side
- Why a person kept as a resource is not blocked by their calendar

1 The resource list

Configuration, **Resources**. The list edits in place: type a name and a capacity on a new line and it is saved. The demo has three studios with capacities of 12, 3 and 8, four photographers and a videographer at 1, and a drone kit at 1.

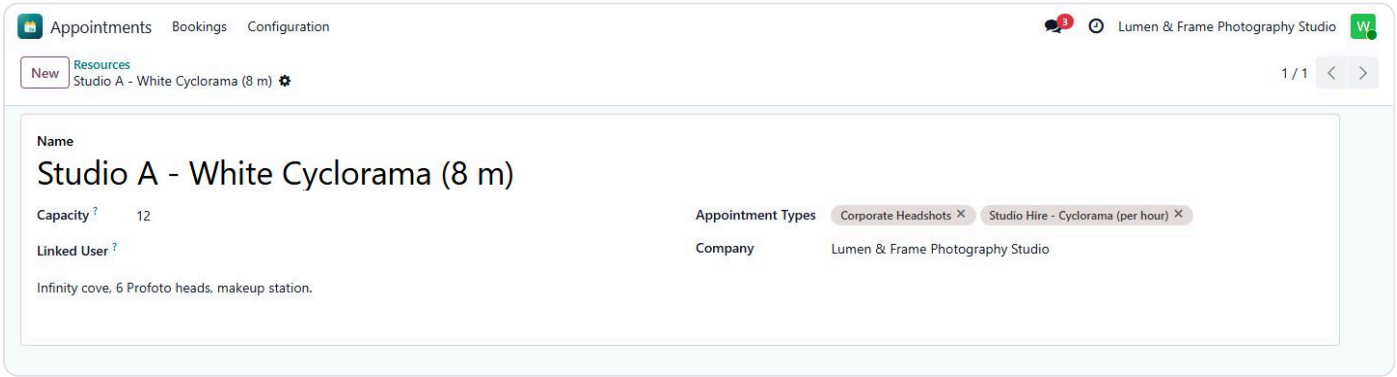

Drag the handle to set the order. That order is also the order Assign automatically tries them in.

2 A studio

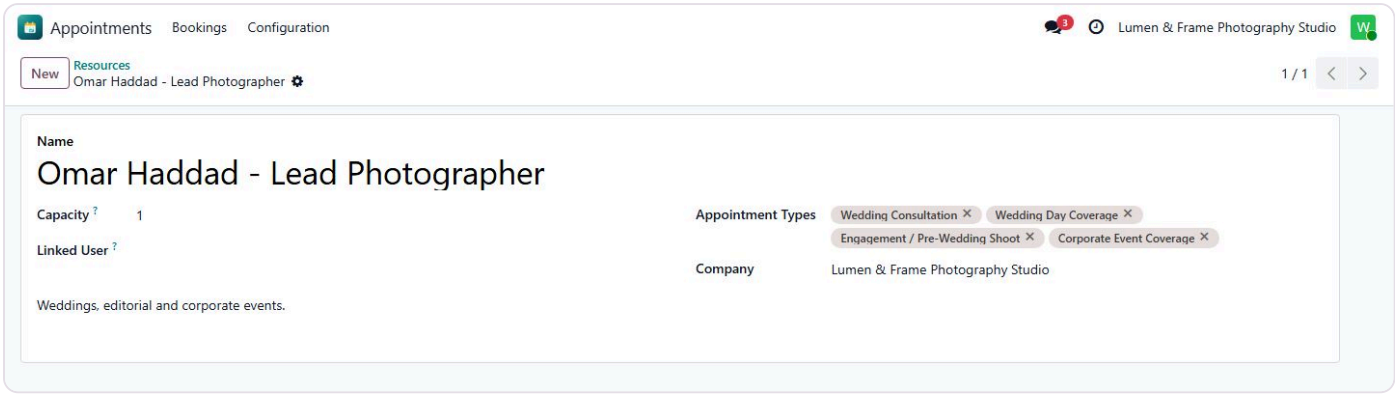

Open **Studio A**. **Capacity** is how many bookings it can hold at the same time. A studio of 12 can take twelve overlapping headshot bookings before the slot disappears. **Appointment Types** lists the types that can be booked on it; adding a type here is the same as adding the resource on the type. The description is for your own notes.

Capacity must be at least 1. A treatment room is usually 1; a class of ten is 10.

3 A person kept as a resource

The demo books its photographers as resources, so a page can offer "Omar or Kareem" without either being an Odoo user. The **Linked User** field lets you note which user the resource really is.

A resource is blocked only by other bookings from this module. The code does not read the Linked User's calendar, so a photographer's own meetings in Odoo Calendar do not hide their slots. If a person's other meetings must block their time, schedule that type with **Staff** instead.

PART 7 The booking page, as a customer sees it

Everything in this part happens on your website, with nobody signed in. It is what you hand your customers: one address per service, or the index that lists them all.

IN THIS PART YOU WILL LEARN

- The booking index and when it skips straight to a type
- Choosing who, picking a slot and moving between months
- The booking form, with the type's own questions
- What the customer sees when something is wrong
- The same pages on a phone

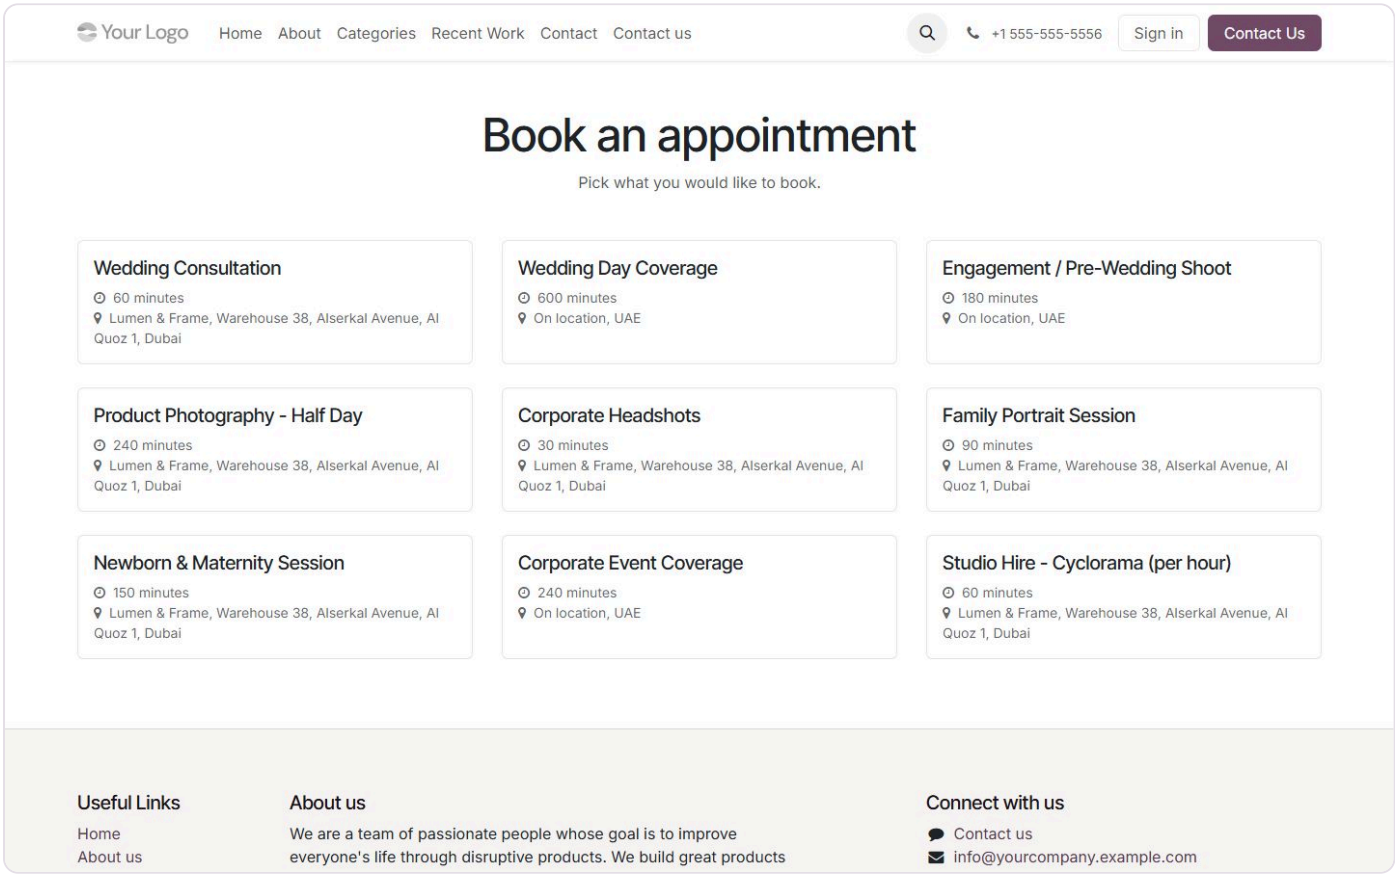

TRY IT YOURSELF ON THE DEMO

1. Open photography.way4tech.com/appointment in a private window
2. Open Corporate Headshots and click a time: it turns solid, nothing is booked yet
3. Click Studio C at the top: the slots narrow to that studio
4. Click Later to see December. Do not press Confirm booking on the demo

1 The booking index, /appointment

Every published type the visitor can see, as a card with its name, duration in minutes and location. Click a card to open that type. If only one type is published, this address jumps straight to it.

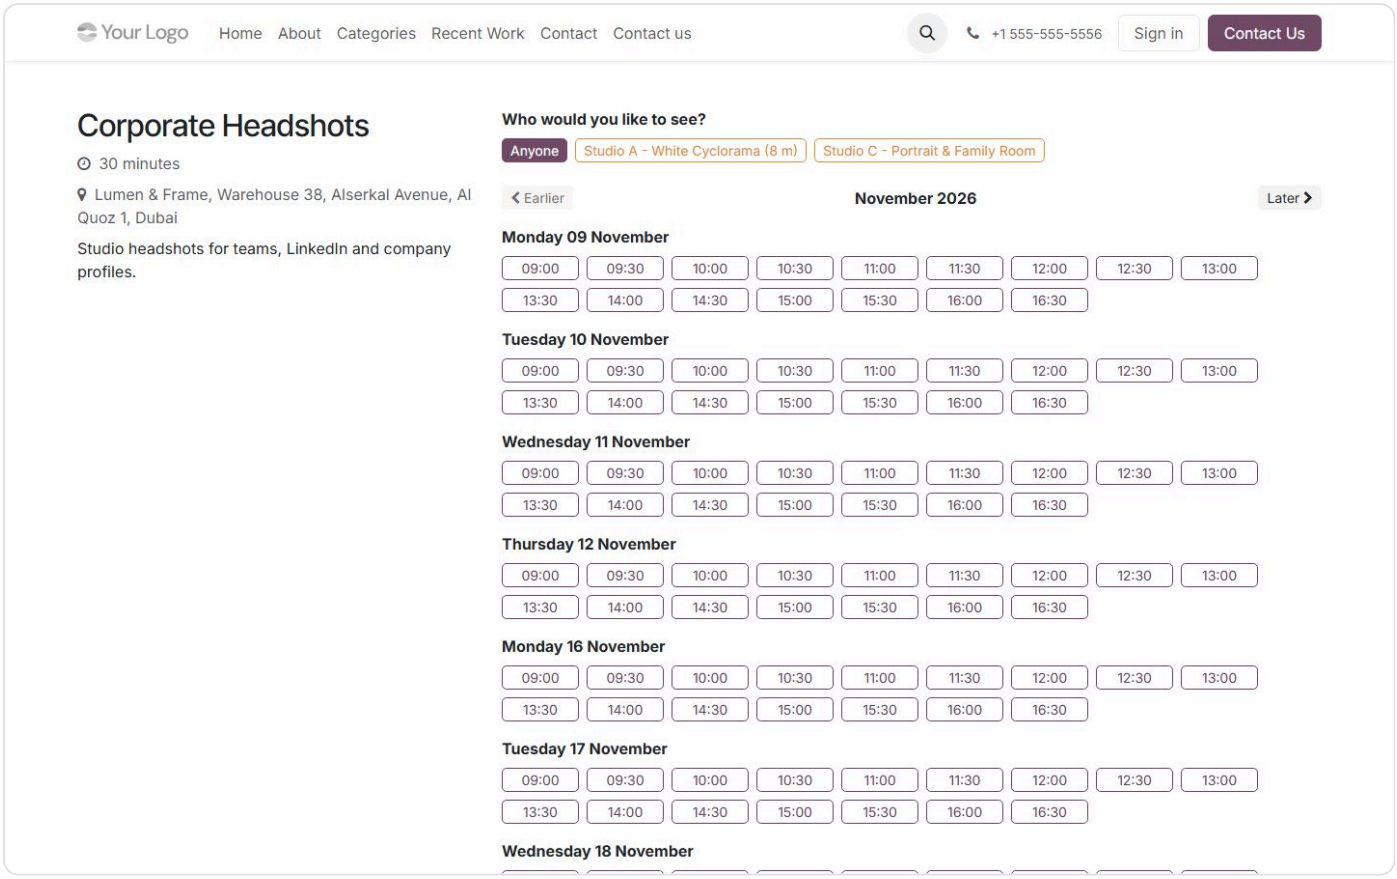

Add a website menu item pointing at /appointment, or link each type's own address from the matching page of your site.

2 One type: the slot picker

The left side shows the name, the duration, the location and the description from the type. The right side lists the free slots of the current month, one row per day, and only days with at least one free slot appear. Times are in the visitor's timezone.

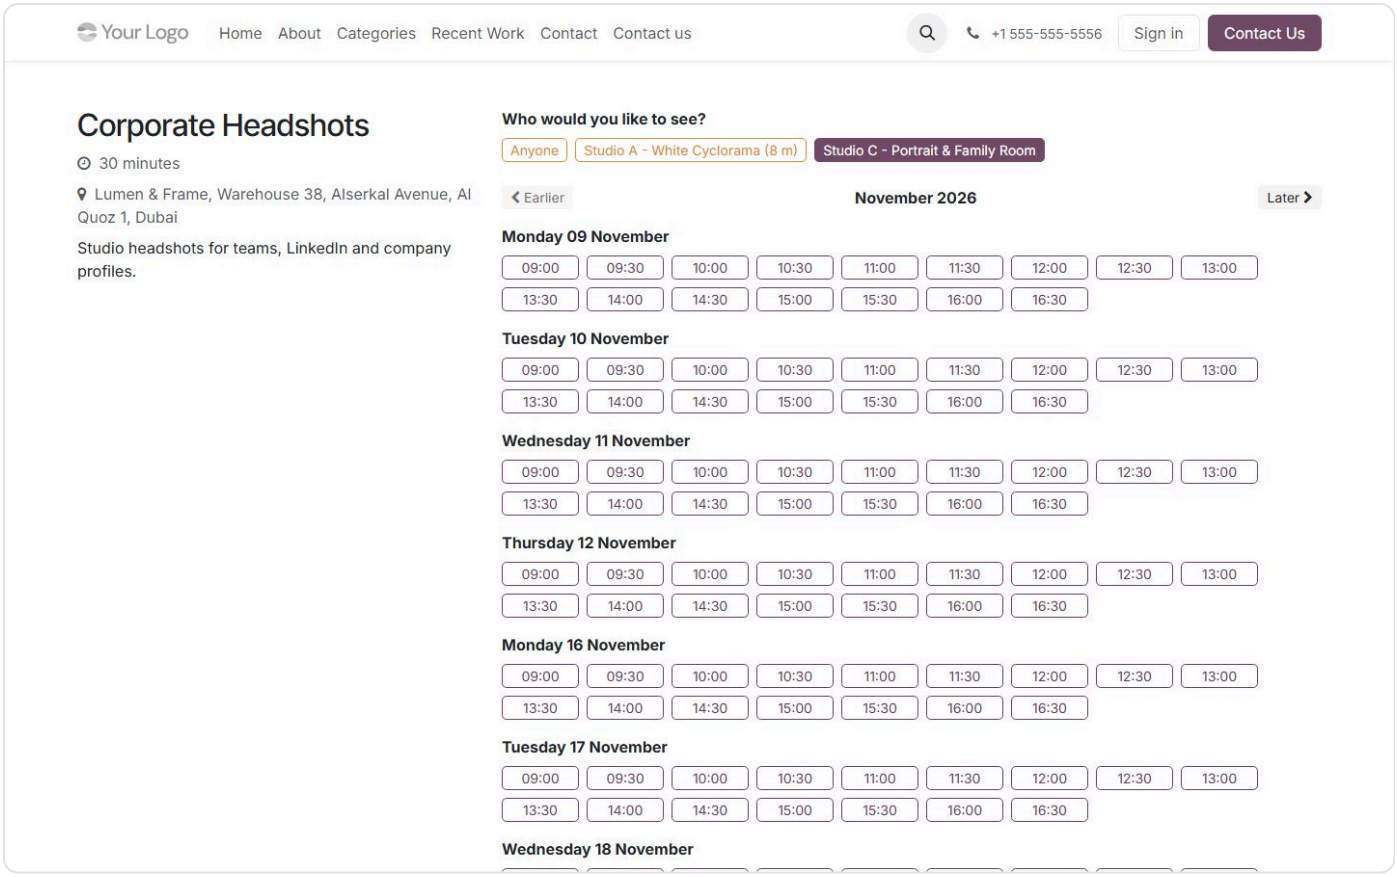

The page shows one month at a time. Earlier stops at the current month, so a past month is never offered.

3 Who would you like to see?

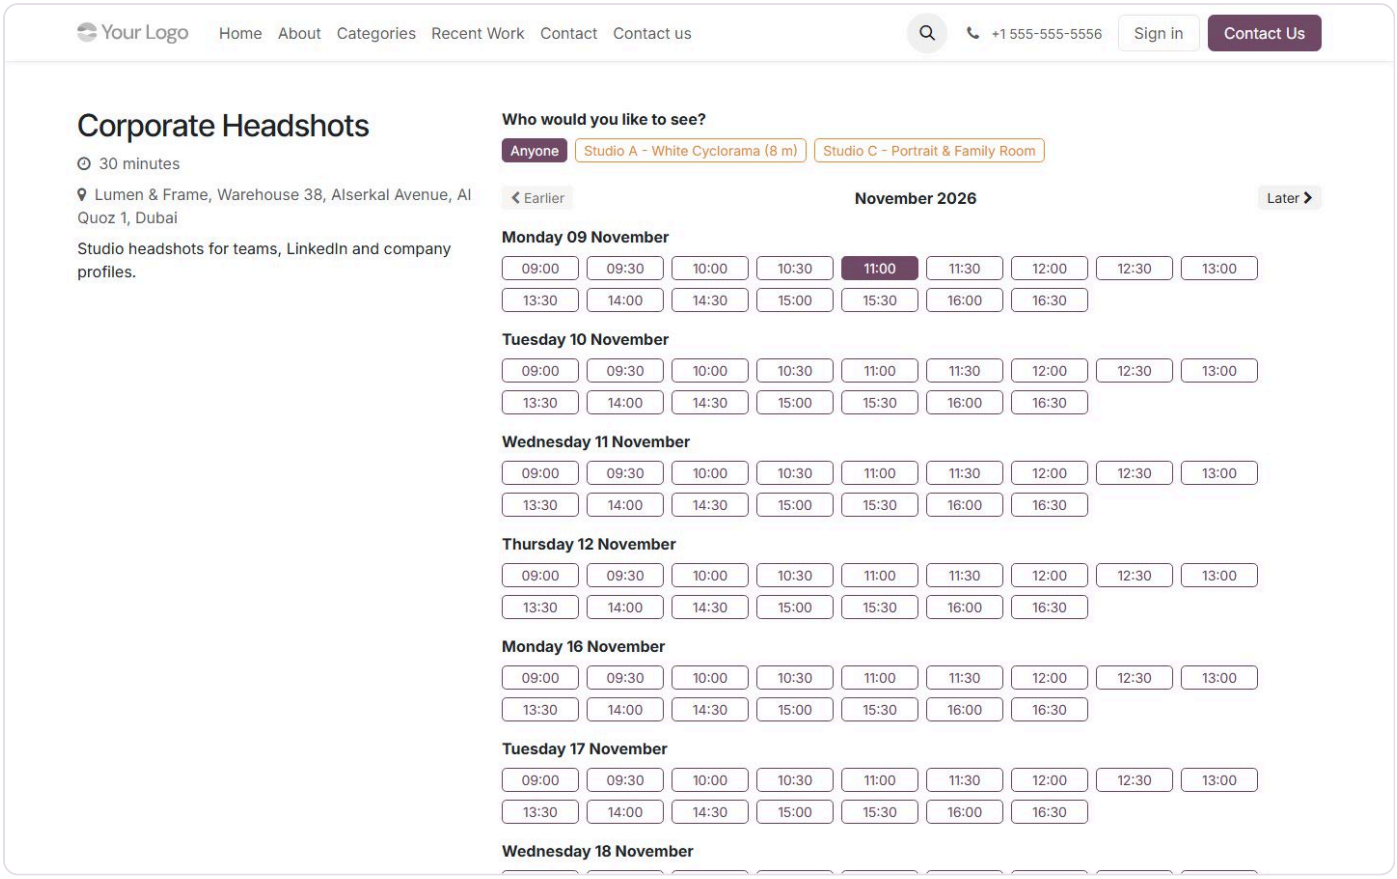

When the type's assignment is **Visitor chooses**, a row of buttons sits above the slots: **Anyone**, then each staff member or resource. Picking one reloads the page with only that one's free slots. Here Studio C is chosen.

With Assign automatically or Everyone must be free, the row is not shown at all.

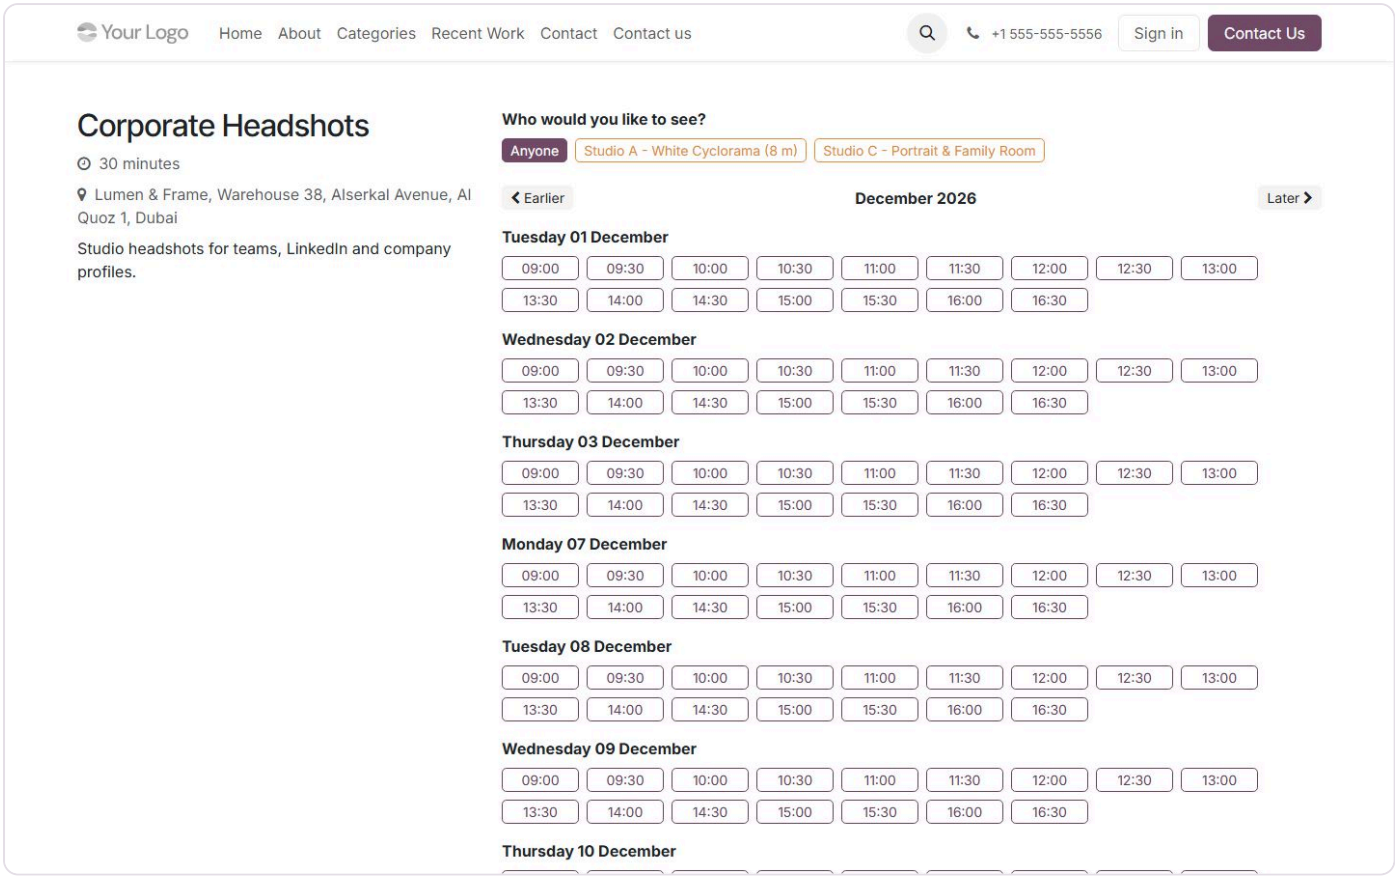

4 Pick a slot

Clicking a time marks it. Nothing is booked yet; it only fills in the form below. The visitor can change their mind and click another time as often as they like.

5 Move between months

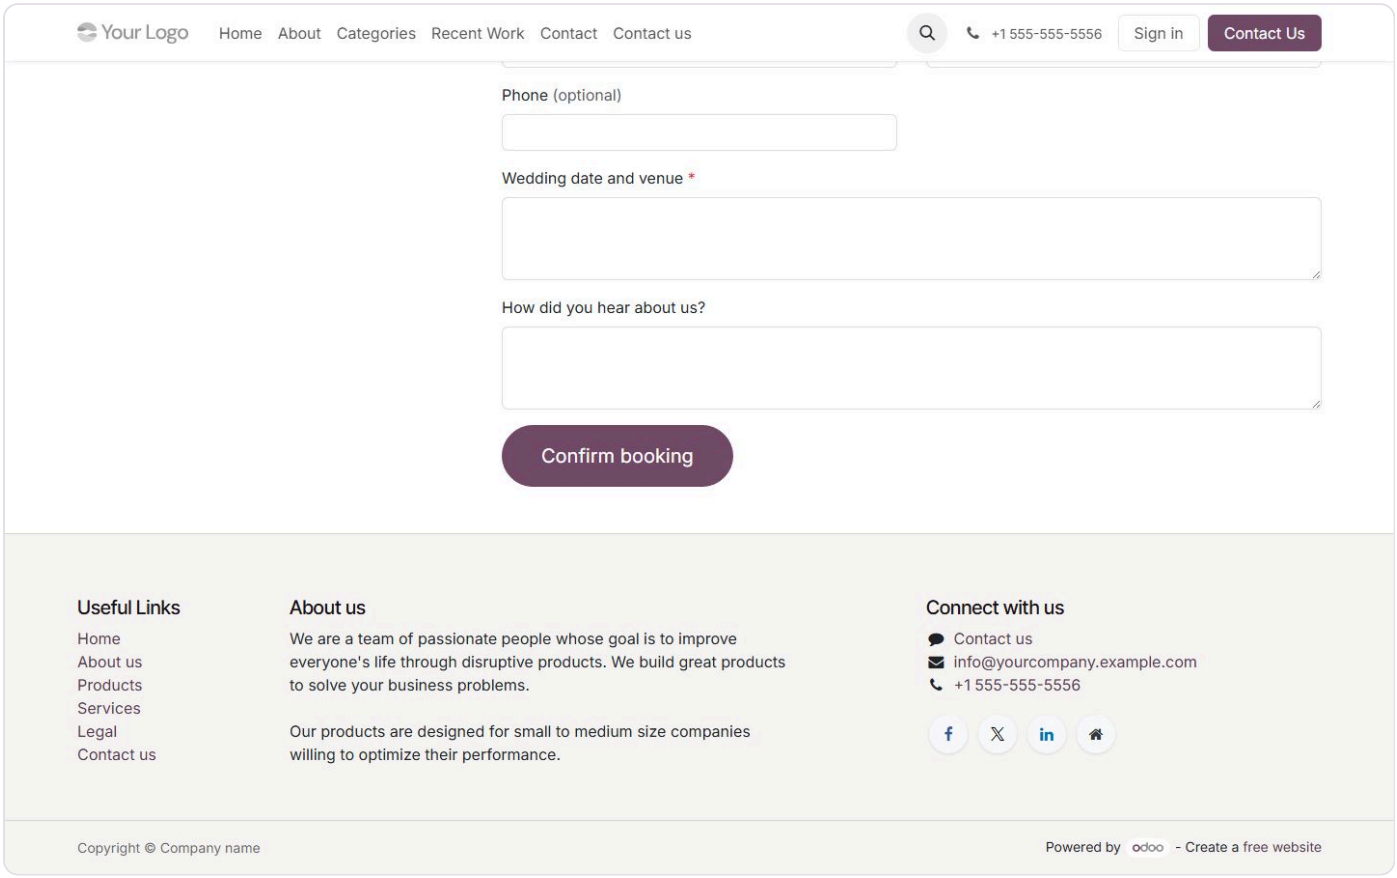

Later opens the next month and **Earlier** goes back. Slots stop at the end of the booking window, so with a 60 day window the month after next is mostly empty.

6 Fill in the form

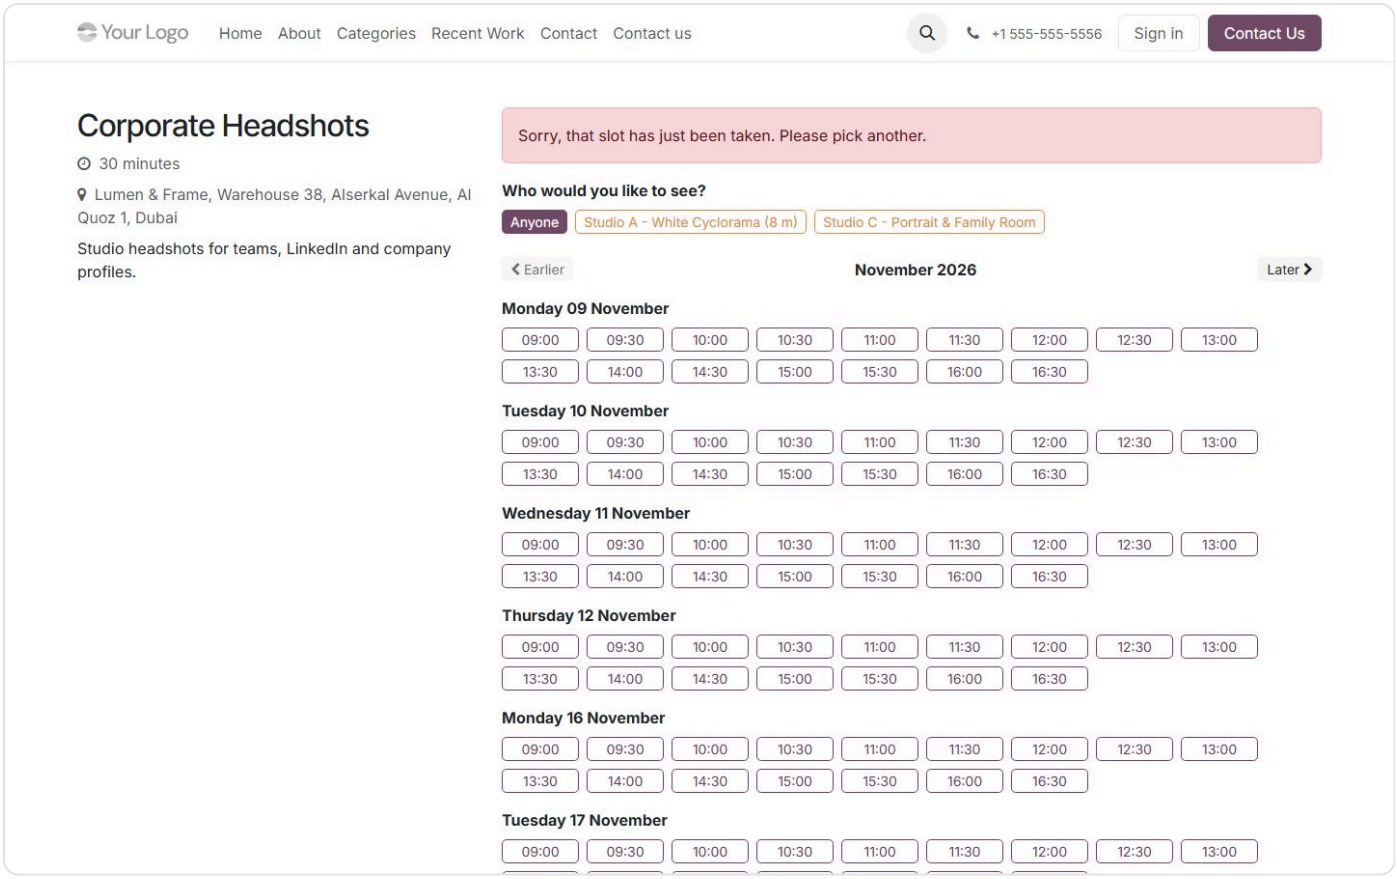

Below the slots: **Name** and **Email**, both required, **Phone**, optional, then the type's own questions in order. A required question has a red star. Single line and paragraph questions show the placeholder, Choose one is a drop-down, and Yes / no is a tick box. **Confirm booking** sends it.

The email is checked for a sensible shape, the name may be up to 120 characters and each answer up to 2,000. Required answers left empty send the visitor back with "Please answer: <question>".

7 When something is wrong

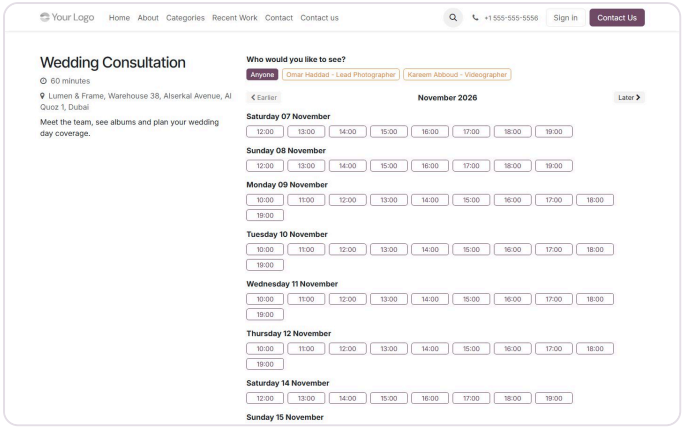

Any problem brings the visitor back to the same page with a red message at the top, and nothing is written. The most common one is a slot taken by somebody else between loading the page and pressing Confirm.

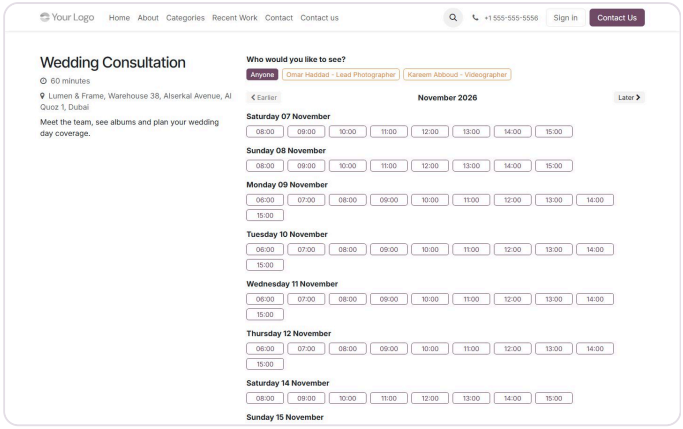

MESSAGE ON THE PAGE	WHY
Please fill in your name, your email and a slot.	One of the three was missing.
That email address does not look right.	No @ or no dot after it.
Please shorten your name or email address.	Name over 120 or email over 240 characters.
That slot is not valid. Please pick another.	The posted time could not be read.
That slot is too soon. Please pick a later one.	Inside the Minimum Notice.
That slot is too far ahead.	Past the Booking Window.
Sorry, that slot has just been taken. Please pick another.	Nobody suitable is free any more, buffers included.
Please answer: <question>	A required question was left empty.
Something went wrong. Please try again.	Anything unexpected. The details go to the server log.

Timezones

Weekly hours are written in the type's timezone and shown to each visitor in theirs. The page asks the browser which timezone it is in, remembers it in a cookie, and reloads once if its first guess was wrong. The timezone the customer booked from is kept on the booking as **Booked From**, and the emails and the customer's page use it.

Wedding Consultation seen from Dubai: Monday opens at 10:00, Saturday at 12:00.

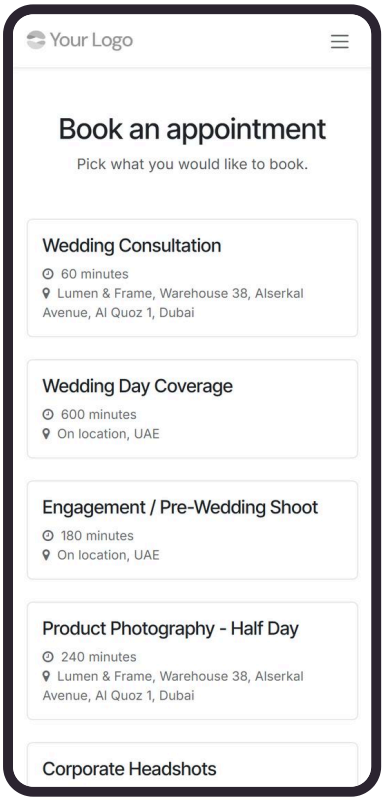

The same hours seen from London, four hours behind: Monday from 06:00, Saturday from 08:00.

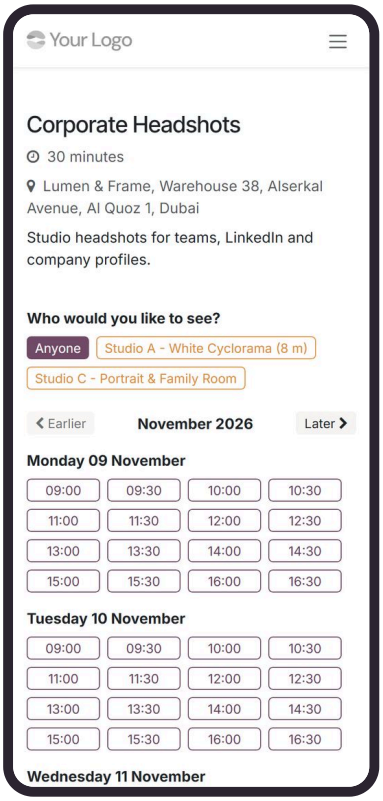

> Daylight saving is handled. A slot that would fall in the hour that does not exist when clocks go forward is skipped, and an hour that happens twice when they go back is read as standard time.

On a phone

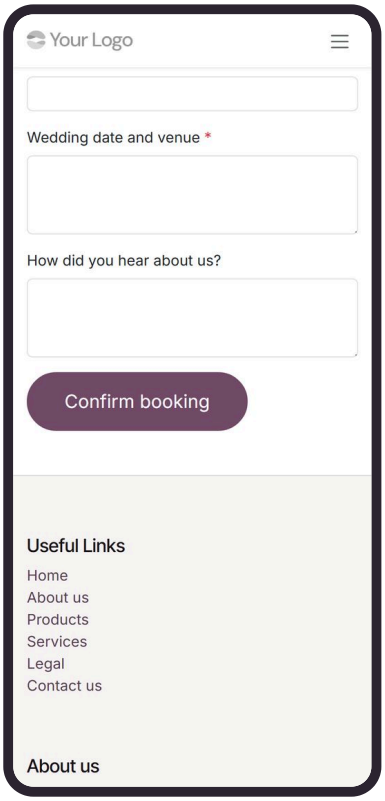

The pages are the same on a phone. The slot buttons wrap to the width of the screen and the form follows underneath.

The index on a phone.

The headshot slots on a phone.

The form and Confirm booking.

PART 8 After booking: the customer's own page

Every booking gets a private address made from a long random token. The customer lands on it the moment they book, and the button in each email brings them back to it to check, move or cancel.

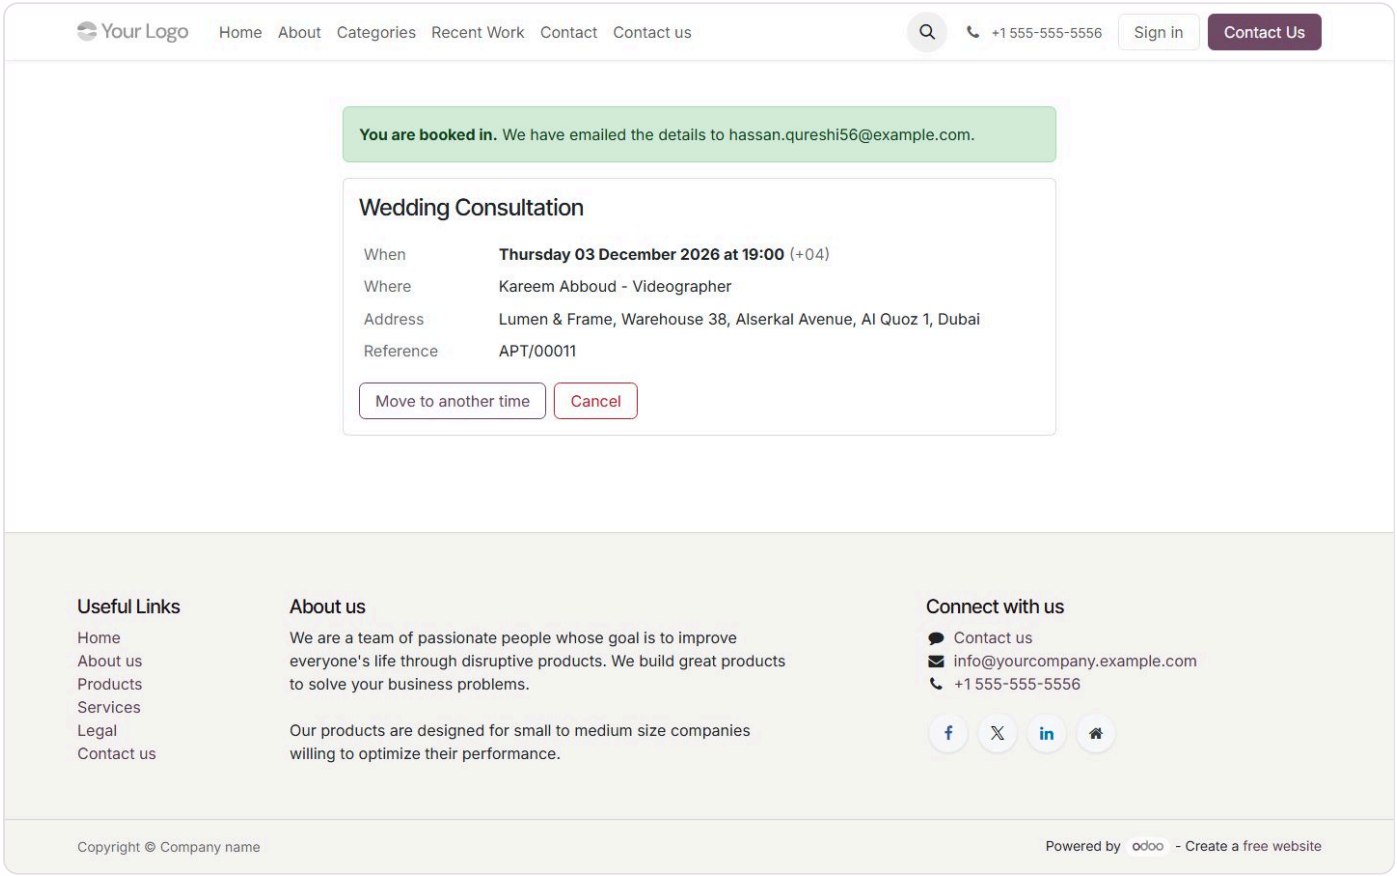

IN THIS PART YOU WILL LEARN

- What the customer sees straight after booking
- Moving to another time, and the checks behind it
- Cancelling, with an optional reason
- When the buttons disappear

1 Straight after booking

A green "You are booked in" box says the details have been emailed. Underneath: the type, **When** in the customer's own timezone with the offset, **Where** (the staff member or resource), the **Address** from the type's location, a video call link if the type has one, and the **Reference**.

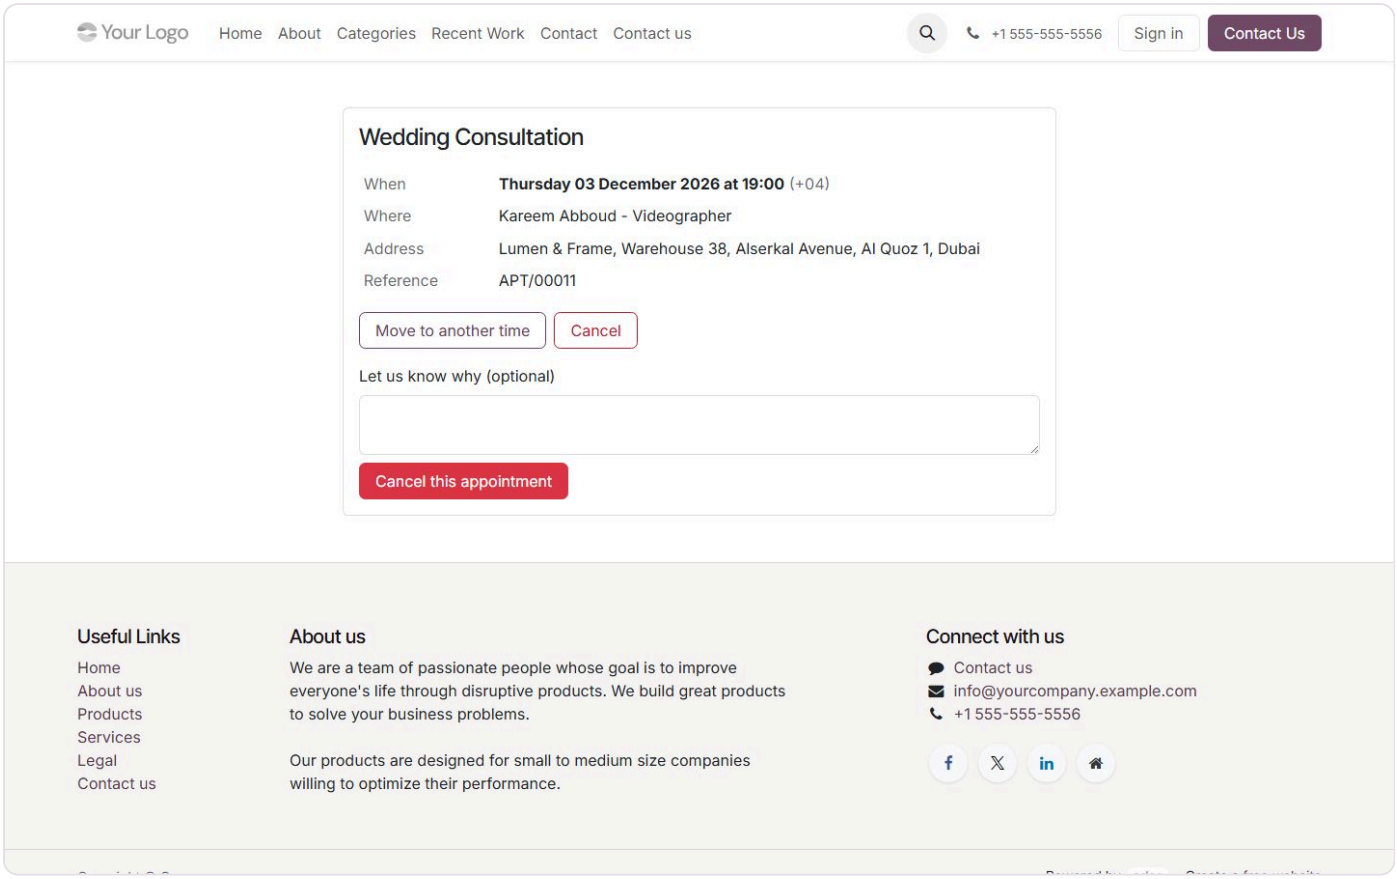

Nobody needs an account. Whoever holds the link can see the booking, so the token is long and random, and the page is never listed in the sitemap.

2 Cancel

Cancel opens a box asking **Let us know why (optional)**, then **Cancel this appointment**. The booking becomes Cancelled, the reason is stored on it, the calendar meeting is archived so the slot frees up, and the cancellation email goes out.

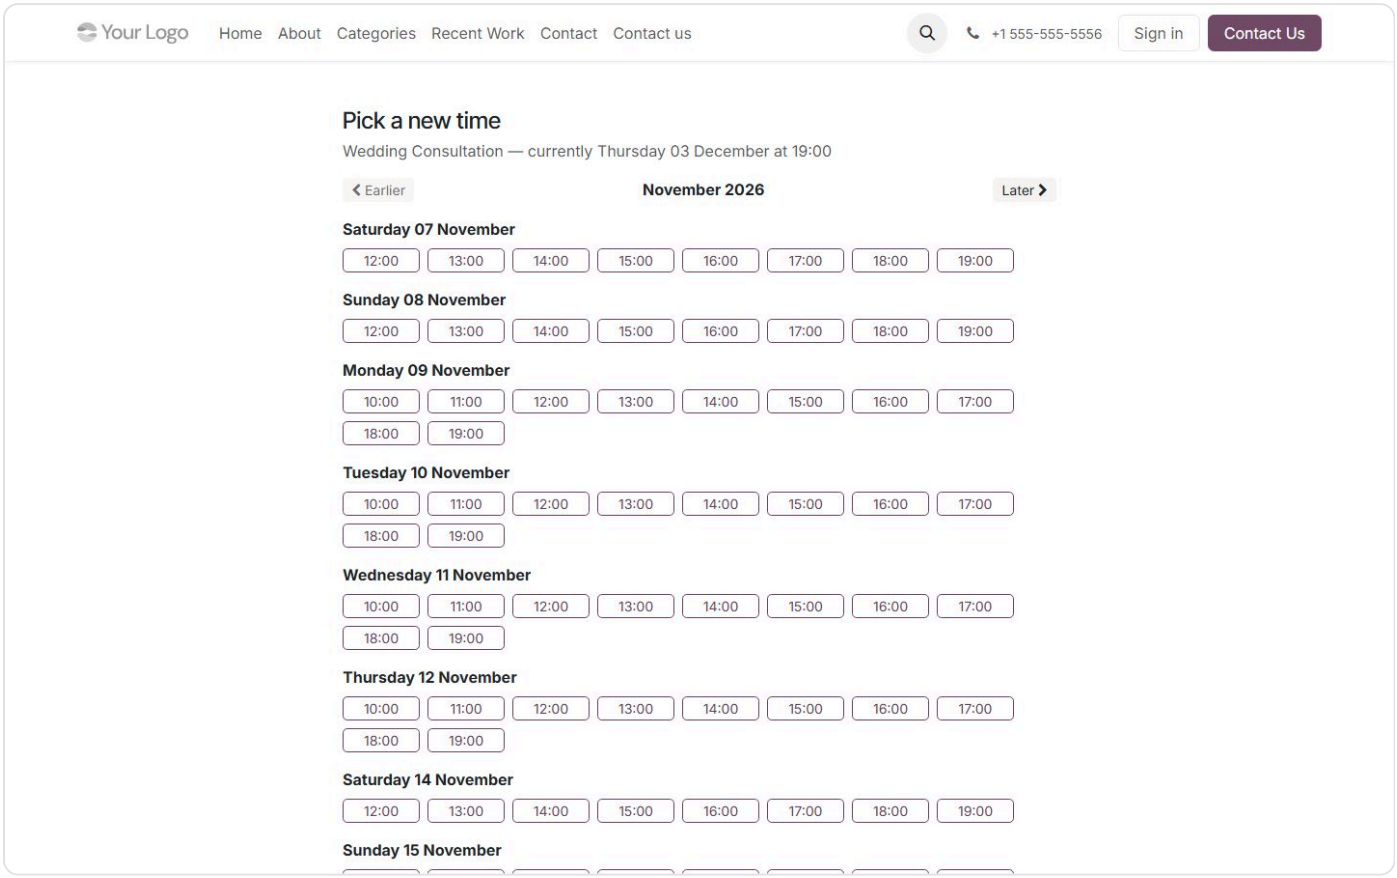

On the demo, open the box to look but do not press Cancel this appointment.

3 Move to another time

Move to another time opens the slot picker again, in the timezone the customer booked from, with the current time shown at the top. Picking a new slot and confirming moves the booking and its meeting, re-sends the confirmation email and writes "Appointment moved to ..." on the booking's history.

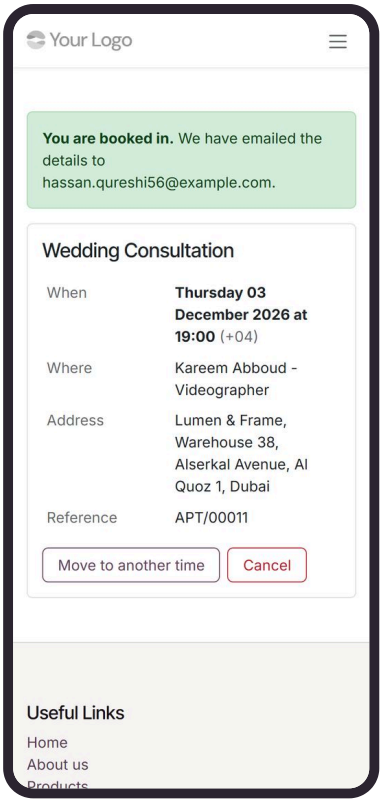

The booking's own slot does not count against it, so moving by half an hour works. The same person or resource keeps the booking: to change photographer, cancel and book again.

When the buttons disappear

BUTTON	SHOWN WHEN
Move to another time	Allow Reschedule is on, the booking is Draft or Confirmed, and the start is further away than Cancel Up To
Cancel	Allow Cancellation is on, the booking is Draft or Confirmed, and the start is further away than Cancel Up To

Past the deadline the page shows the booking without either button. If someone tries to cancel late anyway, the page answers "It is too late to cancel this online. Please get in touch instead." If moving is switched off, it answers "This appointment cannot be moved online."

The confirmation page on a phone, as the customer sees it after pressing Confirm booking.

PART 9 Working the bookings

Appointments, Bookings is where the front desk lives. Website bookings land here already confirmed. This part walks the four views, the search tools, and a booking at every status.

IN THIS PART YOU WILL LEARN

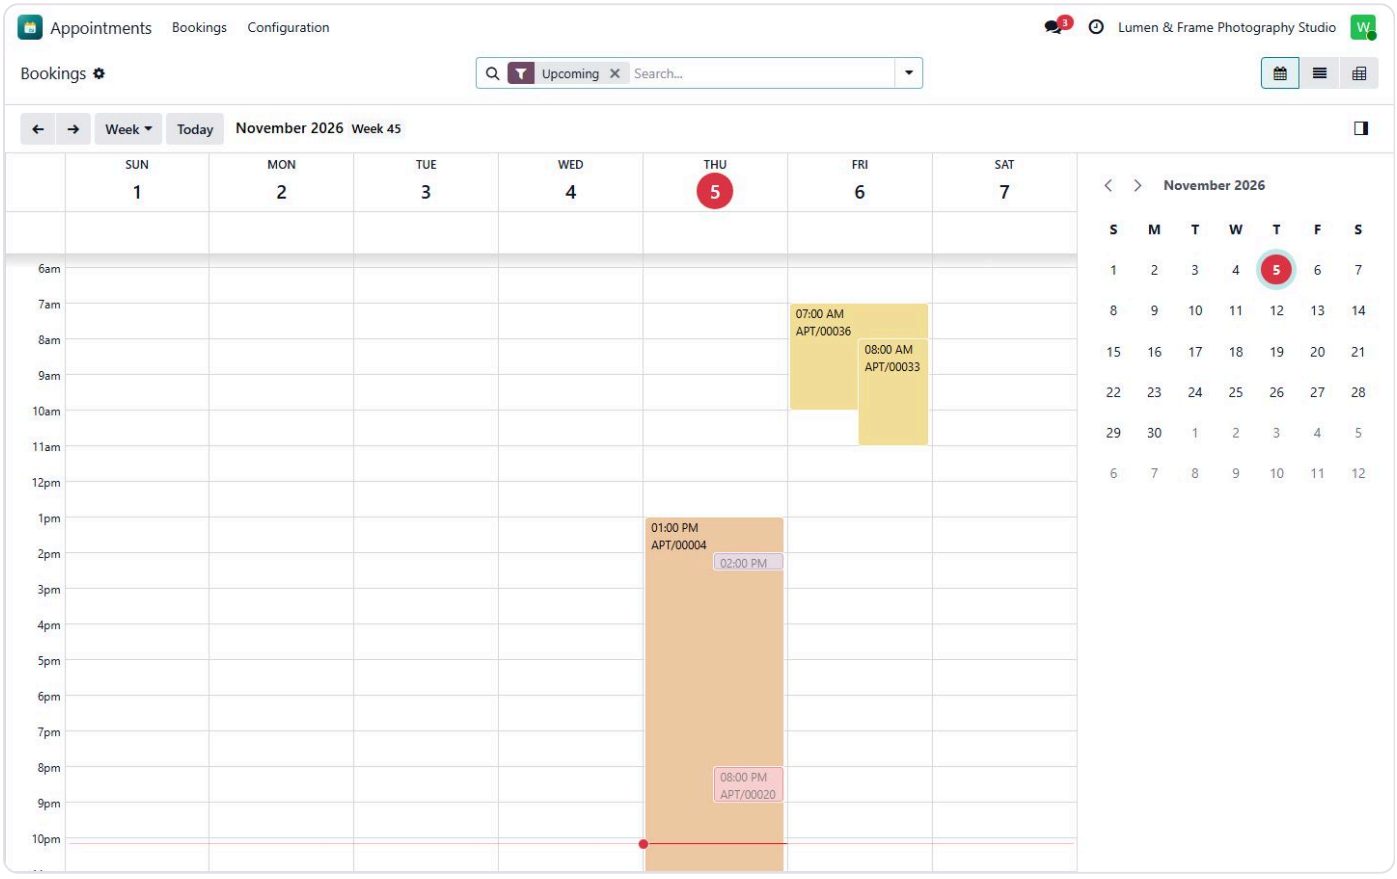

- The week and month calendar, and the list
- Filters and groupings that answer everyday questions
- The booking form and its buttons at each status
- The calendar meeting behind each booking
- Taking a booking by phone safely

TRY IT YOURSELF ON THE DEMO

1. Appointments, Bookings: the week of upcoming bookings
2. Switch to the list, open the filter menu, try Past, then No Show
3. Open APT/00011 and press the Meeting button
4. Look, but do not press Attended, No Show or Cancel on the demo

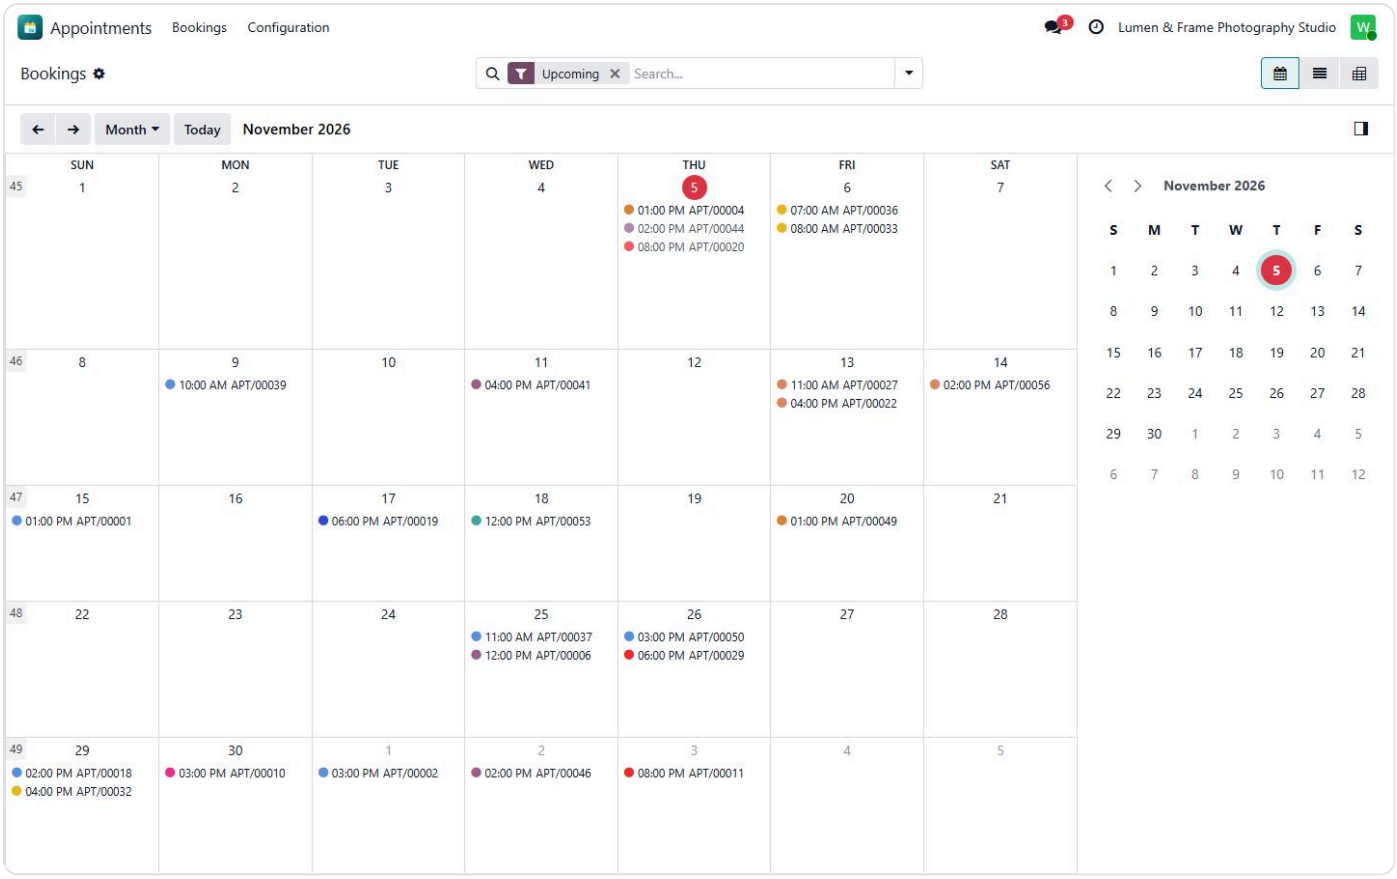

1 The week calendar

Bookings opens in the week calendar with the **Upcoming** filter on. Each block is a booking, coloured by appointment type, showing its reference and start time. Click one for a summary with the customer, type, staff and status. Dragging and quick create are switched off, so a booking is only moved deliberately.

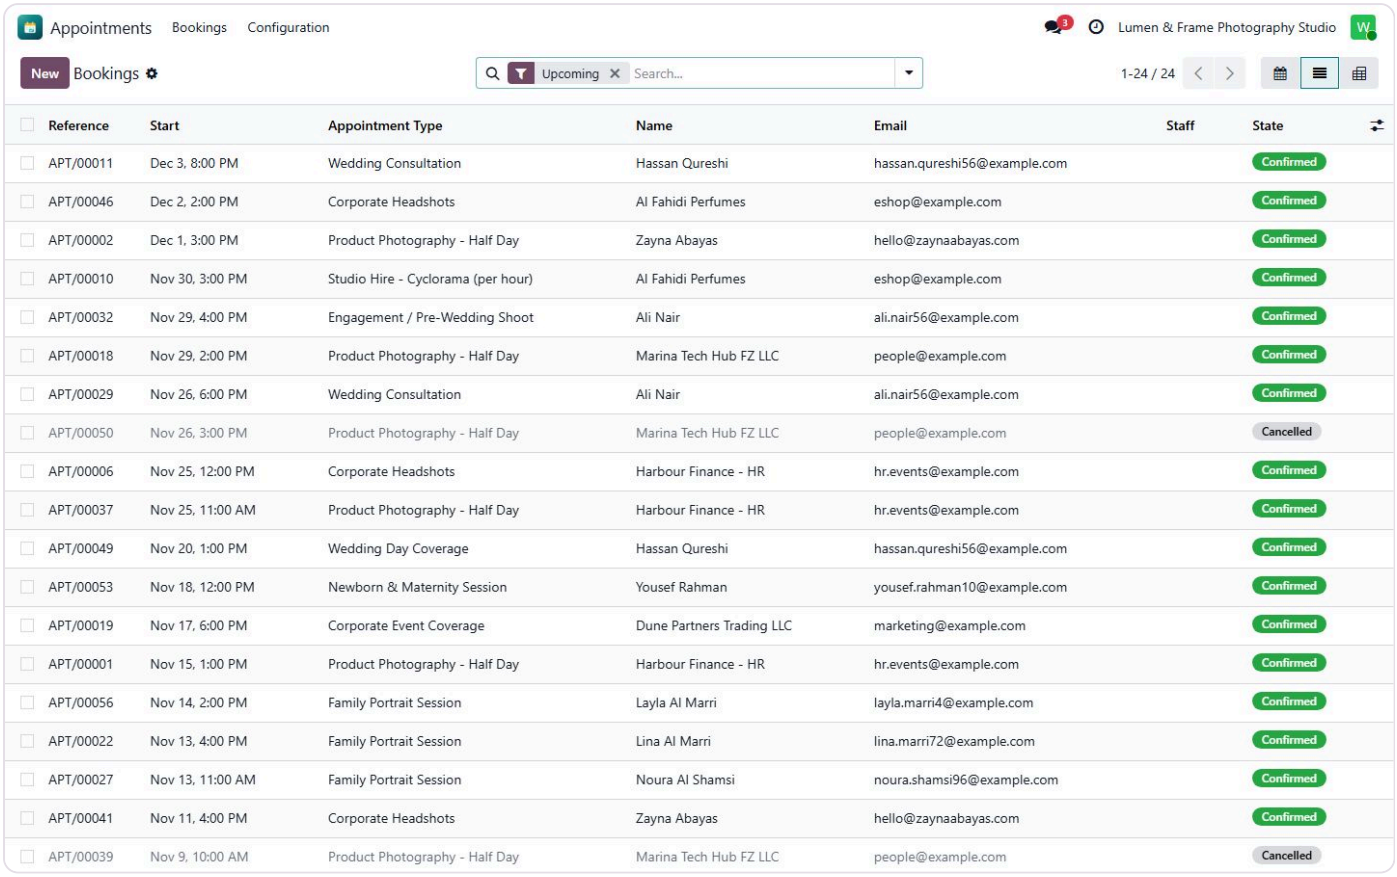

2 The month calendar

Switch the calendar scale to **Month** to see the whole diary at once. The mini calendar on the right jumps to any date.

3 The list

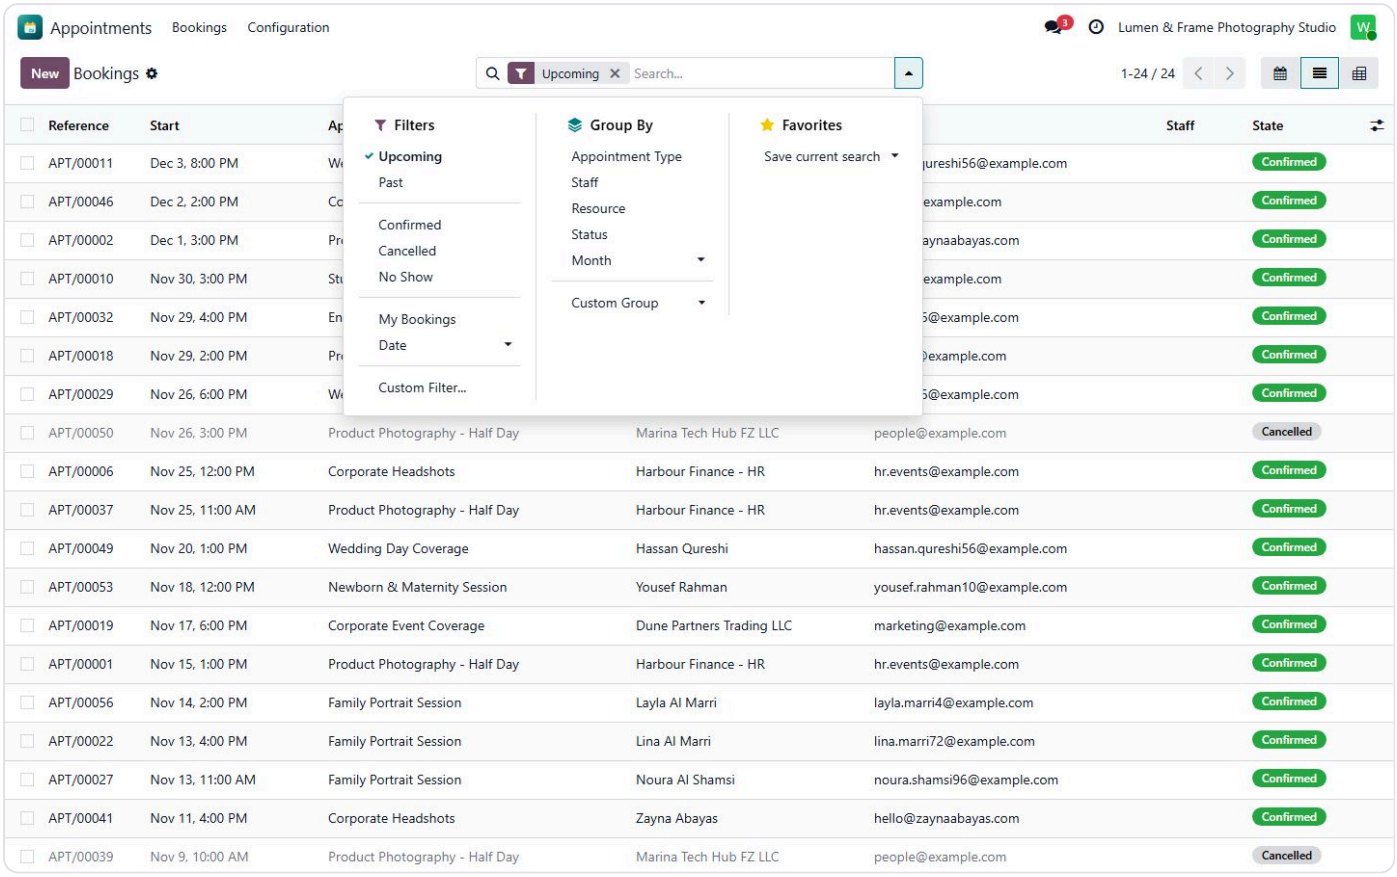

The list shows reference, start, type, the customer's name and email, staff and status. Cancelled lines are greyed, attended ones green and no shows red. Phone, resource, duration and company are optional columns you can switch on from the column menu.

Reference	Start	Appointment Type	Name	Email	Staff	State
APT/00011	Dec 3, 8:00 PM	Wedding Consultation	Hassan Qureshi	hassan.qureshi56@example.com		Confirmed
APT/00046	Dec 2, 2:00 PM	Corporate Headshots	Al Fahidi Perfumes	eshop@example.com		Confirmed
APT/00002	Dec 1, 3:00 PM	Product Photography - Half Day	Zayna Abayas	hello@zaynaabayas.com		Confirmed
APT/00010	Nov 30, 3:00 PM	Studio Hire - Cyclorama (per hour)	Al Fahidi Perfumes	eshop@example.com		Confirmed
APT/00032	Nov 29, 4:00 PM	Engagement / Pre-Wedding Shoot	Ali Nair	ali.nair56@example.com		Confirmed
APT/00018	Nov 29, 2:00 PM	Product Photography - Half Day	Marina Tech Hub FZ LLC	people@example.com		Confirmed
APT/00029	Nov 26, 6:00 PM	Wedding Consultation	Ali Nair	ali.nair56@example.com		Confirmed
APT/00050	Nov 26, 3:00 PM	Product Photography - Half Day	Marina Tech Hub FZ LLC	people@example.com		Cancelled
APT/00006	Nov 25, 12:00 PM	Corporate Headshots	Harbour Finance - HR	hr.events@example.com		Confirmed
APT/00037	Nov 25, 11:00 AM	Product Photography - Half Day	Harbour Finance - HR	hr.events@example.com		Confirmed
APT/00049	Nov 20, 1:00 PM	Wedding Day Coverage	Hassan Qureshi	hassan.qureshi56@example.com		Confirmed
APT/00053	Nov 18, 12:00 PM	Newborn & Maternity Session	Yousef Rahman	yousef.rahman10@example.com		Confirmed

4 Filters and groupings

Open the search options. Filters: **Upcoming**, **Past**, **Confirmed**, **Cancelled**, **No Show**, **My Bookings** (where you are the staff member) and a **Date** filter. Group by: **Appointment Type**, **Staff**, **Resource**, **Status** and **Month**. The search box finds a reference, a customer's name or an email.

5 Grouped by status

With Upcoming removed and grouped by Status, the demo shows 24 attended, 6 cancelled, 22 confirmed and 4 no shows. Click a group to open it.

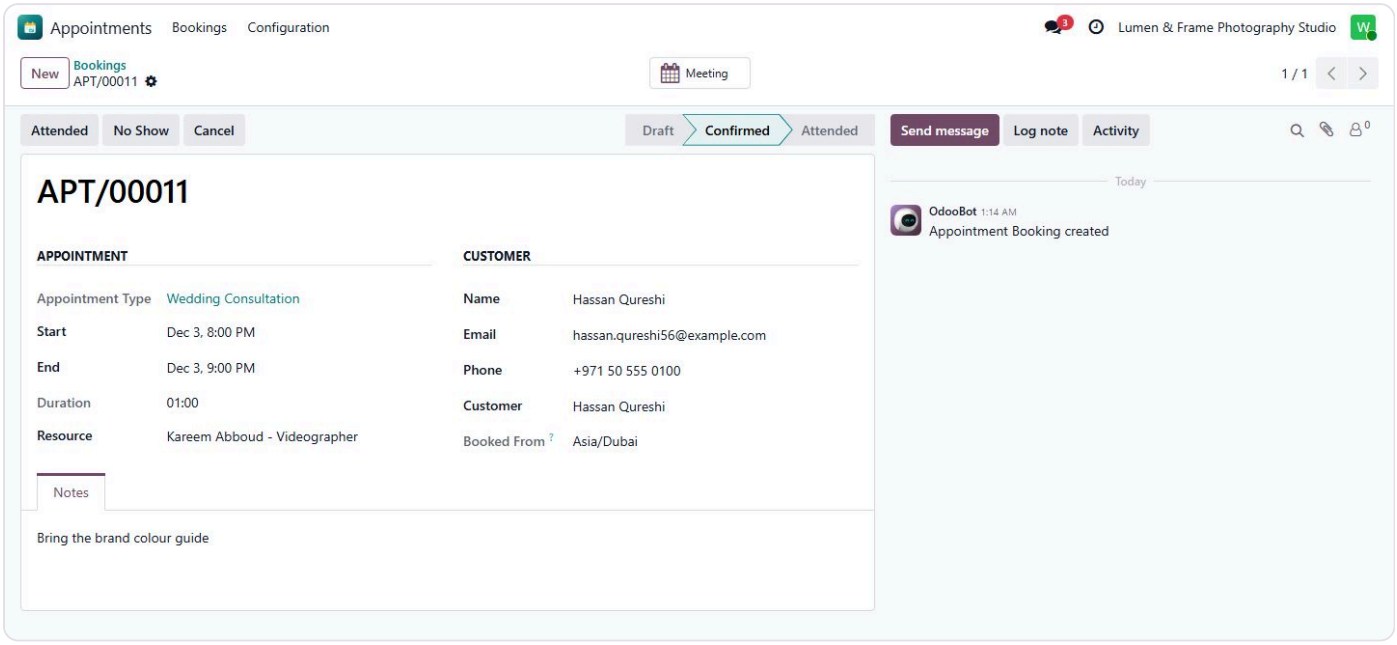

A booking at every status

6 Confirmed

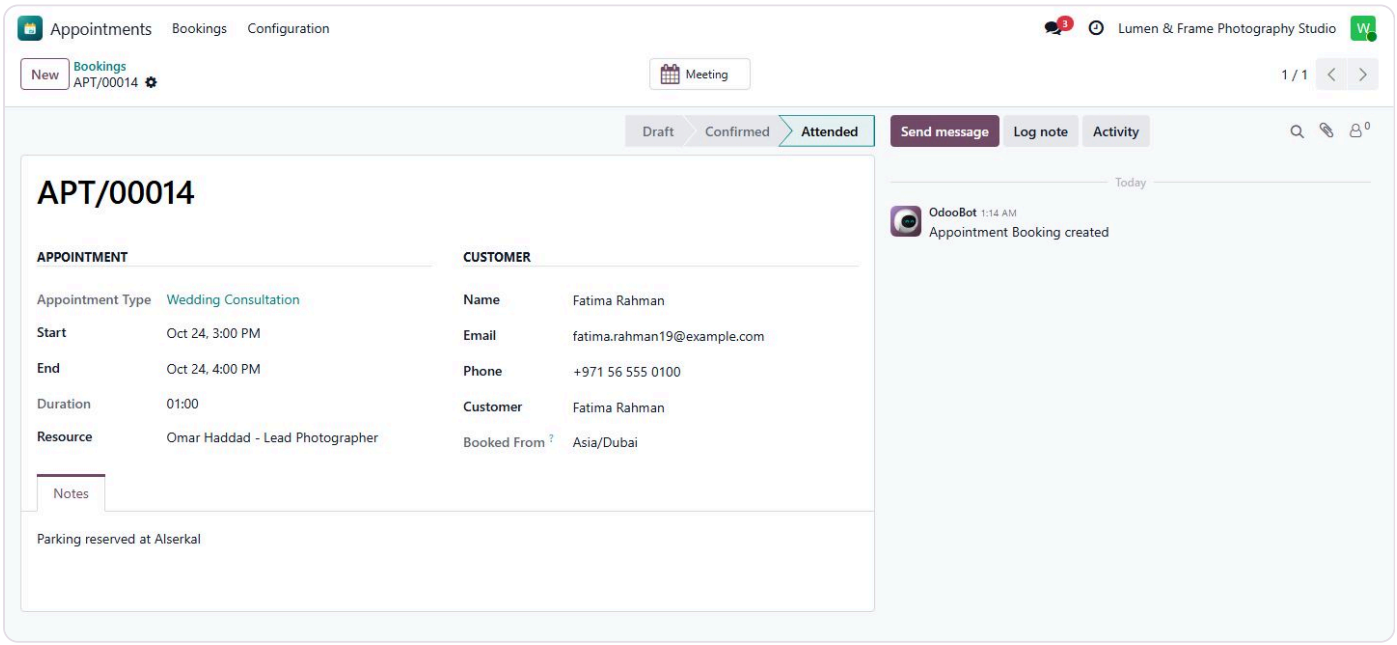

APT/00011, a wedding consultation booked online. The status bar reads Draft, Confirmed, Attended. **Appointment**: type, start, end, duration and the resource, Kareem. **Customer**: name, email, phone, the matched contact and **Booked From**. Buttons: **Attended**, **No Show** and **Cancel**. The **Meeting** button opens the calendar meeting. The Notes tab is for internal notes.

On a website booking, the contact is matched on the email address, so a returning customer stays one contact. A new email creates a new contact.

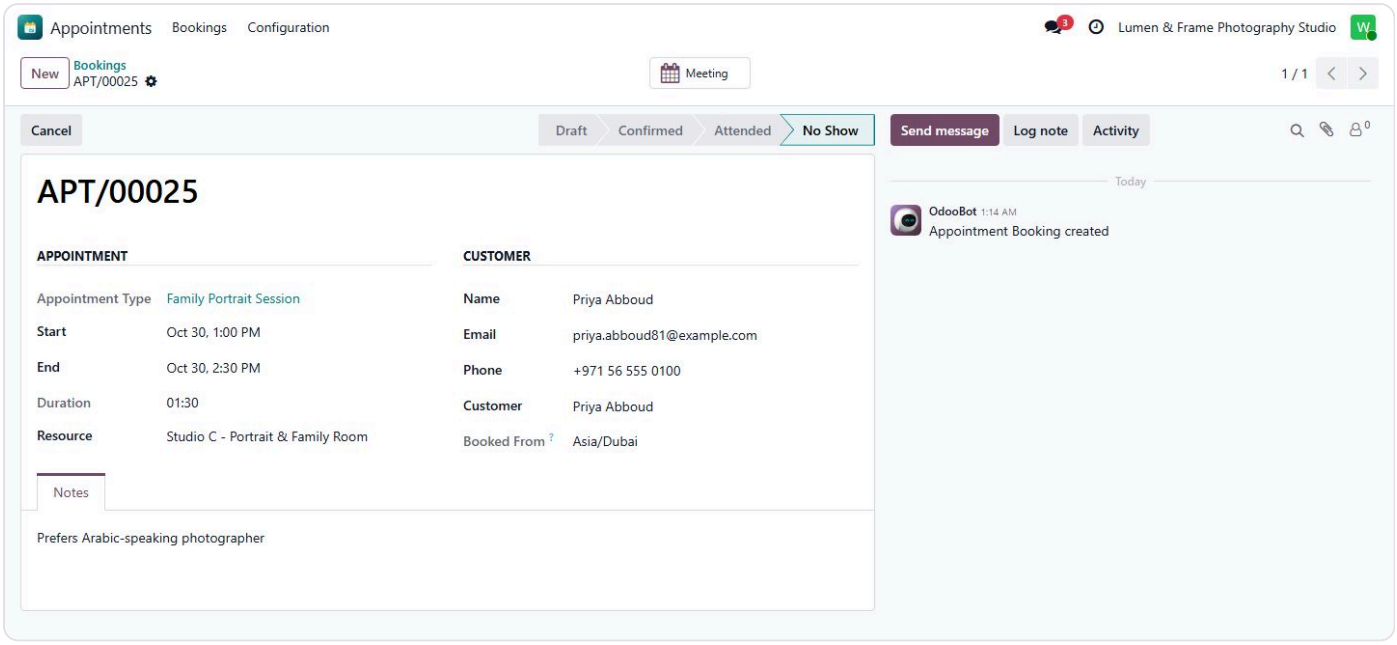

7 Attended

After the appointment, **Attended** closes it. An attended booking has no buttons left in the header: it is the record of what happened, and turns green in the list.

8 No Show

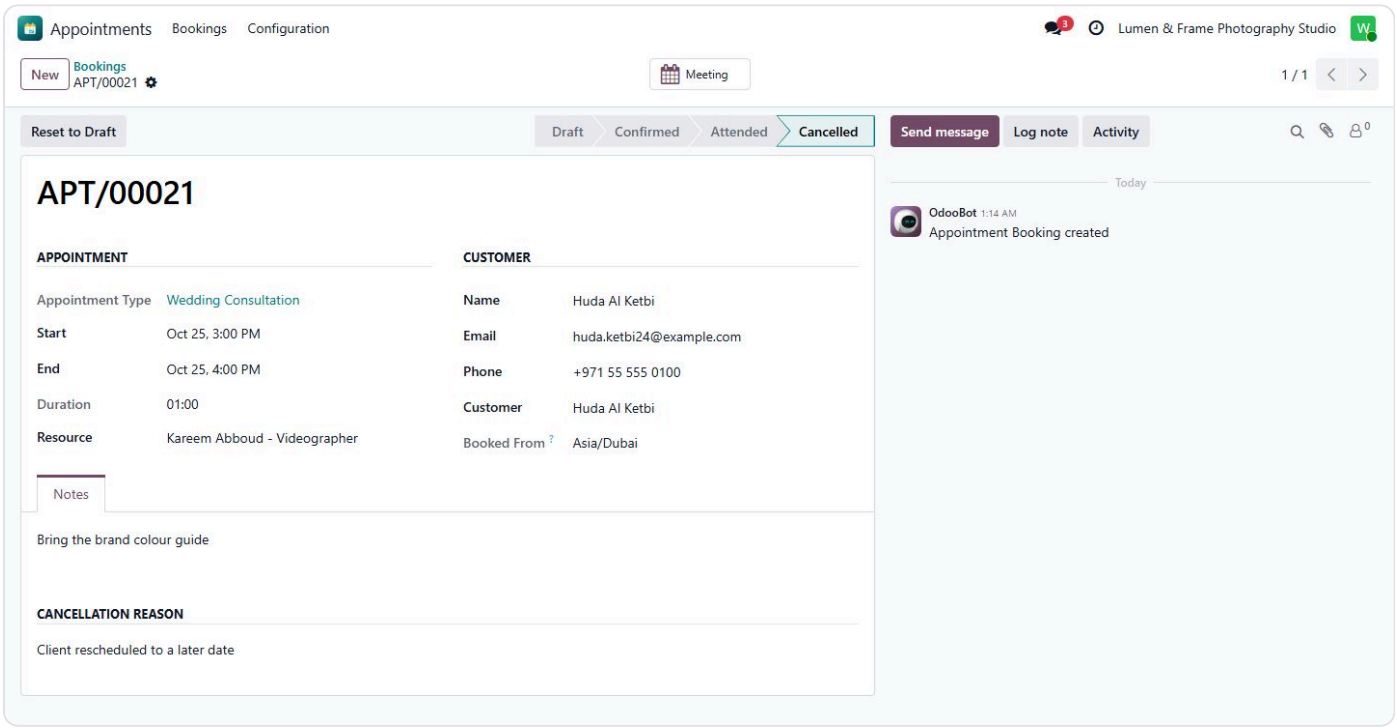

No Show records that the customer did not come. The line turns red in the list. A no show can still be cancelled, which archives its meeting.

9 Cancelled

A cancelled booking shows the **Cancellation Reason** under Notes, whether the customer typed it or not. **Reset to Draft** is the only button: a cancelled booking cannot be confirmed again directly.

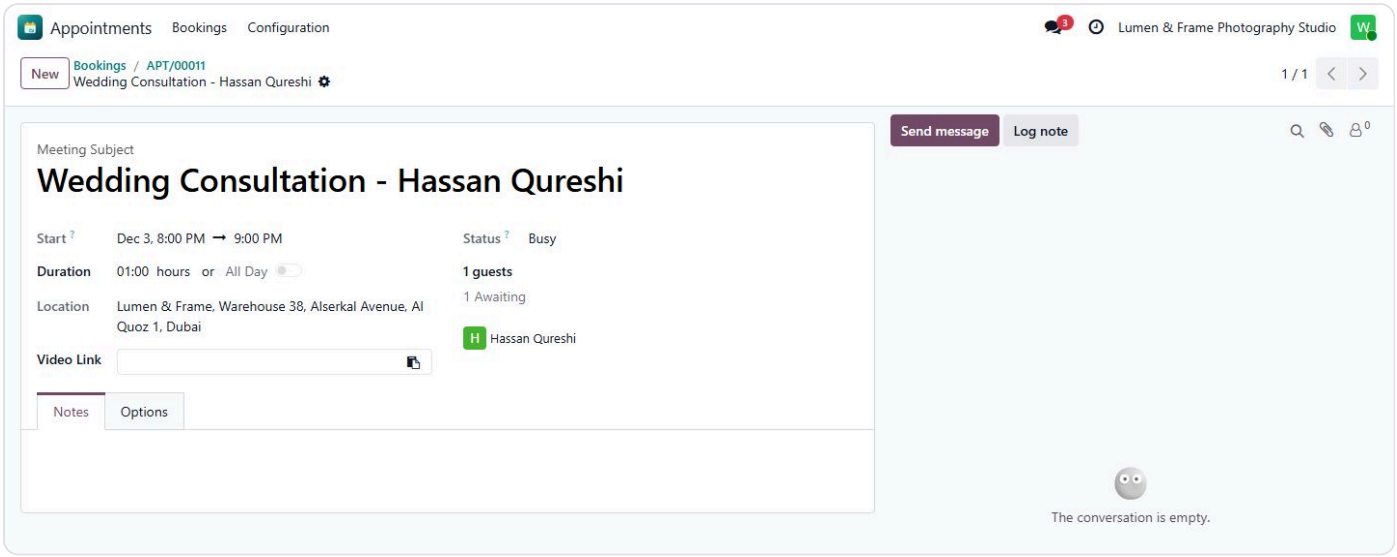

Reset to Draft, then Confirm, creates a fresh meeting and sends the confirmation again.

10 The meeting behind it

The Meeting button opens the Odoo Calendar event: named "<type> - <customer>", with the customer and the staff member as attendees, the type's location, the video link if any, and a description holding the phone number and every answer.

Odoo's own invitation emails are switched off for this meeting, because the module sends its own confirmation.

The buttons, and what each one does

BUTTON	SHOWN ON	WHAT HAPPENS
Confirm	Draft	Finds or creates the contact, sets Confirmed, creates or updates the meeting, sends the confirmation email
Attended	Confirmed	Sets Attended
No Show	Confirmed	Sets No Show
Cancel	Draft, Confirmed, No Show	Sets Cancelled, archives the meeting, sends the cancellation email
Reset to Draft	Cancelled	Sets Draft. Confirm again to rebook it
Meeting	Any booking with a meeting	Opens the calendar meeting

> Bookings typed in the back office are not checked for clashes. The free slot check runs on the website. A booking created by hand under Bookings, New is not tested against other bookings or meetings, and while it is Draft it holds no slot at all. When a customer phones, the safest route is to book them through the website page yourself, which runs every check and sends the email.

Every booking keeps a history in the chatter: status, type, staff, resource, customer and start time are tracked, and moves and emails are logged there. Activities can be scheduled on a booking like on any Odoo record, for example a call back.

PART 10 The emails and the reminder job

Three emails go to the customer, all from your company's email address, all with a button back to their booking page. One scheduled job sends the reminders.

IN THIS PART YOU WILL LEARN

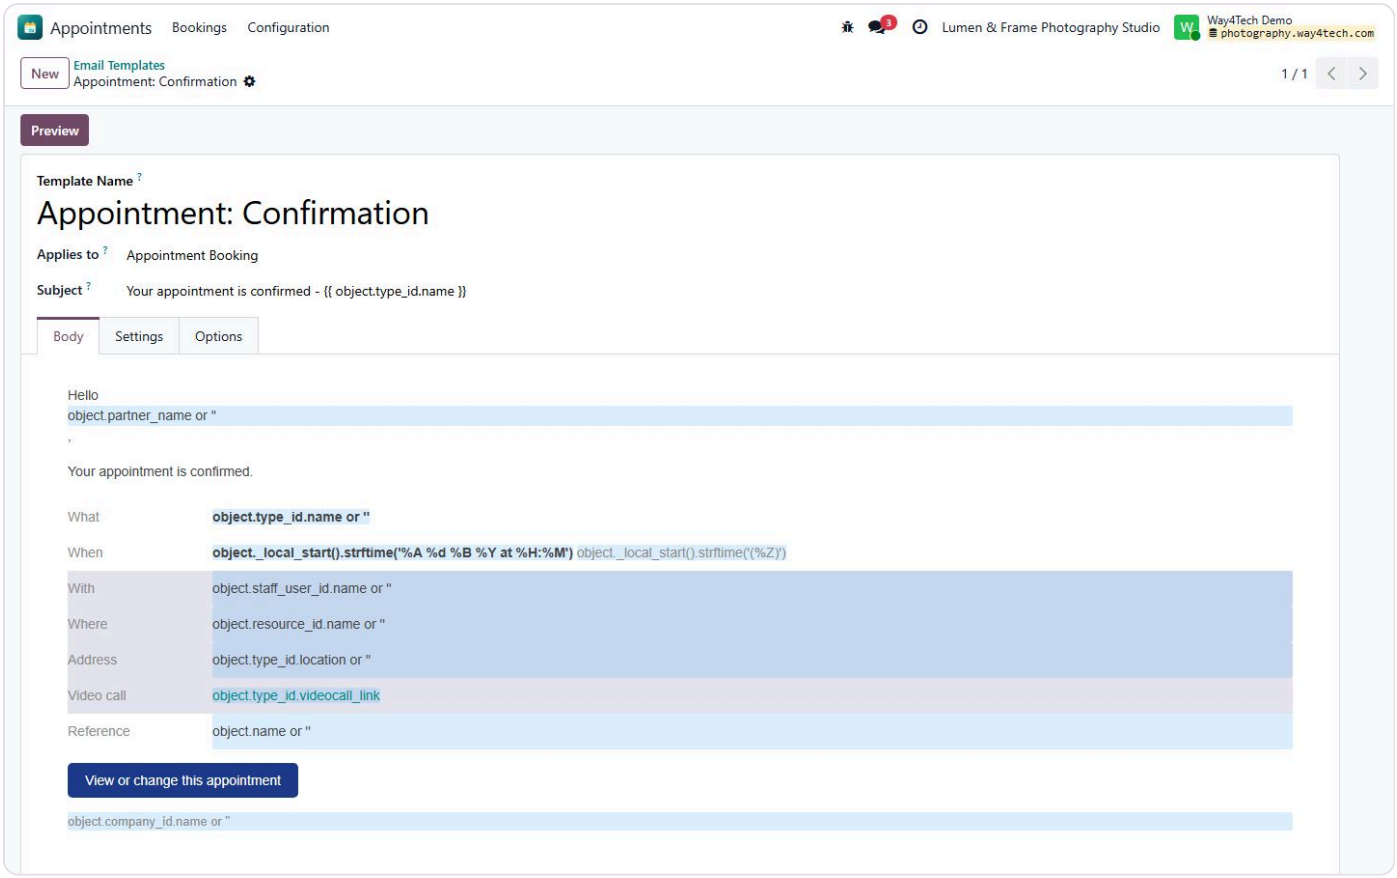

- When each email goes and what it says
- How the hourly reminder job decides who is due
- Where to change the wording

EMAIL	SENT WHEN	WHAT IT HOLDS
Appointment: Confirmation Your appointment is confirmed - <type>	A booking is confirmed, from the website or the Confirm button, and again when it is moved	What, When (in the customer's timezone), With, Where, Address, Video call, Reference, and a View or change this appointment button
Appointment: Reminder Reminder - <type>	The hourly job finds the booking inside its Remind Before window	The type and time, the address, the video link, and a View this appointment button
Appointment: Cancelled Your appointment was cancelled - <type>	A booking is cancelled, by the customer or the team	Which appointment and when, the reason if one was given, and an invitation to book again

1 Change the wording

Settings, Technical, Email Templates (developer mode), then open the template. The Body tab holds the text with the booking's fields in it; the Settings tab holds the sender, recipient and language. Change the words, keep the fields, and use Preview to see it against a real booking.

The emails are queued, not sent on the spot, so a mail server problem never blocks a booking. They go out with Odoo's normal outgoing mail run.

The reminder job

HOW IT WORKS

Appointments: send reminders, every hour

Each run looks for bookings that are:

- Confirmed, with no reminder sent yet,
- still in the future,
- on a type with Send Reminder ticked,
- and starting within that type's Remind Before hours.

Each one gets the reminder email and is marked as reminded, so nobody gets two. A booking made inside the reminder window, for example tomorrow morning with a 24 hour reminder, gets its reminder on the next hourly run.

There is one reminder per booking. Moving a booking does not reset it, so a booking moved after its reminder went out does not get a second one.

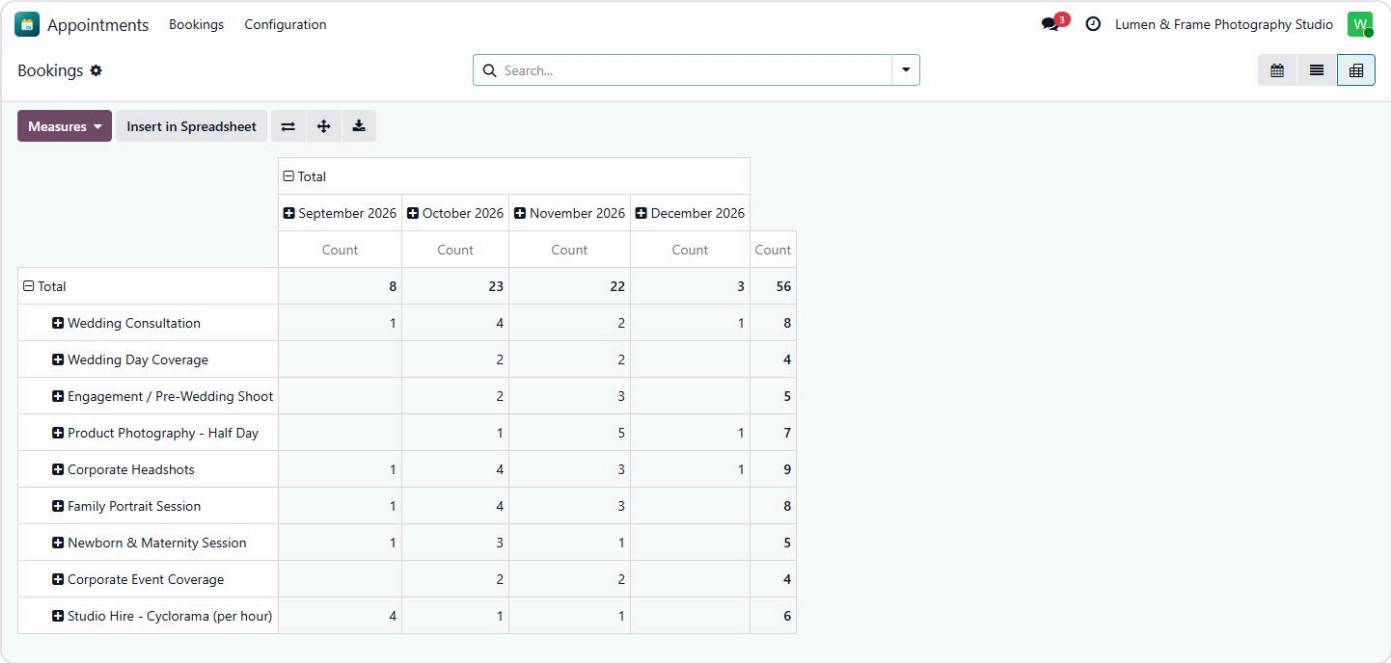

PART 11 Reports and printed documents

The module reports through the Bookings pivot, and its documents are the three emails and the customer's own page. It adds no PDF reports.

1 The Bookings pivot

Bookings, switch to the pivot. It opens with appointment types down the side and months across, counting bookings. Remove the Upcoming filter to include the past.

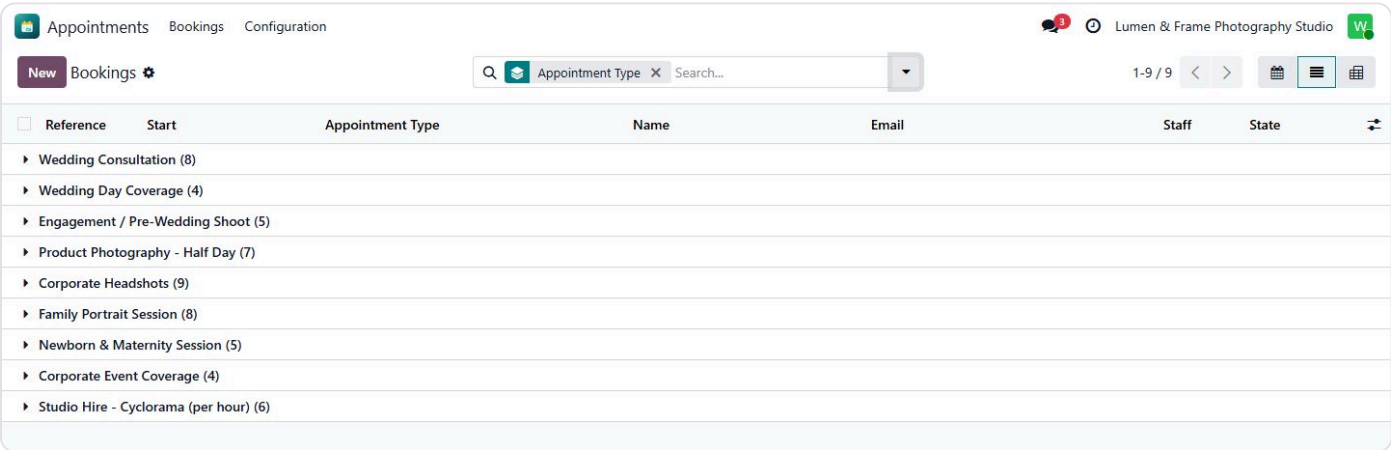

Swap the columns for Status and you have a no show rate per service, the number that tells you whether a longer notice period or an earlier reminder is worth it.

	Total				
	September 2026	October 2026	November 2026	December 2026	
	Count	Count	Count	Count	Count
Total	8	23	22	3	56
Wedding Consultation	1	4	2	1	8
Wedding Day Coverage		2	2		4
Engagement / Pre-Wedding Shoot		2	3		5
Product Photography - Half Day		1	5	1	7
Corporate Headshots	1	4	3	1	9
Family Portrait Session	1	4	3		8
Newborn & Maternity Session	1	3	1		5
Corporate Event Coverage		2	2		4
Studio Hire - Cyclorama (per hour)	4	1	1		6

2 Bookings per type

The list grouped by Appointment Type gives the same count as a list, with each group opening onto its bookings. Download it to a spreadsheet from the list's action menu.

QUESTION	WHERE TO LOOK
How busy is each service by month?	Pivot: types by month
Who is not turning up?	List, filter No Show, group by Appointment Type or Staff
How many were cancelled, and why?	List, filter Cancelled, open each for the reason

What does my day look like?	Calendar, week, filter My Bookings
Which bookings came from abroad?	List with Booked From shown on the form

PART 12 A 15 minute demo script

For showing the module to somebody else, on the demo, in a quarter of an hour.

MIN	SHOW	SAY
0	photography.way4tech.com/appointment in a private window	*This is what your customers see. No account, no app, just your website.*
2	Corporate Headshots: pick Studio C, click a time, scroll to the form	*Only free times appear, worked out from the real diary, in the visitor's own timezone.*
4	Wedding Consultation with ? tz=Europe/London	*A customer in London sees the Dubai hours in London time.*
5	Sign in, Appointments, Bookings, week view	*Every website booking lands here already confirmed, with a calendar meeting.*
7	Open APT/00011, then the Meeting button	*The customer's answers and phone are on the meeting, so the photographer has them.*
8	Configuration, Appointment Types, Corporate Headshots	*Duration, notice, window, timezone. Every rule is per service.*
10	Availability, Questions and Follow-up tabs	*Weekly hours, your own questions, and how late a customer can cancel or move.*
12	Resources: Studio A capacity 12	*A room or a studio can take several bookings at once.*
13	Bookings pivot, then the No Show filter	*Attended and no shows give you a no show rate per service.*
14	The customer's booking page from a confirmation	*The email button lets them cancel or move, up to the deadline you set.*

PART 13 Questions people ask, and the limits

The answers come from the module's code, not from the listing.

Questions

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community and needs only Website, Calendar and Discuss (mail).
Will a booking clash with my staff's other meetings?	Not for types booked with Staff. Every active meeting where the user is an attendee blocks the slot, buffers included.
Can two customers book the same room at once?	Yes, up to the resource's capacity. A capacity of 1 means one at a time.
Can I take a lunch break?	Yes. Two availability bands on the same day leave the gap between them unbookable.
Can customers in another country book?	Yes. They see slots in their own time, and the booking is stored correctly.
Can customers cancel or move it themselves?	Yes, if the type allows it, until Cancel Up To hours before the start.
Can a customer pay a deposit?	No. The module does not take payments or create orders or invoices.
Does it send SMS or WhatsApp?	No, email only: confirmation, one reminder and cancellation.
Will it work with Google or Outlook calendars?	Bookings are ordinary Odoo Calendar meetings, so whatever syncs your Odoo Calendar syncs them too. The module has no sync of its own.
Several companies?	Yes. Types, resources and bookings follow the company, and each type has its own timezone.

Limits worth knowing before you go live

- **One weekly grid per type.** Every staff member or resource on a type shares the same hours. Block an afternoon with a meeting in the staff member's calendar.
- **Resources ignore calendars.** A resource is blocked only by other bookings, even with a Linked User.
- **"Everyone must be free" books one.** The others on the type are not held for that time.
- **Back office bookings are not checked.** Book phone customers through the website page.
- **One reminder per booking,** by email only.
- **Moving keeps the same person or resource.** To change who, cancel and book again.
- **No calendar file in the email.** The customer adds the time to their own calendar.
- **No payment, order, invoice or CRM lead.** A booking is an appointment with contact details and answers.

PART 14

Menu map

Every menu and page the module adds, on one page.

Bookings

Bookings	Every booking: calendar, list, form and pivot. Opens on upcoming ones
Calendar view	Week or month, coloured by appointment type
Pivot view	Bookings per type per month, or per status

Configuration

Appointment Types	What can be booked: timing, rules, who, weekly hours, questions, follow-up
Resources	Rooms, chairs, studios or kit, each with a capacity

Website pages

/appointment	The booking index: every published type as a card
/appointment/<type>	One type: pick who, pick a slot, fill the form
/appointment/booking/<token>	The customer's own page: details, move, cancel
.../reschedule	The slot picker again, for an existing booking

Behind the scenes

Calendar	Every confirmed booking is an Odoo Calendar meeting
Email Templates	Confirmation, Reminder and Cancelled
Scheduled action	"Appointments: send reminders", every hour
Sequence	Booking references APT/00001 onwards

Want online booking on your Odoo?

We set up your appointment types, weekly hours, staff or rooms and booking questions, word the three emails in your voice, link the booking page from your website and train the team on the back office. It runs on Odoo 19 Community with nothing more than Website and Calendar.
