COMPLETE GUIDE · THE TRADE, SETUP AND EVERY SCREEN

Printing Press Management for Odoo 19

Estimating with the imposition worked out for you, job tickets from prepress to despatch, signed proofs, spoilage, reprints and the real cost of every job. Every screen and every step, shown on a live demo.

START

About this guide

A print job is priced by working out how many pieces fit on a press sheet, how many sheets that takes once waste is allowed for, and what the paper, plates, ink, press time and finishing cost. This guide starts there and then walks every screen of the module, one step at a time. You do not need to have used Odoo before.

Who it is for

The owner or manager setting the shop up, the estimator pricing work, the account handler chasing proofs, and the press and finishing operators booking work off on the floor.

How to read it

Front to back the first time. Each part opens with what you will learn and a short thing to try on the live demo, then walks every field and every button on the screen, with a numbered picture for each step.

The live demo

Riverside Press Ltd, a worked example print shop with three presses, seven paper stocks, eight finishing operations, twenty estimates and thirteen job tickets at every stage.

HOW IT WORKS

The demo shop

Address	**printing-demo.way4tech.com**
Sign in	**w4demo / Demo2026**
Shop	Riverside Press Ltd, one site, prices in pounds sterling
Presses	a five colour litho press, a two colour litho press and a digital toner press
Runs on	Odoo 19, Community edition, with Inventory and Invoicing

The demo is shared and resets from time to time, so anything you change may be put back or seen by the next person. The customers on it are invented. Treat it as a shop to walk around, not your own books.

What is in the guide

PART 1	How a print job is priced	PART 2	The shop at a glance
PART 3	Open the demo and sign in	PART 4	Set the shop up from zero
PART 5	Print sites	PART 6	Presses
PART 7	Paper stock	PART 8	Finishing operations
PART 9	Spoilage reasons	PART 10	Writing an estimate: the specification
PART 11	Finishing, cost and price	PART 12	Sending, winning and losing an estimate
PART 13	The job ticket	PART 14	Proofs and the customer's approval
PART 15	On the press and off it	PART 16	Finishing on the floor
PART 17	Despatch, tolerance and the invoice	PART 18	Spoilage and reprints
PART 19	The press board	PART 20	Reporting
PART 21	Printed documents and emails	PART 22	The daily jobs
PART 23	A fifteen minute walk-through	PART 24	The menu map

PART 1 How a print job is priced

Before the screens, the arithmetic. Every figure the module shows you comes out of the same handful of steps an estimator does on paper. Once you know them, every estimate and every job ticket reads like a worksheet.

IN THIS PART YOU WILL LEARN

- Imposition: how many finished pieces fit on one press sheet
- Forms, net sheets, running spoilage and make-ready waste
- Plates, passes, perfecting presses and press hours
- Why the grain of the paper matters on anything folded
- The over and under tolerance on a press run

Imposition: pieces per sheet

Presses do not print one flyer at a time. They print a big sheet with several pieces laid out on it, and the guillotine cuts them apart afterwards. How many fit is the **up per sheet**. The module tries the piece both ways round on the sheet and keeps whichever layout fits more. Before it counts, it takes the **gripper** off the sheet (the edge the press holds, which cannot carry print) and adds the **bleed and gutter** to every piece, because the guillotine needs somewhere to cut and ink needs somewhere to run off to.

HOW IT WORKS

An A5 flyer on an SRA2 sheet

Sheet	640 × 450 mm, less a 12 mm gripper
Piece	148 × 210 mm, plus 6 mm bleed and gutter
= Up per sheet	**8 up, 4 across by 2 down**

Forms, net sheets and gross sheets

A flat job (a flyer, a poster, a card) is one **form**: one layout on the sheet. A bound job (a brochure, a booklet) needs one form for every group of pages that fits on a sheet, so a 24 page booklet on an 8 up sheet is two forms. The **net sheets** are what the job would take if nothing went wrong. On top go two kinds of waste.

WASTE	WHAT IT IS	HOW THE MODULE WORKS IT OUT
Running spoilage	Sheets lost during the run: density drift, a jam, a marked sheet	A percentage of the net sheets, 8 per cent by default, moved by the estimator per job
Make-ready waste	Sheets run to get to colour and register before the good sheets start	A fixed number of sheets per plate on litho, or per form and side on digital, read off the press record

Net sheets plus both kinds of waste is the **gross sheets**: the number of sheets you actually have to buy and put through the press. On a short litho run the make-ready waste can be larger than the job itself, which is exactly why short runs lose money when they are priced by feel.

Plates, passes and press hours

A litho press needs one **plate** per colour per form, so a job in four colours both sides (written 4/4) on one form needs eight. A digital press has no plates. A **perfecting** press turns the sheet inside the machine and prints both sides in one trip; any other press prints one side, the stack is turned, and it goes through again, so a double sided job is two **passes**. **Press hours** are the make-ready time (minutes per plate change on the press record) plus the run time (gross sheets times passes, divided by the real running speed).

HOW IT WORKS

The A5 flyer, 5,000 copies 4/4 on the five colour press

Net sheets	5,000 / 8 up = 625
+ Running spoilage	8 per cent, giving 675
+ Make-ready waste	8 plates x 180 sheets = 1,440
= Gross sheets	**2,115 sheets to issue**
Press time	8 make-readies of 22 minutes, plus 2,115 sheets x 2 passes at 13,000 an hour

Grain

Paper has a grain: its fibres run one way. Fold across the grain and the fold cracks. Any job that is bound or folded wants the grain parallel to the spine, and the estimate warns you, in a yellow band, when the imposition puts it the wrong way.

Over and under

A press run never stops exactly on the number. The trade custom is a **tolerance**, 10 per cent by default: a delivery within that band of the ordered quantity is accepted and invoiced at what was actually delivered. Outside it, the module refuses to despatch until somebody decides.

The life of a job

From enquiry to invoice

1. **Estimate** — Imposition, sheets, cost and price
2. **Approve** — The customer says yes
3. **Job ticket** — The spec goes to the floor
4. **Proof** — Signed off by a named person
5. **Press** — Sheets counted, spoilage booked
6. **Finish** — Each operation timed
7. **Despatch** — Counted against the tolerance
8. **Invoice** — At what was delivered

PART 2 The shop at a glance

The module adds one app, Printing, with four menus. This part is the map and the list of who sees what. Every later part is one screen in full.

Three roles

Access is set on the user, under the **Printing** heading of the access rights. Each role includes the one before it.

Press Operator

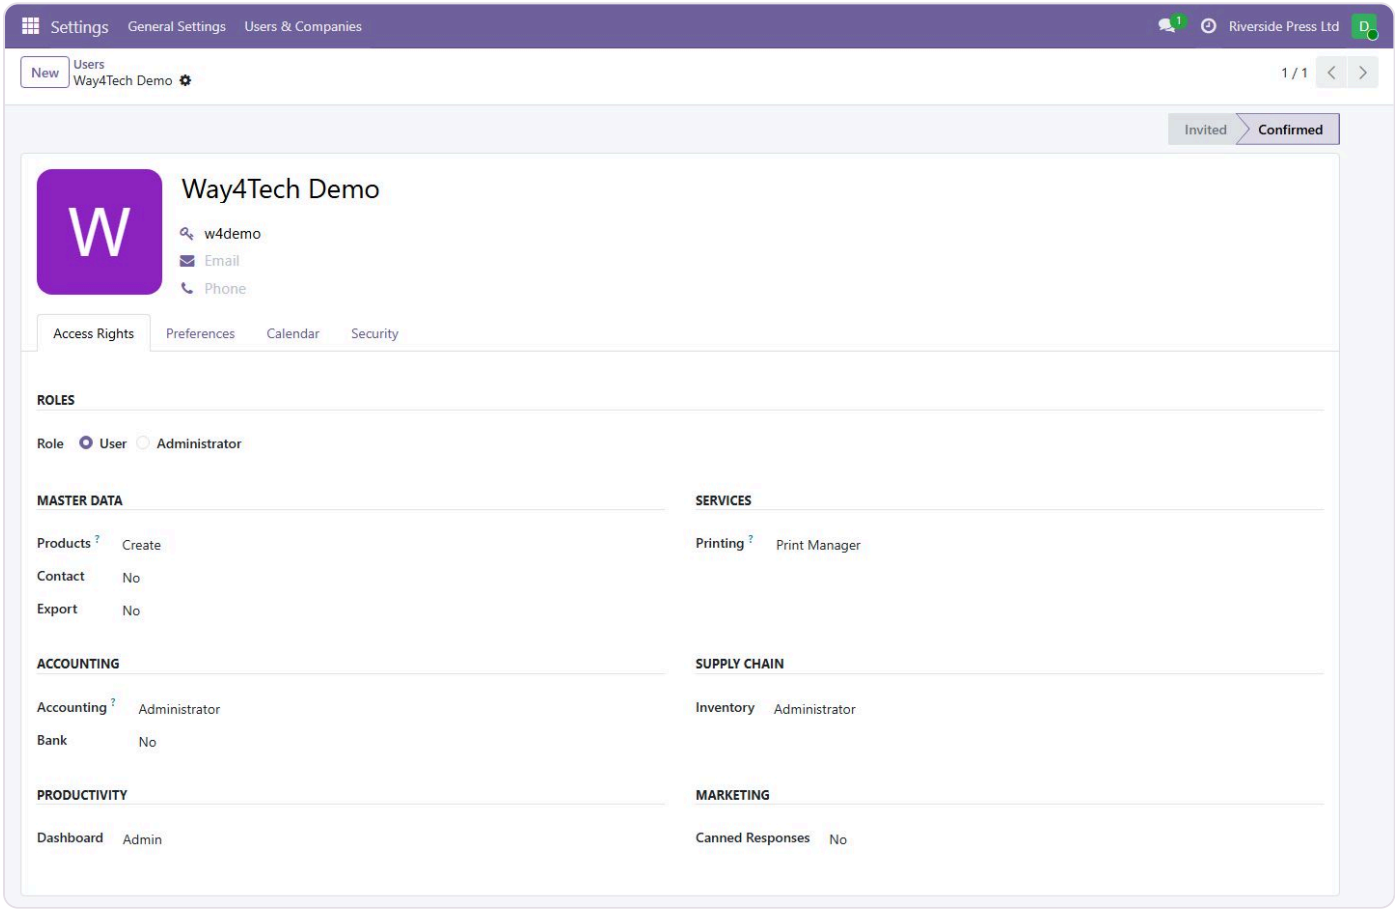

Works the job tickets on the floor: moves them through the stages, books sheets and spoilage, and books finishing operations off. Sees no costs, rates or margins, only the spoilage and finishing lines they booked themselves.

Estimator

Everything the operator does, plus the Estimating and Reporting menus: paper and press rates, the cost build-up, margins and the internal note. Sees every job, every spoilage line and every finishing line on the floor.

Print Manager

Everything, including the Configuration menu: sites, presses, paper stock, finishing rates, spoilage reasons, invoicing and reprints. The Settings screen also needs the Odoo administrator right.

A user's access rights. The Printing line sets the role; here the demo user is a Print Manager.

The four menus

Estimating

Estimates	Every quotation: imposition, sheets, cost and price

Shop Floor

Job Tickets	Every job from prepress to invoice, with the diary
Press Board	The floor as cards, one column per stage
Proofs	Every proof version, who approved it and when
Spoilage	Every sheet written off, with a reason and a stage

Reporting

Estimated Against Actual	Quoted cost against real cost, by press
Waste by Reason	Spoiled sheets and their cost, by stage and reason
Reprints	Every run done twice, with what caused it
Estimating	Estimates won, lost and expired, by estimator and month

Configuration

Settings	Spoilage, margin, overhead, bleed, proofs, tolerance
Print Sites	The shop: product, journal, paper store, capacity
Presses	Units, speed, make-ready, rates and sheet range
Paper Stock	Sheet size, grammage, grain and the cost per sheet
Finishing Operations	Setup, run rate, materials, bought-in work
Spoilage Reasons	Stage, forces a reprint, charged to the customer

> Every record is kept per company, so a group with two print businesses keeps their estimates, jobs, presses and paper apart. On the demo you are signed in as a Print Manager, so you can follow the whole guide from one login.

PART 3 Open the demo and sign in

Everything in this guide can be followed on the live demo. It is a real Odoo 19 database, Riverside Press Ltd, already filled with presses, paper, estimates and a month of jobs.

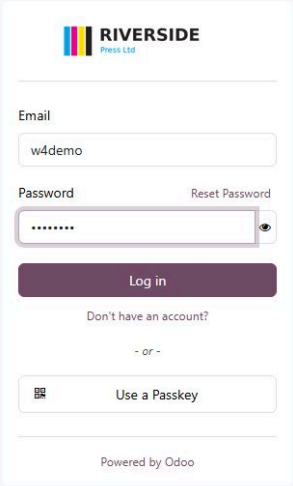

TRY IT YOURSELF ON THE DEMO

1. Open printing-demo.way4tech.com in any browser
2. Sign in with w4demo and Demo2026
3. Open Printing from the app menu, then Shop Floor, then Press Board

1 Go to the shop

Open **printing-demo.way4tech.com**. The sign-in screen is the standard Odoo one. There is nothing to install.

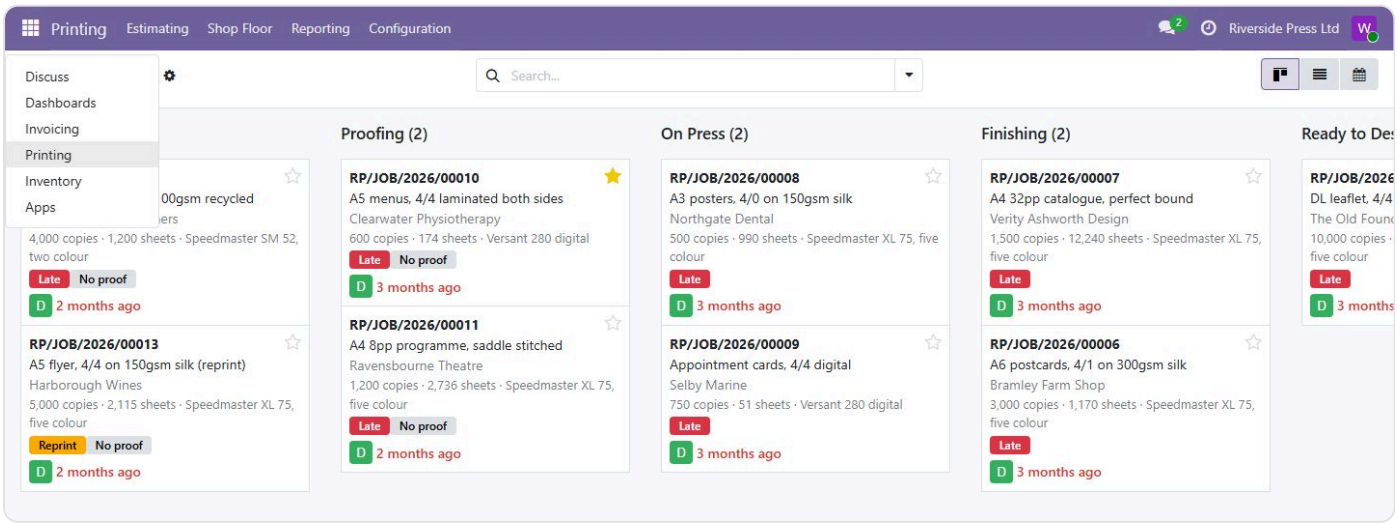

The address works on a phone, a tablet or a computer. Estimating is easiest on a desktop; the press board also reads well on a phone.

2 Sign in and open the app

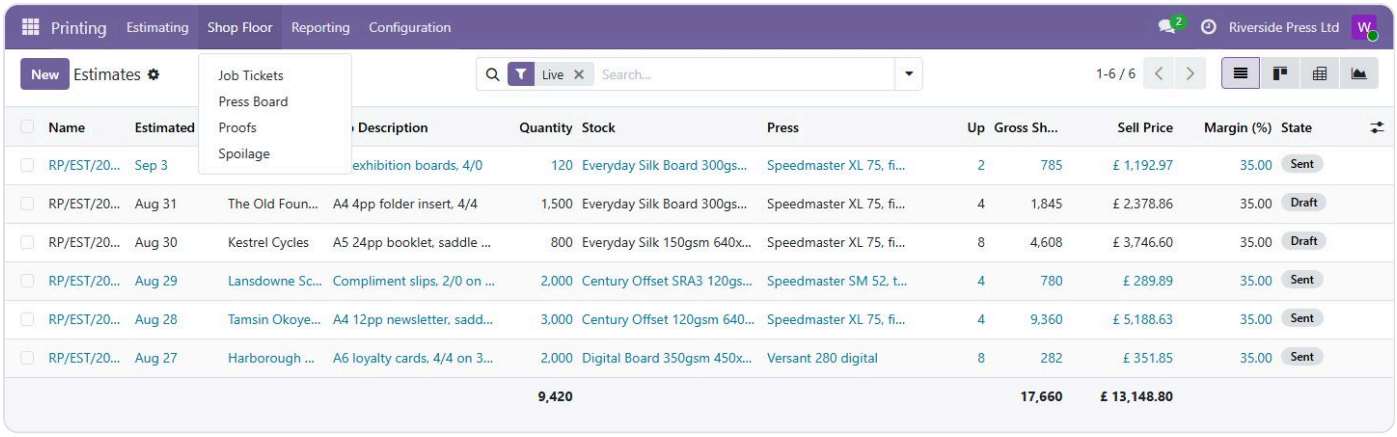

User `w4demo`, password `Demo2026`. Click the square of dots at the top left to see the apps and pick **Printing**. Inventory and Invoicing sit next to it because the module uses both.

This login is a Print Manager so you can follow every part of the guide. A real shop would give the floor the Press Operator role.

3 Find the four menus

Across the top: **Estimating**, **Shop Floor**, **Reporting** and **Configuration**. Click a menu to see its screens; here Shop Floor is open.

PART 4 Set the shop up from zero

This is what a new shop does on day one, before it prices anything: install the app, set the house rules, then describe the site, the presses, the paper, the finishing and the reasons sheets get spoiled. On the demo this is already done, so read it to understand what each setting means and where it lives.

IN THIS PART YOU WILL LEARN

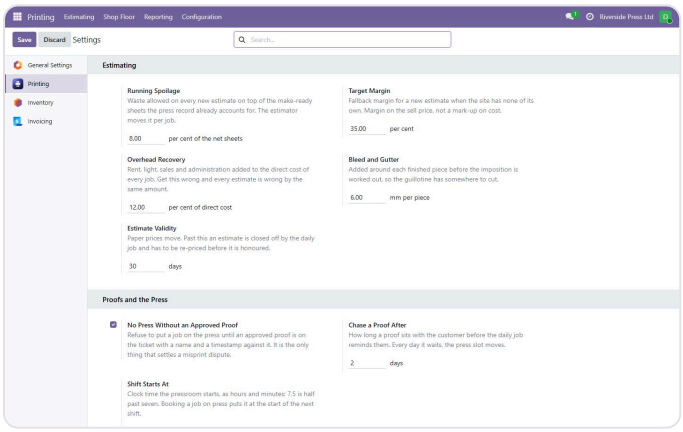

- Installing Printing and what it brings with it
- The ten house rules on the Settings screen and what each one changes
- The order to enter everything else in

Install

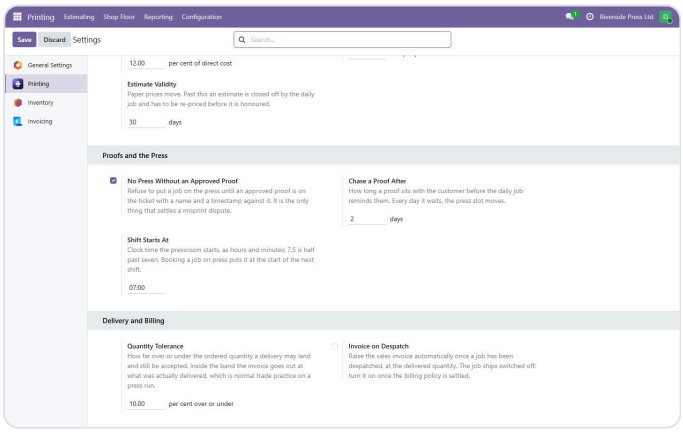

Install **Printing Press Management** from the Apps screen. It pulls in Inventory and Invoicing (the paper store and the sales invoice need them) and creates the three roles, the numbering for estimates (RP/EST/...), job tickets (RP/JOB/...), proofs (PRF/...) and spoilage records (SPL/...), the email templates, three daily scheduled jobs, and ten ready made spoilage reasons. The administrator who installs it becomes a Print Manager.

The house rules

Configuration, then Settings. These are set once per company and every new estimate and job starts from them. The screen needs the Odoo administrator right as well as Print Manager.

Estimating, and the first half of Proofs and the Press.

The rest of Proofs and the Press, then Delivery and Billing.

SETTING	DEFAULT	WHAT IT CHANGES
Running Spoilage	8 %	The running waste put on every new estimate, on top of the make-ready sheets. The estimator moves it per job.
Target Margin	35 %	Margin on the sell price for a new estimate when the site has no House Margin of its own. A margin, not a mark-up on cost.
Overhead Recovery	12 %	Rent, light, sales and administration added to the direct cost of every job.
Bleed and Gutter	6 mm	Added to each finished piece before the imposition is worked out.
Estimate Validity	30 days	Sets Valid Until on a new estimate. Once passed, the daily job closes a sent estimate off as Expired.
No Press Without an Approved Proof	On	Refuses On Press until an approved proof with a name and a time is on the ticket.

Chase a Proof After	2 days	The approval deadline on a new proof, and how long a proof sits before the daily job chases it.
Shift Starts At	07:00	Book on Press puts the job on at this time on the next day.
Quantity Tolerance	10 %	The over and under band a delivery may land in and still be accepted.
Invoice on Despatch	Off	Lets the daily job raise the invoice for every delivered job at the delivered quantity.

The three daily jobs (expire estimates, chase proofs, invoice despatched work) are installed switched off. Turn them on under Settings, Technical, Scheduled Actions once the shop is ready for them. Part 22 shows them.

The order to enter everything else

Day one, in this order

1. **Print site** — Product, journal, store, hours
2. **Presses** — Units, speed, rates, sheet range
3. **Paper stock** — Sheet, grain, cost basis
4. **Finishing** — Setup, run rate, materials
5. **Spoilage reasons** — Check the ten supplied
6. **Users** — Give each person a role

PART 5 Print sites

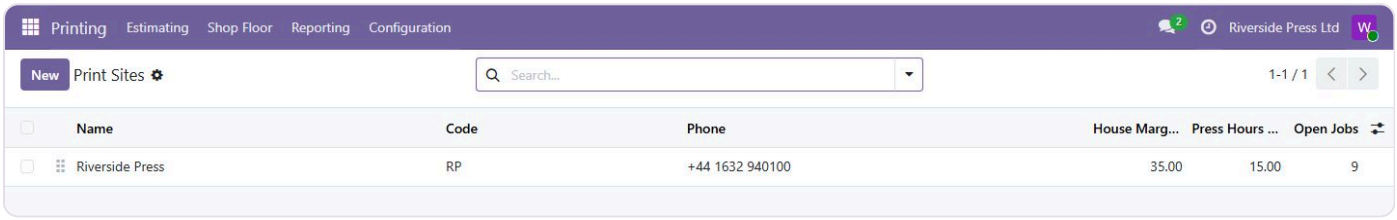

A site is one print shop: one building with its presses, its paper store and its working hours. Most shops have one. A group with two factories gives each its own, and each gets its own job numbering.

TRY IT YOURSELF ON THE DEMO

1. Configuration, then Print Sites, and open Riverside Press
2. Read the Print Product and the capacity, then open the Presses tab

1 The sites list

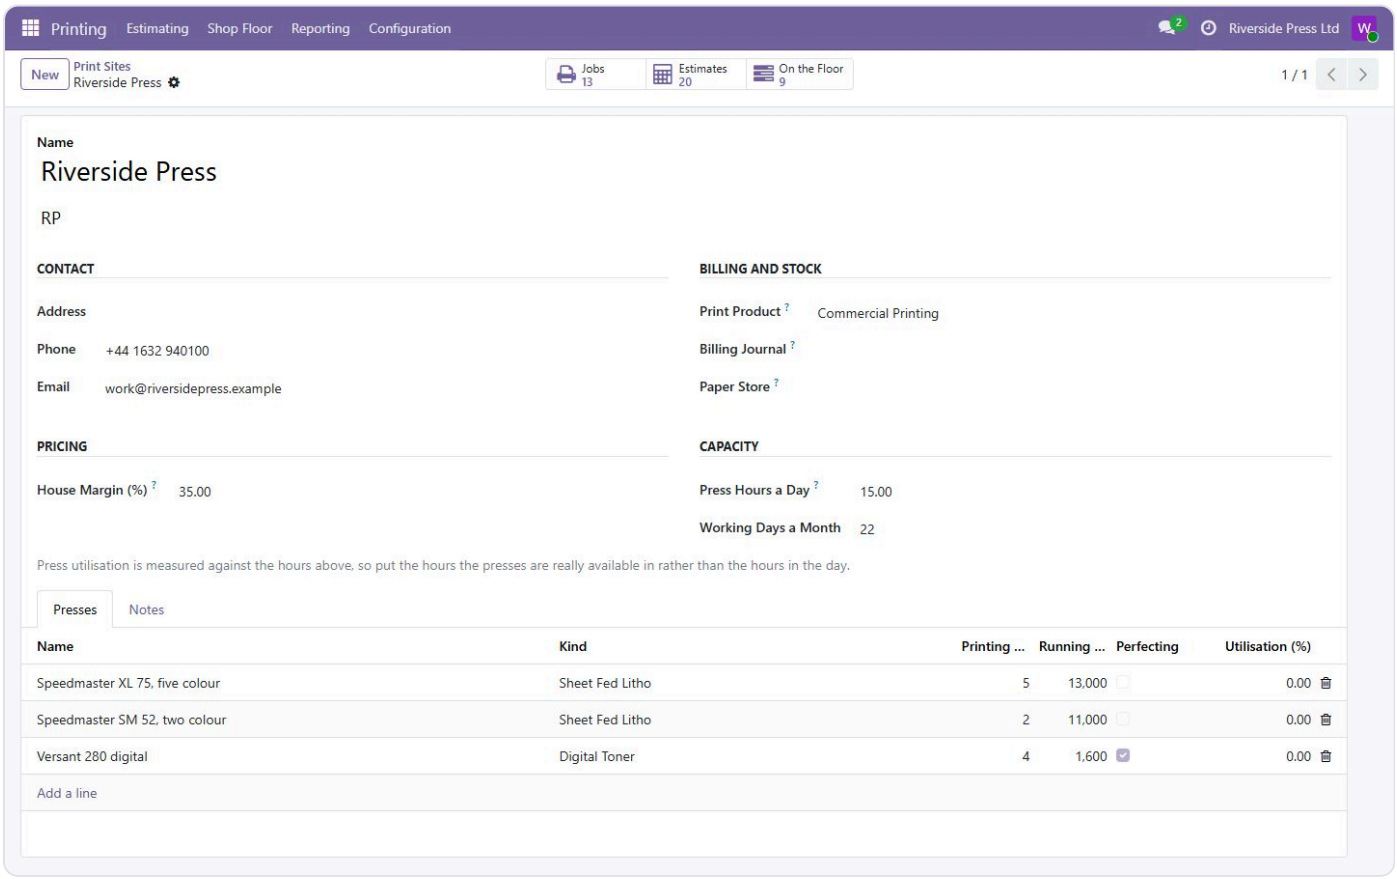

Configuration, then **Print Sites**. Each site with its code, its house margin, its press hours a day and the number of jobs open on the floor.

2 A site in full

Name and **Code**: the code goes in front of every job number at this site (RP/JOB/...). **Contact**: address, phone, email. **Print Product** (required) is the product every job invoice line is posted to. **Billing Journal** is the sales journal the invoices go through; it must be in the company currency. **Paper Store** is the stock location the paper is counted in. **House Margin** is the target margin for estimates at this site. **Press Hours a Day** and **Working Days a Month** give the capacity that press utilisation is measured against.

Put the hours the presses are really available, not the hours the doors are open, or utilisation will always look low.

The buttons along the top open the site's **Jobs**, its **Estimates** and the jobs **On the Floor**. The **Presses** tab lists every press at the site with its kind, units, speed, perfecting flag and utilisation; **Notes** holds anything else.

PART 6 Presses

The press record is where most of an estimate's numbers come from: how many colours it prints in one pass, the sheets it takes, how fast it really runs, what a make-ready costs in time and paper, and what an hour on it is worth.

IN THIS PART YOU WILL LEARN

- Litho, digital toner, inkjet, wide format and flexo, and what changes
- Printing units, perfecting and plates
- Running speed, make-ready time and make-ready waste
- Press hour rate, plate cost, ink per thousand and the click charge
- The sheet range and the gripper, and what they refuse

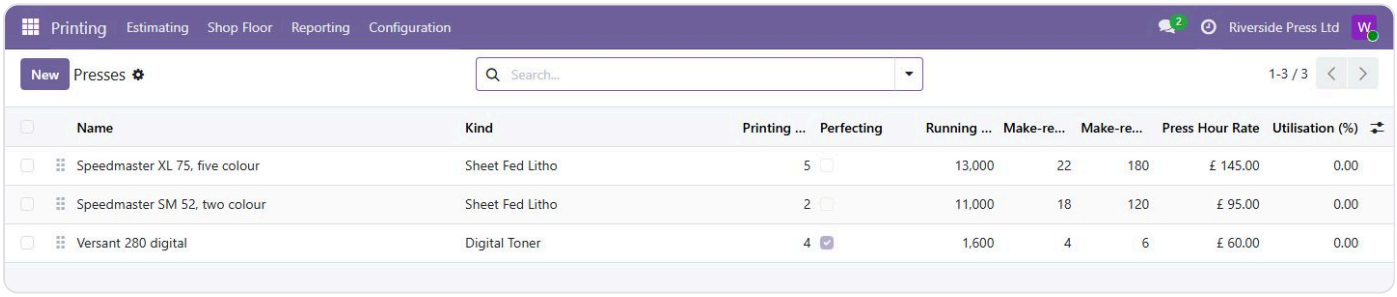

TRY IT YOURSELF ON THE DEMO

1. Configuration, then Presses, and open the five colour press
2. Then open the digital press and compare the Rates block

1 The presses list

Configuration, then **Presses**. Each press with its kind, units, perfecting flag, speed, make-ready, hour rate and utilisation. Filters pick out Litho, Digital, Perfecting and Retired presses.

Archive a press you sell rather than deleting it, so its old jobs keep their history.

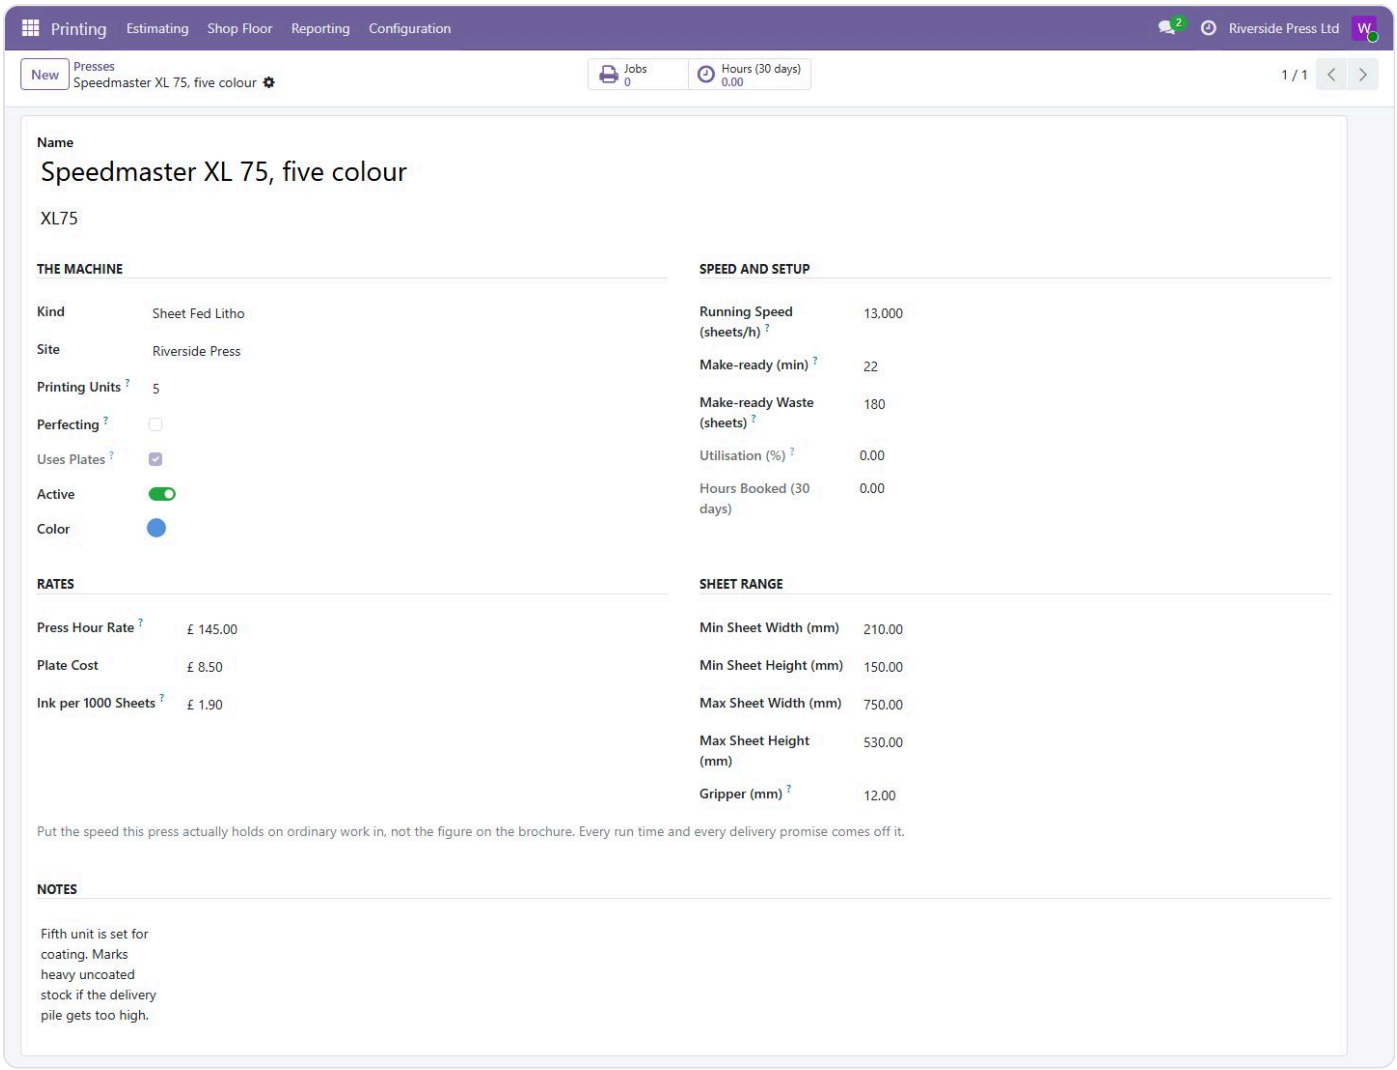

Name	Kind	Printing ...	Perfecting	Running ...	Make-re...	Make-re...	Press Hour Rate	Utilisation (%)
Speedmaster XL 75, five colour	Sheet Fed Litho	5		13,000	22	180	£ 145.00	0.00
Speedmaster SM 52, two colour	Sheet Fed Litho	2		11,000	18	120	£ 95.00	0.00
Versant 280 digital	Digital Toner	4	☑	1,600	4	6	£ 60.00	0.00

2 A litho press

The Machine: **Kind** (Sheet Fed Litho, Digital Toner, Digital Inkjet, Wide Format, Flexo), **Site**, **Printing Units** (colours it lays down in one pass), **Perfecting** (prints both sides in one pass) and **Uses Plates**, ticked automatically for litho and flexo. **Speed and Setup**: the real running speed in sheets an hour, the minutes and the sheets one make-ready takes. **Rates**: press hour rate, plate cost and ink per 1,000 sheets per colour. **Sheet Range**: the smallest and largest sheet and the gripper margin.

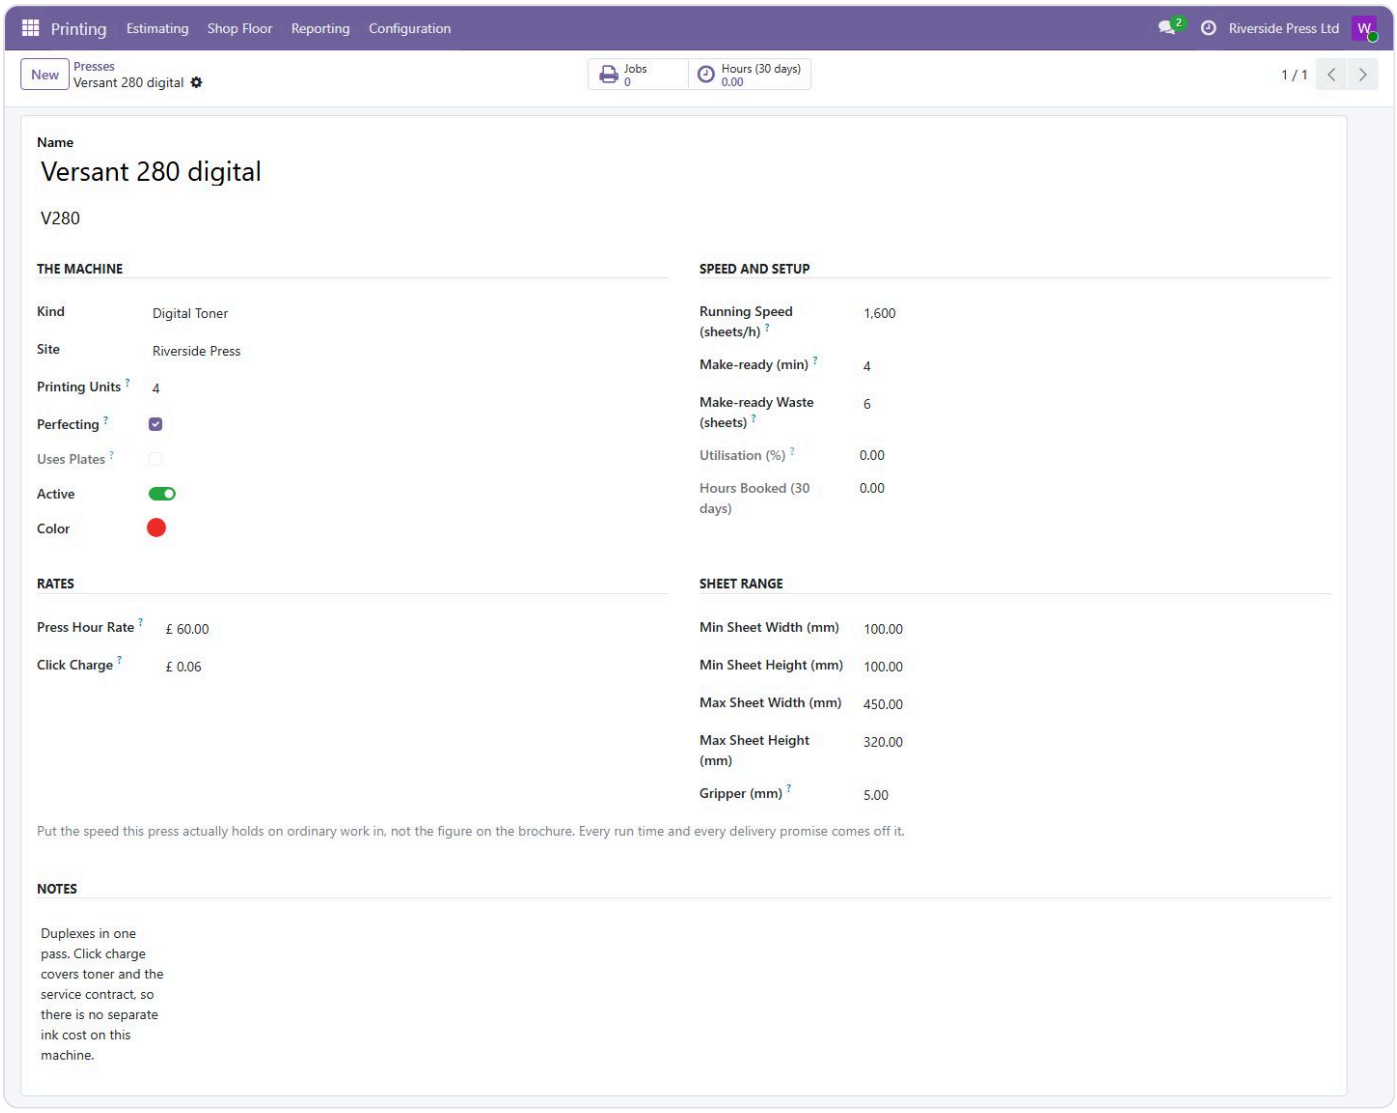

The five colour press here runs at 13,000 an hour, takes 22 minutes and 180 sheets to make ready, and costs 145.00 an hour.

3 A digital press

A digital press has no plates, so instead of plate cost and ink it has a **Click Charge** per printed side. Its make-ready is counted per form and side, not per plate, which is why it wins on short runs.

On a digital or inkjet duplex engine, 4/4 needs four units, because the same stations print both sides. On a litho perfector 4/4 needs eight.

What the press record refuses

CHECK	WHEN IT FIRES
Sheet will not feed	An estimate whose stock is outside the min and max sheet size, tried both ways round
Not enough units	More colours in one pass than the press has units
Range the wrong way round	Largest sheet set smaller than the smallest
Gripper too big	A gripper margin that is negative or swallows the whole sheet
Negative make-ready	Make-ready minutes or sheets below zero

The buttons along the top show the press's **Jobs** and its **Hours (30 days)**: the planned press hours of every job booked on it in the last thirty days. **Utilisation** is those hours against the site's monthly capacity. When a job goes on press, a note with the sheets and plates is posted on the press record.

PART 7 Paper stock

Paper is bought by the sheet, by the ream or by the tonne, and an estimate needs one figure: what a sheet costs. The paper record turns whatever you buy on into that figure.

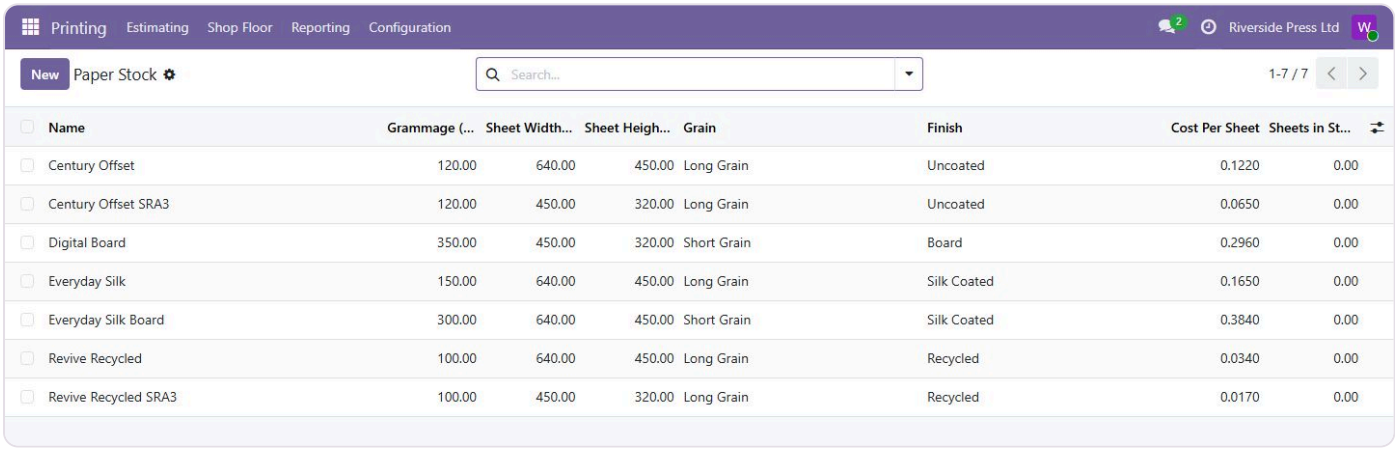

IN THIS PART YOU WILL LEARN

- Sheet format, size, grammage, caliper and the sheet weight
- Grain and finish
- Per sheet, per ream and per tonne, and the cost per sheet
- Merchant, lead time and the stock item that drives the shortage warning

1 The paper list

Configuration, then **Paper Stock**. Each stock with grammage, sheet size, grain, finish, cost per sheet and sheets in stock. Filters for Coated, Uncoated, Board, Long Grain and Short Grain; group by finish, grammage, sheet size or merchant.

The demo carries SRA2 sheets for the big press and SRA3 cuts of the same stocks for the small one, which is how a real shop buys.

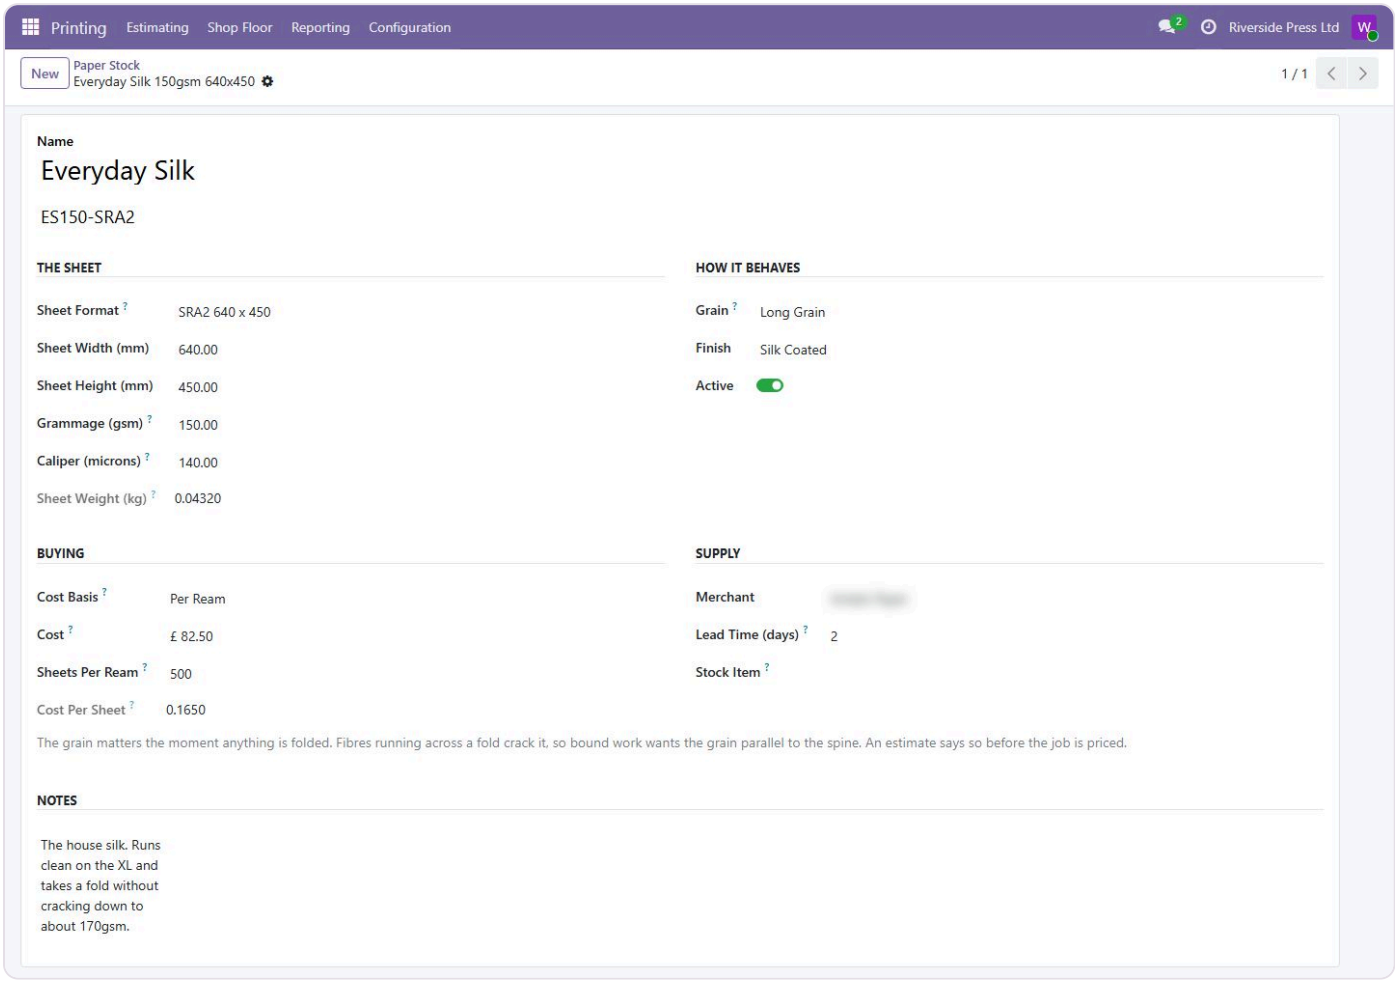

Name	Grammage (...	Sheet Width...	Sheet Heigh...	Grain	Finish	Cost Per Sheet	Sheets in St...
Century Offset	120.00	640.00	450.00	Long Grain	Uncoated	0.1220	0.00
Century Offset SRA3	120.00	450.00	320.00	Long Grain	Uncoated	0.0650	0.00
Digital Board	350.00	450.00	320.00	Short Grain	Board	0.2960	0.00
Everyday Silk	150.00	640.00	450.00	Long Grain	Silk Coated	0.1650	0.00
Everyday Silk Board	300.00	640.00	450.00	Short Grain	Silk Coated	0.3840	0.00
Revive Recycled	100.00	640.00	450.00	Long Grain	Recycled	0.0340	0.00
Revive Recycled SRA3	100.00	450.00	320.00	Long Grain	Recycled	0.0170	0.00

2 A stock bought by the ream

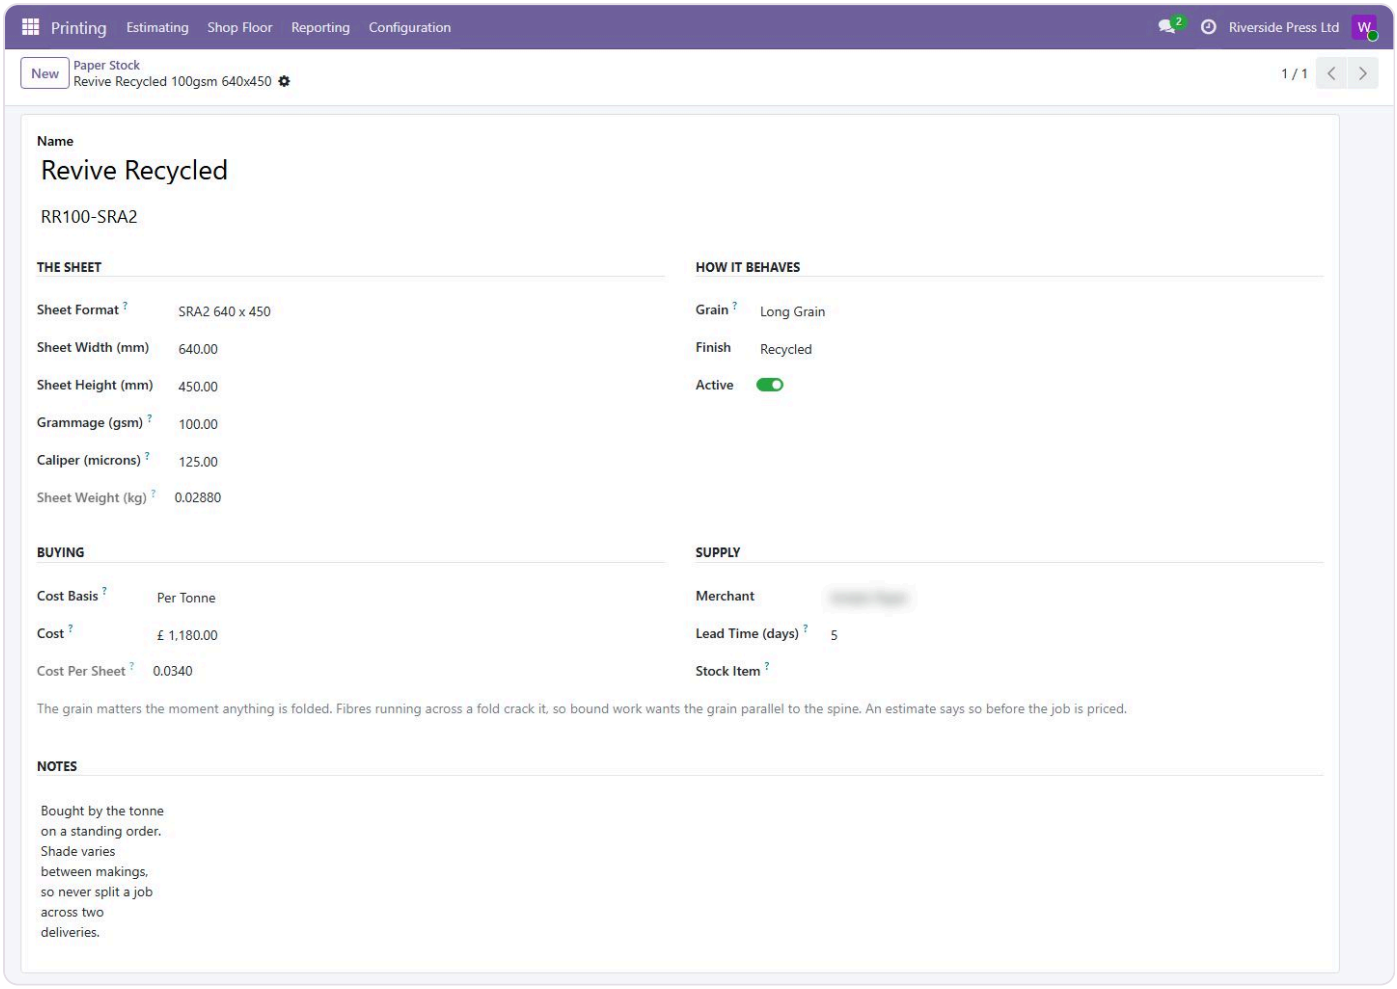

The Sheet: pick a **Sheet Format** (SRA3, SRA2, SRA1, B2, B1, A3, A4) and the width and height fill in, or choose Custom. **Grammage** and **Caliper** (thickness in microns) give the **Sheet Weight** and the spine width of a book. **How It Behaves**: **Grain** long or short, and **Finish** (gloss, silk, matt, uncoated, recycled, board, synthetic). **Buying**: **Cost Basis**, **Cost** and **Sheets per Ream**. **Supply**: **Merchant**, **Lead Time** and the **Stock Item**.

Everyday Silk 150gsm at 82.50 a ream of 500 works out at 0.165 a sheet.

3 A stock bought by the tonne

Switch the cost basis to **Per Tonne** and the cost per sheet is worked out from the sheet weight: an SRA2 sheet of 100gsm weighs 0.0288 kg, so at 1,180.00 a tonne it costs 0.0340.

The shortage warning

Link a paper to a **Stock Item** and set a **Paper Store** on the site, and every estimate checks the sheets on hand in that store against the gross sheets the job needs. If there are not enough, a blue band on the estimate says how many are on the floor, how many the job needs, and the earliest start date once the merchant's lead time is added. Without a stock item the check is skipped.

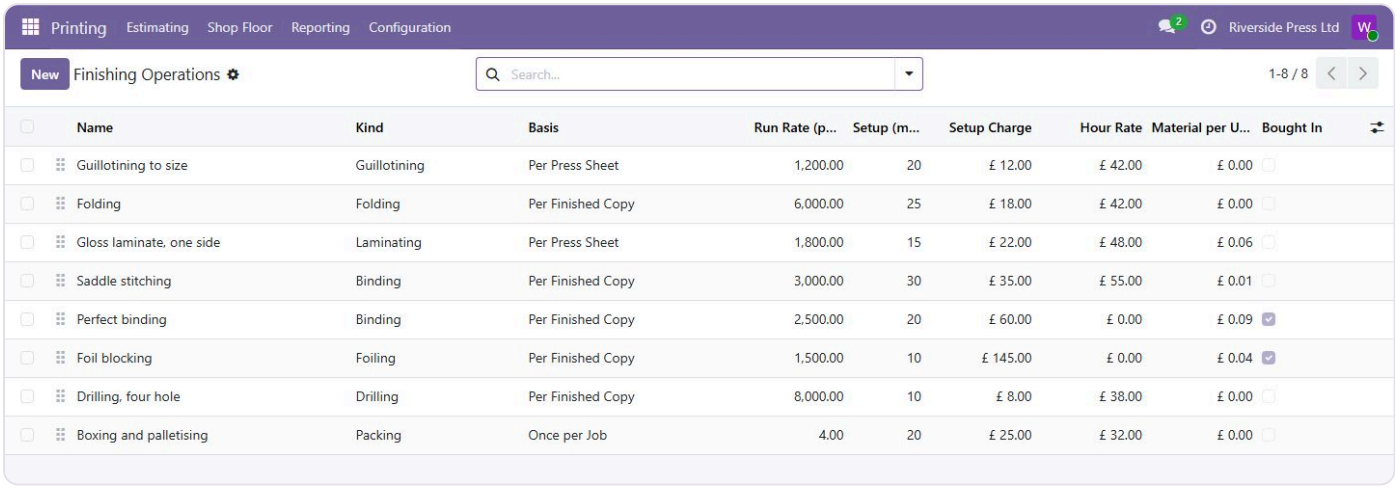

> A paper name must be unique in the company, and sheet size, grammage and sheets per ream must be above zero. A cost cannot be negative.

PART 8 Finishing operations

Everything that happens to the sheets after the press: cutting, folding, laminating, binding, foiling, drilling, packing. Each one is costed from a setup, a run rate and the material it uses, and can be done in house or bought in.

1 The finishing list

Configuration, then **Finishing Operations**. The list is editable in place: kind, basis, run rate, setup minutes, setup charge, hour rate and the bought in flag.

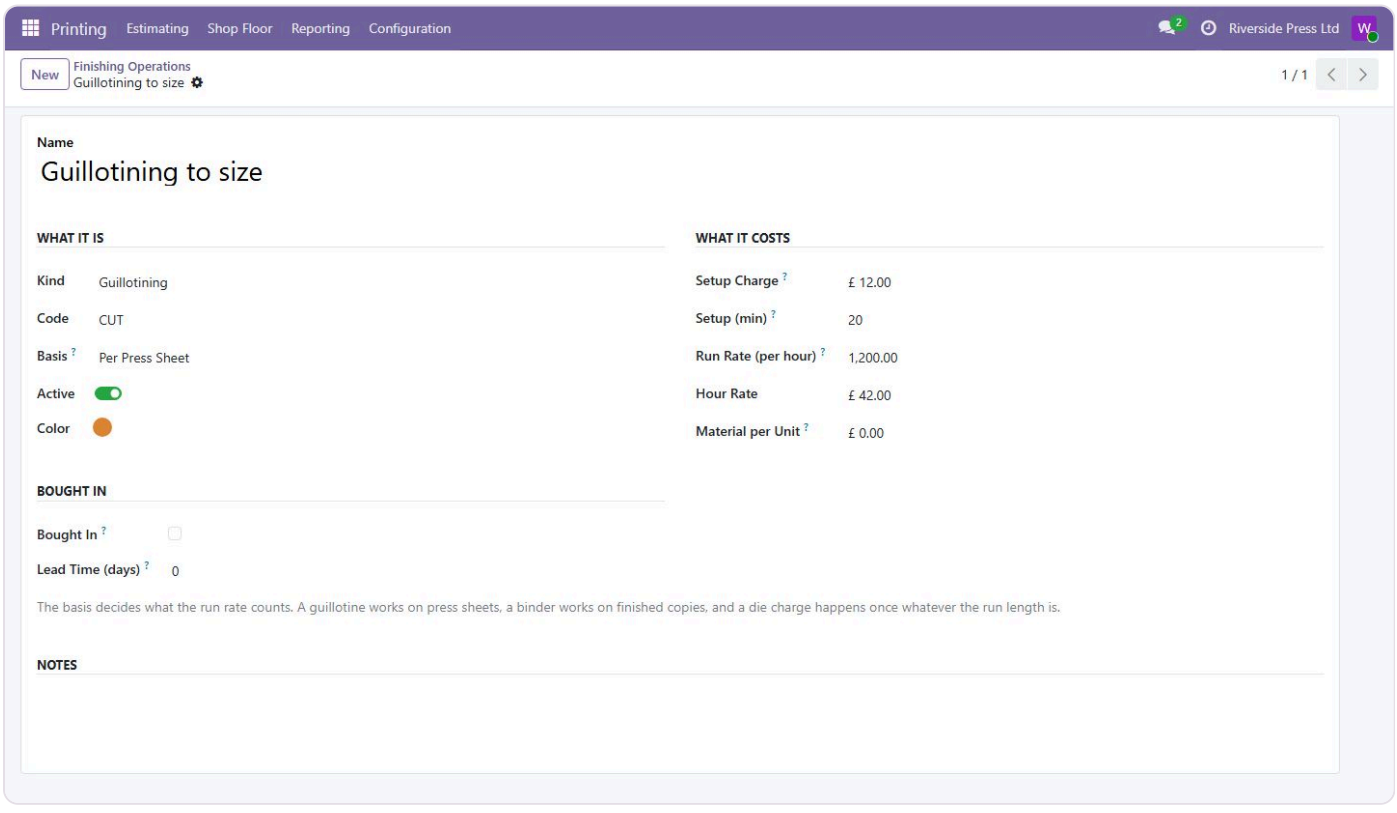

Name	Kind	Basis	Run Rate (p...	Setup (m...	Setup Charge	Hour Rate	Material per U...	Bought In
Guillotining to size	Guillotining	Per Press Sheet	1,200.00	20	£ 12.00	£ 42.00	£ 0.00	
Folding	Folding	Per Finished Copy	6,000.00	25	£ 18.00	£ 42.00	£ 0.00	
Gloss laminate, one side	Laminating	Per Press Sheet	1,800.00	15	£ 22.00	£ 48.00	£ 0.06	
Saddle stitching	Binding	Per Finished Copy	3,000.00	30	£ 35.00	£ 55.00	£ 0.01	
Perfect binding	Binding	Per Finished Copy	2,500.00	20	£ 60.00	£ 0.00	£ 0.09	☑
Foil blocking	Foiling	Per Finished Copy	1,500.00	10	£ 145.00	£ 0.00	£ 0.04	☑
Drilling, four hole	Drilling	Per Finished Copy	8,000.00	10	£ 8.00	£ 38.00	£ 0.00	
Boxing and palletising	Packing	Once per Job	4.00	20	£ 25.00	£ 32.00	£ 0.00	

2 An operation done in house

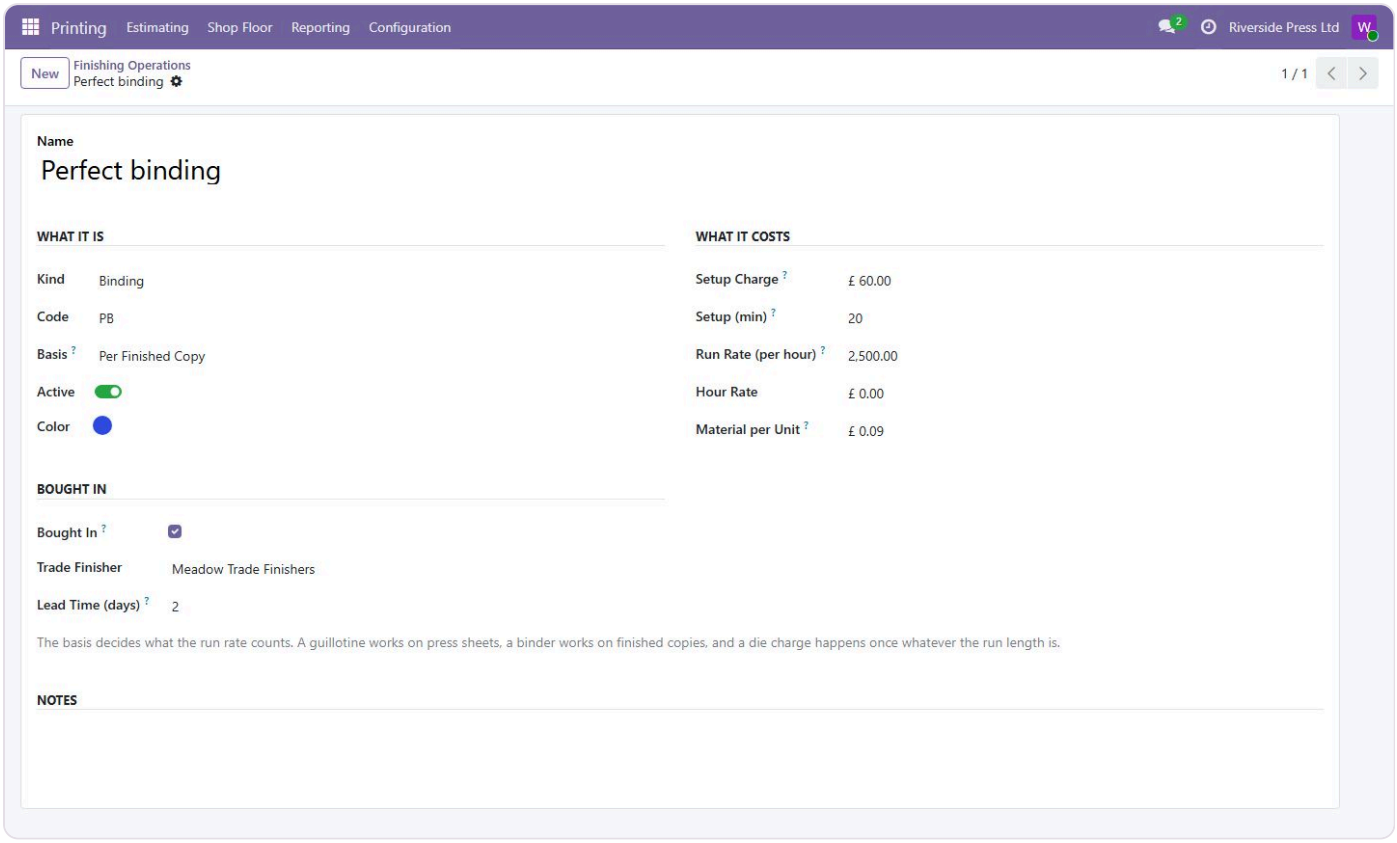

What It Is: **Kind** (guillotining, folding, laminating, binding, foiling, embossing, drilling, creasing and scoring, perforating, collating, packing), a code and the **Basis**: per press sheet, per finished copy, or once per job. **What It Costs**: **Setup Charge**, **Setup** minutes, **Run Rate** in units an hour, **Hour Rate** and **Material per Unit**.

Guillotining here is per press sheet: a 12.00 setup, 20 minutes to set, 1,200 sheets an hour at 42.00 an hour.

3 An operation bought in

Tick **Bought In** and the operation needs a **Trade Finisher** (the record is refused without one) and a **Lead Time** in days. The lead time pushes the delivery date out when the job is booked on press.

HOW IT WORKS

How one finishing line is costed

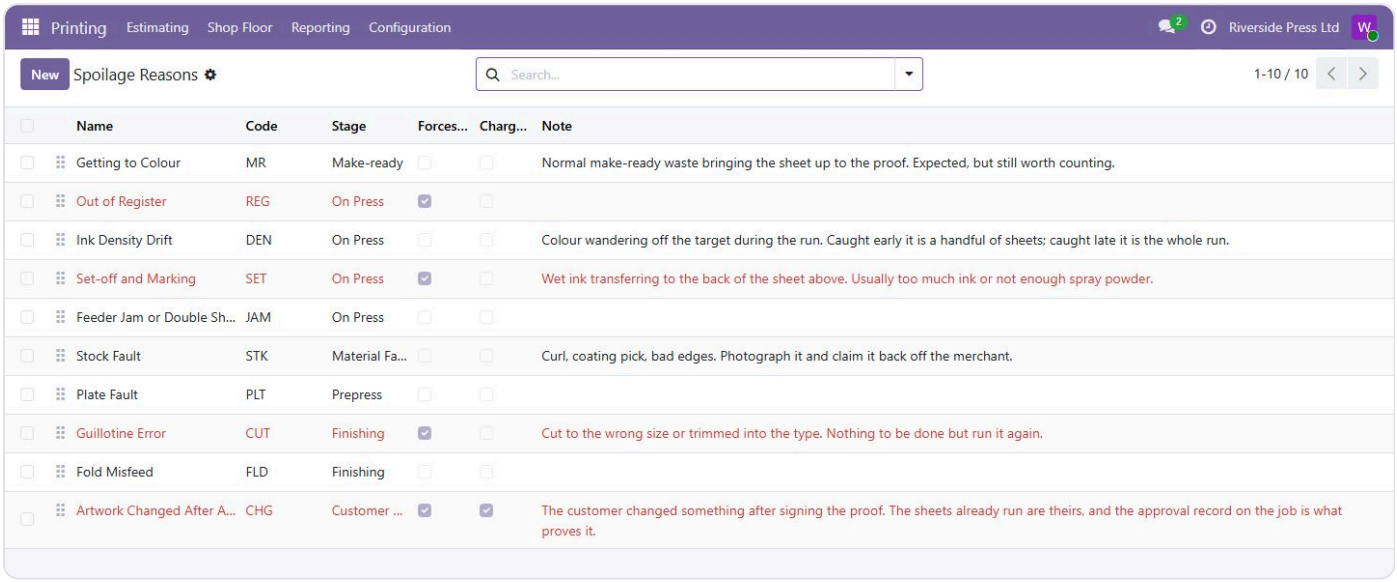

Units	press sheets, finished copies, or 1 for a job
Cost	setup charge + (units / run rate) x hour rate + units x material
Hours	setup minutes / 60 + units / run rate

PART 9 Spoilage reasons

Every sheet that goes in the bin is booked against a reason. The reason carries the stage it belongs to and two flags that decide what happens next: does it force a reprint, and is it charged to the customer.

1 The reasons list

Configuration, then **Spoilage Reasons**. Ten come with the module, from Getting to Colour and Out of Register to Guillotine Error and Artwork Changed After Approval. Rows in red force a reprint.

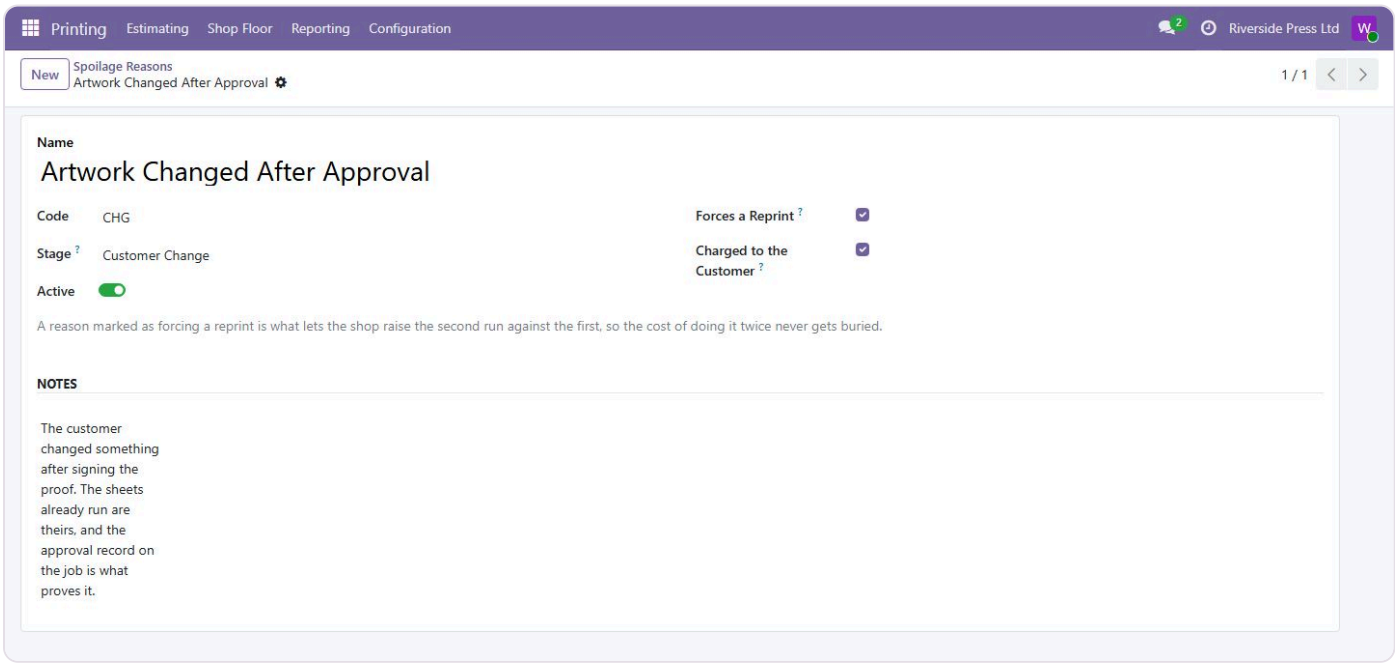

Name	Code	Stage	Forces...	Charg...	Note
Getting to Colour	MR	Make-ready	☐	☐	Normal make-ready waste bringing the sheet up to the proof. Expected, but still worth counting.
Out of Register	REG	On Press	☑	☐	
Ink Density Drift	DEN	On Press	☐	☐	Colour wandering off the target during the run. Caught early it is a handful of sheets; caught late it is the whole run.
Set-off and Marking	SET	On Press	☑	☐	Wet ink transferring to the back of the sheet above. Usually too much ink or not enough spray powder.
Feeder Jam or Double Sh...	JAM	On Press	☐	☐	
Stock Fault	STK	Material Fa...	☐	☐	Curl, coating pick, bad edges. Photograph it and claim it back off the merchant.
Plate Fault	PLT	Prepress	☐	☐	
Guillotine Error	CUT	Finishing	☑	☐	Cut to the wrong size or trimmed into the type. Nothing to be done but run it again.
Fold Misfeed	FLD	Finishing	☐	☐	
Artwork Changed After A...	CHG	Customer ...	☑	☑	The customer changed something after signing the proof. The sheets already run are theirs, and the approval record on the job is what proves it.

2 A reason in full

Code (unique in the company), **Stage** (Prepress, Make-ready, On Press, Finishing, Material Fault, Customer Change), **Forces a Reprint** and **Charged to the Customer**.

Artwork Changed After Approval is both: the job is run again, and the spoiled sheets go on the customer's invoice as their own line.

> A prepress reason cannot force a reprint: a plate fault is caught before the press runs, so there is nothing to run again.

PART 10 Writing an estimate: the specification

An estimate is the whole trade in one record. Finished size, pages, quantity, colours, stock and press go in. The imposition, the sheets, the plates, the passes and the press hours come out, and the estimate refuses the jobs that will not run.

IN THIS PART YOU WILL LEARN

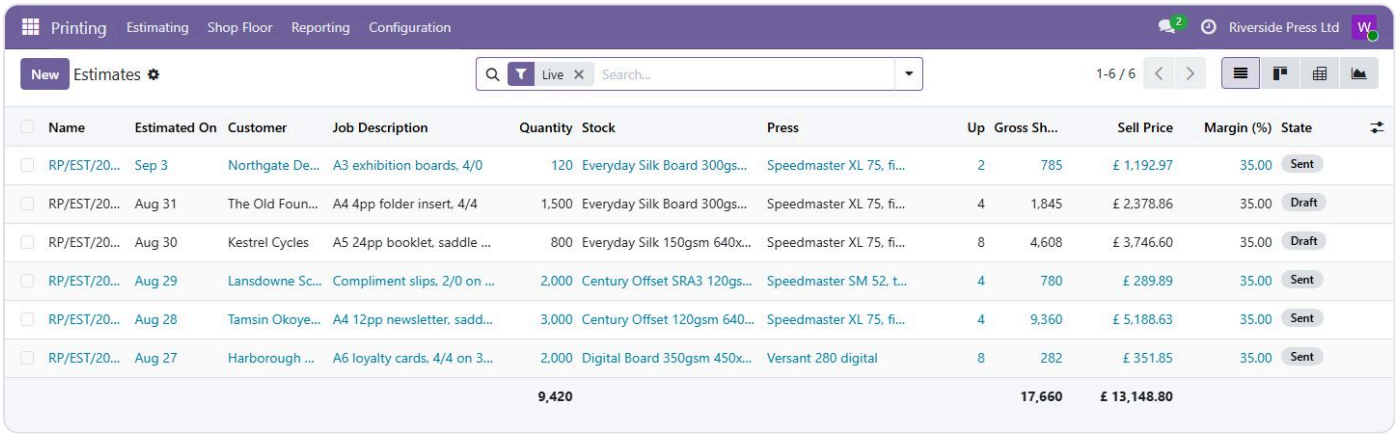

- The estimates list, the kanban and the filters
- Flat work and bound work, sides and binding
- Every figure in What That Works Out To
- The grain warning and the paper shortage warning
- The six checks that refuse a job that will not run

TRY IT YOURSELF ON THE DEMO

1. Estimating, then Estimates, and clear the Live filter to see all twenty
2. Open RP/EST/2026/00001, the A5 flyer, and read the Specification tab
3. Open RP/EST/2026/00016, the 24 page booklet, and read the yellow band

1 The estimates list

Estimating, then **Estimates**. It opens on **Live** estimates (draft and sent). Each line shows the date, customer, title, quantity, stock, press, up per sheet, gross sheets, value, margin and status, with copies, sheets and value totalled. Approved lines are green, sent blue, expired amber, lost and cancelled grey.

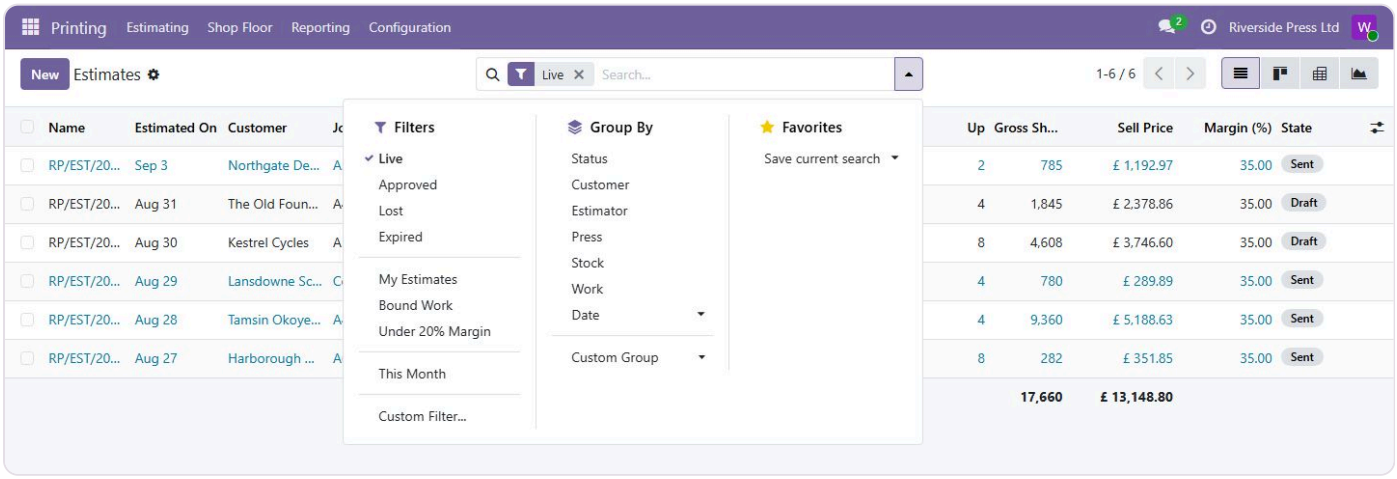

Name	Estimated On	Customer	Job Description	Quantity	Stock	Press	Up	Gross Sh...	Sell Price	Margin (%)	State
RP/EST/20...	Sep 3	Northgate De...	A3 exhibition boards, 4/0	120	Everyday Silk Board 300gs...	Speedmaster XL 75, fi...	2	785	£ 1,192.97	35.00	Sent

				9,420				17,660	£ 13,148.80		

2 Filter and group

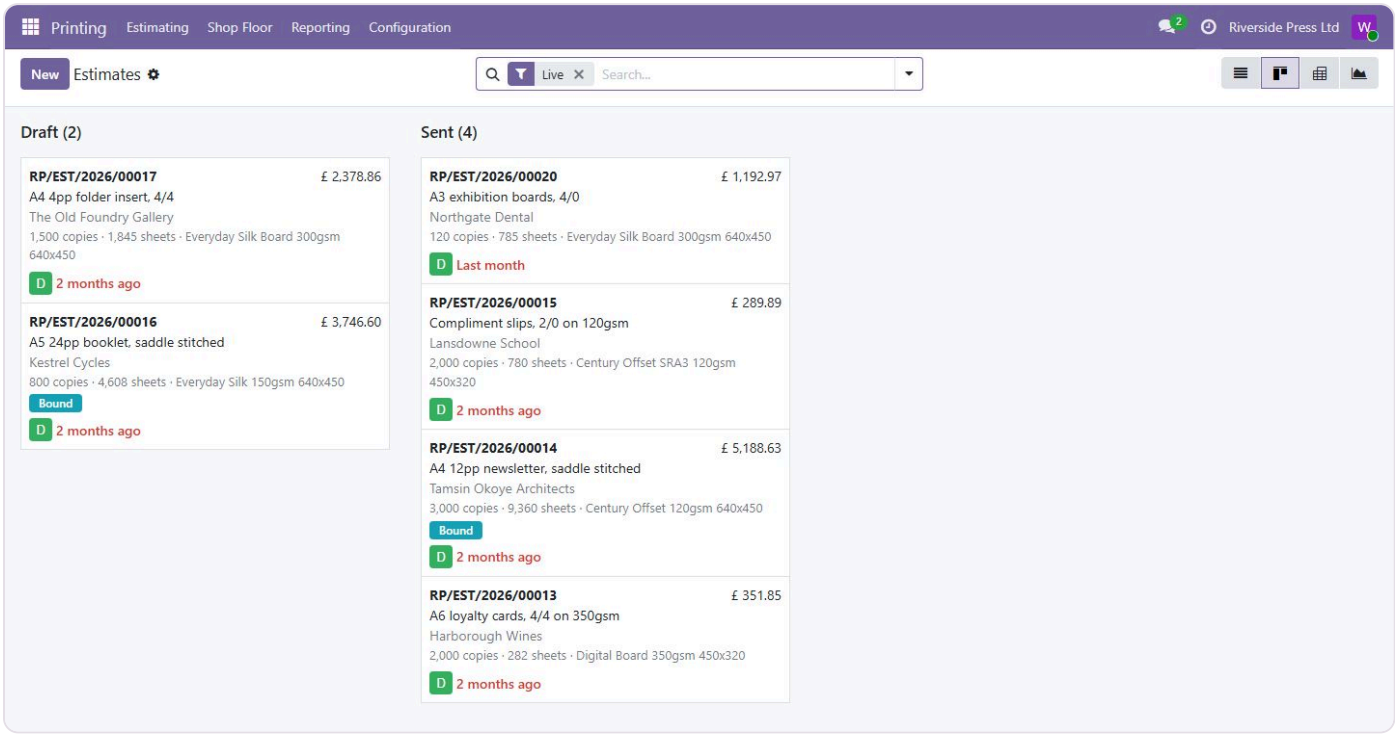

The search box filters by **Live**, **Approved**, **Lost**, **Expired**, **My Estimates**, **Bound Work**, **Under 20% Margin** and **This Month**, and groups by status, customer, estimator, press, stock, kind of work or date.

Under 20% Margin is the filter to read before a price review: it is the work that has been typed down.

3 The pipeline as cards

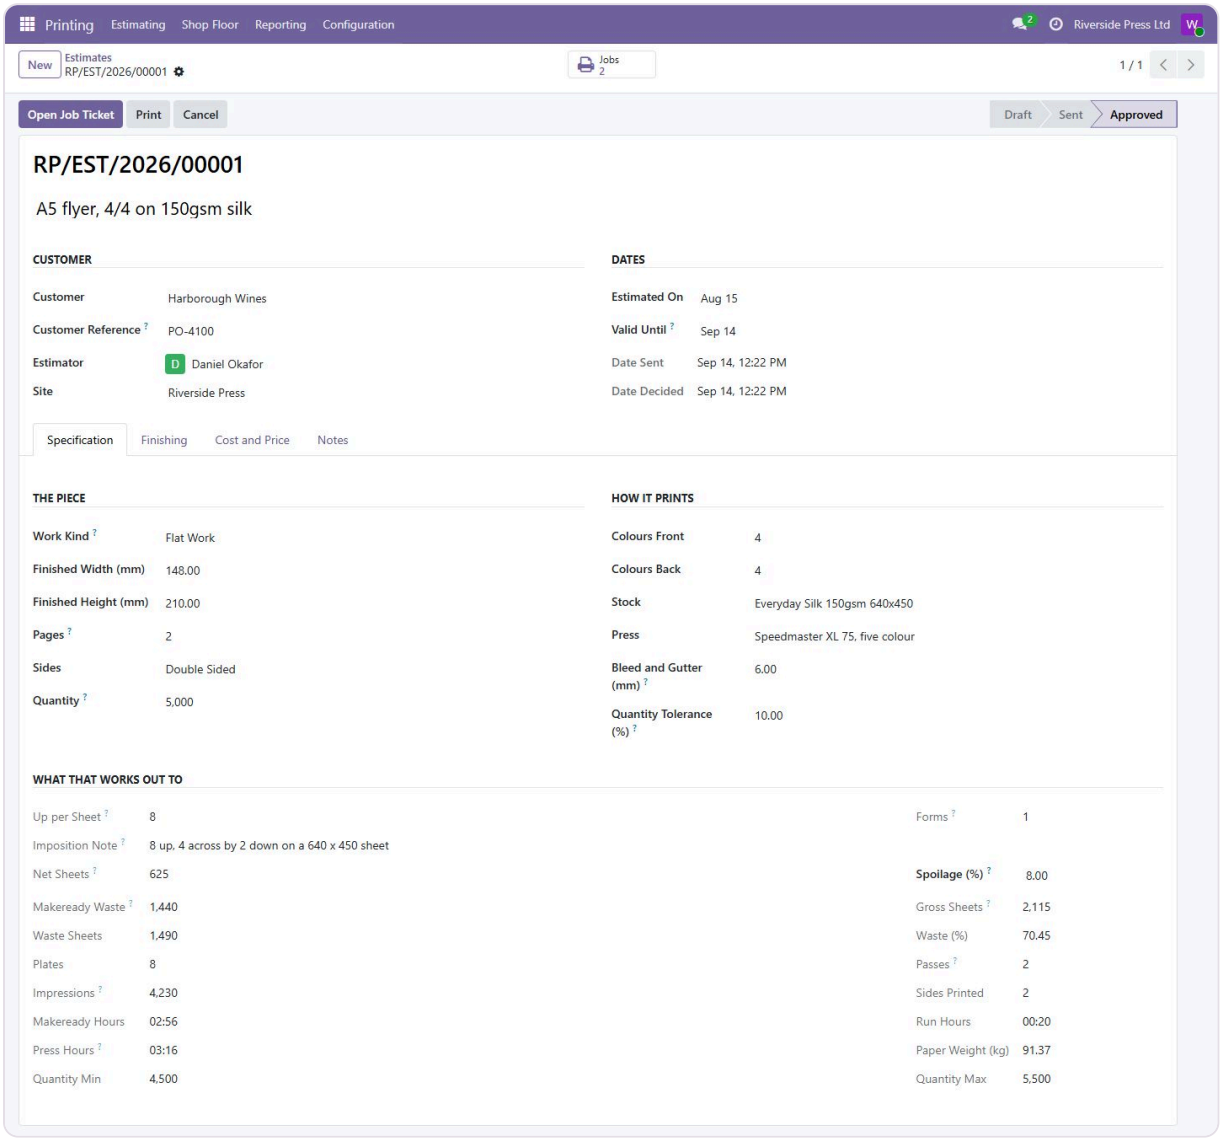

Switch to the kanban view and the estimates sit in one column per status, each card with its value, title, customer, copies, sheets, stock, a Bound badge and the days left on its validity.

The specification

4 The top of the estimate

Click **New**, or open an estimate. **Customer**, **Customer Reference** (their order number), **Estimator** and **Site**. The site sets the job numbering and the house margin. **Estimated On** and **Valid Until** (today plus the validity setting); **Date Sent** and **Date Decided** fill in as it moves. The title under the number is what the job is called on every screen and document.

5 The Piece

Work Kind: Flat Work or Bound Work. **Finished Width** and **Height** in millimetres. **Pages**. For flat work, **Sides** (single or double); for bound work, **Binding** (saddle stitched, perfect bound, PUR bound, wiro bound). **Quantity**.

Switching to Bound Work sets double sided, saddle stitched and 8 pages if there were fewer than four. Back to flat sets binding to None and pages to 2.

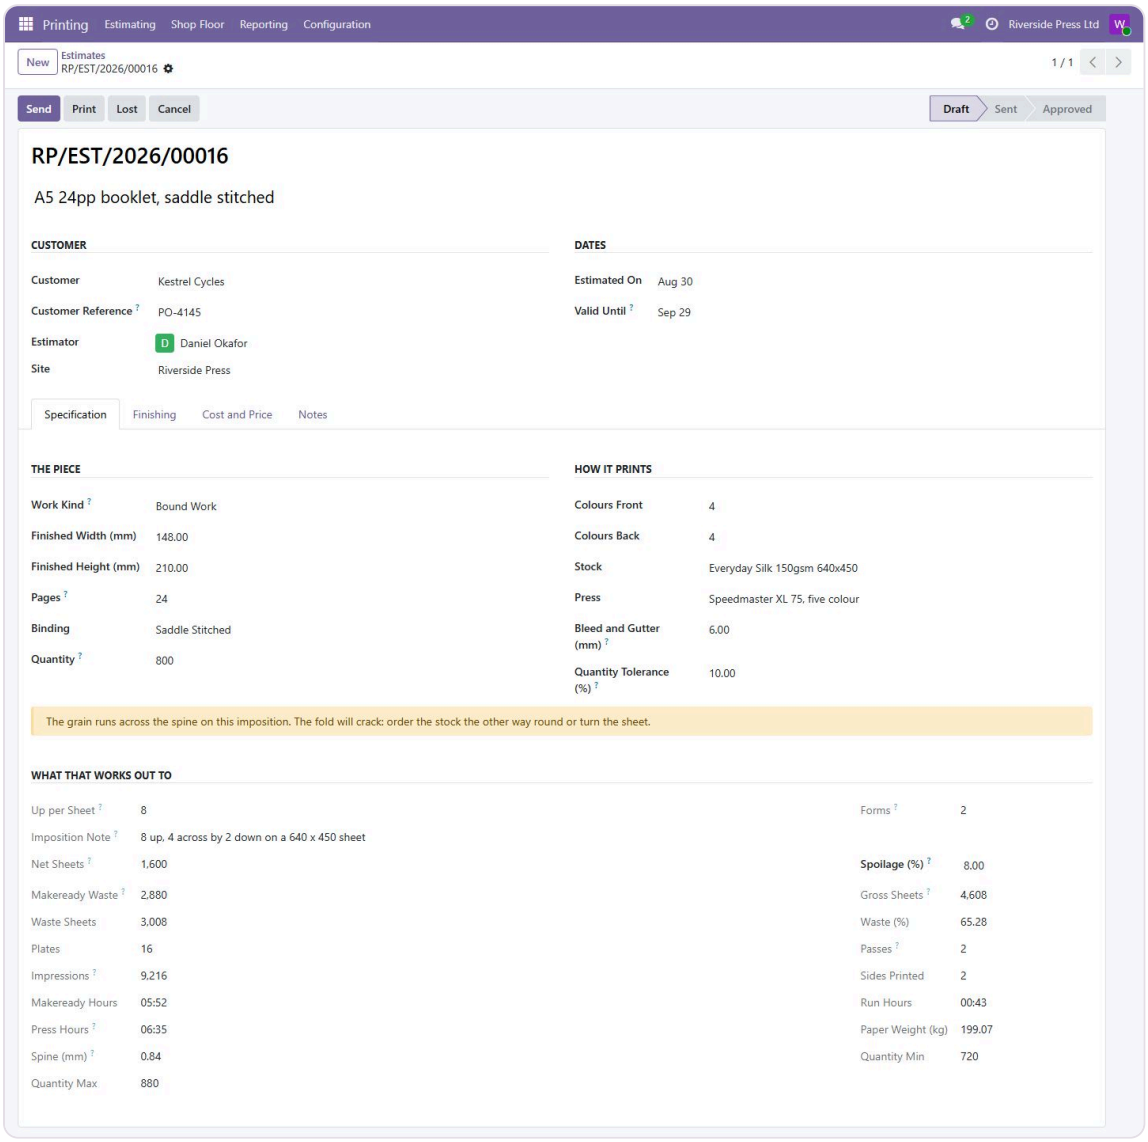

6 How It Prints

Colours Front and **Colours Back**, the **Stock**, the **Press**, **Bleed and Gutter** and **Quantity Tolerance**. Change the press or the stock and every figure below is worked out again.

7 What That Works Out To

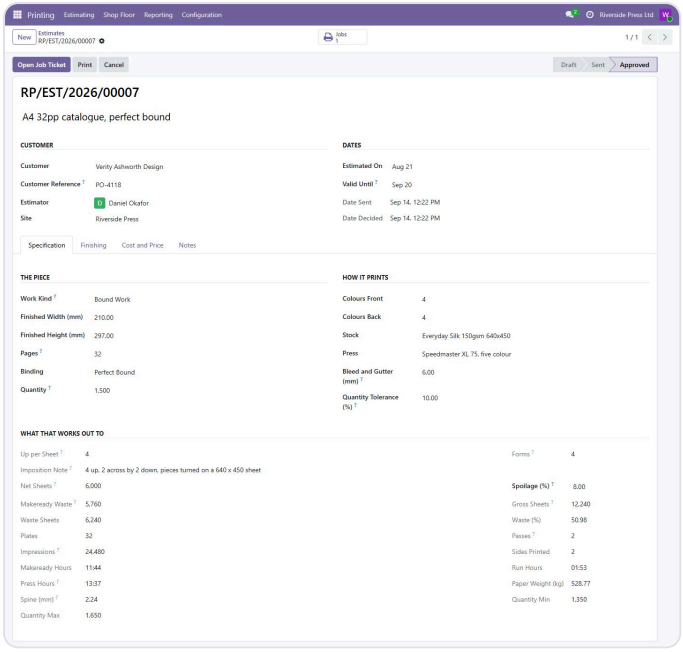

The worksheet. **Up per Sheet** and the **Imposition Note** (how many across and down, and whether the pieces were turned), **Forms**, **Net Sheets**, **Spoilage %**, **Make-ready Waste**, **Gross Sheets**, **Waste Sheets** and **Waste %**, **Plates**, **Passes**, **Impressions**, **Sides Printed**, **Make-ready Hours**, **Run Hours**, **Press Hours**, **Paper Weight**, the **Spine** for bound work, and the **Quantity Min** and **Max** of the tolerance band.

This 24 page A5 booklet is 2 forms at 8 up: 1,600 net sheets, but 16 plates at 180 sheets of make-ready each bring it to 4,608 gross. A short run of a bound book on a big litho press is mostly waste, and the estimate shows it.

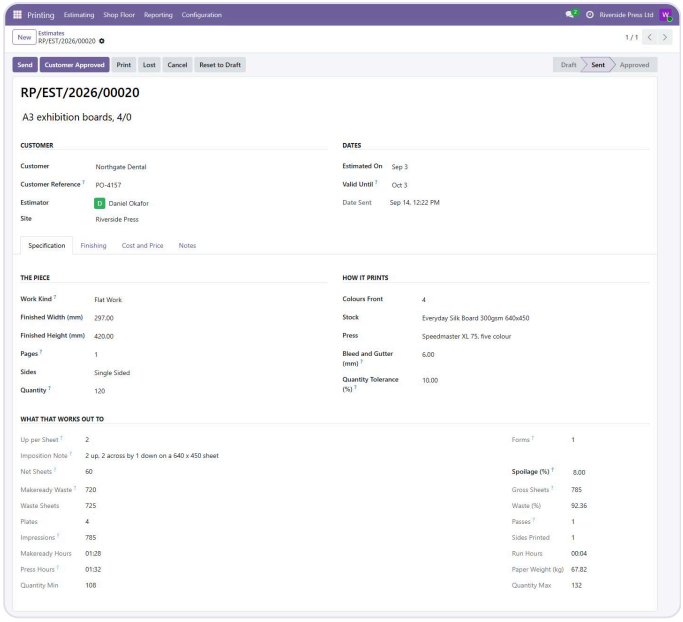

The two warnings

A **yellow band** says the grain runs across the spine on this imposition: order the stock the other way round or turn the sheet. It appears on bound and folded work only. A **blue band** says there is not enough of the paper in the store for this job, and gives the earliest start once the merchant's lead time is added. Neither stops you saving; they are there so the estimator decides knowingly.

A 32 page A4 catalogue, perfect bound: 4 up, 12,240 gross sheets and a spine worked out from the caliper.

A3 exhibition boards on the digital press: no plates, a click charge per side, and a make-ready of a few sheets.

What the estimate refuses

REFUSED WHEN	WHY
The piece does not fit the sheet once the gripper and bleed are allowed	There is no imposition to print
The stock will not feed through the press, either way round	The press cannot take the sheet
More colours in one pass than the press has units	A 4/4 job on a two unit press would need four passes and is priced wrongly
A bound job with fewer than four pages	There is nothing to bind
Saddle stitched pages not a multiple of four, or perfect bound pages odd	The sections will not gather
Single sided work with colours on the back, or Valid Until before the date	The record contradicts itself

PART 11 Finishing, cost and price

With the sheets worked out, the estimate costs each part of the job separately, adds the overhead, and works the price back from the margin you want. You can see which part is eating the job, and type over the price when the market says otherwise.

IN THIS PART YOU WILL LEARN

- Adding finishing operations to an estimate
- The cost build-up line by line, and how each line is worked out
- Target margin, sell price, price per copy and per thousand
- Taxes, and why a tax inclusive price is grossed up

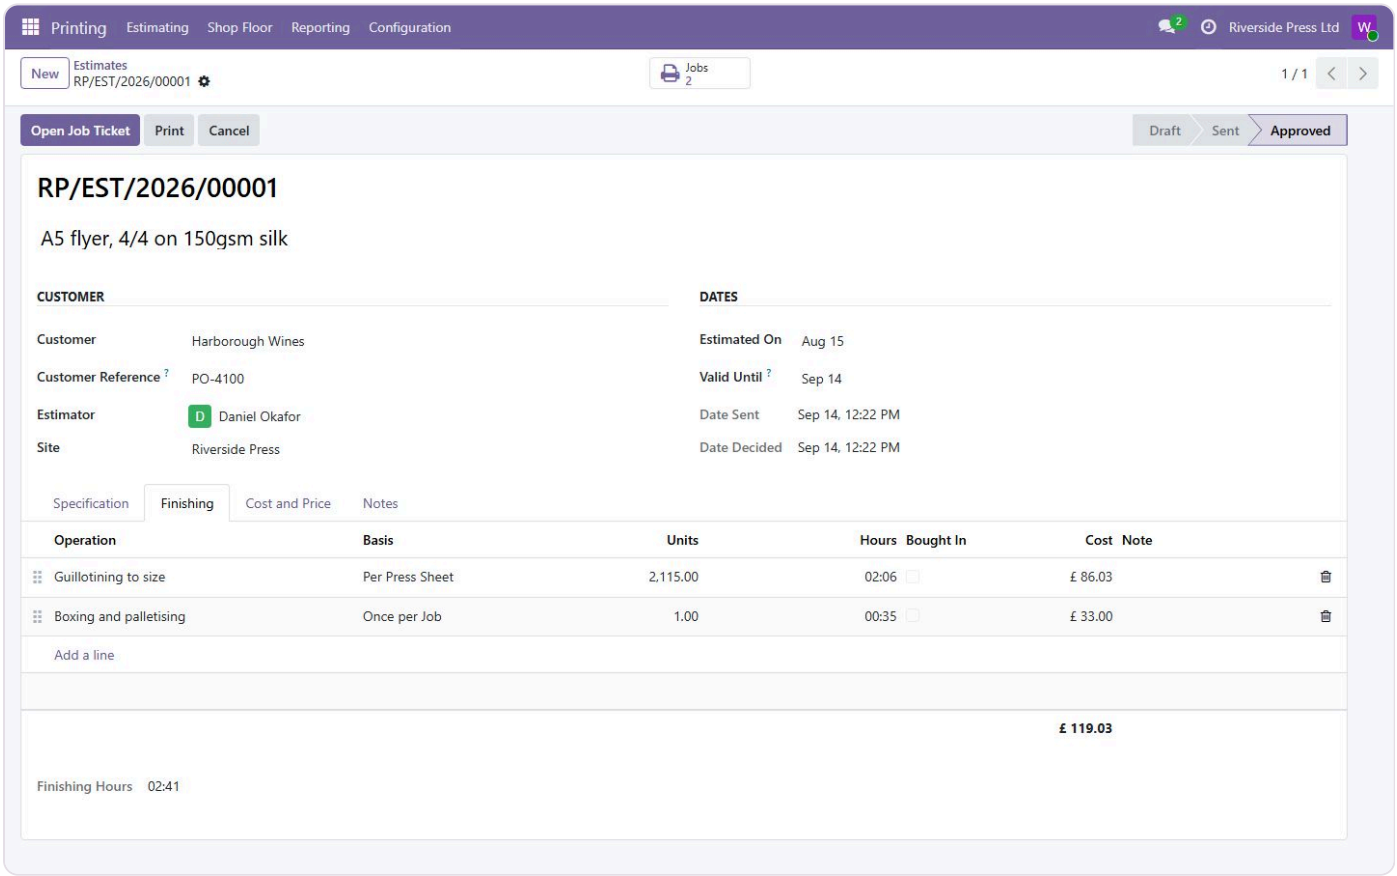

TRY IT YOURSELF ON THE DEMO

1. Open RP/EST/2026/00001 and click the Finishing tab
2. Then click Cost and Price and follow the sums below

1 The Finishing tab

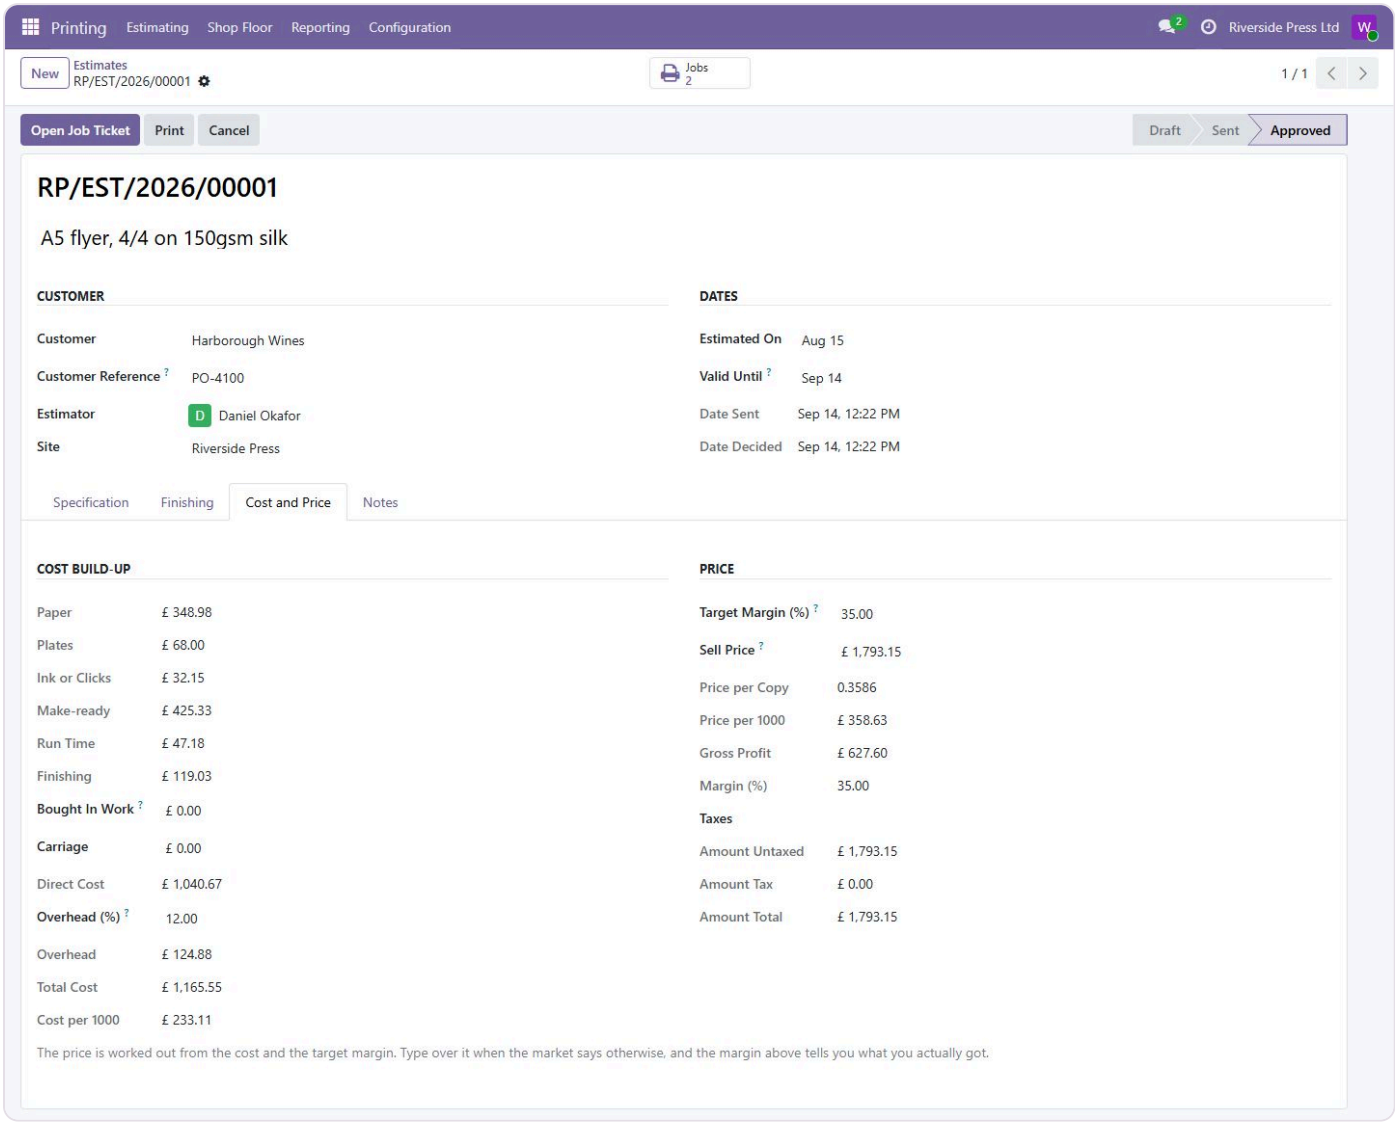

Add a line per operation in the order they happen and drag the handle to reorder. Each line shows the **Basis**, the **Units** it works on (press sheets, copies, or 1 for the job), the **Hours**, whether it is **Bought In**, its **Cost** and a note. The same operation cannot appear twice on one estimate. **Finishing Hours** totals underneath.

Guillotining 2,115 sheets costs 86.03 and takes 2 hours 6 minutes; boxing the job once costs 33.00.

2 The Cost and Price tab

Visible to estimators and managers only. **Cost Build-up** on the left, **Price** on the right, explained line by line in the two tables below.

The cost build-up

LINE	HOW IT IS WORKED OUT	ON THE A5 FLYER
Paper	Gross sheets x cost per sheet	2,115 × 0.165 = 348.98
Plates	Plates x plate cost (none on digital)	8 × 8.50 = 68.00
Ink or Clicks	Litho: gross sheets x colours x ink per 1,000 / 1,000. Digital: impressions x click charge	2,115 × 8 × 1.90 / 1,000 = 32.15
Make-ready	Make-ready hours x press hour rate	8 × 22 min = 2.93 h x 145 = 425.33
Run Time	Run hours x press hour rate	0.33 h x 145 = 47.18
Finishing	The sum of the Finishing tab	119.03
Bought In Work	Typed in: outwork not set up as an operation	0.00
Carriage	Typed in: delivery	0.00

Direct Cost	All of the above	1,040.67
Overhead	Direct cost x overhead %, 12 by default	124.88
Total Cost	Direct cost + overhead, with the cost per 1,000	1,165.55

The price

FIELD	WHAT IT IS
Target Margin	From the site, or the company setting. Margin on the sell price: 35 per cent means cost is 65 per cent of the price
Sell Price	Total cost / (1 - margin). Type over it to quote a market price; 1,165.55 / 0.65 = 1,793.15
Price per Copy, per 1000	The sell price spread over the quantity: 0.3586 a copy, 358.63 a thousand
Gross Profit, Margin %	What is actually left after cost on the untaxed amount. Read this after typing over the price
Taxes	The sales taxes for the quote, with the untaxed, tax and total amounts

> If a tax is included in the price, the module grosses the price up so the margin is made on what the shop keeps, not on what the customer pays. Tax added on top leaves the figures as they are.

PART 12 Sending, winning and losing an estimate

An estimate moves from Draft to Sent to Approved, or it is lost, expires or is cancelled. Approved, it opens the job ticket with the whole specification already on it.

IN THIS PART YOU WILL LEARN

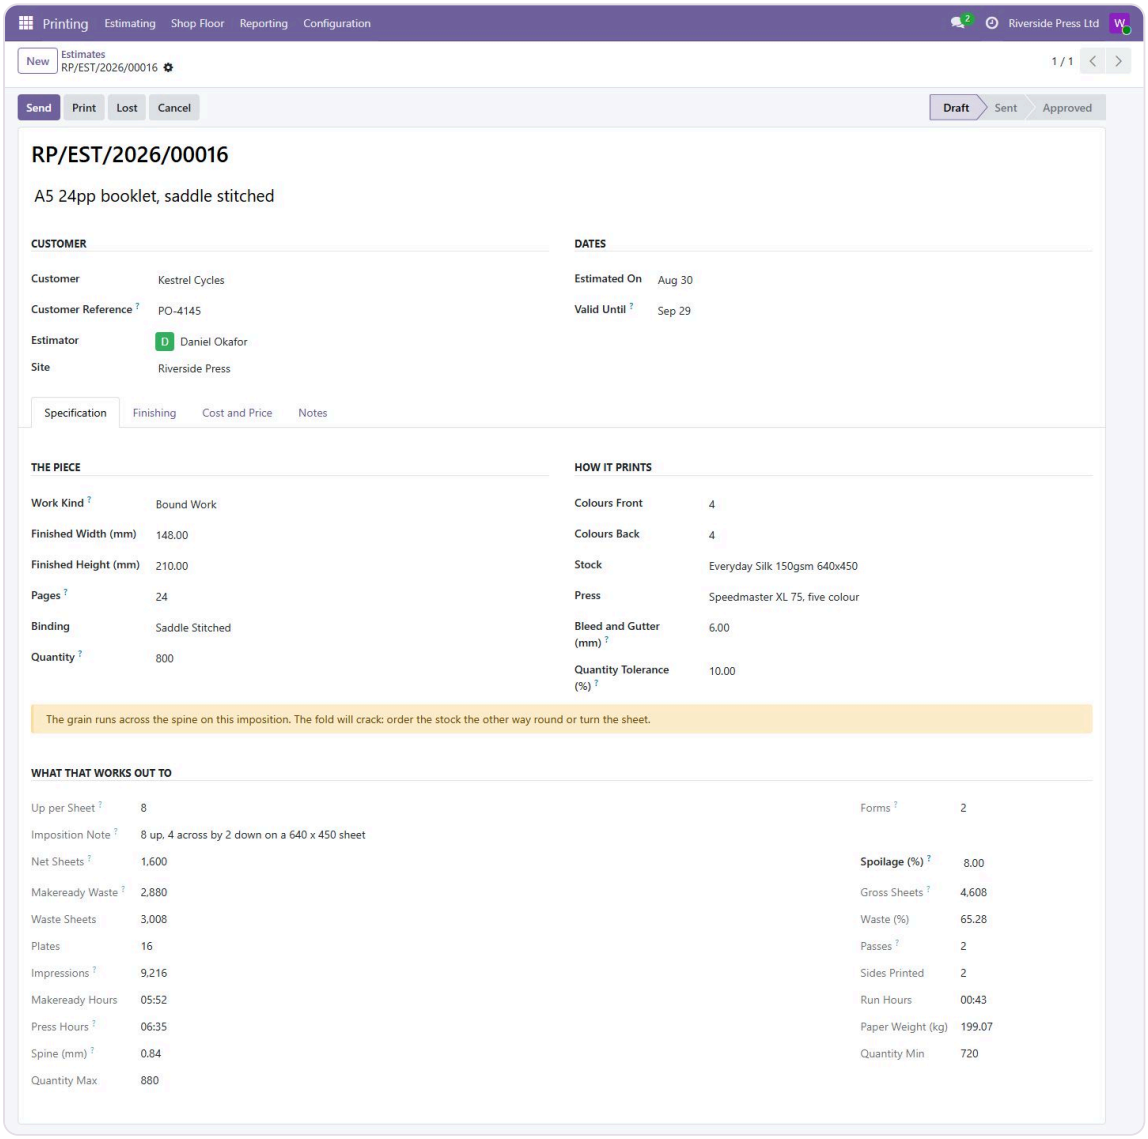

- Send and Print, and the email the customer receives
- Customer Approved, Lost, Cancel and Reset to Draft, and what each refuses
- How an estimate expires
- Open Job Ticket

TRY IT YOURSELF ON THE DEMO

1. Open RP/EST/2026/00016, a draft, and read its buttons
2. Open RP/EST/2026/00018, a lost one, and read the Notes tab
3. Open RP/EST/2026/00001 and click the Jobs button at the top

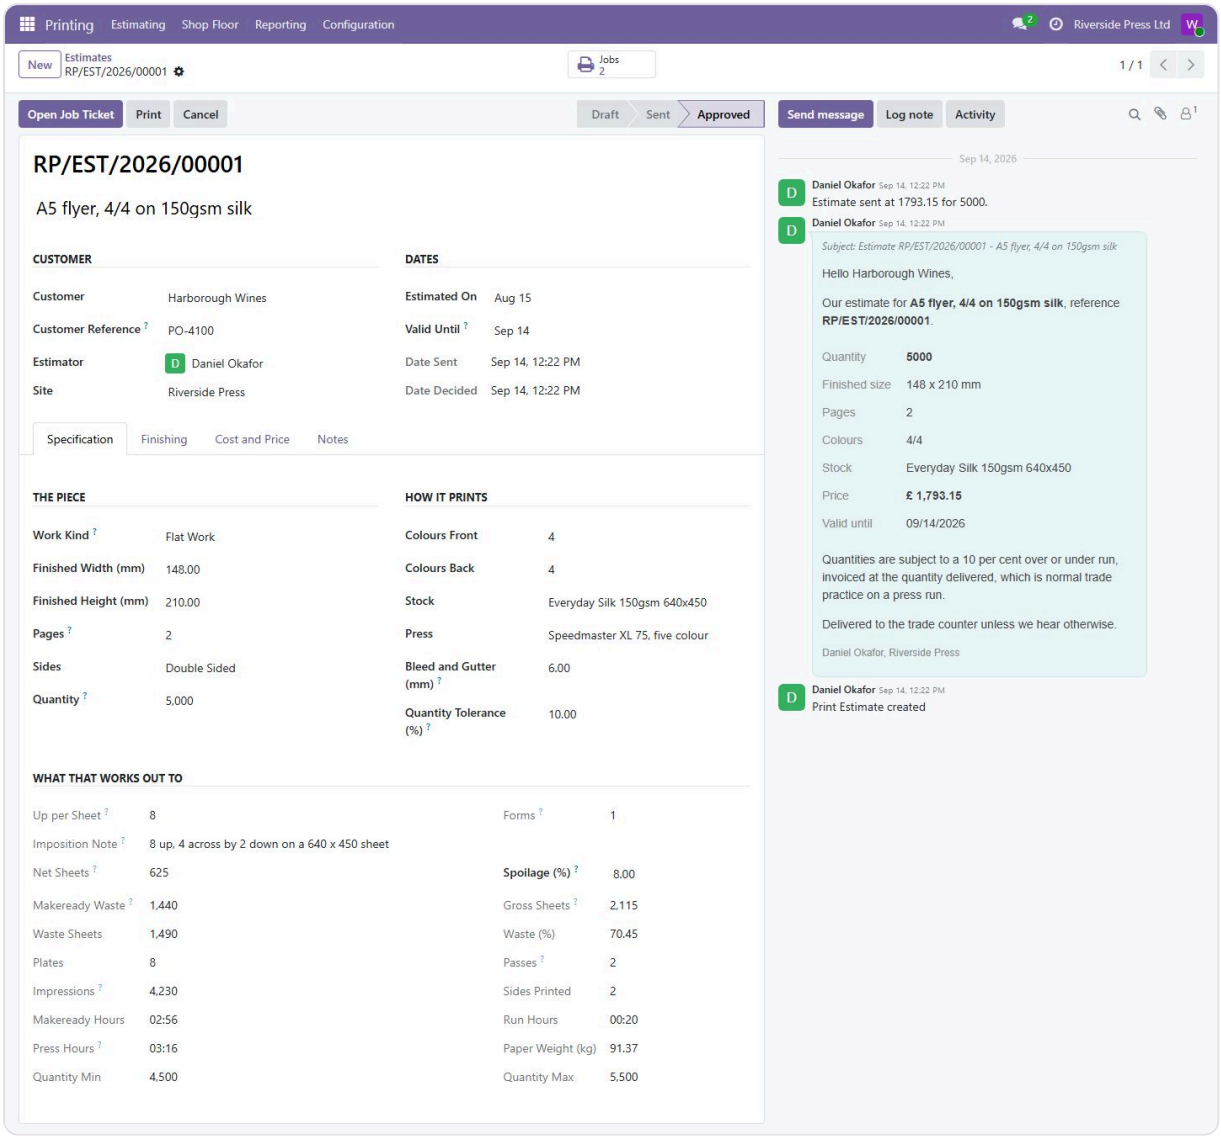

1 A draft

A draft carries **Send**, **Print**, **Lost** and **Cancel**. **Print** produces the estimate PDF (Part 21). **Send** refuses if the imposition does not work out, marks the estimate Sent with the date, and emails it to the customer if they have an email address.

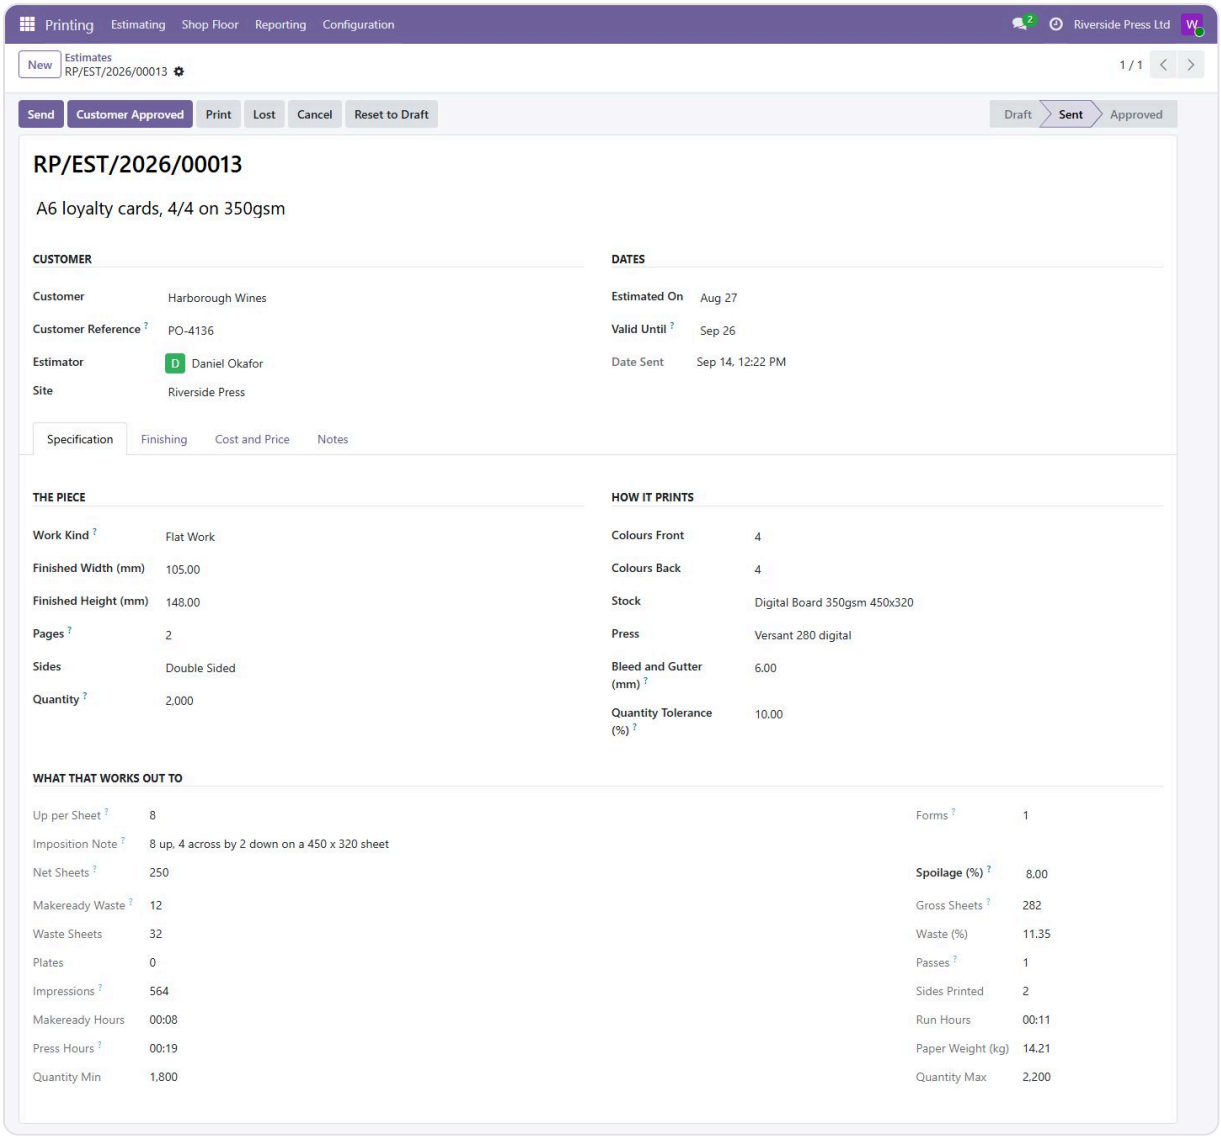

2 What the customer receives

The email sits on the chatter on the right, so anyone picking up the file sees exactly what was promised: quantity, finished size, pages, colours, stock, price, valid until, and the over and under terms.

3 A sent estimate

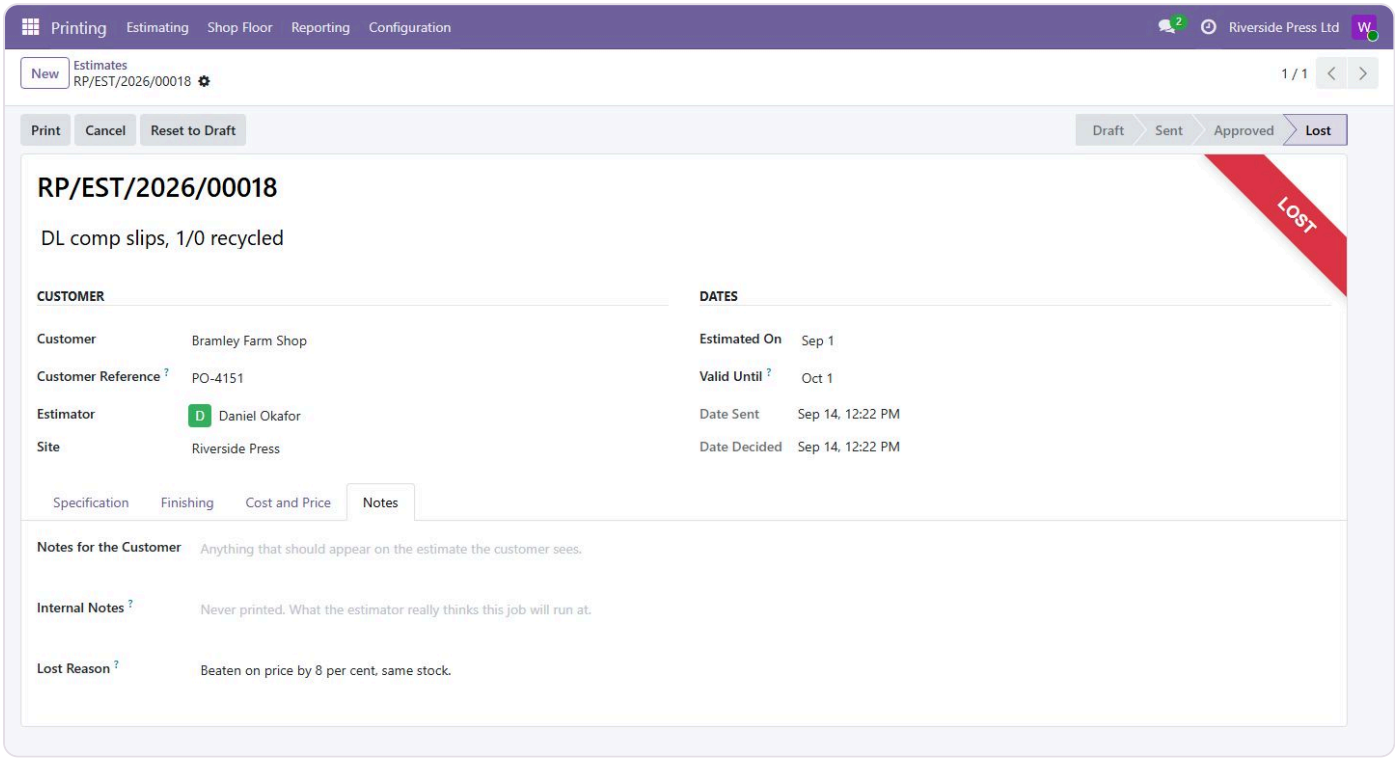

A sent estimate carries **Send** (to send it again), **Customer Approved**, **Lost**, **Cancel** and **Reset to Draft**. Customer Approved stamps the **Date Decided**.

4 A lost estimate

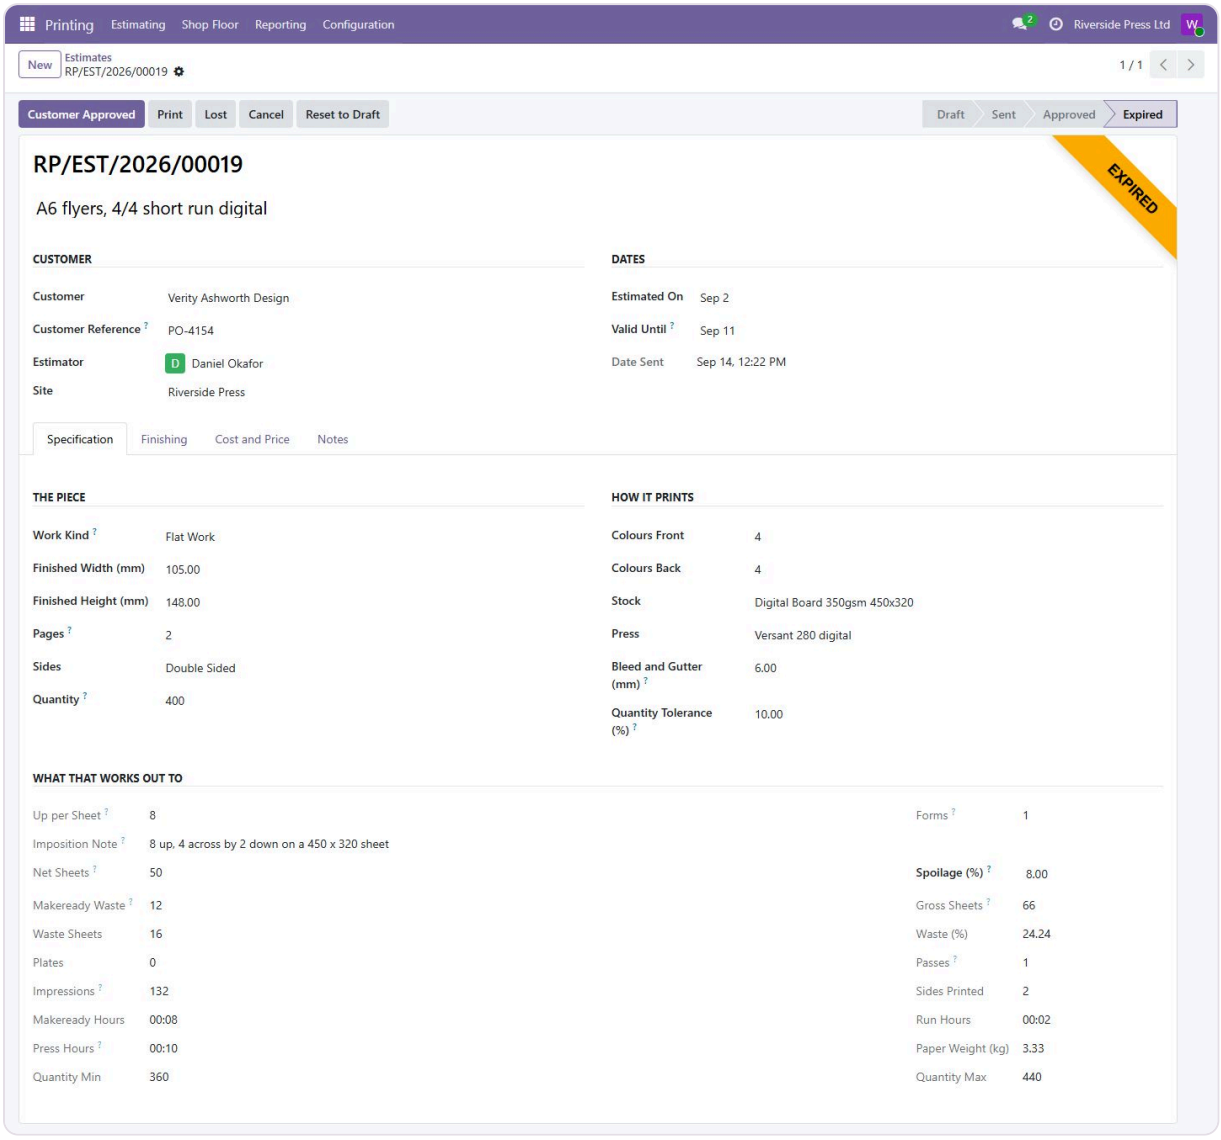

Before **Lost** will work, write the **Lost Reason** on the Notes tab: price, lead time, quality, or they never came back. A red ribbon marks the record. The Notes tab also holds the **note** printed on the estimate and the estimator's **internal note**, which is never printed.

Here: beaten on price by 8 per cent, same stock.

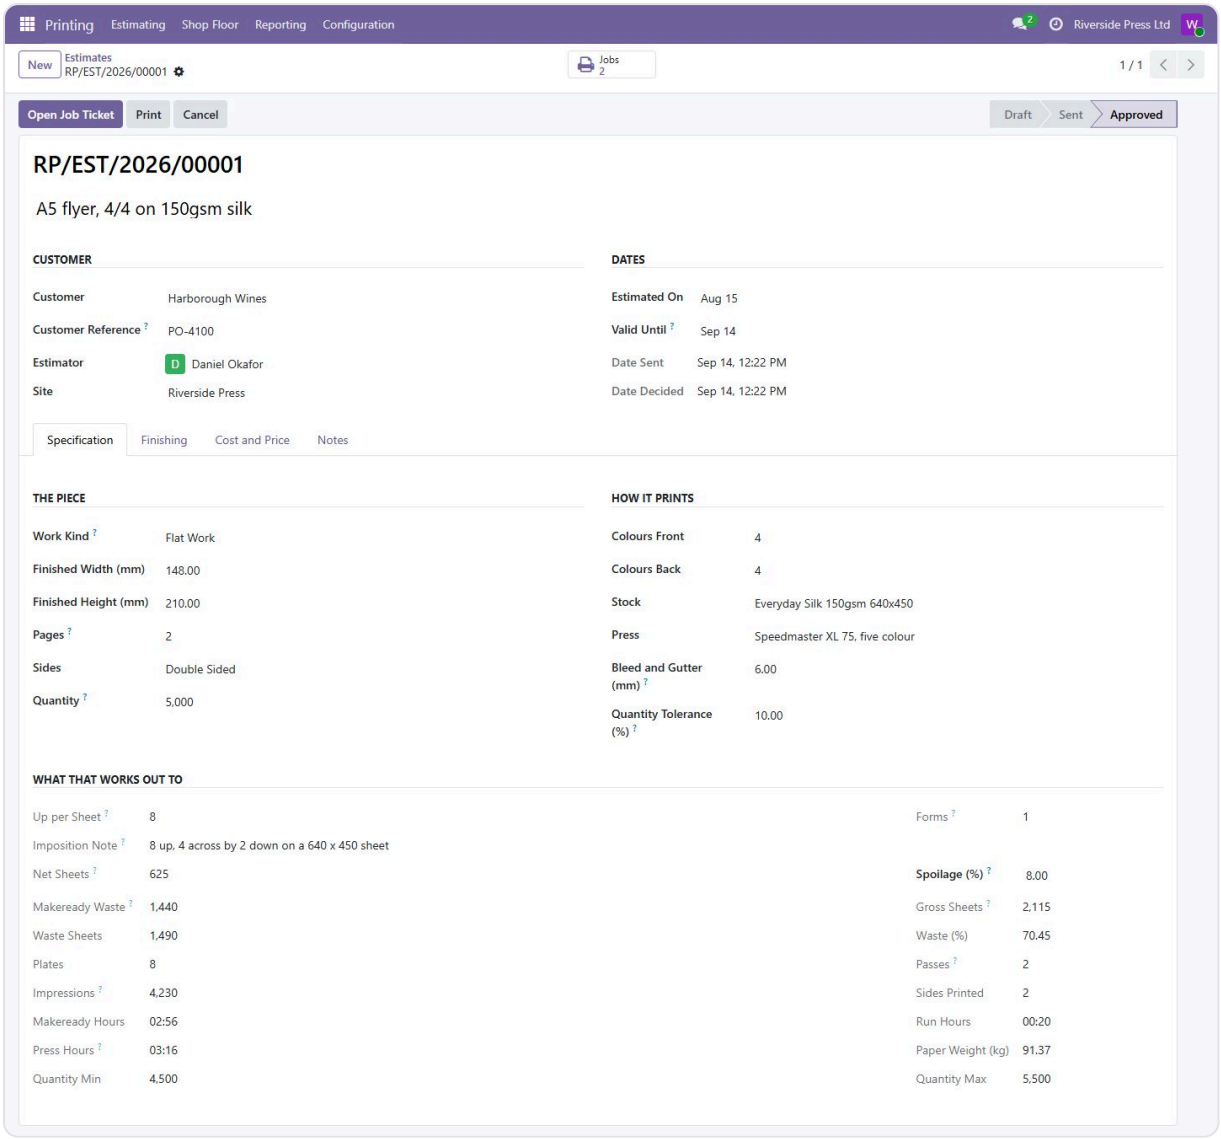

5 An expired estimate

Once a sent estimate passes Valid Until, the daily job marks it **Expired** with an amber ribbon and a chatter note. It cannot be approved as it stands: **Reset to Draft**, re-price, and send it again.

6 An approved estimate

Open Job Ticket creates the ticket with the customer, reference, specification, press, stock, tolerance, taxes, price per copy and every finishing line. The **Jobs** button at the top opens it. A second ticket is refused while one is live: a job that has to run again is raised as a reprint from the job.

What each button refuses

BUTTON	REFUSED WHEN
Send	The estimate has already been decided, or the imposition does not work out
Customer Approved	It is lost, cancelled, already approved or expired
Lost	It is approved (cancel the job instead), or there is no lost reason
Cancel	A job ticket off it is already past draft
Reset to Draft	A live job ticket is against it
Open Job Ticket	It is not approved, or a live ticket already exists

PART 13 The job ticket

The job ticket is what the floor works from. It carries the specification from the estimate and walks through eight stages, with the buttons changing as it moves. Nothing moves a ticket except those buttons.

IN THIS PART YOU WILL LEARN

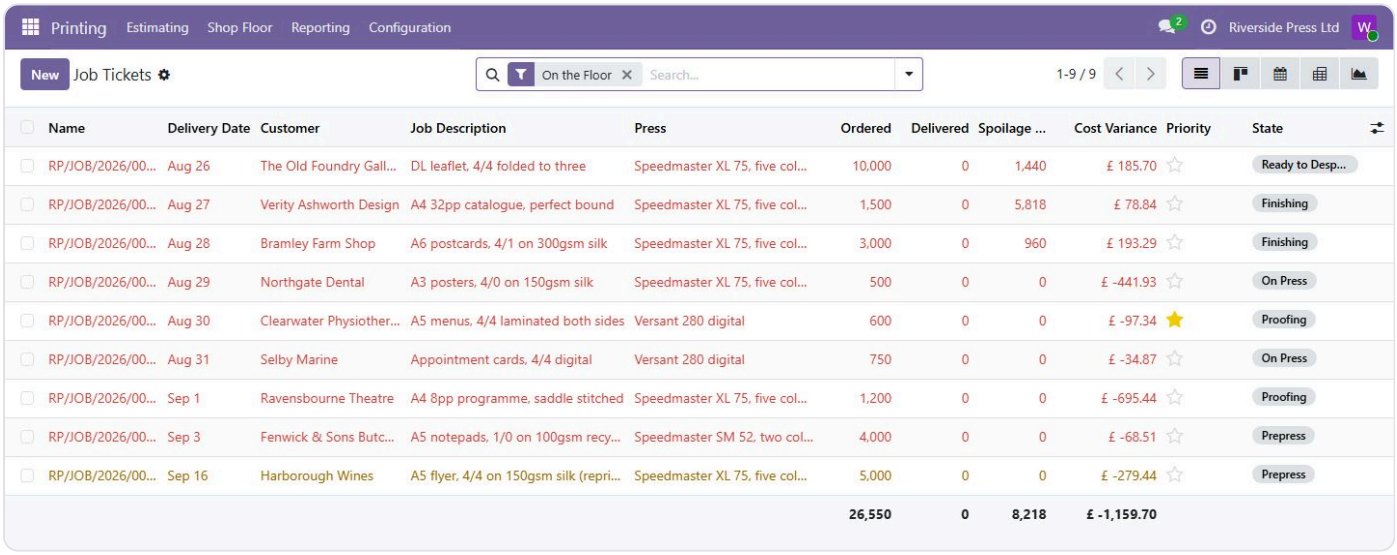

- The job list, its colours, filters and the press diary
- The eight stages and which button moves the ticket out of each
- Book on Press, priority, the Late ribbon and the no proof banner
- Every tab on the ticket

TRY IT YOURSELF ON THE DEMO

1. Shop Floor, then Job Tickets
2. Open RP/JOB/2026/00012, in prepress, and read the red banner
3. Switch to the calendar view to see the press diary

1 The job tickets list

Shop Floor, then **Job Tickets**. It opens on **On the Floor** (prepress to despatch). Each line shows the delivery date, customer, title, press, ordered and delivered copies, sheets spoiled, cost variance, priority and stage. Late jobs are red, reprints amber, delivered green.

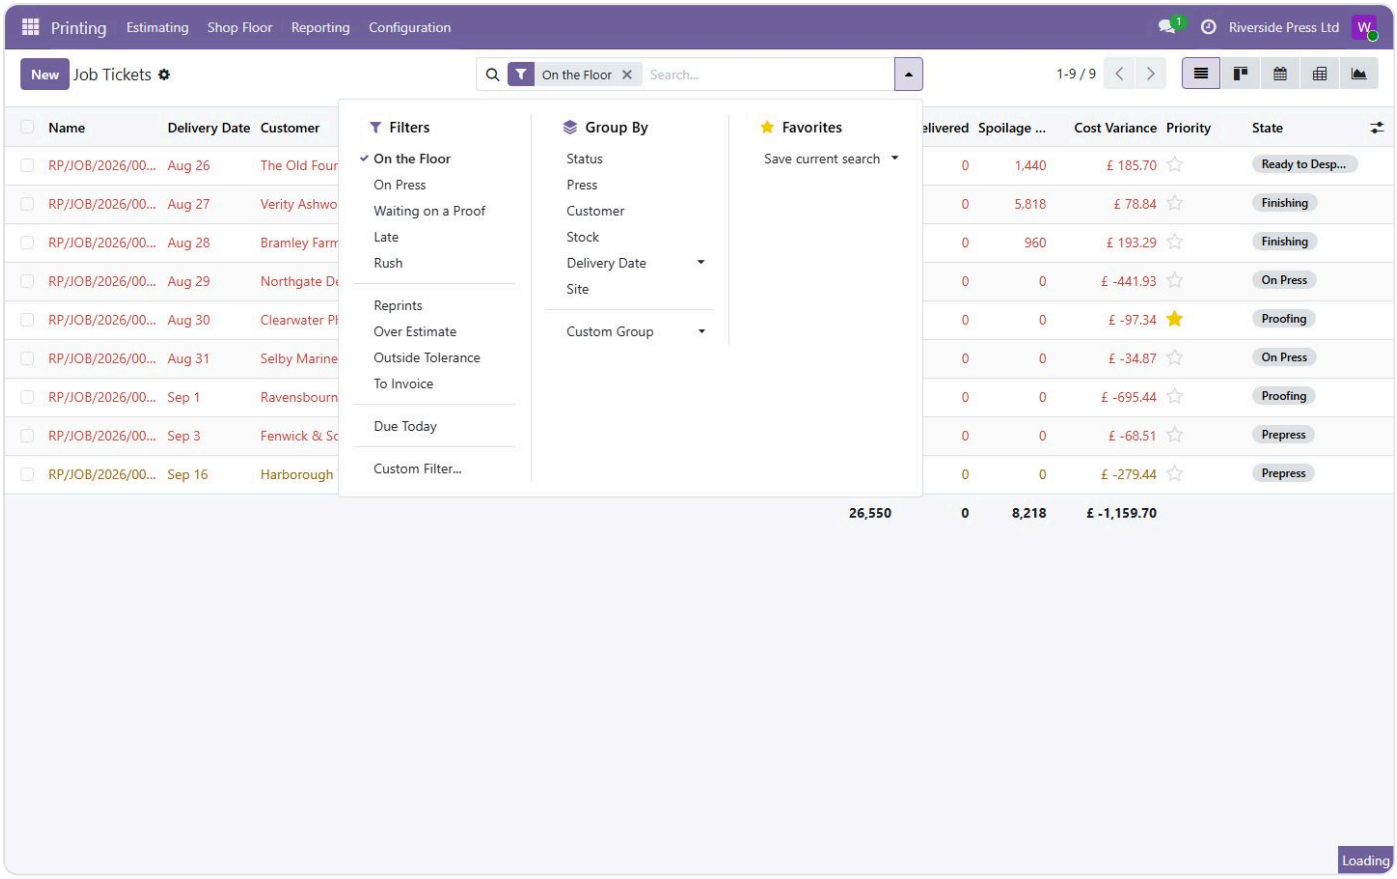

Name	Delivery Date	Customer	Job Description	Press	Ordered	Delivered	Spoilage ...	Cost Variance	Priority	State
RP/JOB/2026/00...	Aug 26	The Old Foundry Gall...	DL leaflet, 4/4 folded to three	Speedmaster XL 75, five col...	10,000	0	1,440	£ 185.70		Ready to Desp...

					26,550	**0**	**8,218**	**£ -1,159.70**		

2 Filter and group

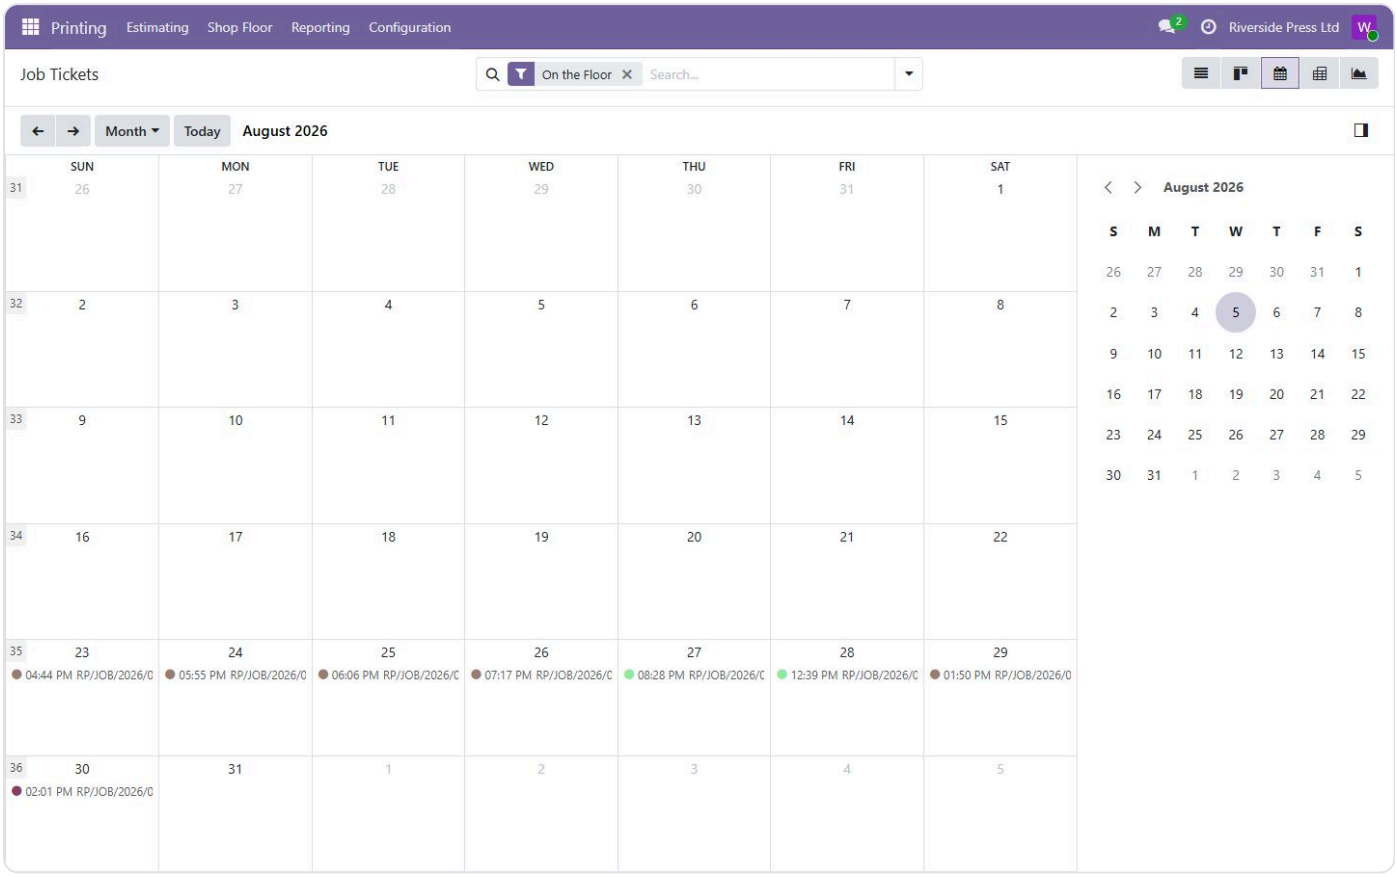

Filters: **On the Floor**, **On Press**, **Waiting on a Proof**, **Late**, **Rush**, **Reprints**, **Over Estimate** (estimators only), **Outside Tolerance**, **To Invoice** and **Due Today**. Group by status, press, customer, stock, delivery date or site.

To Invoice is the end of day check: delivered and not yet billed.

3 The press diary

The calendar view places every ticket on its **On Press** date, coloured by press. Pivot and graph views give press hours by press.

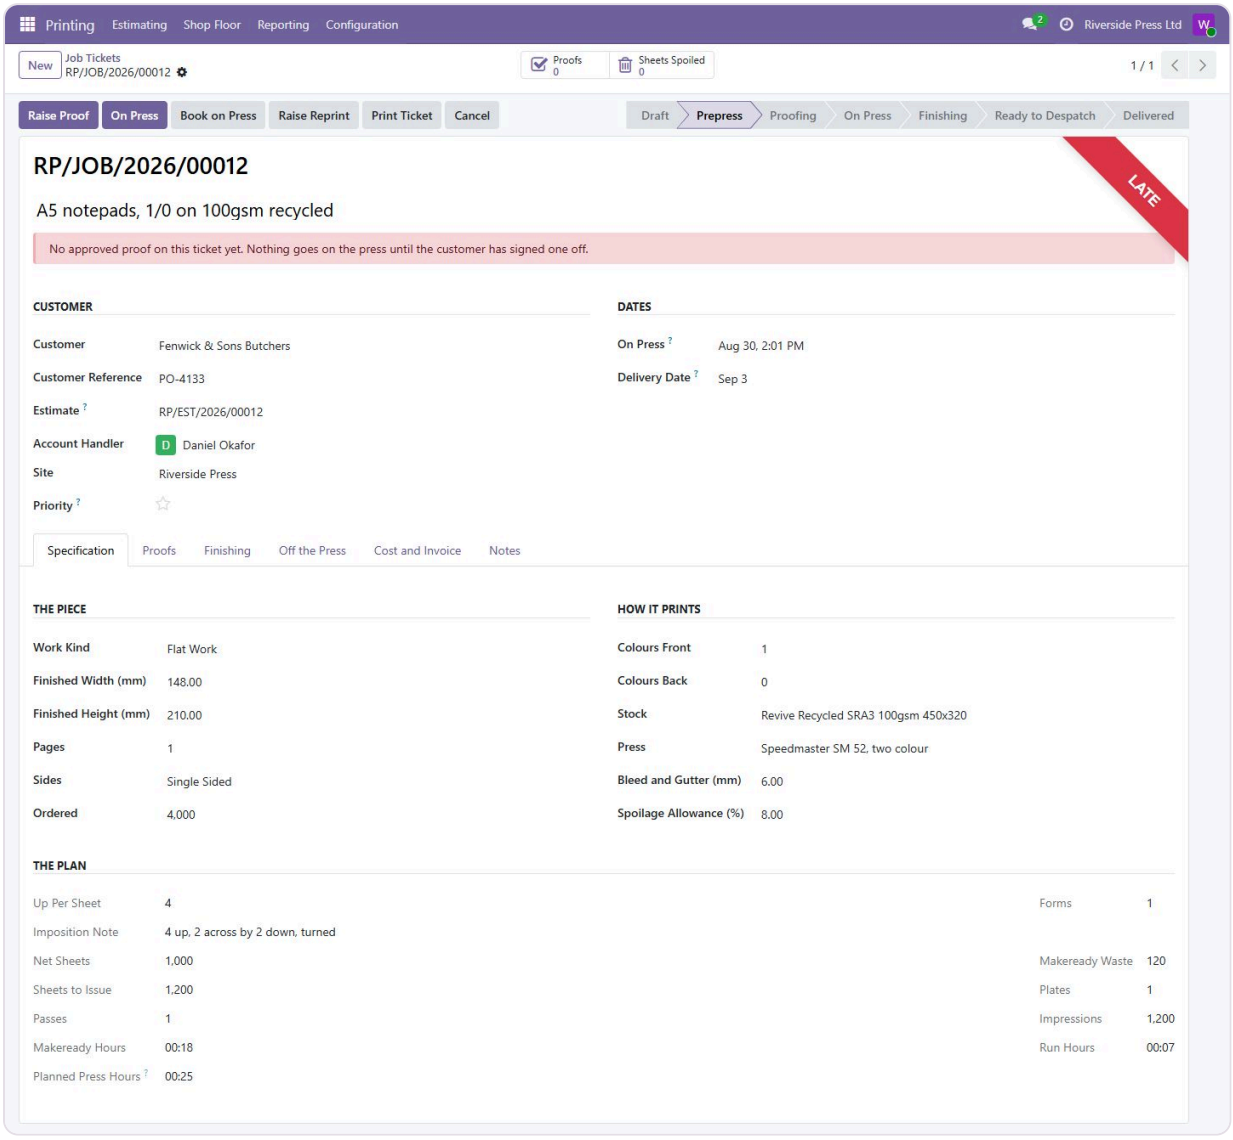

The stages

STAGE	BUTTON THAT MOVES IT ON	WHAT THE BUTTON CHECKS
Draft	Start Prepress	Only from draft
Prepress	Raise Proof, or On Press	On Press needs an approved proof when the setting is on
Proofing	On Press	An approved proof with a name and a time
On Press	Off Press	The sheet count off the press counter is filled in
Finishing	Finishing Done	Every finishing operation is booked off
Ready to Despatch	Despatch	The delivered quantity is counted and inside the tolerance
Delivered	Invoice	Not invoiced yet, and the site has a print product
Invoiced	none	Cancel is refused; credit the invoice instead

> Off Press goes straight to Ready to Despatch when the job has no finishing operations. A status cannot be typed or dragged onto a ticket; every move goes through its button so its checks run.

4 A ticket in prepress

The header shows **Raise Proof**, **On Press**, **Book on Press**, **Raise Reprint**, **Print Ticket** and **Cancel**. The red banner, *No approved proof on this ticket yet*, stays until a proof is approved. The **Late** ribbon shows once the delivery date has passed.

5 Customer and Dates

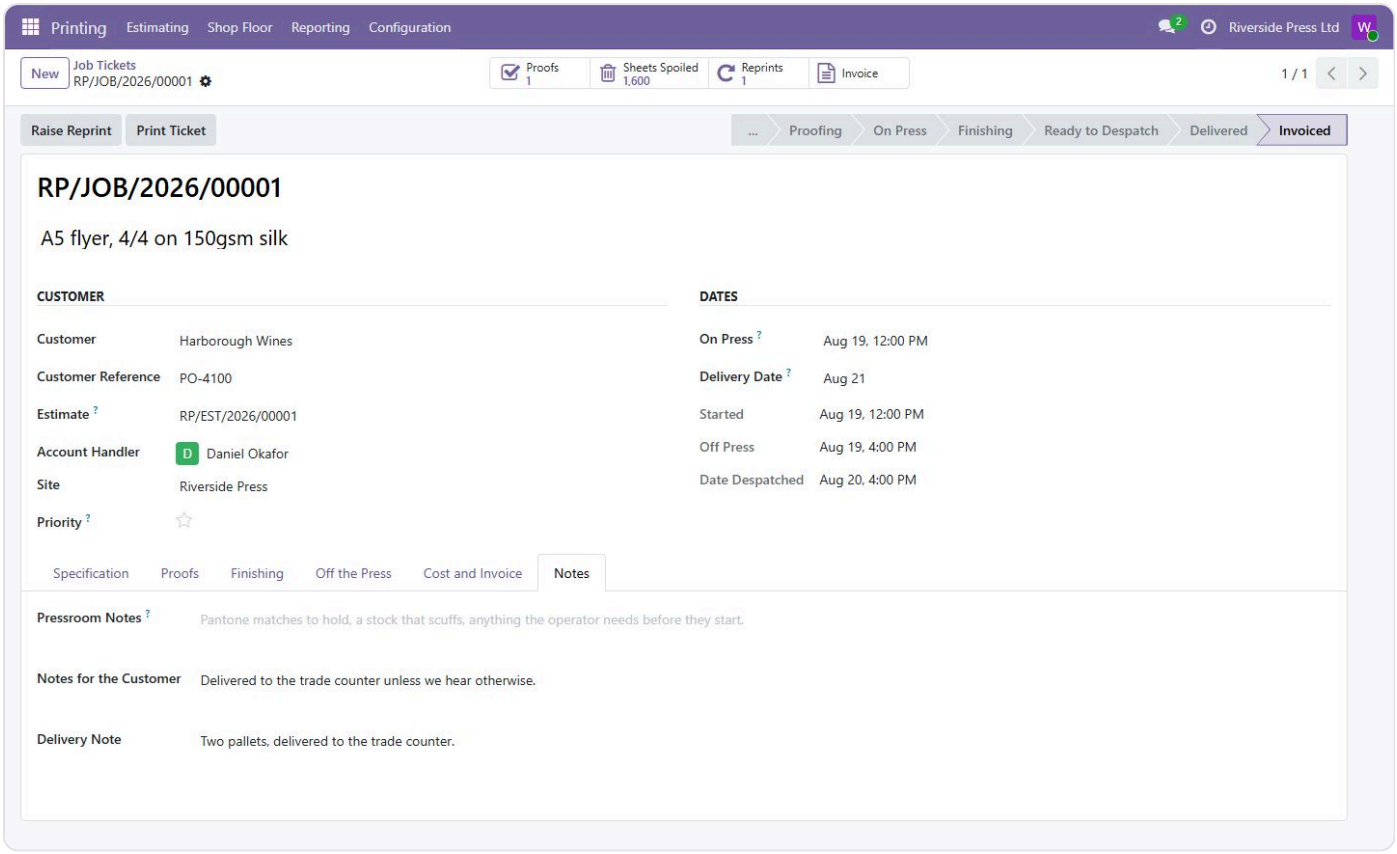

Customer, **Customer Reference**, the **Estimate** it came from, the **Account Handler**, the **Site** and **Priority** (the star marks a rush job). **On Press** is the planned start and **Delivery Date** the promise; **Started**, **Off Press** and **Date Despatched** fill in as it moves.

6 Book on Press

Sets On Press to the next day at the shift start, and the delivery date one day later, plus the longest lead time of any bought in finishing operation on the job.

7 The Notes tab

Pressroom Notes for the operator (Pantone matches, a stock that scuffs), **Notes for the Customer**, and the **Delivery Note**: where it goes and who signs for it.

The **Specification** tab repeats the estimate's piece and print settings with **The Plan** underneath: up per sheet, forms, net, make-ready and gross sheets, plates, passes, impressions and the make-ready, run and press hours. The other tabs, Proofs, Finishing, Off the Press and Cost and Invoice, have a part each below. Cancel puts a ticket aside; only a cancelled ticket can be reset to draft.

PART 14 Proofs and the customer's approval

Nothing goes on the press without an approved proof. The proof record holds the version, the file that went out, the method, the name of the person who approved it and the time they did. That record is what settles a misprint argument weeks later.

IN THIS PART YOU WILL LEARN

- Raising a proof from the job, and versions
- Send, Record Approval, Changes Requested and Chase
- Why a name is required, and only one approved proof per job
- The proofs list and its filters

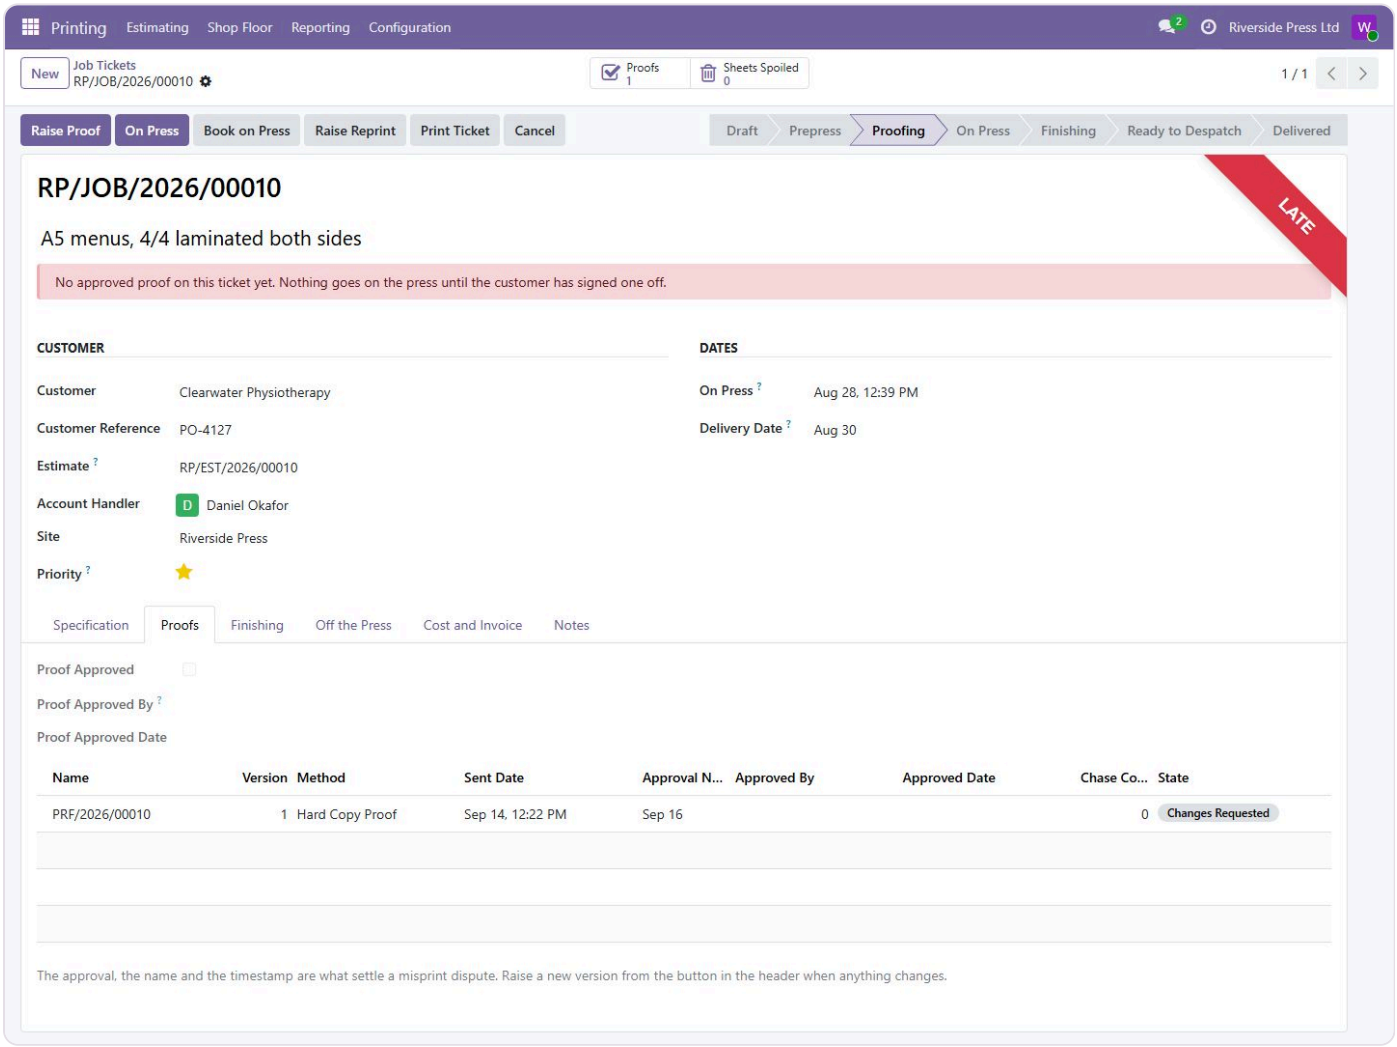

TRY IT YOURSELF ON THE DEMO

1. Open RP/JOB/2026/00010 and click the Proofs tab
2. Shop Floor, then Proofs, and clear the filter to see every version
3. Open PRF/2026/00001, an approved proof

1 The Proofs tab on a job

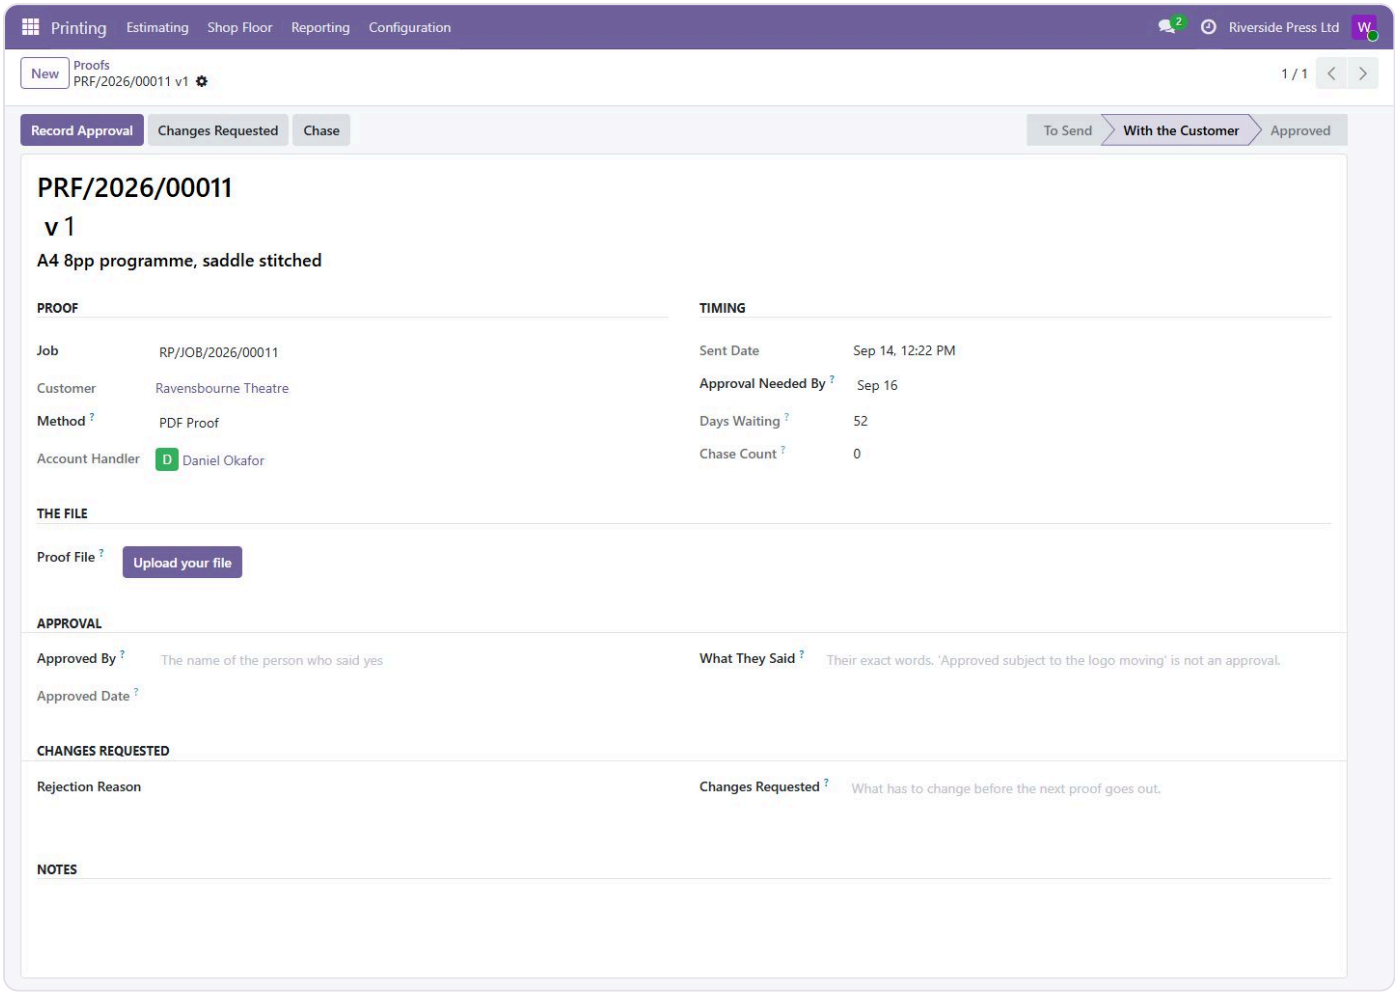

Raise Proof in the header creates the next version, sets its approval deadline (today plus the chase setting), supersedes any earlier version still out, moves the job to Proofing and opens the new proof. The tab shows whether a proof is approved, by whom and when, and every version with its method, dates, approver and chase count.

Raising and recording proofs needs the Estimator role; a Press Operator can read them but not change them.

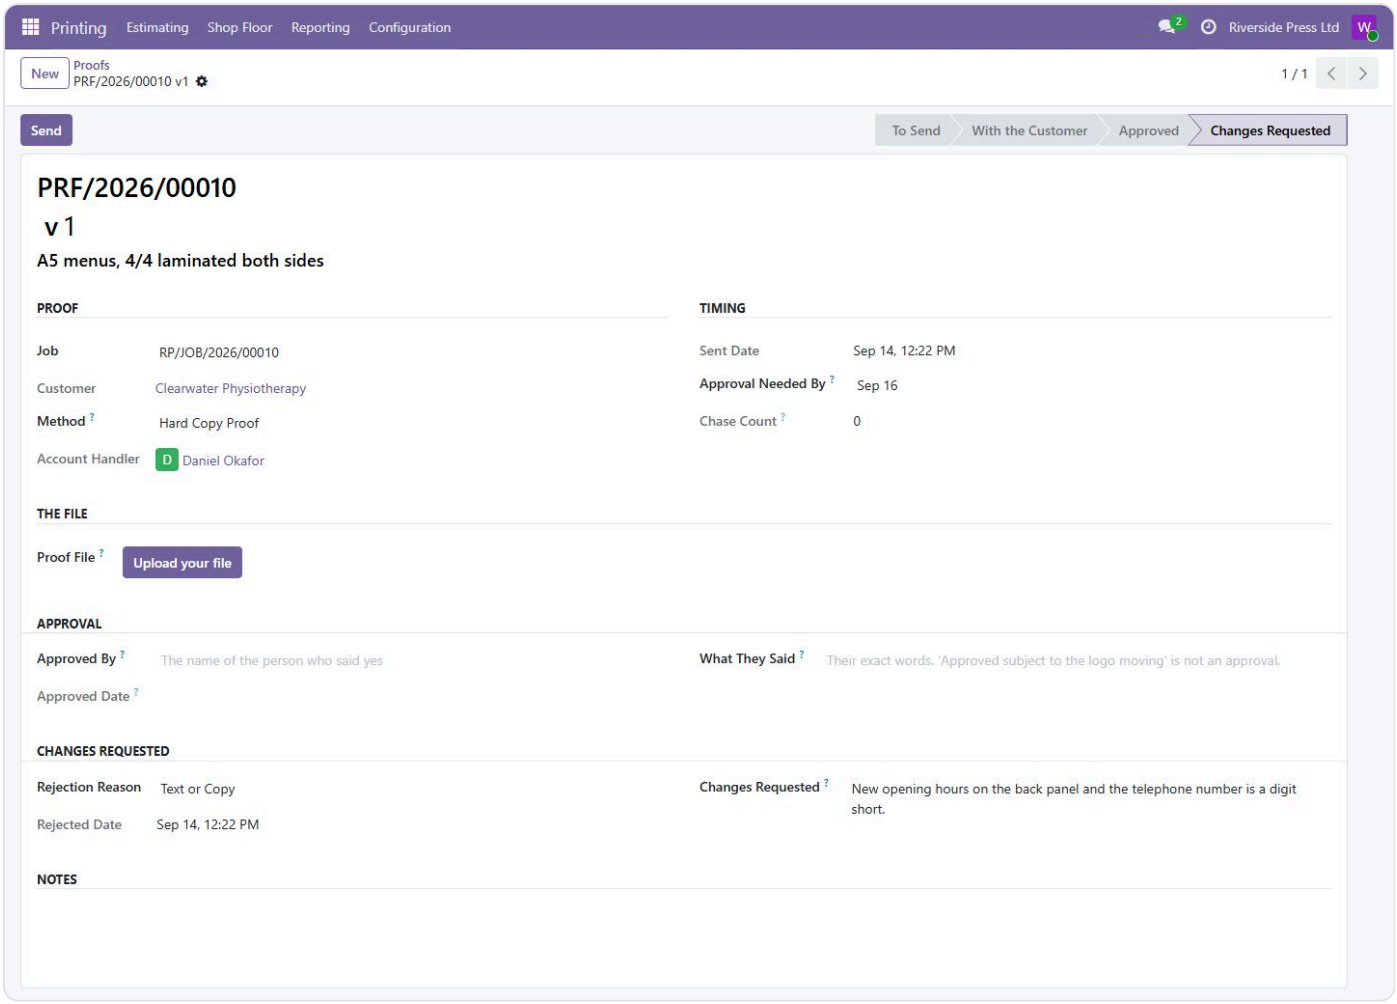

2 A proof with the customer

Method: PDF, on screen, hard copy, wet proof on the press or a contract colour target. Upload the **Proof File** that went out. **Send** marks it With the Customer, stamps the sent date, emails the customer and notes it on the job. While it waits it shows **Days Waiting** and offers **Chase**, which emails a reminder and adds one to the **Chase Count**.

3 Changes requested

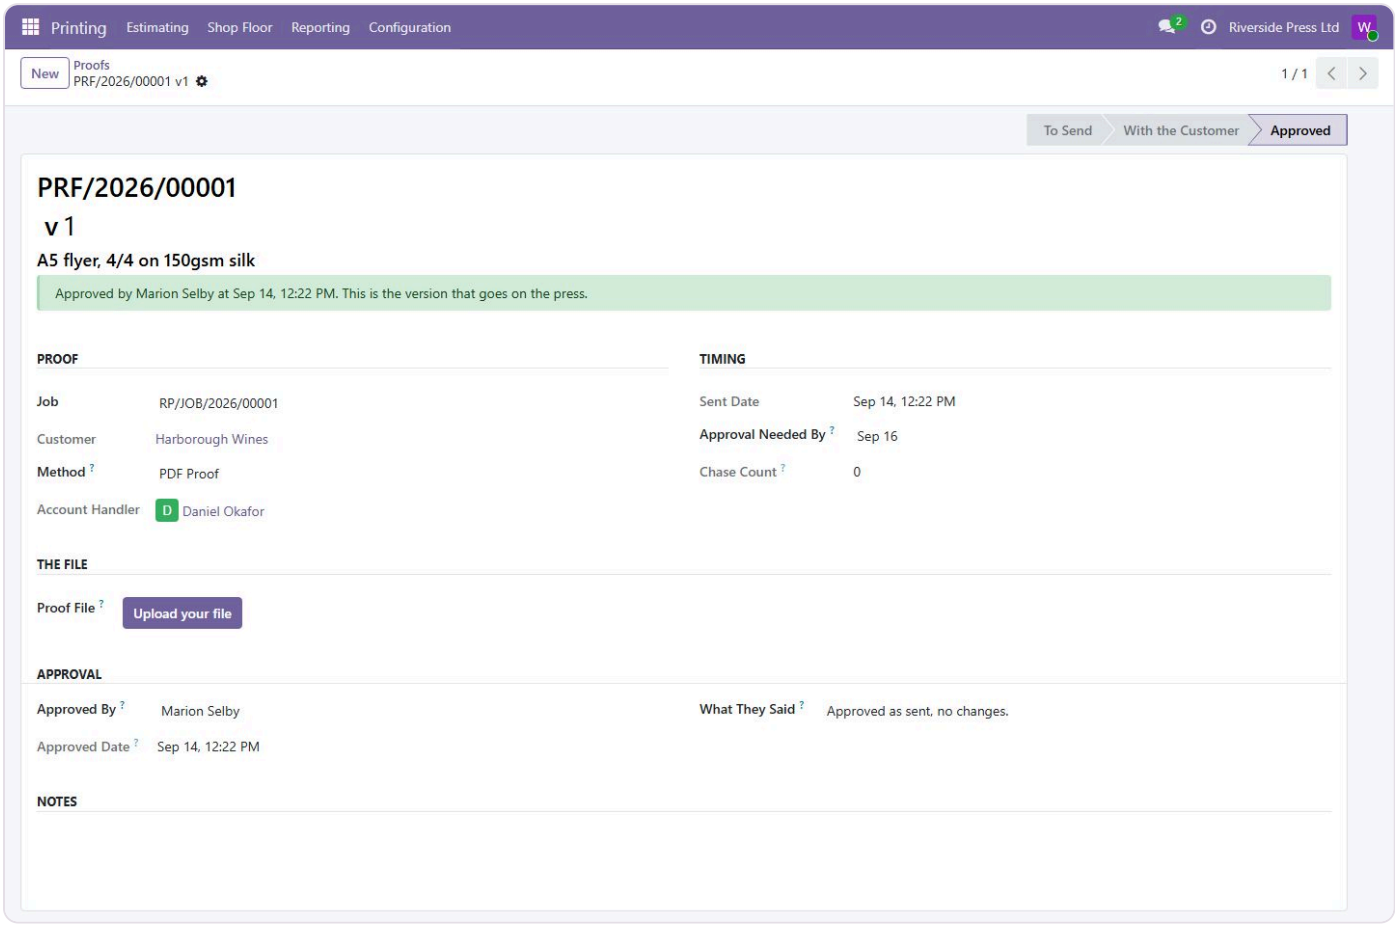

Pick a **Rejection Reason** (colour, text or copy, image, layout, size, spelling, other) and write the **Changes Requested**, then click **Changes Requested**. Without a reason it is refused. The rejection and the detail are posted on the job. Send it again, or raise the next version from the job.

4 An approved proof

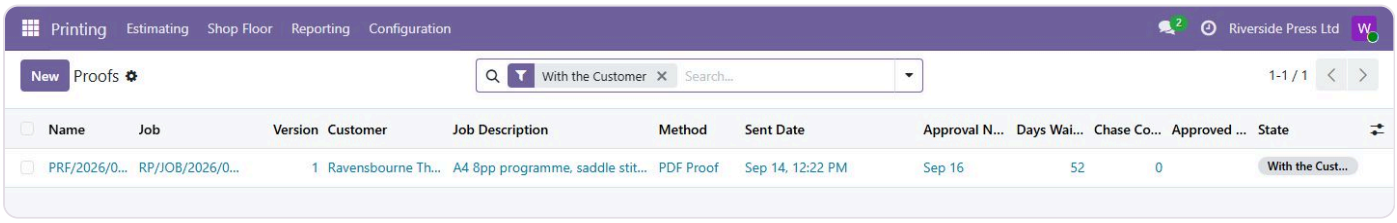

Type the name of the person who said yes in **Approved By** and their exact words in **What They Said**, then **Record Approval**. The time is stamped, the green band names them, and the name and time are copied onto the job, which lifts the red banner.

'Approved subject to the logo moving' is not an approval. Without a name the button is refused.

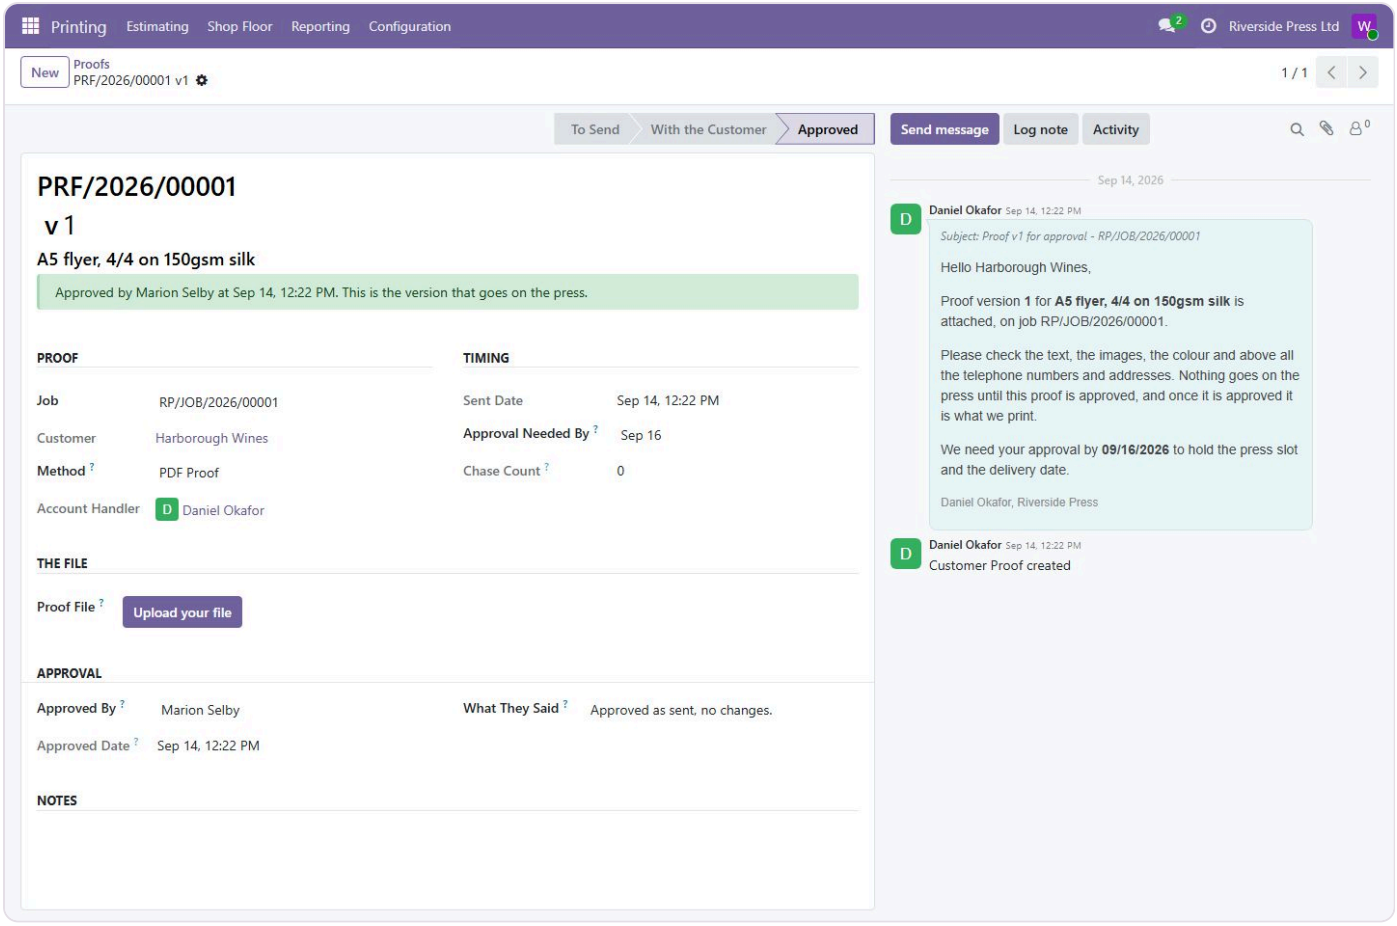

5 The proofs list

Shop Floor, then **Proofs**, opens on **With the Customer**. Other filters: Approved, Changes Requested, **Chased More Than Once**, **Past the Approval Date** and **Second Version or Later**. Group by status, customer, job, rejection reason or method.

> Only one proof per job can be approved. Approving a second is refused until the first is superseded, so there are never two versions in play. A superseded proof cannot be approved.

The proof's own chatter keeps the email that went to the customer with the deadline.

PART 15 On the press and off it

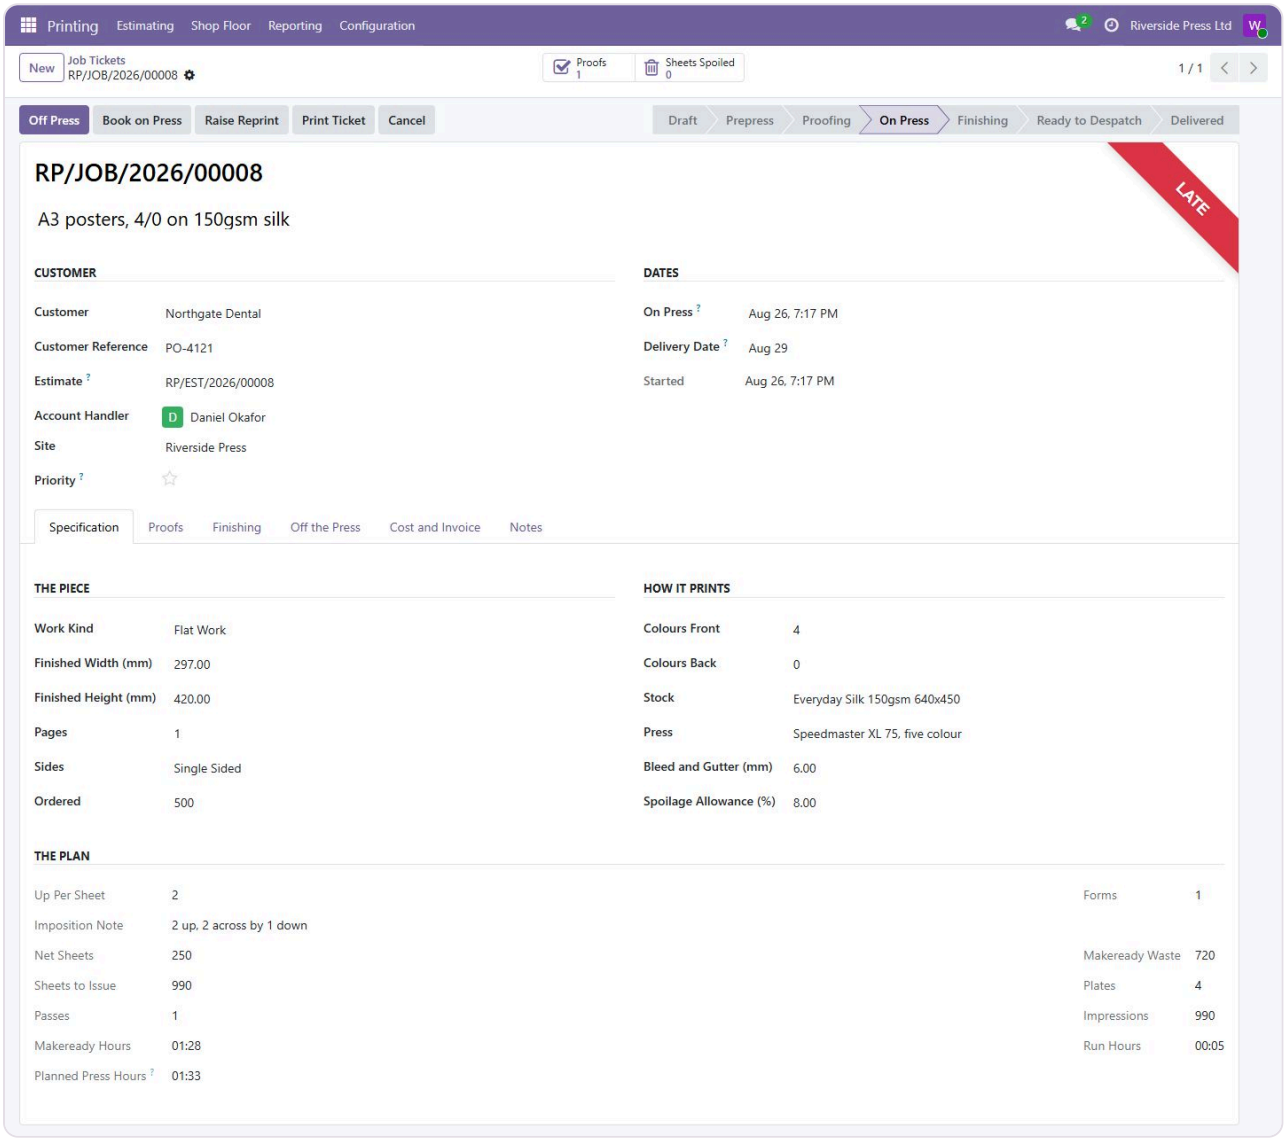

On Press starts the clock. Off Press stops it, and needs the sheet count from the press counter, because without it there is no actual cost.

TRY IT YOURSELF ON THE DEMO

1. Open RP/JOB/2026/00008, which is on press
2. Open RP/JOB/2026/00001 and click Off the Press

1 A job on press

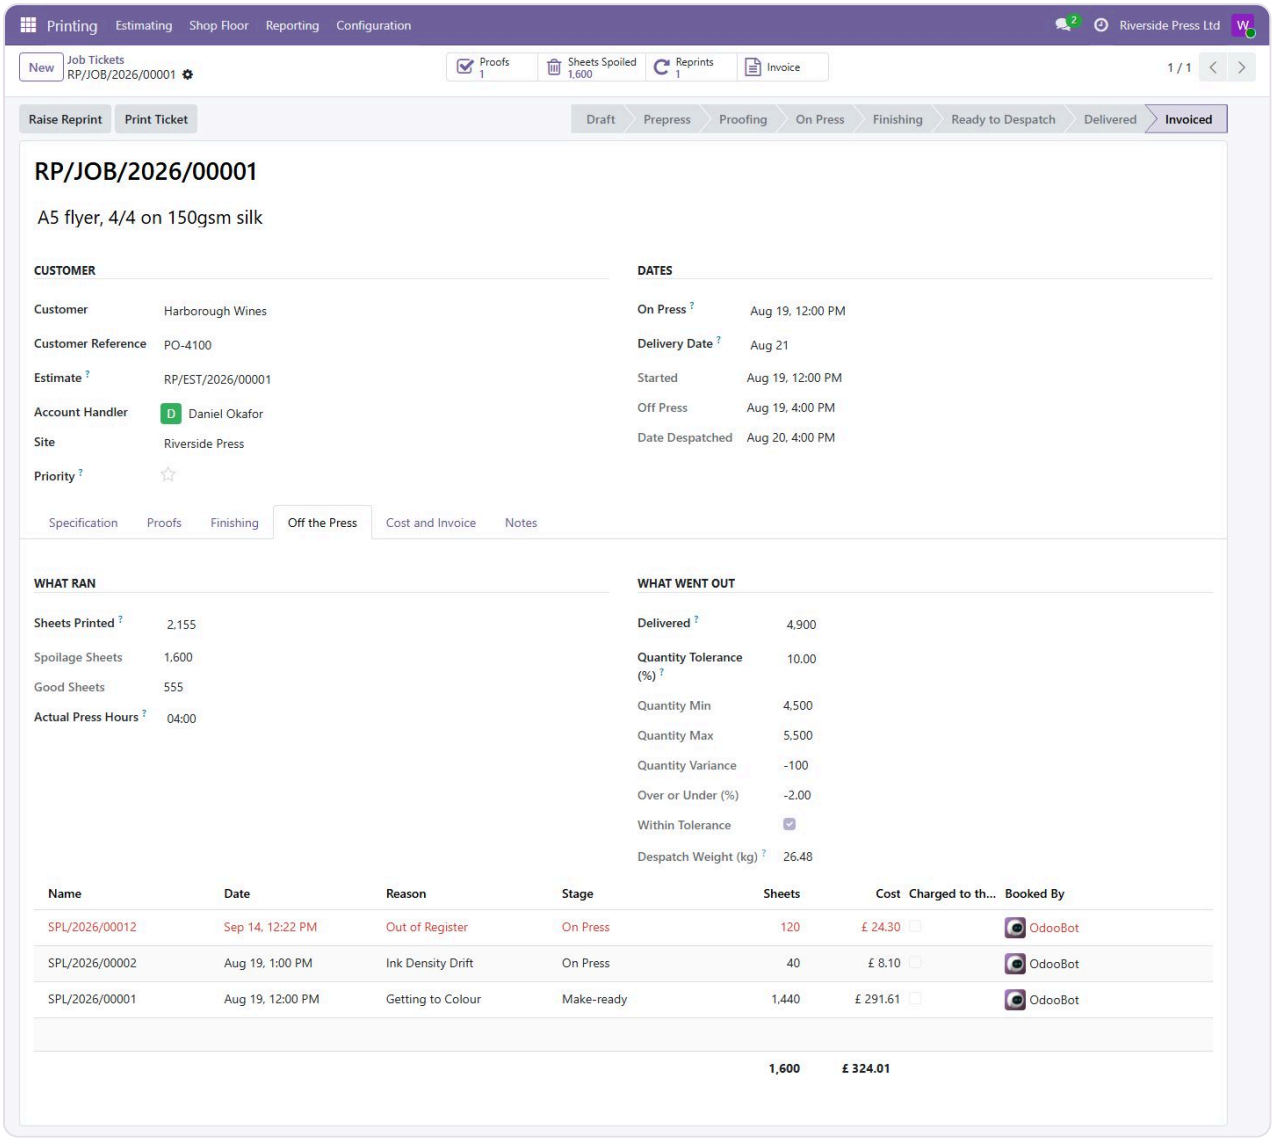

On Press stamps **Started** and posts the sheets and plates on the press record. The header now offers **Off Press**.

2 The Off the Press tab

What Ran: type the **Sheets Printed** off the counter. **Spoilage Sheets** totals the spoilage booked, **Good Sheets** is the difference, and **Actual Press Hours** is the time from Started to Off Press. **What Went Out** is covered in Part 17. Underneath, every spoilage record on the job, reprint causes in red.

Here 2,155 sheets ran against 2,115 issued, and 1,600 are booked as spoilage, mostly the 1,440 make-ready sheets.

3 Off Press

Refused until Sheets Printed is filled in. It stamps **Off Press** and moves the job to Finishing, or straight to Ready to Despatch when there is no finishing.

> Spoilage booked against a job can never add up to more sheets than the press counter says were run.

PART 16 Finishing on the floor

The finishing operations come across from the estimate. Each is booked off with the time it really took, and the job cannot leave finishing until every one is done.

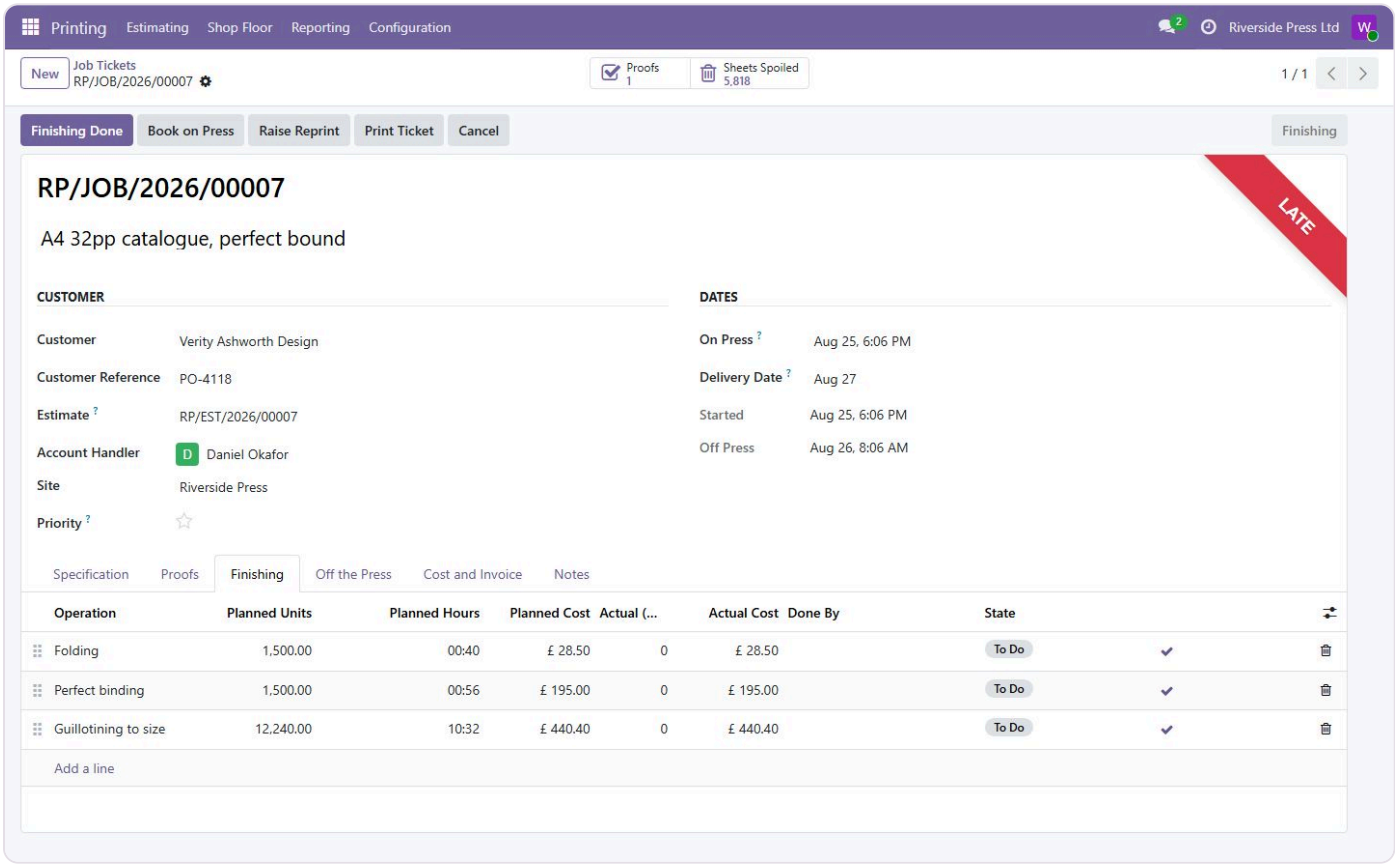

TRY IT YOURSELF ON THE DEMO

1. Open RP/JOB/2026/00007, the perfect bound catalogue, and click Finishing

1 The Finishing tab

Each line: the **Operation**, **Planned Units**, **Planned Hours** and **Planned Cost** (worked out from the job's gross sheets and copies), **Actual** minutes, **Actual Cost**, **Done By** and **State**. Optional columns show bought in, the trade finisher, the date done and a note.

Actual cost is the setup charge plus the actual minutes at the hour rate plus the materials. Until minutes are typed it equals the planned cost.

2 Book an operation off

Type the **Actual** minutes and click the tick at the end of the line. It is refused without minutes. The line goes to Done with the time and the person who booked it.

A Press Operator sees only the finishing lines booked by them or not yet booked by anyone.

3 Finishing Done

Refused while any line is still To Do, and names the open ones. Otherwise the job moves to Ready to Despatch.

PART 17 Despatch, tolerance and the invoice

The delivery is counted before it leaves. Inside the tolerance it goes, and is invoiced at what went out. Outside it, despatch is refused with the figures on screen, so somebody decides.

IN THIS PART YOU WILL LEARN

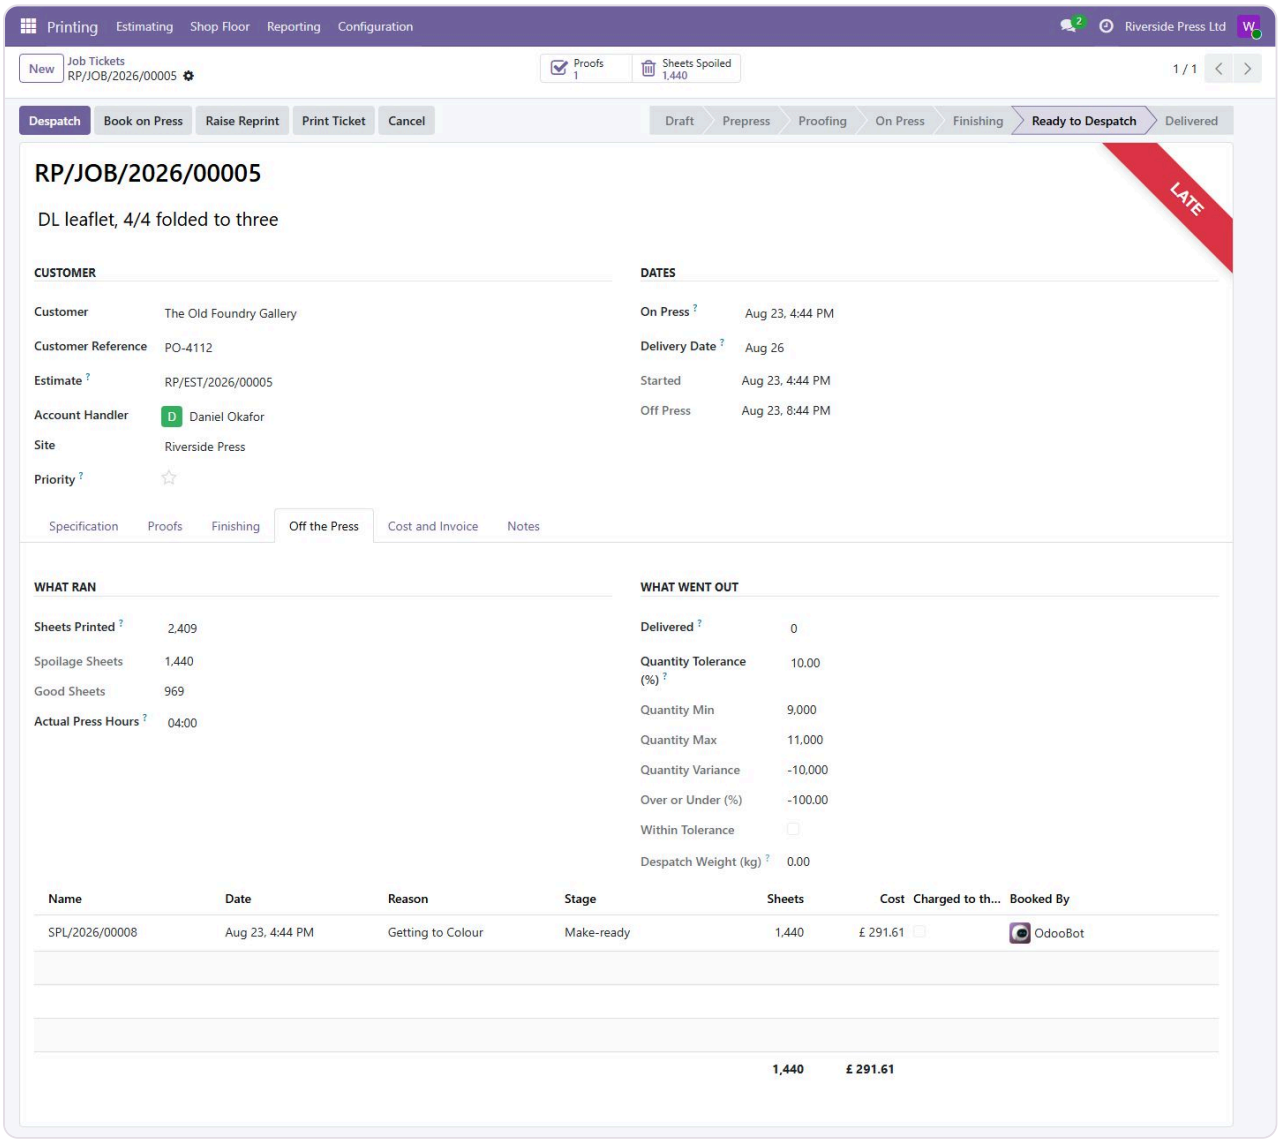

- What Went Out and the tolerance band
- Despatch and what it refuses
- Actual cost against estimated, and the variance
- Invoice: the quantity, the spoilage line, the taxes and the journal

TRY IT YOURSELF ON THE DEMO

1. Open RP/JOB/2026/00005, ready to despatch, and click Off the Press
2. Open RP/JOB/2026/00004, delivered, and click Cost and Invoice
3. Open RP/JOB/2026/00001 and click the Invoice button at the top

1 Ready to despatch

On Off the Press, **What Went Out**: type the **Delivered** count. The **Quantity Tolerance** comes from the estimate and can be widened on this ticket. **Quantity Min** and **Max**, the **Quantity Variance**, **Over or Under %**, **Within Tolerance** and the **Despatch Weight** in kilos follow. A yellow band appears when the count is outside the band.

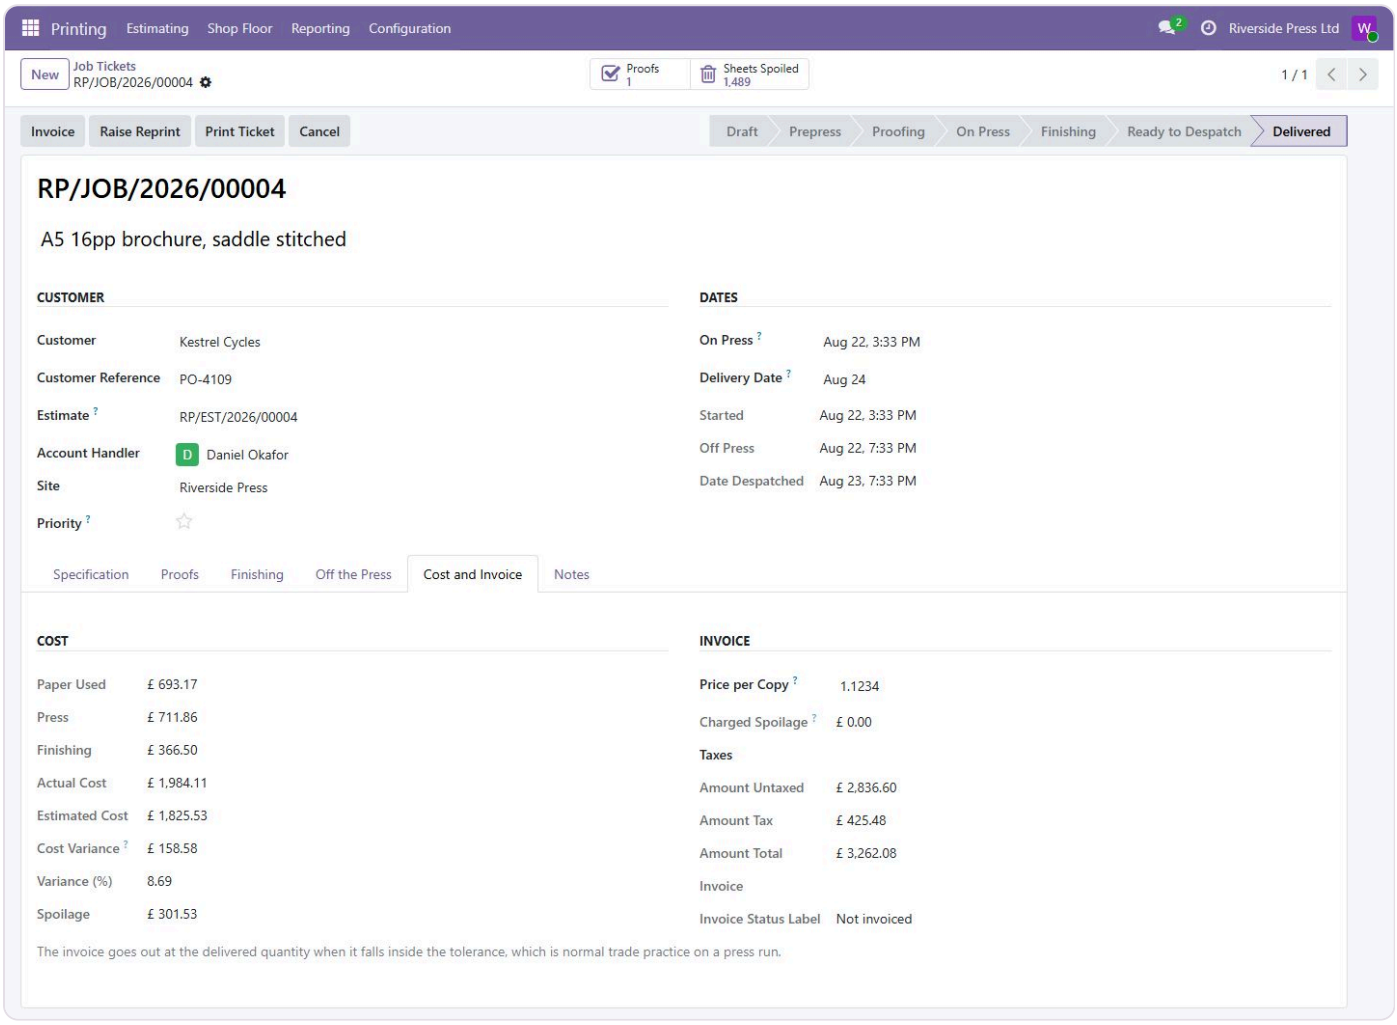

2 Despatch

Refused if nothing is counted, and refused outside the tolerance with the delivered, ordered and band figures. Otherwise the job is Delivered, **Date Despatched** is stamped and the copies and weight are posted on the chatter.

To deliver short by agreement, widen the tolerance on this ticket first, so the decision is on record.

3 Cost and Invoice on a delivered job

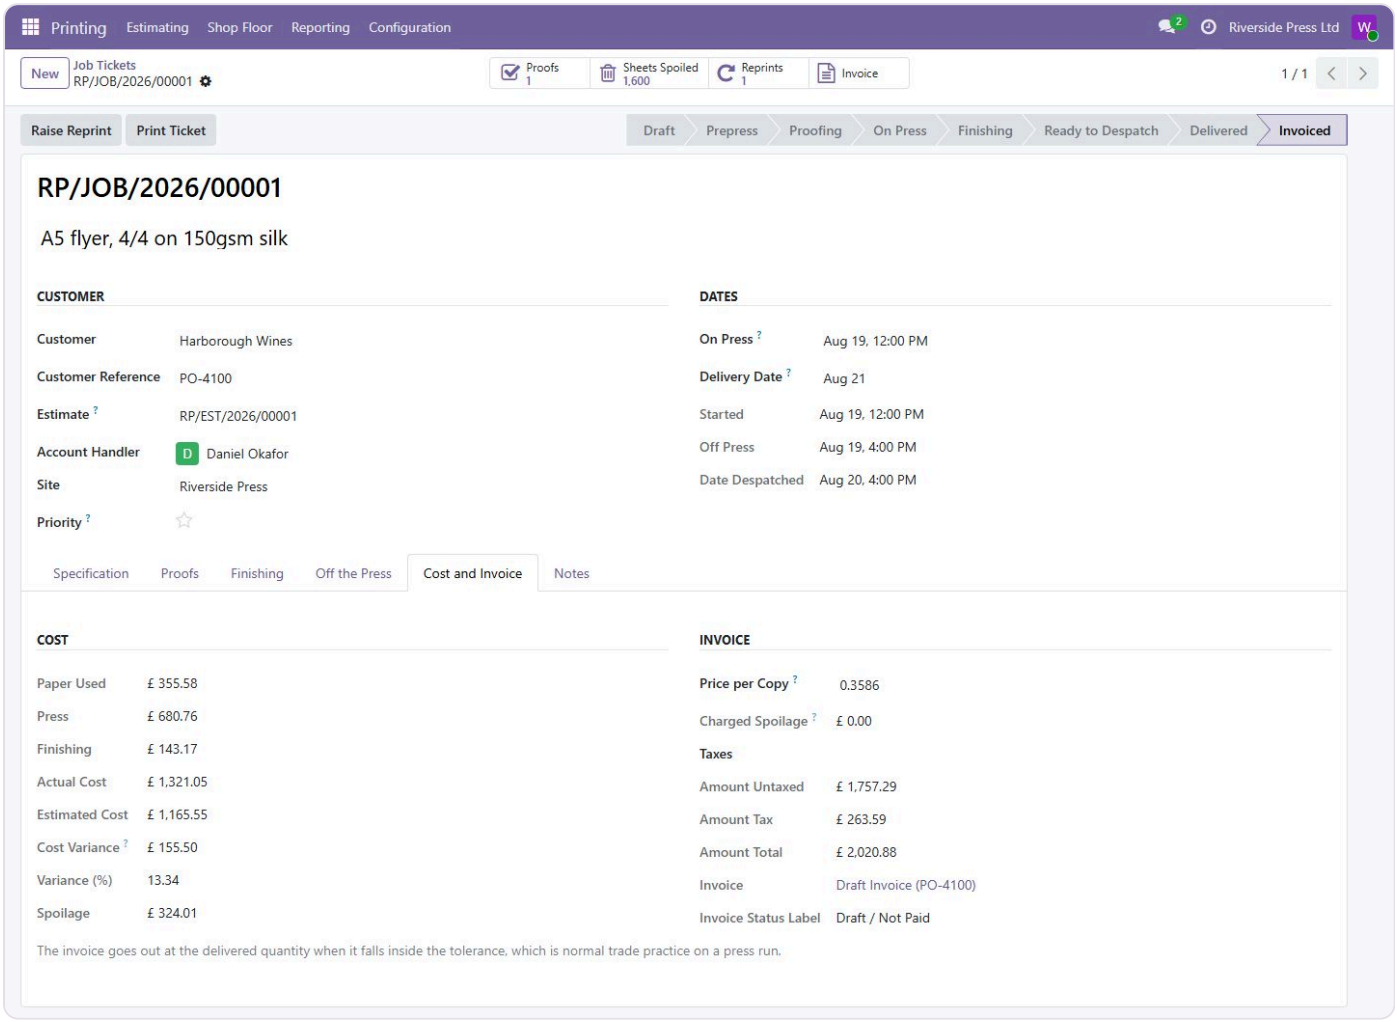

Cost (estimators only): **Paper Used** (sheets printed x cost per sheet), **Press** (actual hours x rate, plus plates, plus ink or clicks), **Finishing** (actual), **Actual Cost** with overhead, **Estimated Cost**, **Cost Variance**, **Variance %** and **Spoilage**. **Invoice**: price per copy from the estimate, **Charged Spoilage**, taxes and amounts. The header offers **Invoice**.

4 After Invoice

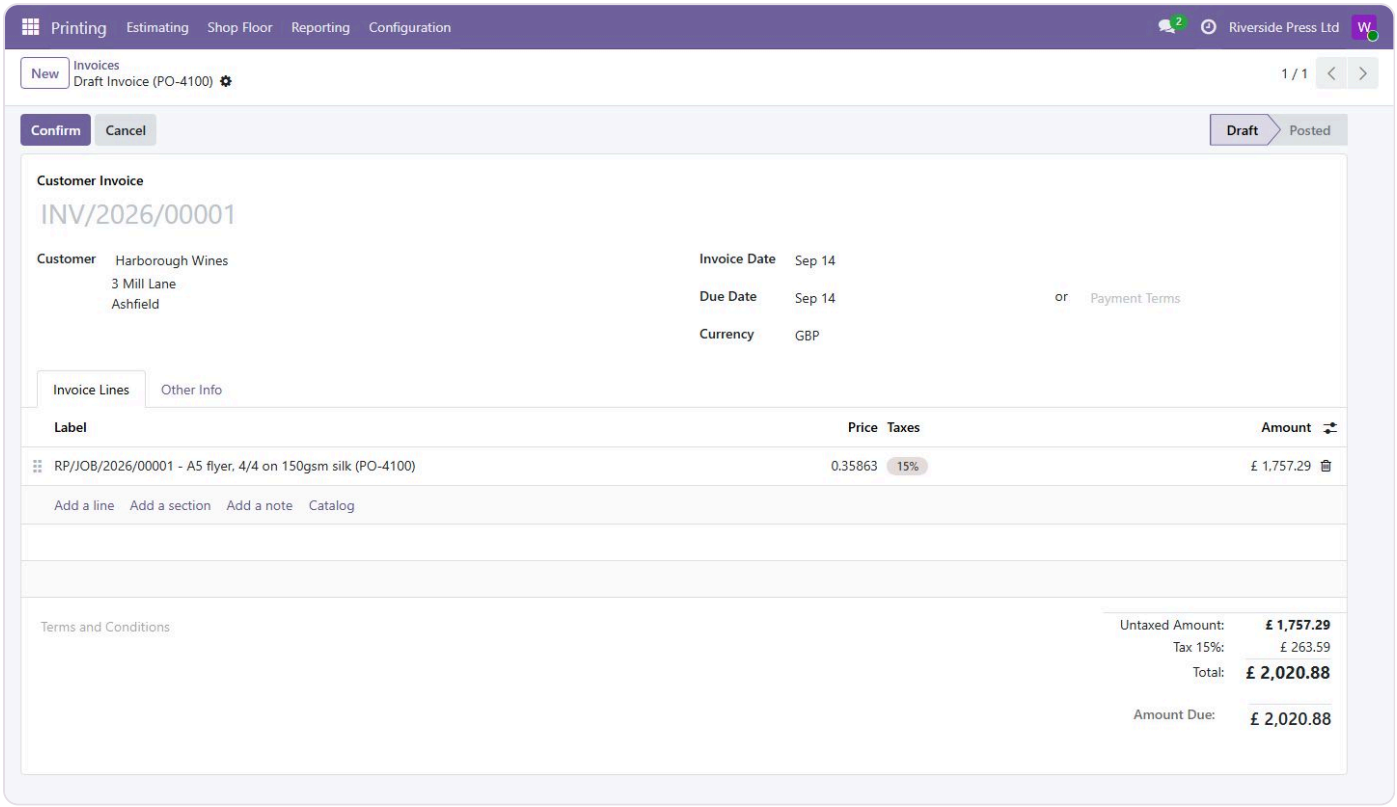

Invoice creates a customer invoice in draft and moves the job to Invoiced. The quantity is the delivered count when it is inside the tolerance, otherwise the ordered quantity. Chargeable spoilage goes on as its own line. The **Invoice Status** shows where the invoice stands without needing accounting rights.

4,900 delivered against 5,000 ordered is inside 10 per cent, so the invoice is for 4,900 at 0.3586.

5 The invoice

One line per job on the site's **Print Product**, described with the job number, title and customer reference, through the site's billing journal. Post it and take payment in Invoicing as usual.

> The invoice uses the estimate's taxes. When the estimate has none it falls back to the print product's sales tax, mapped through the customer's fiscal position. Check the estimate's taxes so the quote and the invoice agree.

Invoice is refused if the job is already invoiced, not yet delivered, or the site has no print product, and a billing journal in another currency is refused too. With **Invoice on Despatch** on and the daily job running, delivered jobs are invoiced overnight; a job the accounts refuse is skipped and left to be raised by hand.

PART 18 Spoilage and reprints

Every sheet that goes in the bin is booked against a reason and a stage, and costed properly: paper, plus ink or clicks, plus the press time it took to make it. A reason that forces a reprint opens the second run as its own job.

IN THIS PART YOU WILL LEARN

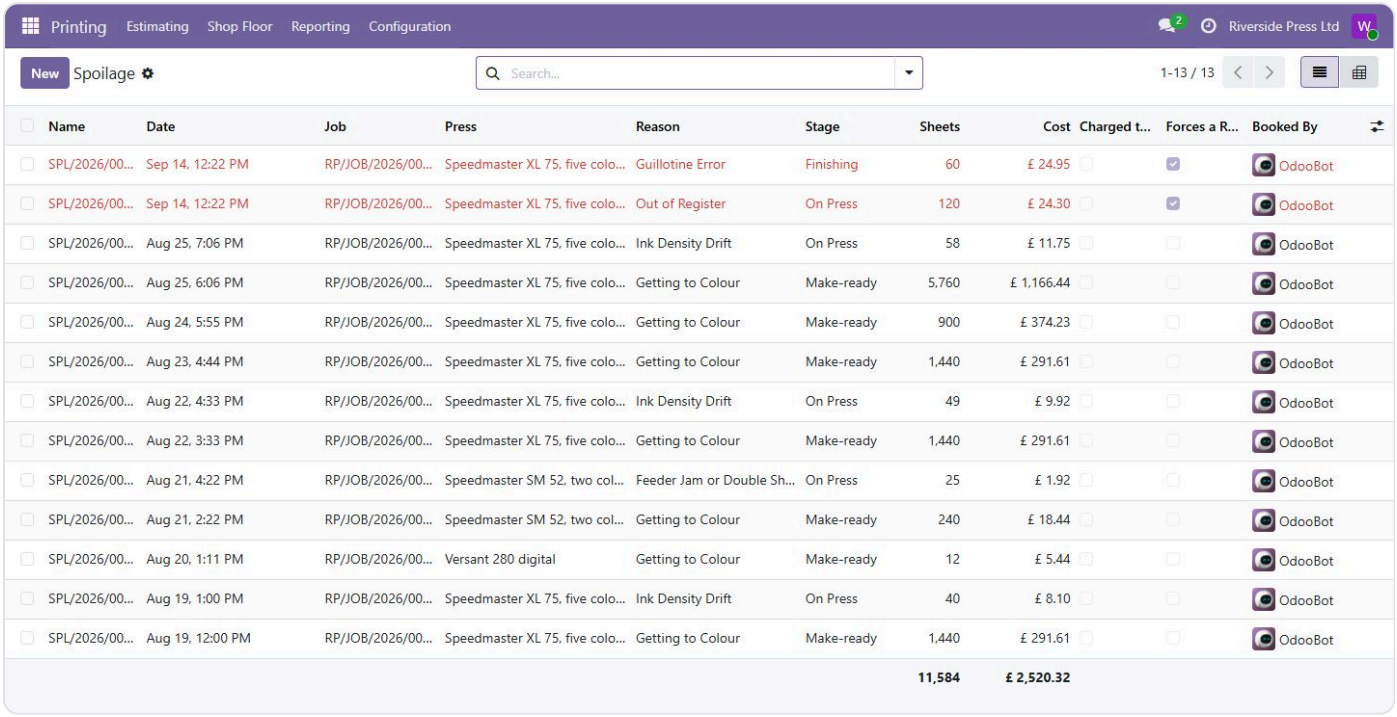

- Booking spoilage and how it is costed
- Chargeable spoilage on the invoice
- Raise Reprint and the reprint ticket

TRY IT YOURSELF ON THE DEMO

1. Shop Floor, then Spoilage, and filter Forced a Reprint
2. Open SPL/2026/00012, then click Open the Job
3. Open RP/JOB/2026/00013, the reprint

1 The spoilage list

Shop Floor, then **Spoilage**. Each record with date, job, press, reason, stage, sheets, cost, chargeable, reprint and who booked it. Reprint causes are red, chargeable lines blue. Sheets and cost are totalled.

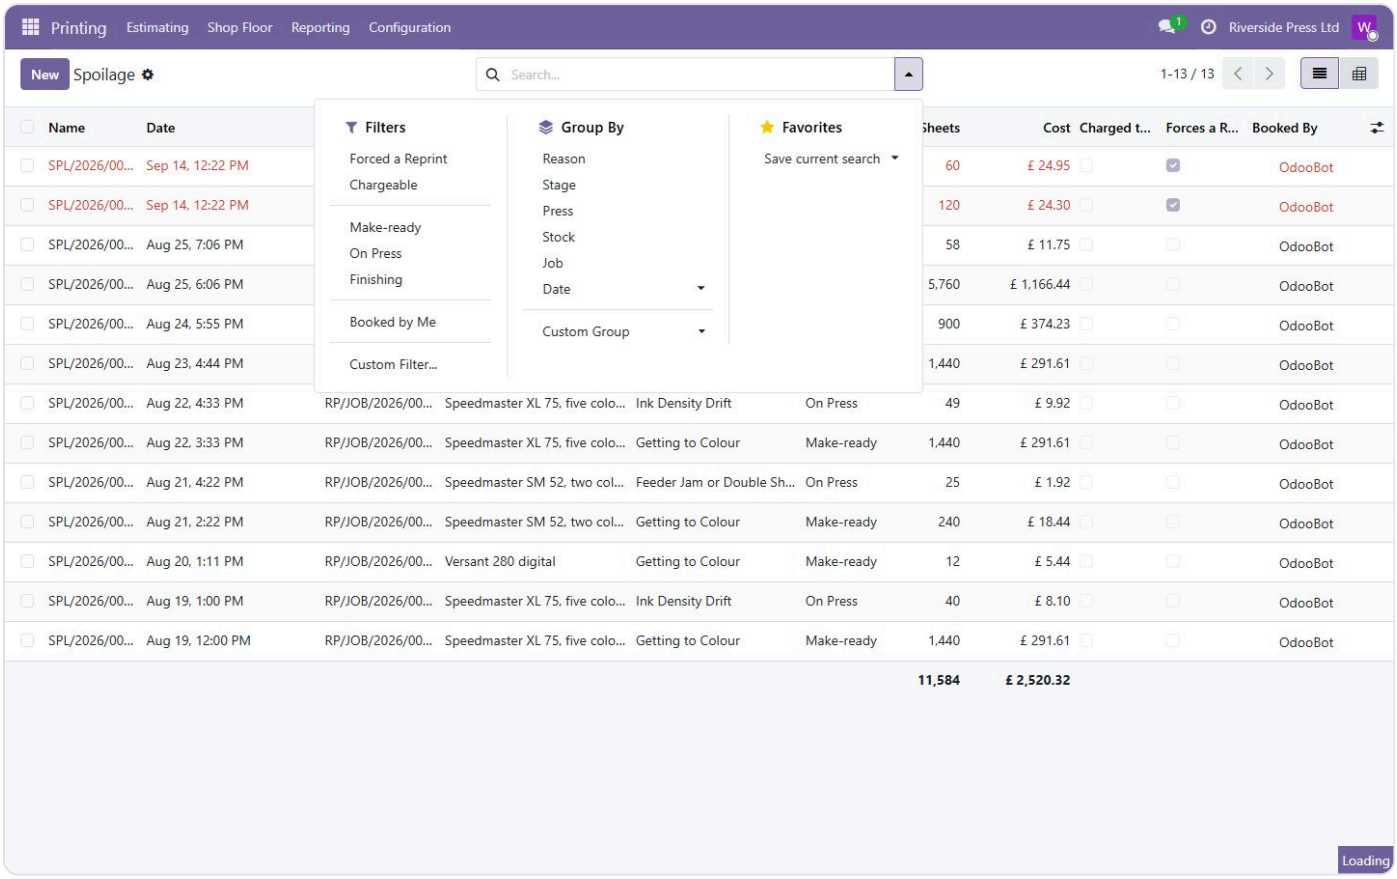

Name	Date	Job	Press	Reason	Stage	Sheets	Cost	Charged t...	Forces a R...	Booked By
SPL/2026/00...	Sep 14, 12:22 PM	RP/JOB/2026/00...	Speedmaster XL 75, five colo...	Guillotine Error	Finishing	60	£ 24.95		☑	OdooBot

						11,584	**£ 2,520.32**			

2 Filter and group

Filters: **Forced a Reprint**, **Chargeable**, **Make-ready**, **On Press**, **Finishing** and **Booked by Me**. Group by reason, stage, press, stock, job or date. A pivot view totals sheets and cost by reason and month.

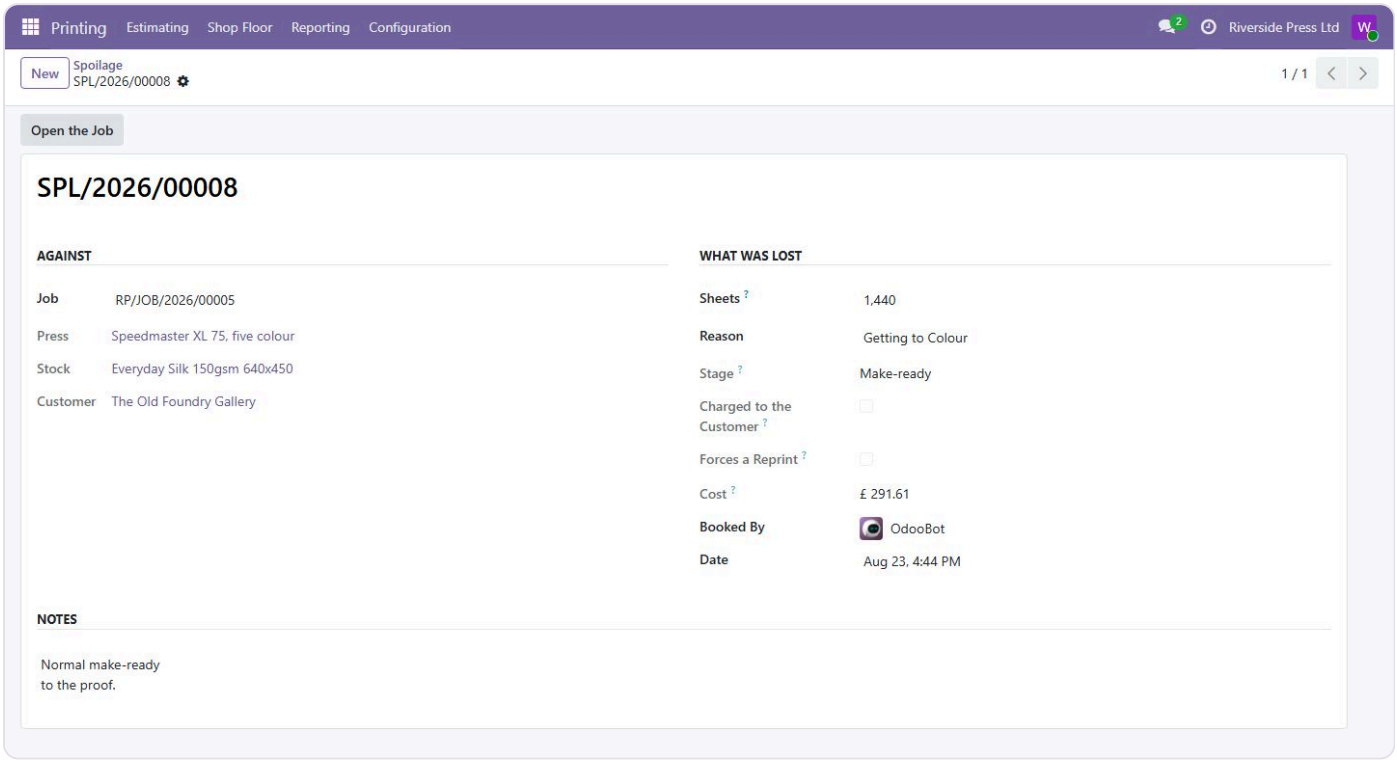

A Press Operator sees only the spoilage they booked themselves. Estimators and managers see it all.

3 Book spoilage

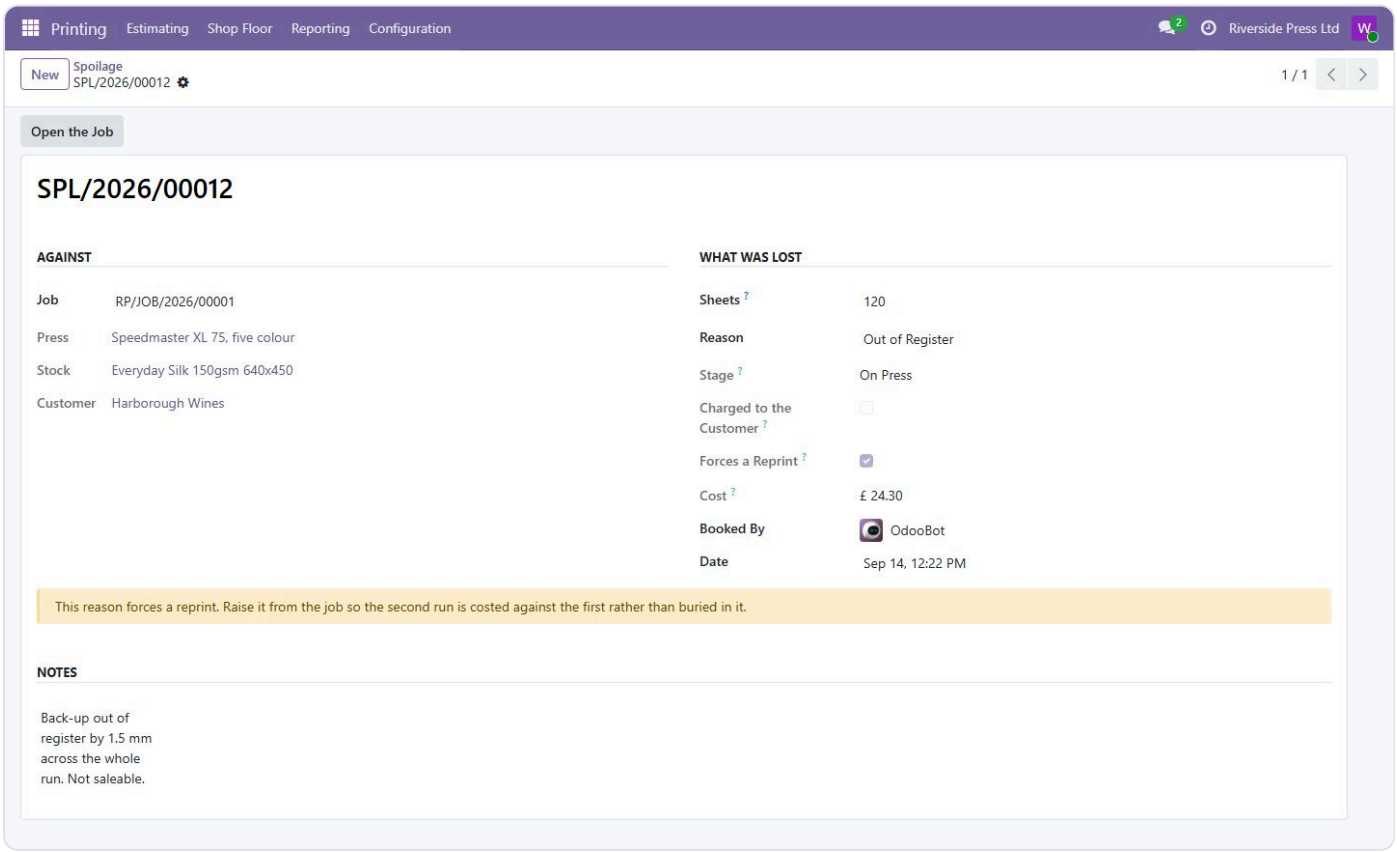

Click **New**. Pick the **Job** (press, stock and customer follow from it), the **Sheets** and the **Reason**; the **Stage**, **Chargeable** and **Reprint** flags come from the reason. **Cost** is worked out, and the person and date are stamped. Saving posts a note on the job.

1,440 sheets getting to colour on the five colour press cost 291.61: far more than the paper alone.

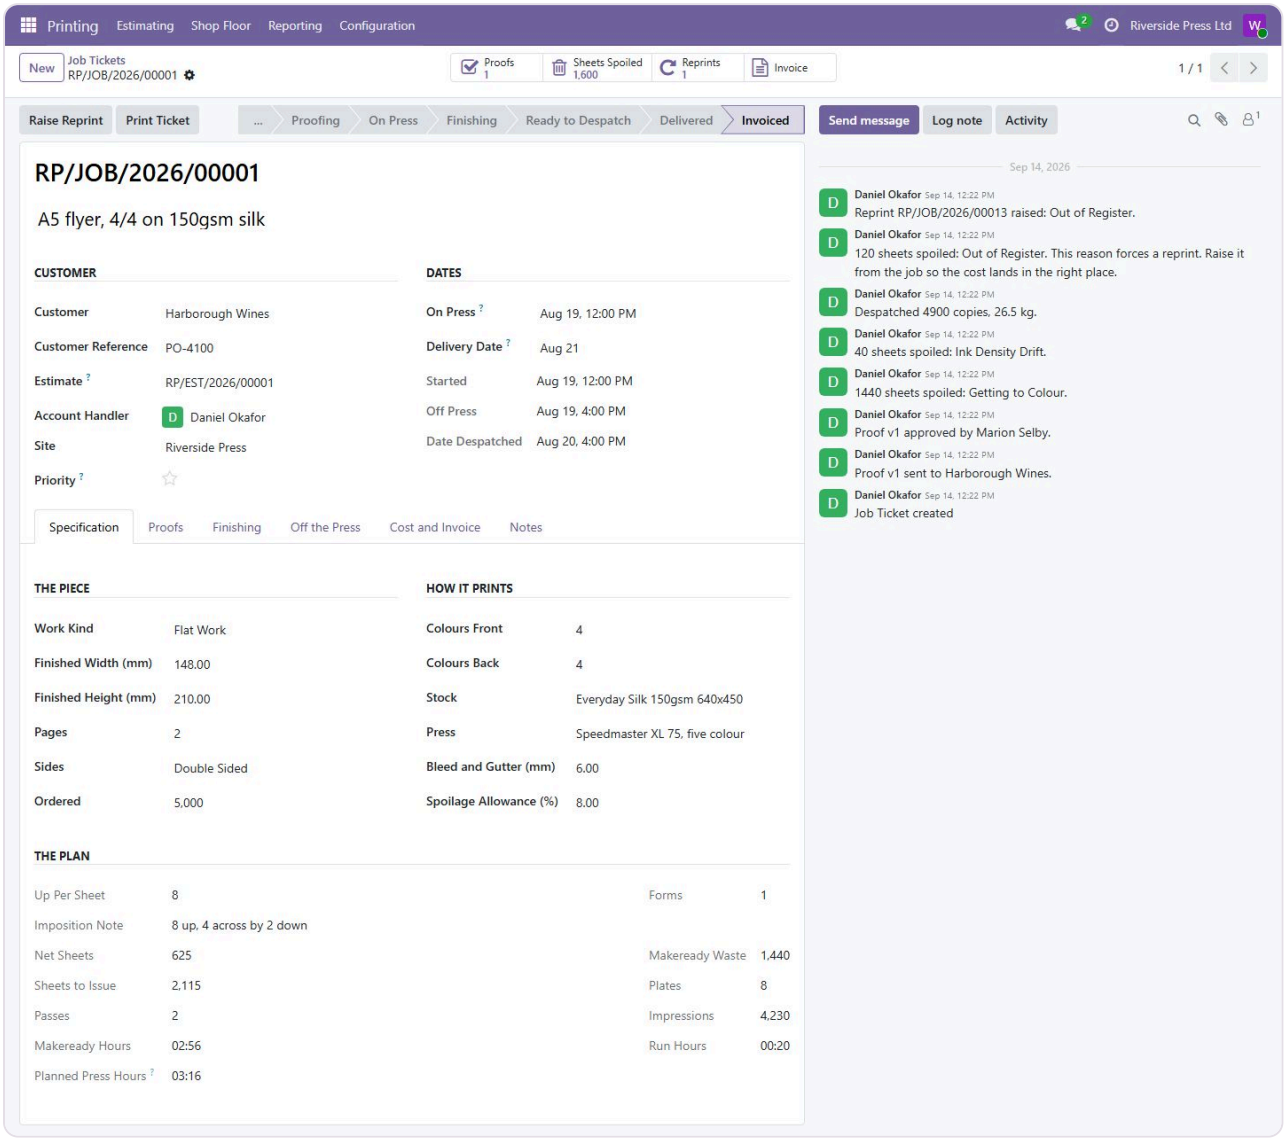

4 Spoilage that forces a reprint

A yellow band says the reason forces a reprint and to raise it from the job. A chargeable reason shows a blue band instead: the cost goes on the customer's invoice as its own line. **Open the Job** goes back to the ticket.

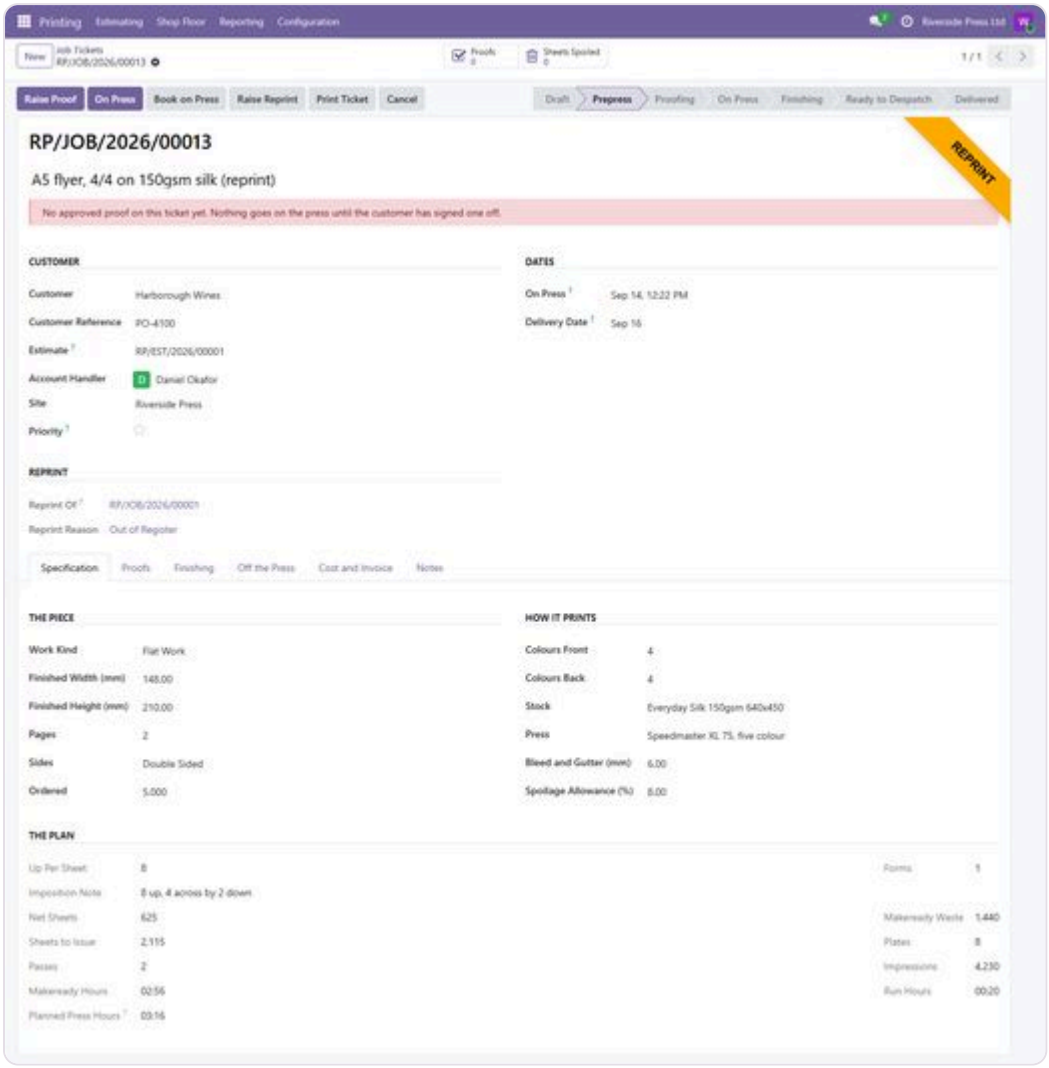

5 Raise Reprint

On the job, **Raise Reprint** asks you to confirm, then copies the ticket into a new draft titled *(reprint)*, linked to the original, carrying the reason from the spoilage record. It is refused until a spoilage record with a reprint reason is booked on the job, and refused on a job that has not run. The original shows a **Reprints** button and a chatter note.

6 The reprint ticket

An amber **Reprint** ribbon, and a **Reprint** block naming the original job and the reason. It starts at draft with no sheets, no delivery and no proof approval, so it walks the floor like any job and its cost is never buried in the first run's numbers.

PART 19 The press board

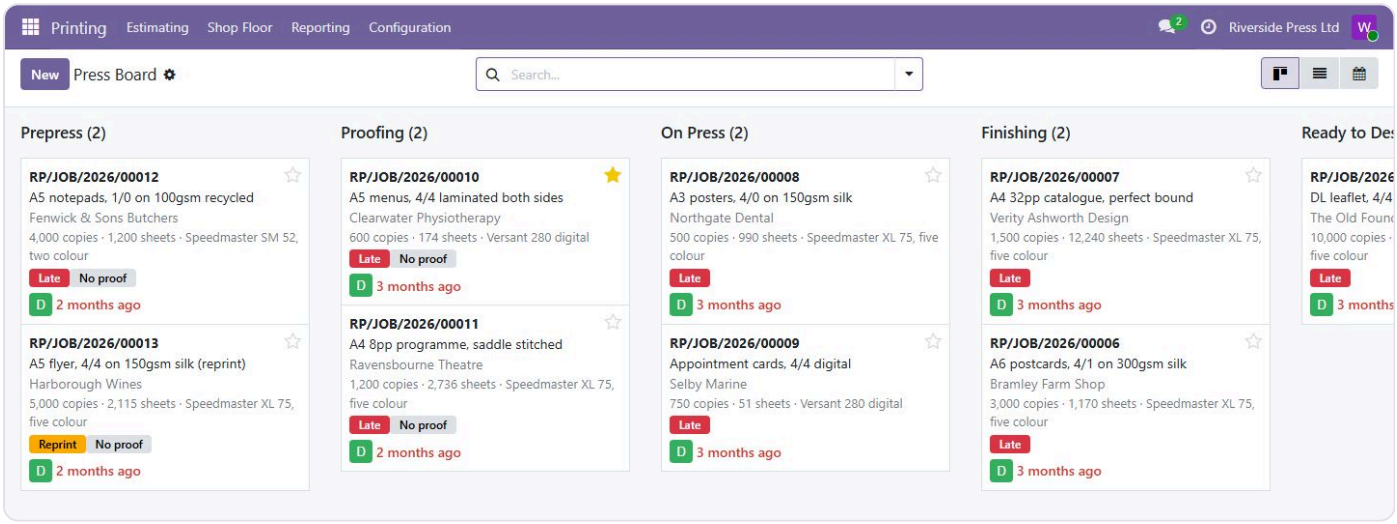

The press board is the floor at a glance: one column per stage in the order work moves, one card per job, and a badge on anything that needs attention.

TRY IT YOURSELF ON THE DEMO

1. Shop Floor, then Press Board
2. Scroll right to Ready to Despatch and Delivered
3. Open the board on a phone

1 The board

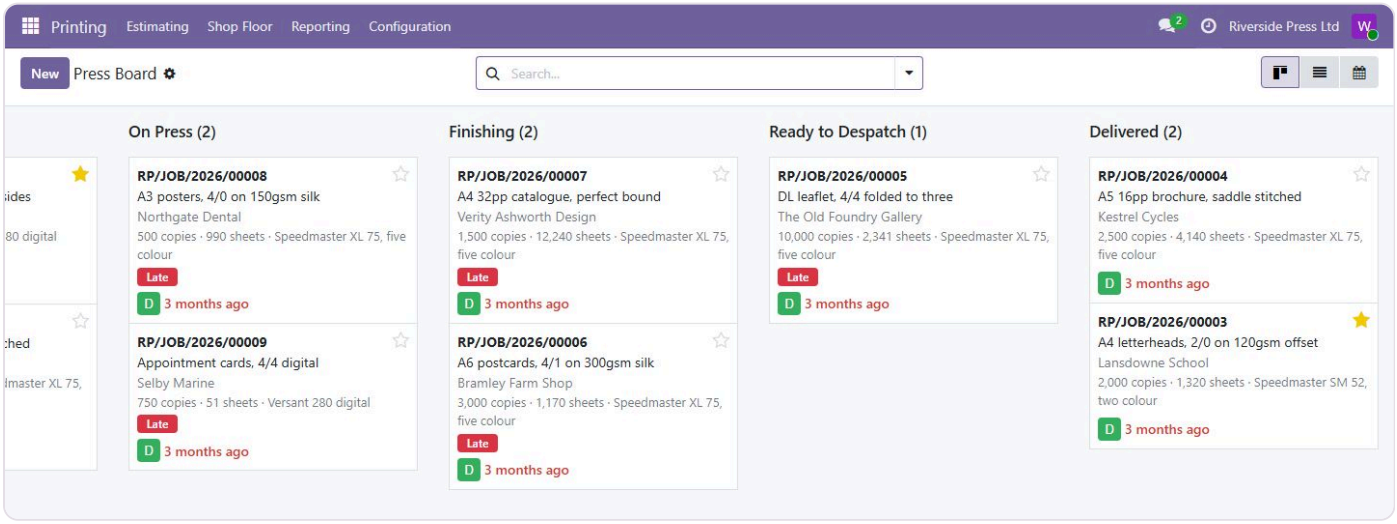

Columns run Prepress, Proofing, On Press, Finishing, Ready to Despatch, Delivered; draft, cancelled and invoiced jobs are left off. Each card shows the job number, title, customer, copies, sheets to issue and press, with **Late**, **Reprint** and **No proof** badges, the handler and the days to delivery.

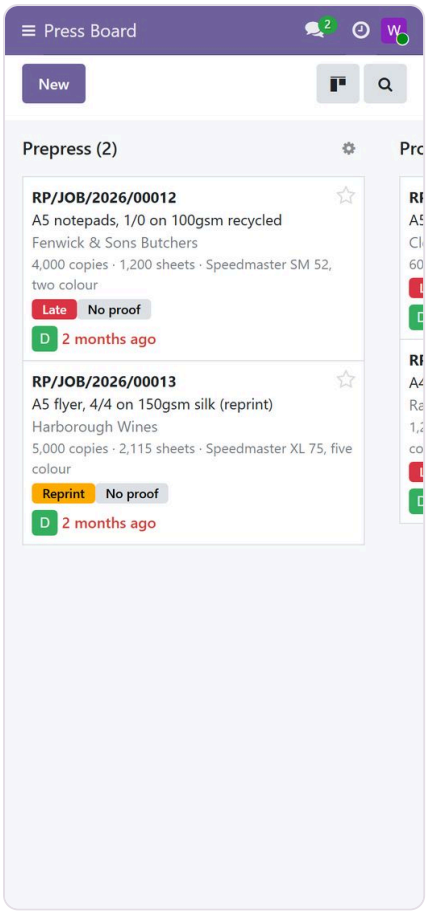

2 The far end of the board

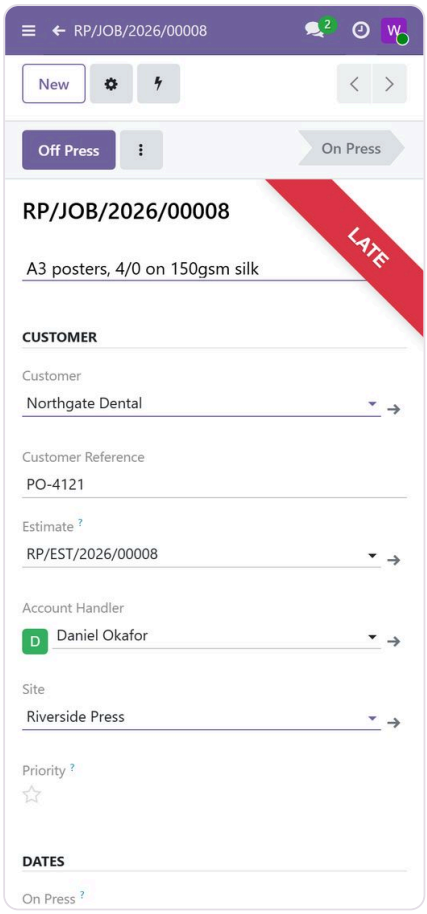

Ready to Despatch and Delivered. Click a card to open the ticket and use its buttons.

Cards cannot be dragged between columns: the module refuses a status written directly, so every move goes through the ticket's button and its checks.

The board on a phone: one column at a time, swipe across.

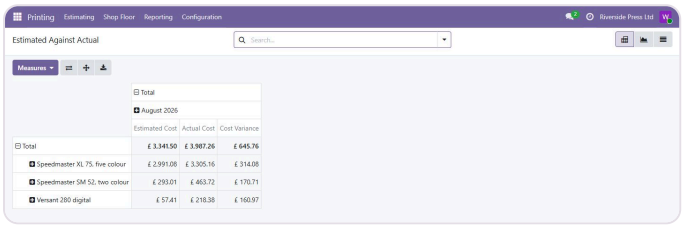

A ticket on a phone, with its buttons in the header.

PART 20 Reporting

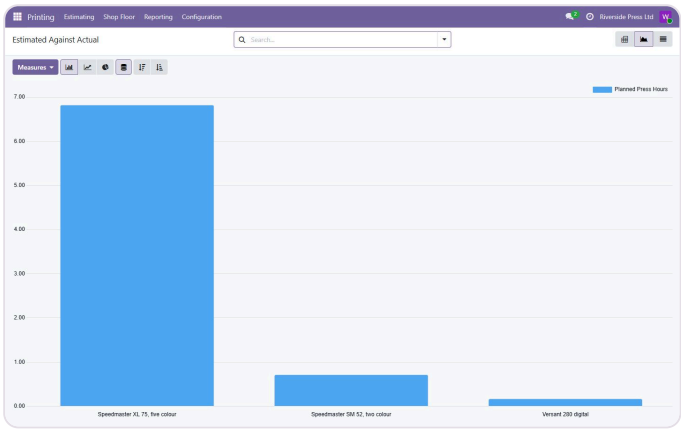

Four reports, all under Reporting and all for estimators and managers. They answer the questions a print shop owner asks at the end of the month: did the work cost what we said, where are the sheets going, what had to be run twice, and how much are we winning.

Estimated Against Actual

Delivered and invoiced jobs only, by press and month: estimated cost, actual cost and the variance. Switch to the graph for press hours by press, or the list to read job by job. Use the Over Estimate filter to see only the jobs that cost more than quoted.

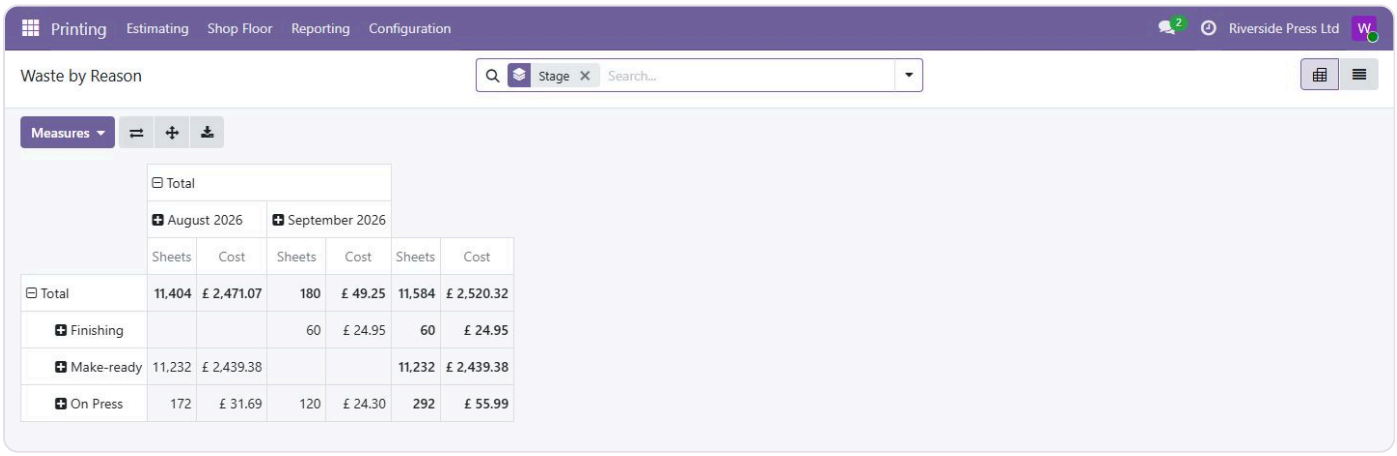

Estimated against actual by press. Every press here ran over its estimate in August.

The same jobs as press hours per press.

Waste by Reason

Every spoilage record as a pivot of sheets and cost. It opens grouped by stage, so you see at once whether the loss is make-ready, the press or the folder; expand a stage to see its reasons, or regroup by press or stock.

	Total					
	August 2026		September 2026			
	Sheets	Cost	Sheets	Cost	Sheets	Cost
Total	11,404	£ 2,471.07	180	£ 49.25	11,584	£ 2,520.32
Finishing			60	£ 24.95	60	£ 24.95
Make-ready	11,232	£ 2,439.38			11,232	£ 2,439.38
On Press	172	£ 31.69	120	£ 24.30	292	£ 55.99

Spoilage by stage and month. Make-ready is 11,232 of 11,584 sheets lost: that is the figure to work on.

Reprints

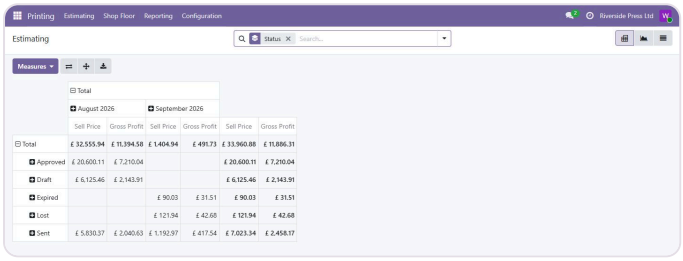

Every job run a second time, with the original, the reason and what the second run cost.

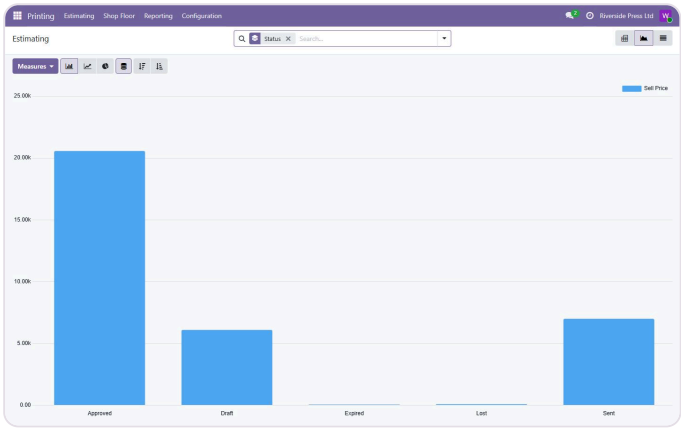

The reprints list.

Estimating

Every estimate as a pivot of value and gross profit by estimator and month, grouped by status, or as a graph of value by status. This is the win rate: approved against sent, lost and expired.

Estimate value and margin by status and month.

Value by status.

> Every list in Odoo also exports to a spreadsheet from the gear menu, and every pivot downloads with the button above it.

PART 21 Printed documents and emails

Three documents print from the module, each from the record it belongs to, and three emails go to the customer.

DOCUMENT	PRINTED FROM	WHAT IT IS FOR
Estimate	Print on the estimate, or the print menu	The quote the customer sees: specification, finishing, quantity and price, taxes and validity
Job Ticket	Print Ticket on the job	The job bag for the floor on A4 with wide margins: the spec, sheets to issue, plates, passes, the proof approval, the finishing to sign off, and boxes to write the sheet count, spoilage and delivered quantity
Proof Approval Record	The print menu on a proof	Who approved which version, when, by what method and in what words

Proof Approval Record

Proof: PRF/2026/00001 version 1
Job: RP/JOB/2026/00001
Description: A5 flyer, 4/4 on 150gsm silk
Method: PDF Proof

Customer: Harborough Wines
Sent: 14/09/2026 12:22:48
Approval due: 16/09/2026
Status: Approved

Approved

Approved by	**Marion Selby**
Approved at	**14/09/2026 12:22:48**
What they said	Approved as sent, no changes.

This is the version that went on the press. Any artwork supplied after the time above was not printed.

The proof approval record.

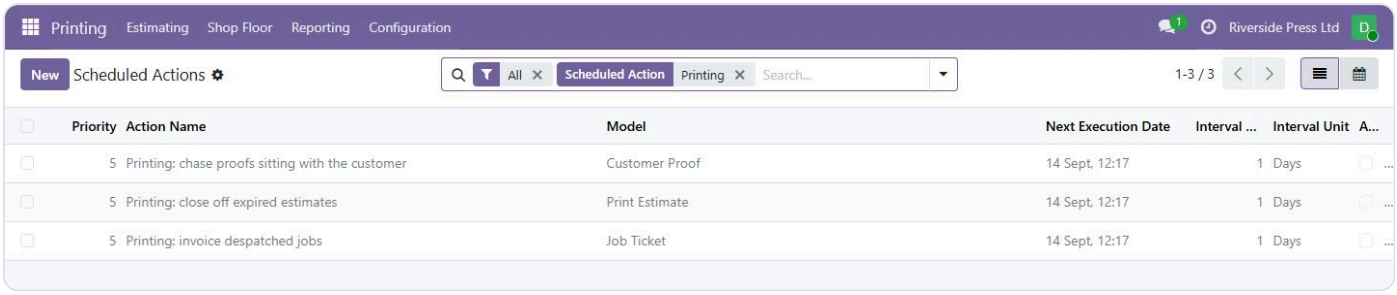

Emails

EMAIL	SENT BY	SAYS
Estimate	Send on the estimate	The specification, the price, the validity and the over and under terms
Proof for Approval	Send on a proof	The version, the job, and the date the approval is needed by
Proof Reminder	Chase on a proof, or the daily job	That the press is waiting on their approval

Each email goes only when the customer has an email address, and a copy stays on the record's chatter.

PART 22 The daily jobs

Three scheduled jobs come with the module. They are installed switched off, so a new shop decides when each one starts.

Settings, Technical, Scheduled Actions, searched for Printing. The Active box on the right turns each one on.

JOB	WHAT IT DOES EACH DAY
Close off expired estimates	Every sent estimate past its Valid Until goes to Expired, with a chatter note to re-price it
Chase proofs sitting with the customer	Every proof with the customer longer than the chase setting, and not chased in that time, gets a reminder email and one more on its chase count. From the second chase, the account handler gets a call scheduled
Invoice despatched jobs	When Invoice on Despatch is on, every delivered job not yet invoiced is invoiced at the delivered quantity. A job the accounts refuse is skipped and logged

> Until these are switched on, estimates do not expire, proofs are not chased, and Invoice on Despatch does nothing. The Chase button on a proof works either way.

PART 23 A fifteen minute walk-through

If you have the demo open and fifteen minutes, this is the path that shows the whole module. It is also the order to show it to someone else in.

#	DO THIS	AND NOTICE
1	Configuration, then Presses, open the five colour press	*Speed, make-ready time and sheets, the hour rate and the sheet range*
2	Configuration, then Paper Stock, open Revive Recycled	*Bought by the tonne, costed per sheet from its weight*
3	Estimating, then Estimates, open RP/EST/2026/00001	*The imposition: 8 up, 2,115 sheets, 1,440 of them make-ready*
4	Its Cost and Price tab	*Every part costed separately, price worked back from a 35 per cent margin*
5	Open RP/EST/2026/00016, the 24 page booklet	*The grain warning, and 4,608 sheets for 800 books*
6	Shop Floor, then Press Board	*Every job by stage, with Late, Reprint and No proof badges*
7	Open RP/JOB/2026/00010, then its Proofs tab	*The red banner, and a proof sent back with the changes written down*
8	Open RP/JOB/2026/00007, then Finishing	*Three operations, each to be booked off with its time*
9	Open RP/JOB/2026/00001, then Off the Press and Cost and Invoice	*4,900 delivered inside the tolerance and invoiced at 4,900; actual against estimated*
10	Open RP/JOB/2026/00013	*The reprint, linked to the original and the spoilage that caused it*
11	Reporting, then Waste by Reason	*Where the sheets go*

Questions people ask

QUESTION	ANSWER
Does it handle digital and litho in one shop?	Yes. Each press has its kind. Litho is costed on plates and ink, digital on a click charge per side, from the same estimate screen.
Can we quote a price the market sets, not the margin?	Yes. Type over the sell price and the estimate shows the margin you actually get.
What stops a job going on press without approval?	With the setting on, On Press is refused until an approved proof with a name and a time is on the ticket.
Can the floor see our prices?	No. A Press Operator sees no costs, rates or margins, and only the spoilage and finishing lines they booked.
We deliver a few over. What gets invoiced?	Inside the tolerance, what was delivered. Outside it, despatch is refused until the tolerance is widened on that ticket.
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community with Inventory and Invoicing.
Can two print businesses share one database?	Yes. Every record is kept per company, and each site has its own job numbering, product, journal and capacity.

PART 24

The menu map

Every screen in the module, on one page.

Estimating

Estimates	Every quotation: imposition, sheets, cost and price

Shop Floor

Job Tickets	Every job from prepress to invoice, with the diary
Press Board	The floor as cards, one column per stage
Proofs	Every proof version, who approved it and when
Spoilage	Every sheet written off, with a reason and a stage

Reporting

Estimated Against Actual	Quoted cost against real cost, by press
Waste by Reason	Spoiled sheets and their cost, by stage and reason
Reprints	Every run done twice, with what caused it
Estimating	Estimates won, lost and expired, by estimator and month

Configuration

Settings	Spoilage, margin, overhead, bleed, proofs, tolerance
Print Sites	The shop: product, journal, paper store, capacity
Presses	Units, speed, make-ready, rates and sheet range
Paper Stock	Sheet size, grammage, grain and the cost per sheet
Finishing Operations	Setup, run rate, materials, bought-in work
Spoilage Reasons	Stage, forces a reprint, charged to the customer

Want this for your print shop?

We set it up with your presses, your paper and your finishing rates, check the first estimates against the way you price today, connect it to your invoicing and stock, and train the estimators and the floor. It runs a single digital shop or a litho plant with several sites.
