COMPLETE GUIDE · EVERY MODULE, EVERY SCREEN

Clinic, Hospital and Dental for Odoo 19

Patients, the OPD queue, consultations, admissions and the bed board, lab, surgery, insurance and pharmacy, and a dental practice with online booking and the till. Every screen and every step, shown on the live demos. No Odoo background needed.

HOSPITAL CORE · ENTERPRISE ADD-ON · ULTIMATE ADD-ON · DENTAL · DENTAL POS ADD-ON

START

About this guide

This guide covers two products for medical practices on Odoo 19: the Hospital Management suite for a clinic or a small hospital, and the Dental Clinic app for a dental practice. It walks every screen, every button and every setting, in the order a practice would use them. You do not need to have used Odoo before.

Who it is for

The practice manager setting the system up, the receptionist at the front desk, the doctor or dentist, the nurse and the lab, and the accounts person who bills the visits.

How to read it

Parts 1 to 3 explain the products and how to sign in. Parts 4 to 11 are the hospital core, 12 to 17 the Enterprise add-on, 18 to 24 the Ultimate add-on, and 25 to 30 the dental app and its POS add-on. The end has a demo script, questions and a menu map.

The live demos

Two public demos are already filled with patients, visits, admissions, dental appointments and invoices. Open one and follow along.

HOW IT WORKS

The two demos

Clinic demo	**clinic.way4tech.com** Hospital Management core
Dental demo	**dental-app.way4tech.com** Dental Clinic Management and the POS add-on
Sign in	**w4demo** / **Demo2026** the same on both
Runs on	Odoo 19, Community edition

The public clinic demo runs the hospital core only. The Enterprise and Ultimate screens in this guide were taken on a copy of the same modules with their own sample data, so the names on those pages differ from the clinic demo. On the dental pages, patient names, phone numbers, e-mail addresses and the practice's own details are blurred.

The edition badges

Every heading and step that belongs to one product or add-on carries a badge, so you always know what you need to buy to get that screen.

HOSPITAL CORE

Hospital Management. Patients, OPD, admissions, beds, billing.

ENTERPRISE ADD-ON

Adds lab and radiology, surgery, insurance, blood bank, ambulance, analytics.

ULTIMATE ADD-ON

Adds pharmacy, emergency, ICU, cashier, commission, pre-authorisation and more.

DENTAL

Dental Clinic Management. A separate app for a dental practice.

DENTAL POS ADD-ON

POS Dental Clinic. Brings the dental diary into Point of Sale.

The demos are shared and reset from time to time, so anything you change may be put back or seen by the next visitor. Treat them as a practice to walk around rather than your own records.

PART 1 What a clinic needs from its system

A clinic's records usually sit in three places that do not talk to each other: the register at the front desk, the doctor's notes and the billing software. Putting the practice on Odoo makes the visit, the clinical notes and the bill one record.

IN THIS PART YOU WILL LEARN

- The six things every clinical front office needs
- What standard Odoo already gives a clinic, and what it does not
- Which of the five modules covers what, and what each one needs installed

The short list

1. **One patient record** with a medical record number, the basics, allergies and history, that the doctor sees at every visit.
2. **A queue the front desk can run**: appointments and walk-ins in order, a token number per doctor per day, and who is waiting, who is with the doctor and who is done.
3. **The consultation on one screen**: vitals, symptoms, diagnosis, prescription and test requests, written while the patient is there.
4. **Beds and wards** for anyone who stays, with a board that shows which bed is free, taken or being cleaned.
5. **Billing without retyping**: the fee, the tests and the room go onto the invoice from the visit or the stay.
6. **Roles**, so the receptionist, the nurse, the lab and the doctor each see what their job needs.

A dental practice adds its own needs: a diary per dentist, priced treatments that each take a set time, online booking, and the commission and targets dentists are paid on.

What standard Odoo does and does not do

Odoo's own apps give a practice the business side: contacts, invoices, payments, stock and accounting. They have nothing clinical. There is no patient with a record number, no vitals, no diagnosis list, no prescription, no token queue, no admission to a bed and no bed board. That is the gap these modules fill.

The five modules

Module	What it adds	Needs
HOSPITAL CORE **Hospital Management**	Patients, physicians, departments, appointments and OPD visits with tokens, vitals, diagnosis, prescription, lab and radiology requests, admissions, wards, rooms and beds, a bed board, services and charges, invoicing, a front desk dashboard, three printouts and five roles.	Invoicing, Discuss, Products
ENTERPRISE ADD-ON **Hospital Management Enterprise**	A lab and radiology system with a test catalogue, parameters, normal ranges and high and low flags, insurers, patient policies and claims, operation theatres and surgeries, a blood bank, ambulance trips and five analysis reports.	Hospital core, Inventory
ULTIMATE ADD-ON **Hospital Management Ultimate**	Pharmacy dispensing from stock with batches, emergency triage, ICU charts, vaccinations, recurring procedures, a clinical waiting list, cashier sessions, doctor commission, pre-authorisation, insurer tariffs, care packages, co-pay, a batch claim export, facility assets and an ICD-10 code list.	Enterprise add-on

DENTAL **Dental Clinic Management**	Dental appointments with treatment lines and stages, a treatment catalogue with durations, dentists and materials, a sales order and invoice from each appointment, commission rules, sales targets, a website booking page, the customer portal and two printouts.	Sales, Invoicing, Inventory, Manufacturing, Employees, Website
DENTAL POS ADD-ON **POS Dental Clinic**	A dental screen inside Point of Sale: the day's appointments, walk-ins, quick booking, customer history, payment at the till and a receipt with the treatment details.	Dental, Point of Sale

> "Enterprise" and "Ultimate" are the names of the hospital add-ons, not Odoo subscriptions. Every module here runs on Odoo 19 Community and also installs on Odoo Enterprise.

Patient data is sensitive

These modules hold clinical information: allergies, diagnoses, prescriptions and discharge summaries. Odoo's access groups and record rules control who sees what inside the database. Hosting, backups, encryption and your country's health data rules are for you and your hosting provider; the modules make no claim of certification.

PART 2 The menus at a glance

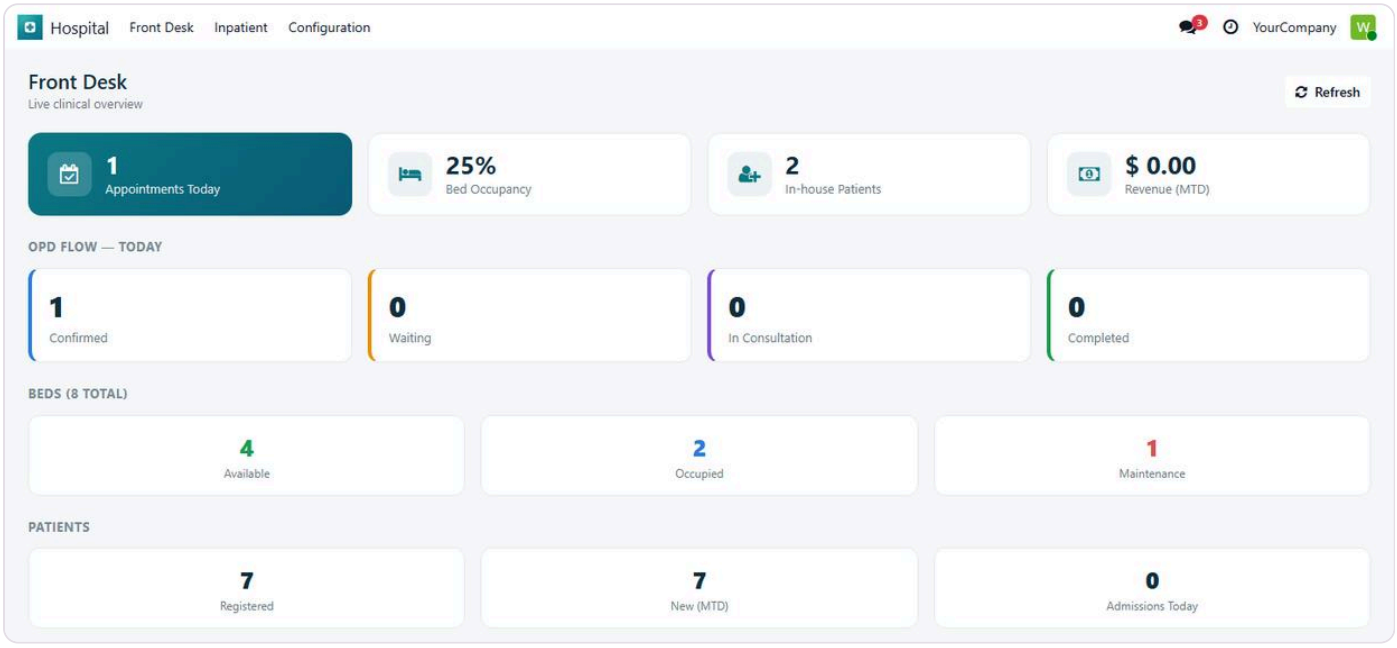

Each product adds one app to the Odoo home screen: Hospital for the suite and DentalClinic for the dental app. This part shows how their menus are laid out, so you know where to look before you start.

IN THIS PART YOU WILL LEARN

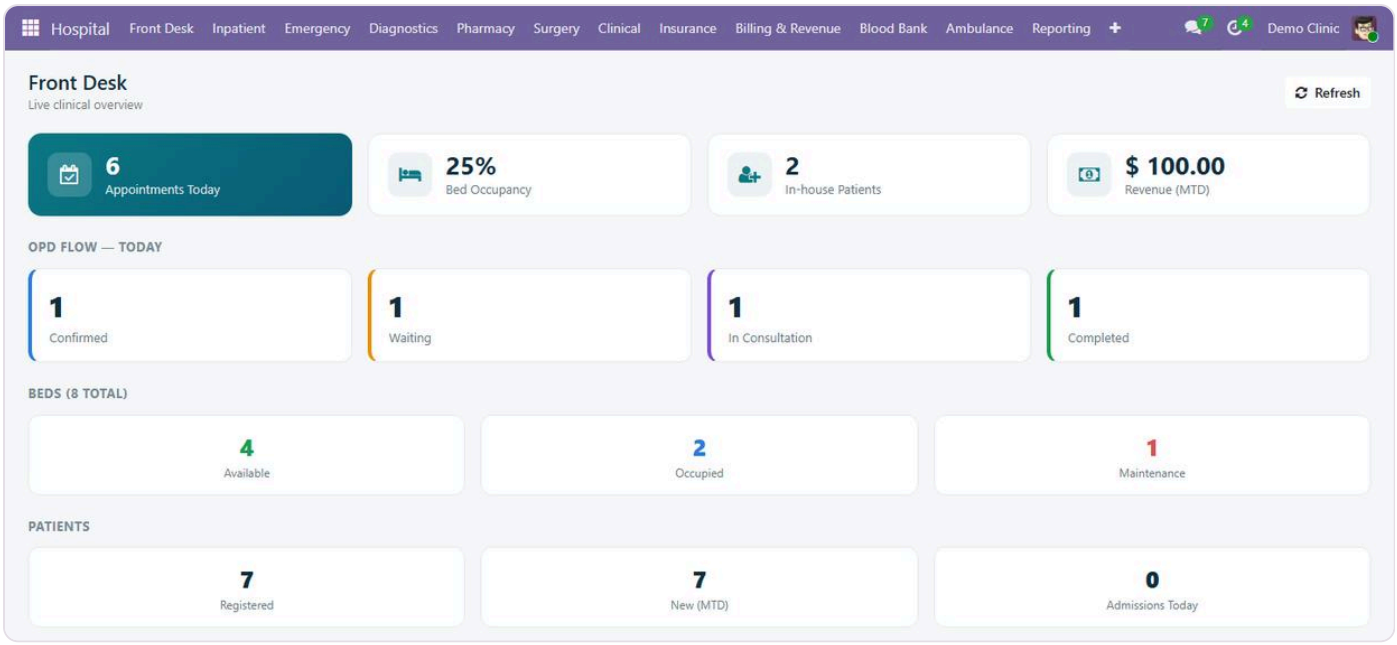

- The Hospital menus and which add-on brings each one
- The DentalClinic menus
- The roles each product ships with

The Hospital app HOSPITAL CORE

With only the core installed the top bar has **Front Desk** (Dashboard, Appointments, OPD Queue, Patients), **Inpatient** (Admissions, Bed Board) and **Configuration**. The add-ons slot their own menus in between.

HOSPITAL CORE The core on the clinic demo: Front Desk, Inpatient and Configuration, opening on the dashboard.

ULTIMATE ADD-ON All three hospital modules installed: Emergency, Diagnostics, Pharmacy, Surgery, Clinical, Insurance, Billing & Revenue, Blood Bank, Ambulance and Reporting join the bar.

Menu	Holds	Edition
Front Desk	Dashboard, Appointments, OPD Queue, Patients	HOSPITAL CORE
Inpatient	Admissions, Bed Board, and ICU Charts with Ultimate	HOSPITAL CORE
Diagnostics	Lab and Radiology Orders	ENTERPRISE ADD-ON
Surgery	Surgeries	ENTERPRISE ADD-ON
Insurance	Claims, Patient Policies	ENTERPRISE ADD-ON
Blood Bank	Blood Inventory, Donors	ENTERPRISE ADD-ON
Ambulance	Trips, Ambulances	ENTERPRISE ADD-ON
Reporting	Appointments, Admissions, Lab and Radiology, Claims, Surgeries	ENTERPRISE ADD-ON
Emergency	Emergency / Triage	ULTIMATE ADD-ON
Pharmacy	Dispensing, Medicines, Vaccinations	ULTIMATE ADD-ON
Clinical	Recurring Procedures, Clinical Waiting List	ULTIMATE ADD-ON
Billing & Revenue	Cashier, Doctor Commissions, Pre-Authorizations, Batch Claim Export	ULTIMATE ADD-ON
Facility	Facility Assets	ULTIMATE ADD-ON
Configuration	Departments, Physicians, Wards, Rooms, Beds, Services and Charges, Diagnoses, Allergies, Settings; Test Catalog, Operation Theatres, Insurers (Enterprise); ICD-10 Codes, Vaccines, Commission Rules, Insurer Tariffs, Care Packages (Ultimate)	all

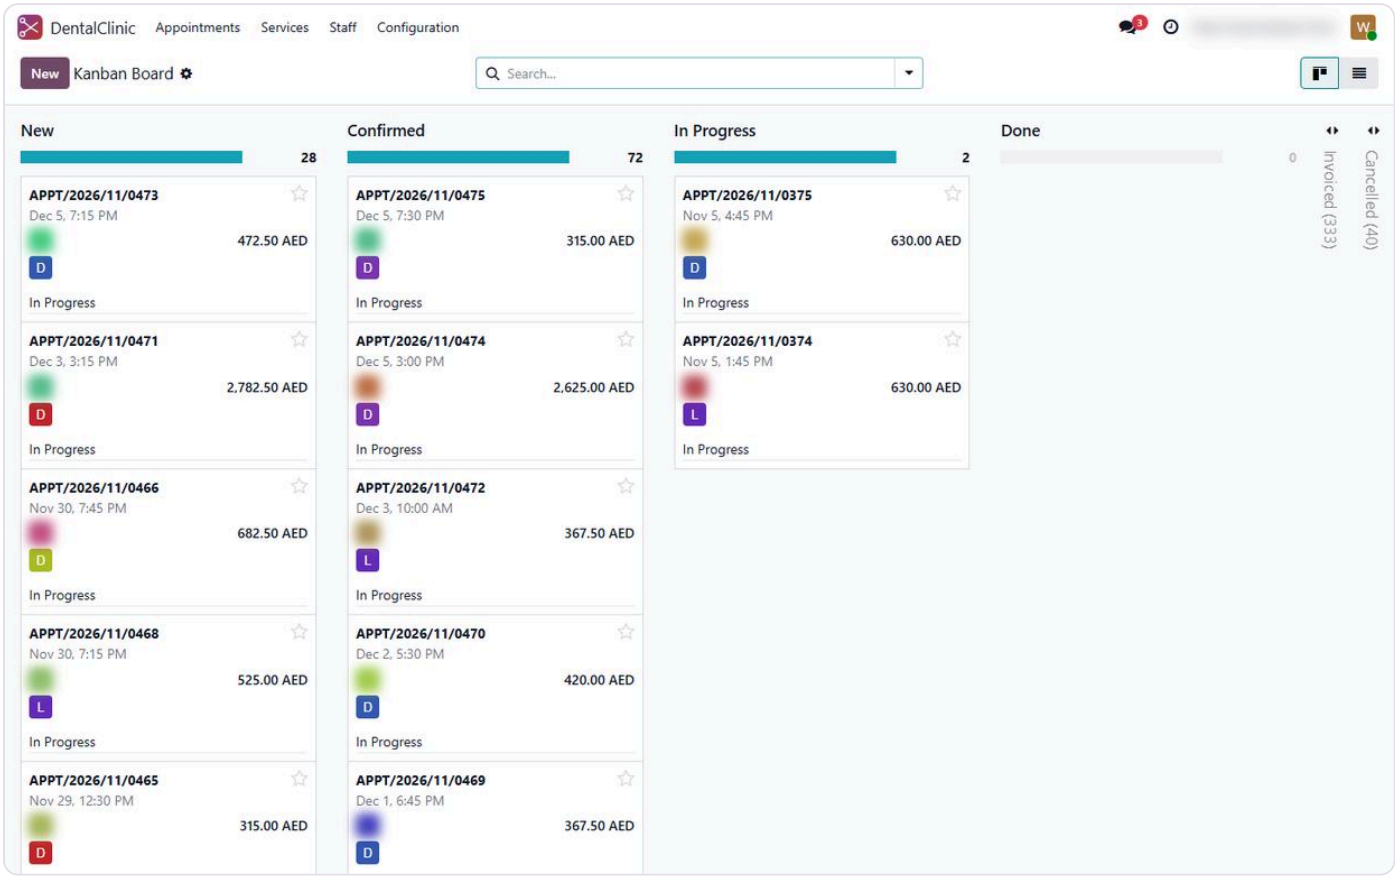

The hospital roles HOSPITAL CORE

The core ships five groups, set on each user under **Settings, Users**: **Receptionist / Front Desk**, **Nurse**, **Lab / Radiology Technician**, **Physician / Doctor** and **Hospital Administrator**. Enterprise adds **Insurance and Claims Officer** and Ultimate adds **Pharmacist** and **Cashier / Billing**; the administrator gets all of them. Each add-on menu shows only to the roles that use it: Diagnostics to the lab and doctors, Pharmacy to pharmacists and nurses, Billing and Revenue

to cashiers and insurance officers, Reporting, Facility and Configuration to the administrator. Departments, wards, beds, physicians, services and patients carry a company rule, so one database can run several branches, each seeing its own.

The DentalClinic app DENTAL

The dental app's menu is **Appointments** (All Appointments, Today, Calendar, Kanban Board), **Services** (Services, Categories), **Staff** (Dentists, Commission Rules, Commission Earnings, Sales Targets) and **Configuration** (Settings, Appointment Stages, Service Categories).

DENTAL The DentalClinic app on the dental demo, open on the appointment board.

The dental roles DENTAL

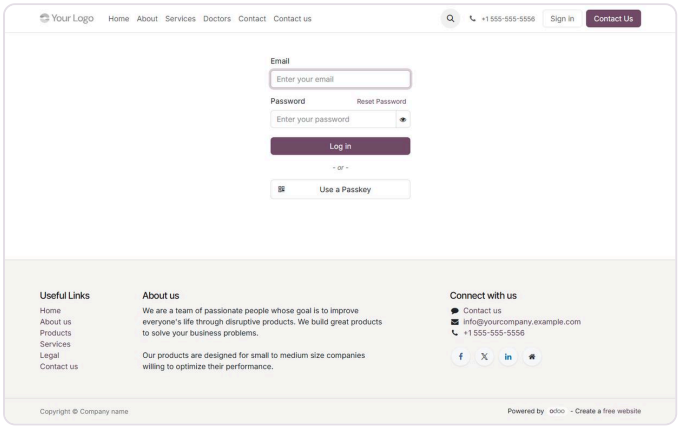

Three groups: **Manager** sees and changes everything; **Receptionist** sees every appointment and books them; **Dentist** sees only their own appointments, their own targets and their own commission. A portal customer sees only their own appointments on the website.

PART 3 Open the demo and sign in

Everything in the hospital parts can be followed on the clinic demo. It is a working Odoo 19 database with seven patients, four doctors, three wards and visits at every stage.

TRY IT YOURSELF ON THE DEMO

1. Open clinic.way4tech.com in any browser
2. Sign in with w4demo and Demo2026
3. Open the Hospital app from the home screen
4. You land on the front desk dashboard shown on the next pages

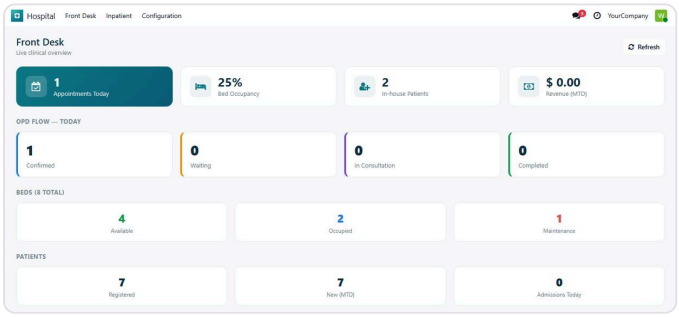

1 HOSPITAL CORE

Go to the demo

Open **clinic.way4tech.com**. The sign-in screen is the standard Odoo one. There is nothing to install.

For the dental app use **dental-app.way4tech.com** with the same login.

3 HOSPITAL CORE

Open the Hospital app

Click **Hospital** on the home screen. It opens on **Front Desk, Dashboard**.

2 HOSPITAL CORE

Sign in

User `w4demo`, password `Demo2026`. This login can see every hospital screen so you can follow the whole guide. A real clinic would give each person one role instead.

The demo login cannot open the Settings screens; those pages in this guide come from the full copy.

PART 4 Set the hospital up from zero

This is what a new clinic does before it sees its first patient: install the app, then enter departments, doctors, wards, rooms, beds, the price list of services, diagnoses and allergies. On the demo it is already done, so read it to see what each screen means.

IN THIS PART YOU WILL LEARN

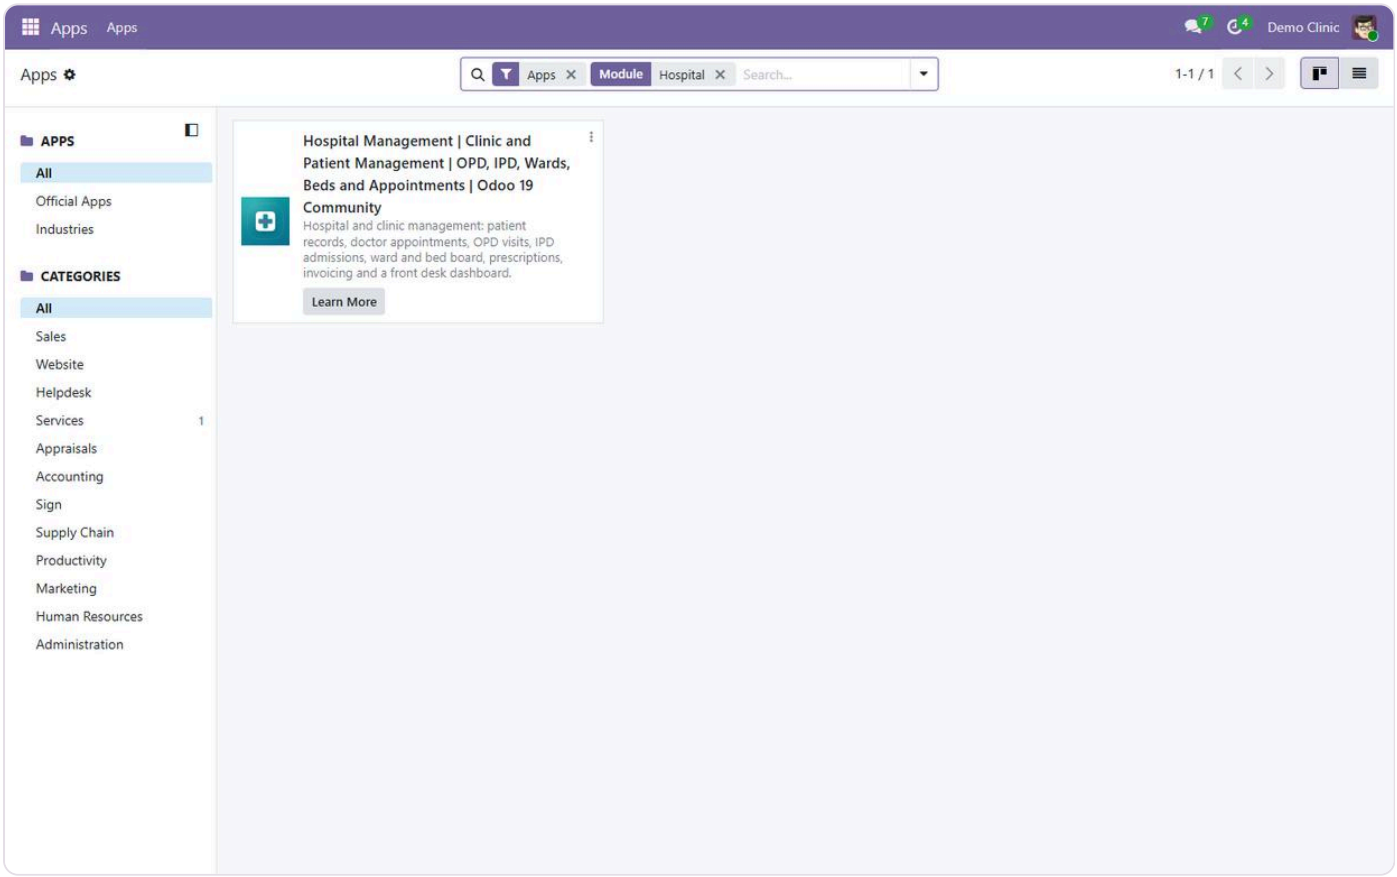

- What installing Hospital Management brings with it
- The two settings and what they do today
- Departments, physicians, wards, rooms and beds
- Services and charges, diagnoses and allergies
- The order to do it in, and a test visit before going live

TRY IT YOURSELF ON THE DEMO

1. Open Configuration, then Physicians, and open Dr. Emily Smith
2. Note her consultation fee and consultation service
3. Open Configuration, then Beds, and switch to the list

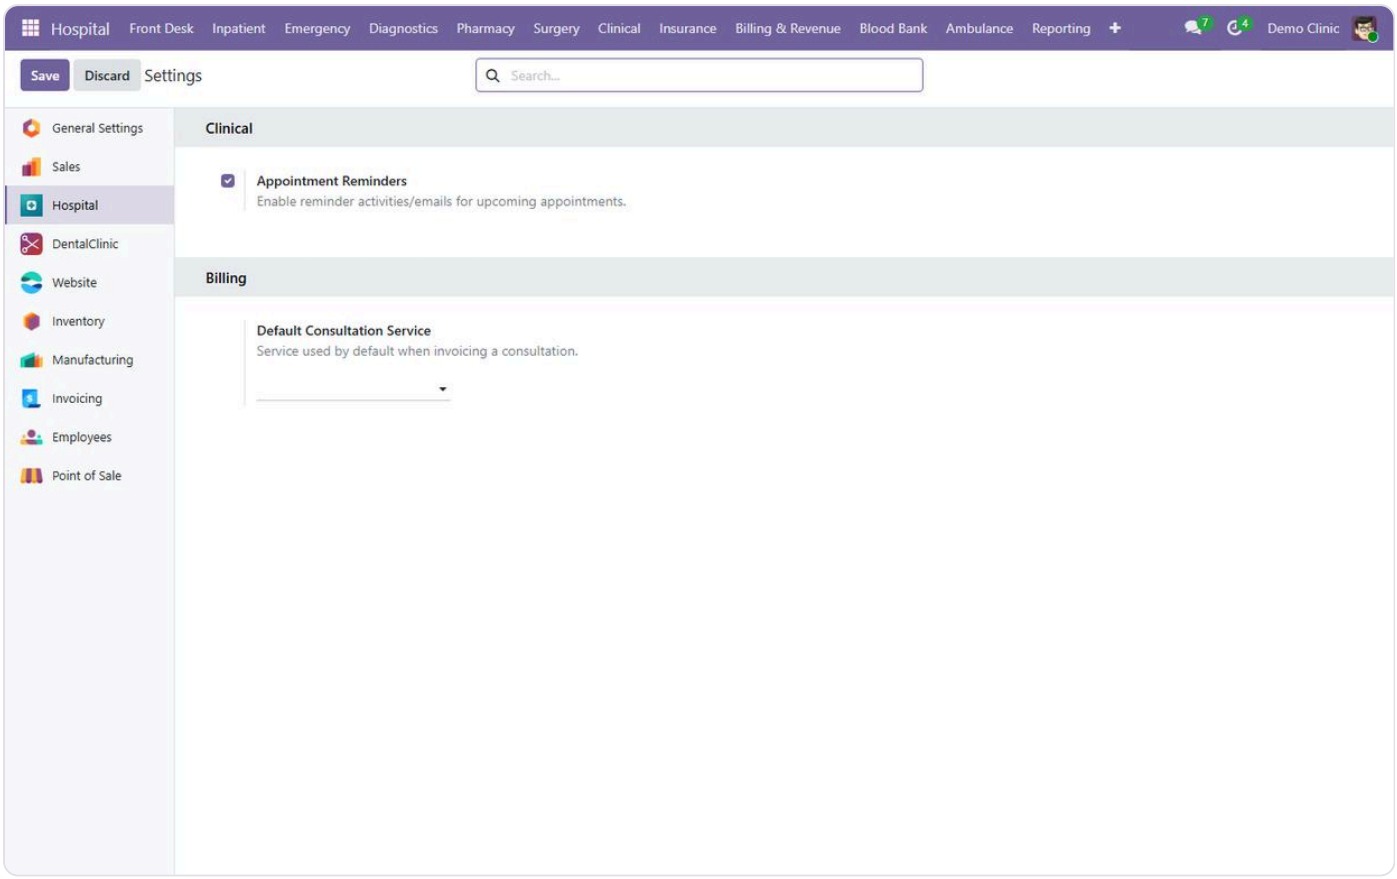

Install the app HOSPITAL CORE

Install **Hospital Management** from Apps. Invoicing, Discuss and Products come with it. A chart of accounts must exist before you invoice, because every invoice line posts to the first income account found.

HOSPITAL CORE Apps, searched for Hospital. Only the core is listed as an app; the Enterprise and Ultimate add-ons are modules that install on top of it, each pulling in what it needs below it.

The settings HOSPITAL CORE

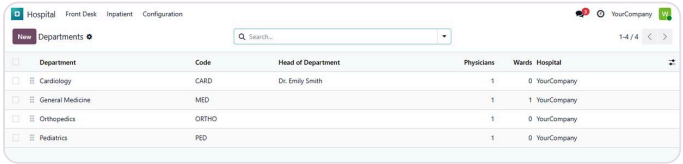

HOSPITAL CORE Settings, Hospital. Two settings, one per company.

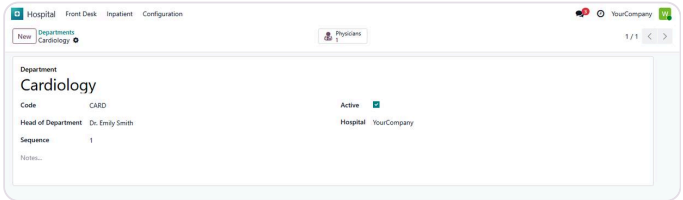

SETTING	WHAT IT DOES	DEFAULT
Appointment Reminders	Stored per company. In this version nothing reads it, so no reminder is sent; the Appointment Confirmation e-mail template is there to send by hand from the appointment.	On
Default Consultation Service	Stored per company. The consultation line on an invoice takes its taxes from the physician's own consultation service, so set that on each physician.	Empty

Departments HOSPITAL CORE

Configuration, Departments. Each has a name, code, sequence, head of department and notes. The Physicians smart button lists the doctors in it, and the department counts its wards.

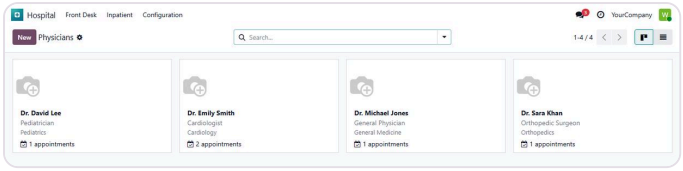

HOSPITAL CORE Departments with their head.

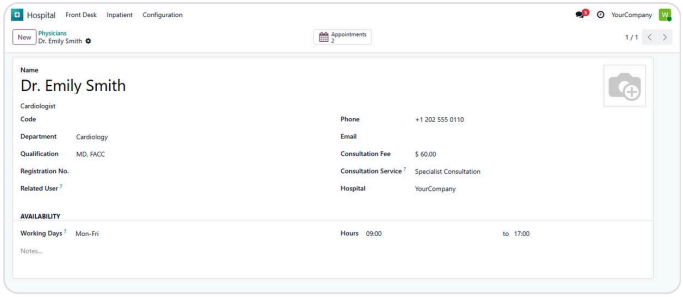

HOSPITAL CORE A department with its Physicians button.

Physicians HOSPITAL CORE

Configuration, Physicians. A physician has a photo, code, specialty, qualification, registration number, department, phone and e-mail, the **Related User** they sign in as, a **Consultation Fee**, a **Consultation Service** (its taxes go on the invoice), working days and hours. Choosing the physician on an appointment fills the department and the fee.

HOSPITAL CORE Physicians with specialty and appointment count.

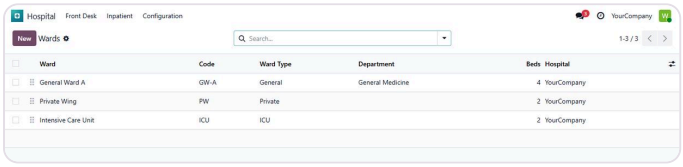

HOSPITAL CORE Fee, consultation service, related user and availability.

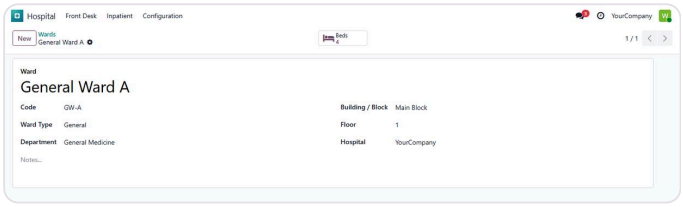

> Working days and hours are for reference. Appointments are not checked against them, and two appointments can be booked for the same doctor at the same time.

Wards, rooms and beds HOSPITAL CORE

Wards have a type (General, Private, ICU, CCU, NICU, Isolation, Maternity), building, floor and department, and a Beds button. **Rooms** belong to a ward. **Beds** belong to a ward and optionally a room, with a bed type (Standard, Electric, ICU, Pediatric, Bariatric) and a **Daily Charge**, which is what the room and board line on the admission invoice is priced at.

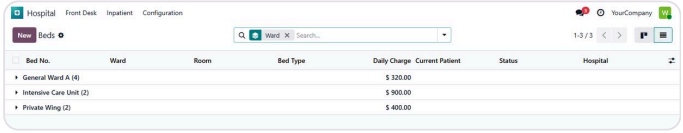

HOSPITAL CORE Wards with type and bed count.

HOSPITAL CORE A ward with building, floor and its Beds button.

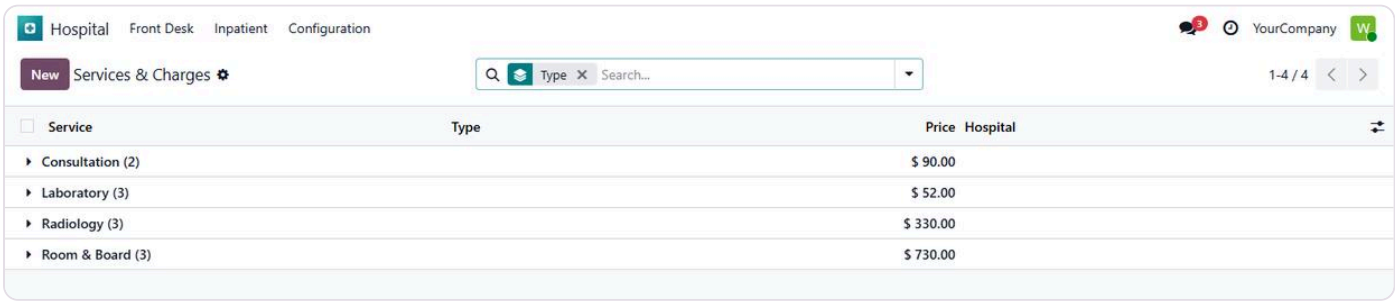

HOSPITAL CORE Rooms in their wards.

HOSPITAL CORE Beds with type, daily charge and status.

Services and charges HOSPITAL CORE

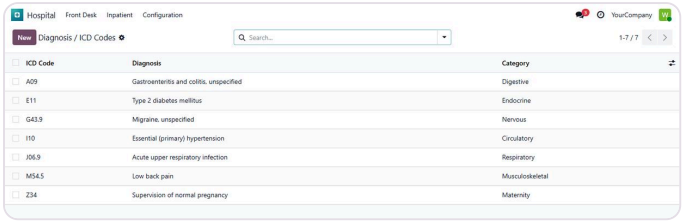

Configuration, Services & Charges is the price list: each service has a code, a type (Consultation, Procedure / Surgery, Room & Board, Nursing Care, Laboratory, Radiology, Pharmacy, Other), a price, taxes and a description. Lab and radiology requests on a visit take their price from here, and so do admission service lines.

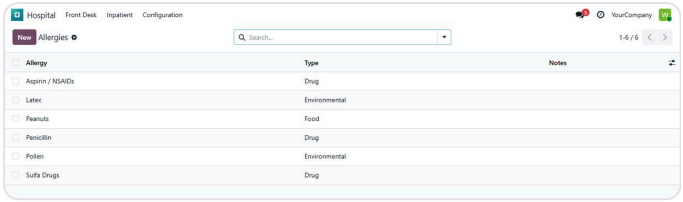

HOSPITAL CORE Services and charges grouped by type.

Diagnoses and allergies HOSPITAL CORE

Diagnoses carry an ICD code, a category and a description, and are searched by name or code. **Allergies** have a type (Drug, Food, Environmental, Other) and each name is unique.

HOSPITAL CORE Diagnoses with ICD codes.

HOSPITAL CORE Allergies by type.

The order to do it in HOSPITAL CORE

1. Install Hospital Management and set up the chart of accounts.
2. Add departments, then physicians with fee, consultation service and user.
3. Add wards, rooms and beds with their daily charge.
4. Enter services and charges with prices and taxes.
5. Load your diagnoses and allergies.
6. Give every user one of the hospital roles.
7. Register a test patient, book, check in, consult and invoice one visit.

PART 5 Patients

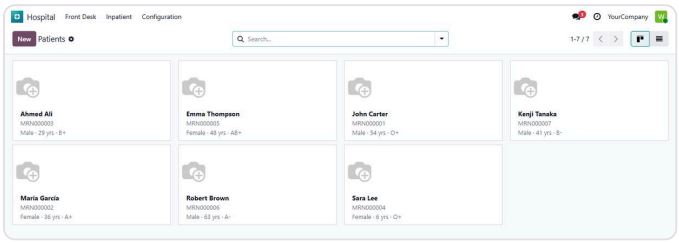

Every visit, stay and bill hangs off one patient record. It is registered once, gets a medical record number, and from then on the doctor sees the allergies and history at every visit.

IN THIS PART YOU WILL LEARN

- Registering a patient and what the MRN is
- The billing contact Odoo creates for each patient
- Medical history, emergency contact and notes
- The smart buttons and the patient card

TRY IT YOURSELF ON THE DEMO

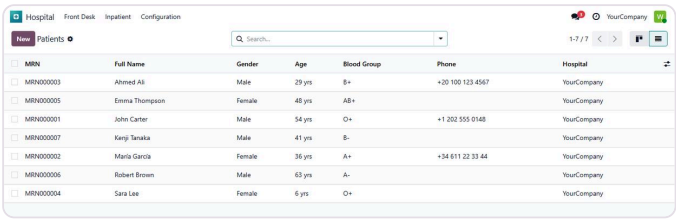

1. Front Desk, Patients, open John Carter
2. Look at the Medical History tab: the penicillin allergy
3. Use the Appointments and Admissions buttons at the top

1 HOSPITAL CORE

Find the patient

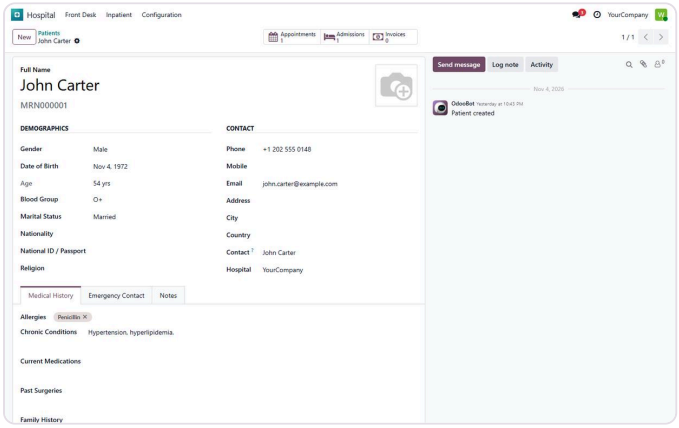

Front Desk, Patients opens as cards with the MRN, gender, age and blood group. Search by name or MRN. Filters: Male, Female, Deceased; group by gender or blood group.

2 HOSPITAL CORE

Or use the list

The list shows MRN, name, gender, age, blood group, phone and hospital (company).

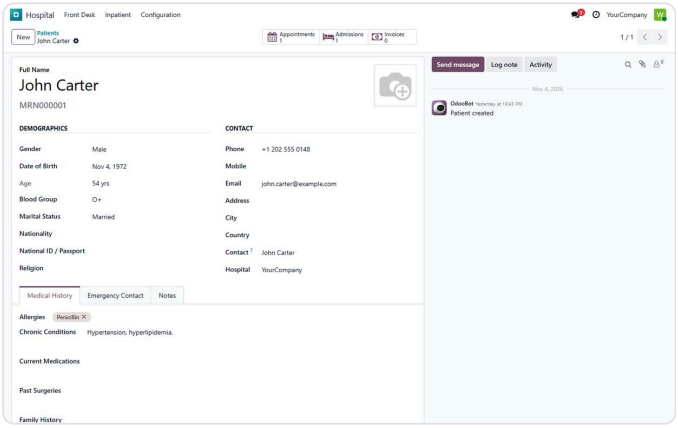

3 HOSPITAL CORE

Register a new patient

Click **New**. Only the full name is required. The **MRN** is given on save from the sequence MRN000001, MRN000002 and so on. Fill gender, date of birth (the age is worked out), blood group, marital status, nationality, religion, national ID or passport, phone, mobile, e-mail and address.

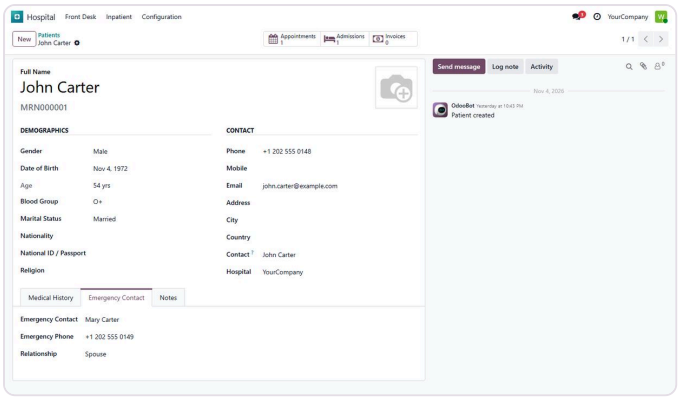

If you leave Contact empty, Odoo creates a contact with the patient's name, phone and e-mail, marked Is a Patient. Invoices go to that contact.

4 HOSPITAL CORE

Medical history

Allergies (from the allergy list), chronic conditions, past surgeries, family history, current medications and vaccination history. Tick **Deceased** when that applies.

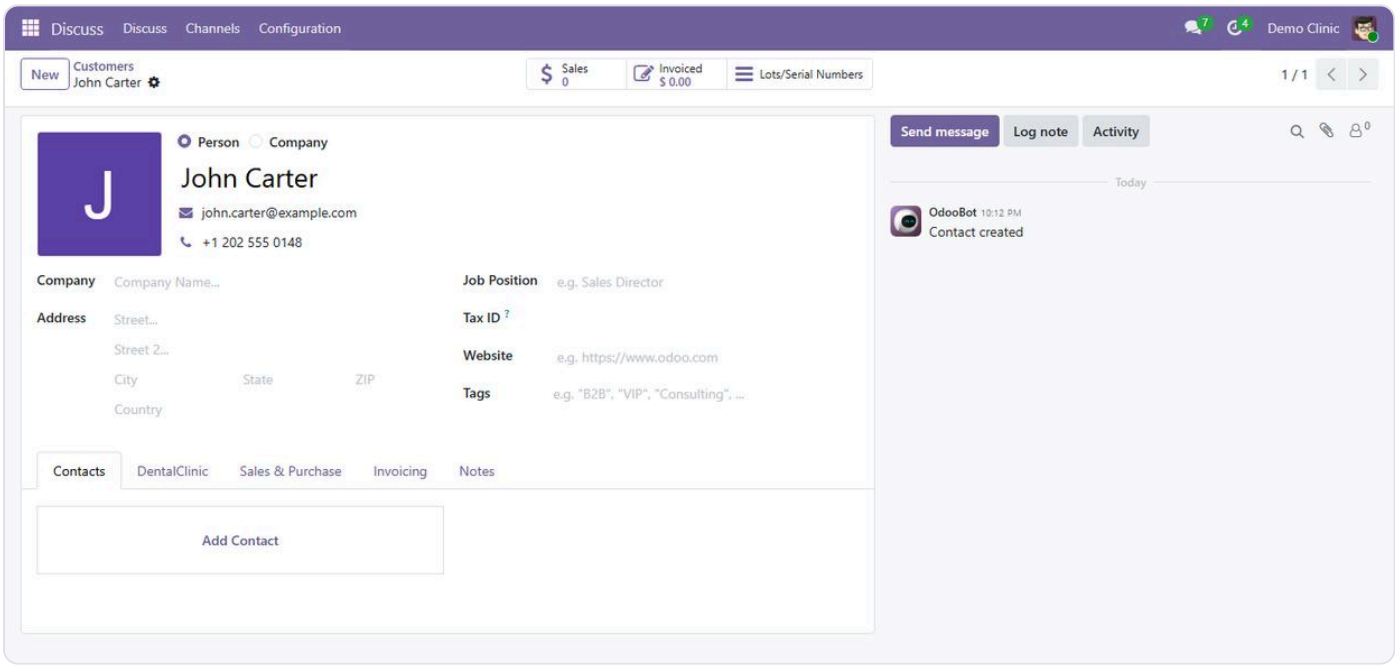

5 HOSPITAL CORE

Emergency contact and notes

Emergency contact name, phone and relationship, and general notes.

The smart buttons HOSPITAL CORE

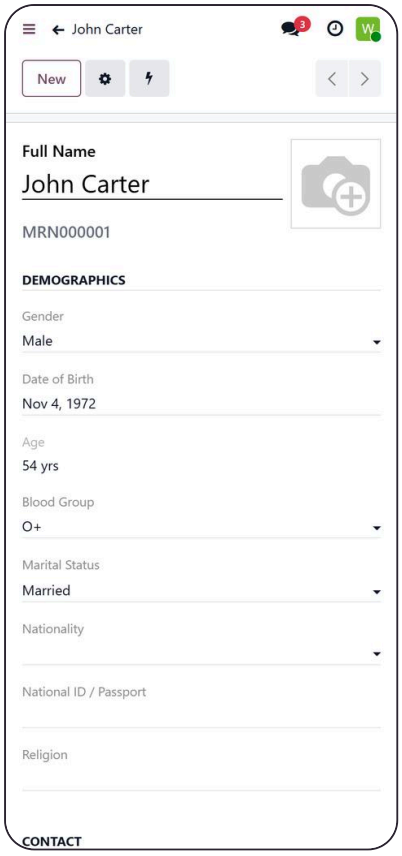

Appointments and **Admissions** open the patient's visits and stays. **Invoices** lists the customer invoices raised for the patient, and the patient also carries a **Total Billed** figure, the sum of their posted invoices. On the contact form, an Is a Patient box and a Patients count link the accounting contact back to the record.

HOSPITAL CORE The billing contact Odoo made for the patient, with Is a Patient ticked.

On a phone HOSPITAL CORE

Every hospital screen is a normal Odoo screen and works on a phone, for a doctor on a ward round or a nurse checking a bed.

The patient record on a phone.

The bed board on a phone.

PART 6 Appointments and the OPD queue

An appointment is also the OPD visit. It moves from Draft to Confirmed, Checked In, In Consultation and Completed, and the front desk works from the OPD Queue while it does.

IN THIS PART YOU WILL LEARN

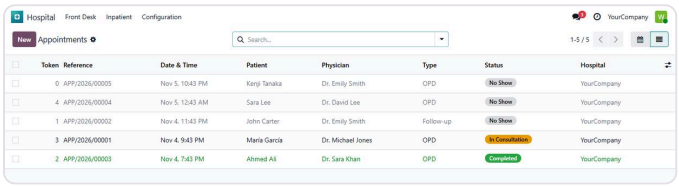

- Booking an appointment and the four visit types
- How the token number is worked out
- Check-in, consultation and completion
- Cancel, No Show, Reset to Draft and the nightly no-show job

TRY IT YOURSELF ON THE DEMO

1. Front Desk, OPD Queue: today's queue
2. Open APP/2026/00002 (checked in) and APP/2026/00001 (in consultation)
3. Switch Appointments to the calendar and back

The visit

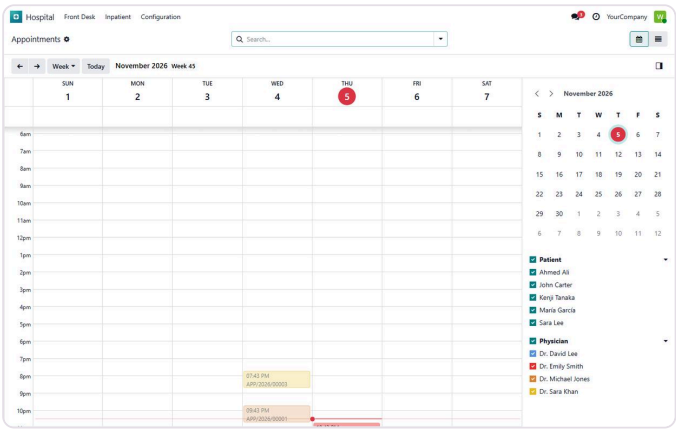

1. **Draft** — booked
2. **Confirmed** — token issued
3. **Checked In** — waiting
4. **In Consultation** — with the doctor
5. **Completed** — follow-up raised

1 HOSPITAL CORE

Appointments

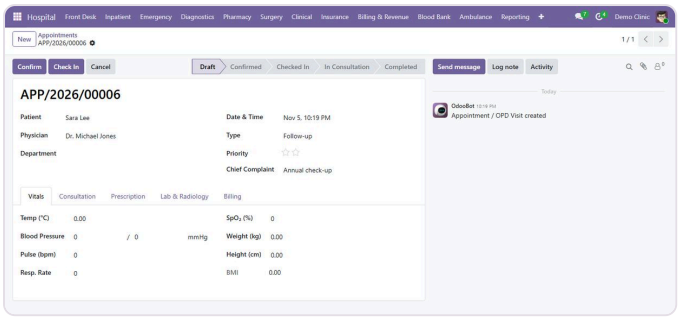

Front Desk, Appointments opens on a calendar coloured by physician; this is the list. Filters: Today, Confirmed, Checked In, Completed; group by physician, department, status or date.

2 HOSPITAL CORE

The calendar

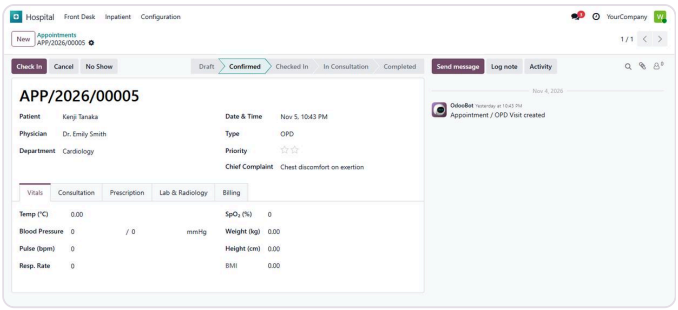

Each appointment sits at its date and time. Drag one to move it; patients and physicians can be switched on and off on the right.

3 HOSPITAL CORE

Book it

Click **New**. Pick the **Patient**, the **Physician** (department and consultation fee fill in), the date and time, the **Type** (OPD, Walk-in, Follow-up, Telemedicine), the priority (Normal, Urgent, Emergency) and the chief complaint. It saves as Draft with a reference APP/2026/00001.

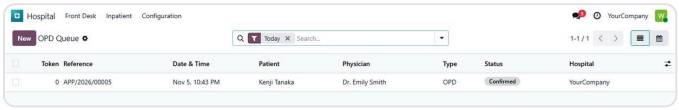

4 HOSPITAL CORE

Confirm

Confirm issues the **token**: the next number for that physician that day, counting the tokens already given. A note is posted on the record.

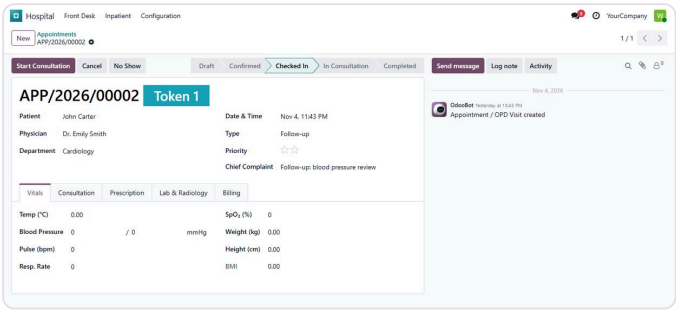

Tokens are per doctor per day. Two doctors each have their own token 1.

5 HOSPITAL CORE

The OPD Queue

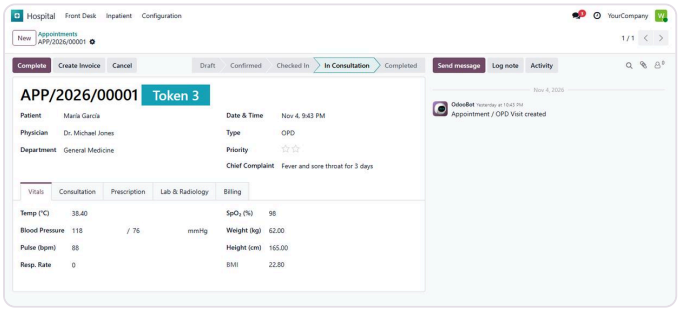

Front Desk, OPD Queue lists today's confirmed, checked-in and in-consultation visits with token, reference, time, patient, physician, type and status.

6 HOSPITAL CORE

Check In

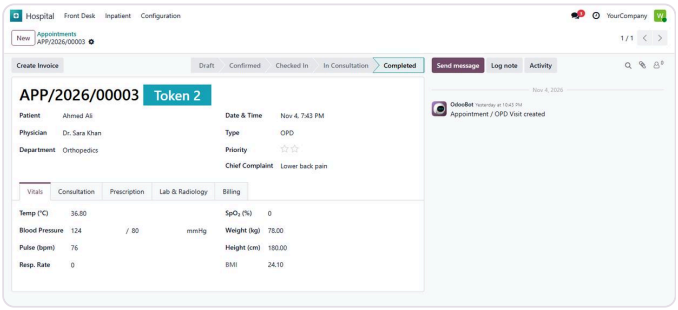

When the patient arrives, **Check In**. It also works from Draft and gives a token if there was none. The patient now counts as Waiting on the dashboard.

7 HOSPITAL CORE

Start Consultation

The doctor clicks **Start Consultation**. The record is now In Consultation and the clinical tabs are filled in (next part).

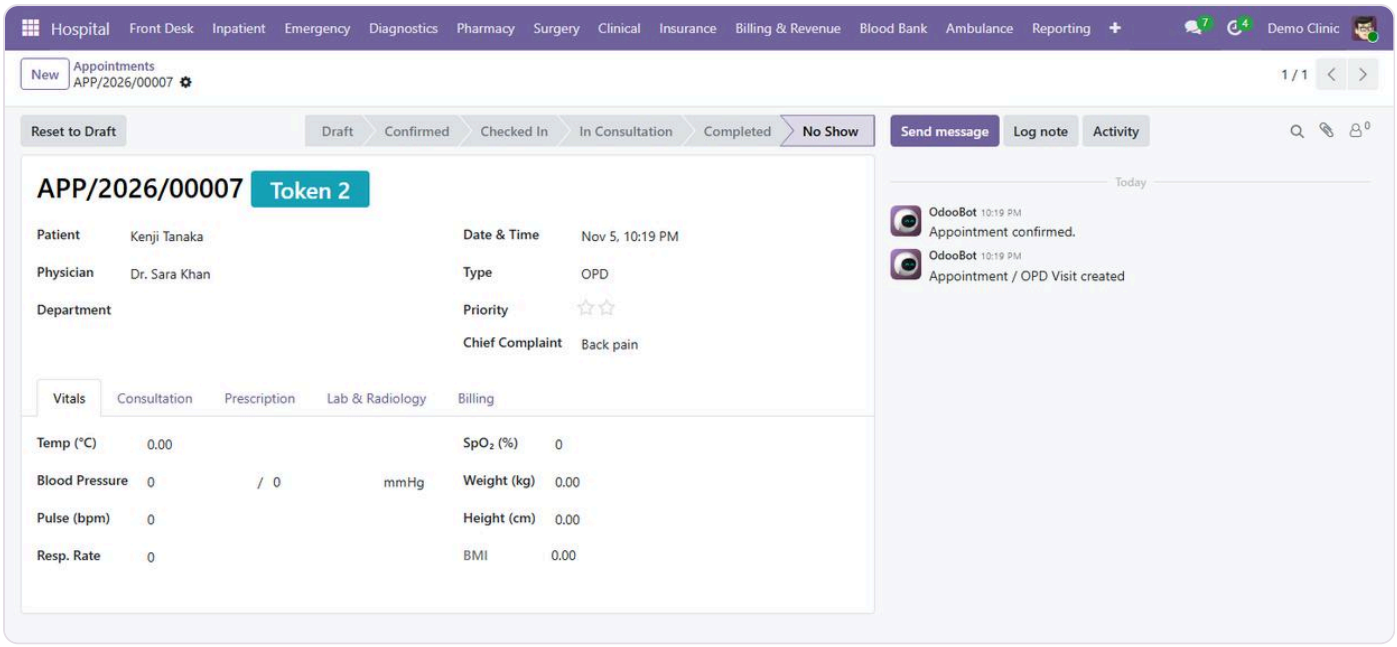

8 HOSPITAL CORE

Complete

Complete closes the visit. If a follow-up date was set, a to-do activity is scheduled for that date for the physician's user (or whoever completes it).

When the patient does not come HOSPITAL CORE

Cancel is there until the visit is completed. **No Show** is there on a confirmed or checked-in visit. **Reset to Draft** brings a cancelled or no-show visit back.

HOSPITAL CORE A no-show, with Reset to Draft.

The nightly no-show job HOSPITAL CORE

A scheduled action, **Hospital: mark missed appointments as no-show**, runs once a day. Every appointment still Confirmed or Checked In whose time has passed is set to No Show, with a note.

> A patient who was checked in but never moved to In Consultation is caught by that job too. Make sure doctors press Start Consultation, or the visit turns into a no-show overnight.

PART 7 The consultation

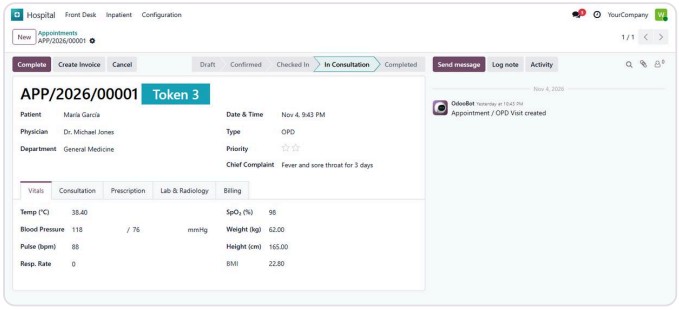

While the patient is in the room the doctor fills five tabs on the appointment: vitals, consultation, prescription, lab and radiology, and billing. Everything is on one record.

IN THIS PART YOU WILL LEARN

- Vitals and how BMI is worked out
- Symptoms, diagnosis, clinical notes and the follow-up date
- Prescription lines
- Lab and radiology requests and their results

TRY IT YOURSELF ON THE DEMO

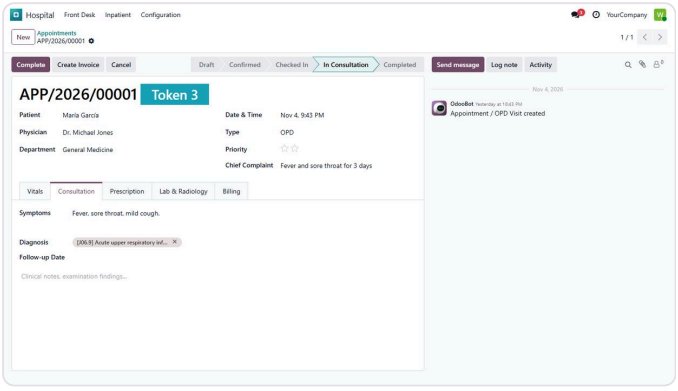

1. Open APP/2026/00001 (in consultation) and walk the five tabs
2. On Prescription, read the two medicines and their frequency
3. On Lab & Radiology, see the CBC request still Requested

1 HOSPITAL CORE

Vitals

Temperature, blood pressure (systolic and diastolic), pulse, respiratory rate, SpO2, weight and height. **BMI** is worked out from weight and height, to one decimal.

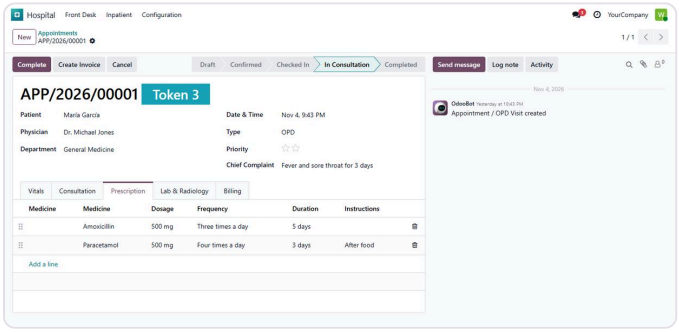

2 HOSPITAL CORE

Consultation

Symptoms, **Diagnosis** (one or more, searched by name or ICD code), the follow-up date and free clinical notes.

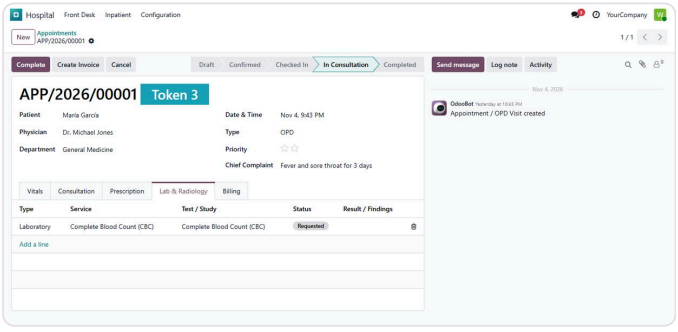

The follow-up date becomes a to-do for the doctor when the visit is completed.

3 HOSPITAL CORE

Prescription

One line per medicine: a product (optional; it fills the name), the medicine name, dosage, **frequency** (once to four times a day, at bedtime, when required, immediately), duration, quantity and instructions.

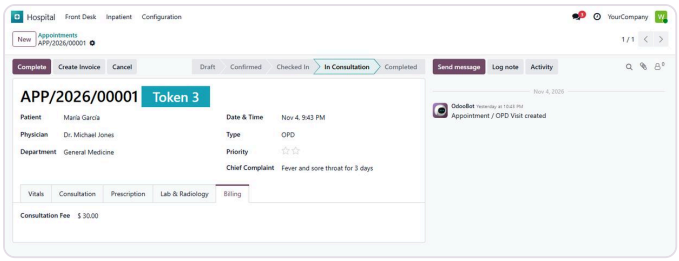

4 HOSPITAL CORE

Lab and radiology

One line per test: type (Laboratory or Radiology), the service (its type sets the line's type), the test or study, status (Requested, Sample Collected, In Progress, Completed, Cancelled), result and result date.

Lines with a service are charged on the visit invoice at the service price.

5 HOSPITAL CORE

Billing

The **Consultation Fee**, filled from the physician and editable, and the invoices raised for the visit.

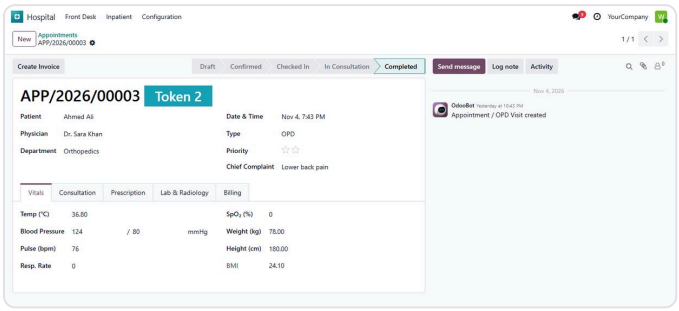

> In the core, a lab or radiology request is a line with a status and a free text result. The Enterprise add-on turns it into a proper lab order with parameters and normal ranges (Part 12).

PART 8 Invoicing a visit

Once the doctor has seen the patient, the visit becomes an invoice with one click, using the fee and the tests already on it.

IN THIS PART YOU WILL LEARN

- What goes on the visit invoice
- Where the invoice is linked back to

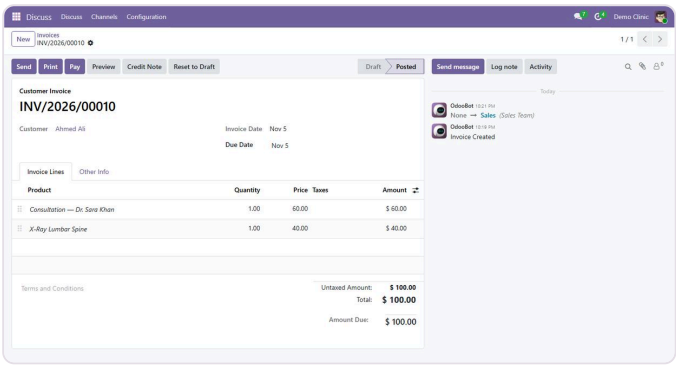

1 HOSPITAL CORE

Create Invoice

Create Invoice shows on a visit In Consultation or Completed. It raises a draft customer invoice to the patient's contact with one line for the consultation (at the fee, with the taxes of the physician's consultation service) and one line per lab or radiology request that has a service, at the service price.

If there is no fee and no priced request, it stops with Nothing to invoice on this appointment.

2 HOSPITAL CORE

Post and collect

The invoice opens. It carries the appointment as its origin and is linked to the patient and the visit. Post it and register the payment the usual Odoo way.

> The button stays available after an invoice exists, so a second click raises a second invoice. Check the Invoices count on the visit before pressing it again.

Posted hospital invoices this month make up the **Revenue (MTD)** tile on the dashboard.

PART 9 Admissions and the bed board

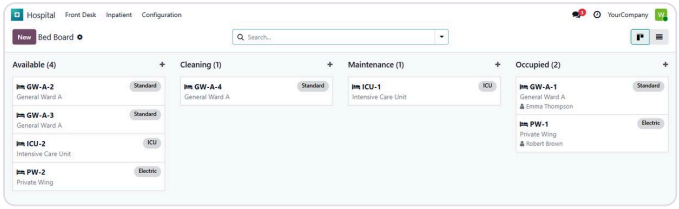

A patient who stays is admitted to a bed. The bed board shows every bed by status, and the admission collects the services given during the stay.

IN THIS PART YOU WILL LEARN

- The bed board and the five bed states
- Admitting a patient to a bed
- Services, diagnosis, prescription and tests during the stay
- Length of stay and the estimated total

TRY IT YOURSELF ON THE DEMO

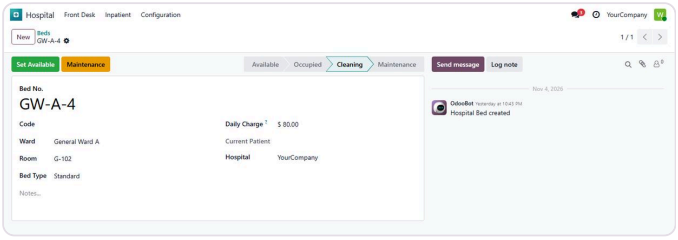

1. Inpatient, Bed Board
2. Inpatient, Admissions, open ADM/2026/00001
3. Read the Services tab and the estimated total

1 HOSPITAL CORE

The bed board

Inpatient, Bed Board shows each bed as a card in a column by status: Available, Reserved, Occupied, Cleaning, Maintenance, with its ward, type and the patient in it.

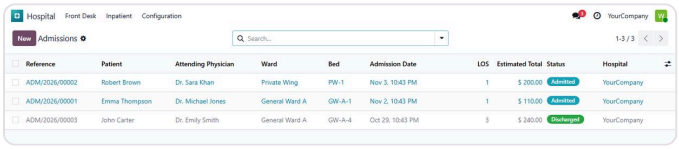

2 HOSPITAL CORE

Set a bed by hand

On a bed, **Set Available**, **Cleaning** and **Maintenance** move it. A discharge puts the bed into Cleaning; housekeeping sets it back to Available.

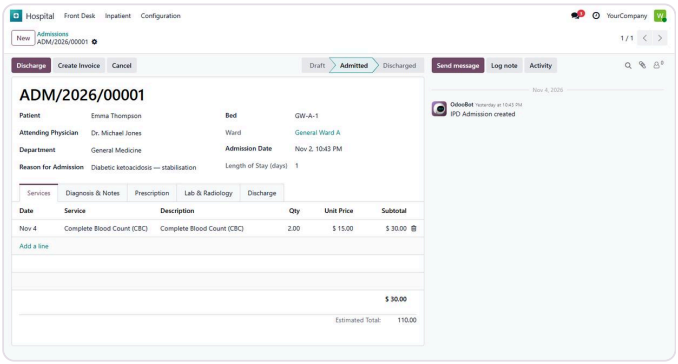

Nothing in the module sets Reserved; use it by hand if you hold beds.

3 HOSPITAL CORE

Admissions

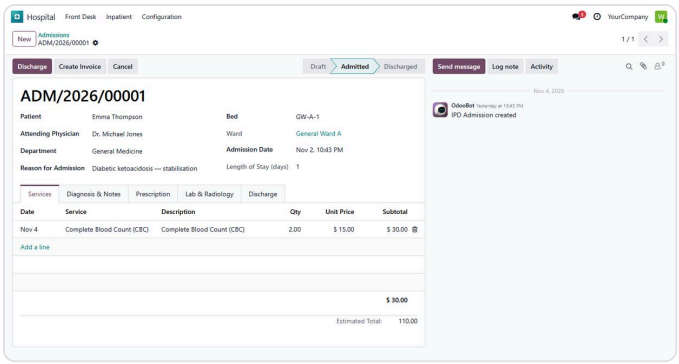

Inpatient, Admissions lists reference, patient, physician, ward, bed, admission date, length of stay, estimated total and status. Filters: Admitted (in-house) and Discharged; group by ward, physician or status.

4 HOSPITAL CORE

Admit

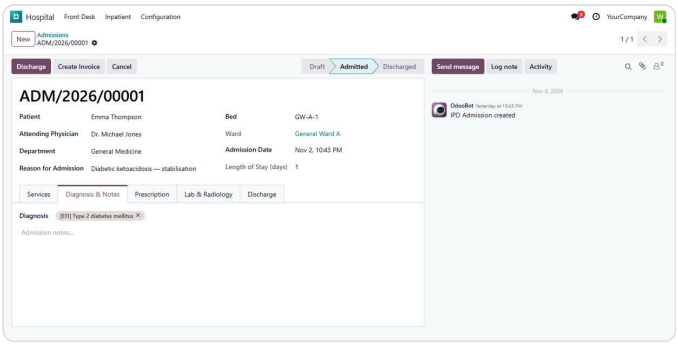

Create an admission (ADM/2026/00001) with patient, attending physician (department fills in), **Bed** (ward fills in), admission date and reason. **Admit** needs a bed and refuses one that is already occupied. The bed becomes Occupied.

5 HOSPITAL CORE

Services during the stay

On **Services**, add a line per service given: date, service (fills description and price), quantity and unit price. **Estimated Total** is the bed's daily charge times the length of stay, plus the services.

6 HOSPITAL CORE

Diagnosis, prescription and tests

Diagnosis & Notes holds the diagnoses and admission notes. **Prescription** and **Lab & Radiology** work as on a visit.

> The length of stay counts whole days from admission to discharge (or to now while the patient is in), with a minimum of one.

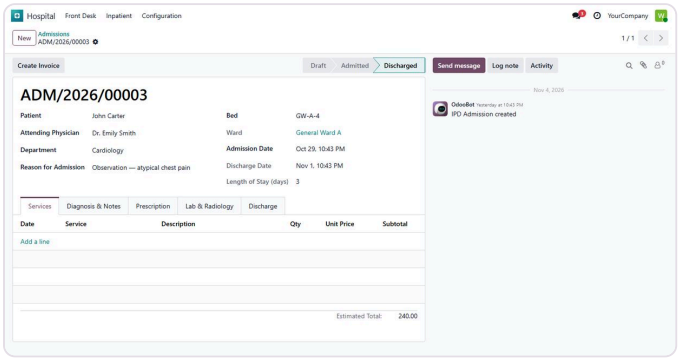

> **Set Available** also shows on an occupied bed. Pressing it frees the bed while the patient is still admitted to it, so keep that button for housekeeping.

PART 10 Discharge and the admission bill

Discharge closes the stay, sends the bed to cleaning, and the admission becomes one invoice for the room and every service.

IN THIS PART YOU WILL LEARN

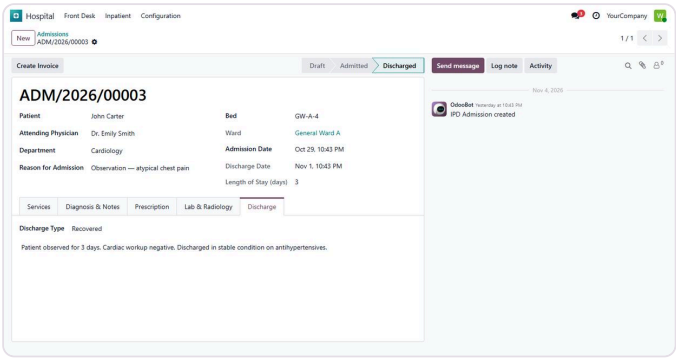

- Discharging and the four discharge types
- The discharge summary
- What goes on the admission invoice
- Cancelling an admission

1 HOSPITAL CORE

Discharge

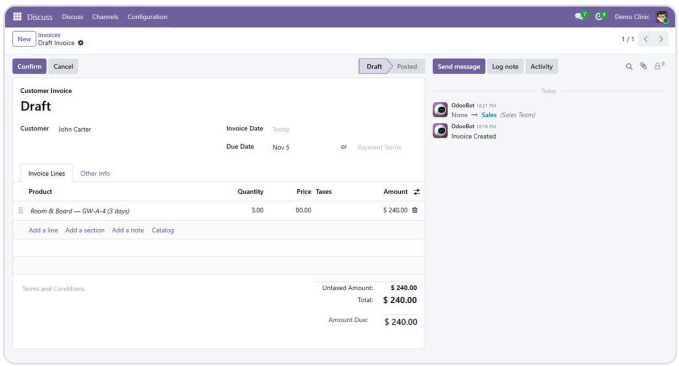

Discharge on an admitted patient sets the discharge date to now and the bed to **Cleaning**.

2 HOSPITAL CORE

The summary

On **Discharge**, pick the discharge type (Recovered, Referred, Left Against Medical Advice, Deceased) and write the summary. Both print on the discharge summary (Part 11).

3 HOSPITAL CORE

Create Invoice

Create Invoice, on an admitted or discharged patient, raises a draft invoice with a **Room & Board** line (the bed, days times the daily charge) and one line per service with its taxes.

Invoicing while the patient is still in bills the days so far. As on visits, a second click raises a second invoice.

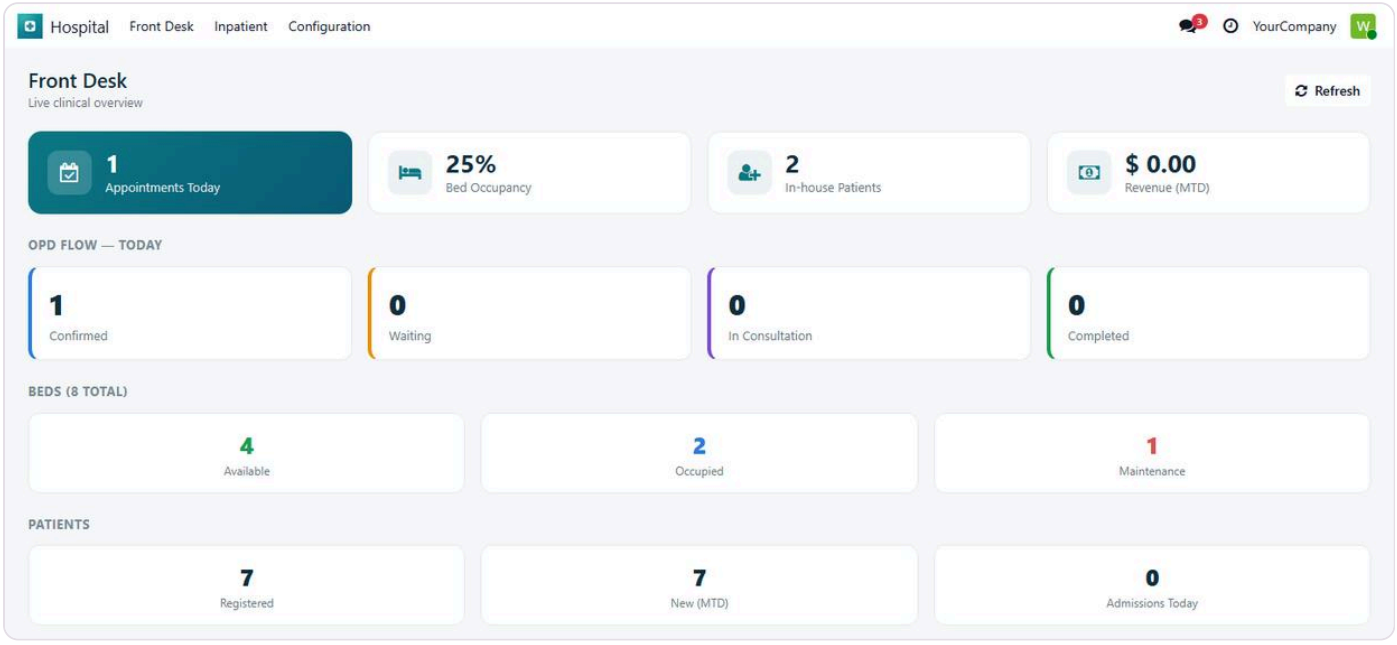

Cancel is there until discharge; cancelling an admitted patient frees the bed. **Reset to Draft** brings a cancelled admission back.

PART 11 The dashboard and the core printouts

The front desk dashboard is the live view of the day. Three printouts come with the core: the prescription, the patient card and the discharge summary.

IN THIS PART YOU WILL LEARN

- Every tile on the dashboard and where its figure comes from
- The three printouts and where to print them

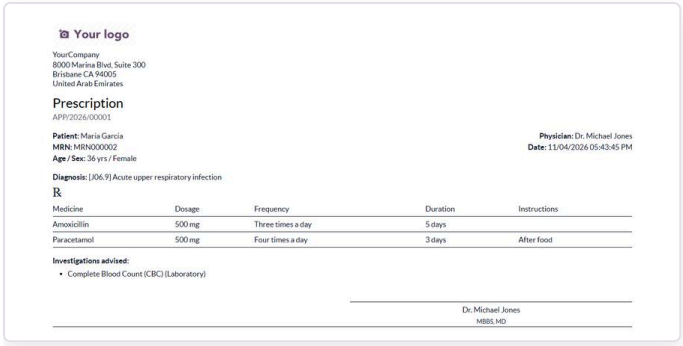

HOSPITAL CORE Front Desk, Dashboard. Refresh reloads the figures.

TILE	COUNTS
Appointments Today	Appointments dated today, any status
Bed Occupancy	Occupied beds over all beds
In-house Patients	Admissions in Admitted
Revenue (MTD)	Posted customer invoices for a patient this month
OPD flow	Today's Confirmed, Waiting (checked in), In Consultation and Completed
Beds	Available, Occupied and Maintenance (beds in Cleaning or Reserved are not shown)
Patients	Registered, new this month, admissions today

The printouts HOSPITAL CORE

Print each from the record's **Print** menu (the gear next to the reference).

Patient: John Carter (MRN000001)
Age / Sex: 54 yrs / Male
Ward / Bed: General Ward A / GW-A-4

Attending: Dr. Emily Smith
Admitted: 10/29/2026 06:43:45 PM
Discharged: 11/01/2026 06:43:45 PM
Length of Stay: 3 day(s)

Diagnosis: [I10] Essential (primary) hypertension
Reason for admission: Observation — atypical chest pain

Summary
Patient observed for 3 days. Cardiac workup negative. Discharged in stable condition on antihypertensives.

Discharge condition: Recovered

Dr. Emily Smith

HOSPITAL CORE **Discharge Summary**, from an admission: dates, length of stay, ward and bed, diagnosis, reason, the summary and the discharge condition.

PART 12 Laboratory and radiology

With the Enterprise add-on, a test is no longer a line with a free text result. It is an order with a test catalogue behind it, a sample, a result per parameter checked against the normal range, a printed lab report and its own invoice.

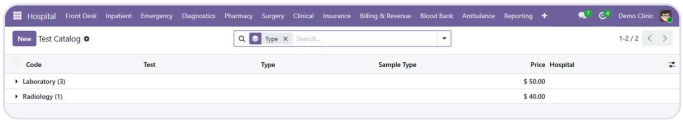

IN THIS PART YOU WILL LEARN

- The test catalogue: tests, parameters and normal ranges
- Raising a lab or radiology order from a visit or directly
- Collecting the sample, entering results and the High and Low flags
- Publishing, invoicing and printing the lab report

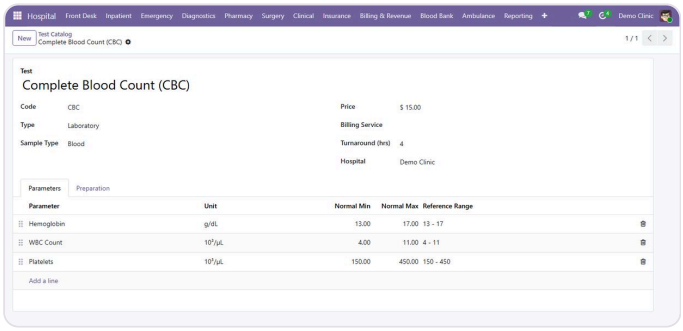

> The Enterprise screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

The test catalogue ENTERPRISE ADD-ON

Configuration, Test Catalog. Each test has a code, a type (Laboratory or Radiology), a **sample type** (Blood, Urine, Stool, Swab, Tissue, None / Imaging), a price, a **billing service** (its taxes go on the invoice), a turnaround in hours and preparation notes. The **Parameters** tab lists what is measured: name, unit, normal minimum and maximum, and a reference range text that fills itself from the two numbers. The add-on ships CBC, lipid profile, fasting glucose and a chest X-ray as examples.

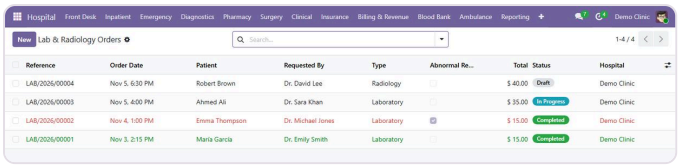

ENTERPRISE ADD-ON The test catalogue.

ENTERPRISE ADD-ON A test with its parameters and normal ranges.

A lab order

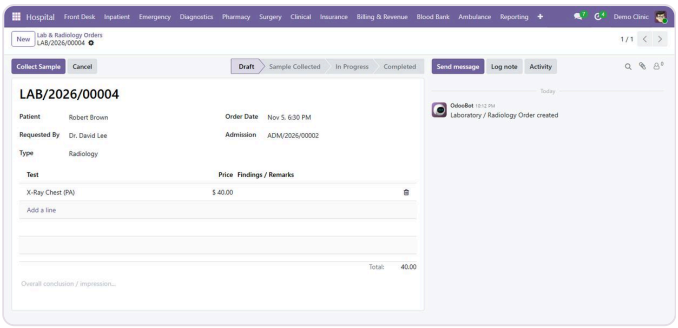

1. **Draft** — tests ordered
2. **Sample Collected** — time stamped
3. **In Progress** — results entered
4. **Completed** — results published

1 ENTERPRISE ADD-ON

Lab and radiology orders

Diagnostics, Lab & Radiology Orders lists every order with date, patient, requesting doctor, type, an abnormal results tick, total and status.

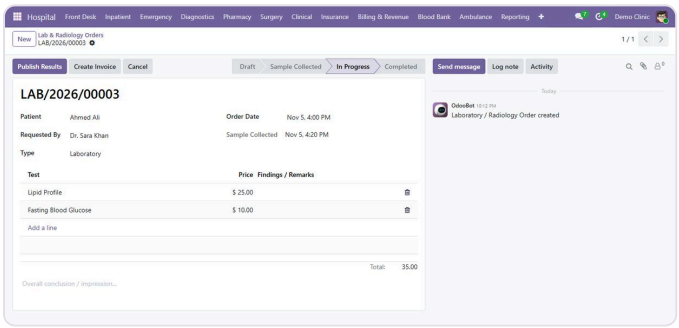

2 ENTERPRISE ADD-ON

Raise the order

Click **New**: patient, requesting physician, the visit or the admission it belongs to, and the type. Add a line per test; the price comes from the catalogue. Each line gets one result row per parameter of the test when it is saved.

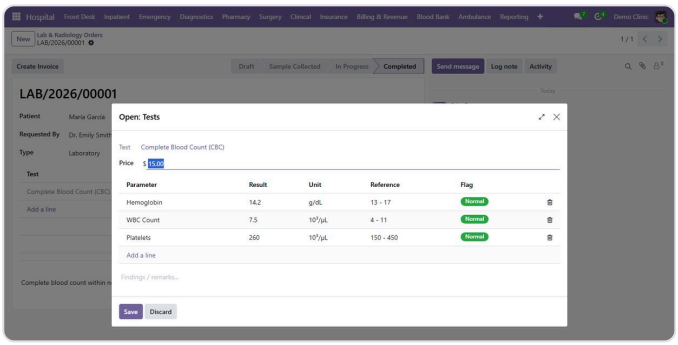

Orders are raised from this menu. The add-on has code for a Create Lab Order button on the appointment, but no button shows it, so link the visit on the order instead.

3 ENTERPRISE ADD-ON

Collect the sample and start

Collect Sample stamps the sample time. **Start** moves the order to In Progress for the lab to work on.

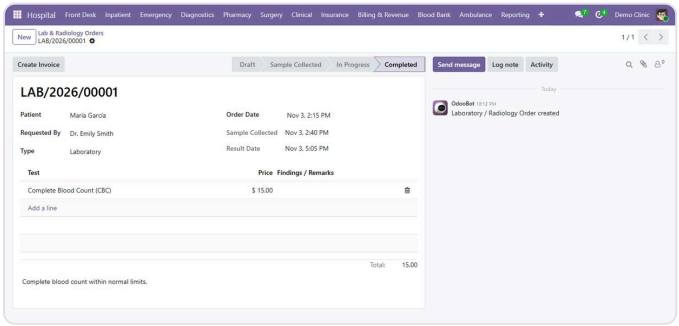

4 ENTERPRISE ADD-ON

Enter the results

Open a test line and type each result. A numeric result is compared with the normal range and flagged **Low**, **High** or **Normal**; the order is ticked Abnormal when any line is out of range. Add findings per line and a conclusion for the order.

A text result (for example Positive) is always flagged Normal; the Abnormal flag exists but nothing sets it, so write such findings in the remarks.

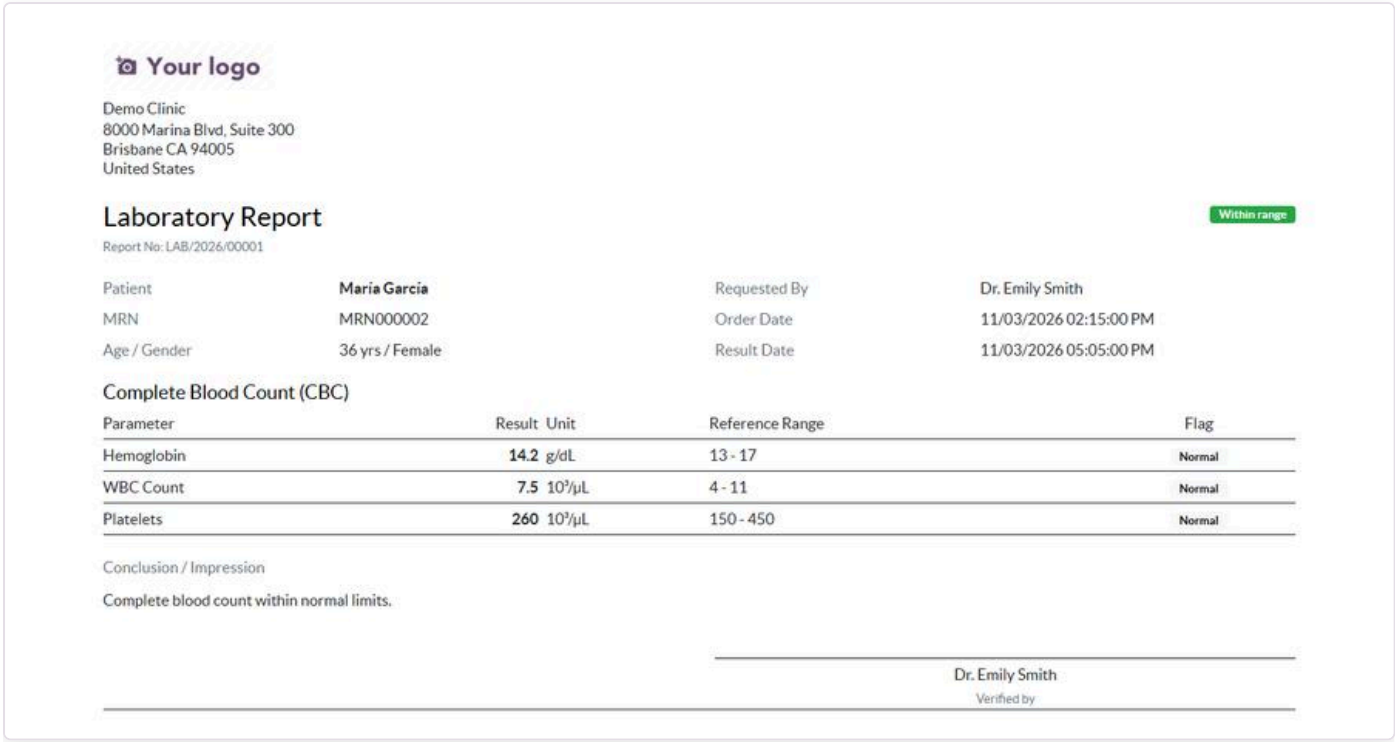

5 ENTERPRISE ADD-ON

Publish

Publish Results completes the order, stamps the result date and posts a note. **Create Invoice** raises an invoice with one line per test at its price.

Cancel and **Reset to Draft** are on the order header.

Laboratory Report

Within range

Report No: LAB/2026/00001

Patient	**Maria Garcia**	Requested By	Dr. Emily Smith
MRN	MRN000002	Order Date	11/03/2026 02:15:00 PM
Age / Gender	36 yrs / Female	Result Date	11/03/2026 05:05:00 PM

Complete Blood Count (CBC)

Parameter	Result	Unit	Reference Range	Flag
Hemoglobin	**14.2**	g/dL	13 - 17	Normal
WBC Count	**7.5**	$10^3/\mu L$	4 - 11	Normal
Platelets	**260**	$10^3/\mu L$	150 - 450	Normal

Conclusion / Impression

Complete blood count within normal limits.

Dr. Emily Smith
Verified by

ENTERPRISE ADD-ON The **Lab Report**, printed from an order: each test with its parameters, result, unit, reference range and flag, and the conclusion.

PART 13 Operation theatres and surgery

Theatres are set up once. Each surgery is planned with its surgeon, team, anaesthetist and theatre, scheduled on a calendar, and its notes and consumables are kept on the record.

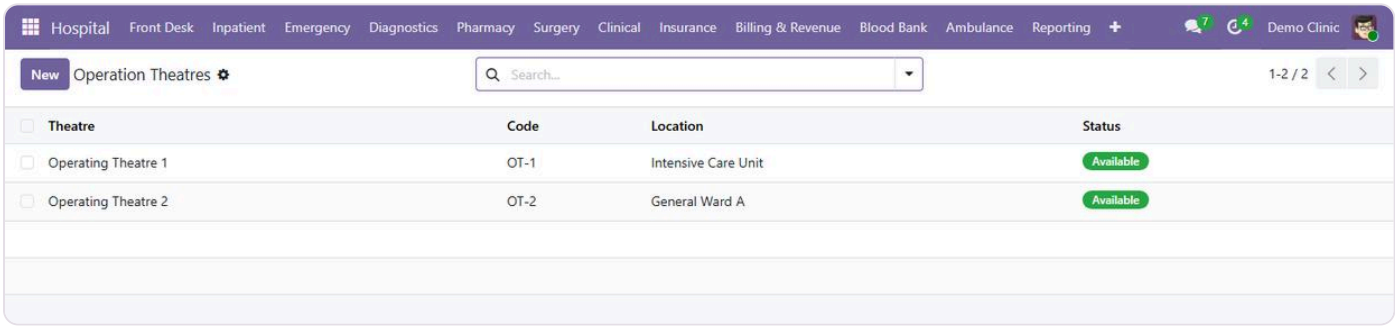

IN THIS PART YOU WILL LEARN

- Setting up operation theatres
- Planning, scheduling, starting and completing a surgery
- Pre-op, operative and post-op notes and the consumables used

> The Enterprise screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

Operation theatres ENTERPRISE ADD-ON

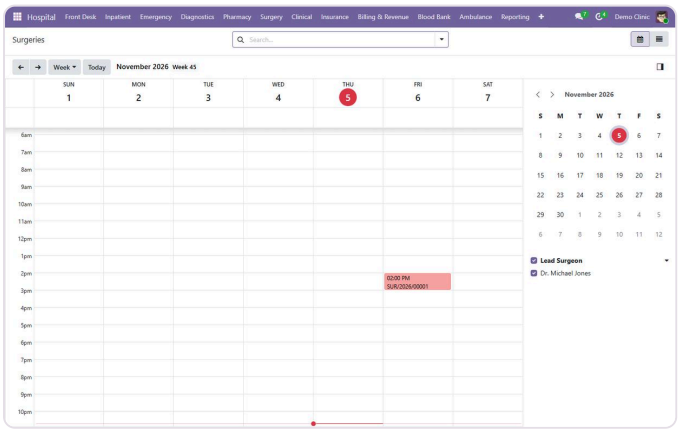

Configuration, Operation Theatres: name, code, location (a ward), status (Available, In Use, Cleaning, Maintenance) and notes. The status changes as surgeries start and finish.

ENTERPRISE ADD-ON Operation theatres and their status.

A surgery

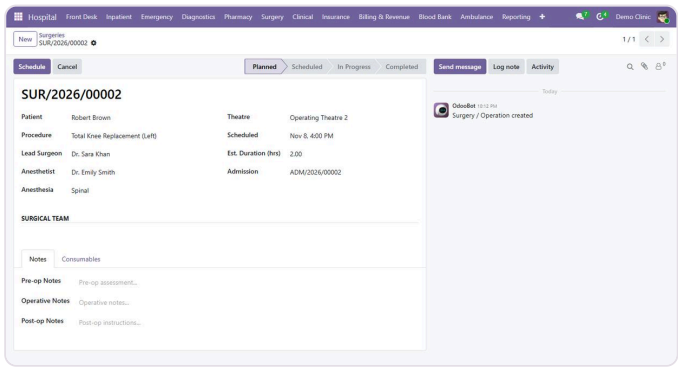

1. **Planned** — booked
2. **Scheduled** — theatre set
3. **In Progress** — theatre in use
4. **Completed** — theatre to cleaning

1 ENTERPRISE ADD-ON

The surgery calendar

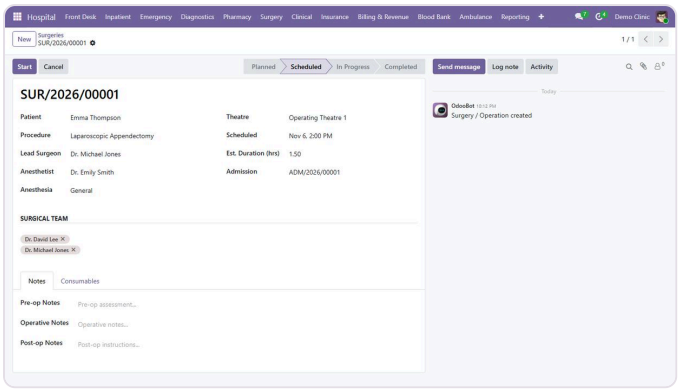

Surgery, Surgeries opens on a calendar by scheduled time and lead surgeon, with a list next to it.

2 ENTERPRISE ADD-ON

Plan it

New surgery: patient, admission, procedure, lead surgeon, surgical team, anaesthetist, anaesthesia type (General, Regional, Local, Spinal, Sedation), theatre, scheduled time and estimated duration. It starts Planned.

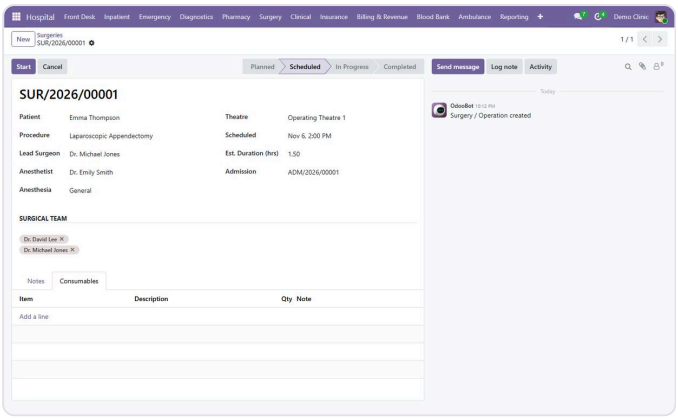

3 ENTERPRISE ADD-ON

Schedule and start

Schedule needs a theatre. **Start** stamps the actual start and sets the theatre In Use. **Complete** stamps the actual end, sets the theatre to Cleaning and posts a note.

Cancel frees a theatre that was in use; Reset to Draft returns the surgery to Planned.

4 ENTERPRISE ADD-ON

Notes and consumables

Notes has pre-op, operative and post-op notes. **Consumables** lists the items used: product, description, quantity and a note.

Consumables are a record of use. They do not move stock or go onto an invoice; bill them as admission services.

ENTERPRISE ADD-ON Surgeries as a list.

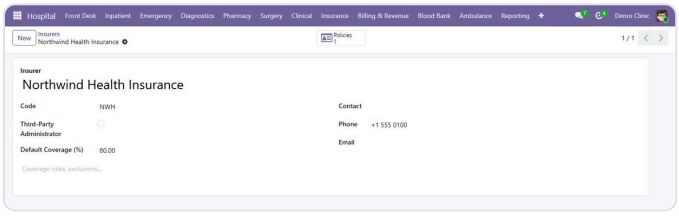

PART 14 Insurance policies and claims

The insurer and each patient's policy are set up once. A claim is raised against an invoice, works out what the insurer pays and what the patient pays, and follows the insurer's answer to payment.

IN THIS PART YOU WILL LEARN

- Insurers, third-party administrators and default coverage
- Patient policies with coverage, ceiling and validity
- How a claim splits an invoice between insurer and patient
- Submit, approve (in full or in part), reject and mark paid

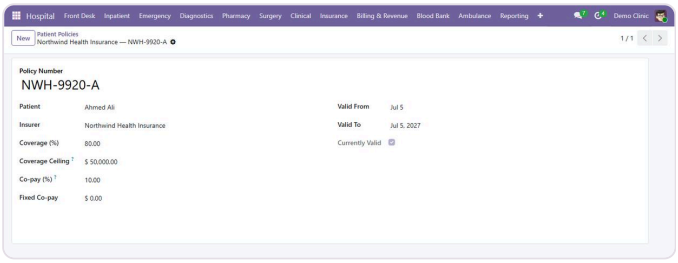

> The Enterprise screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

1 ENTERPRISE ADD-ON

The insurer

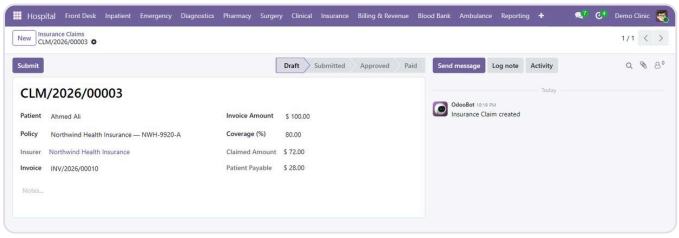

Configuration, Insurers: name, code, a **Third-Party Administrator** tick, contact, phone, e-mail, **default coverage** and the coverage rules in notes. The Policies button lists the patients it covers.

2 ENTERPRISE ADD-ON

The patient policy

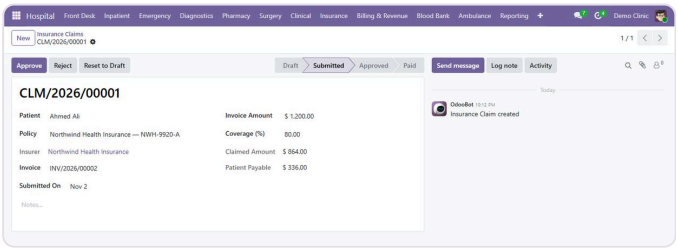

Insurance, Patient Policies: policy number, patient, insurer (the coverage fills from its default), coverage percent, coverage ceiling, valid from and to. **Currently Valid** is worked out from today's date.

3 ENTERPRISE ADD-ON

Raise the claim

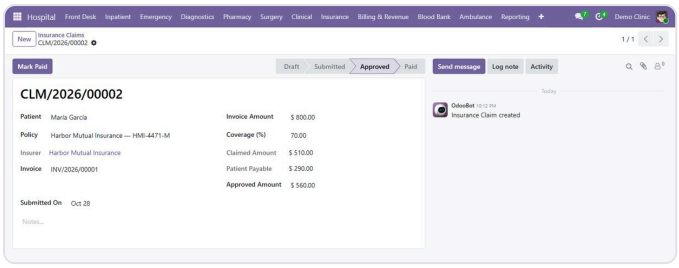

Insurance, Claims, New. Choose the invoice: the amount and the patient fill in. Choose the policy: insurer and coverage follow. **Claimed Amount** is the invoice times the coverage, capped at the ceiling; **Patient Payable** is the rest.

4 ENTERPRISE ADD-ON

Submit

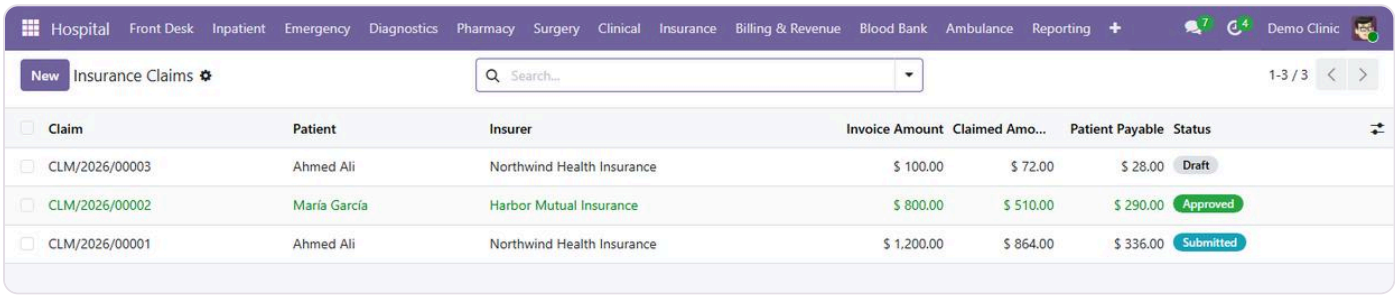

Submit stamps the submission date and posts a note naming the insurer.

5 ENTERPRISE ADD-ON

The insurer answers

Type the **Approved Amount** and click **Approve**. Less than claimed makes it Partially Approved; empty approves the full claim. **Reject** records a rejection with a reason. **Mark Paid** stamps the settlement date when the money comes in.

ENTERPRISE ADD-ON Claims with insurer, amounts and status. Reset to Draft is there to correct a claim.

> The claim is a record of what is owed. Marking it paid does not post a payment; register the insurer's payment on the invoice in Accounting.

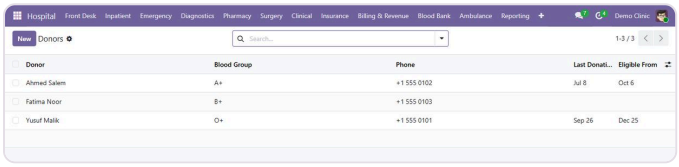

PART 15 The blood bank

Donors and the units they give are kept in the blood bank, with the group, the component, the expiry and who each unit went to.

IN THIS PART YOU WILL LEARN

- Donors and when they can give again
- Blood units by group and component, and their states

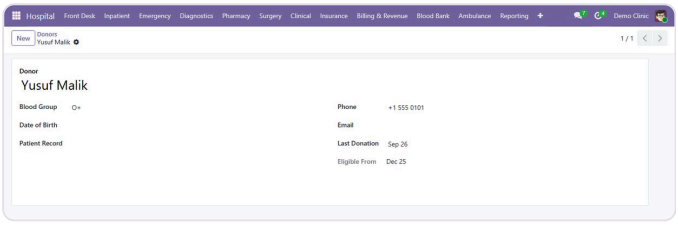

> The Enterprise screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

1 ENTERPRISE ADD-ON

Donors

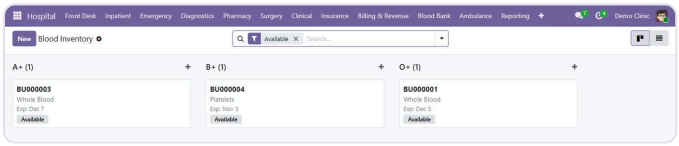

Blood Bank, Donors: name, a link to a patient record, blood group, phone, e-mail, date of birth and last donation. **Eligible From** is the last donation plus 90 days.

2 ENTERPRISE ADD-ON

A donor

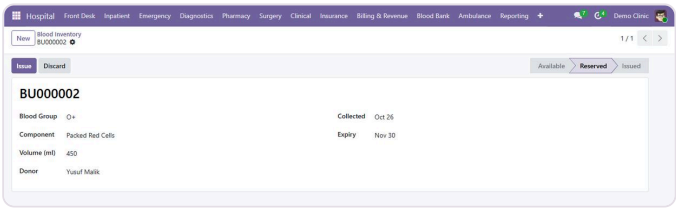

The donor record with the eligibility date.

3 ENTERPRISE ADD-ON

Blood inventory

Blood Bank, Blood Inventory shows each unit as a card: its number, group, component (Whole Blood, Packed Red Cells, Plasma, Platelets), volume and expiry. Units past their expiry show in red.

4 ENTERPRISE ADD-ON

Reserve, issue or discard

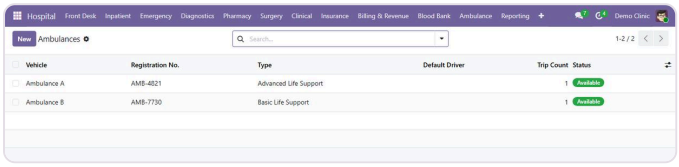

A unit is Available until it is **Reserved**, **Issued** (to the patient named in Issued To) or **Discarded**.

Expiry is shown, not enforced: an expired unit is flagged but stays Available until someone discards it.

PART 16 Ambulance trips

Each vehicle and each trip is recorded, with the time it was asked for, dispatched and back.

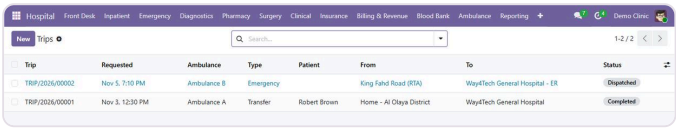

> The Enterprise screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

1 ENTERPRISE ADD-ON

Ambulances

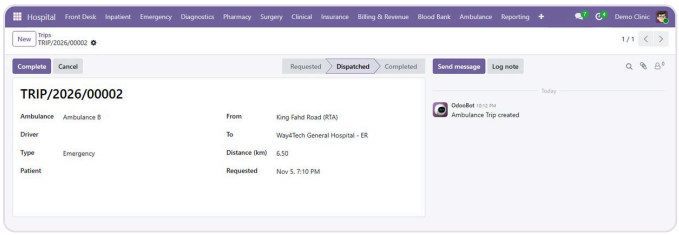

Ambulance, Ambulances: vehicle, registration, type (Basic Life Support, Advanced Life Support, Patient Transport, Neonatal), default driver, phone and status (Available, On Trip, Maintenance), with a Trips count.

2 ENTERPRISE ADD-ON

Trips

Ambulance, Trips: each trip with its ambulance, patient, driver, type (Pickup, Transfer, Discharge, Emergency), from, to, request time, distance and status.

3 ENTERPRISE ADD-ON

Dispatch and complete

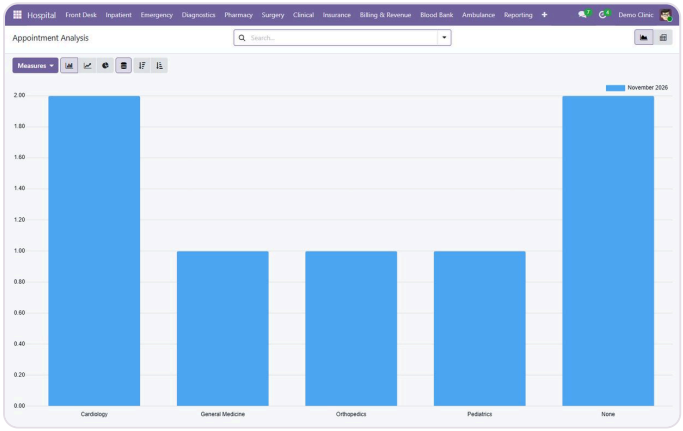

Dispatch stamps the dispatch time and puts the ambulance On Trip. **Complete** stamps the completion and makes it Available. **Cancel** also frees the ambulance.

PART 17 Hospital reporting

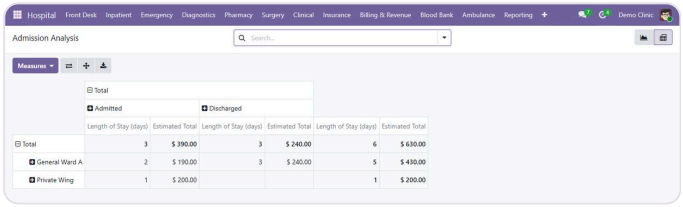

Five analysis screens under Reporting, each a graph and a pivot table you can group and filter like any Odoo report.

> The Enterprise screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

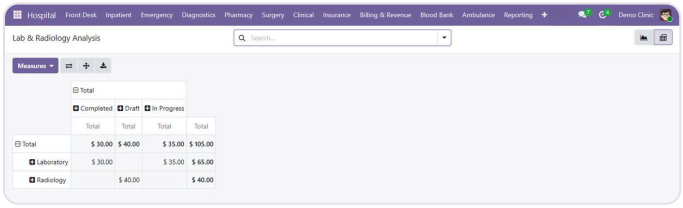

REPORT	BUILT ON	USE IT FOR
Appointments	Appointments	Visits by doctor, department, type and status over time
Admissions	Admissions	Stays by ward and doctor, length of stay, estimated totals
Lab & Radiology	Lab orders	Orders by type, test and status, abnormal results
Claims	Claims	Claimed, approved and paid amounts by insurer
Surgeries	Surgeries	Operations by surgeon, theatre and status

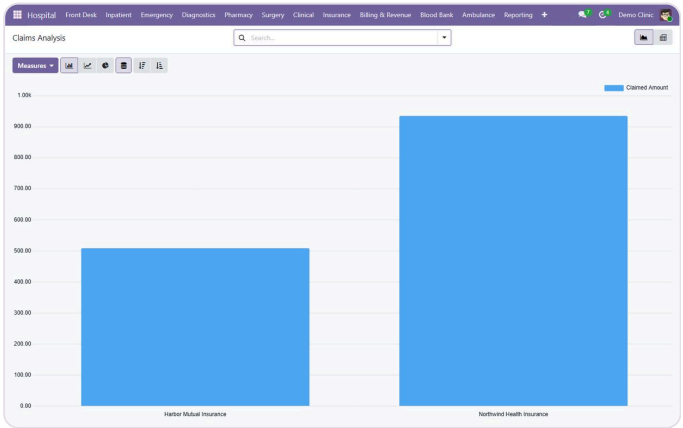

ENTERPRISE ADD-ON Appointments, as a graph.

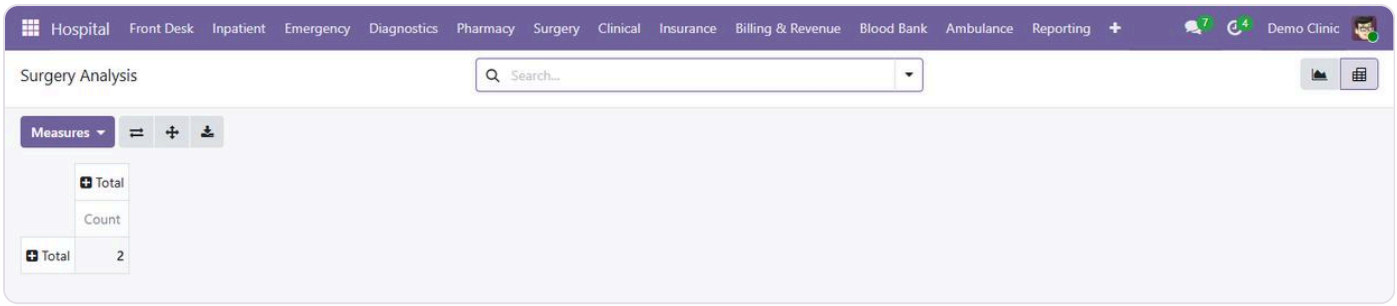

ENTERPRISE ADD-ON Admissions, as a pivot.

ENTERPRISE ADD-ON Lab and radiology, as a pivot.

ENTERPRISE ADD-ON Claims, as a graph.

ENTERPRISE ADD-ON Surgeries, as a pivot.

The Reporting menu shows only to the Hospital Administrator.

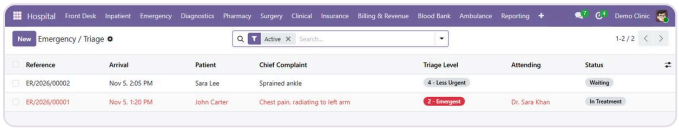

PART 18 Emergency and triage

An emergency case is logged the moment the patient arrives, triaged on a five level scale, and followed to its outcome.

IN THIS PART YOU WILL LEARN

- Logging an arrival and the five triage levels
- Quick vitals, the attending doctor and the outcome

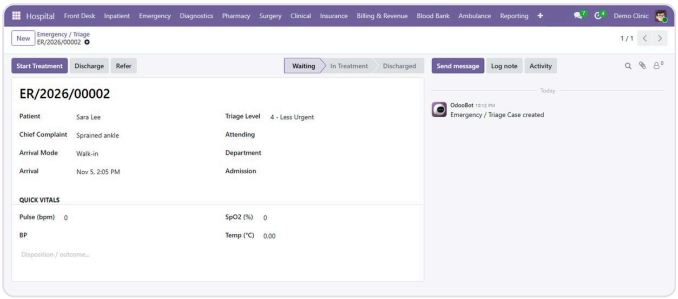

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

1 ULTIMATE ADD-ON

Emergency / Triage

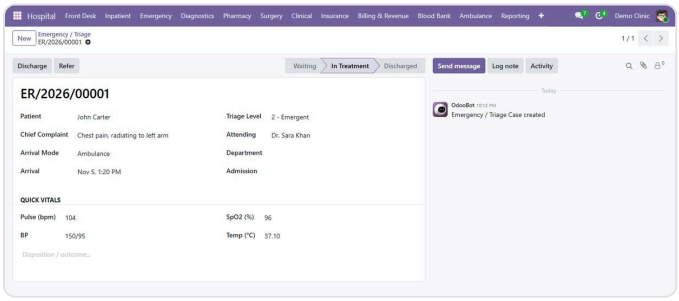

Emergency, Emergency / Triage lists every case with arrival time, patient, complaint, triage level and status.

2 ULTIMATE ADD-ON

Log the arrival

New case (ER/2026/00001): patient, arrival time, mode of arrival (Walk-in, Ambulance, Referral, Police), chief complaint and **triage level**: 1 Resuscitation, 2 Emergent, 3 Urgent, 4 Less Urgent, 5 Non-Urgent. It starts as Waiting.

3 ULTIMATE ADD-ON

Treat

Start Treatment moves it to In Treatment. Record the attending doctor, department and quick vitals (pulse, BP, SpO2, temperature) and write the disposition. **Discharge** or **Refer** closes the case.

Observation and Admitted are statuses on the case with no button; set them in the status bar, and link the admission when the patient is admitted.

PART 19 Pharmacy and dispensing

Medicines are stock products with a few medical fields. A dispense takes them out of stock against a prescription or as a counter sale, with the batch, and bills them.

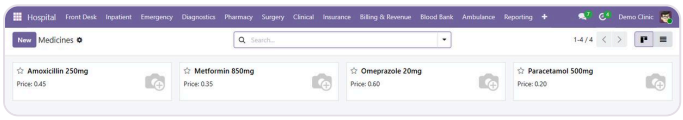

IN THIS PART YOU WILL LEARN

- Marking a product as a medicine
- Dispensing against a visit's prescription or at the counter
- What dispensing does to stock, and invoicing it

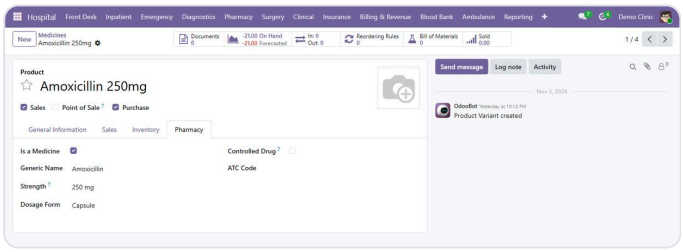

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

Medicines ULTIMATE ADD-ON

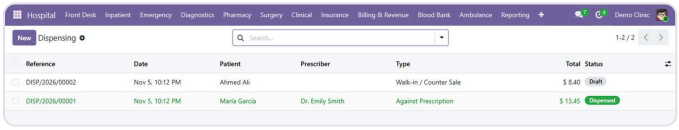

Pharmacy, Medicines opens the products marked **Is a Medicine**. The product form gains a **Pharmacy** tab: generic name, strength, dose form (Tablet, Capsule, Syrup, Injection, Drops, Ointment / Cream, Inhaler, Other), a controlled drug tick and the ATC code. Price and stock are the product's own.

ULTIMATE ADD-ON Medicines.

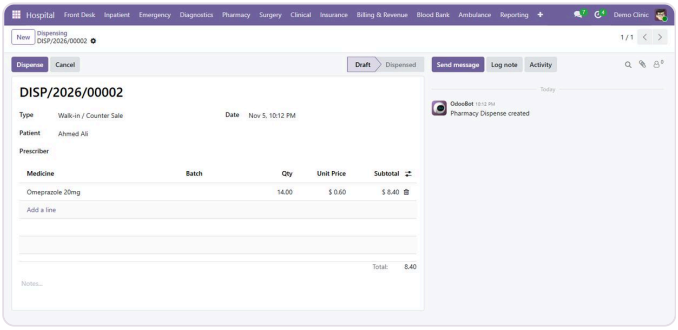

ULTIMATE ADD-ON A medicine product.

1 ULTIMATE ADD-ON

Dispensing

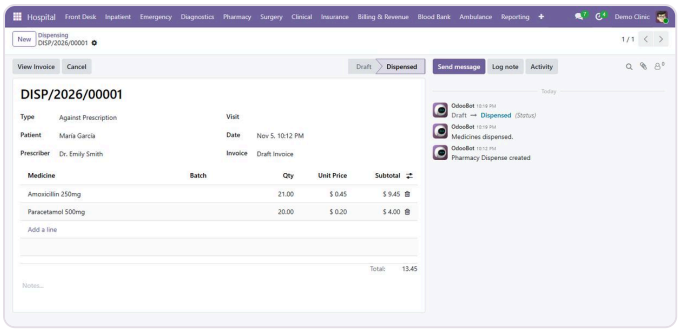

Pharmacy, Dispensing lists each dispense with patient, type, date, total and status.

2 ULTIMATE ADD-ON

Make up the dispense

New dispense: type **Against Prescription** or **Walk-in / Counter Sale**, patient, prescriber, and the visit or admission. Choosing the visit brings in every prescription line that names a product. Each line has the medicine, a **batch**, quantity and unit price (the product's sale price).

3 ULTIMATE ADD-ON

Dispense

Dispense moves each medicine out of the company's main warehouse stock to the customer location with the batch chosen, and links the stock move to the line. **Create Invoice** raises one invoice for the lines; **View Invoice** opens it.

Dispensing does not check that the stock is there; it can take a medicine below zero. Keep the stock counted.

Cancel and **Reset to Draft** are on the header. A dispensed record is not reversed by cancelling it; return the stock in Inventory.

PART 20

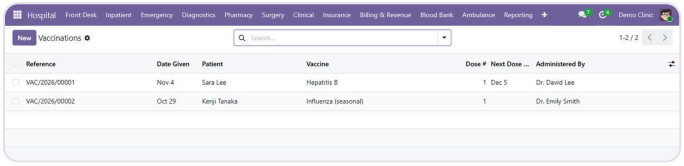

Vaccinations, recurring procedures and the waiting list

Three registers for care that runs over weeks or months: the doses given, a course of repeat sessions, and the list of patients waiting for a procedure.

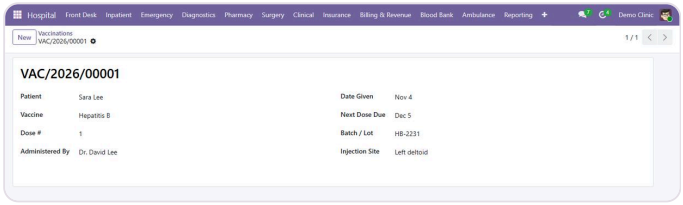

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

Vaccinations ULTIMATE ADD-ON

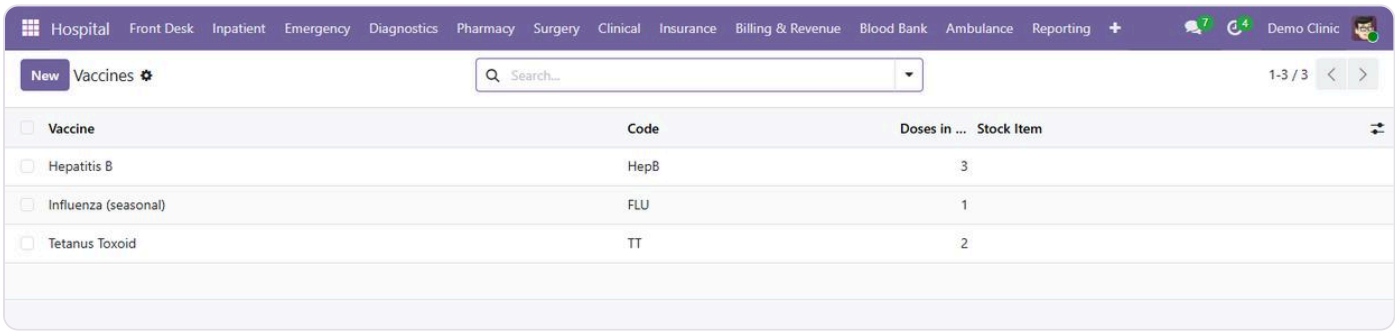

Configuration, Vaccines holds each vaccine with its code, doses in the schedule, the stock item and notes. **Pharmacy, Vaccinations** records each dose: patient, vaccine, dose number, date given, next dose due, batch, who gave it and the site.

ULTIMATE ADD-ON Vaccinations given.

ULTIMATE ADD-ON One dose with batch and next due date.

ULTIMATE ADD-ON The vaccine list.

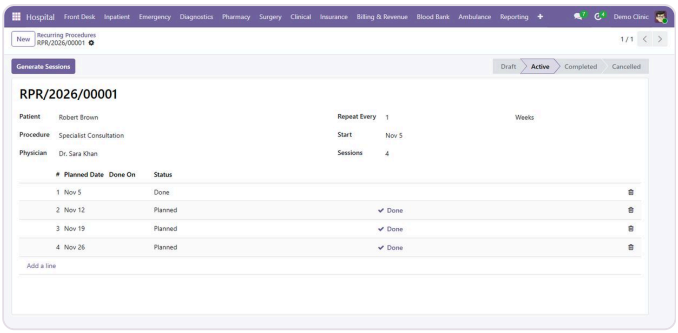

Recurring procedures ULTIMATE ADD-ON

1 ULTIMATE ADD-ON

The plans

Clinical, Recurring Procedures: a plan per patient for a course such as dialysis or physiotherapy.

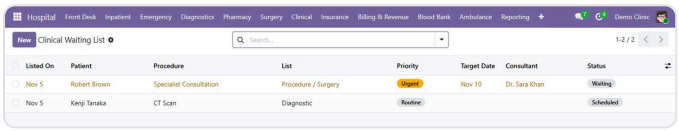

2 ULTIMATE ADD-ON

Generate the sessions

Set the procedure (a service), physician, repeat every N days, weeks or months, the start date and the number of sessions. **Generate Sessions** writes the planned dates and makes the plan Active. Tick each session **Done** as it happens.

Generating again replaces the session list.

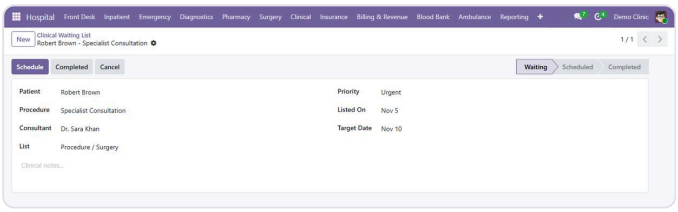

The clinical waiting list ULTIMATE ADD-ON

3 ULTIMATE ADD-ON

Who is waiting

Clinical, Clinical Waiting List: each entry has patient, procedure, consultant, list type (Procedure / Surgery, Organ Transplant, Diagnostic), priority (Routine, Urgent, Emergency), the date listed and a target date.

4 ULTIMATE ADD-ON

Move it on

Schedule when a date is given, **Completed** when done, or **Cancel**.

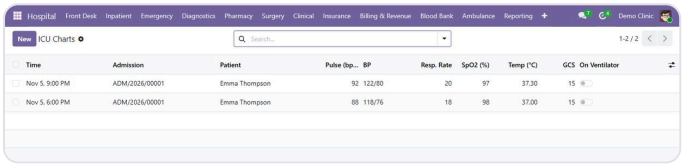

PART 21 ICU charts, facility assets and ICD-10

Hourly ICU observations against an admission, a register of the hospital's equipment and its maintenance, and a standard code list for diagnoses.

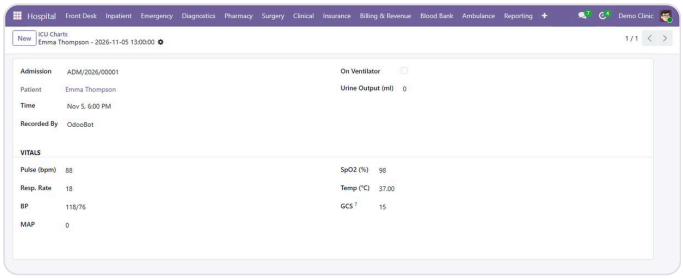

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

ICU charts ULTIMATE ADD-ON

Inpatient, ICU Charts. Each entry is one observation for an admission: time, who recorded it, pulse, respiratory rate, BP, MAP, SpO2, temperature, GCS (3 to 15), on ventilator, FiO2, urine output and a note. A ward can be marked **Intensive Care Unit**.

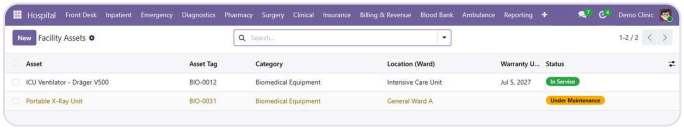

ULTIMATE ADD-ON ICU chart entries.

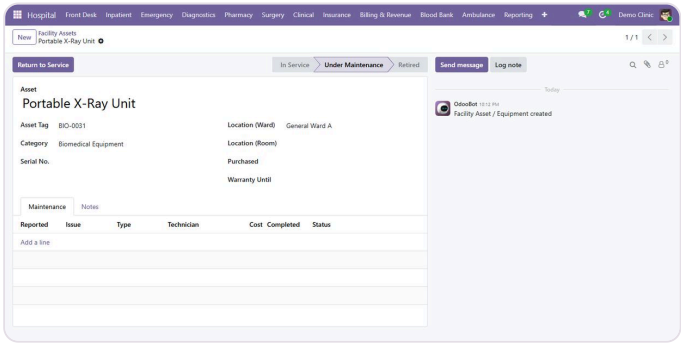

ULTIMATE ADD-ON One observation.

Facility assets ULTIMATE ADD-ON

Facility, Facility Assets: each asset has a tag, category (Biomedical Equipment, Furniture, IT / Electronics, Utility / Plant, Vehicle, Other), ward and room, serial number, purchase date and warranty end. **Maintenance** and **In Service** change its status (it can also be Retired). The Maintenance tab logs each job: date reported, issue, type (Preventive, Corrective, Calibration), technician, cost and a Done button.

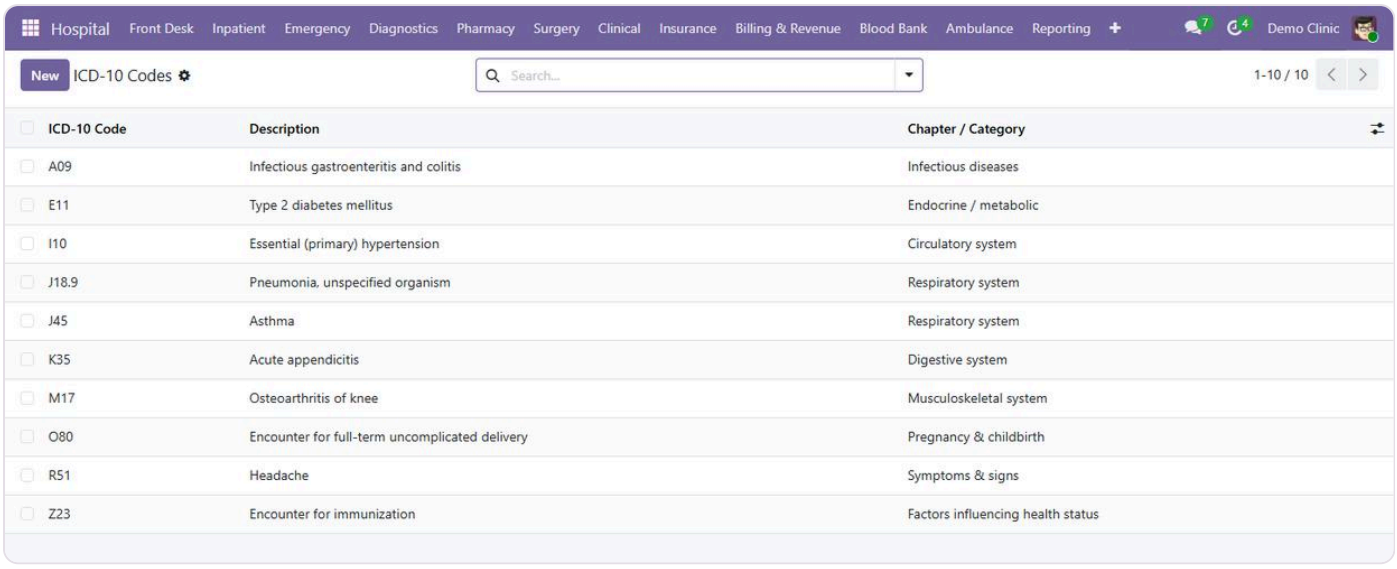

ULTIMATE ADD-ON Facility assets.

ULTIMATE ADD-ON An asset with its maintenance log.

ICD-10 codes ULTIMATE ADD-ON

Configuration, ICD-10 Codes loads a starter set of codes with description and chapter. Each diagnosis can then point to its ICD-10 code.

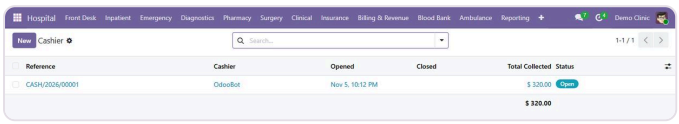

ULTIMATE ADD-ON The ICD-10 code list.

PART 22 The cashier session

The hospital cash desk opens a session with a float, records each payment taken, and closes with a cash count that shows the difference.

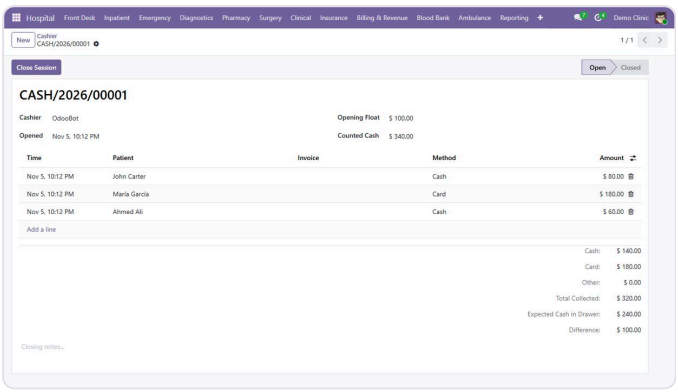

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

1 ULTIMATE ADD-ON

Sessions

Billing & Revenue, Cashier lists each session with cashier, opening and closing times, totals and status.

2 ULTIMATE ADD-ON

Take payments and close

Open a session with the **Opening Float**. Add a line per payment: time, patient, invoice (the amount fills with what is still due), amount, method (Cash, Card, Insurance, Online / Transfer) and reference. The session totals cash, card and other, works out the **expected cash in drawer** (float plus cash), and shows the **difference** against the counted cash. **Close Session** closes it; **Reopen** reopens it.

Lines here are the cash desk's record. Register the payment on the invoice in Accounting too, so the invoice shows as paid.

Your logo

Demo Clinic
8000 Marina Blvd, Suite 300
Brisbane CA 94005
United States

Cashier Cash-Up

CASH/2026/00001
Cashier: OdooBot

Opened: 11/05/2026 10:12:25 PM
Closed:

Time	Patient	Invoice	Method	Amount
11/05/2026 10:12:25 PM	John Carter		Cash	$ 80.00
11/05/2026 10:12:25 PM	Maria Garcia		Card	$ 180.00
11/05/2026 10:12:25 PM	Ahmed Ali		Cash	$ 60.00

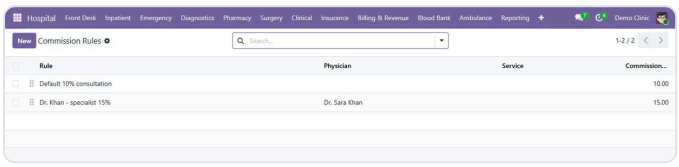

Opening Float	$ 100.00
Cash	$ 140.00
Card	$ 180.00
Other	$ 0.00
Total Collected	**$ 320.00**
Expected Cash	$ 240.00
Counted Cash	$ 340.00
Difference	**$ 100.00**

ULTIMATE ADD-ON The **Cash-Up** printout of a session.

PART 23 Doctor commission

Rules set what share of an invoice a doctor earns. Commission lines are worked out per invoice and paid out from a list with a printable statement.

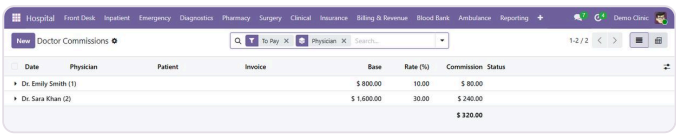

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

1 ULTIMATE ADD-ON

Commission rules

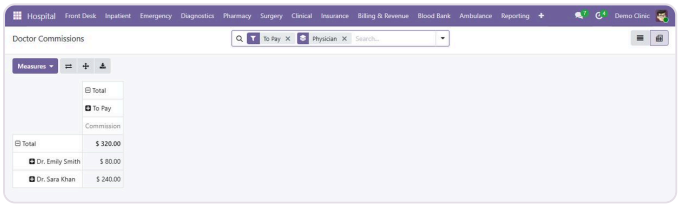

Configuration, Commission Rules: name, sequence, physician (empty for everyone), service (empty for all), and the commission percent.

2 ULTIMATE ADD-ON

Commission lines

Billing & Revenue, Doctor Commissions. A line is worked out for a customer invoice raised from a visit or admission: the physician comes from it, the base is the untaxed amount and the rate is the best matching rule. Lines are **To Pay** until **Mark Paid**.

3 ULTIMATE ADD-ON

Analyse

The pivot sums commission by physician and month.

Your logo

Demo Clinic
8000 Marina Blvd, Suite 300
Brisbane CA 94005

Doctor Commission Statement

Dr. Emily Smith
Cardiologist

Department: Cardiology

Date	Invoice	Patient	Base	Rate %	Commission	Status
10/31/2026		Maria Garcia	$ 800.00	10.0%	$ 80.00	To Pay
				Total Due	**$ 80.00**	

ULTIMATE ADD-ON The **Commission Statement**, printed from a physician.

> The add-on has the calculation but no button on the invoice to run it, and it matches only the physician-wide and global rules: a rule set for one service is never picked. Ask for the button to be added before relying on commission.

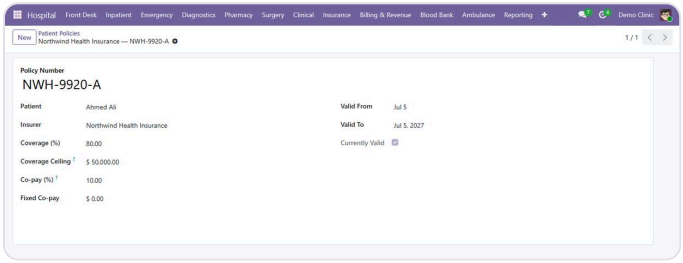

PART 24 Pre-authorisation, tariffs, packages and claim export

Ultimate rounds off the insurance side: approval before treatment, contracted prices per insurer, fixed price care packages, a co-pay on each policy and a CSV export of claims for the insurer.

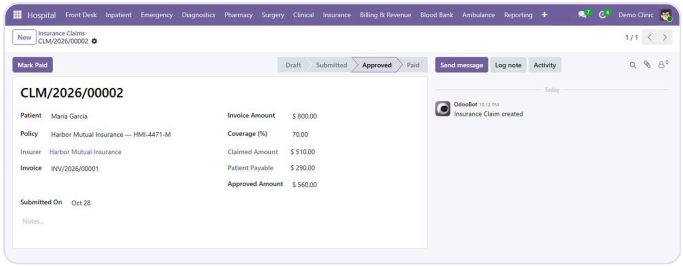

> The Ultimate screens are not on the public clinic demo. They were taken on a copy of the modules with the add-on's sample data.

Co-pay on the policy and the claim ULTIMATE ADD-ON

The policy gains **Co-pay (%)** and **Fixed Co-pay**. On a claim the covered amount (invoice times coverage, capped at the ceiling) is reduced by the fixed co-pay plus the co-pay percent of it: the insurer is claimed the rest, and the patient pays the invoice less the claim. A claim can also name its pre-authorisation and care package.

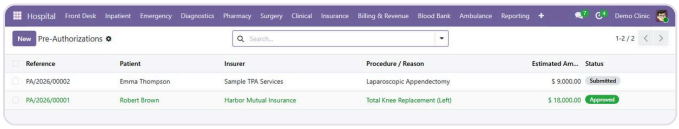

ULTIMATE ADD-ON A policy with co-pay.

ULTIMATE ADD-ON A claim with the co-pay taken off.

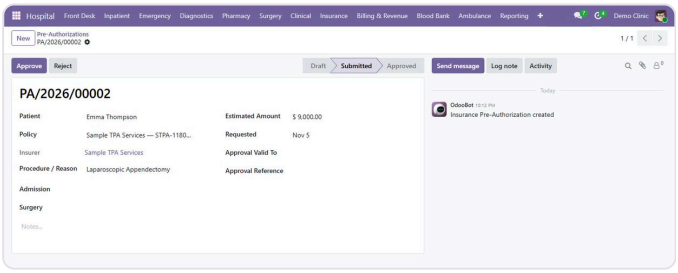

Pre-authorisations ULTIMATE ADD-ON

1 ULTIMATE ADD-ON

The list

Billing & Revenue, Pre-Authorizations: each request with patient, policy, insurer, procedure, estimated amount and status.

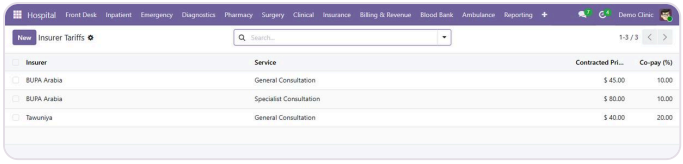

2 ULTIMATE ADD-ON

Ask, then record the answer

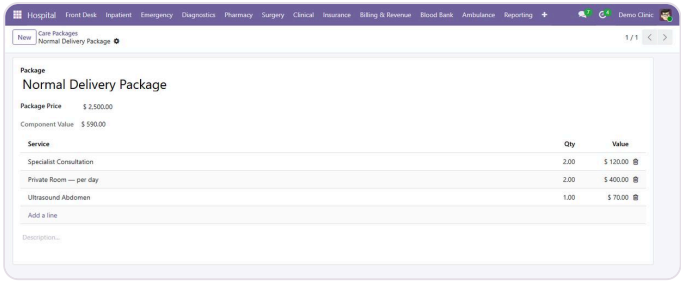

New request (PA/2026/00001): patient, policy, procedure or reason, the admission or surgery, estimated amount. **Submit**, then **Approve** with the approval reference and valid-to date, or **Reject**. Reset to Draft is there to correct it.

Insurer tariffs and care packages ULTIMATE ADD-ON

Configuration, Insurer Tariffs keeps the contracted price and co-pay per insurer per service. **Configuration, Care Packages** keeps a package price against its component services, with the total of the components beside it so the discount is visible.

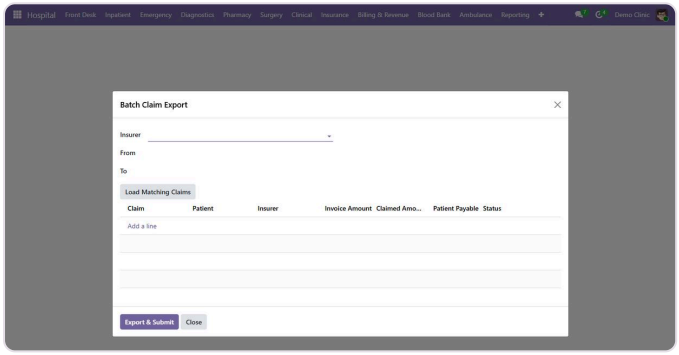

ULTIMATE ADD-ON Insurer tariffs.

ULTIMATE ADD-ON A care package and its components.

> Tariffs and packages are reference lists in this version: an invoice is not repriced from them. Price the invoice lines to match.

Batch claim export ULTIMATE ADD-ON

3 ULTIMATE ADD-ON

Export claims

Billing & Revenue, Batch Claim Export. Pick the insurer and dates and **Load Matching Claims** (draft and submitted claims created in that range). **Export & Submit** downloads a CSV with claim, patient, insurer, policy, invoice amount, claimed, co-pay, patient payable and status, and marks the draft claims Submitted.

PART 25 Set the dental practice up

The dental app is built on standard Odoo: a treatment is a service product, a dentist is an employee, a patient is a contact, and each appointment makes a sales order and an invoice. Setup is the treatment list, the dentists and three booking settings.

IN THIS PART YOU WILL LEARN

- What the app installs and why
- The three booking settings
- Treatment categories and the treatment catalogue
- Dentists, their blocked time and the appointment stages
- The dental tab on the patient's contact

TRY IT YOURSELF ON THE DEMO

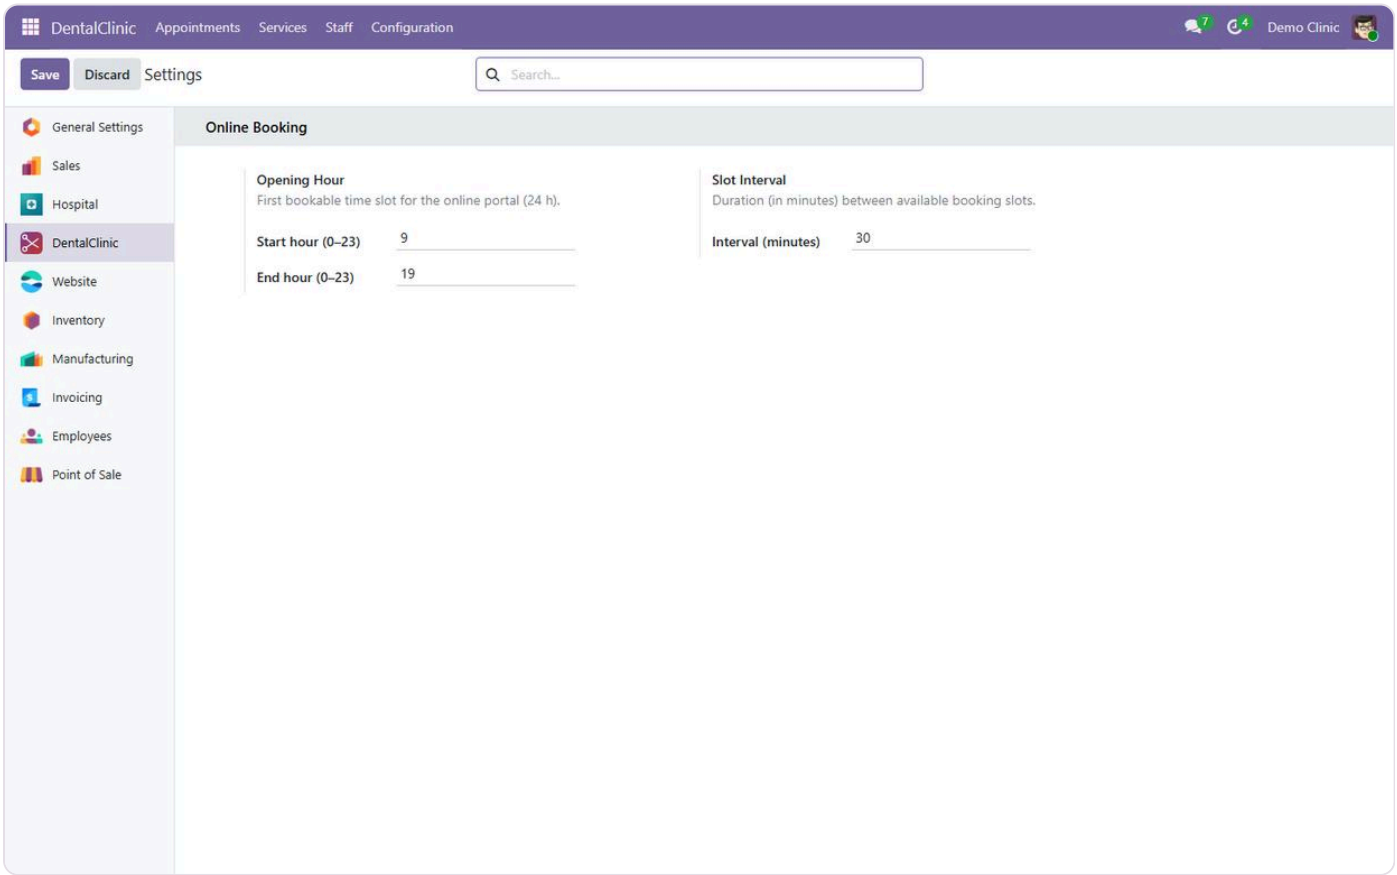

1. Open dental-app.way4tech.com and sign in with w4demo / Demo2026
2. DentalClinic, Services, Services: switch to the cards
3. Open Dental Crown and read its price, duration and dentists

Patient names, phone numbers, e-mail addresses and the practice's own details are blurred in the screenshots from the dental demo.

What it installs DENTAL

Installing **Dental Clinic Management** brings Sales (an appointment makes a sales order), Invoicing, Inventory and Manufacturing (a treatment can use up materials through a bill of materials), Employees (dentists are employees), Website and the customer Portal (online booking and My Appointments). It loads six stages, seven treatment categories and a starter list of treatments.

The booking settings DENTAL

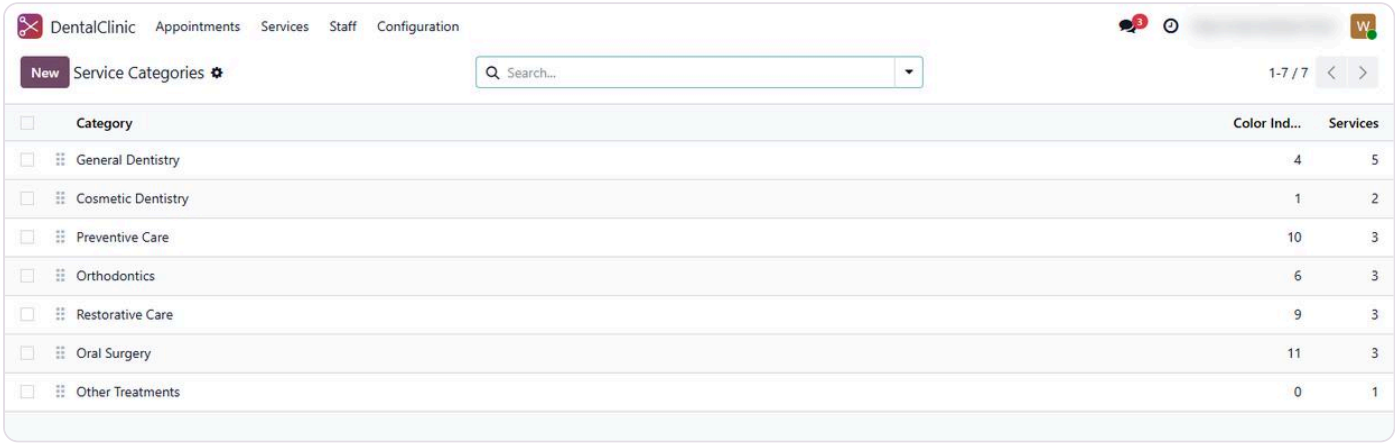

DENTAL Settings, DentalClinic. This screen was taken on a copy of the module with invented sample data, because the demo login cannot open it.

SETTING	WHAT IT DOES	DEFAULT
Booking start hour	The first time slot offered on the website booking form	9
Booking end hour	The last time slot offered	19
Slot interval (minutes)	The gap between slots	30

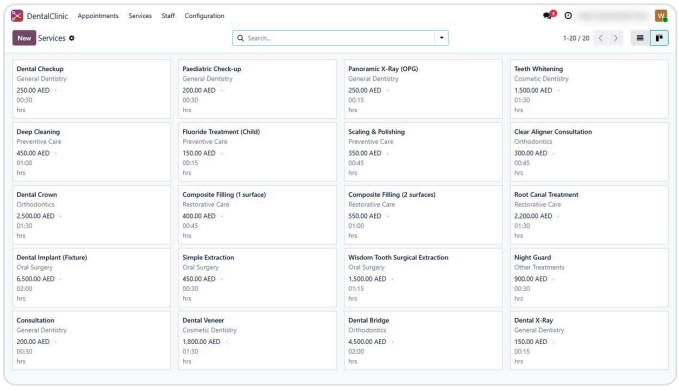

Treatment categories DENTAL

Services, Categories (also under Configuration): General Dentistry, Cosmetic, Preventive Care, Orthodontics, Restorative Care, Oral Surgery, Other. Each has a sequence, colour, description and a count of its treatments; the website lists treatments under them.

DENTAL Treatment categories with their counts.

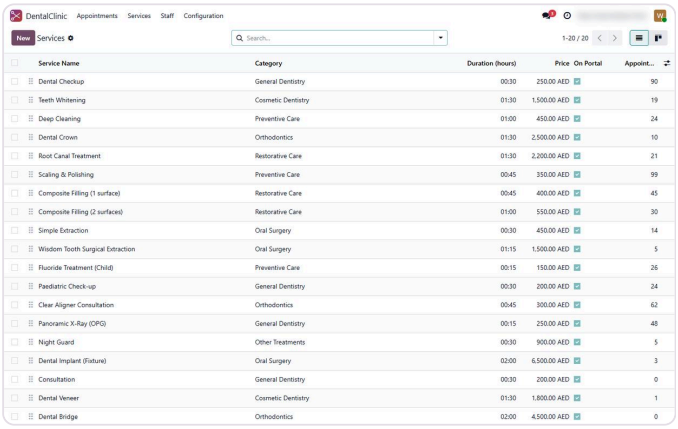

The treatment catalogue DENTAL

1 DENTAL

Services

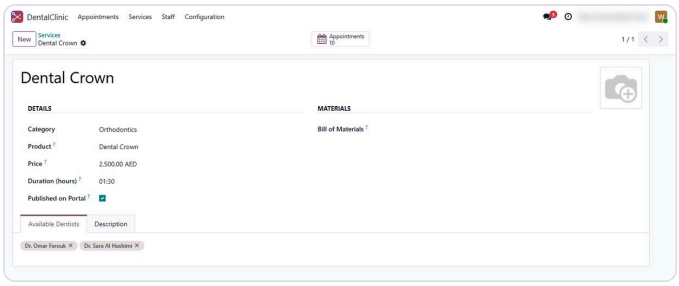

Services, Services shows each treatment with its category, price, duration and appointment count.

2 DENTAL

As a list

The same treatments as a list.

3 DENTAL

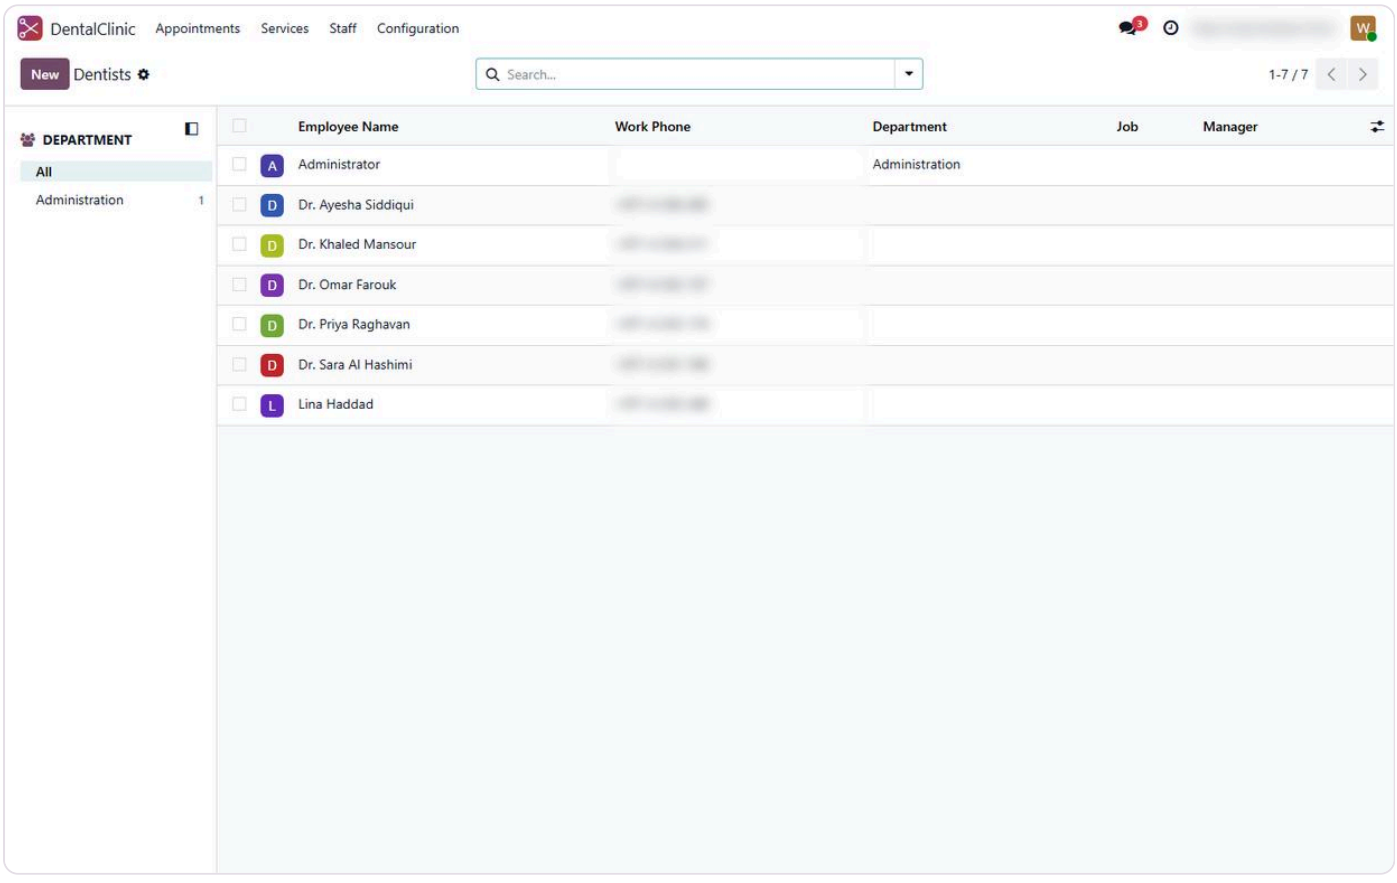

A treatment

Each has a **product** (a service product, required; its sale price is the treatment's **Price**), a category, a **duration** in hours, **Available Dentists** (empty means anyone), an optional **Bill of Materials**, **Published on Portal**, an image and a description for the website.

The duration sets how long an appointment runs: the end time is the start plus the durations of its treatments.

Dentists DENTAL

Staff, Dentists opens the Employees list grouped by department. Any employee can be the lead dentist on an appointment or the dentist on a treatment line.

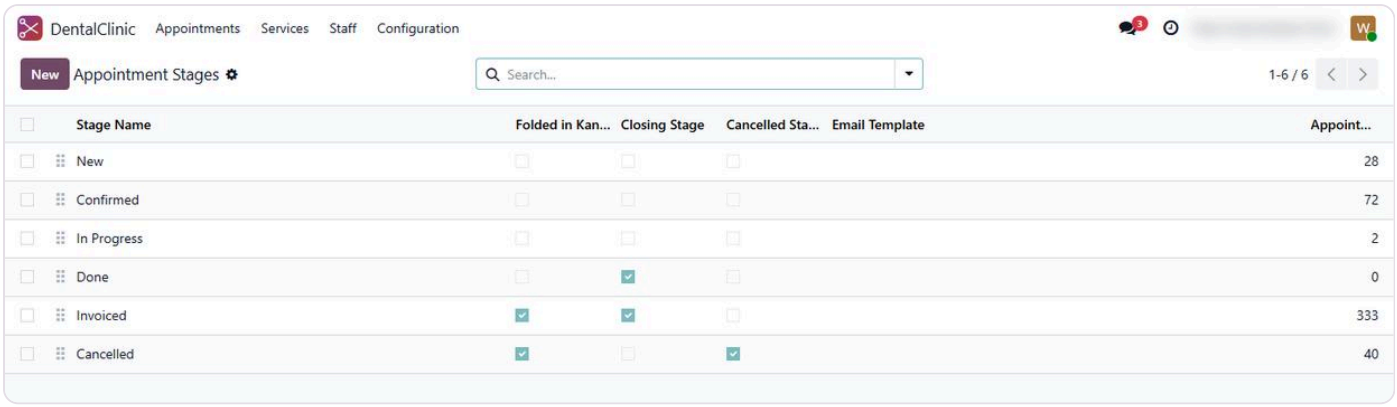

DENTAL Dentists are Odoo employees.

Blocked time DENTAL

Each dentist can have blocked time: a title, from and to, and a type (Break, Vacation, Training, Other). The website booking form will not book a dentist into it. The model has no menu of its own in this version; it is filled in by the administrator (the demo holds lunch breaks, leave and a course).

Appointment stages DENTAL

Configuration, Appointment Stages: New, Confirmed, In Progress, Done, Invoiced, Cancelled. Each stage has a sequence, a **Folded in Kanban** tick, **Closing Stage** and **Cancelled Stage** ticks, labels for the three kanban states, and an e-mail template field.

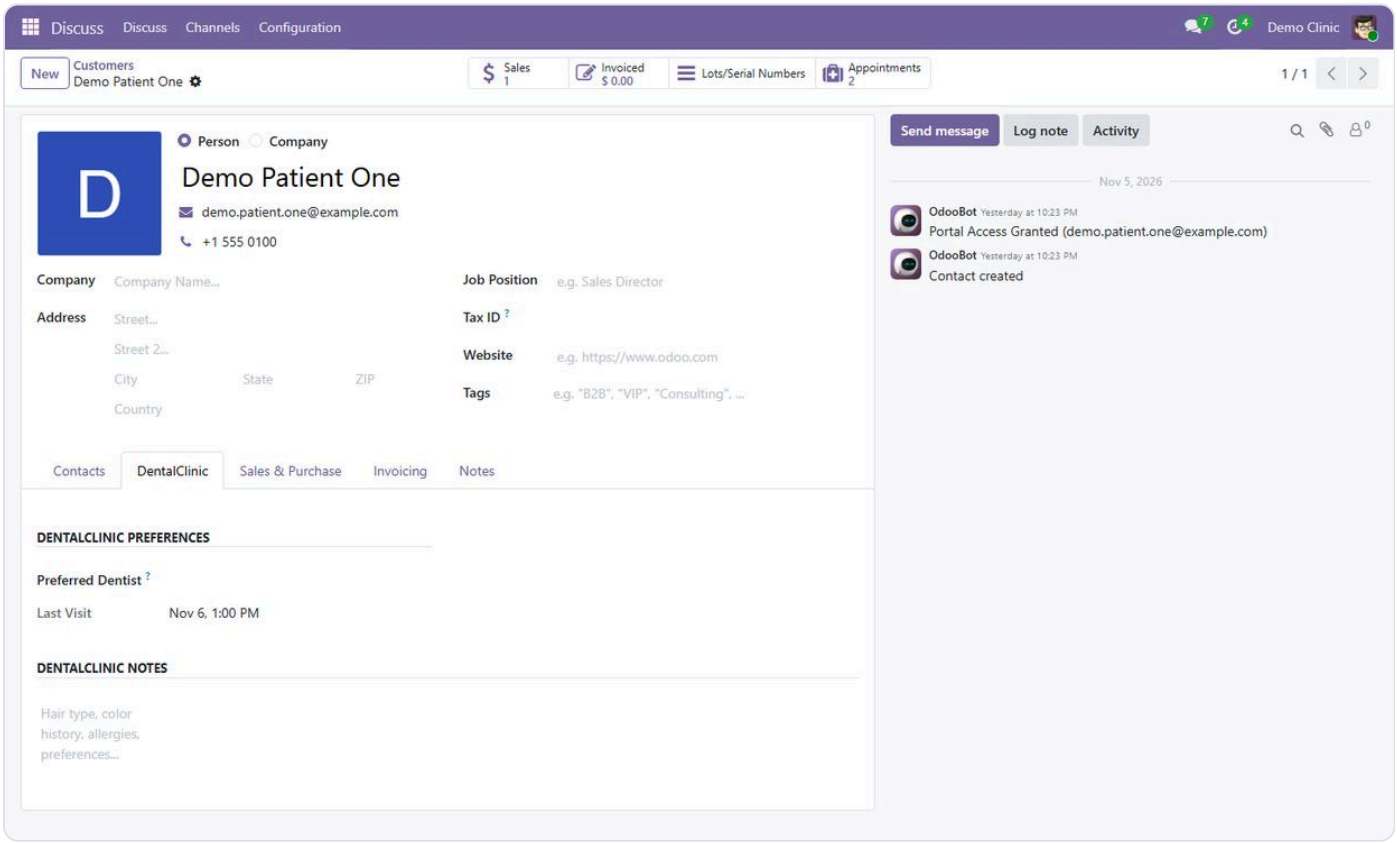

DENTAL The six stages with their appointment counts.

> The buttons on the appointment move it to these six stages by their fixed names, so rename them freely but do not delete them. The e-mail template on a stage is not sent by this version.

The patient DENTAL

A patient is a contact. The contact gains a **Dental** tab with the preferred dentist and dental notes, the last visit date, and an Appointments button.

DENTAL The dental tab on a contact. This screen was taken on a copy of the module with invented sample data, because the demo login cannot open it.

PART 26 Dental appointments

An appointment is a booking with one or more treatments. It moves through six stages, and on the way makes a sales order, uses up materials and ends as an invoice with the dentist's commission.

IN THIS PART YOU WILL LEARN

- The four ways to look at the diary
- Booking an appointment with its treatment lines
- Confirm, Start Service, Mark Done and Cancel, and what each does

TRY IT YOURSELF ON THE DEMO

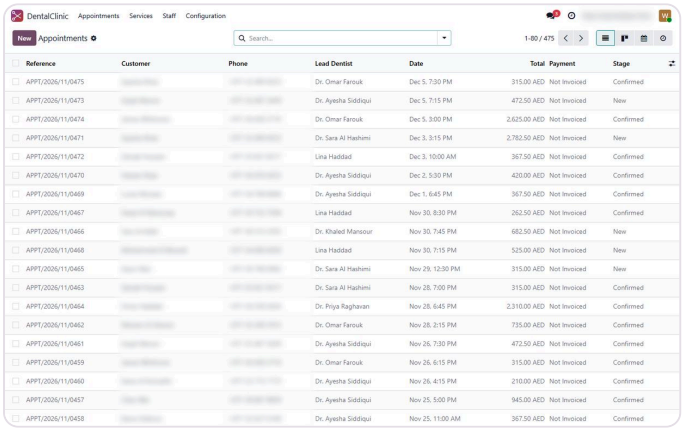

1. DentalClinic, Appointments, Kanban Board
2. Open an appointment in Confirmed and click its Sale Order button
3. Appointments, Calendar: the week by dentist

> Patient names, phone numbers, e-mail addresses and the practice's own details are blurred in the screenshots from the dental demo.

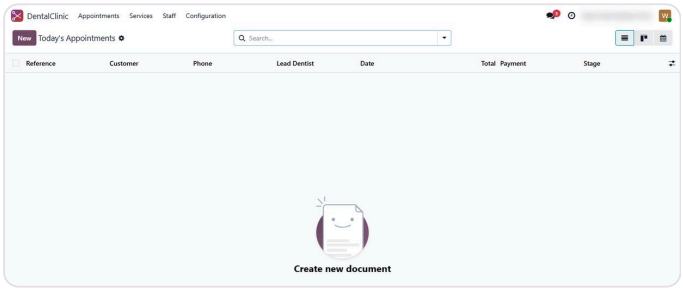

A dental appointment

1. **New** — booked
2. **Confirmed** — sales order made
3. **In Progress** — in the chair
4. **Done** — order confirmed, materials used
5. **Invoiced** — commission worked out

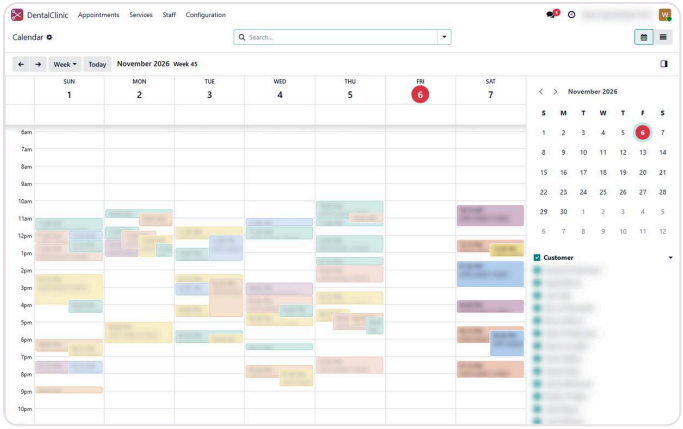

Four views of the diary DENTAL

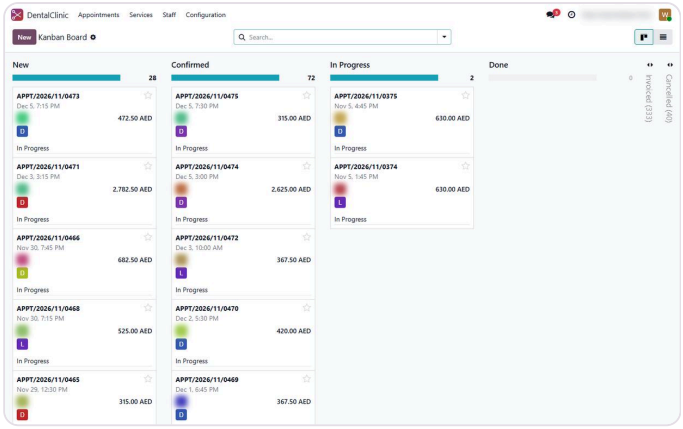

DENTAL **All Appointments**: reference, customer, phone, lead dentist, date, total, payment status and stage.

DENTAL **Today**: the same list for today only.

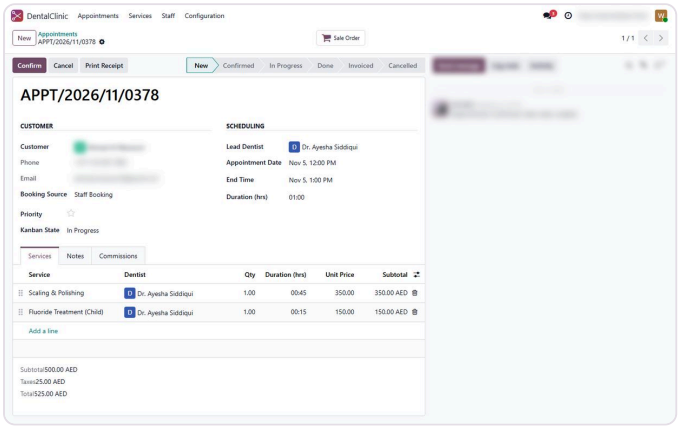

DENTAL **Calendar**: the week, coloured by dentist.

DENTAL **Kanban Board**: a card per appointment by stage; Invoiced and Cancelled are folded.

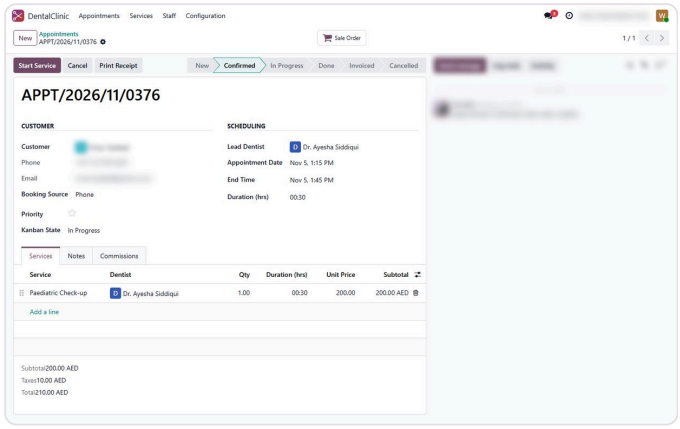

Filters include this week, each stage, high priority, booked online and archived; search by service name.

1 DENTAL

Book it

Click **New**. Pick the customer (phone and e-mail show from the contact), the appointment date, the **lead dentist**, the **booking source** (Walk-in, Phone, Online Portal, Staff Booking), priority and kanban state. On **Services** add a line per treatment: the dentist, quantity, duration, unit price (from the treatment), discount and taxes. Duration, end time, subtotal, taxes and total are worked out.

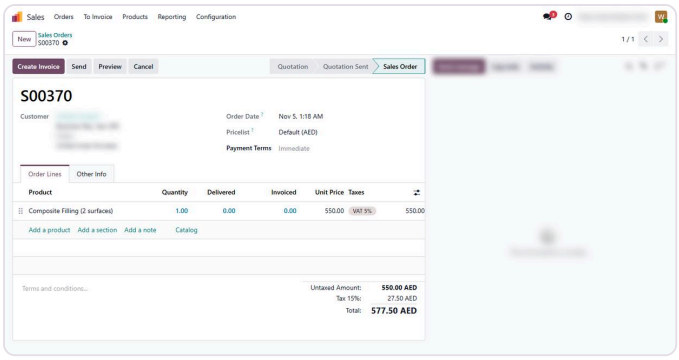

2 DENTAL

Confirm

Confirm moves it to Confirmed and creates a **sales order** from the treatment lines, linked from the Sale Order button.

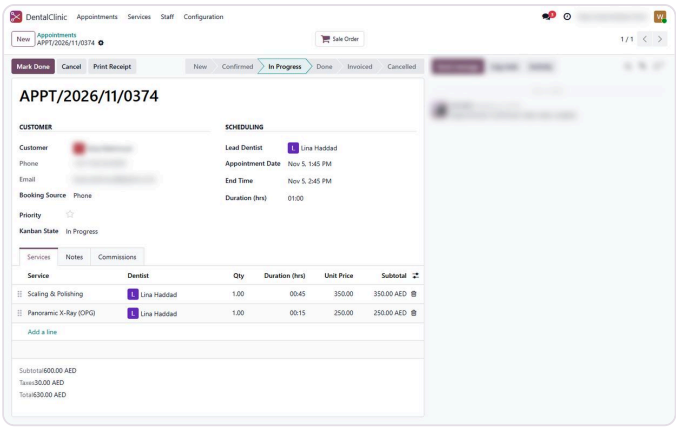

Only lines whose treatment has a product go onto the order.

3 DENTAL

The sales order

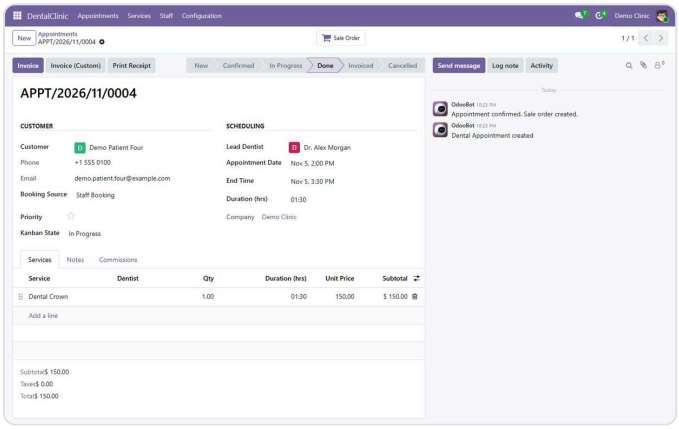

A normal Odoo quotation for the customer, with the appointment as its origin.

4 DENTAL

Start Service

When the patient sits down, **Start Service** moves it to In Progress.

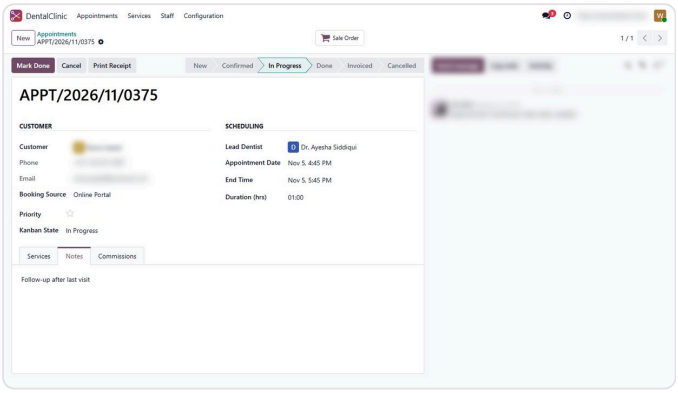

5 DENTAL

Mark Done

Mark Done moves it to Done, confirms the sales order and, for every treatment with a bill of materials, moves the materials out of the main warehouse stock to production.

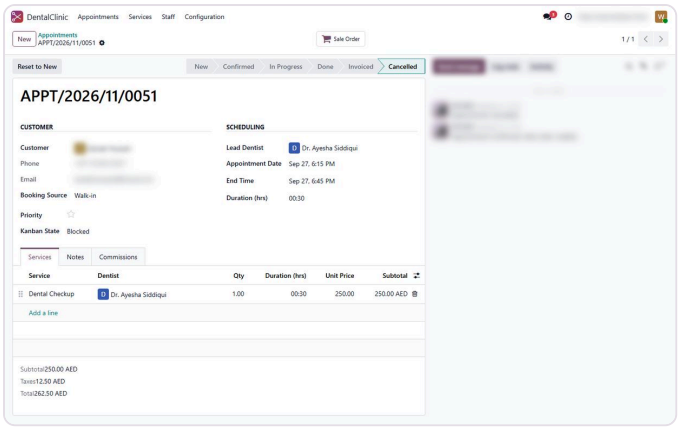

A material move is only finished when the stock is there to reserve. This screen was taken on a copy of the module with invented sample data, because the demo login cannot open it.

6 DENTAL

Notes

The **Notes** tab holds special requests and clinical notes.

7 DENTAL

Cancel

Cancel moves it to Cancelled and cancels a sales order that is still a quotation. **Reset to New** brings it back.

> Appointments typed in at the front desk are not checked against the dentist's other bookings or blocked time; only the website form checks. Use the calendar when booking by phone.

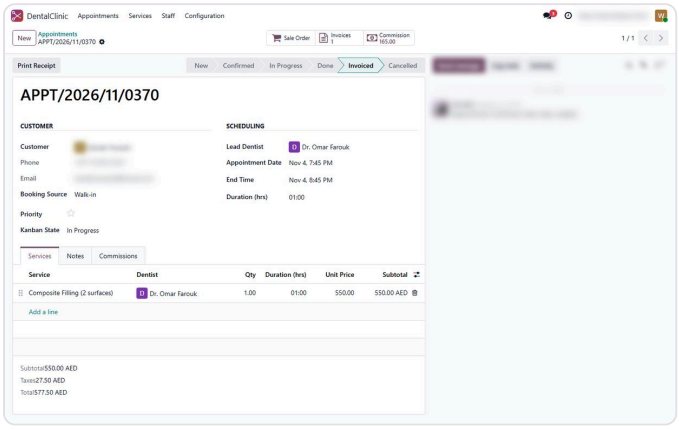

PART 27 Invoicing a dental appointment

Two buttons turn the appointment into an invoice: Invoice does it straight from the treatment lines, Invoice (Custom) lets you change the date, payment terms and lines first.

IN THIS PART YOU WILL LEARN

- Invoice and Invoice (Custom), and when each uses the sales order
- The payment status on the appointment
- The appointment sheet and the thermal receipt

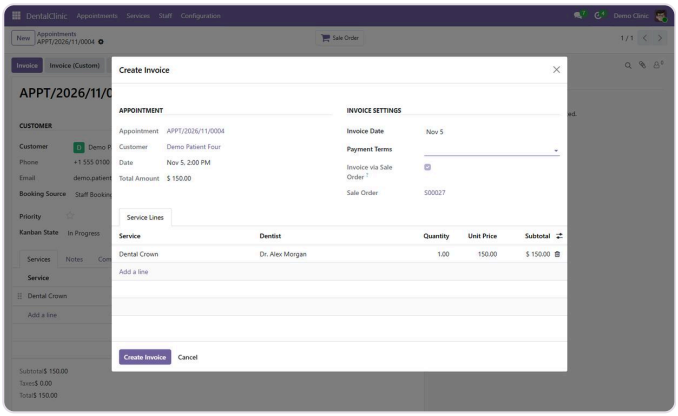

> Patient names, phone numbers, e-mail addresses and the practice's own details are blurred in the screenshots from the dental demo.

1 DENTAL

Invoice

Invoice creates a draft customer invoice from the treatment lines with today's date, opens it, moves the appointment to **Invoiced** and works out the commission lines (Part 29). If a posted invoice already exists it opens that one instead.

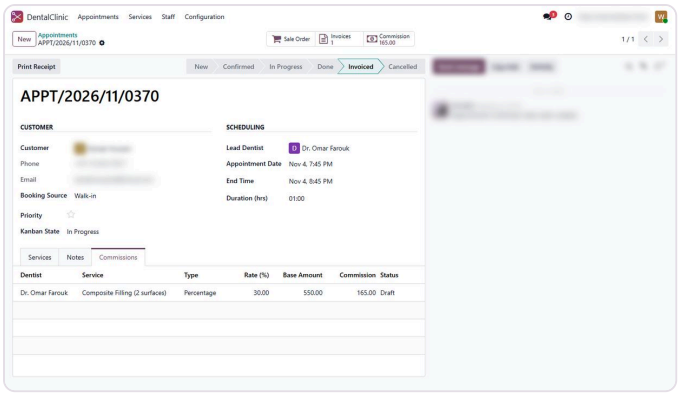

2 DENTAL

Invoice (Custom)

Invoice (Custom) opens a wizard with the invoice date, payment terms and the lines (treatment, dentist, quantity, price, discount, taxes) to adjust. **Create Invoice** raises it, moves the appointment to Invoiced and works out commission. This screen was taken on a copy of the module with invented sample data, because the demo login cannot open it.

When the sales order is already confirmed (after Mark Done), the wizard invoices from the sales order and your changes to the lines, date and terms are not used.

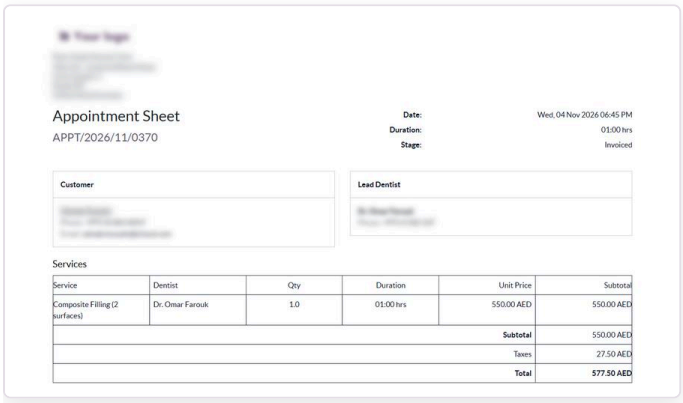

3 DENTAL

Payment status and commission

The **Payment** column reads the invoices: Not Invoiced, Unpaid, Partial or Paid. The **Commissions** tab and button show the lines worked out for the dentists.

> **Invoice** bills the treatment lines directly, not through the sales order, so the order still shows as to invoice in Sales. Invoice the appointment here, not again from Sales.

The printouts DENTAL

DENTAL **Appointment Sheet**, from the Print menu: the customer, dentist, date, the treatment table and the totals.

DENTAL **Thermal Receipt**, from the Print Receipt button: an 80 mm receipt with the treatments, totals and payment.

PART 28 Online booking and the patient portal

The app adds two pages to your Odoo website, Our Services and Book Appointment, and an appointments page in the customer portal.

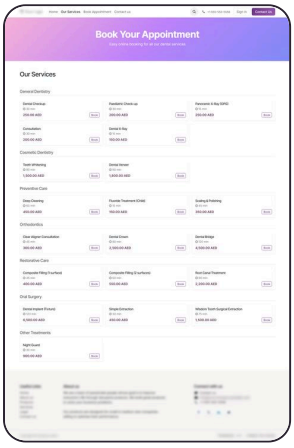

IN THIS PART YOU WILL LEARN

- The services page and the booking form
- What happens when a patient books
- My Appointments in the portal

TRY IT YOURSELF ON THE DEMO

1. Open dental-app.way4tech.com/dental while signed out
2. Click Book on a treatment and look at the booking form
3. Do not submit it: the demo is shared

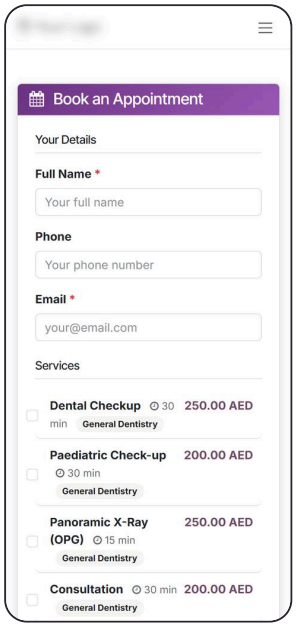

Patient names, phone numbers, e-mail addresses and the practice's own details are blurred in the screenshots from the dental demo.

1 DENTAL

Our Services

/dental lists every published treatment by category with its duration, price and a **Book** button.

2 DENTAL

Book Appointment

/dental/book: full name, phone, e-mail, one or more treatments, a dentist (optional), the date, a time slot from the settings, and special requests.

The dentist list shows every active employee, not only dentists. Keep other staff in a separate company or archive them from this list.

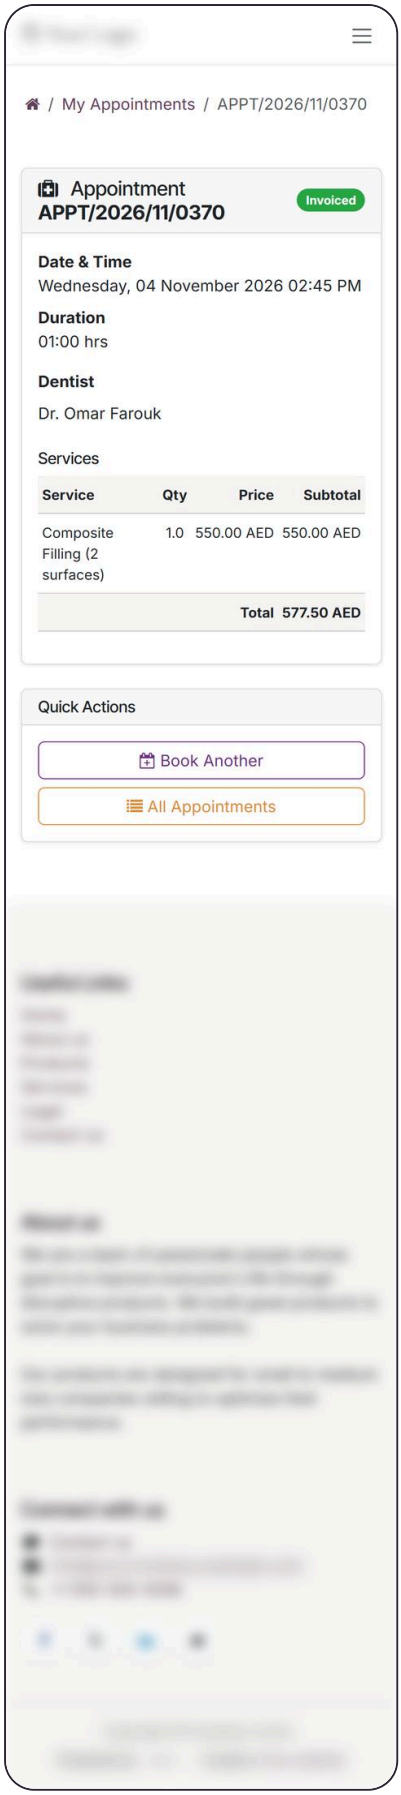

When the patient submits DENTAL

1. Name, e-mail, date and time and at least one treatment are required.
2. The contact is found by e-mail, or created.
3. If a dentist was chosen, the time is checked against that dentist's appointments that are not cancelled and against their blocked time; a clash sends the patient back with a message.
4. The appointment is created in New with source Online Portal, at each treatment's price, and the booking confirmation e-mail is sent.

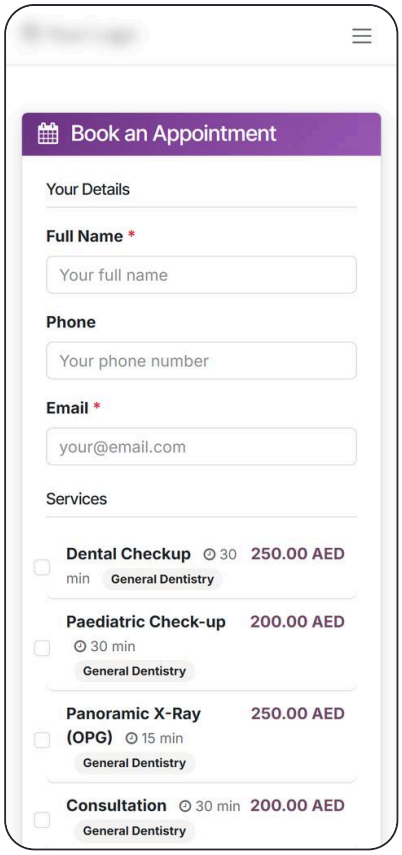

The time picked on the form is stored as given, without converting from the visitor's time zone. Check booked times on the calendar when the practice is not on UTC.

My Appointments DENTAL

A patient with a portal login sees **My Appointments** on their portal home, sortable by date, reference, stage and total. Each opens a page with the date and time, duration, dentist, the treatments and the total. The same page opens from a link with an access token.

An appointment in the portal, on a phone.

The booking form on a phone.

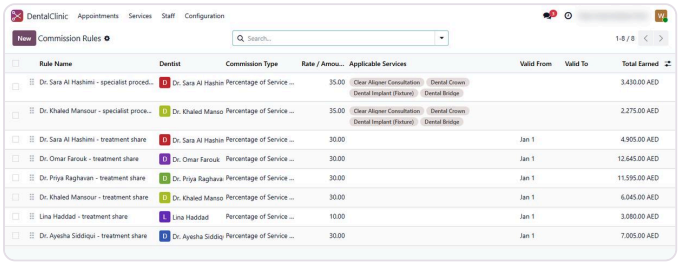

PART 29 Commission and sales targets

Dentists are paid a share of what they treat. Rules set the share, commission lines are made when an appointment is invoiced, and targets track each dentist's sales for a period with a bonus.

IN THIS PART YOU WILL LEARN

- Commission rules and the order they are matched in
- Commission lines from draft to paid
- Sales targets, achievement and bonus

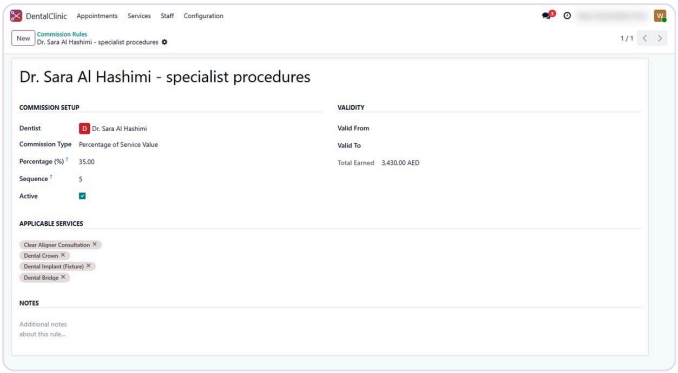

> Patient names, phone numbers, e-mail addresses and the practice's own details are blurred in the screenshots from the dental demo.

1 DENTAL

Commission rules

Staff, Commission Rules: one dentist per rule, a type (**Percentage of Service Value** or **Fixed Amount per Service**), the rate, the treatments it applies to (empty for all), a sequence and valid from and to dates. Each rule shows the total earned on it.

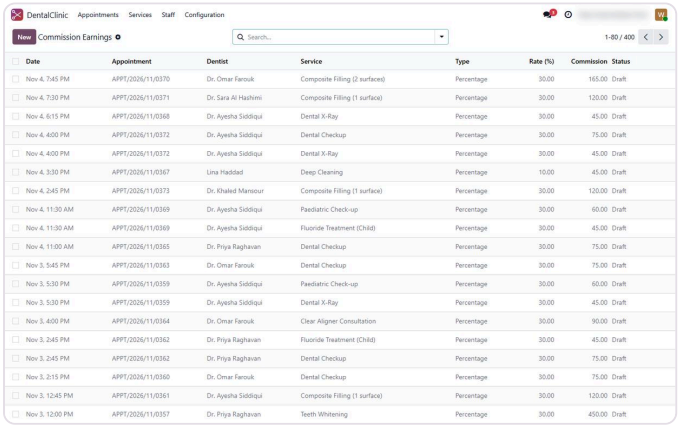

2 DENTAL

Which rule applies

When an appointment is invoiced, each treatment line takes its dentist (or the lead dentist) and the first active rule for that dentist, lowest sequence first, that covers the treatment. Put the specialist rule above the general one.

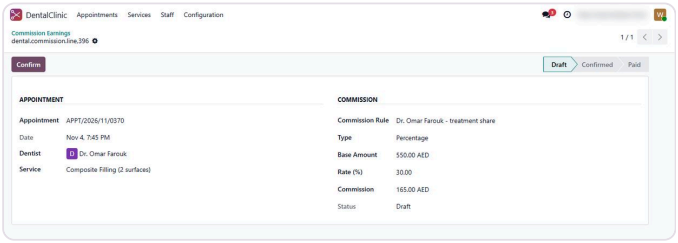

Valid From and Valid To are not checked when matching. Archive a rule that has ended. A fixed amount is per line, whatever the quantity.

3 DENTAL

Commission earnings

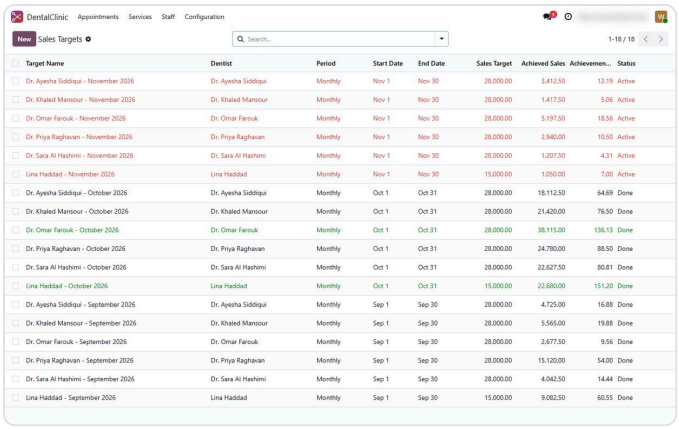

Staff, Commission Earnings lists every line: date, appointment, dentist, treatment, type, rate, base and commission. Lines start as Draft; re-invoicing replaces the draft lines.

4 DENTAL

Confirm and pay

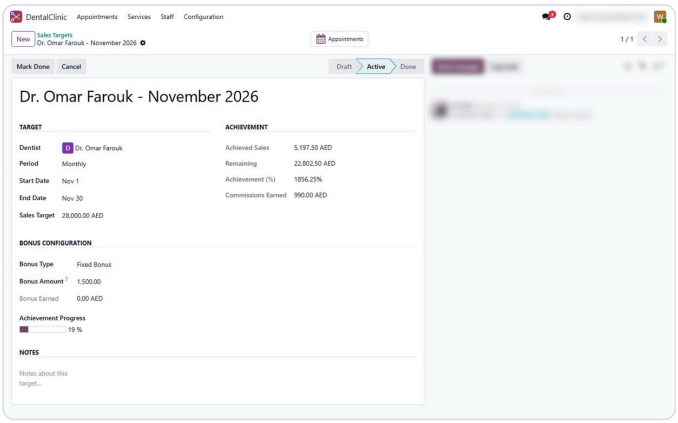

Confirm, then **Mark as Paid**. **Reset to Draft** to correct.

5 DENTAL

Sales targets

Staff, Sales Targets: a target per dentist for a month, quarter, year or custom period with the target amount.

6 DENTAL

Achievement and bonus

Achieved Sales is the total of that dentist's Invoiced appointments in the period; then the remaining amount, the commission earned (confirmed and paid lines) and the **bonus**: a percentage of sales above target, or a fixed amount once the target is reached. **Activate**, **Mark Done**, **Cancel**, **Reset to Draft**; the Appointments button lists what counted.

On the form the Achievement (%) field shows a figure a hundred times too large (18.56 shows as 1856.25%). The list and the progress bar show it right.

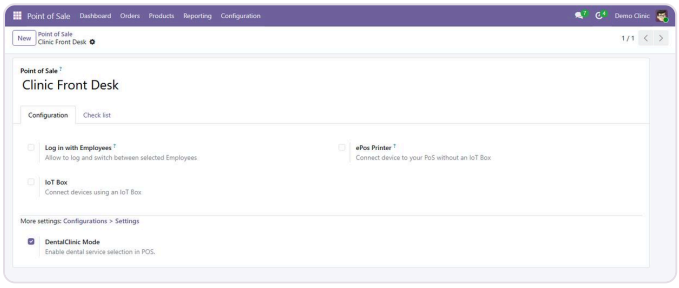

PART 30 The dental screen in Point of Sale

With POS Dental Clinic the reception desk runs the day from the till: today's appointments, walk-ins, new bookings and payment, with the appointment invoiced and closed the moment the patient pays.

IN THIS PART YOU WILL LEARN

- Turning the dental screen on for a till
- The day's board, the filters and the customer history
- Walk-ins and bookings from the till
- Loading an appointment onto the order and taking payment

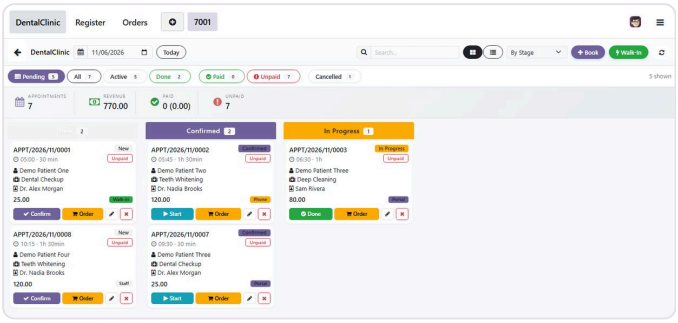

> The public dental demo has no till set up, so these screens were taken on a copy of the modules with invented sample data.

1 DENTAL POS ADD-ON

Switch it on

In **Point of Sale, Configuration, Point of Sale**, open the till and tick **DentalClinic Mode**. The treatments' products are made available in the till automatically.

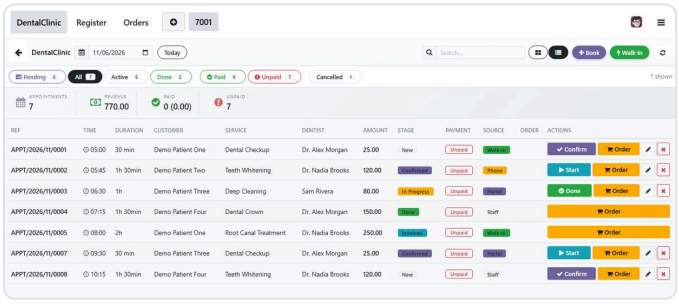

2 DENTAL POS ADD-ON

The dental screen

A **DentalClinic** button appears in the till's top bar. It opens the day's appointments with a date picker, search, a board or list, grouping by stage, dentist, service, time, source or payment, and the Book and Walk-In buttons.

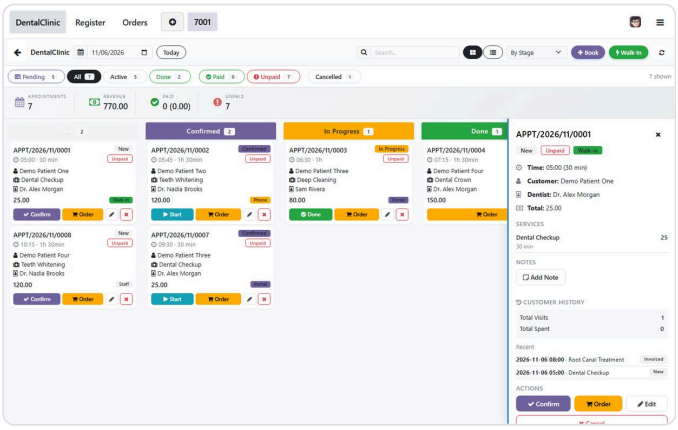

After every payment the till returns to this screen.

3 DENTAL POS ADD-ON

Filters and totals

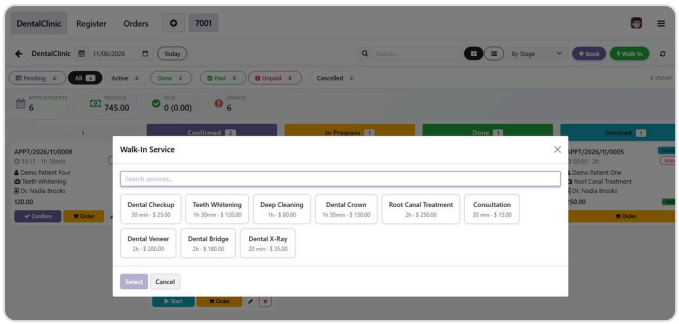

Filters: Pending, All, Active, Done, Paid, Unpaid, Cancelled, each with a count. The strip shows the day's appointments, revenue, paid and unpaid. Overdue appointments are marked.

4 DENTAL POS ADD-ON

An appointment and the customer history

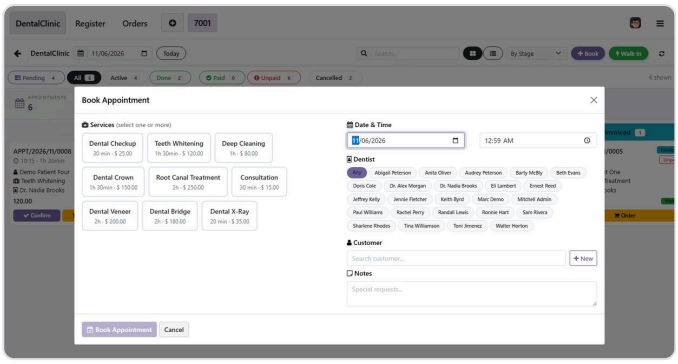

Click an appointment for its details, the customer's total visits, total spent, preferred dentist and recent history, **Add Note**, and the actions: Confirm, Start, Done, Order, Edit, Cancel.

5 DENTAL POS ADD-ON

Walk-in

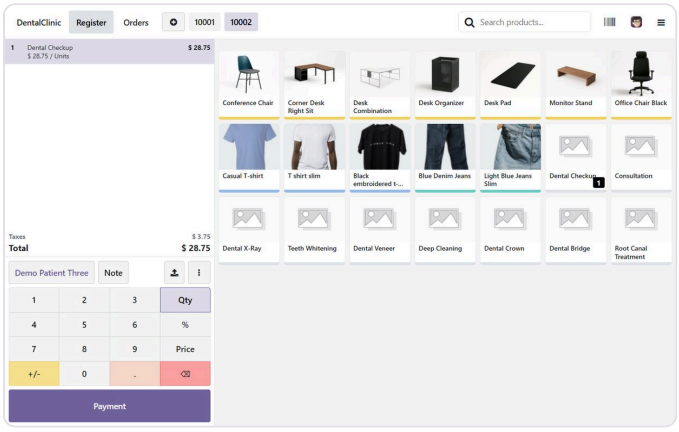

Walk-In picks a treatment from a searchable grid and starts an appointment for now.

6 DENTAL POS ADD-ON

Book

Book takes services, date and time, a dentist (with today's count beside each), the customer (search or **New** for a quick customer with name, phone and e-mail) and notes.

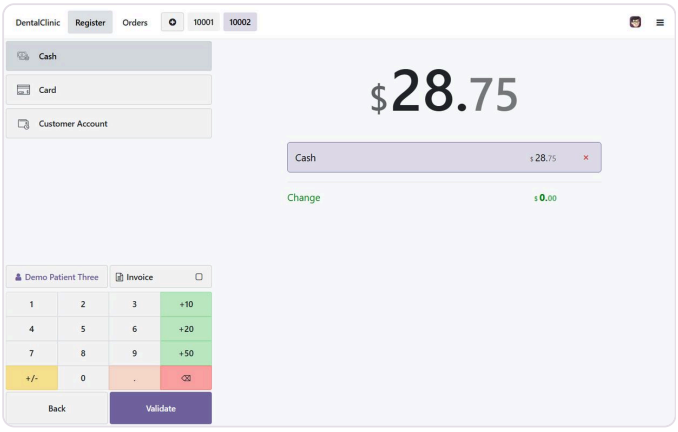

7 DENTAL POS ADD-ON

Load it onto the order

Order puts the appointment's treatments on a new till order for its customer, at the appointment prices.

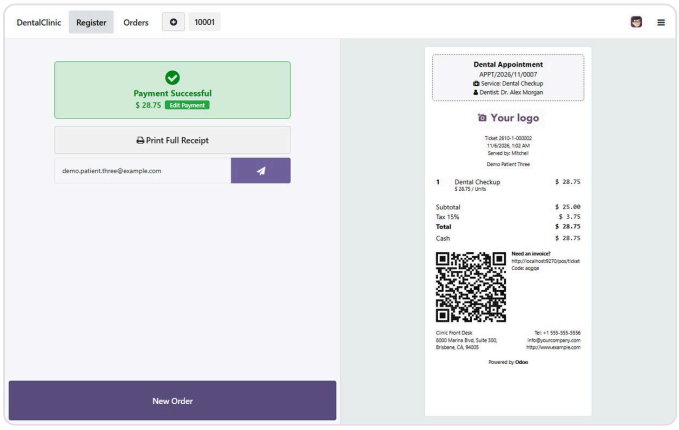

The till opens a new order tab for it but keeps showing the previous one; click the new order number at the top to see the lines.

8 DENTAL POS ADD-ON

Take payment

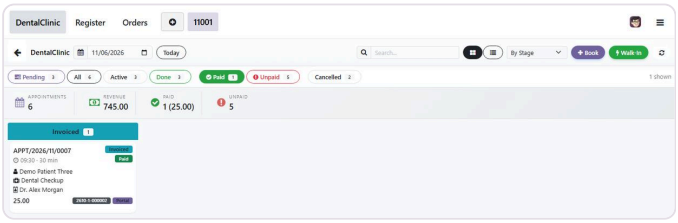

Payment, choose the method and **Validate**, as with any till sale.

9 DENTAL POS ADD-ON

The receipt

The receipt starts with a Dental Appointment block: the reference, the treatment and the dentist.

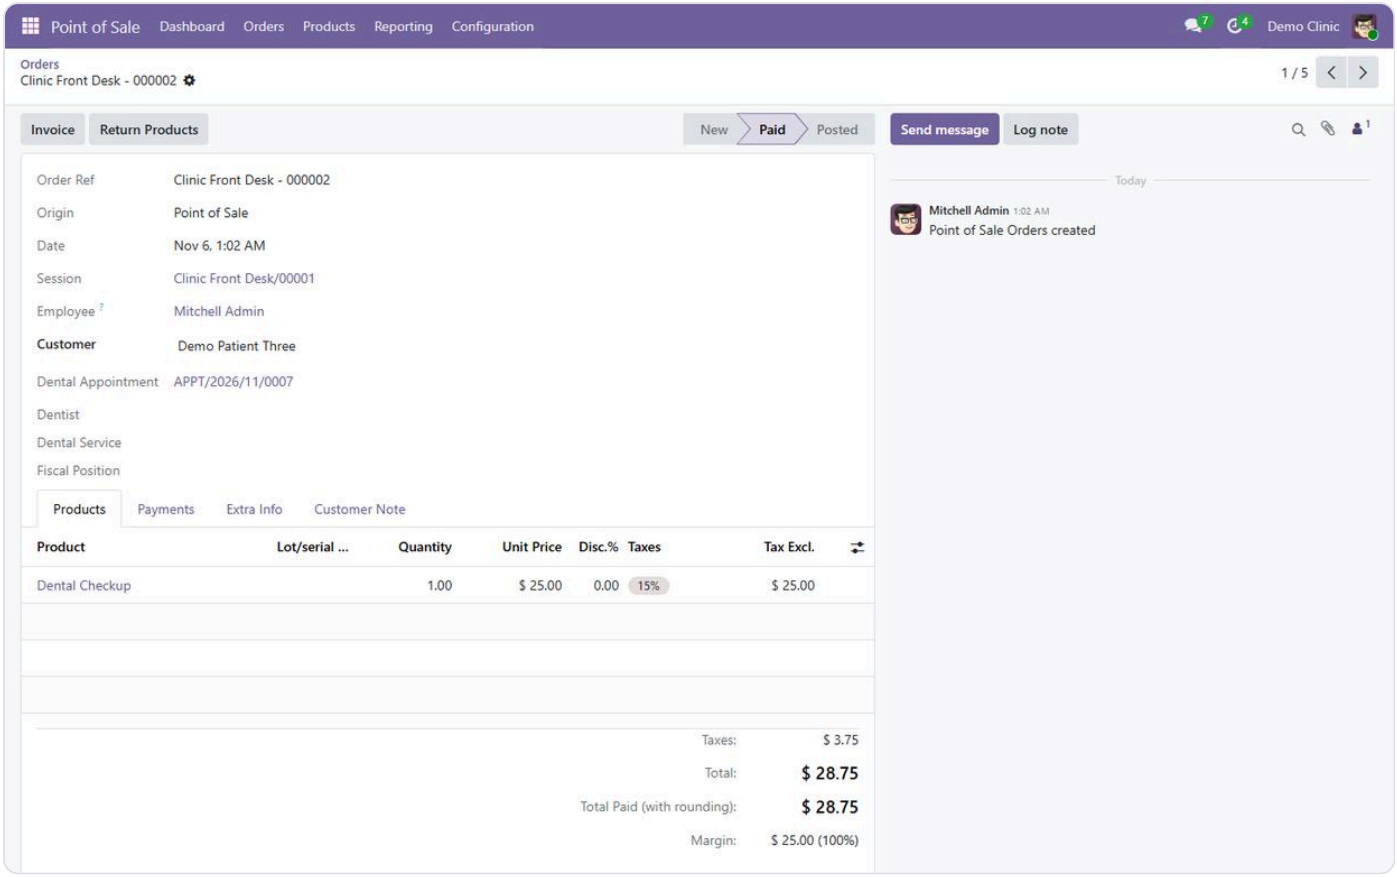

10 DENTAL POS ADD-ON

The appointment is closed

After payment the appointment is moved to Done, an invoice is made and posted with a payment registered against it, and it ends **Invoiced** and **Paid** on the dental screen.

A refund of the till order puts the appointment back to Confirmed; the invoice and its payment stay as they are.

DENTAL POS ADD-ON A paid till order in the back office: it links the dental appointment. The Dentist and Dental Service fields stay empty in this version.

> Paying at the till records the sale in the POS session and also posts an invoice with its own registered payment for the same appointment. Check with your accountant how this lands in your books before going live; the takings may appear twice.

PART 31 Every report and printout

Everything that can be printed or analysed, on one page, with where to find it.

Printout or report	From	Edition
Prescription	Appointment, Print	HOSPITAL CORE
Patient Card	Patient, Print	HOSPITAL CORE
Discharge Summary	Admission, Print	HOSPITAL CORE
Front desk dashboard	Front Desk, Dashboard	HOSPITAL CORE
Lab Report	Lab order, Print	ENTERPRISE ADD-ON
Appointments, Admissions, Lab and Radiology, Claims, Surgeries analysis	Reporting	ENTERPRISE ADD-ON
Commission Statement	Physician, Print	ULTIMATE ADD-ON
Cash-Up	Cashier session, Print	ULTIMATE ADD-ON
Doctor commission pivot	Billing and Revenue, Doctor Commissions	ULTIMATE ADD-ON
Claim batch CSV	Billing and Revenue, Batch Claim Export	ULTIMATE ADD-ON
Appointment Sheet	Dental appointment, Print	DENTAL
Thermal Receipt (80 mm)	Dental appointment, Print Receipt	DENTAL
Till receipt with treatments	Point of Sale, after payment	DENTAL POS ADD-ON

Scheduled jobs and e-mails

What	When	Edition
Mark missed appointments as no-show	Once a day	HOSPITAL CORE
Follow-up to-do for the doctor	When a visit with a follow-up date is completed	HOSPITAL CORE
Appointment Confirmation e-mail template	Sent by hand from an appointment	HOSPITAL CORE
Booking confirmation e-mail	When a patient books on the website	DENTAL

PART 32 A fifteen minute walk-through

With the two demos open and fifteen minutes, this is the path that shows both products. It is also a good order to show a practice.

Clinic demo: clinic.way4tech.com HOSPITAL CORE

#	DO THIS	AND NOTICE
1	Hospital, Front Desk, Dashboard	*The day at a glance: OPD flow, beds, in-house patients, revenue.*
2	Front Desk, Patients, open John Carter	*MRN, the penicillin allergy, history, and the Appointments and Admissions buttons.*
3	Front Desk, OPD Queue	*Today's queue with tokens per doctor.*
4	Open APP/2026/00001 and walk the tabs	*Vitals with BMI, the diagnosis, two medicines and a CBC request.*
5	Print the Prescription from that visit	*The printed prescription the patient takes away.*
6	Inpatient, Bed Board	*Every bed by status, with the patient in each.*
7	Inpatient, Admissions, open ADM/2026/00001	*The bed, the services and the estimated total.*
8	Open ADM/2026/00003, Discharge tab, then print	*The discharge summary.*

#	DO THIS	AND NOTICE
9	DentalClinic, Appointments, Kanban Board	*The day by stage, invoiced and cancelled folded away.*
10	Open a Confirmed appointment, then its Sale Order	*Treatments with dentist, duration and price, and the order made on confirm.*
11	Open an Invoiced one, Commissions tab	*The dentist's share worked out on invoicing.*
12	Staff, Sales Targets, open an active one	*Achieved sales, remaining, commission and bonus.*
13	Open /dental signed out	*The public services page and the booking form.*

PART 33 Questions people ask

The questions practices ask most, answered from what the modules do.

QUESTION	ANSWER
Do these need Odoo Enterprise?	No. All five run on Odoo 19 Community and also install on Enterprise. Enterprise and Ultimate are names of the hospital add-ons.
Can patients book online?	With the dental app, yes: a services page, a booking form and My Appointments in the portal. The hospital suite has no online booking; the front desk books.
Are reminders sent before an appointment?	Not automatically in this version. The hospital has a confirmation template to send by hand; the dental app e-mails a confirmation on website bookings.
Does it stop double booking a doctor?	The dental website form checks the dentist's appointments and blocked time. Bookings typed in by staff, in either product, are not checked.
Can one database run several branches?	Yes. Hospital records carry a company and a company rule, and the dental appointment has a company rule too.
Does the pharmacy take stock out?	Yes, with Ultimate: dispensing moves the medicines out of the main warehouse with the batch. In the core, a prescription is a record only.
Is there a tooth chart or X-ray archive?	No. The dental app has no odontogram, treatment plan across visits or imaging; attach files to the appointment through the chatter.
Can insurers be claimed?	With the hospital Enterprise add-on: policies, claims and approvals; Ultimate adds pre-authorisation, co-pay and a CSV export. The dental app has no insurance side.
Is patient data protected?	Inside Odoo, by roles and record rules: a dentist sees only their own appointments. Hosting, backups and health data law are for you and your host.

PART 34 The menu map

Every menu in the five modules, on one page.

Hospital: Front Desk

Dashboard HOSPITAL CORE	The day: OPD flow, beds, patients, revenue
Appointments HOSPITAL CORE	Every visit: calendar, list, form
OPD Queue HOSPITAL CORE	Today's confirmed, waiting and in consultation
Patients HOSPITAL CORE	The patient records with MRN

Hospital: Inpatient

Admissions HOSPITAL CORE	Stays, services, discharge, bill
Bed Board HOSPITAL CORE	Every bed by status
ICU Charts ULTIMATE ADD-ON	Observations per admission

Hospital: clinical add-ons

Emergency / Triage ULTIMATE ADD-ON	Arrivals, triage level, outcome
Lab & Radiology Orders ENTERPRISE ADD-ON	Orders, samples, results, flags
Dispensing ULTIMATE ADD-ON	Medicines out of stock with batch
Medicines ULTIMATE ADD-ON	Products marked as medicines
Vaccinations ULTIMATE ADD-ON	Doses given and next due
Surgeries ENTERPRISE ADD-ON	Theatre bookings, team, notes

Want this for your practice?

We set it up with your departments, doctors or dentists, wards and beds or chairs, your price list and taxes, load your patients, connect your accounts, and train the front desk, the clinicians and the billing team. The same modules run a single clinic, a dental practice or a hospital with several branches.
