COMPLETE GUIDE · SETUP, EVERY SCREEN, EVERY STEP

Transport Management for Odoo 19

Trips, drivers, vehicles and their paperwork, then what each job should be charged, what it really cost and who gets paid for it. Every screen and every step, shown on the live demos. No transport software background needed.

BASE MODULE | ENTERPRISE ADD-ON

START

About this guide

This is one guide for one product, **Transport Management for Odoo 19**, which comes as two modules. The **base module** runs the fleet day to day: trips, expenses, vehicle paperwork, drivers, a simple payroll and a dashboard. The **Enterprise add-on** sits on top of it and adds the money side: what a job should be charged, what it really cost to run, and who gets paid for it, with loads, stops and a readiness check before a truck leaves.

BASE

In the base module **wt_transport_management**, so on every install.

ENTERPRISE ADD-ON

Needs **wt_transport_management_enterprise** on top of the base.

Every part, section and step carries one of these badges, so you always know which module a screen comes from. "Enterprise" is the name of the add-on, not the Odoo subscription: both modules run on Odoo 19 Community and need only Fleet, Employees and Invoicing from it.

HOW IT WORKS

The two live demos

Base module	**transport-demo.way4tech.com**
Base + add-on	**transport-pro.way4tech.com**
Sign in	**w4demo** / **Demo2026** on both
Company	Gulf Eastern Transport Co., a worked example haulier in the Eastern Province, prices in SAR with 15% VAT
Data	12 vehicles, 11 drivers, 19 locations, about 290 trips in every state, expenses, documents, payslips; the add-on demo adds rate cards, charge sheets, loads, stops, fuel, tyres, defects and settlements

Both demos are shared with other visitors and reset from time to time. Anything you change may be changed back or seen by the next person, so treat them as a yard to walk around rather than your own books.

Who should read what

IF YOU ARE	READ
New to transport software	Part 1, the business in five minutes, then Part 2 to see what each module does.
Setting the system up	Part 4, setup from zero, in the order to do it.
A dispatcher or traffic planner	Parts 7 and 11 to 12: trips, loads, stops and the readiness check.
A fleet or workshop manager	Parts 5, 16 and 17: vehicles, paperwork, fuel, defects, tyres and service plans.
In accounts	Parts 8, 9, 13, 14 and 18: expenses, payroll, pricing, invoicing and settlements.
The owner	Parts 10 and 15: the dashboard, reports and the true cost per kilometre.
Showing the product to someone	Part 21, the 15 minute demo script.

PART 22 Questions, and the menu map

PART 1

Road transport in five minutes

A transport company sells one thing: moving somebody else's goods or people from one place to another, on time, for a price agreed in advance. Everything in this product follows from three questions the owner asks about every job.

IN THIS PART YOU WILL LEARN

- The three questions every transport job raises
- The words trip, load, stop, POD, detention and settlement
- What the base module does and what the add-on adds
- What neither module tries to do

What should it be charged?

The customer's contract says how: per kilometre, per tonne, per pallet, per drop, a flat trip rate, plus surcharges for fuel or waiting time. Get it wrong and the margin is gone before the truck leaves.

What did it really cost?

Fuel, tolls and repairs are the costs you see. The lease, insurance, road tax and depreciation are paid whether the truck runs or not. A cost per kilometre that leaves them out is too low.

Who gets paid for it?

The employed driver on a pay deal, or a subcontractor who ran the job on his own truck. Advances, fuel losses and damage claims come off what they are owed.

The words used in this guide

WORD	WHAT IT MEANS HERE
Trip	One journey by one vehicle, with a driver, an origin, a destination, a date and a charge.
Load (consignment)	What the customer bought: their goods, with their own number, shipper, consignee and time windows. One trip can carry several loads; that is called **groupage**.
Stop	One call on a trip: a collection, a delivery, a fuel stop, a border. Each stop has planned and actual times.
Proof of delivery (POD)	Who signed for the goods, when, and with what remarks or shortages.
Detention	Waiting time at a customer site beyond the free time in the contract, charged by the hour.
Rate card	A contract tariff, valid between two dates, for a customer (sell side) or a carrier (buy side).
Charge sheet	The priced lines for one job: what the customer is charged and what a carrier is paid.
Standing cost	A cost that runs by the calendar, not by the kilometre: lease, insurance, tax, depreciation.
Cost per km	Every cost of a vehicle in a period divided by the distance it ran.
Break-even per earning km	What each kilometre that earned money must be charged to cover the whole cost, empty legs included.
Subcontractor (carrier)	Another haulier or an owner-operator who runs a job for you on their own vehicle.
Settlement	A pay run: the work done in a window, the deal applied, advances taken off, the balance paid.
VOR	Vehicle off road. The vehicle must not be dispatched.

How a job moves through the system

The base module: a trip logbook BASE

1. **Plan** — Trip in draft, vehicle and driver
2. **Schedule** — Confirmed for a date
3. **Run** — Start, odometer out, expenses
4. **Complete** — Odometer in, distance
5. **Invoice** — One invoice per trip

The add-on: the money layer around the same trip ENTERPRISE ADD-ON

1. **Book loads** — Customer consignments
2. **Check readiness** — Paperwork, defects, clashes
3. **Price** — Charge sheet from rate cards
4. **Deliver** — Stops, POD, detention
5. **Bill and pay** — Invoices, settlements

What is deliberately not in either module. There is no drag and drop dispatch board, no GPS tracking, no route optimisation and no driver phone app. Distance comes from odometer readings typed on the trip, or from the planned leg distances on the stops. Dispatch control is the readiness check instead, which answers one question: can this truck, with this driver, go out on this job today?

PART 2 Two modules, one product

The base module records what a trip cost after the fact. The add-on adds the half it does not have: the price before the job, the true cost behind it, and the pay after it. Install the add-on later and nothing you already do changes; a trip with no loads, no stops and no charge sheet behaves exactly as it did before.

IN THIS PART YOU WILL LEARN

- Which features need the add-on
- What to install and in what order

WHAT YOU CAN DO	BASE	ENTERPRISE ADD-ON
Trips with vehicle, driver, customer, route, odometer, cargo and charge	✓	✓
Trip expenses with submit, approve, pay and a vendor bill	✓	✓
One invoice per completed trip, with the company sales tax	✓	✓
Vehicle documents with expiry status and daily reminders	✓	✓
Driver licences with expiry status and daily reminders	✓	✓
Payroll with allowances, bonuses, deductions and expense reimbursement	✓	✓
Fleet Control dashboard, trip and expense analysis	✓	✓
Trip Sheet, Expense Voucher and Payslip printouts	✓	✓
Loads, groupage, ordered stops, proof of delivery, waybill	–	✓
Readiness check and double booking detection before dispatch	–	✓
Driver certificates (medical, CPC, tachograph card, ADR)	–	✓
Rate zones, rate cards, bands, surcharges, charge sheets	–	✓
Consolidated monthly invoicing, detention charges, claims	–	✓
Standing costs, cost periods, true cost and margin per trip	–	✓
Fuel entries measured tank to tank, six loss checks, card import	–	✓
Defects, operational state (off road, workshop), tyres, service plans	–	✓
Pay schemes, settlement runs, advances, subcontractors, self-billing	–	✓

What you install

MODULE	TECHNICAL NAME	NEEDS
Transport Management	**wt_transport_management**	Fleet, Employees, Invoicing (all Community)
Transport Management Enterprise	**wt_transport_management_enterprise**	The base module

The screenshots for the base module come from **transport-demo**, which runs the base alone. The screenshots marked Enterprise add-on come from **transport-pro**, which runs both. The base screens look the same on both, except that the add-on puts extra buttons, tabs and fields on the trip, the vehicle and the driver; those are shown where they matter.

PART 3 Sign in and find your way

Everything lives under one app, **Transport**, in the bar across the top of Odoo. The add-on does not add a second app; it adds menus inside the same one.

IN THIS PART YOU WILL LEARN

- How to sign in to either demo
- Where the menus are
- The three roles and what each can do

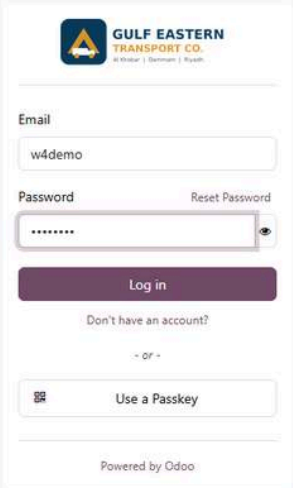

TRY IT YOURSELF ON THE DEMO

1. Open transport-pro.way4tech.com and sign in with w4demo / Demo2026
2. Click Transport, then walk across the top menu once
3. Open Operations and notice the add-on entries under Trips and Expenses

1 Open the demo and sign in BASE

Go to **transport-demo.way4tech.com** for the base module, or **transport-pro.way4tech.com** to see the add-on as well. Sign in with `w4demo` and `Demo2026`.

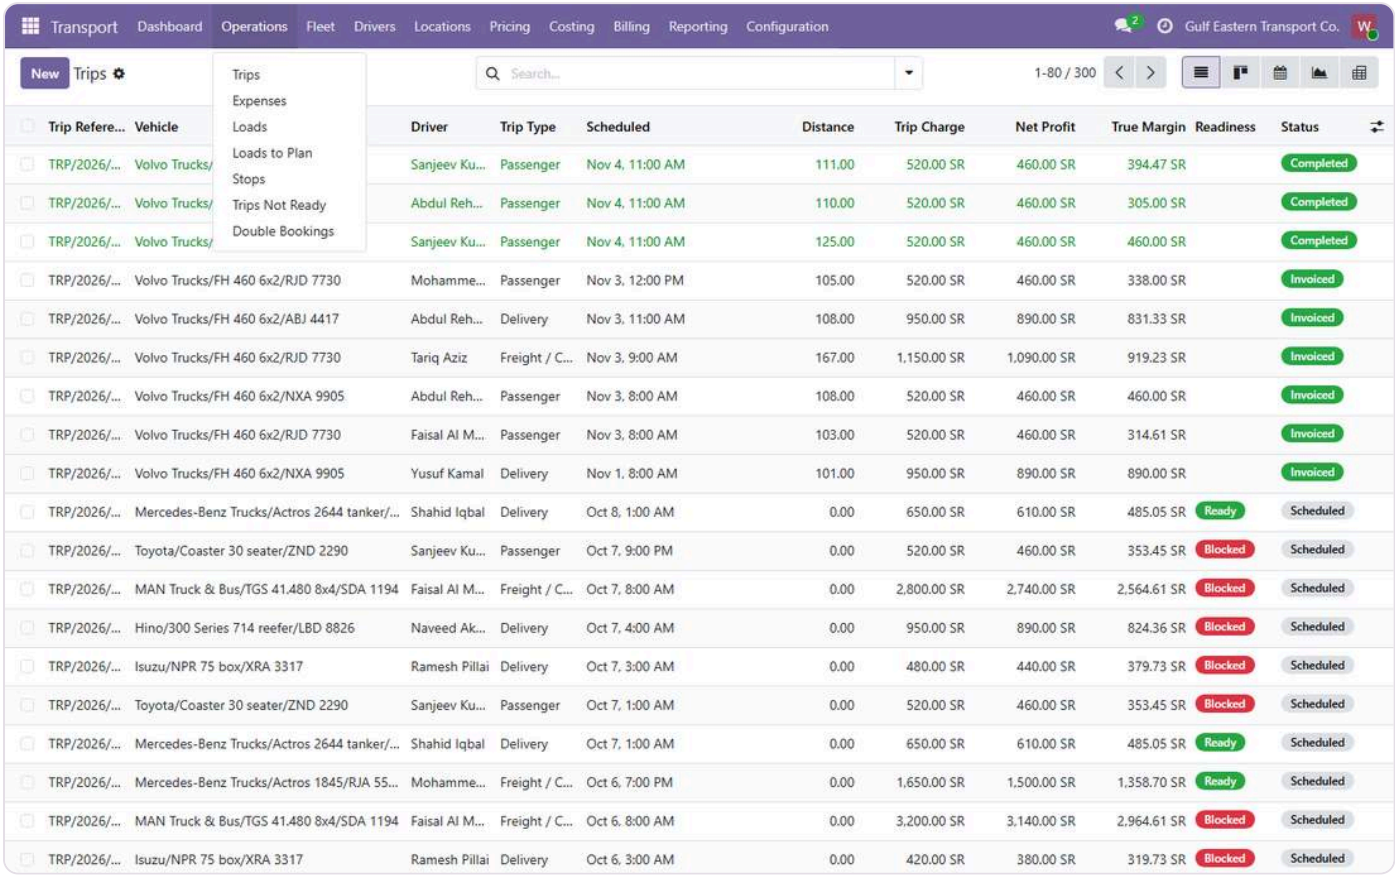

> This login can see every menu so you can follow the whole guide. A real driver or clerk would be given less, as the roles below explain.

2 Open the Transport app BASE

The Transport app opens on the dashboard. The menu bar reads Dashboard, Operations, Fleet, Drivers, Locations, Pricing, Costing, Billing, Reporting and Configuration. Pricing, Costing and Billing only appear with the add-on; it also adds entries inside Operations, Fleet, Drivers and Configuration.

> The full menu map, with the module behind each entry, is in Part 22.

Roles: who sees what BASE

The base module creates three groups under **Transport and Fleet** in each user's access rights. Each one includes the one before it.

ROLE	WHAT IT ALLOWS	ALSO GETS
Driver	Read vehicles, documents, locations and categories; open and update trips; record expenses. Can read payroll records but not change them.	Internal user
Fleet Officer	Everything a driver can, plus create and delete trips, expenses, vehicle documents and locations; edit expense categories and document types. Sees the Payroll and Reporting menus, but payroll stays read only. With the add-on, sees Pricing, Settlements, Advances and Subcontractors and the readiness and pricing buttons.	Fleet user
Fleet Manager	Full access, including payroll, Configuration and Settings.	Fleet manager, Invoicing, Employees officer

> Records are separated by company: a user only sees trips, expenses, documents, locations and payroll of the companies they are allowed into. There is no rule that limits a driver to their own trips; a driver sees every trip and can edit it, so give the Driver role with that in mind.

PART 4 Setup from zero, in order

Set the system up in this order. Each step needs the one before it: a trip needs a vehicle, a vehicle's paperwork needs document types, an expense needs a category. The add-on steps at the end can wait until the base is running.

IN THIS PART YOU WILL LEARN

- The order to set things up in
- Every base setting and what reads it
- Why the expense kind matters
- How document types propose expiry dates
- What tags and locations are used for

TRY IT YOURSELF ON THE DEMO

1. Open Configuration, Settings and find the Transport section
2. Open Expense Categories and look at the Kind column
3. Open Document Types, then one type, and note its validity and reminder days

STEP	WHERE	EDITION
1. Company, currency, chart of accounts and sales tax	Settings, Accounting	BASE
2. Transport settings: distance unit and reminder days	Transport, Configuration, Settings	BASE
3. Expense categories	Configuration, Expense Categories	BASE
4. Document types	Configuration, Document Types	BASE
5. Service types and vehicle tags	Configuration, Service Types / Vehicle Tags	BASE
6. Locations: depots, hubs, customer sites, fuel stations	Locations	BASE
7. Drivers: employees with the driver box ticked and a licence	Drivers, Drivers	BASE
8. Vehicles, each with a driver, base location and documents	Fleet, Vehicles	BASE
9. Readiness rules and the refuse unready trips switch	Configuration, Readiness Rules / Settings	ENTERPRISE ADD-ON
10. Rate zones, then rate cards for each customer and carrier	Configuration, Rate Zones; Pricing, Rate Cards	ENTERPRISE ADD-ON
11. Detention rules	Configuration, Detention Rules	ENTERPRISE ADD-ON
12. Standing costs per vehicle or per tag	Costing, Standing Costs	ENTERPRISE ADD-ON
13. Fuel baselines and each vehicle tank capacity	Configuration, Fuel Baselines; the vehicle	ENTERPRISE ADD-ON

14. Pay schemes, subcontractors, and a scheme on each driver	Configuration, Pay Schemes; Drivers	ENTERPRISE ADD-ON
15. Service plans for preventive maintenance	Fleet, Service Plans	ENTERPRISE ADD-ON

The Transport settings BASE

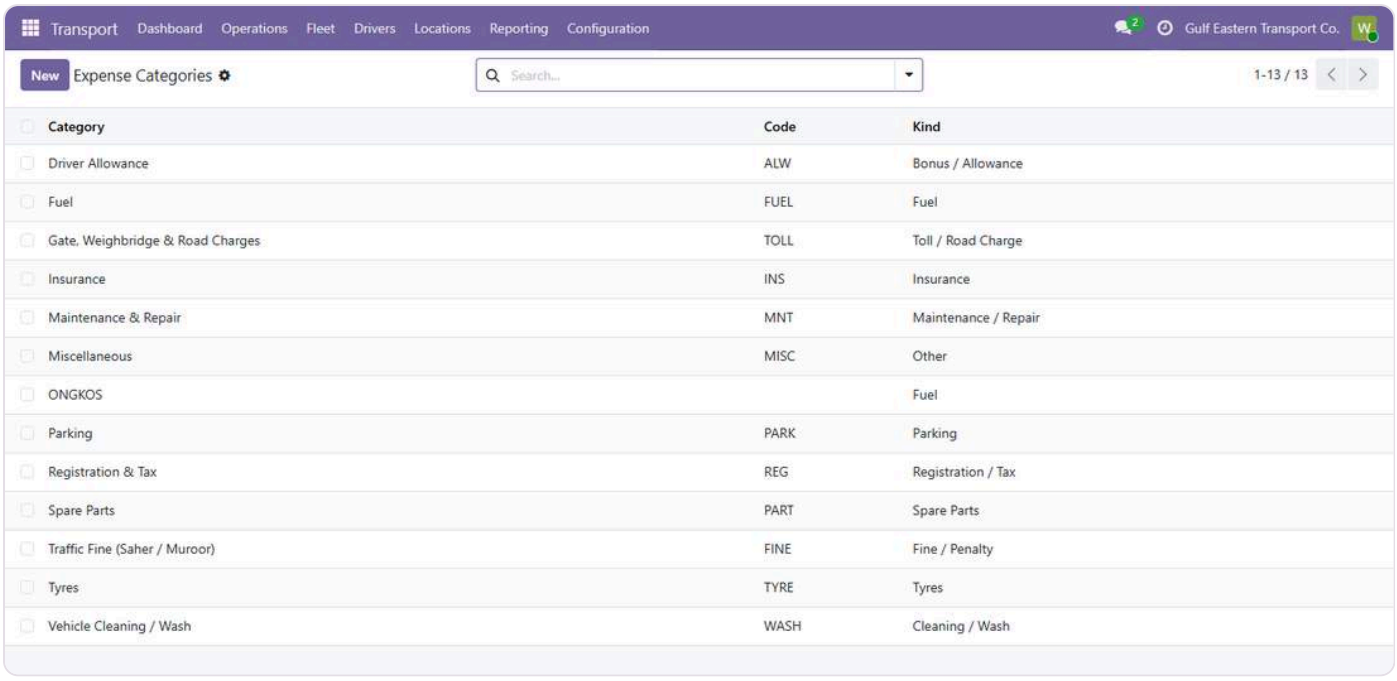

Open **Configuration, Settings**. The Transport section holds the base settings, per company; with the add-on a second section, **Transport Enterprise**, holds Dispatch Control. The settings page needs the Odoo Settings right (Administration), so the shared demo login cannot open it; the table lists every field.

SETTING	WHAT IT DOES IN THE CODE	DEFAULT
Distance Unit	Kilometres or miles. Stored on the company; the add-on uses it to label distance lines on a charge sheet as km or mi.	km
Document Reminder	Days before a vehicle document expires to raise an alert. The add-on uses it as the warning horizon for subcontractor insurance and licence. Each vehicle document also carries its own reminder days, which is what its Expiring Soon status follows.	30
Licence Reminder	Days before a driver licence expires. The add-on uses it as the horizon for driver certificates. The base licence status itself turns Expiring Soon at 30 days.	30
Service Reminder	Stored for a service reminder. No job reads it; service warnings come from the lead days on each service plan in the add-on.	15
Refuse Unready Trips	Shown in a second section, Transport Enterprise. When on, Start Trip refuses a trip that fails a blocking readiness check. When off, the same reasons are shown as warnings.	On

> Several figures the add-on works with have no setting screen and use a fixed value: a charge sheet priced below cost is confirmed with a note in its history (it is not refused); fuel loss tolerance is 10% unless a baseline sets its own; a trip with no end time is assumed to occupy its vehicle and driver for 8 hours; cost periods are monthly. These are covered in the parts that use them.

Expense categories BASE

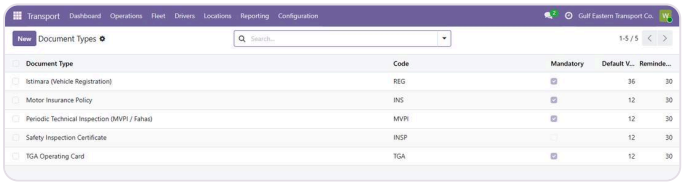

Twelve categories come with the module: Fuel, Maintenance & Repair, Insurance, Toll & Road Charges, Fine / Penalty, Registration & Tax, Tyres, Spare Parts, Parking, Vehicle Cleaning / Wash, Driver Allowance and Miscellaneous. Rename them to your own words (the demo uses Saudi terms such as Saher fines). Each one has a **Kind**. The kind is what the numbers run on: only expenses of kind **Fuel** count as fuel cost and fuel quantity on the vehicle and the dashboard, and only they show the litres, unit price and odometer fields.

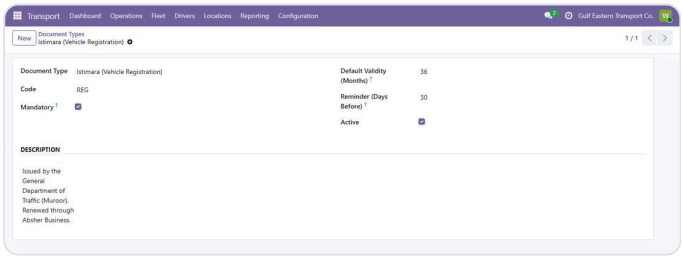

BASE Configuration, Expense Categories. Name, code and kind; the kind drives the fuel figures.

Document types BASE

Eight types come with the module: Vehicle Registration, Insurance Policy, Fitness Certificate, Road Tax, Route Permit, Emission Certificate, MOT / Roadworthiness Test and Safety Inspection. Each has a **Default Validity** in months, which proposes the expiry date when a document is recorded with an issue date, and **Reminder (Days Before)**, which is copied onto each document of that type. **Mandatory** marks the paperwork that matters most for reporting.

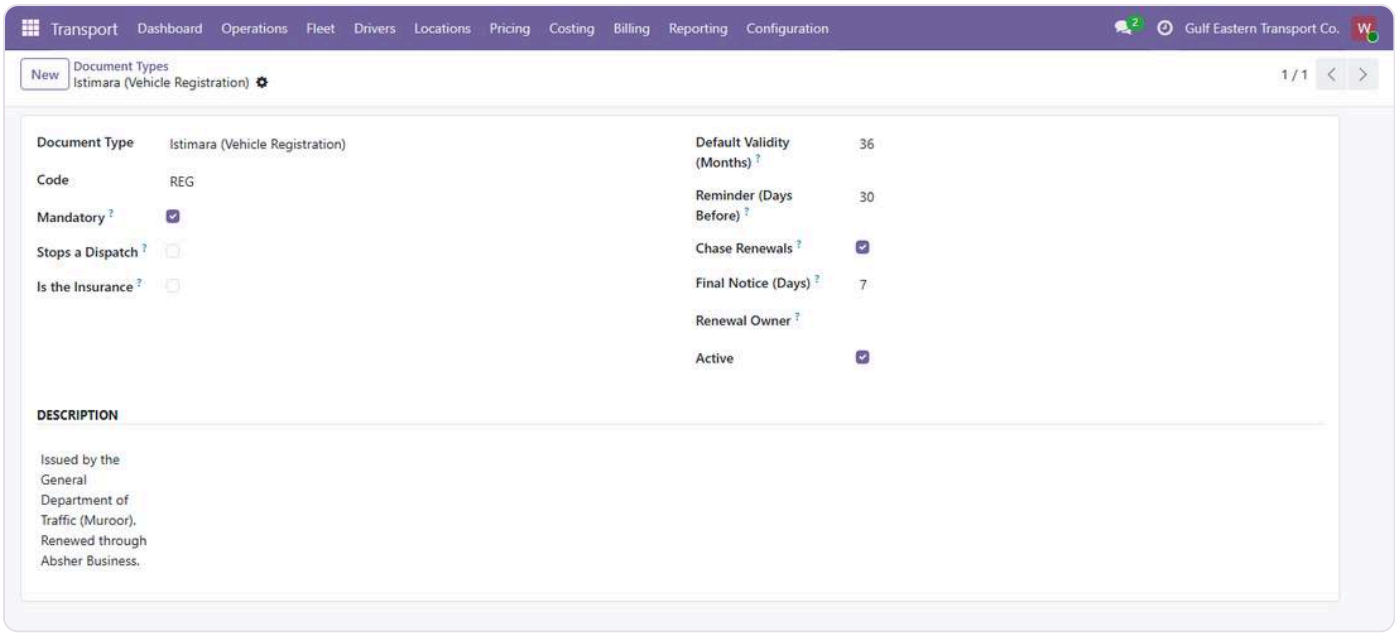

BASE Document Types, renamed for the Saudi demo: Istimara, MVPI, TGA card.

BASE A document type. Validity and reminder days feed every document of this type.

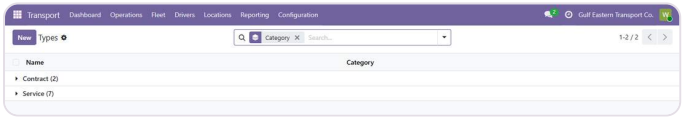

With the add-on, the same form gains four more fields, covered in Part 12: **Stops a Dispatch**, **Is the Insurance**, **Chase Renewals** with a final notice day count, and a **Renewal Owner**.

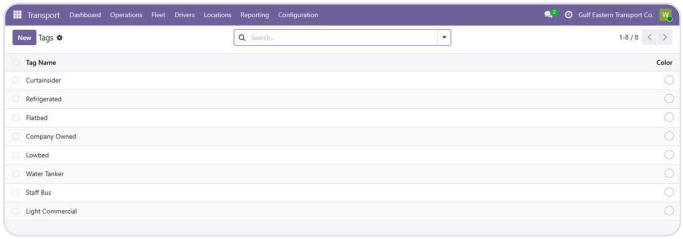

ENTERPRISE ADD-ON The document type with the add-on: Dispatch, Insurance and Chasing fields.

Service types and vehicle tags BASE

These two menus open the standard Odoo Fleet lists. **Service types** name the jobs your workshop does (oil and filters, brakes, tyres, inspections). **Vehicle tags** group vehicles into classes such as reefer, flatbed or tanker. Tags matter later: rate cards can be restricted to a vehicle class, and a standing cost can apply to every vehicle carrying a tag.

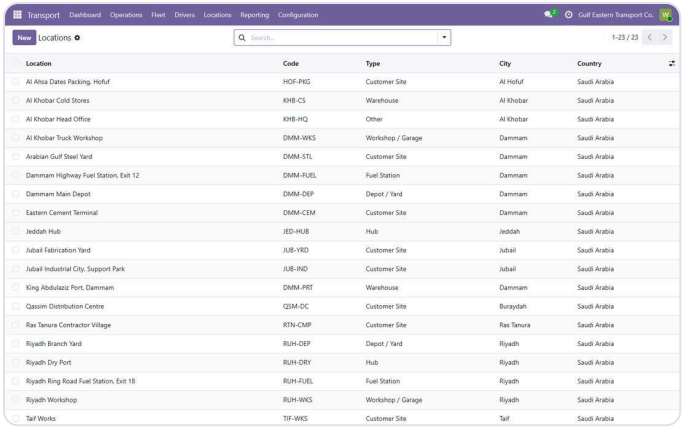

BASE Service Types, from Odoo Fleet.

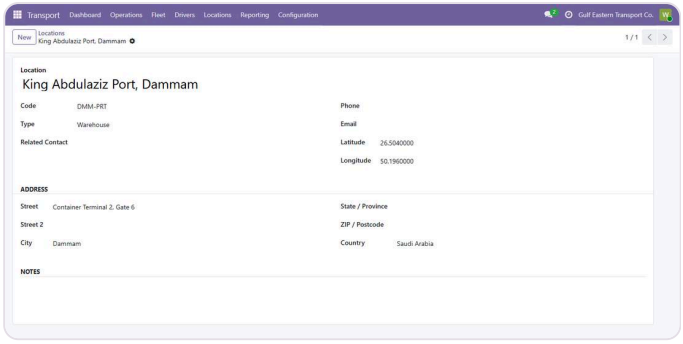

BASE Vehicle Tags, from Odoo Fleet.

Locations BASE

A location is any place a truck goes: a depot or yard, a hub, a warehouse, a customer site, a fuel station, a workshop, parking or a checkpoint. Each has a code, an address, GPS latitude and longitude, a phone, an email and an optional related contact. Trips use them as origin and destination; the add-on uses them for stops, rate zones and fuel stations.

BASE Locations: the demo has 19 places across the Eastern Province and beyond.

BASE A location form with type, address and coordinates.

PART 5 The fleet: vehicles, paperwork, maintenance

The Vehicles menu is Odoo Fleet's own vehicle list. The base module adds a Transport tab and three smart buttons to the vehicle form, and a register of vehicle documents with expiry tracking.

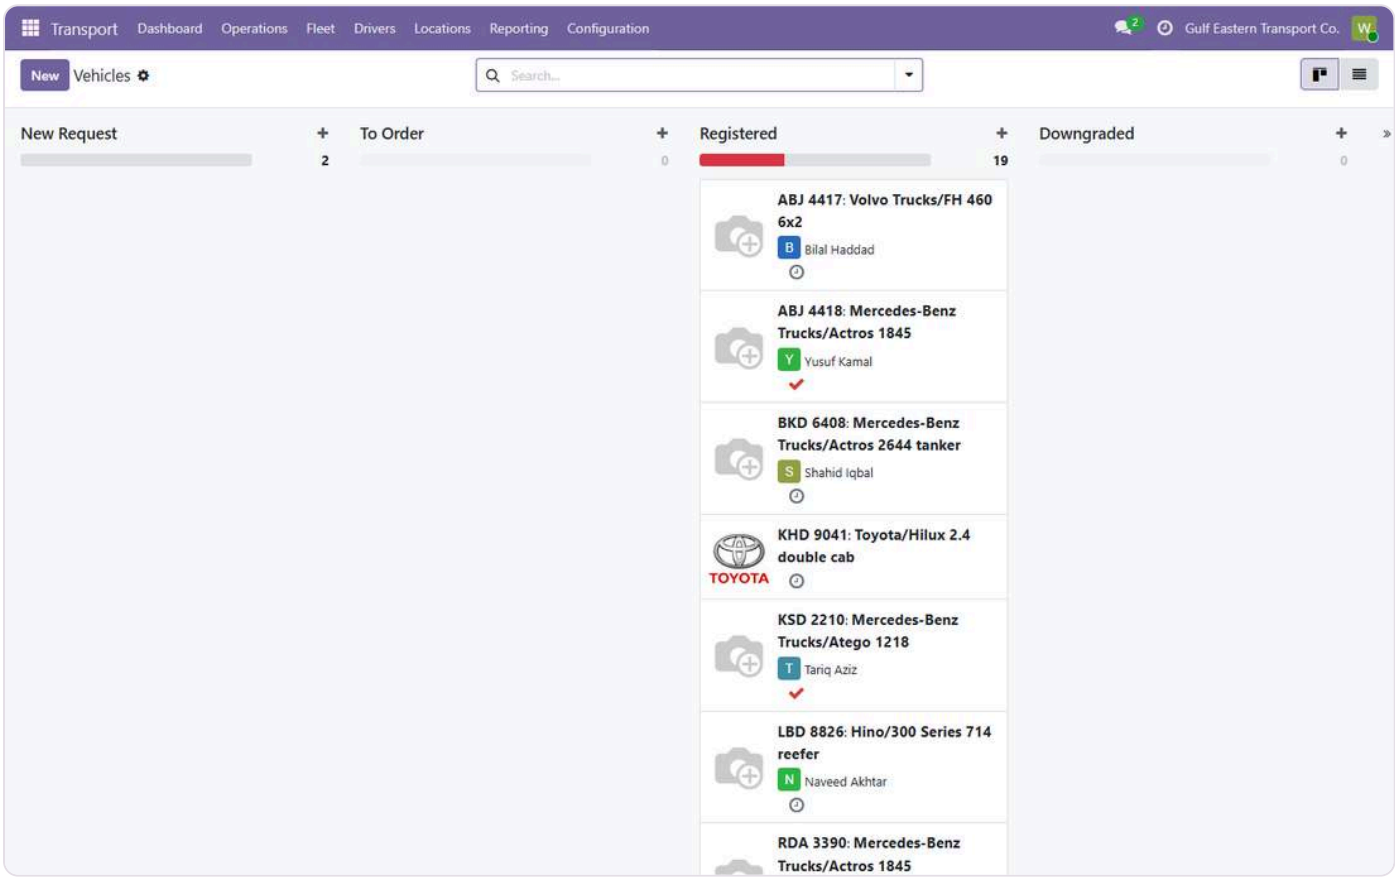

IN THIS PART YOU WILL LEARN

- The three buttons and the Transport tab on a vehicle
- How the lifetime cost figures are worked out
- How document status and reminders work
- Where services and odometer readings live

TRY IT YOURSELF ON THE DEMO

1. Open Fleet, Vehicles, then the Actros ABJ 4418
2. Open its Transport tab and read the Operating Cost group
3. Open Fleet, Documents and filter on Expired

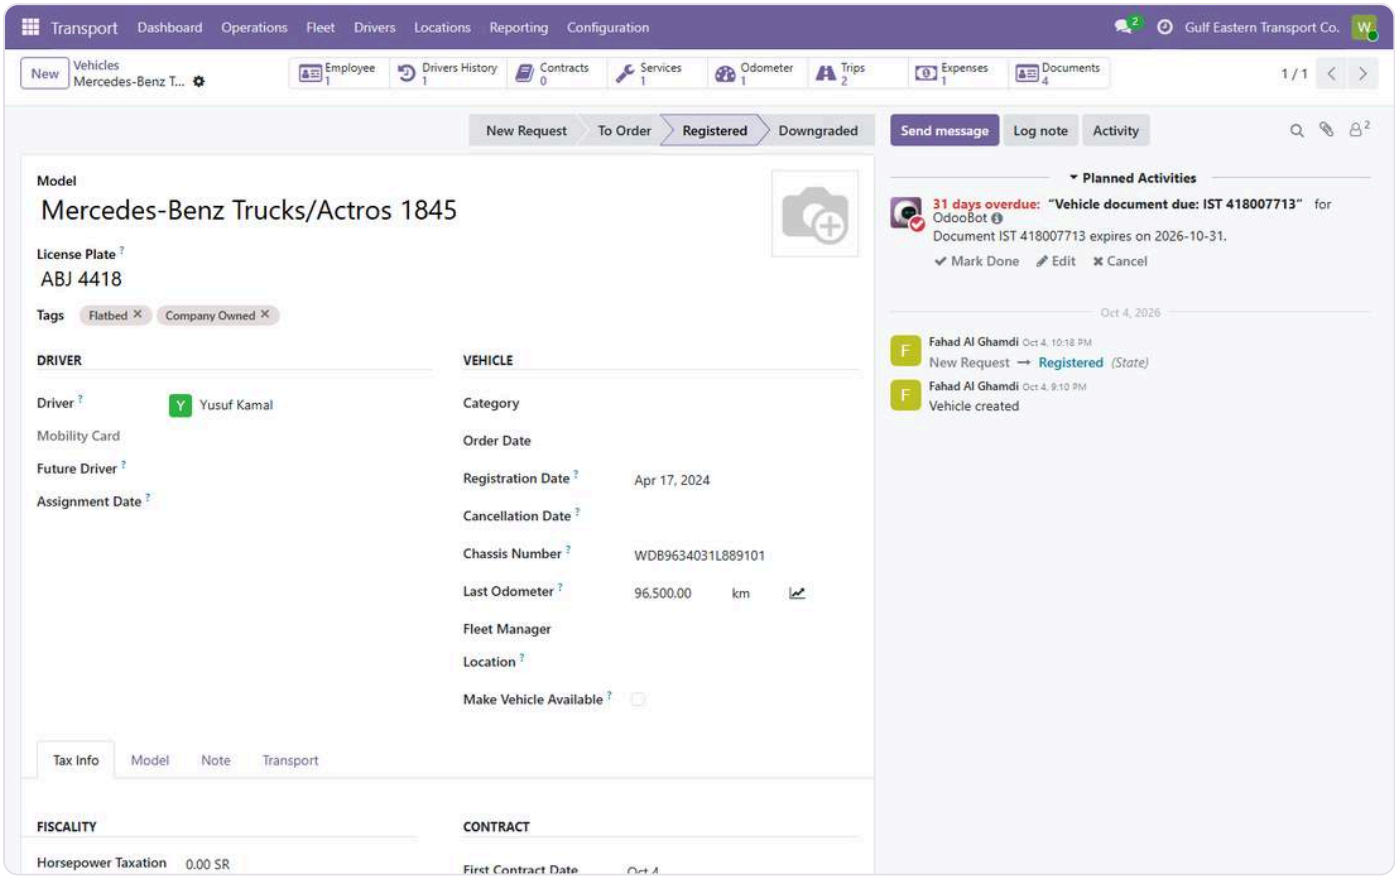

The vehicle list BASE

BASE Fleet, Vehicles opens as cards. Each card is one vehicle from Odoo Fleet.

1 Open a vehicle BASE

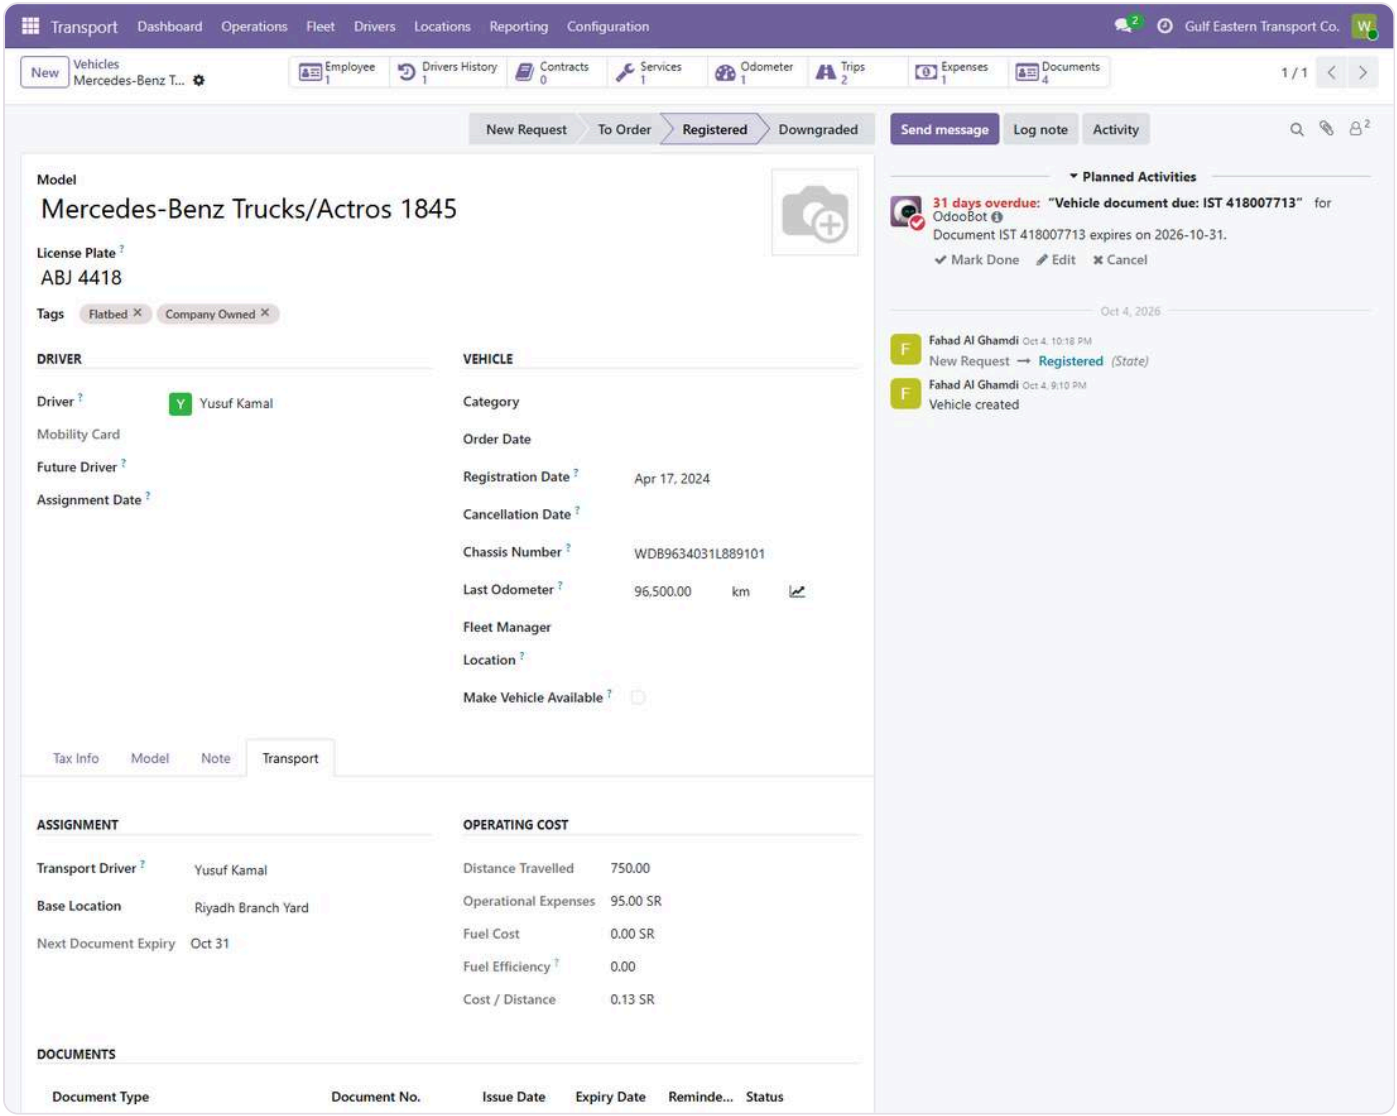

The form is the standard Fleet form: model, plate, driver, odometer, contract details. Across the top are three buttons the module adds: **Trips**, **Expenses** and **Documents**, each with a count. Each opens the list for this vehicle only, ready to add a new one already pointed at it.

2 The Transport tab BASE

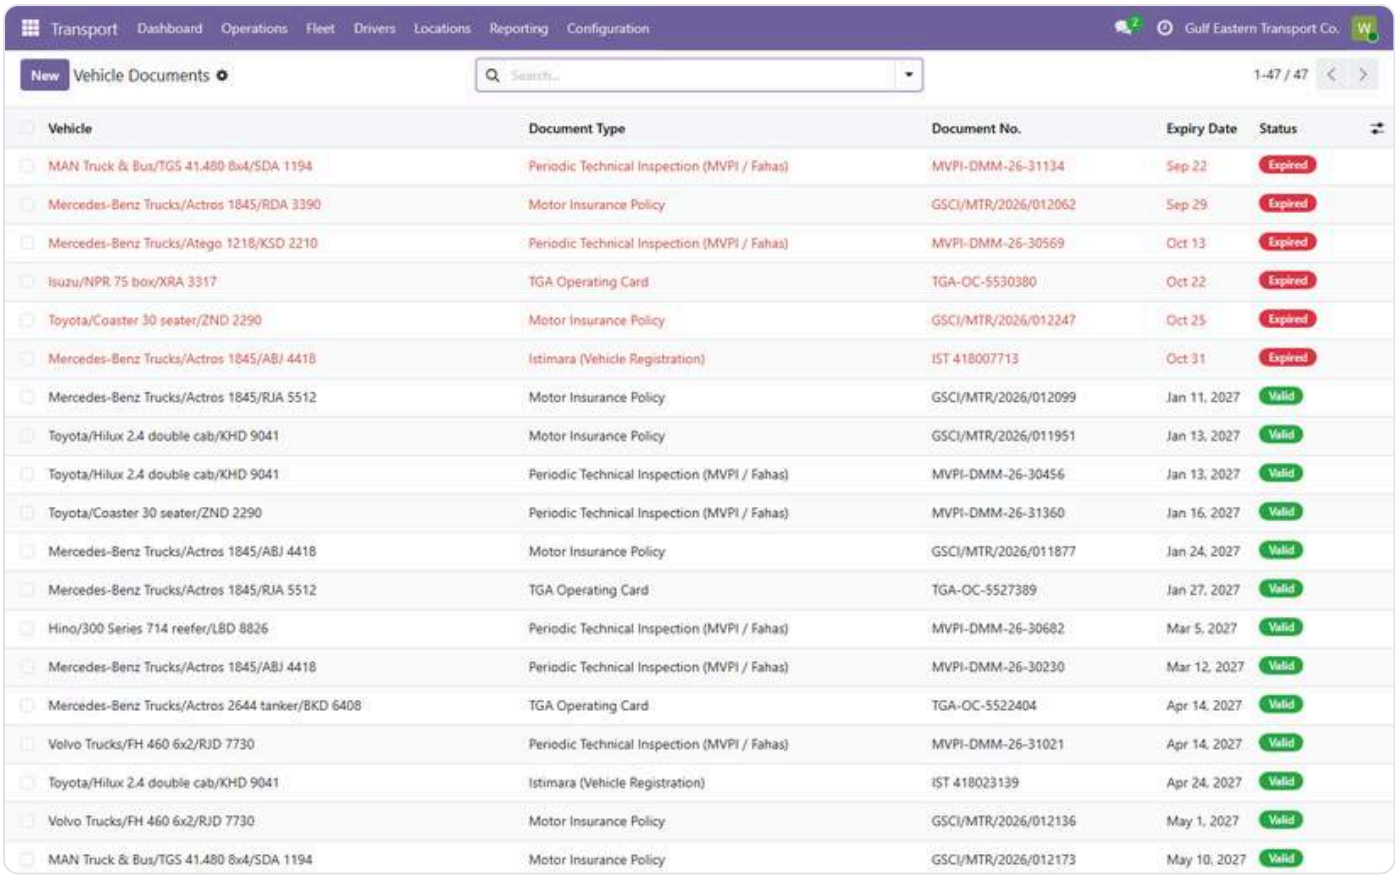

Transport Driver is the employee who normally drives it; a new trip on this vehicle picks the driver up from here. **Base Location** is its home depot. **Next Document Expiry** is the soonest expiry of its paperwork. The **Operating Cost** group shows lifetime figures worked out from the records.

> Distance Travelled counts completed and invoiced trips only. Operational Expenses counts every expense not rejected. Fuel Efficiency is that distance divided by the litres on fuel expenses, Cost / Distance is expenses divided by distance. The add-on keeps these and adds a separate, period-based true cost.

The Documents grid at the bottom of the Transport tab lists the vehicle's paperwork and can be edited in place: type, number, issue date, expiry date, reminder days, and a status badge in green, amber or red.

Vehicle documents BASE

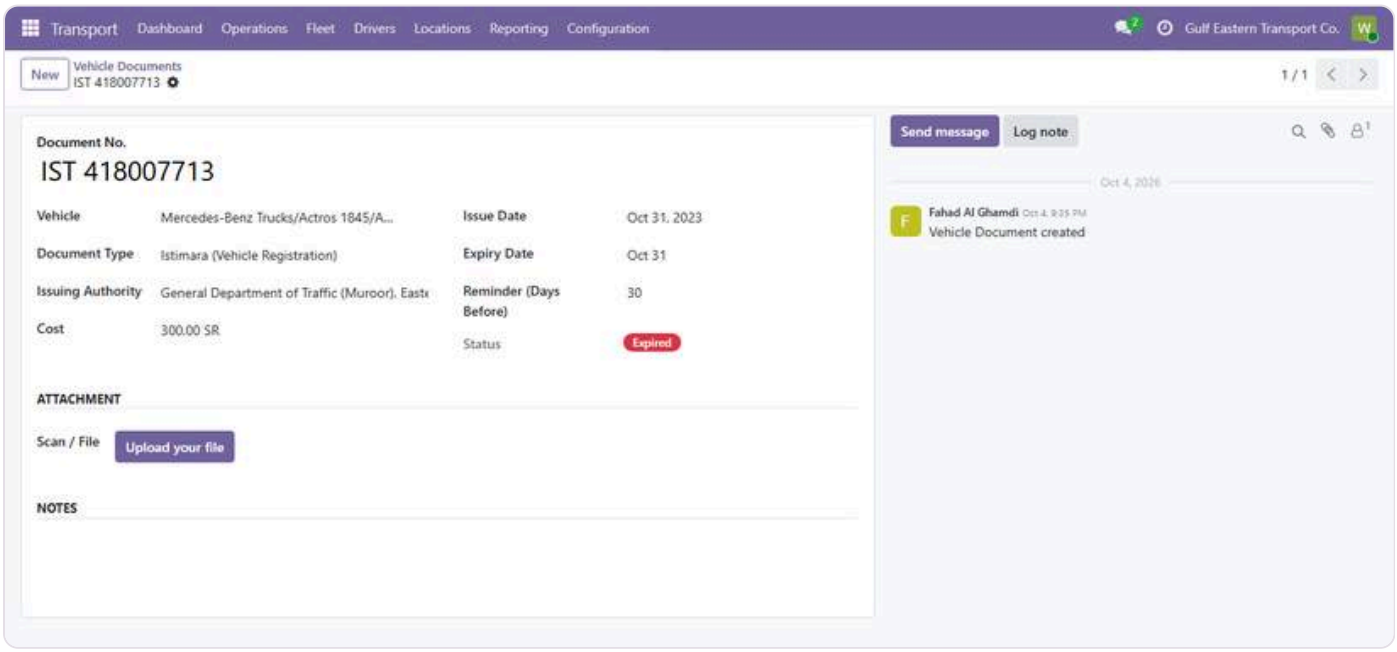

Vehicle	Document Type	Document No.	Expiry Date	Status
MAN Truck & Bus/TGS 41.480 8x4/SDA 1194	Periodic Technical Inspection (MVPI / Fahas)	MVPI-DMM-26-31134	Sep 22	Expired
Mercedes-Benz Trucks/Actros 1845/RDA 3390	Motor Insurance Policy	GSCI/MTR/2026/012062	Sep 29	Expired
Mercedes-Benz Trucks/Atego 1218/KSD 2210	Periodic Technical Inspection (MVPI / Fahas)	MVPI-DMM-26-30569	Oct 13	Expired

Mercedes-Benz Trucks/Actros 1845/RJA 5512	TGA Operating Card	TGA-OC-5527389	Jan 27, 2027	Valid
Hino/300 Series 714 reefer/LBD 8826	Periodic Technical Inspection (MVPI / Fahas)	MVPI-DMM-26-30682	Mar 5, 2027	Valid
Mercedes-Benz Trucks/Actros 1845/ABJ 4418	Periodic Technical Inspection (MVPI / Fahas)	MVPI-DMM-26-30230	Mar 12, 2027	Valid
Mercedes-Benz Trucks/Actros 2644 tanker/BKD 6408	TGA Operating Card	TGA-OC-5522404	Apr 14, 2027	Valid
Volvo Trucks/FH 460 6x2/RJD 7730	Periodic Technical Inspection (MVPI / Fahas)	MVPI-DMM-26-31021	Apr 14, 2027	Valid
Toyota/Hilux 2.4 double cab/KHD 9041	Istimara (Vehicle Registration)	IST 418023139	Apr 24, 2027	Valid
Volvo Trucks/FH 460 6x2/RJD 7730	Motor Insurance Policy	GSCI/MTR/2026/012136	May 1, 2027	Valid
MAN Truck & Bus/TGS 41.480 8x4/SDA 1194	Motor Insurance Policy	GSCI/MTR/2026/012173	May 10, 2027	Valid

BASE Fleet, Documents: every piece of paperwork on every vehicle, soonest expiry first.

3 Record a document BASE

Pick the vehicle and the **Document Type**, type the document number, the issuing authority and the cost, and attach a scan. Enter the **Issue Date** and the expiry date is proposed from the type's default validity; the reminder days are copied from the type.

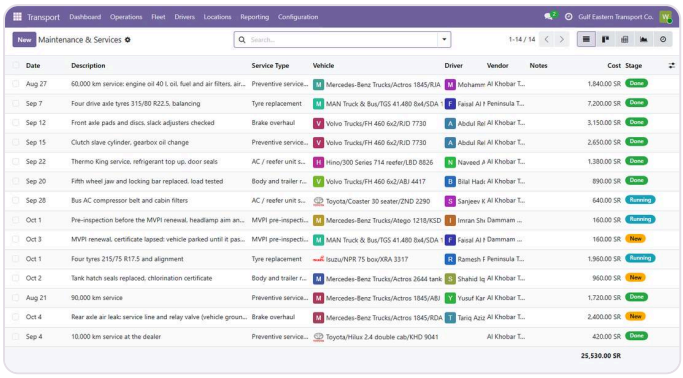

> The status is worked out every time the record is read: Expired when the expiry date has passed, Expiring Soon inside the reminder days, otherwise Valid. A document with no expiry date counts as valid.

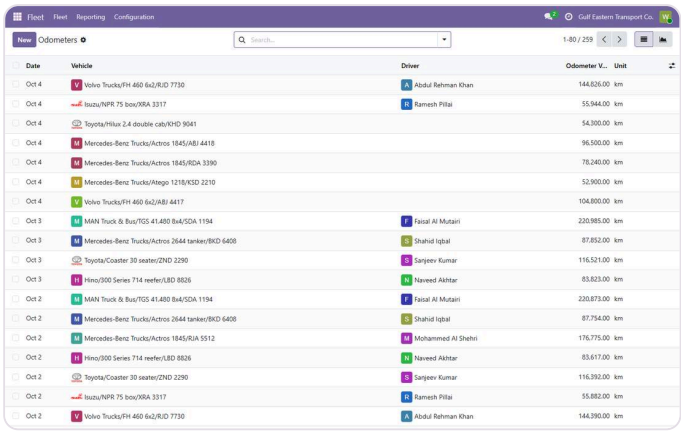

The search panel has two ready filters, **Expired** and **Expiring (30 days)**, and groupings by vehicle, document type and expiry month. Every day the job **Transport: Vehicle Document Reminders** puts a to-do on the vehicle for each

document that is expiring or expired, once per document.

Maintenance and services, odometer logs BASE

BASE Fleet, Maintenance & Services: Odoo Fleet service records, with pivot, graph and activity views.

BASE Fleet, Odometer Logs: Odoo Fleet odometer readings.

Both menus open standard Odoo Fleet screens, so the workshop history and odometer readings stay in one place. The odometer on the vehicle is moved forward automatically when a trip is completed with a higher Odometer In, and when an expense with a higher odometer reading is approved. It never moves backwards.

PART 6 Drivers

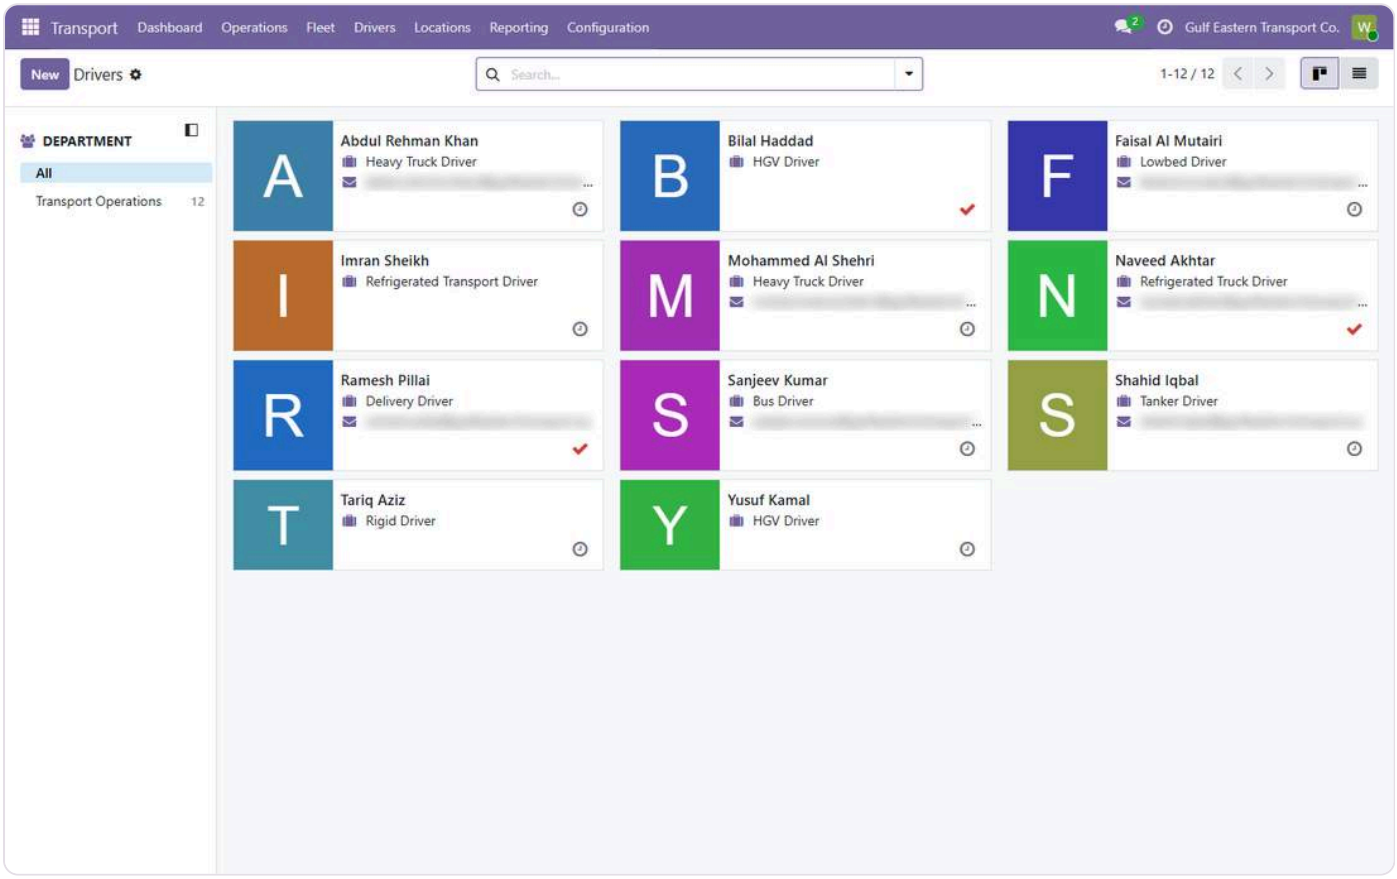

A driver is an Odoo employee with the **Is a Driver** box ticked. Only employees marked this way can be picked as driver or co-driver on a trip or as the driver of a vehicle.

IN THIS PART YOU WILL LEARN

- What makes an employee a driver
- The licence fields and how status is worked out

TRY IT YOURSELF ON THE DEMO

1. Open Drivers, then Bilal Haddad
2. Open the Driver / Transport tab and look at the licence status

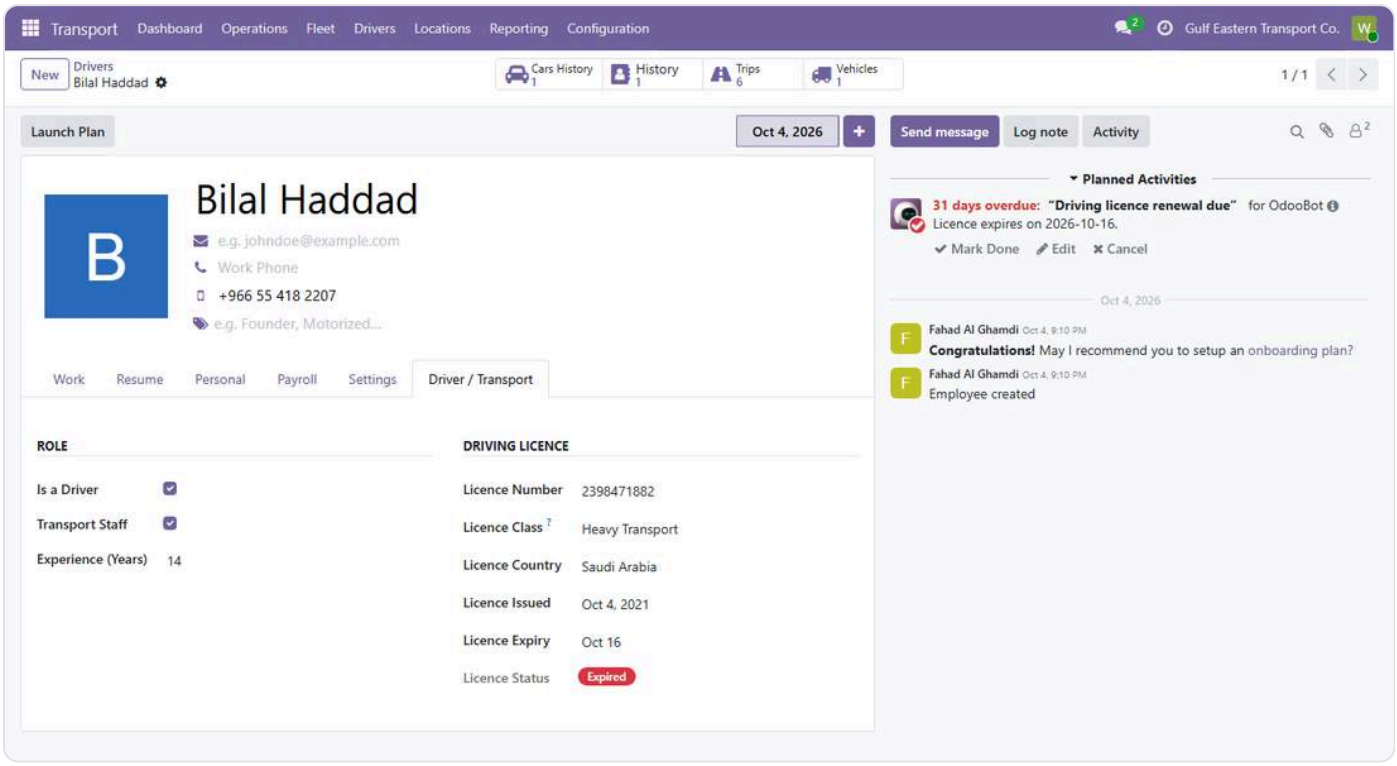

BASE Drivers, Drivers: the employees marked as drivers.

1 The Driver / Transport tab BASE

Tick **Is a Driver** (or **Transport Staff** for office and workshop people) and the licence block appears: number, licence class (B, C+E, HTV, CDL, whatever your country uses), licence country, issue and expiry dates and years of experience. Two buttons at the top open the driver's **Trips** and assigned **Vehicles**.

> Licence Status turns Expiring Soon 30 days before the expiry date and Expired after it. Every day the job Transport: Driver Licence Reminders puts one to-do on each driver whose licence is expiring or expired.

> The add-on adds two blocks to this tab, **Certificates** and **Pay**, and a Driver Compliance list. Those are in Part 12 and Part 18.

PART 7 Trips, step by step

A trip is one journey by one vehicle. It moves through six states: Draft, Scheduled, In Progress, Completed, Invoiced and Cancelled. Each button on the form moves it one step, and the chatter keeps the history.

IN THIS PART YOU WILL LEARN

- The six trip states and the button for each
- What fills in by itself and when
- How the distance, duration and net profit are worked out
- What the invoice from a trip contains

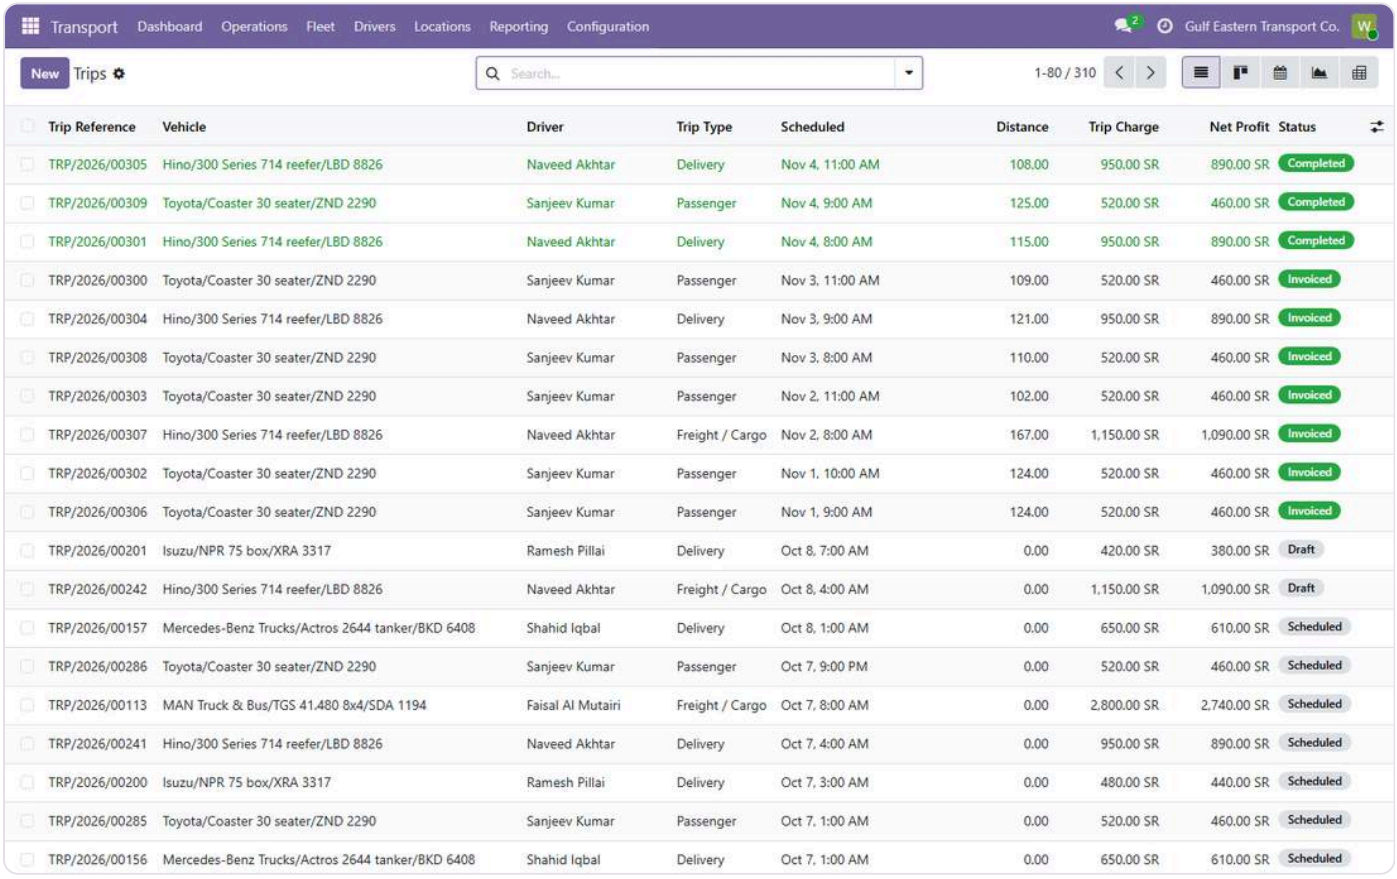

TRY IT YOURSELF ON THE DEMO

1. Open Operations, Trips and switch to the kanban view
2. Open TRP/2026/00009 and read its Financials tab
3. Click the Invoice button on it and look at the VAT line

The life of a trip BASE

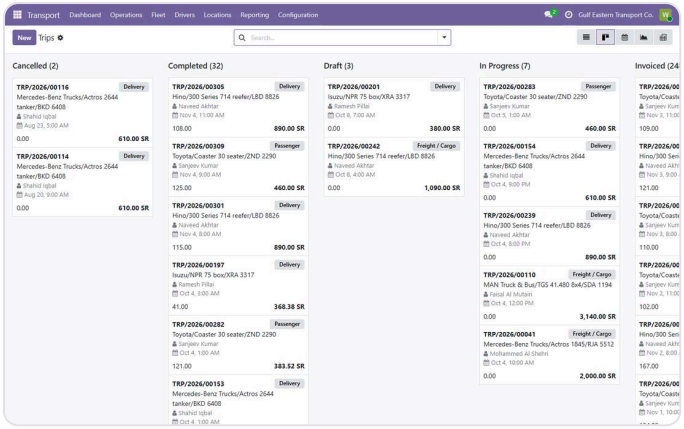

1. **Draft** — Being planned
2. **Scheduled** — Confirmed for a date
3. **In Progress** — On the road
4. **Completed** — Back, distance known
5. **Invoiced** — Billed to the customer

The trip list and its views BASE

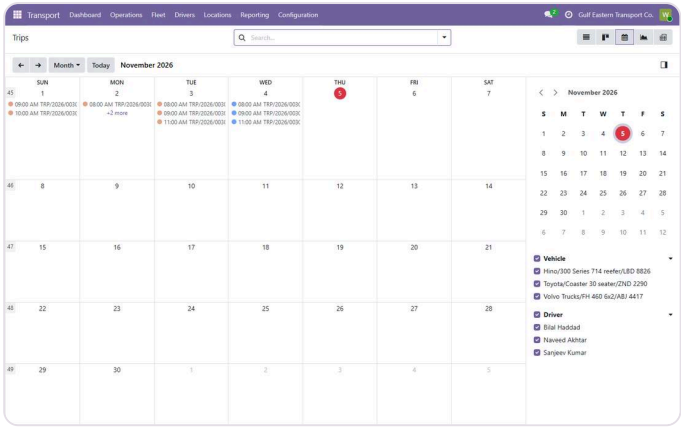

Trip Reference	Vehicle	Driver	Trip Type	Scheduled	Distance	Trip Charge	Net Profit	Status
TRP/2026/00305	Hino/300 Series 714 reefer/LBD 8826	Naveed Akhtar	Delivery	Nov 4, 11:00 AM	108.00	950.00 SR	890.00 SR	Completed

BASE Operations, Trips. Distance, charge and profit are totalled at the foot of the list.

BASE The kanban view, one column per state.

BASE The calendar, by scheduled date, with vehicle and driver filters.

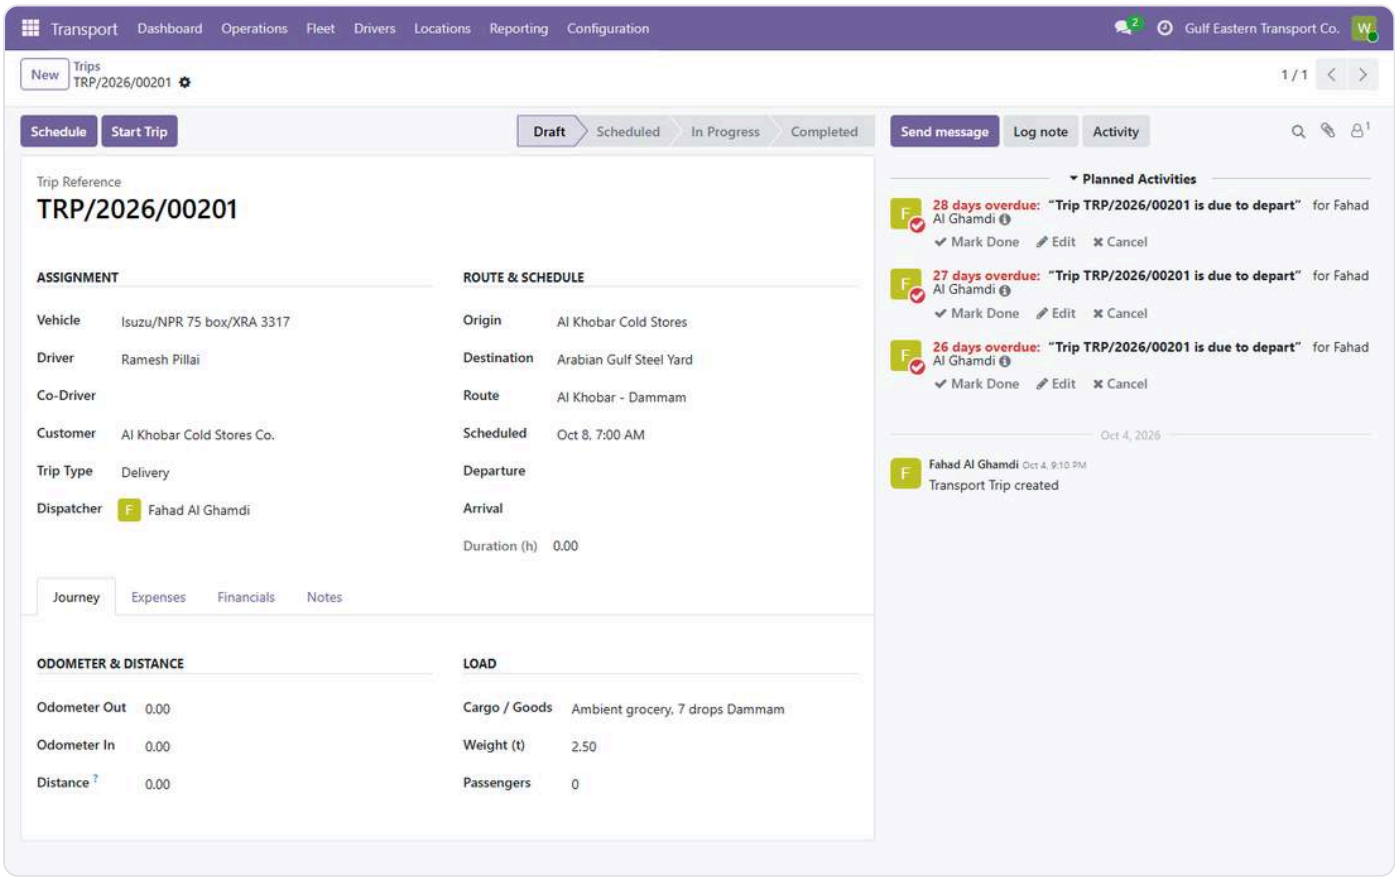

Filters: Draft, Scheduled, In Progress, Completed (which includes invoiced), My Trips and a date filter. Group by status, vehicle, driver, trip type or scheduled month. The graph and pivot views are covered with the reports in Part 10.

Running a trip BASE

1 Create the trip (Draft) BASE

Click **New**. Pick the **Vehicle**: its usual driver and its current odometer fill in. Set the **Customer**, the **Trip Type** (Freight / Cargo, Passenger, Delivery, Pickup, Transfer, Rental / Hire, Other), the origin and destination locations, a free text route, and the scheduled date and time. On the Journey tab note the cargo, its weight in tonnes or the passenger count.

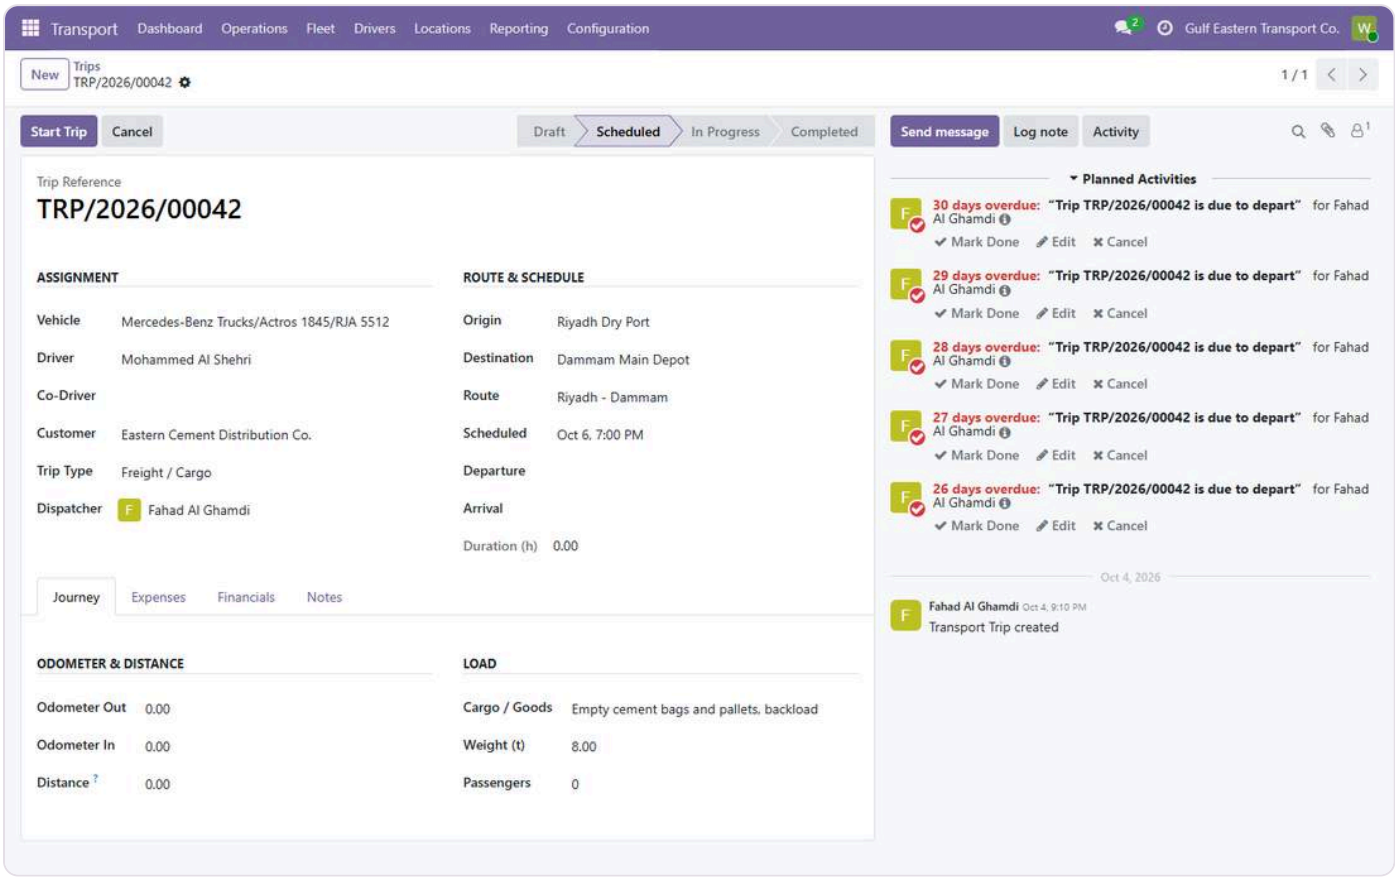

> The reference TRP/2026/00001 is given when the trip is saved. The dispatcher defaults to you.

2 Schedule it BASE

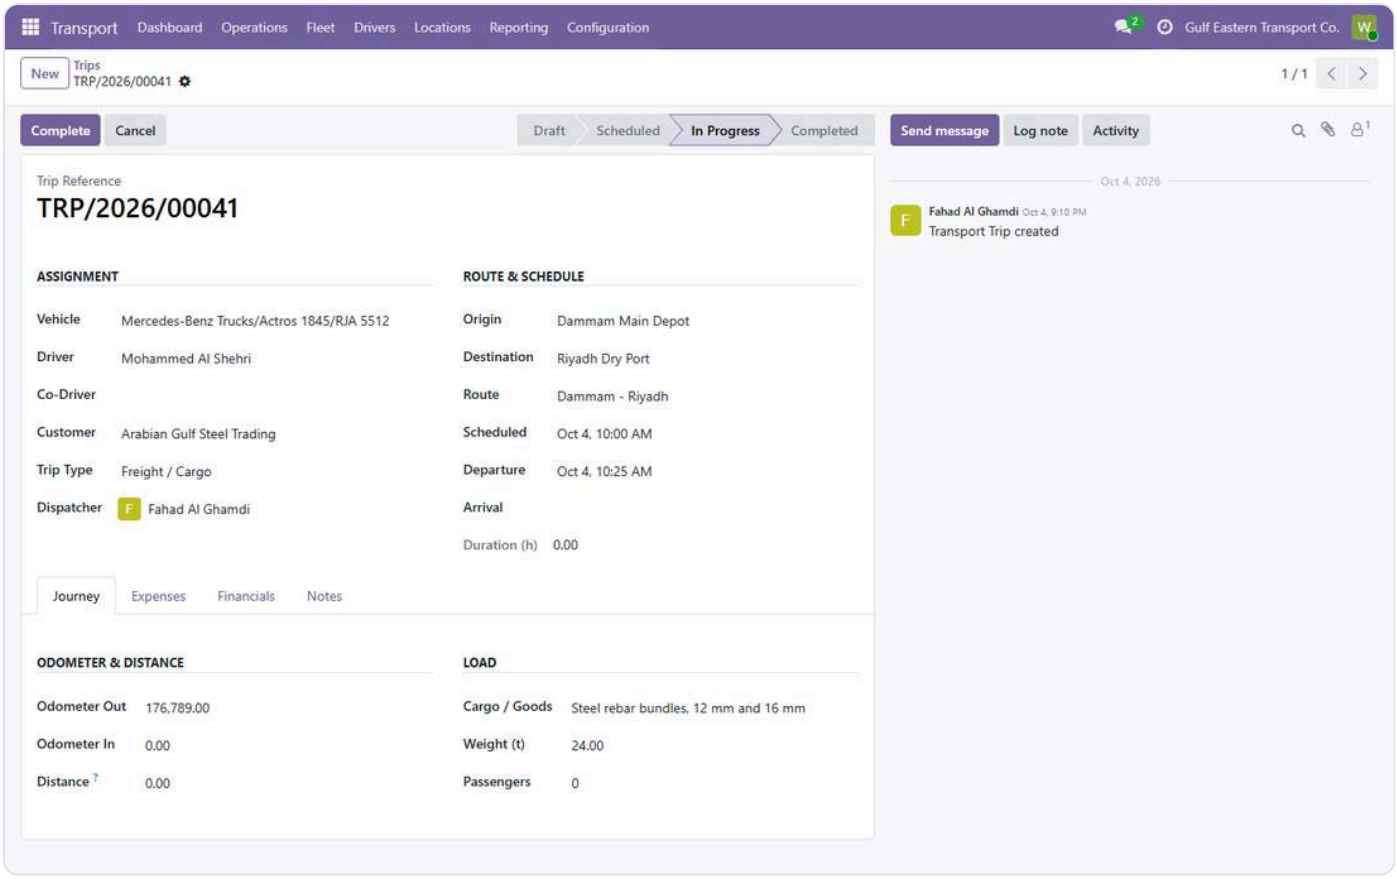

Press **Schedule**. The trip is now promised. Only a draft trip can be scheduled. Every day the job Transport: Trip Departure Reminders puts a to-do on the dispatcher for each draft or scheduled trip whose scheduled time has passed.

> With the add-on, a Check Readiness button sits beside Schedule and a red or amber banner explains anything that would stop the truck. See Part 12.

3 Start the trip BASE

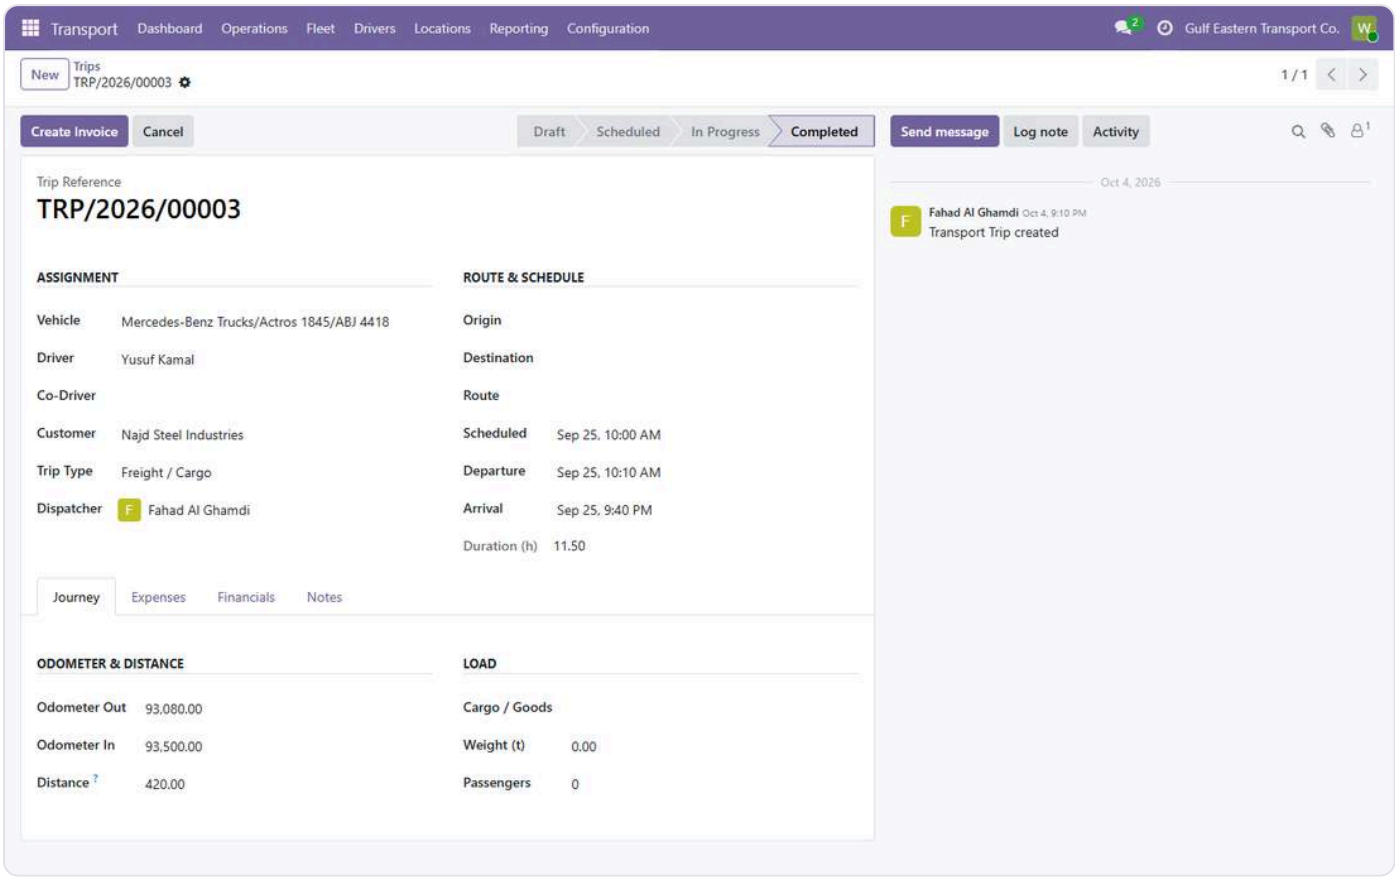

Press **Start Trip** when the truck leaves. The departure time is stamped if empty. A draft trip can be started directly. Book trip costs on the **Expenses** tab as they happen.

4 Complete it BASE

Type the **Odometer In** and press **Complete**. The arrival time is stamped, the distance is worked out from the two readings and the vehicle odometer moves forward. Odometer In can never be lower than Odometer Out. Distance can also be typed by hand when there is no reading.

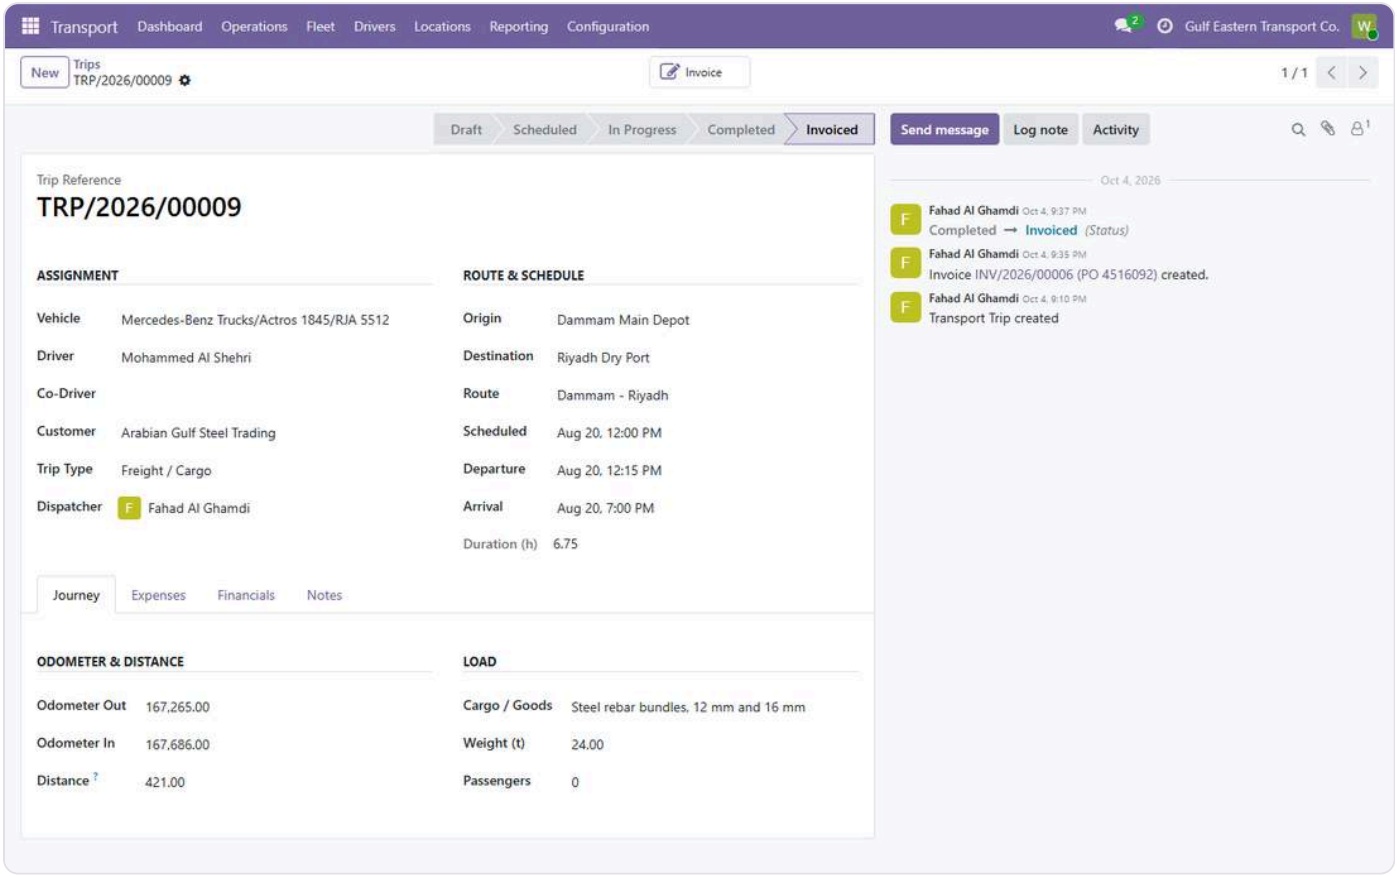

> Duration is arrival less departure, in hours.

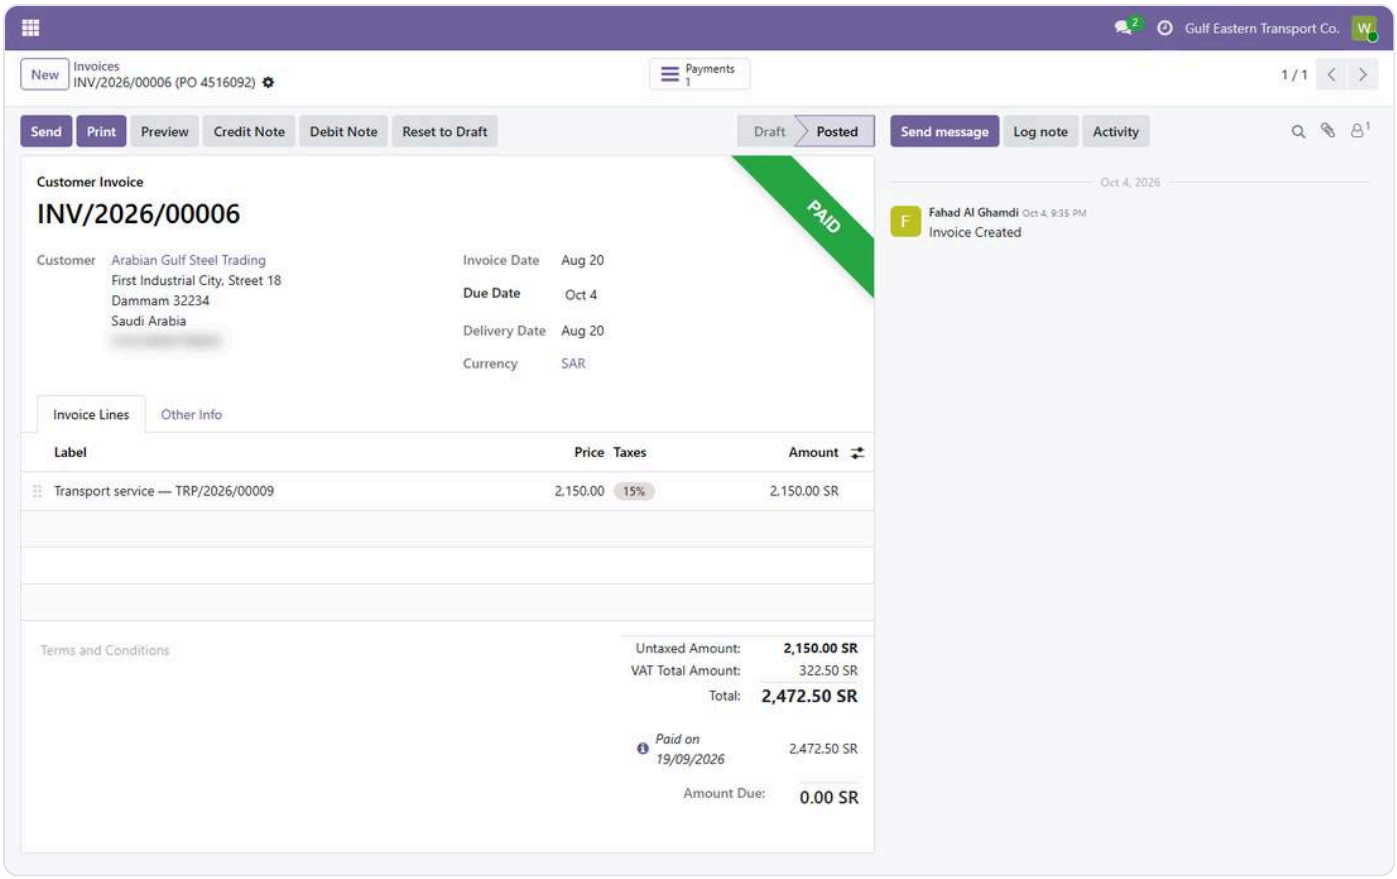

5 Invoice it BASE

Press **Create Invoice**. The trip needs a customer and a trip charge above zero. A draft customer invoice is raised with one line, "Transport service", for the trip charge, booked to the sales journal's income account and taxed with the company's default sales tax through the customer's fiscal position. The trip moves to Invoiced and an **Invoice** button opens it.

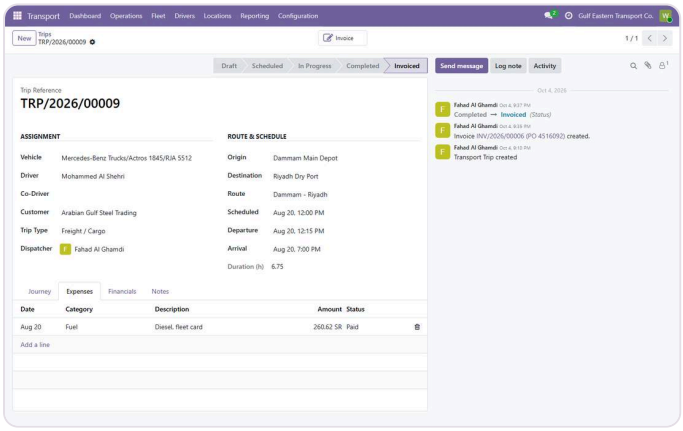

> An invoiced trip cannot be cancelled. With the add-on, a trip that has a charge sheet invoices from the sheet instead, line by line (Part 14).

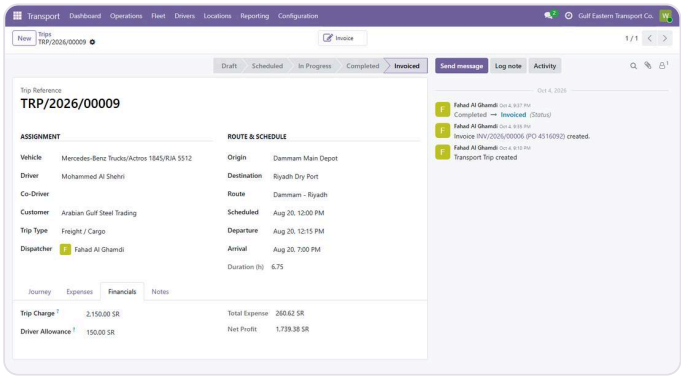

BASE The invoice raised from a trip: one line for the trip charge, with the 15% VAT the company uses.

Expenses and money on the trip BASE

BASE Expenses tab: costs booked to this trip, editable in the grid.

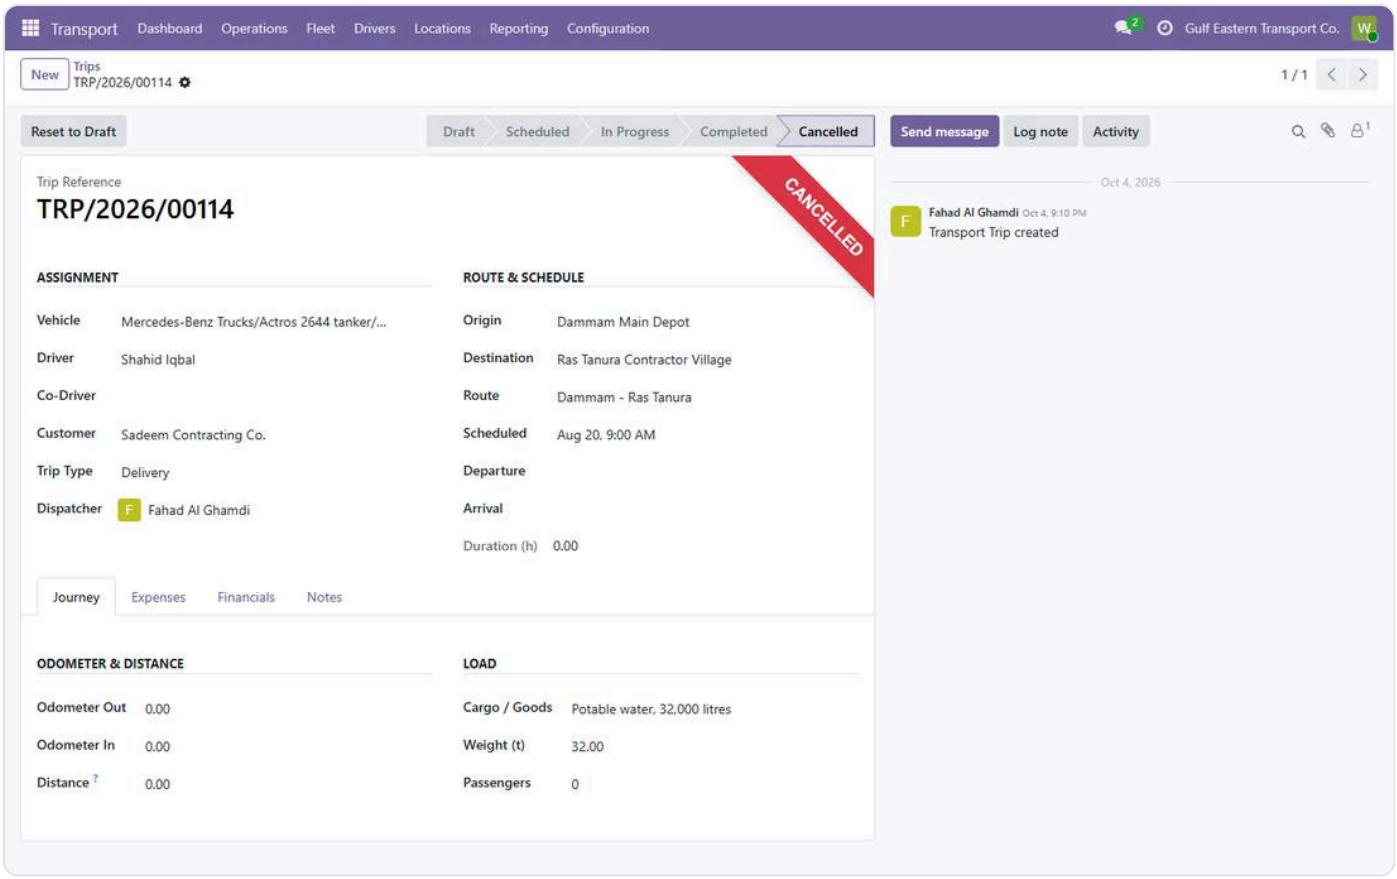

BASE Financials tab: charge, driver allowance, total expense and net profit.

HOW IT WORKS

How net profit is worked out

Trip Charge	what the customer is charged (typed in, or published from a charge sheet with the add-on)
– Total Expense	every expense on the trip that is not rejected
– Driver Allowance	the allowance paid to the driver for this trip
= Net Profit	**shown on the list, the kanban card, the pivot and the dashboard**

Cancel and reset BASE

BASE A cancelled trip carries a red ribbon. Reset to Draft brings it back.

Cancel is offered on a scheduled, in progress or completed trip, and asks for confirmation. **Reset to Draft** appears only on a cancelled trip. With the add-on, cancelling a trip also cancels the live charge sheet quoted for it.

> The module also ships an email template, **Transport: Trip Assignment**, addressed to the driver with the trip, vehicle, date and route. No button sends it; use it from the chatter's Send message with a template if you want drivers told by email.

PART 8 Expenses, step by step

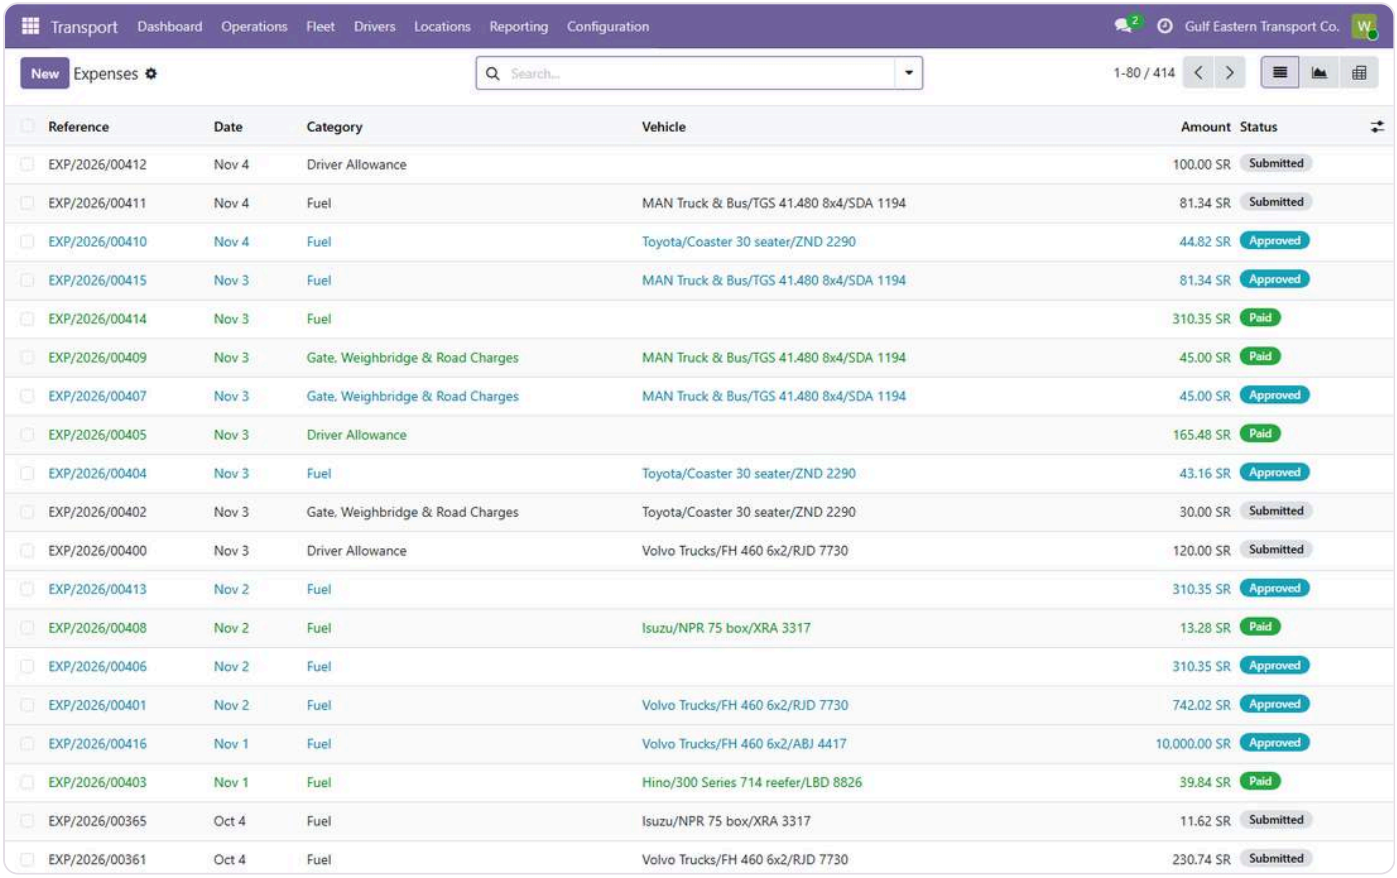

Every cost of running the fleet is an expense: fuel, tolls, parking, fines, tyres, repairs. An expense can belong to a trip, to a vehicle, to a driver, or to all three, and goes through a short approval.

IN THIS PART YOU WILL LEARN

- The four expense states
- What a fuel expense adds
- How a vendor bill is raised from an expense
- What rejection does to the totals

TRY IT YOURSELF ON THE DEMO

1. Open Operations, Expenses and pick the To Approve filter
2. Open a fuel expense and look at quantity and unit price
3. Open EXP/2026/00367 and click its Vendor Bill button

Reference	Date	Category	Vehicle	Amount	Status
EXP/2026/00412	Nov 4	Driver Allowance		100.00 SR	Submitted
EXP/2026/00411	Nov 4	Fuel	MAN Truck & Bus/TGS 41.480 8x4/SDA 1194	81.34 SR	Submitted
EXP/2026/00410	Nov 4	Fuel	Toyota/Coaster 30 seater/ZND 2290	44.82 SR	Approved

BASE Operations, Expenses. Filters for To Approve, Approved, Paid and Fuel.

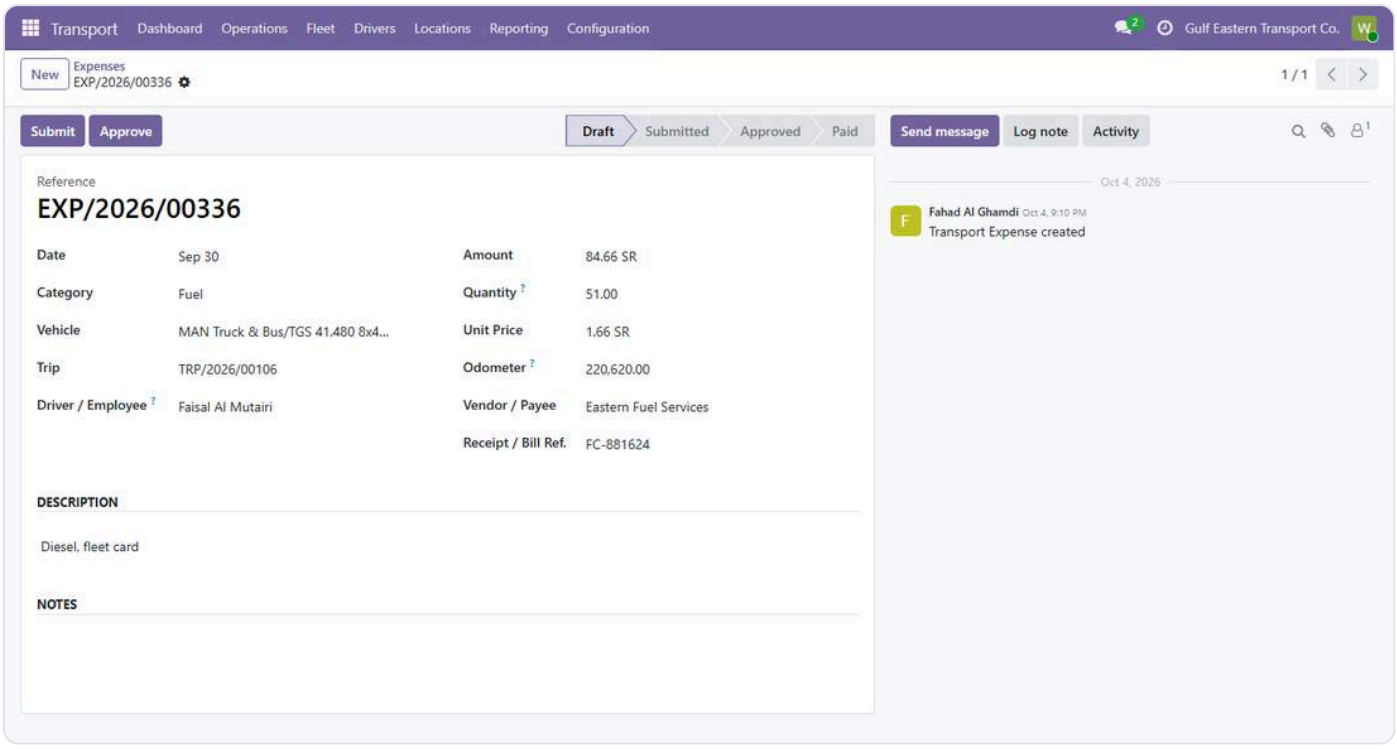

The life of an expense BASE

1. **Draft** — Recorded
2. **Submitted** — Waiting for approval
3. **Approved** — Accepted as a cost
4. **Paid** — Paid out, date stamped

1 Record the expense BASE

Click **New**, pick the **Category** and the date, then the vehicle, the trip and the driver. Picking a trip fills its vehicle and driver. Type the amount, the vendor or payee, and the receipt or bill reference.

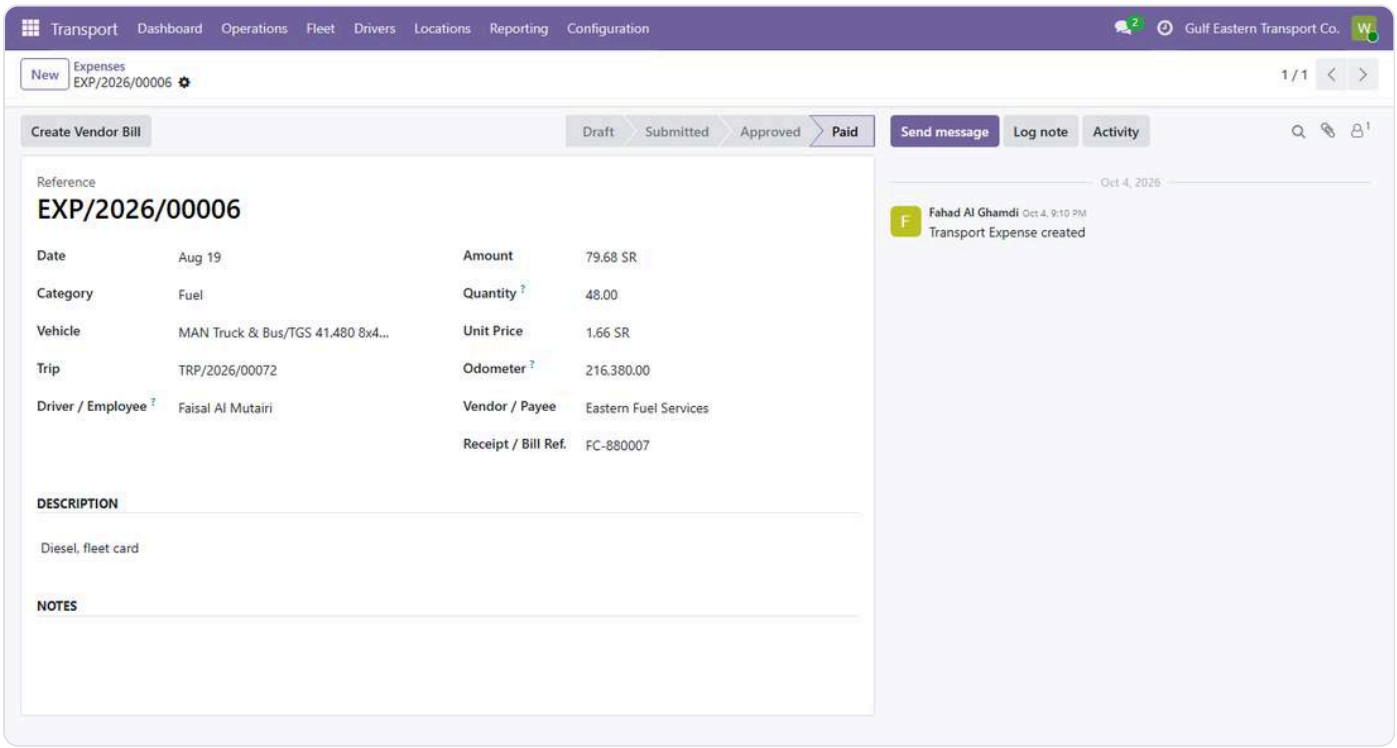

> The reference EXP/2026/00001 is given on save.

2 A fuel expense BASE

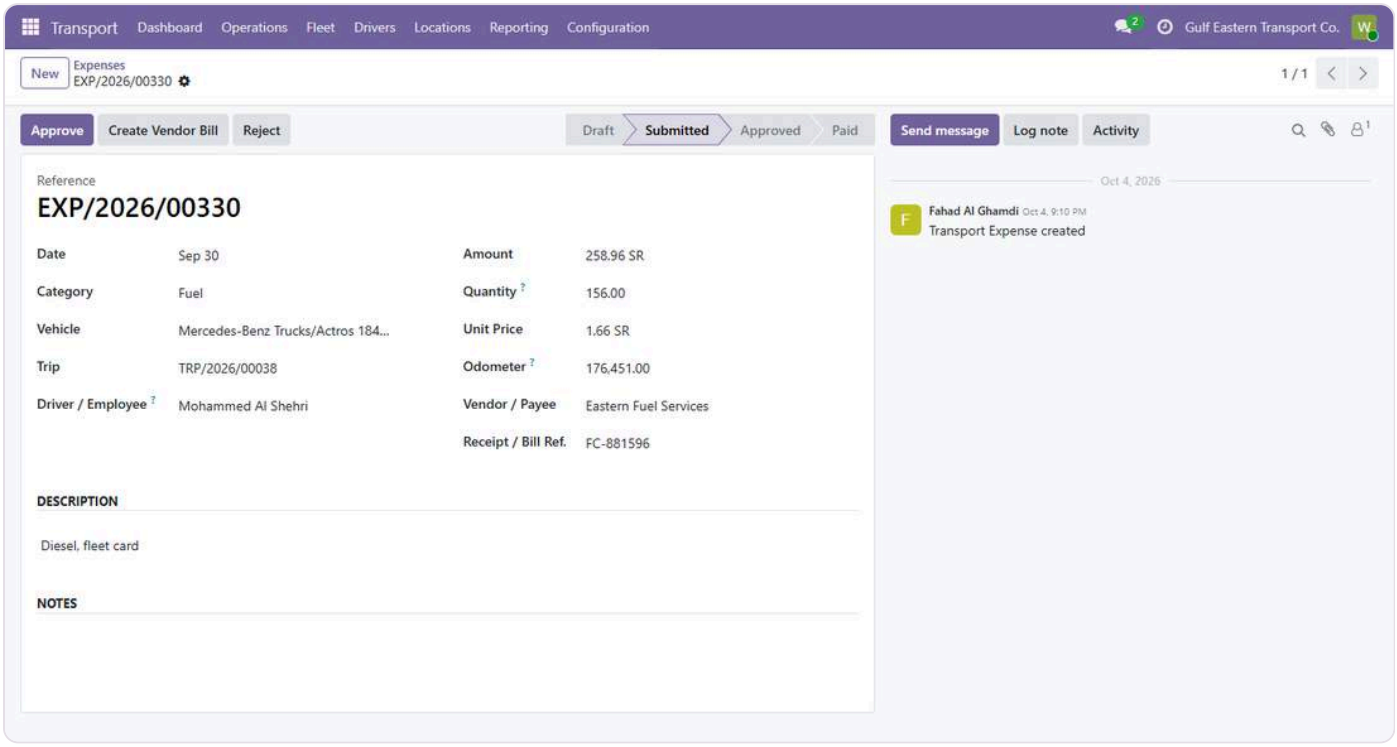

When the category's kind is Fuel, three more fields appear: **Quantity** in litres, **Unit Price** and **Odometer**. Quantity times unit price fills the amount.

> Only fuel expenses with a quantity feed the vehicle's fuel efficiency.

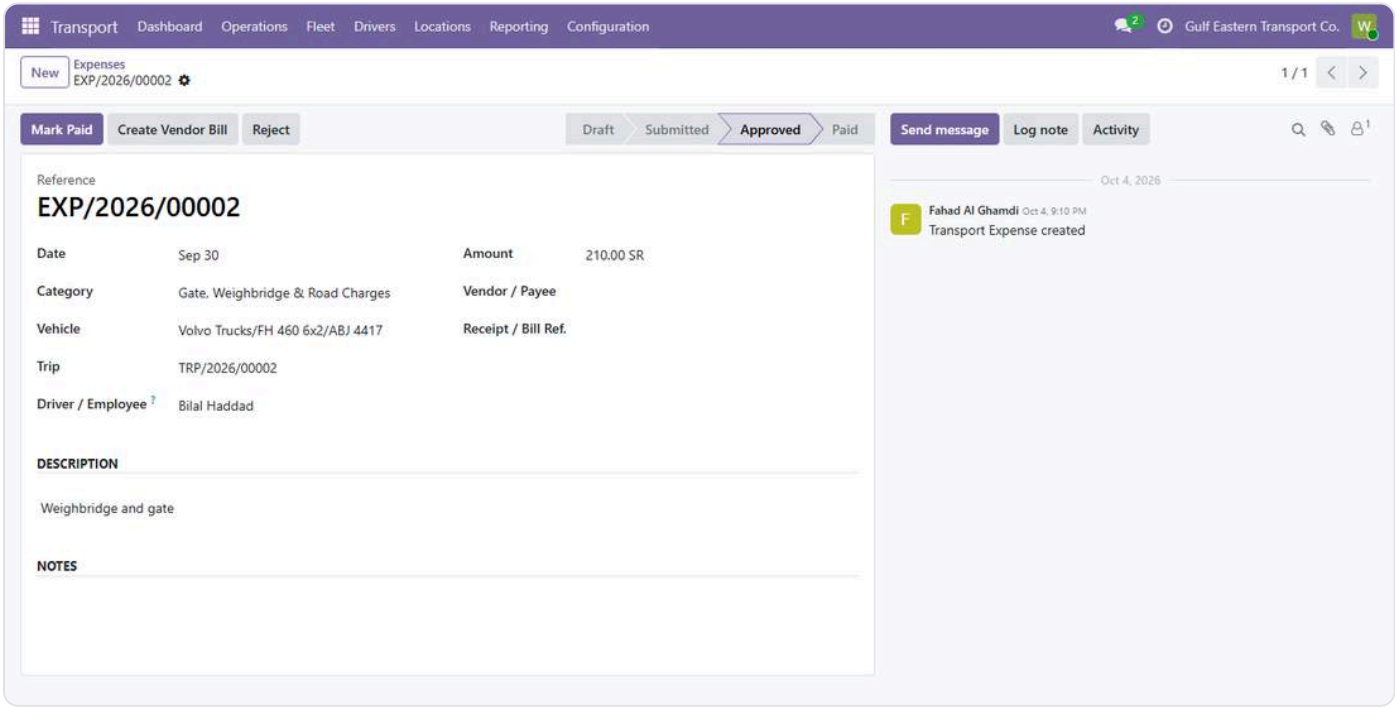

3 Submit it BASE

Press **Submit**. The expense waits under the **To Approve** filter and is counted on the dashboard as Expenses to Approve.

4 Approve it BASE

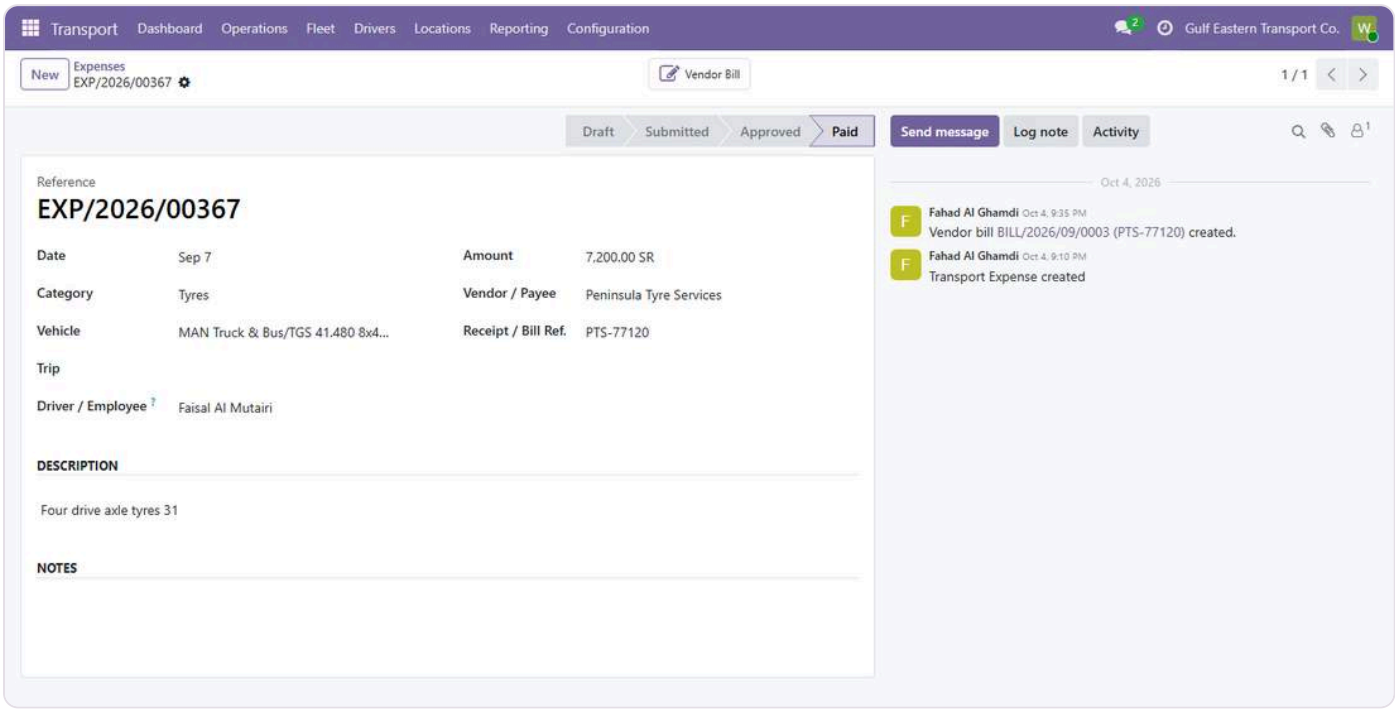

Press **Approve**. A draft expense can be approved directly. If the odometer on the expense is higher than the vehicle's, the vehicle odometer moves forward.

5 Pay it, and raise a vendor bill BASE

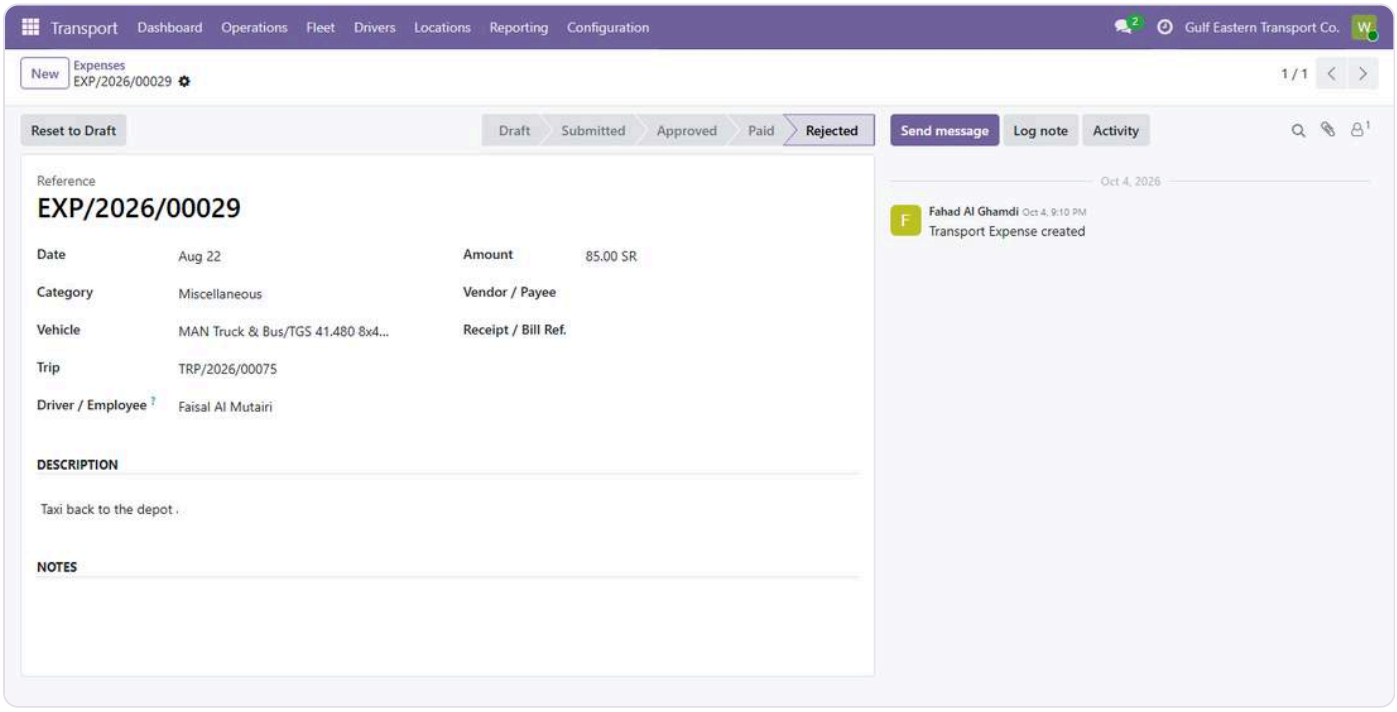

Press **Mark Paid** on an approved expense to stamp the payment date. To put the cost into the books, press **Create Vendor Bill** (offered once the expense is past draft and has a vendor): a draft vendor bill is raised for the amount, booked to the purchase journal's expense account, and a **Vendor Bill** button opens it.

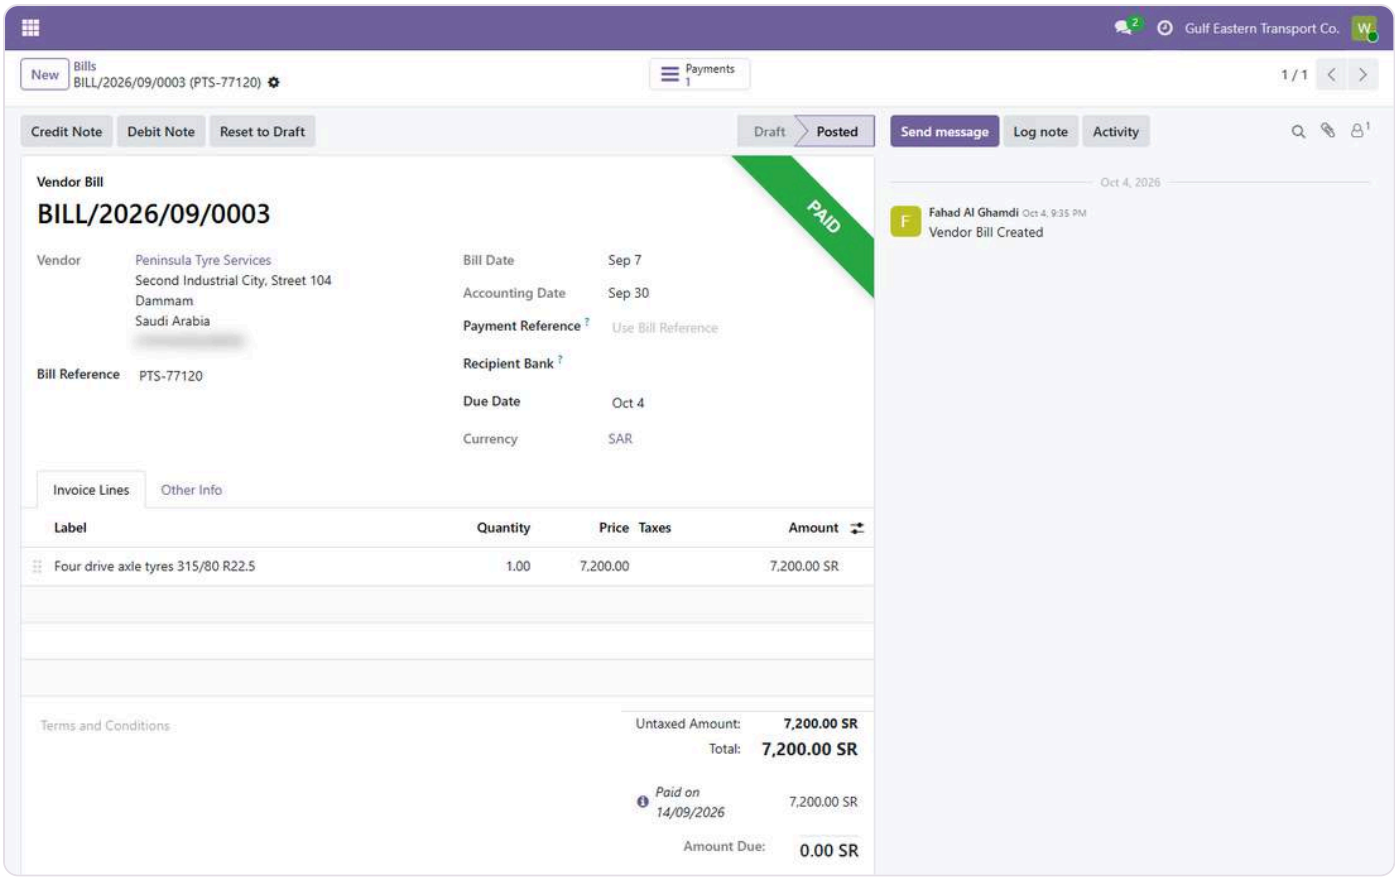

> Mark Paid does not create a payment in accounting; pay the vendor bill there as usual.

6 Reject it BASE

Reject is offered on a submitted or approved expense. A rejected expense no longer counts in the trip, vehicle or dashboard totals. **Reset to Draft** brings it back. A paid expense cannot be rejected.

BASE The vendor bill raised from an expense, with the expense reference as origin.

PART 9 Payroll for drivers and staff

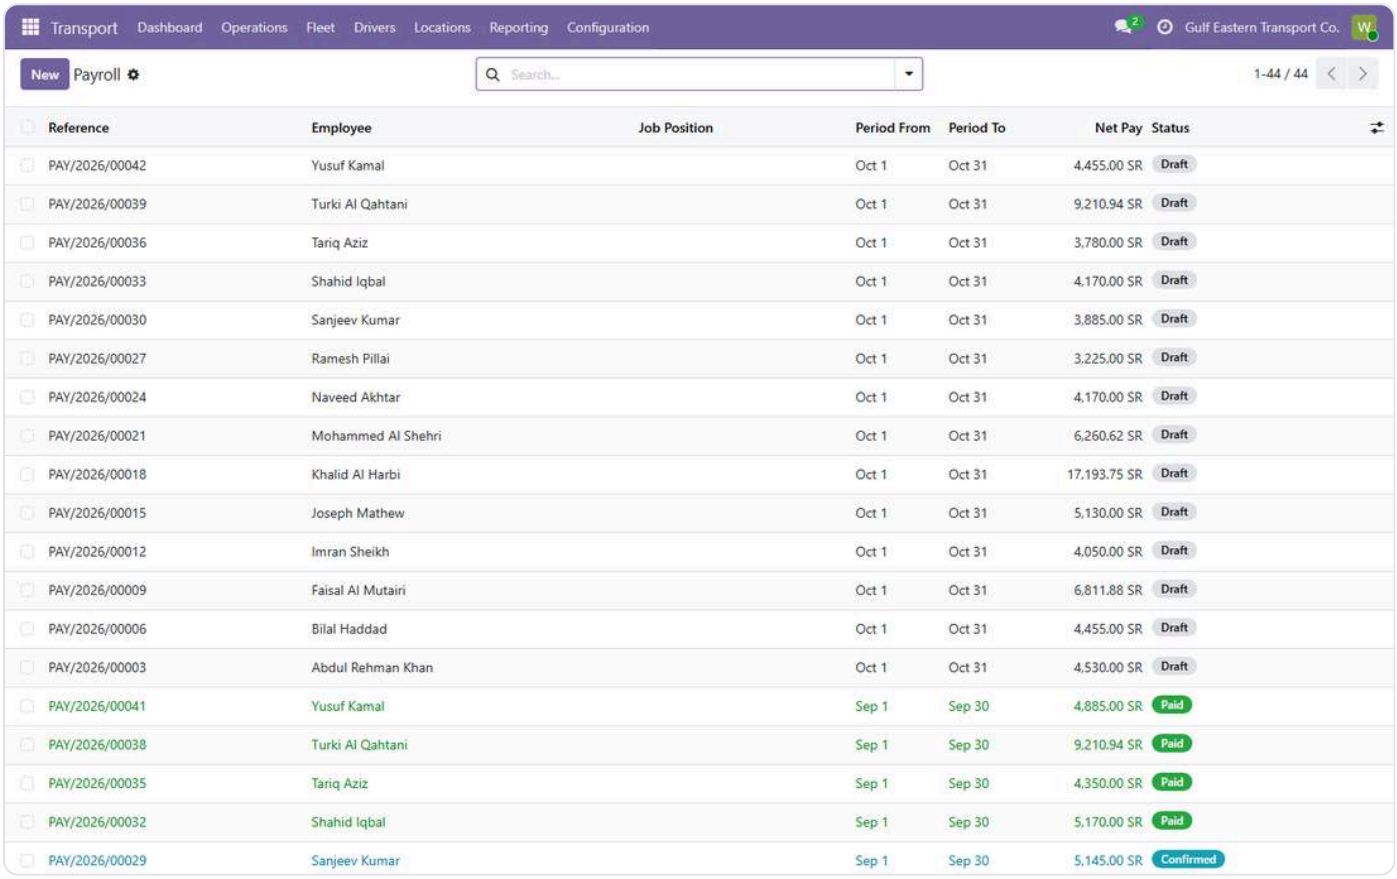

The base module carries its own simple payroll: one record per employee per period, with the basic salary, a list of components and the expenses to reimburse. It does not need Odoo Payroll.

IN THIS PART YOU WILL LEARN

- How a payslip is built
- Where the reimbursement comes from
- How gross and net are worked out

TRY IT YOURSELF ON THE DEMO

1. Open Drivers, Payroll and open a confirmed payslip
2. Read the Salary Components tab and the totals

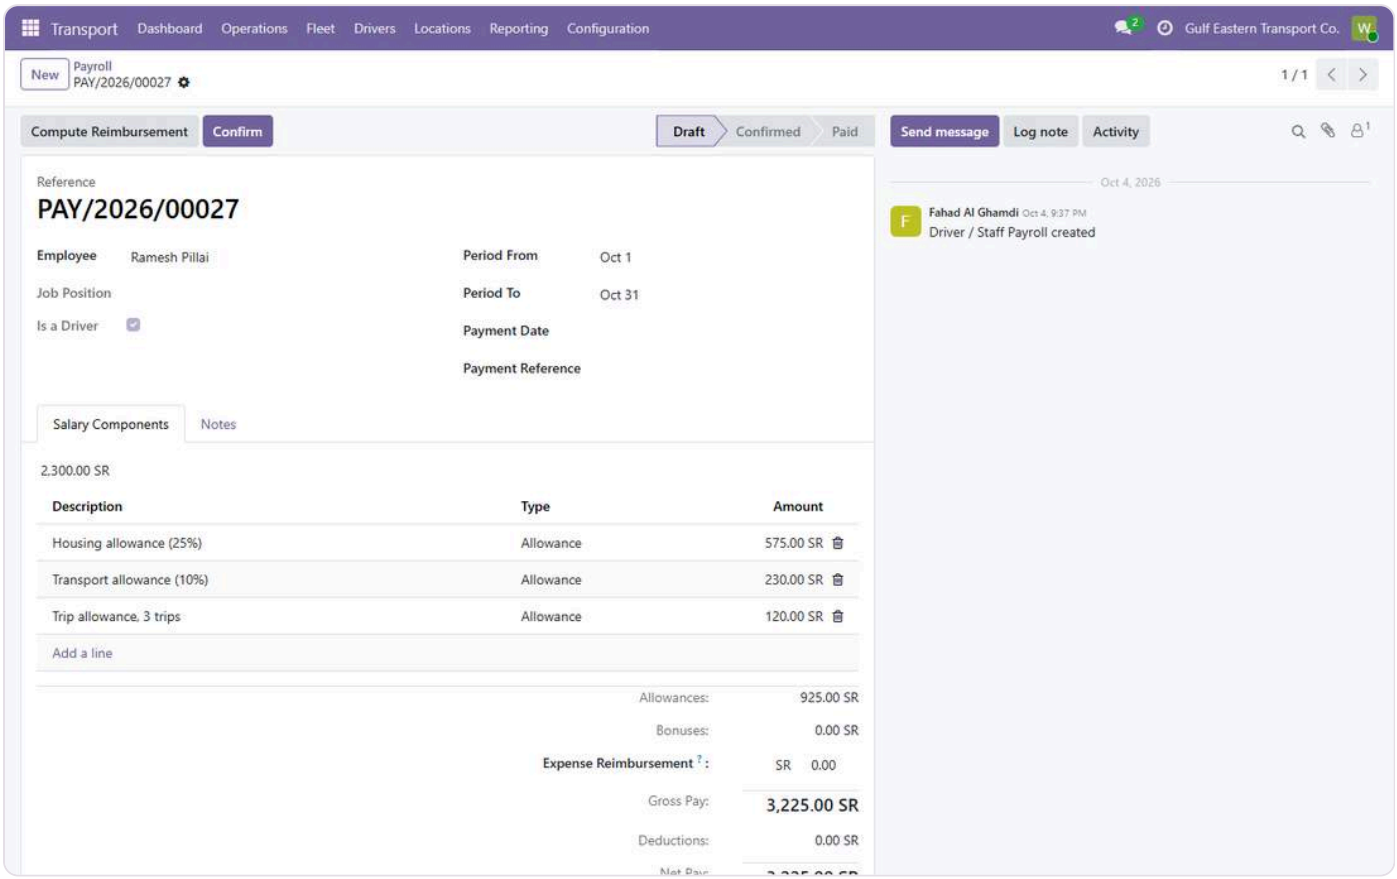

Reference	Employee	Job Position	Period From	Period To	Net Pay	Status
PAY/2026/00042	Yusuf Kamal		Oct 1	Oct 31	4,455.00 SR	Draft
PAY/2026/00039	Turki Al Qahtani		Oct 1	Oct 31	9,210.94 SR	Draft
PAY/2026/00036	Tariq Aziz		Oct 1	Oct 31	3,780.00 SR	Draft
PAY/2026/00033	Shahid Iqbal		Oct 1	Oct 31	4,170.00 SR	Draft
PAY/2026/00030	Sanjeev Kumar		Oct 1	Oct 31	3,885.00 SR	Draft
PAY/2026/00027	Ramesh Pillai		Oct 1	Oct 31	3,225.00 SR	Draft
PAY/2026/00024	Naveed Akhtar		Oct 1	Oct 31	4,170.00 SR	Draft
PAY/2026/00021	Mohammed Al Shehri		Oct 1	Oct 31	6,260.62 SR	Draft
PAY/2026/00018	Khalid Al Harbi		Oct 1	Oct 31	17,193.75 SR	Draft
PAY/2026/00015	Joseph Mathew		Oct 1	Oct 31	5,130.00 SR	Draft
PAY/2026/00012	Imran Sheikh		Oct 1	Oct 31	4,050.00 SR	Draft
PAY/2026/00009	Faisal Al Mutairi		Oct 1	Oct 31	6,811.88 SR	Draft
PAY/2026/00006	Bilal Haddad		Oct 1	Oct 31	4,455.00 SR	Draft
PAY/2026/00003	Abdul Rehman Khan		Oct 1	Oct 31	4,530.00 SR	Draft
PAY/2026/00041	Yusuf Kamal		Sep 1	Sep 30	4,885.00 SR	Paid
PAY/2026/00038	Turki Al Qahtani		Sep 1	Sep 30	9,210.94 SR	Paid
PAY/2026/00035	Tariq Aziz		Sep 1	Sep 30	4,350.00 SR	Paid
PAY/2026/00032	Shahid Iqbal		Sep 1	Sep 30	5,170.00 SR	Paid
PAY/2026/00029	Sanjeev Kumar		Sep 1	Sep 30	5,145.00 SR	Confirmed

BASE Drivers, Payroll. One line per employee per month.

1 Open a draft payslip BASE

Pick the **Employee**; the job position and the driver flag come from the employee. The period defaults to the current month. Type the **Basic Salary** and add lines on **Salary Components**: each has a description, a type (Allowance, Bonus, Deduction, Other) and an amount.

> The demo uses components for housing and transport allowances and GOSI, the Saudi social insurance.

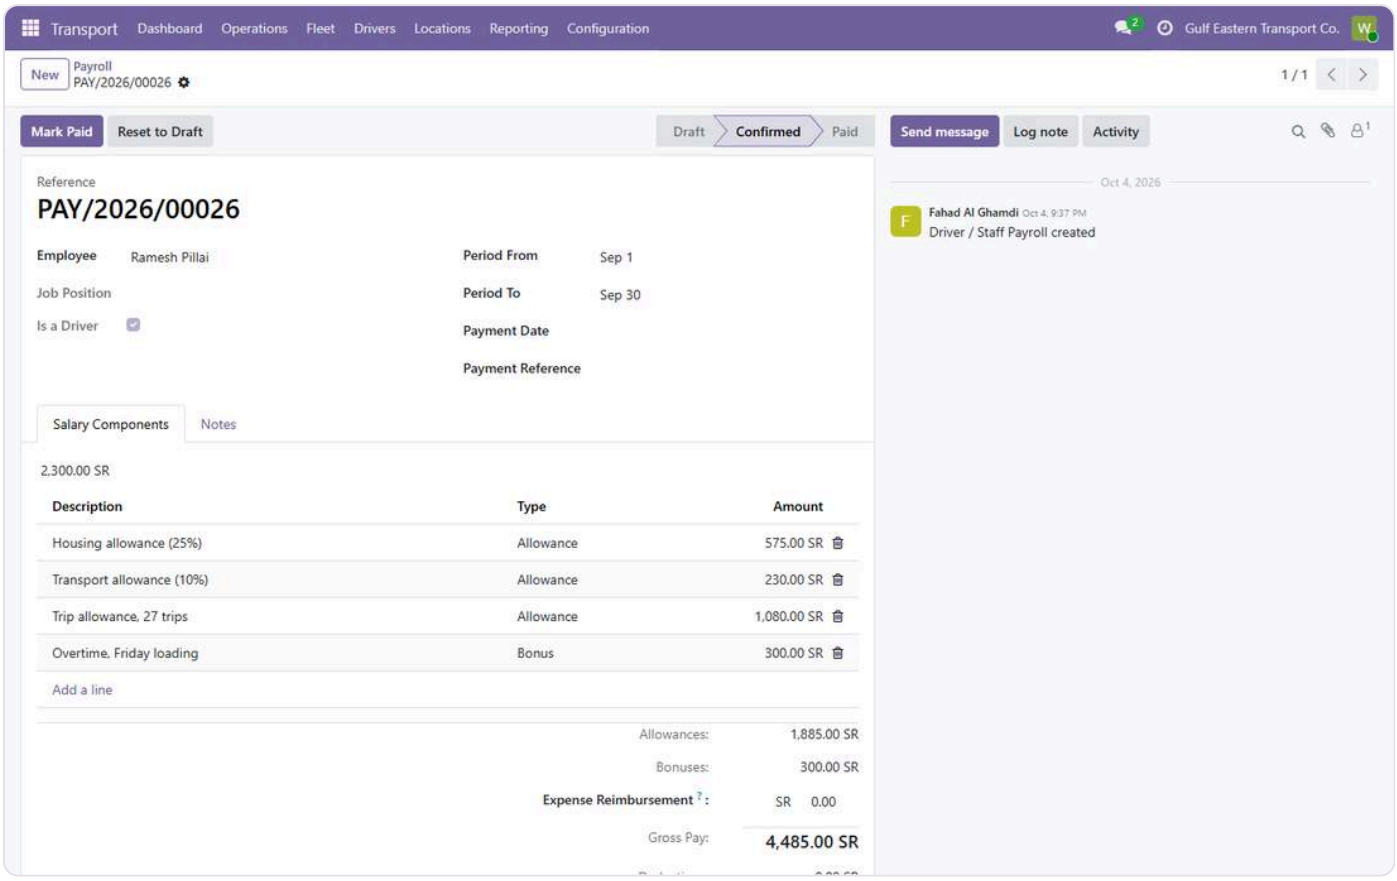

2 Compute the reimbursement BASE

Press **Compute Reimbursement**. It totals the employee's approved and paid expenses dated inside the period into **Expense Reimbursement**.

3 Confirm and pay BASE

Press **Confirm**, then **Mark Paid** when the money has gone; the payment date is stamped and a payment reference can be typed. **Reset to Draft** reopens it.

> Gross is basic plus allowances, bonuses, other additions and reimbursement. Net is gross less deductions. Mark Paid records the fact; it does not post anything in accounting.

> Only a Fleet Manager can create or change payroll. A Fleet Officer can read it. With the add-on, a settlement run for an employed driver posts its pay onto this same payroll record (Part 18).

PART 10 The dashboard and the reports

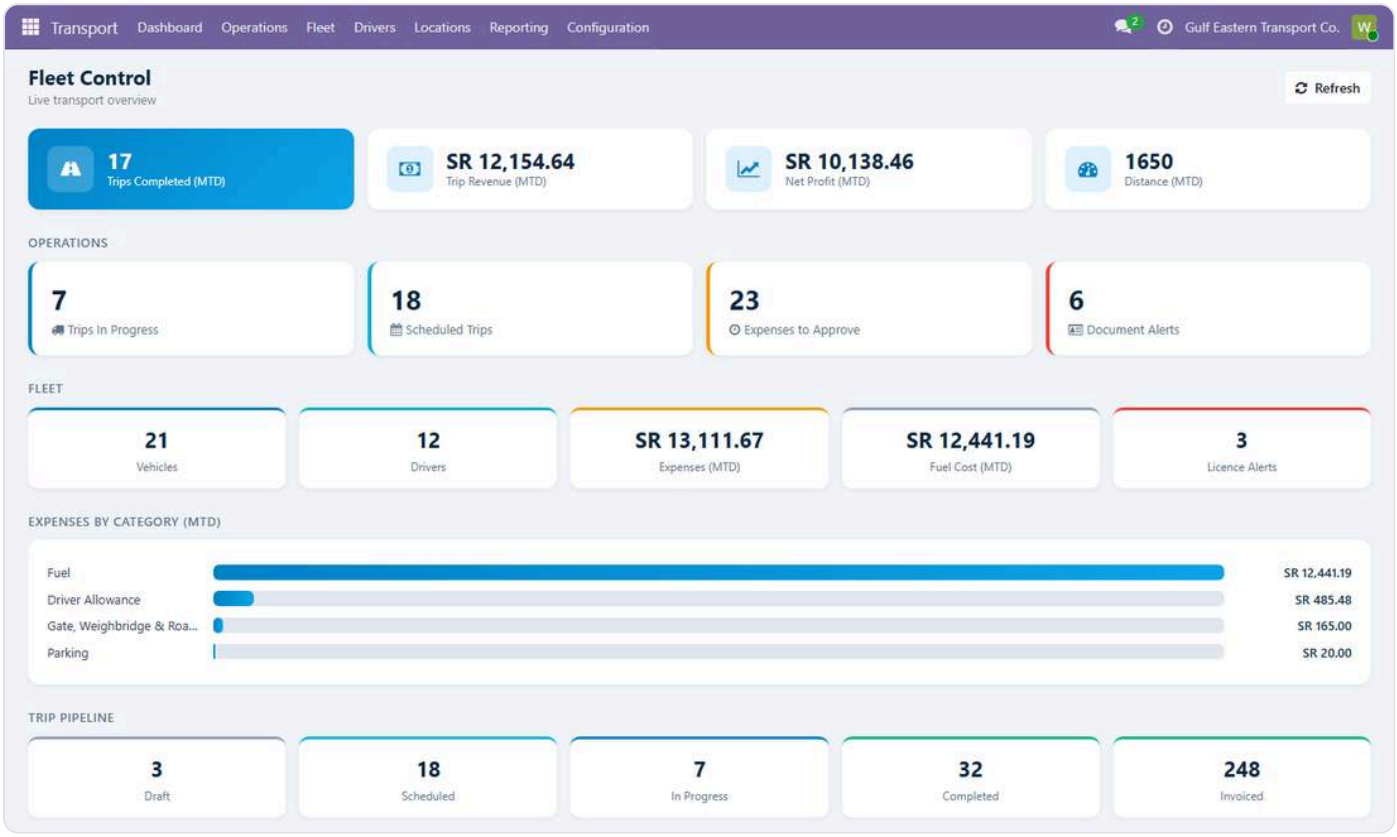

The Fleet Control dashboard answers how this month is going. The two analysis menus answer anything else, by grouping trips and expenses any way you like.

IN THIS PART YOU WILL LEARN

- What each dashboard tile counts
- Where to analyse trips and expenses

TRY IT YOURSELF ON THE DEMO

1. Open Dashboard and press Refresh
2. Open Reporting, Trip Analysis and swap rows for vehicles

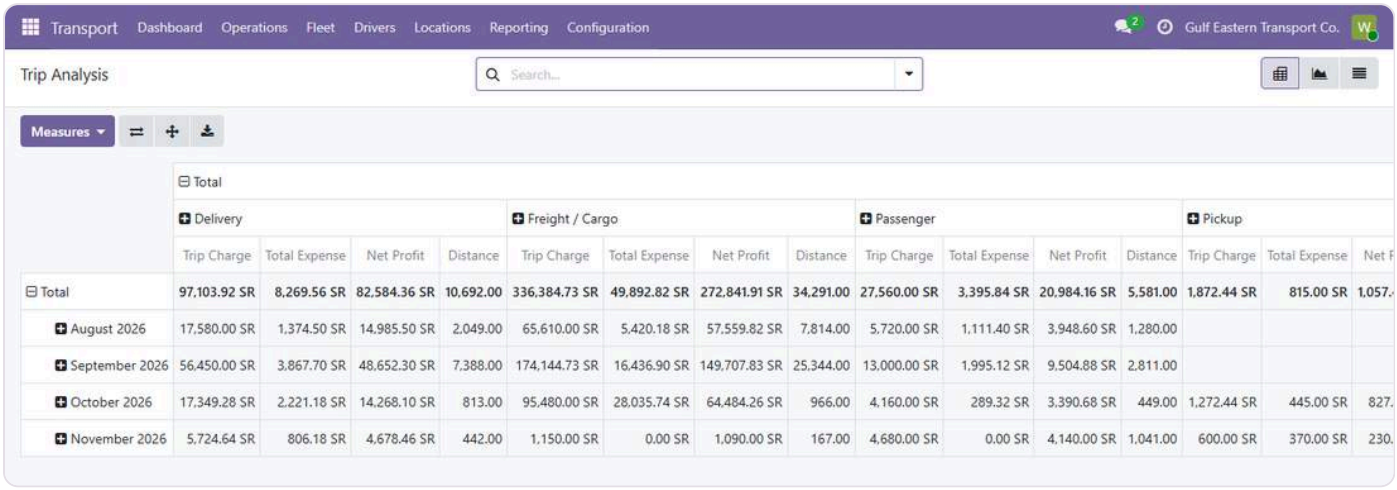

BASE Dashboard: Fleet Control. Press Refresh to read the figures again.

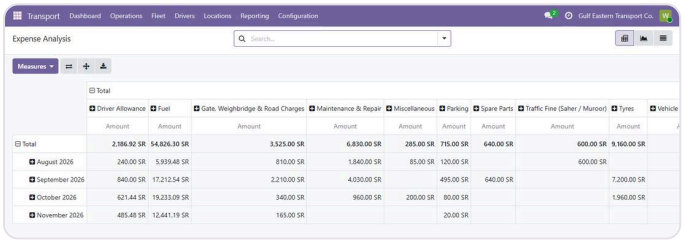

TILE	WHAT IT COUNTS
Trips Completed, Trip Revenue, Net Profit, Distance (MTD)	Trips scheduled this month that are completed or invoiced. A cancelled or still planned trip does not count as earned.
Trips In Progress, Scheduled Trips	All trips in that state now.
Expenses to Approve	Submitted expenses.
Document Alerts	Vehicle documents expiring or expired.
Vehicles, Drivers, Licence Alerts	All vehicles; employees marked as drivers; drivers whose licence is expiring or expired.
Expenses, Fuel Cost (MTD)	Expenses dated this month up to today, not rejected; and those of kind Fuel.
Expenses by Category (MTD)	The same expenses as bars, largest first.

Trip Pipeline	How many trips are in each state.

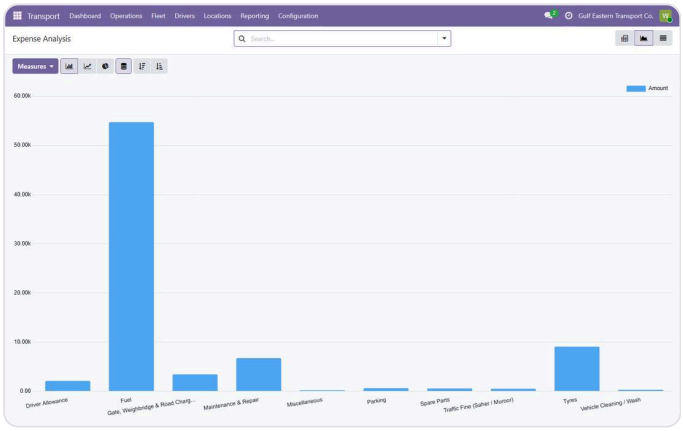

Trip Analysis and Expense Analysis BASE

BASE Reporting, Trip Analysis: revenue, expense, profit and distance by month and trip type.

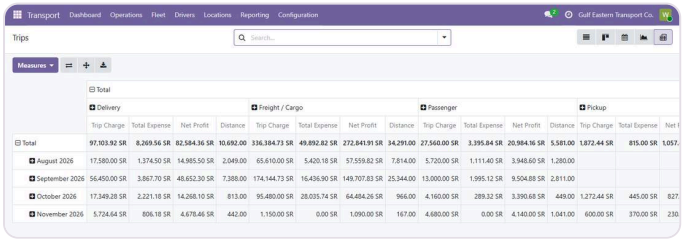

BASE Reporting, Expense Analysis: amounts by category and month.

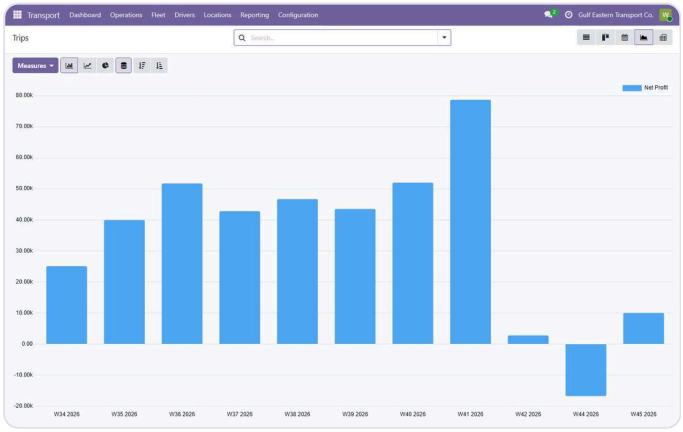

BASE The same expenses as a graph.

Both are ordinary Odoo pivot and graph views, so you can change the rows and columns, drill into a cell, download to a spreadsheet or add the view to a dashboard. The trip list itself also opens as a graph of profit by week and a pivot.

BASE Trips as a pivot.

BASE Trips as a graph of profit by week.

PART 11 Loads, stops and proof of delivery ENTERPRISE ADD-ON

In the base module a trip is one origin and one destination. The add-on separates the customer's consignment, the **load**, from the journey that carries it, and gives the journey an ordered list of **stops**. That is what lets one truck carry three customers, makes waiting time billable and makes proof of delivery real.

IN THIS PART YOU WILL LEARN

- What a load is and why it is separate from a trip
- How a groupage trip is built
- The stop types and the buttons on a stop
- How proof of delivery and shortages are recorded

TRY IT YOURSELF ON THE DEMO

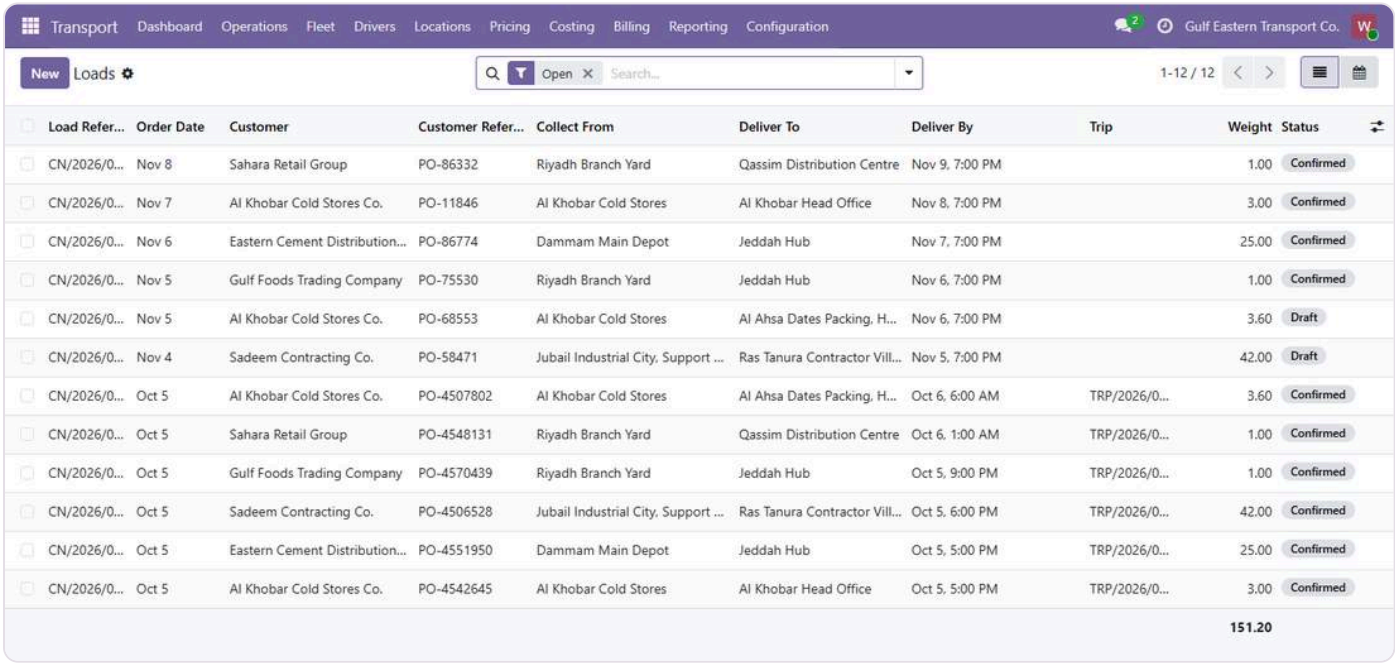

1. On transport-pro, open Operations, Loads, then CN/2026/00002
2. Open its trip, TRP/2026/00002, and the Stops tab
3. Open the stop at Taif Works and read its time on site and detention

HOW IT WORKS

Loads are optional

A trip with no loads and no stops behaves exactly like a base trip. Nothing in the add-on creates a load or a stop for a trip you already have. Use loads when you need a consignment number per customer, groupage, or a waybill; use stops when you need times at each call, detention or a signature.

Loads ENTERPRISE ADD-ON

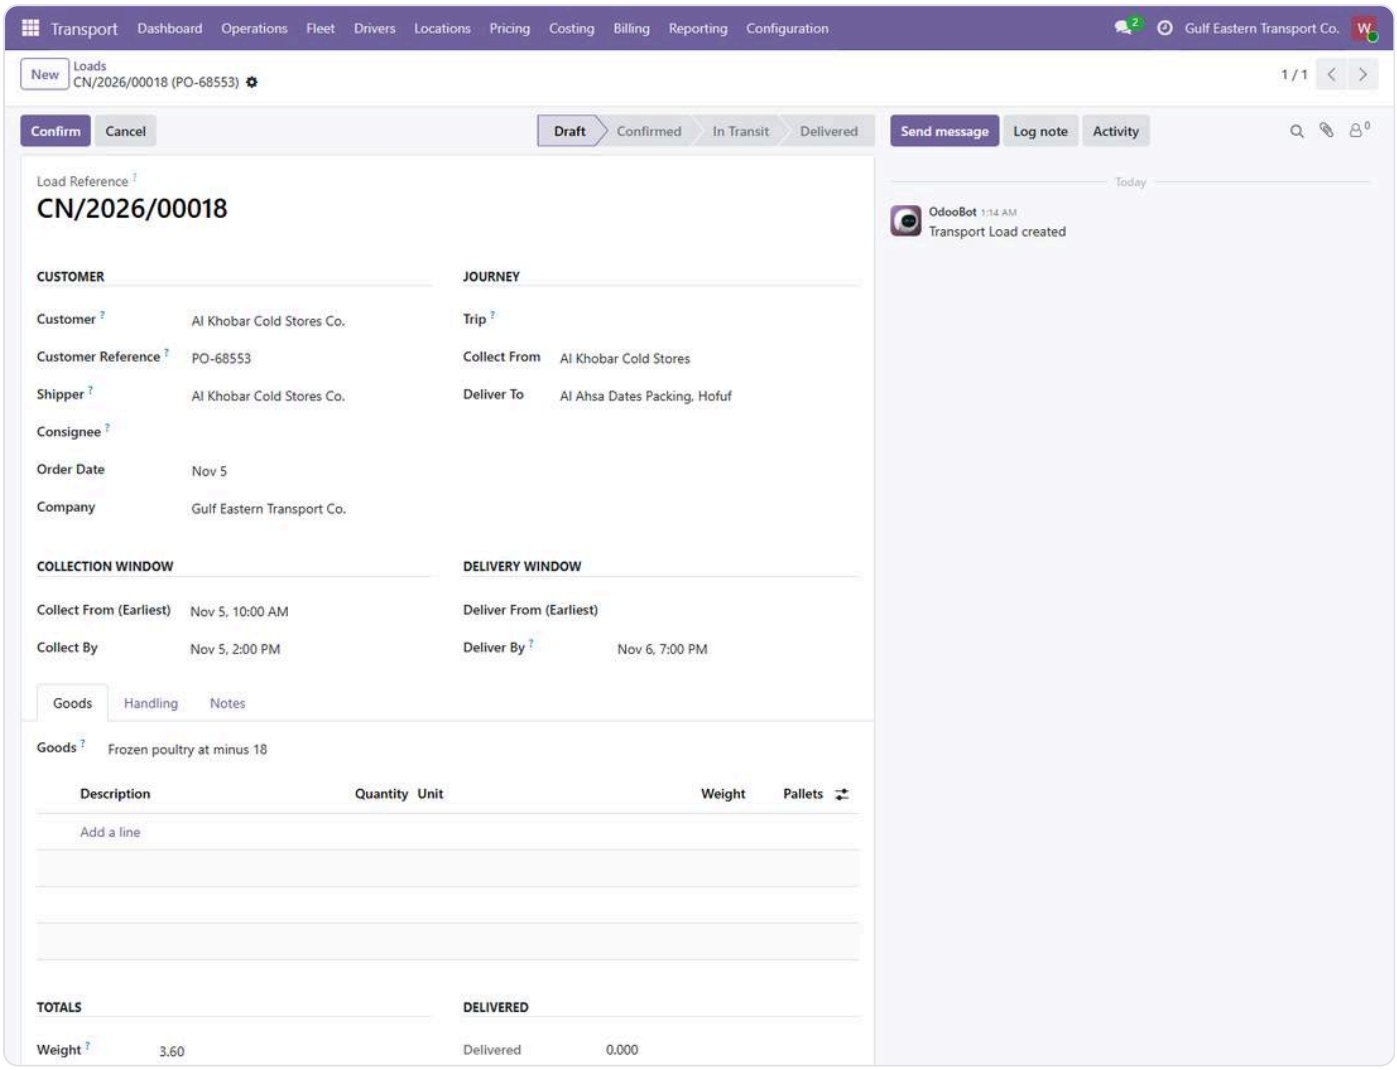

Load Refer...	Order Date	Customer	Customer Refer...	Collect From	Deliver To	Deliver By	Trip	Weight	Status
CN/2026/0...	Nov 8	Sahara Retail Group	PO-86332	Riyadh Branch Yard	Qassim Distribution Centre	Nov 9, 7:00 PM		1.00	Confirmed

								151.20	

ENTERPRISE ADD-ON Operations, Loads. Each line is one consignment with its own CN number, customer and trip.

1 Book the consignment ENTERPRISE ADD-ON

Click **New**. The **Customer** pays for the movement; the **Shipper** hands the goods over and the **Consignee** signs for them, often two other companies. Type the customer's own order or booking number in **Customer Reference**: it is quoted on the invoice. Set the collection and delivery locations and the time windows: collect from, collect by, deliver from and **Deliver By**, the promise.

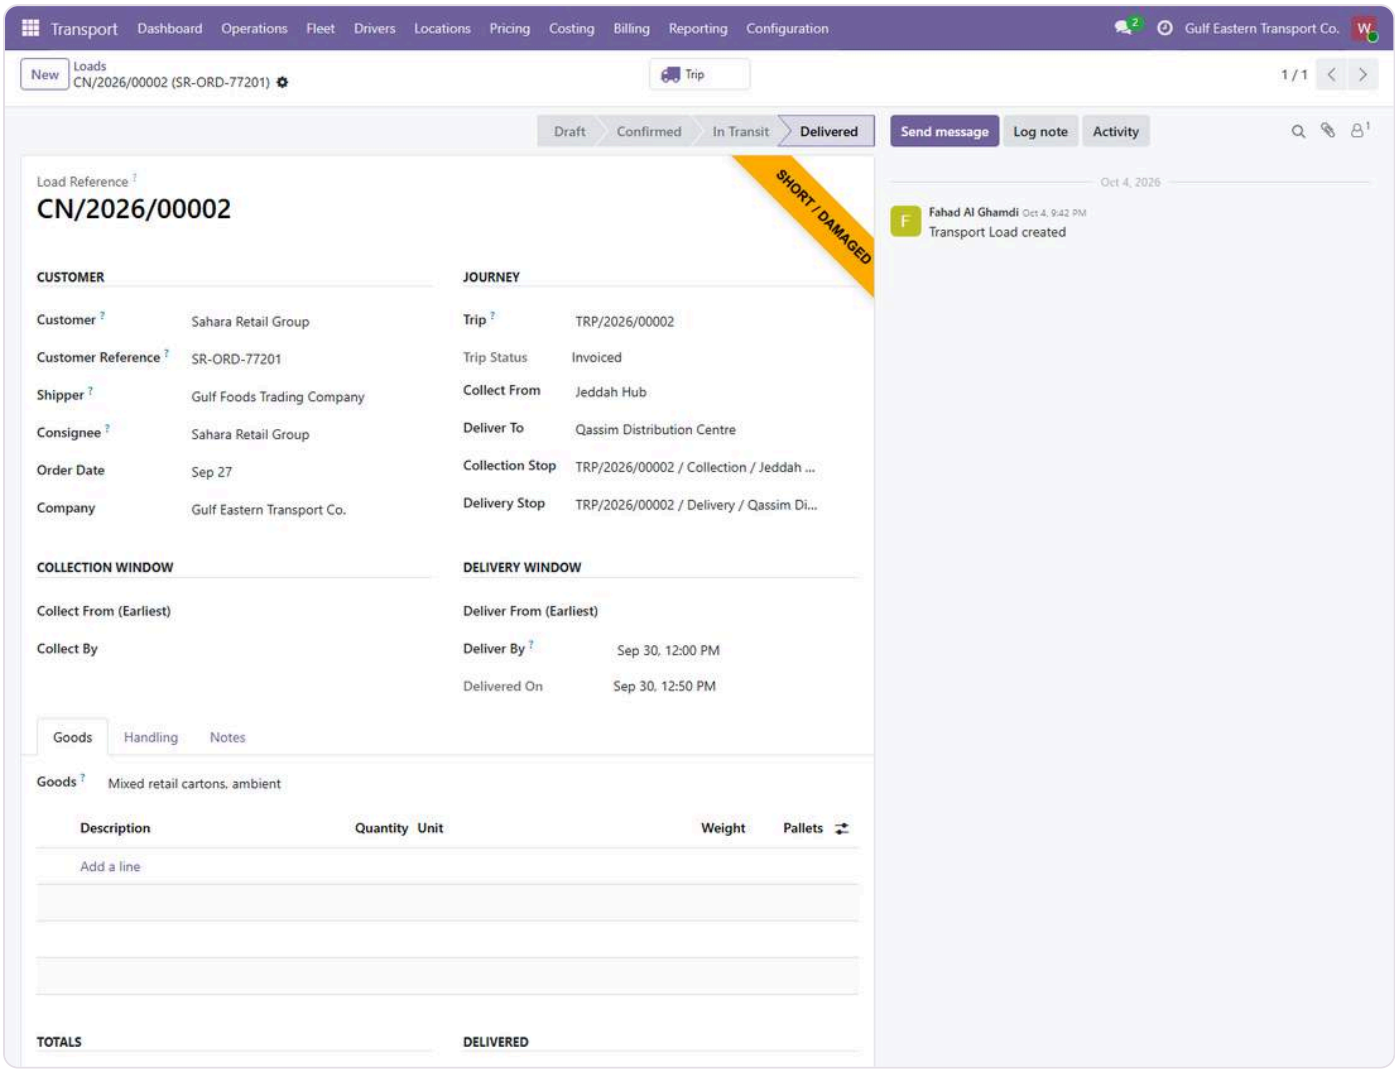

> The load reference (CN/2026/00001) is the consignment note or waybill number you give the customer.

2 Describe the goods ENTERPRISE ADD-ON

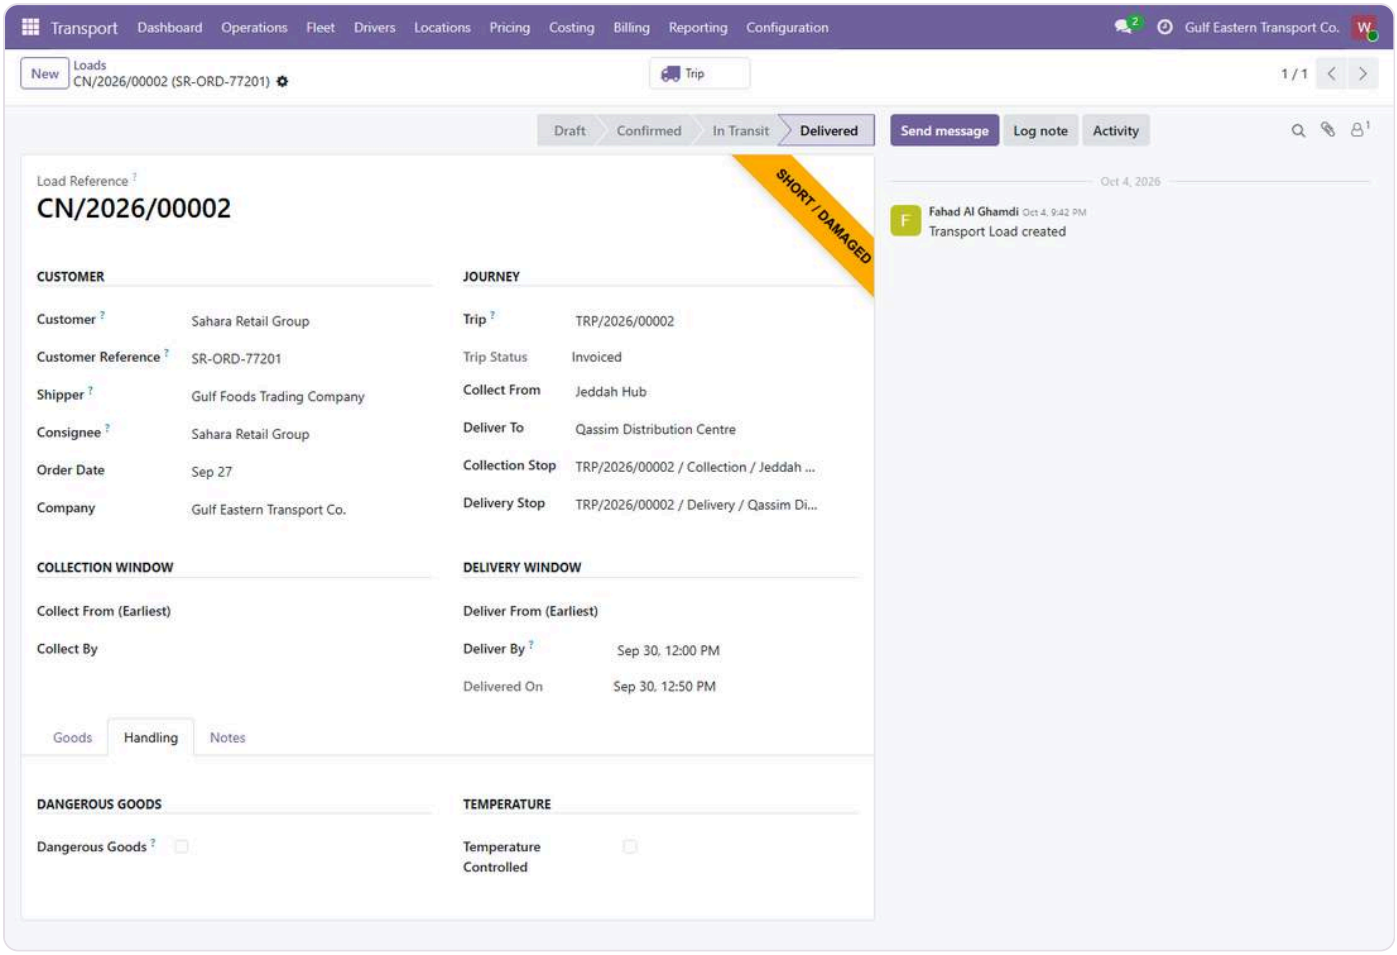

Type the goods description, weight, volume, pallets, pieces and declared value straight on the load, or add **Goods Lines** when there are several commodities, each with marks and numbers, quantity, unit and weight; the totals then add up from the lines.

> The declared value is what most claims are capped at.

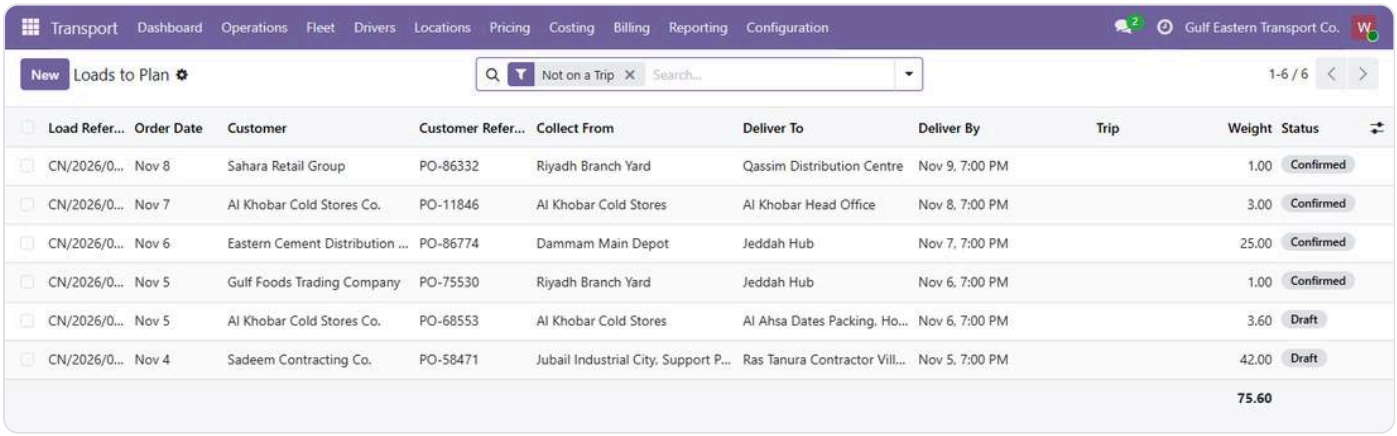

3 Handling needs ENTERPRISE ADD-ON

On **Handling**, tick **Dangerous Goods** and type the UN number for an ADR load, or **Temperature Controlled** with the minimum and maximum. The readiness check uses these to refuse a dry truck for a chilled load or a vehicle without ADR approval for dangerous goods.

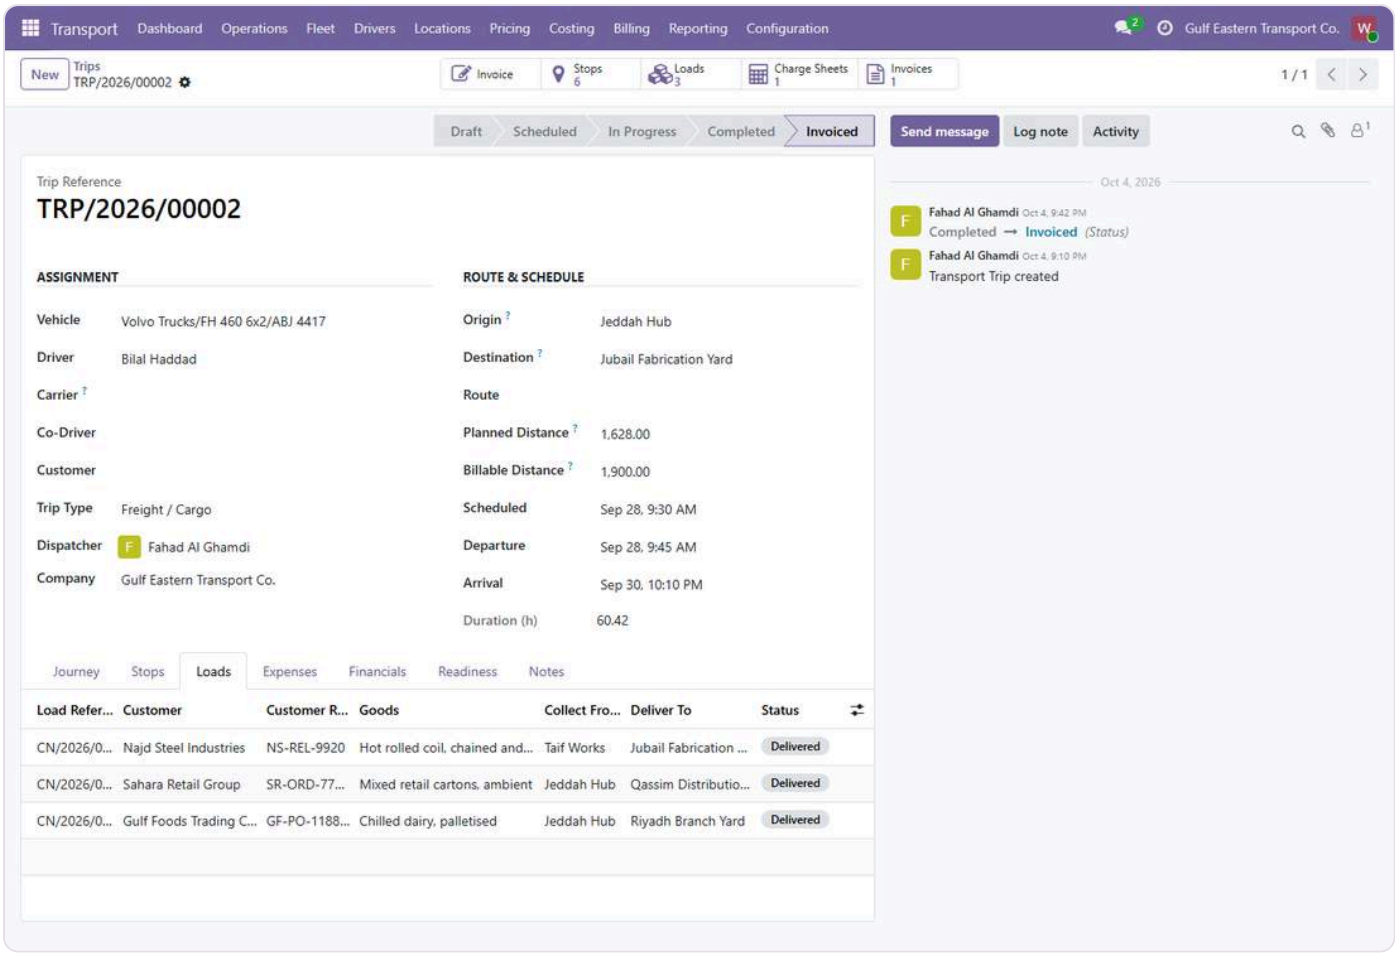

Confirm the load when it is agreed. To plan it, set the **Trip** field on the load; the trip's **Stops from Loads** button then adds a collection and a delivery call for every load that does not have one yet. When the collection stop is completed the load turns **In Transit**; when the delivery stop is completed it turns **Delivered**, with the delivered time, the quantity signed for, a shortage flag and a **Late** flag when it arrived after Deliver By. **Mark Delivered** does the same by hand.

ENTERPRISE ADD-ON Operations, Loads to Plan: open consignments that have no trip yet.

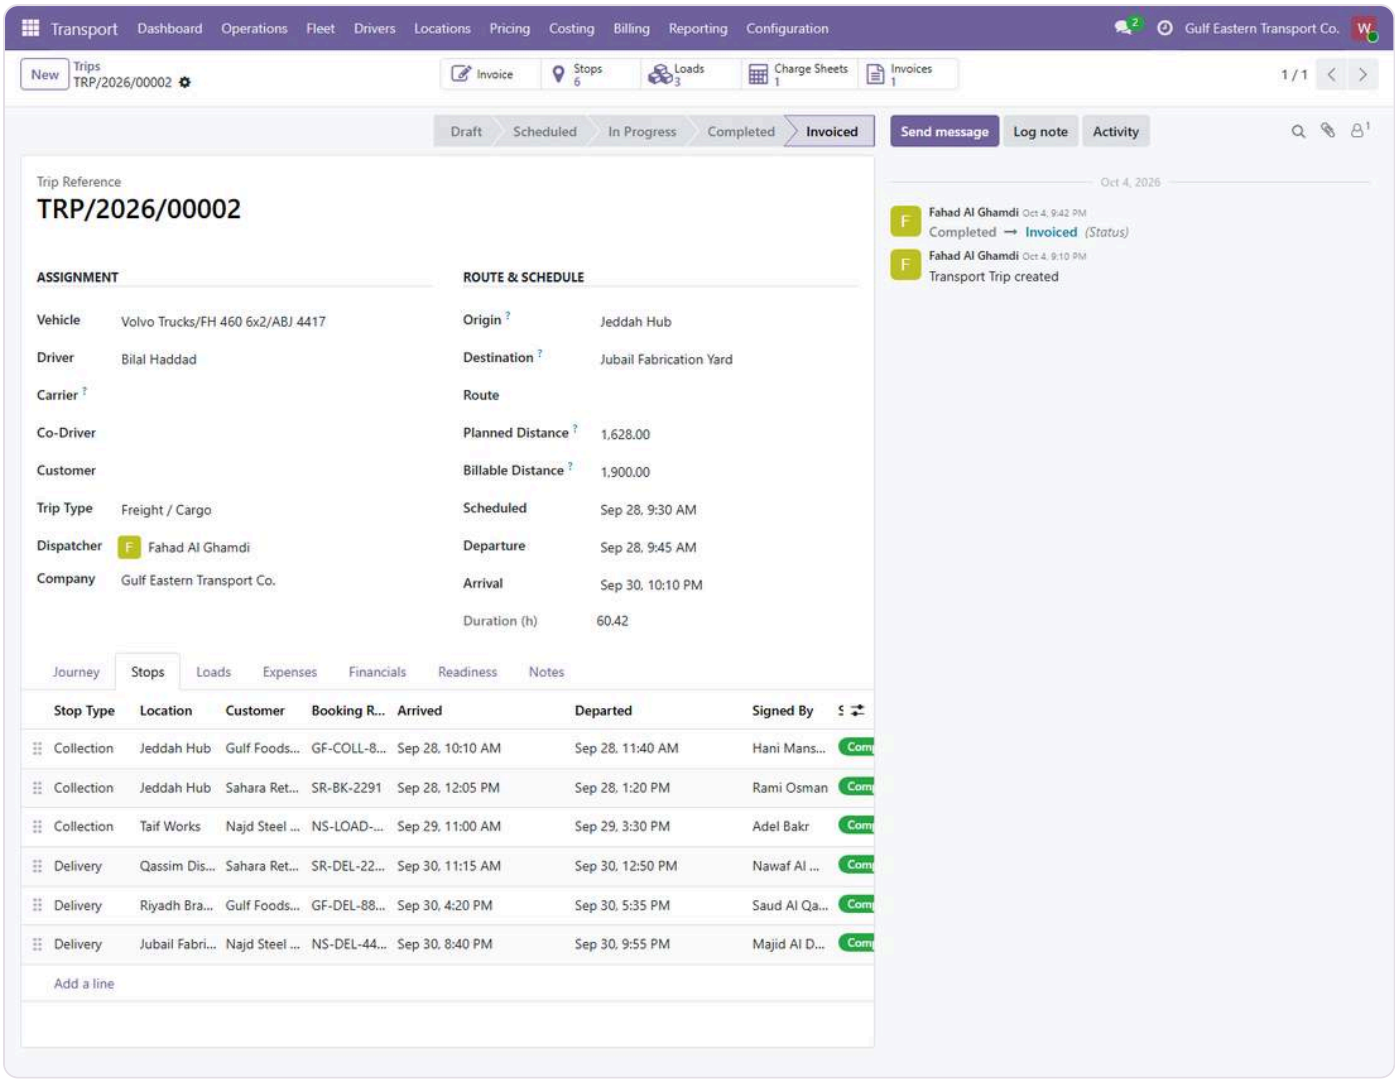

Groupage: several customers on one trip ENTERPRISE ADD-ON

ENTERPRISE ADD-ON A groupage trip: three loads for three customers on one Volvo. Smart buttons show the stops, loads, charge sheets and invoices.

When the loads on a trip belong to more than one customer the trip is marked **Groupage**. Each load can be priced under its own customer's rate card, and a charge sheet is made per customer. Total weight, volume and pallets on the trip add up from its loads; the readiness check compares them with the vehicle's capacity.

Stops ENTERPRISE ADD-ON

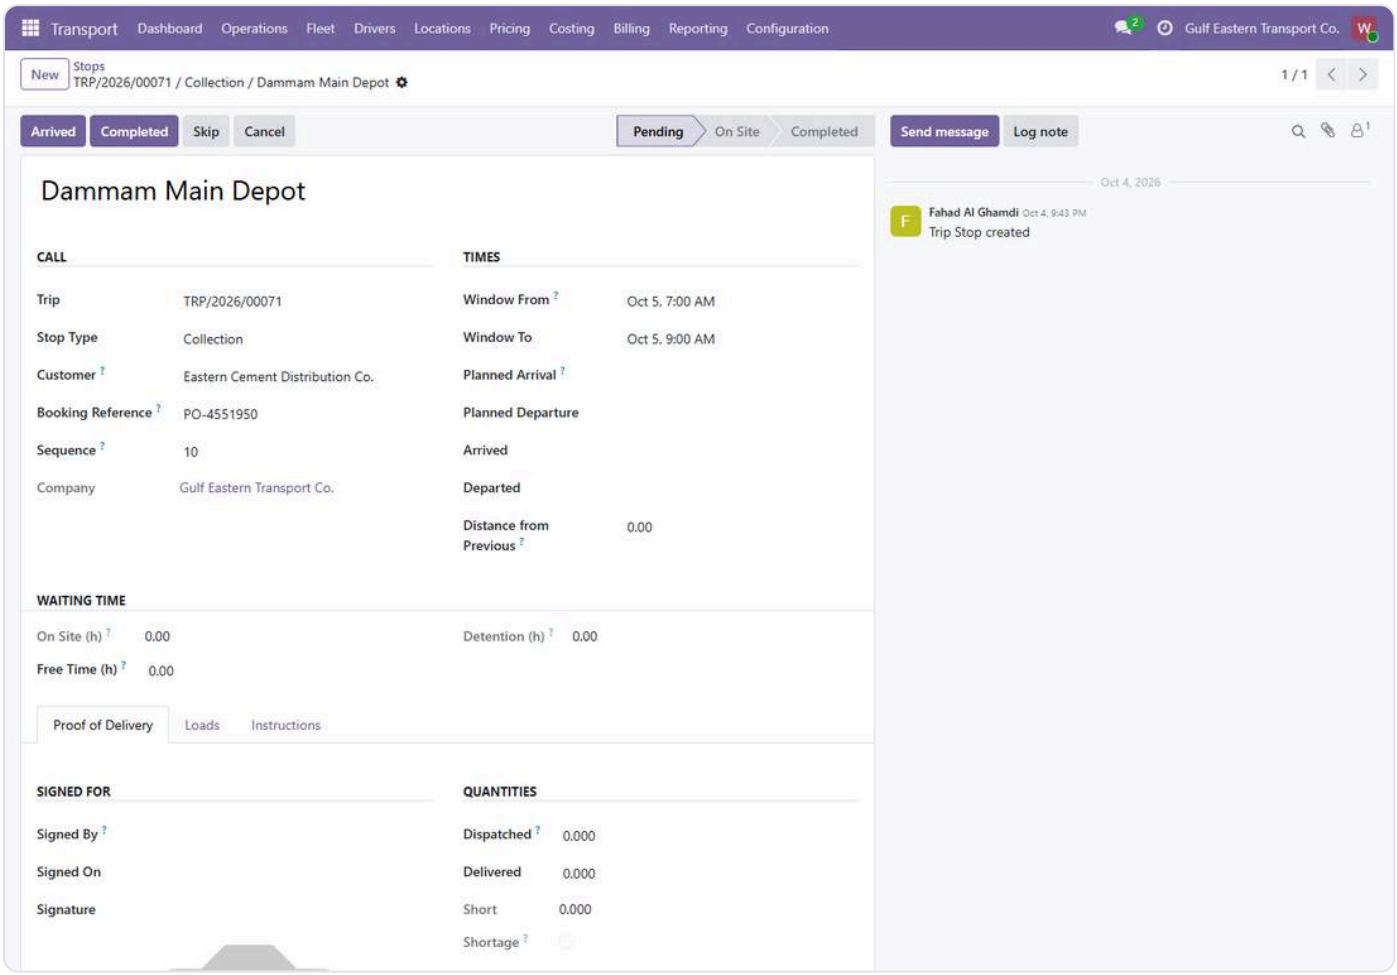

ENTERPRISE ADD-ON The Stops tab of the trip: collections and deliveries in order, with actual times and who signed.

4 A planned call ENTERPRISE ADD-ON

Each stop has a type (Collection, Delivery, Waypoint, Fuel, Rest / Break, Customs / Border, Other), a location, the customer whose freight is handled there, a booking reference, instructions for the driver, the booked window and the planned arrival and departure. **Distance from Previous** is the planned leg; the trip's **Planned Distance** is the sum of the legs.

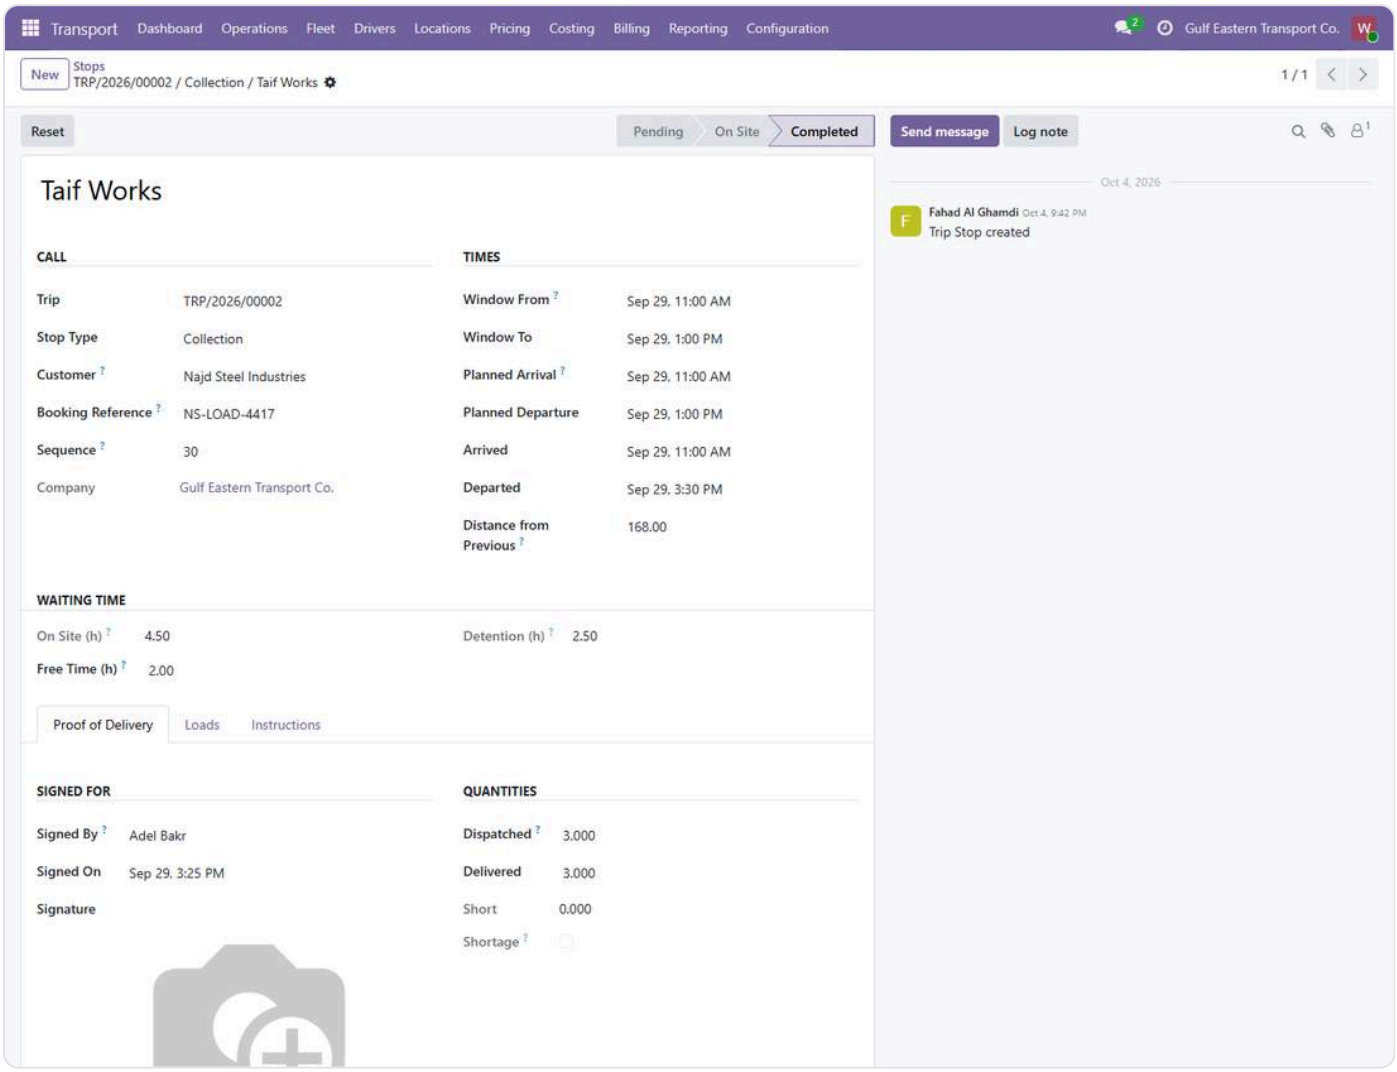

> Reorder the stops and the trip origin and destination follow: they are the first and last call.

5 Arrive and complete ENTERPRISE ADD-ON

Press **Arrived** when the truck is on site (the arrival time is stamped) and **Completed** when it leaves. Time on site is departure less arrival. The free time comes from the detention rules (Part 14), and anything beyond it is **Detention**, the hours a waiting charge is raised on.

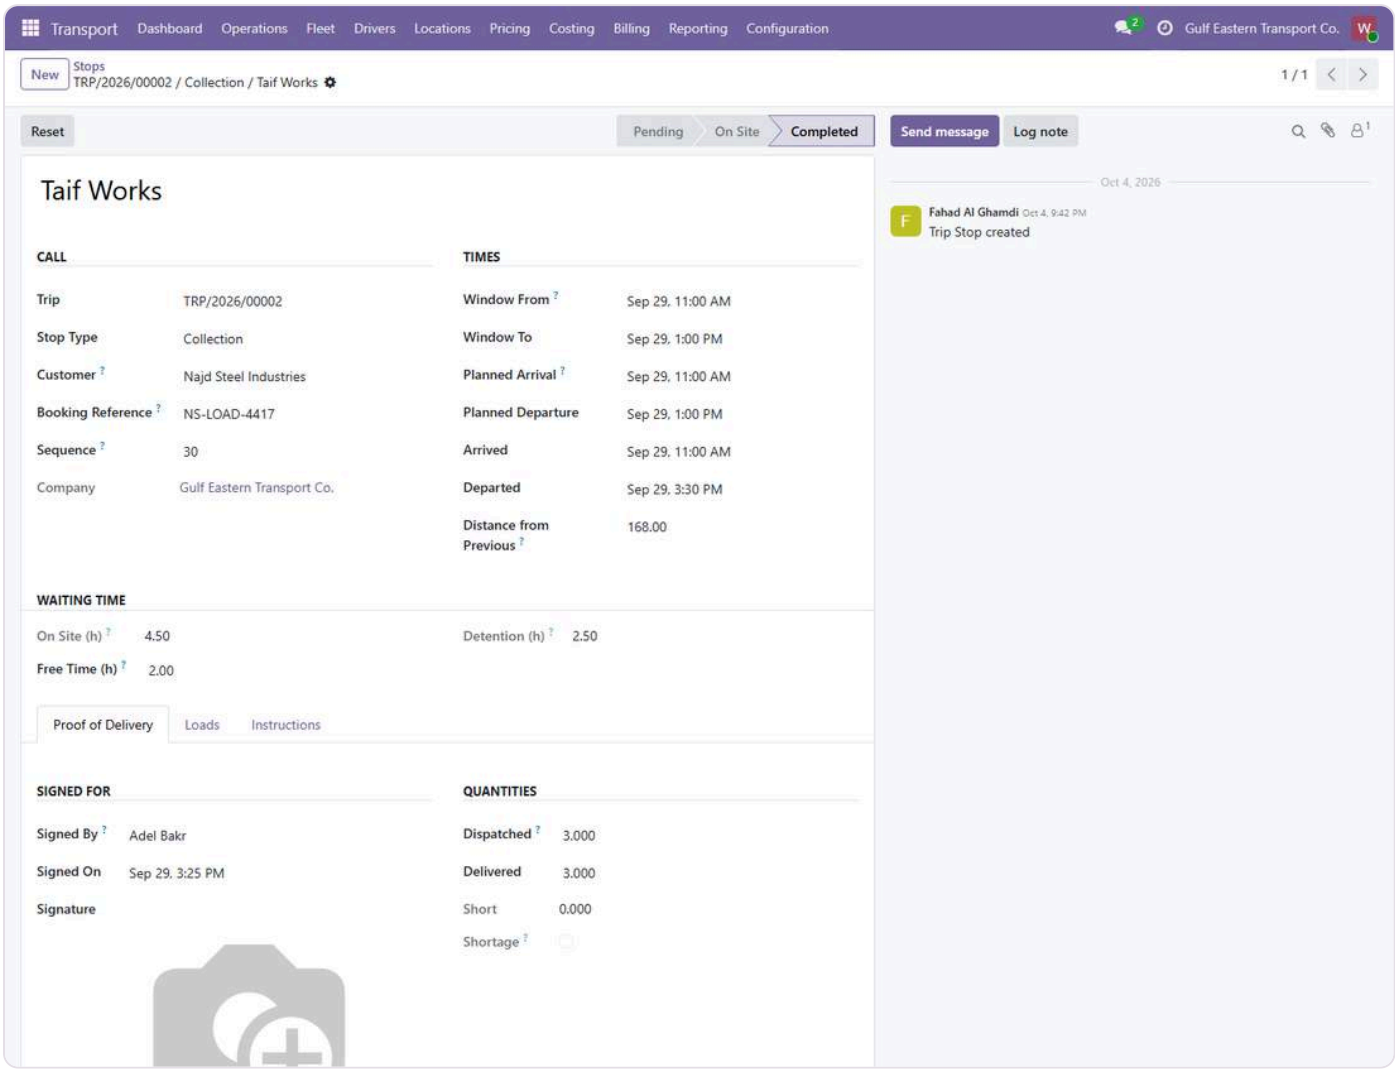

> Skip keeps a call that was not made on the sheet, with its reason. Cancel is refused on a completed call.

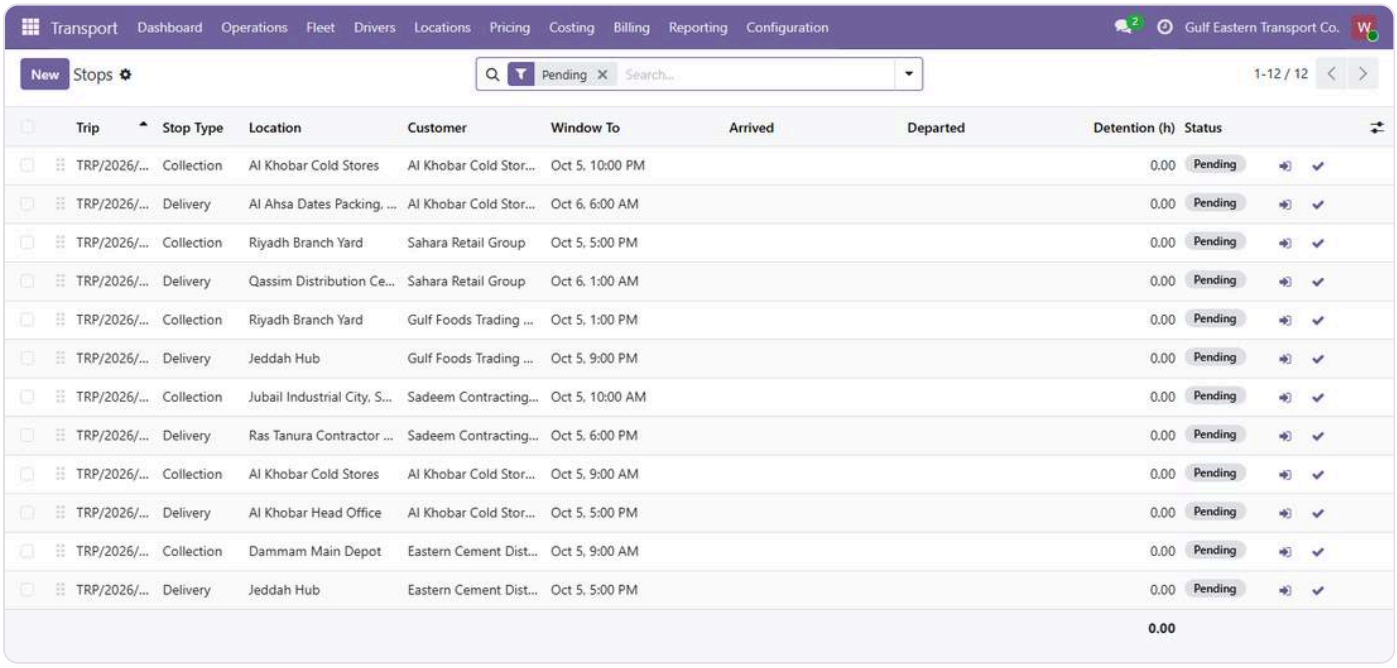

6 Proof of delivery ENTERPRISE ADD-ON

On the **Proof of Delivery** tab record the signature, who signed, when, a photo, the quantity dispatched and delivered, and any damage or exception note. Less delivered than dispatched, or a damage note, flags a **Shortage**.

> This is the evidence a claim is judged on. Part 14 shows how a claim is raised from it.

ENTERPRISE ADD-ON Operations, Stops: every call on every run, for the traffic office to work through.

Trip billable distance is the actual distance once the odometer is in, the planned distance until then, or a figure you type when the customer pays on a tariff distance. Completing a trip closes the loads that rode on it, except a load whose delivery was skipped or never made: it is left open, because the freight is still on the vehicle.

PART 12 Readiness before dispatch, and driver compliance ENTERPRISE ADD-ON

The add-on answers one question ten times an hour: can this truck, with this driver, go out on this job today? It checks the vehicle, the driver, the loads and the subcontractor, and reports every reason at once, blocking ones first.

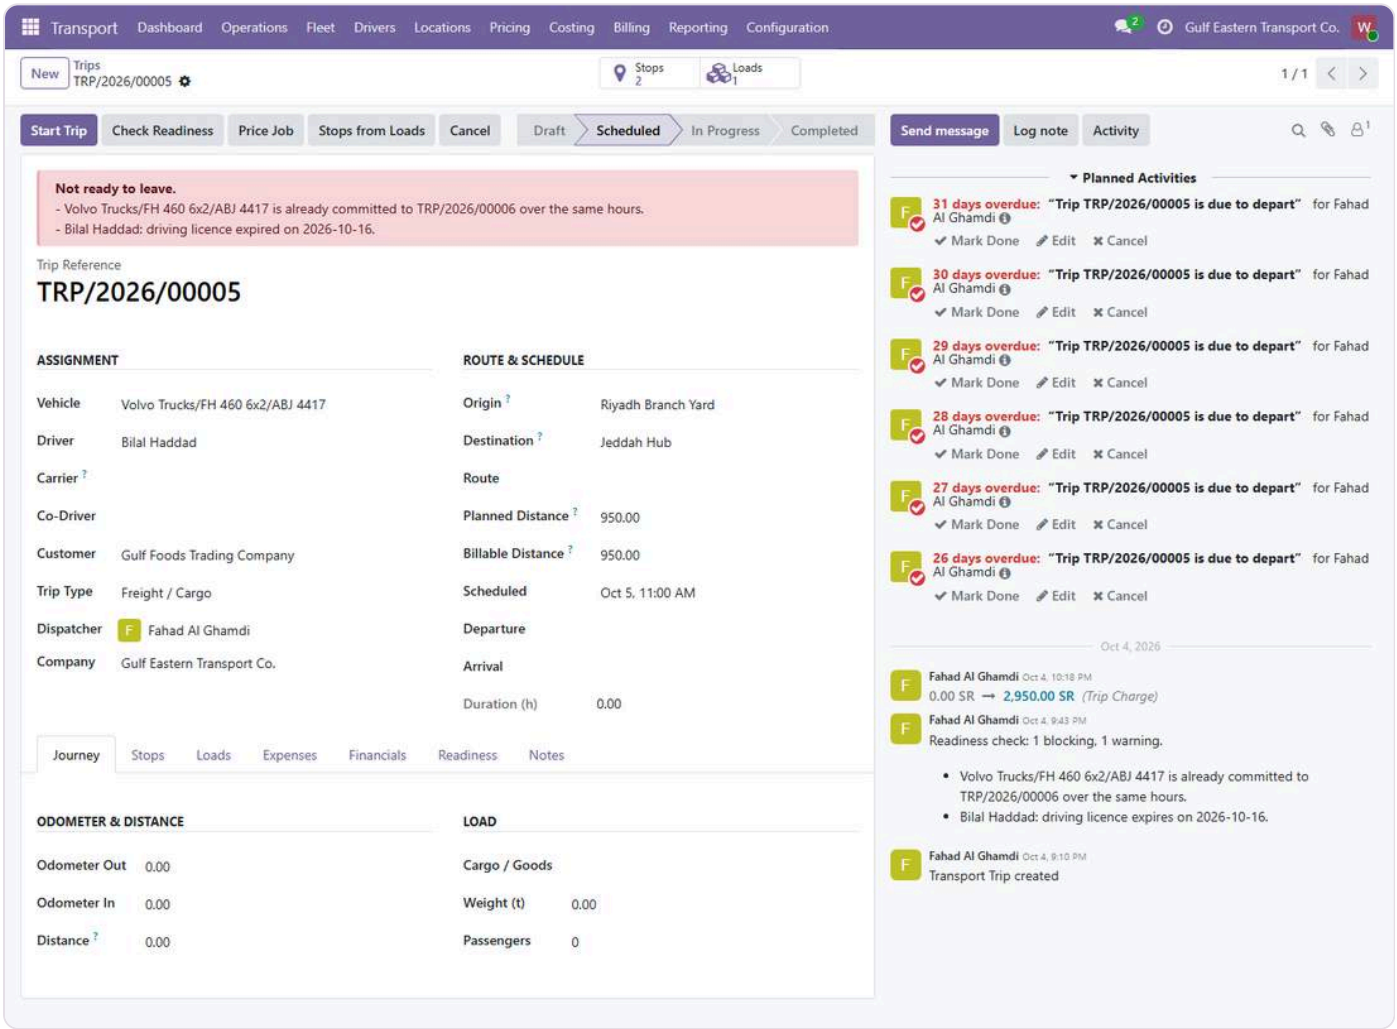

IN THIS PART YOU WILL LEARN

- What blocks a trip and what only warns
- How double bookings are found
- How to change what your fleet enforces
- The four driver certificates

TRY IT YOURSELF ON THE DEMO

1. On transport-pro, open TRP/2026/00005 and read the red banner
2. Open its Readiness tab and the Clashes With trip
3. Open Configuration, Readiness Rules and open Vehicle document expired

The banner on the trip ENTERPRISE ADD-ON

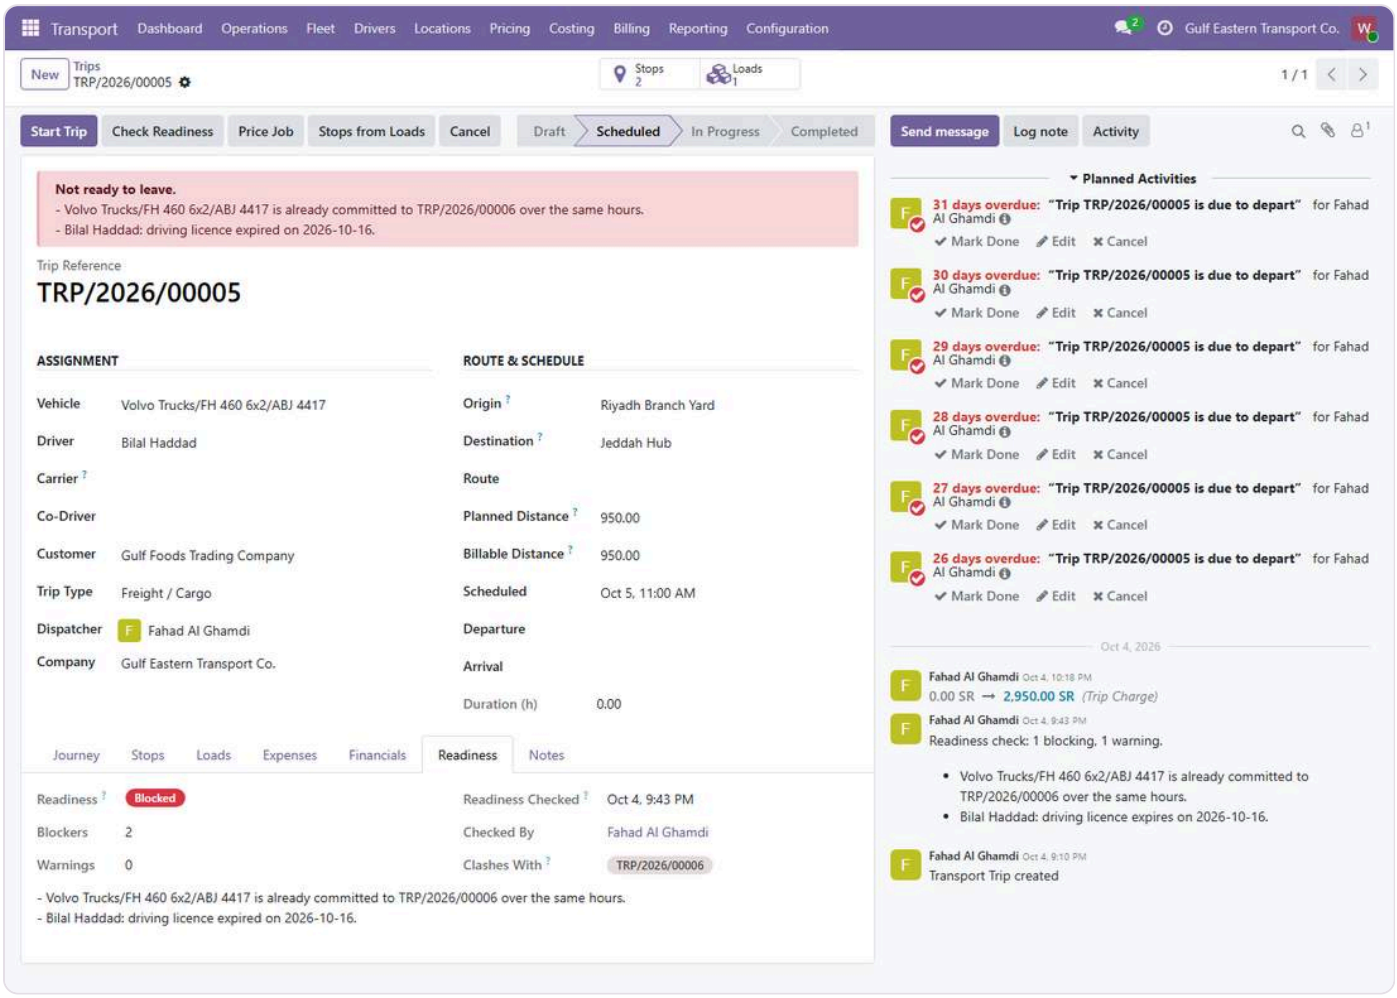

ENTERPRISE ADD-ON A scheduled trip that is not ready: the vehicle is already committed to another trip over the same hours, and the driver's licence has expired.

On a draft or scheduled trip, a red **Not ready to leave** banner lists the blocking reasons, or an amber **Can leave, with warnings** banner lists the warnings. A third banner warns when the job is priced below what the vehicle costs to run. The state is worked out every time the trip is read, because a licence expires overnight without any record changing.

1 Read the Readiness tab ENTERPRISE ADD-ON

The tab shows the state (Ready, Warnings, Blocked), the number of blockers and warnings, the full report, and **Clashes With**: other unfinished trips that want this vehicle or one of these drivers over the same hours.

> Overlap is half open, so a trip ending exactly when the next starts is not a clash. A trip with no arrival time is assumed to take 8 hours.

2 Press Check Readiness ENTERPRISE ADD-ON

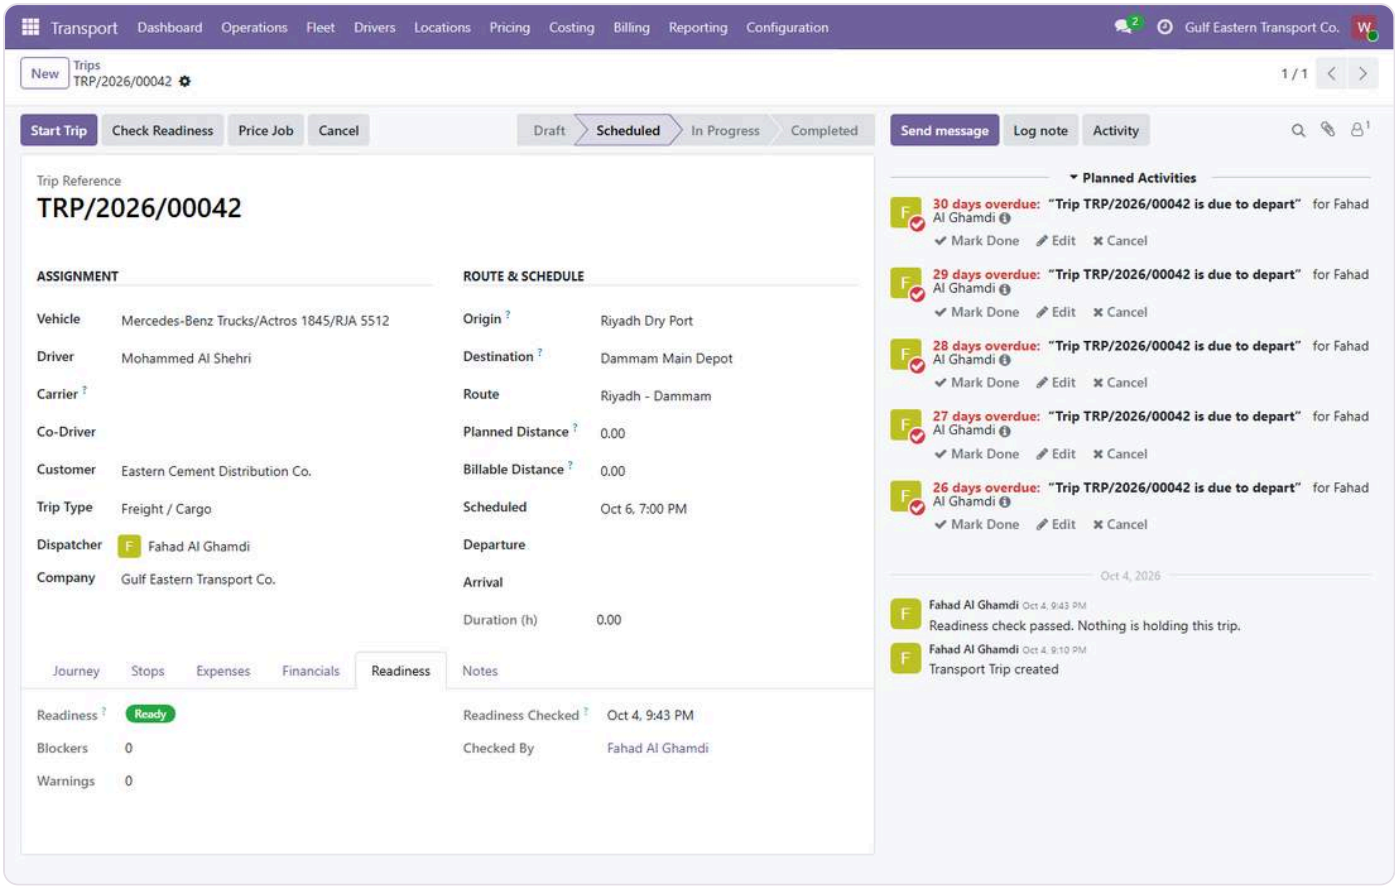

Check Readiness runs every check and shows the result in a pop-up, and writes the full report into the chatter with the time and who pressed it. That note is the record that dispatch knew.

3 Start the trip ENTERPRISE ADD-ON

When **Refuse Unready Trips** is on (the default), **Start Trip** refuses a blocked trip and lists every reason. Switch it off in Settings and the same reasons are only warnings. The check runs before the trip changes state, so a blocked trip never reaches In Progress.

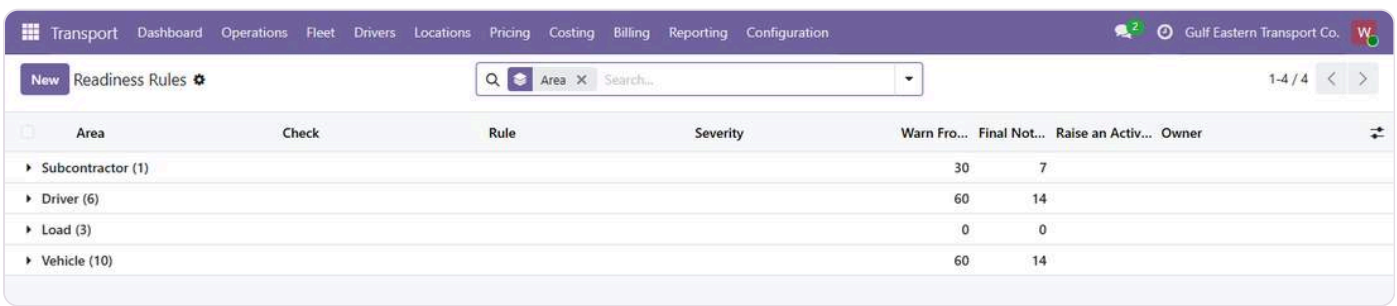

4 A trip that is ready ENTERPRISE ADD-ON

A trip with nothing against it shows Ready and no banner.

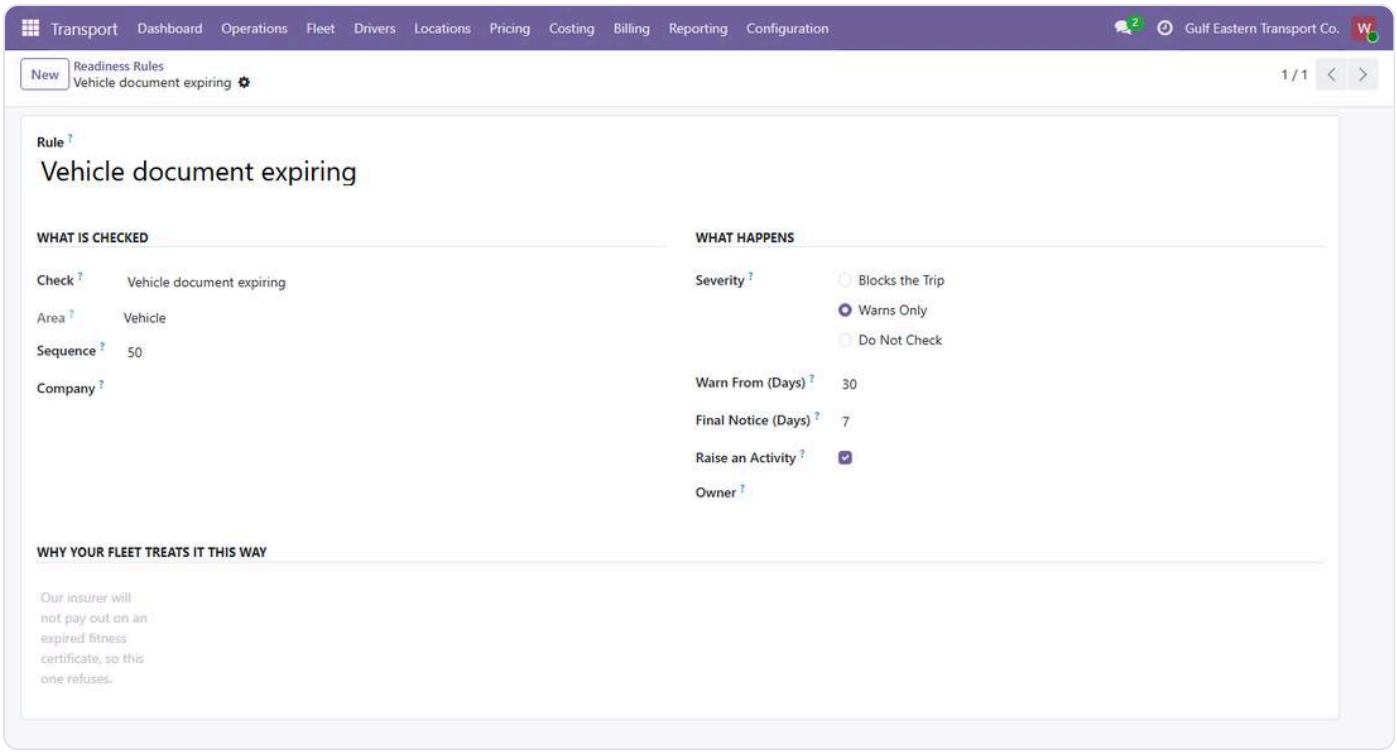

The twenty checks ENTERPRISE ADD-ON

AREA	CHECK	DEFAULT
Vehicle	Vehicle is off the road; immobilising defect open; vehicle document expired; insurance lapsed; service overdue; vehicle already committed	Blocks
Vehicle	Vehicle is in the workshop; document expiring; document not on file; service due soon	Warns
Load	Load exceeds what the vehicle may carry; dangerous goods on a vehicle without ADR; temperature controlled load on a dry vehicle	Blocks
Driver	Driving licence expired; driver certificate expired; driver already committed	Blocks
Driver	No driver assigned; licence expiring; certificate expiring	Warns
Subcontractor	Subcontractor not compliant (insurance or operator licence)	Blocks

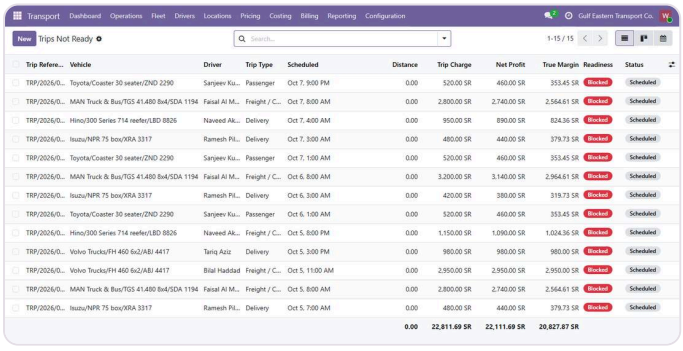

ENTERPRISE ADD-ON Configuration, Readiness Rules: one record per check, with its severity.

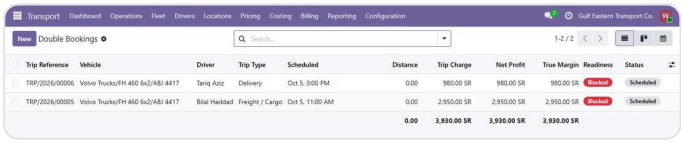

ENTERPRISE ADD-ON A readiness rule. Severity, how far ahead an expiry starts to count, the final notice days, whether a to-do is raised and who owns it.

Each rule can be set to **Blocks the Trip**, **Warns Only** or **Do Not Check**. **Warn From (Days)** is how far ahead an expiry starts to count. Archiving a rule switches its check off. A rule naming a company overrides the shared one for that company. A document that was never recorded is only reported when its type has **Stops a Dispatch** ticked, so nothing a customer already had starts being refused on the day the add-on is installed.

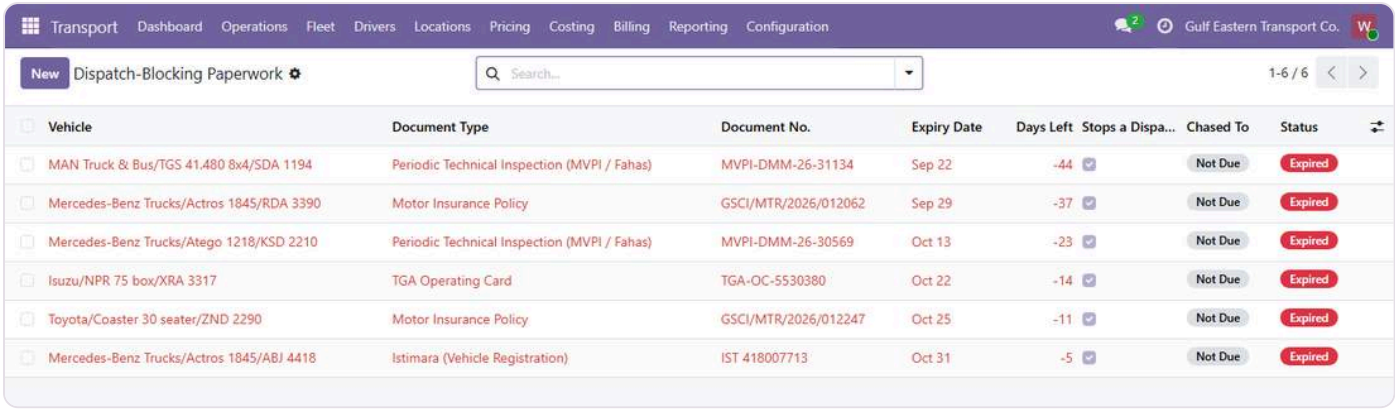

The lists the traffic office works from ENTERPRISE ADD-ON

ENTERPRISE ADD-ON Operations, Trips Not Ready.

ENTERPRISE ADD-ON Operations, Double Bookings.

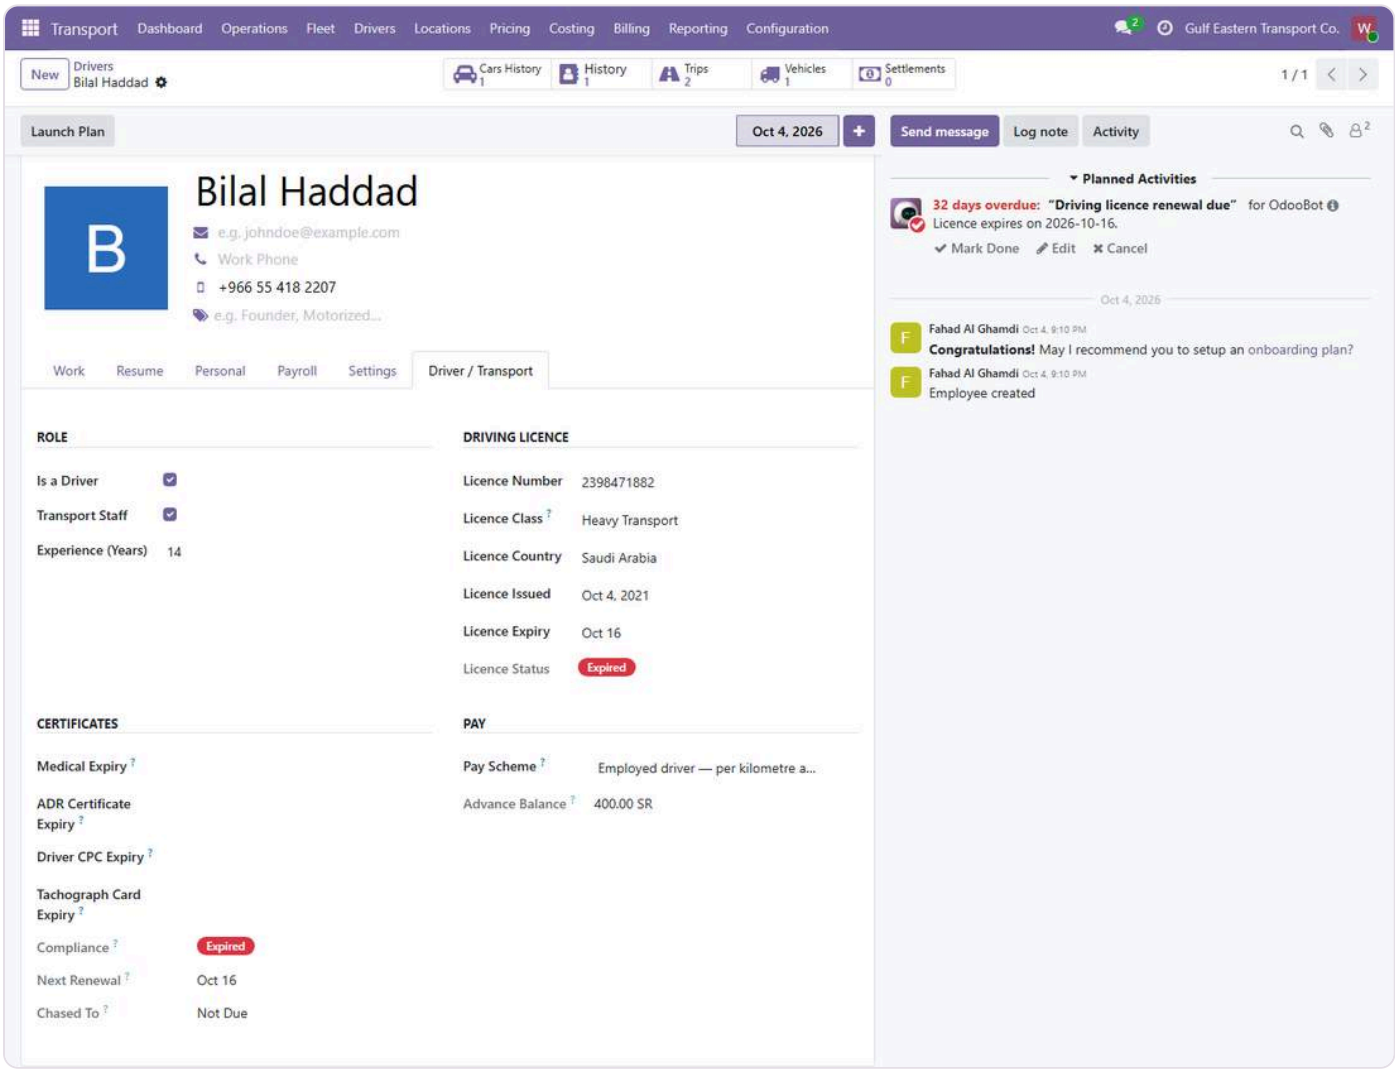

ENTERPRISE ADD-ON Fleet, Dispatch-Blocking Paperwork: documents whose type stops a dispatch, with days left and how far each renewal has been chased.

Driver certificates and compliance ENTERPRISE ADD-ON

5 The Certificates block ENTERPRISE ADD-ON

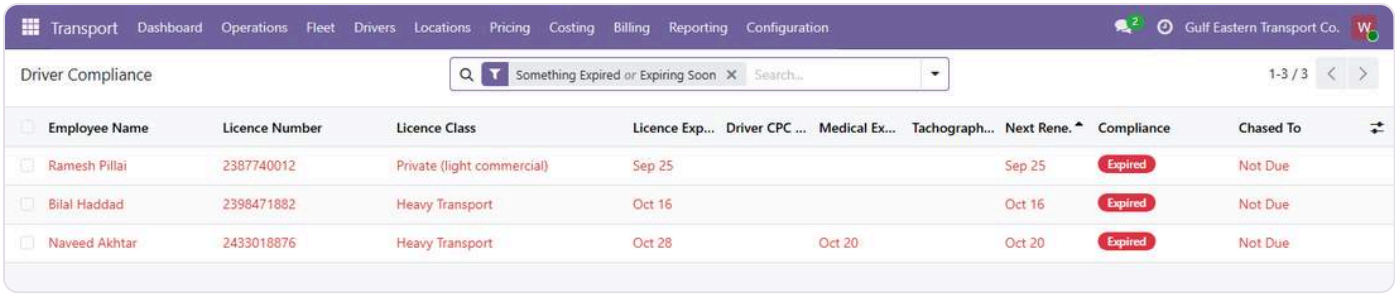

Beyond the licence, the add-on tracks four dates on each driver: **Medical**, **ADR Certificate** for dangerous goods, **Driver CPC** and **Tachograph Card**. **Compliance** is the worst state of the licence and all four; **Next Renewal** is the earliest date; **Chased To** is how far reminders have gone.

> Leave a date empty where your country does not use that certificate; an empty date is not reported.

6 The Driver Compliance list ENTERPRISE ADD-ON

Drivers, Driver Compliance lists every driver with each date and the overall state, sorted by who is next to fall due.

> The renewal chasing (Reminder Sent, Final Notice, Lapsed) is written by a sweep method in the add-on that updates each document and driver only when its level changes, so the same to-do is not raised every night. The base module's own daily document and licence reminders keep running as before.

PART 13 Pricing: rate zones, rate cards and charge sheets ENTERPRISE ADD-ON

In the base module the trip charge is one number somebody typed. The add-on replaces it with a **charge sheet**: priced lines, each saying which contract, which lane, which band, what quantity and what rate produced it. Six weeks later, when the customer asks how the figure was reached, the answer is on the line.

IN THIS PART YOU WILL LEARN

- How zones, cards, bands and surcharges fit together
- Landing and slab banding
- How the fuel escalator works
- Which card wins when several match
- How a charge sheet is priced, overruled, confirmed and frozen

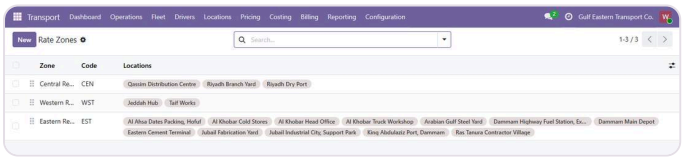

TRY IT YOURSELF ON THE DEMO

1. On transport-pro, open Pricing, Rate Cards, then Gulf Foods, National Contract
2. Read its Rates and Surcharges tabs
3. Open Pricing, Charge Sheets, then CHG/2026/00026 and read How this was priced on each line

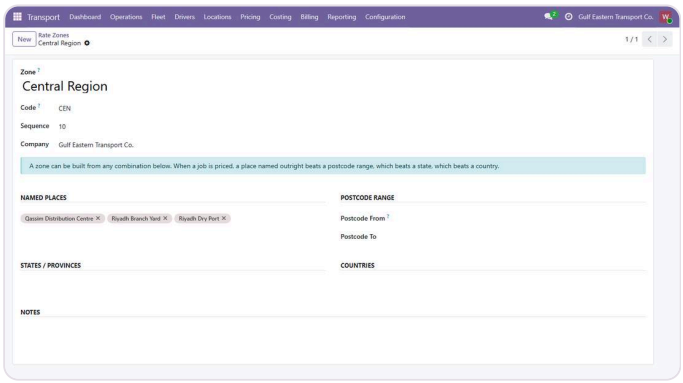

From contract to charge ENTERPRISE ADD-ON

1. **Rate zones** — Groups of places
2. **Rate cards** — Contracts with dates
3. **Rate bands** — What is measured, at what rate
4. **Surcharges** — Fuel, tolls, waiting
5. **Charge sheet** — The priced job

Rate zones ENTERPRISE ADD-ON

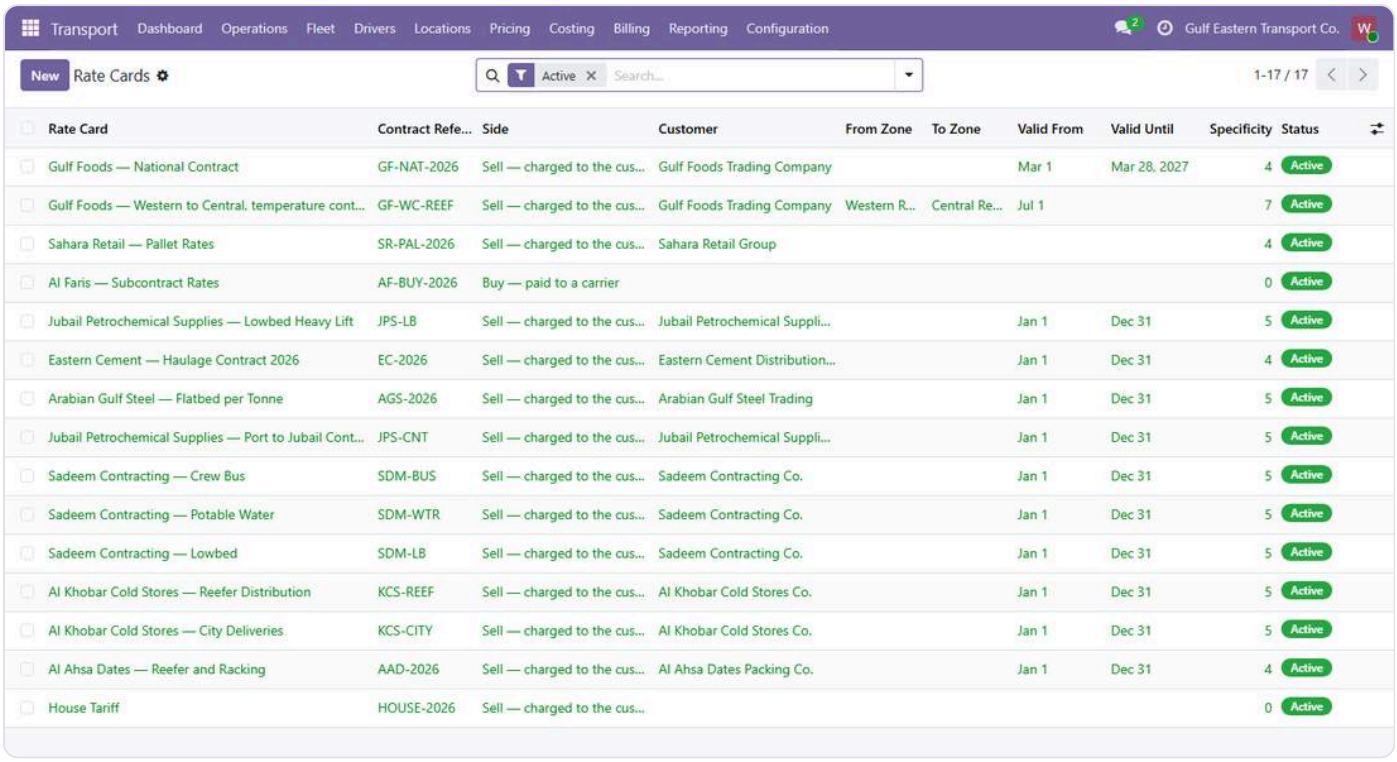

ENTERPRISE ADD-ON Configuration, Rate Zones.

ENTERPRISE ADD-ON A zone built from locations, countries, states or a postcode range.

Customers do not quote place to place, they quote region to region. A zone is that region, made of named locations, whole countries, states or a postcode range. A place can sit in several zones; the most precise one claims it.

ENTERPRISE ADD-ON Pricing, Rate Cards: a house tariff, customer contracts, a lane card, a pallet card, an expired contract and a subcontractor buy card.

1 A customer contract ENTERPRISE ADD-ON

Give the card the customer's own name for it and their contract reference: both are printed on every line it prices. Set the **Side** (Sell, charged to the customer; or Buy, paid to a carrier), the customer or carrier, the validity dates, the currency and a **Minimum Charge**. Narrow it if you need to with a From Zone and To Zone, vehicle classes (tags) and a trip type. **Activate** it; **Expire** retires it; **Back to Draft** reopens it.

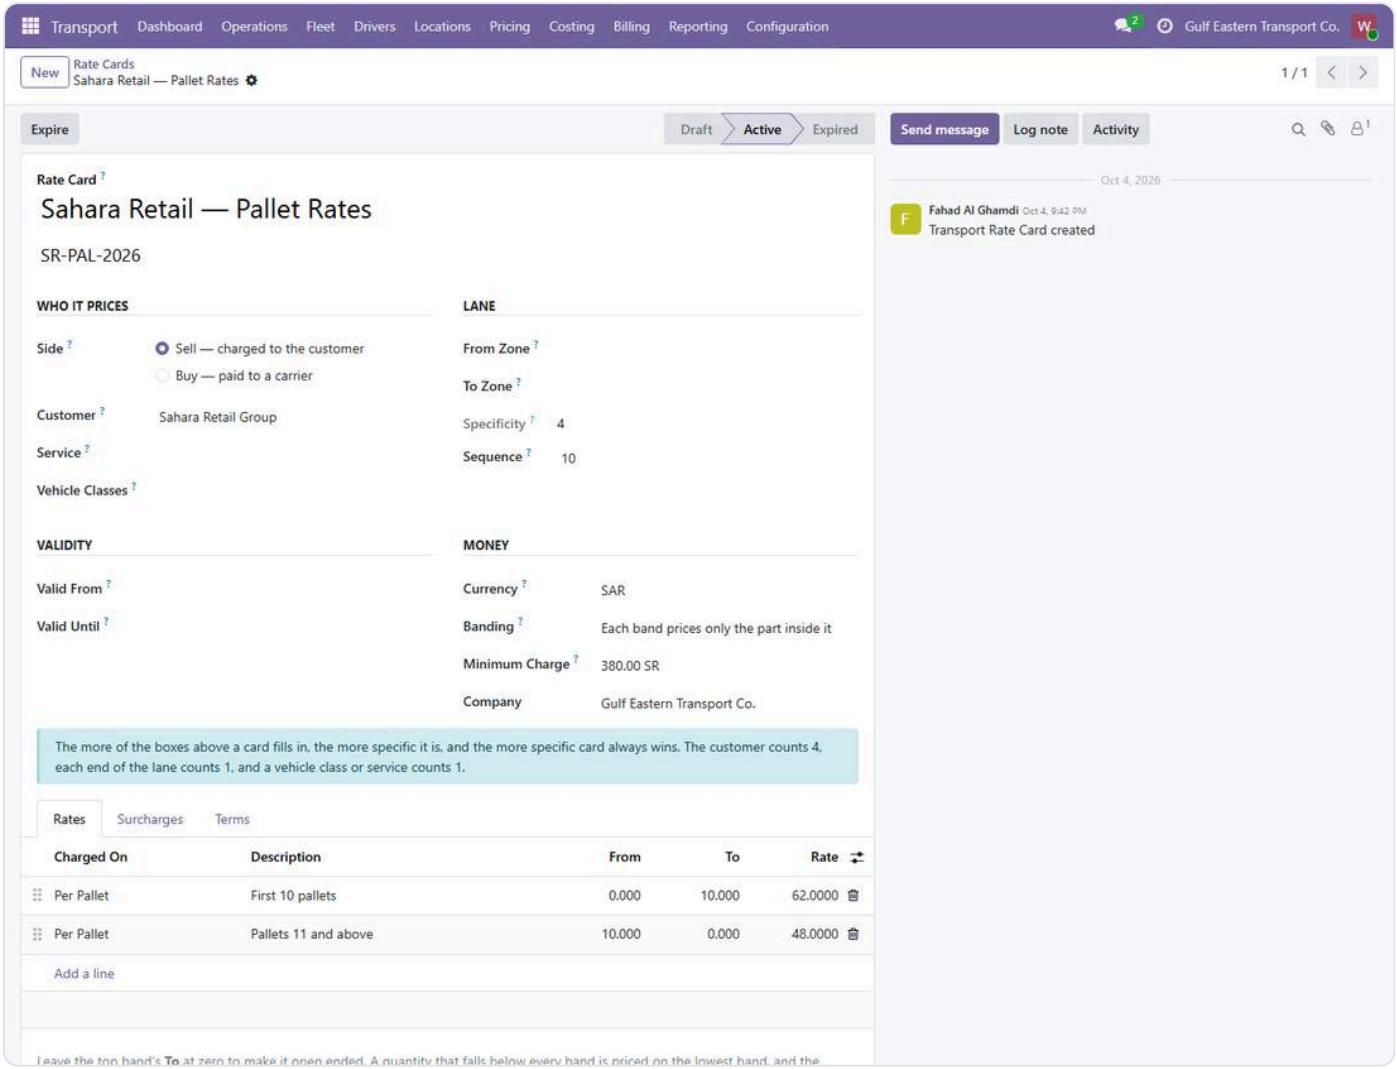

> Only an active card inside its dates is ever picked. A card with no customer is a house tariff for anyone without a contract.

2 The rates: bands ENTERPRISE ADD-ON

The **Rates** tab holds the bands. Each band is charged on one basis: per distance, per tonne, per pallet, per drop, per chargeable waiting hour, per trip (flat) or a zone to zone slab, with a quantity range, a rate, an optional minimum and cap, and its own account and taxes.

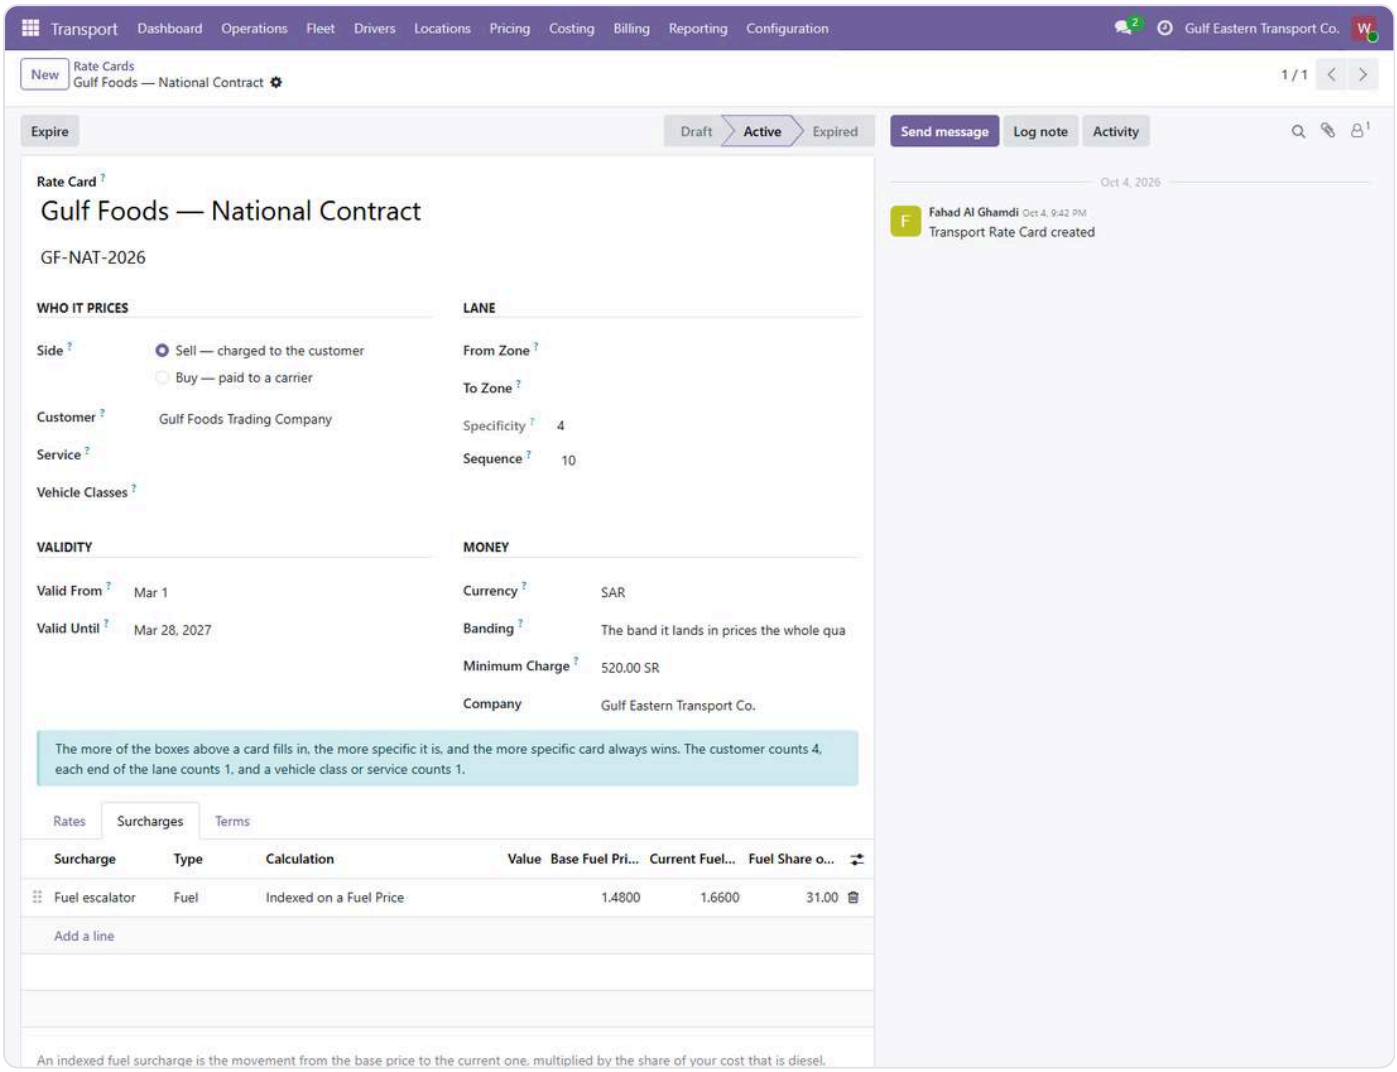

> **Banding** decides how a quantity is split. Landing: 700 km at the 500 and above rate prices all 700. Slab: the first 500 at one rate and the remaining 200 at the next.

3 Surcharges ENTERPRISE ADD-ON

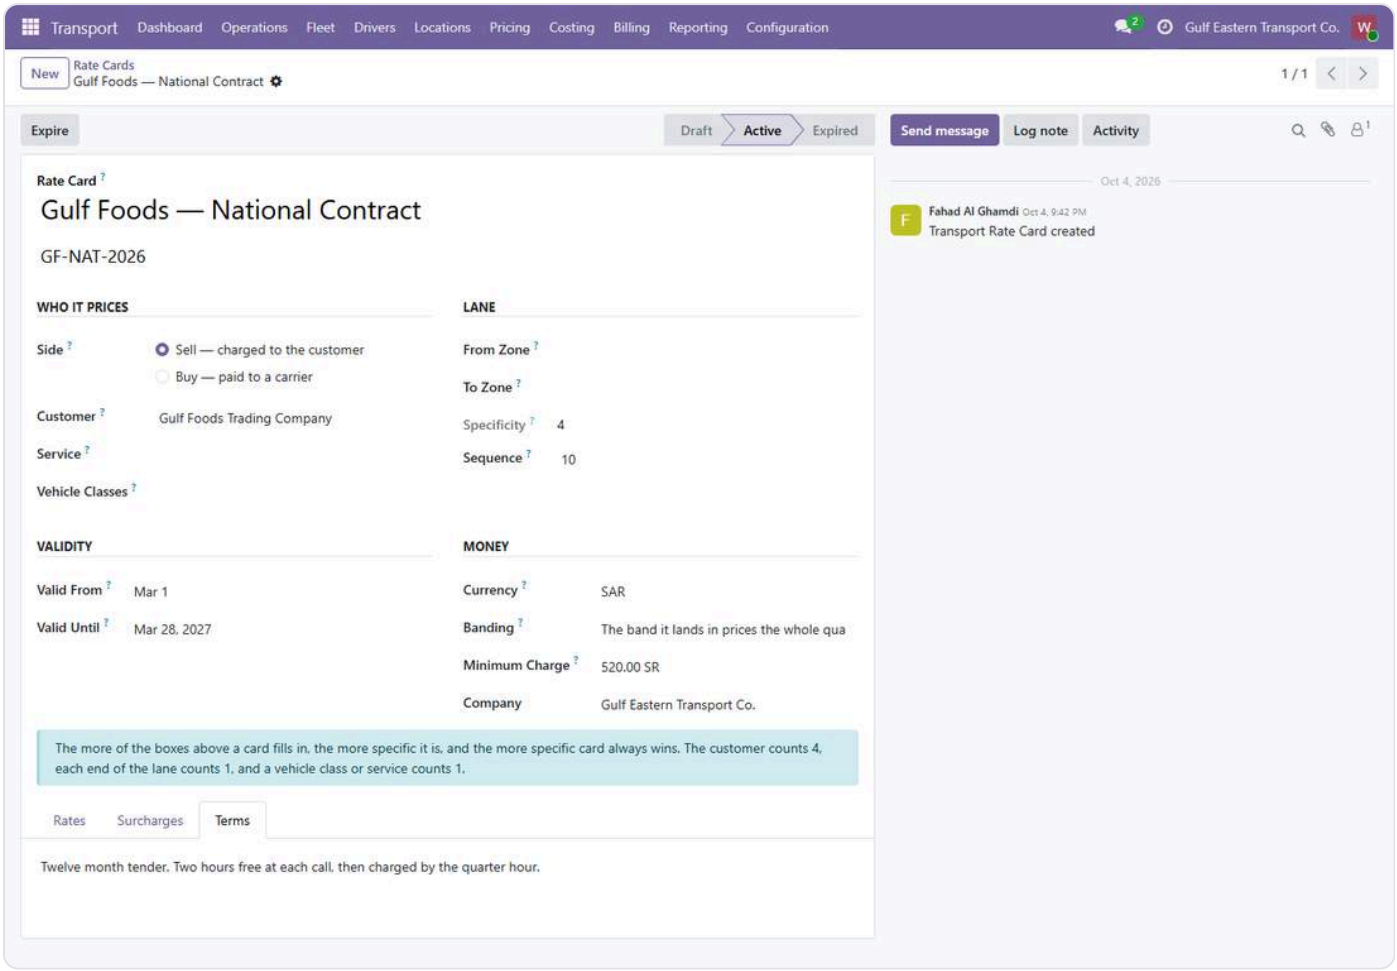

The **Surcharges** tab holds the extras: fuel, tolls, congestion, ferry, dangerous goods, temperature, night, weekend, handling, other. Each is a percent of the linehaul, a fixed amount, per distance, per tonne, or **indexed on a fuel price**.

> The fuel escalator: the base price the contract was signed at, this week's price, a trigger percent before it bites, the share of your cost that is diesel and the share passed on, with a cap. A 20% move in a price that is 30% of your cost is a 6% surcharge.

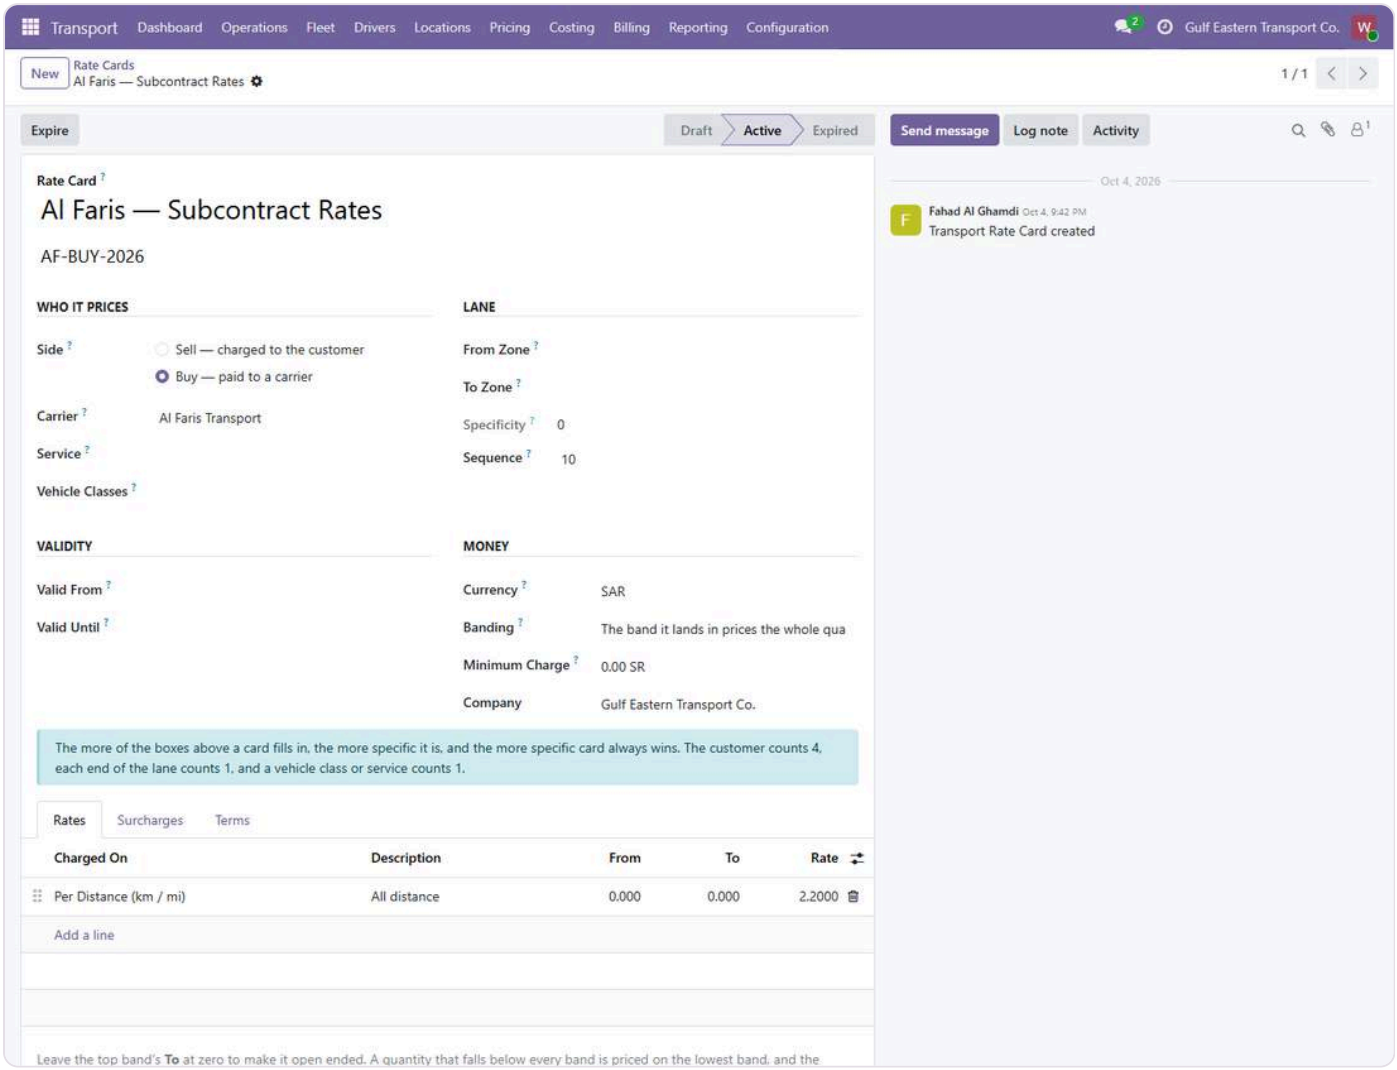

4 Terms ENTERPRISE ADD-ON

Anything the pricing cannot express goes on **Terms**: notice periods, what counts as a failed delivery, free time.

5 A buy card for a subcontractor ENTERPRISE ADD-ON

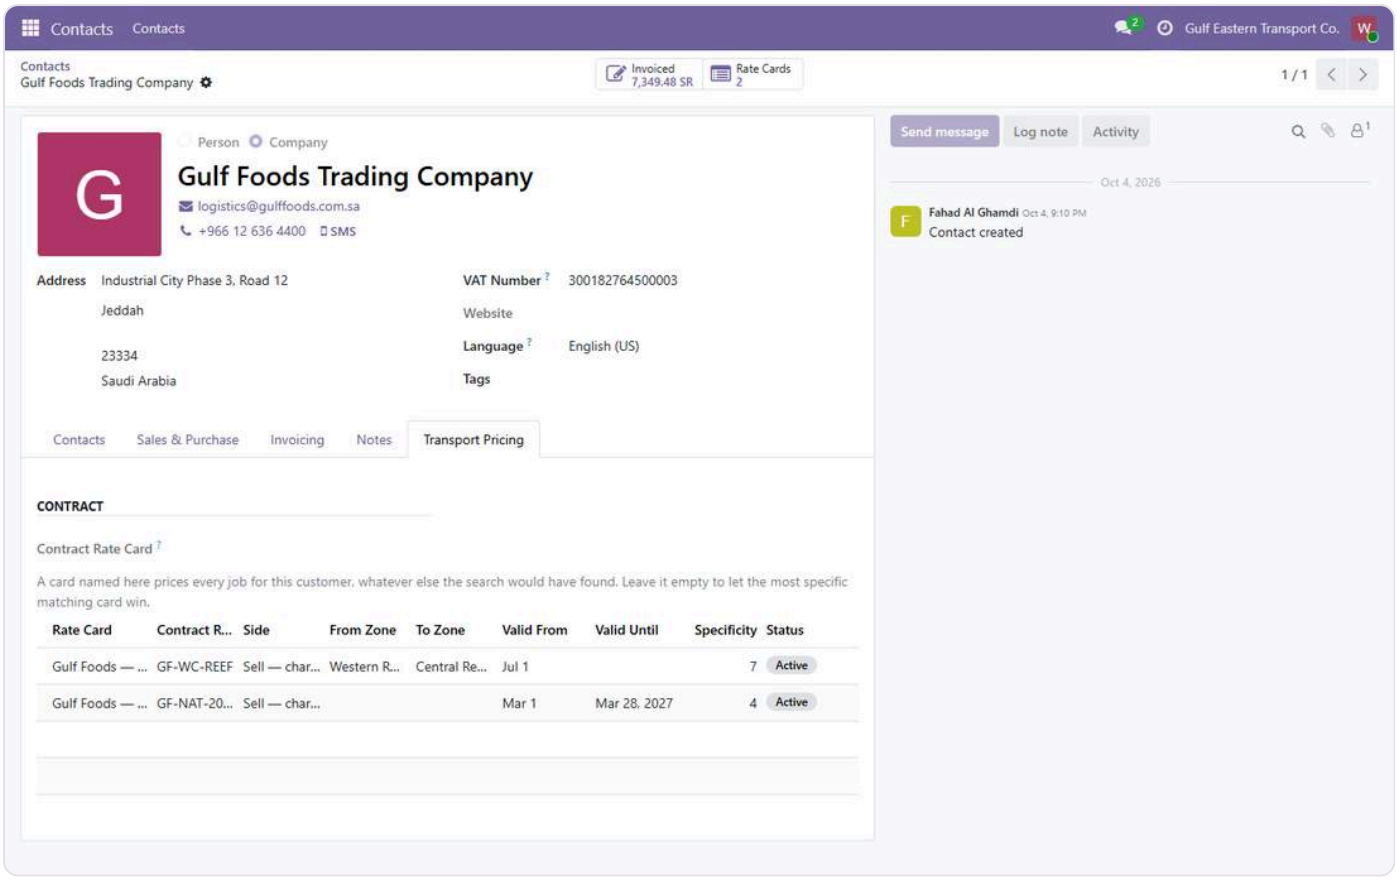

The same structure, on the buy side, prices what a carrier is paid for a job you sublet. With a sell and a buy card on the same job, the margin is visible before anything is invoiced.

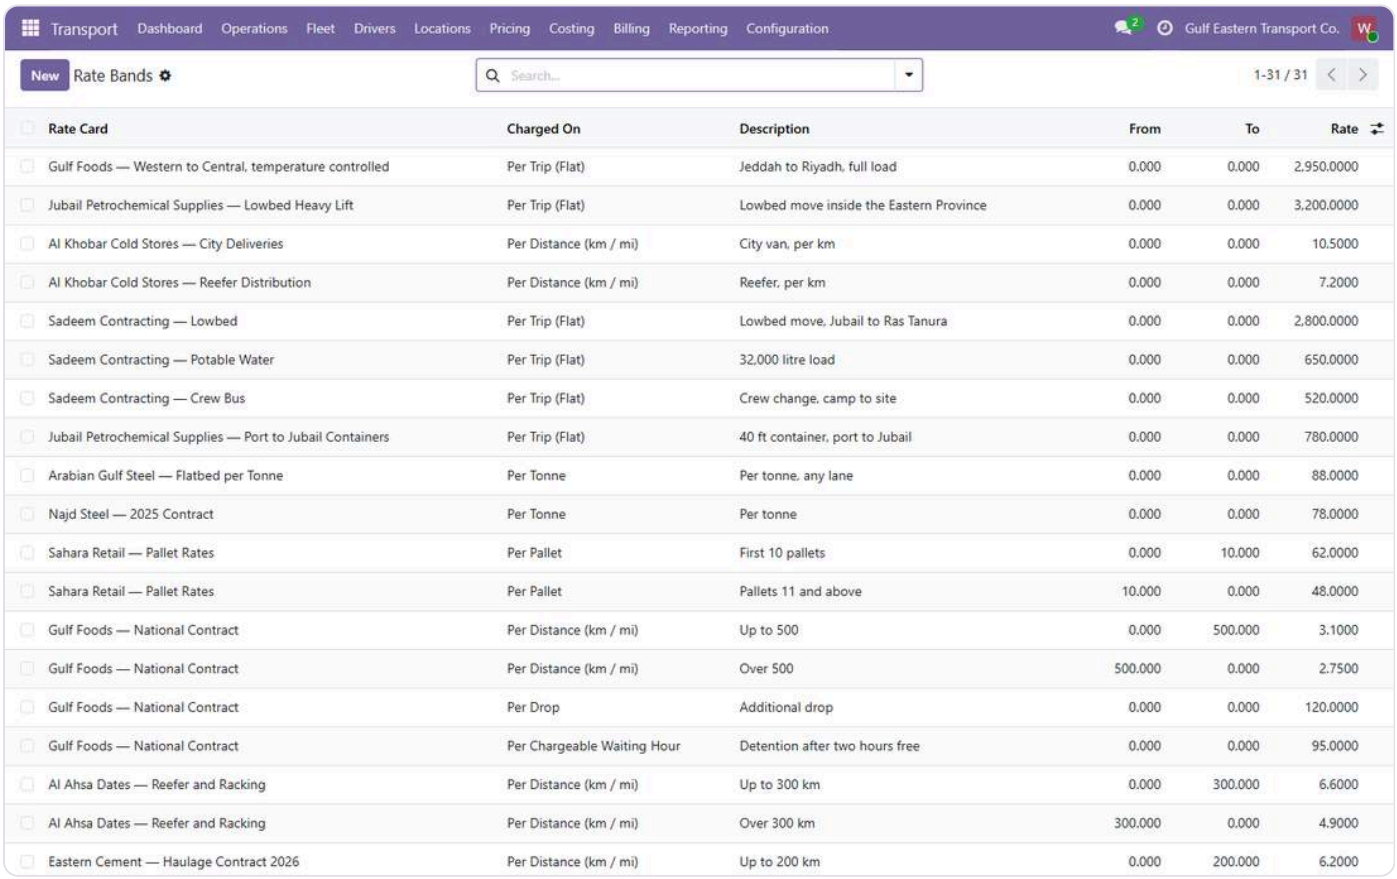

HOW IT WORKS

Which card prices a job

1. A card set by hand on the trip, the load or the customer's contact card wins outright.
2. Otherwise, among active cards whose dates cover the pricing date and whose customer, lane, vehicle class and service each match or were left blank, the most **specific** wins. The customer counts 4, each end of the lane 1, a vehicle class or a service 1.
3. A tie goes to the card with an end date (a spot rate beats the annual contract it displaces), then the lower sequence, then the newest card.

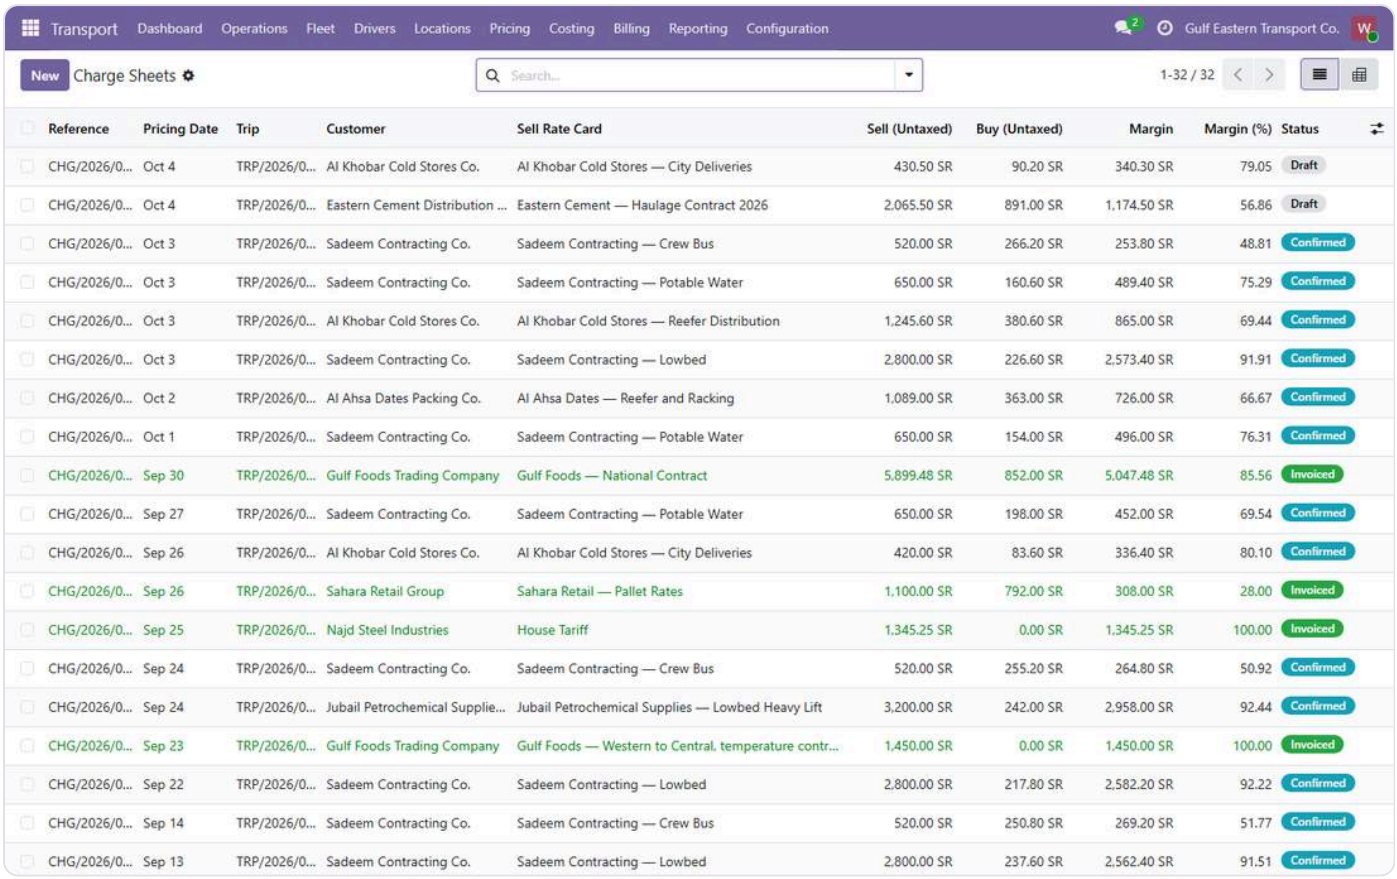

ENTERPRISE ADD-ON The customer contact gains a Transport Pricing tab: a nominated contract rate card, and every card written for this customer.

ENTERPRISE ADD-ON Pricing, Rate Bands: every band of every card in one list.

ENTERPRISE ADD-ON Pricing, Charge Sheets with the sell, buy and margin of each job.

6 Price the job from the trip ENTERPRISE ADD-ON

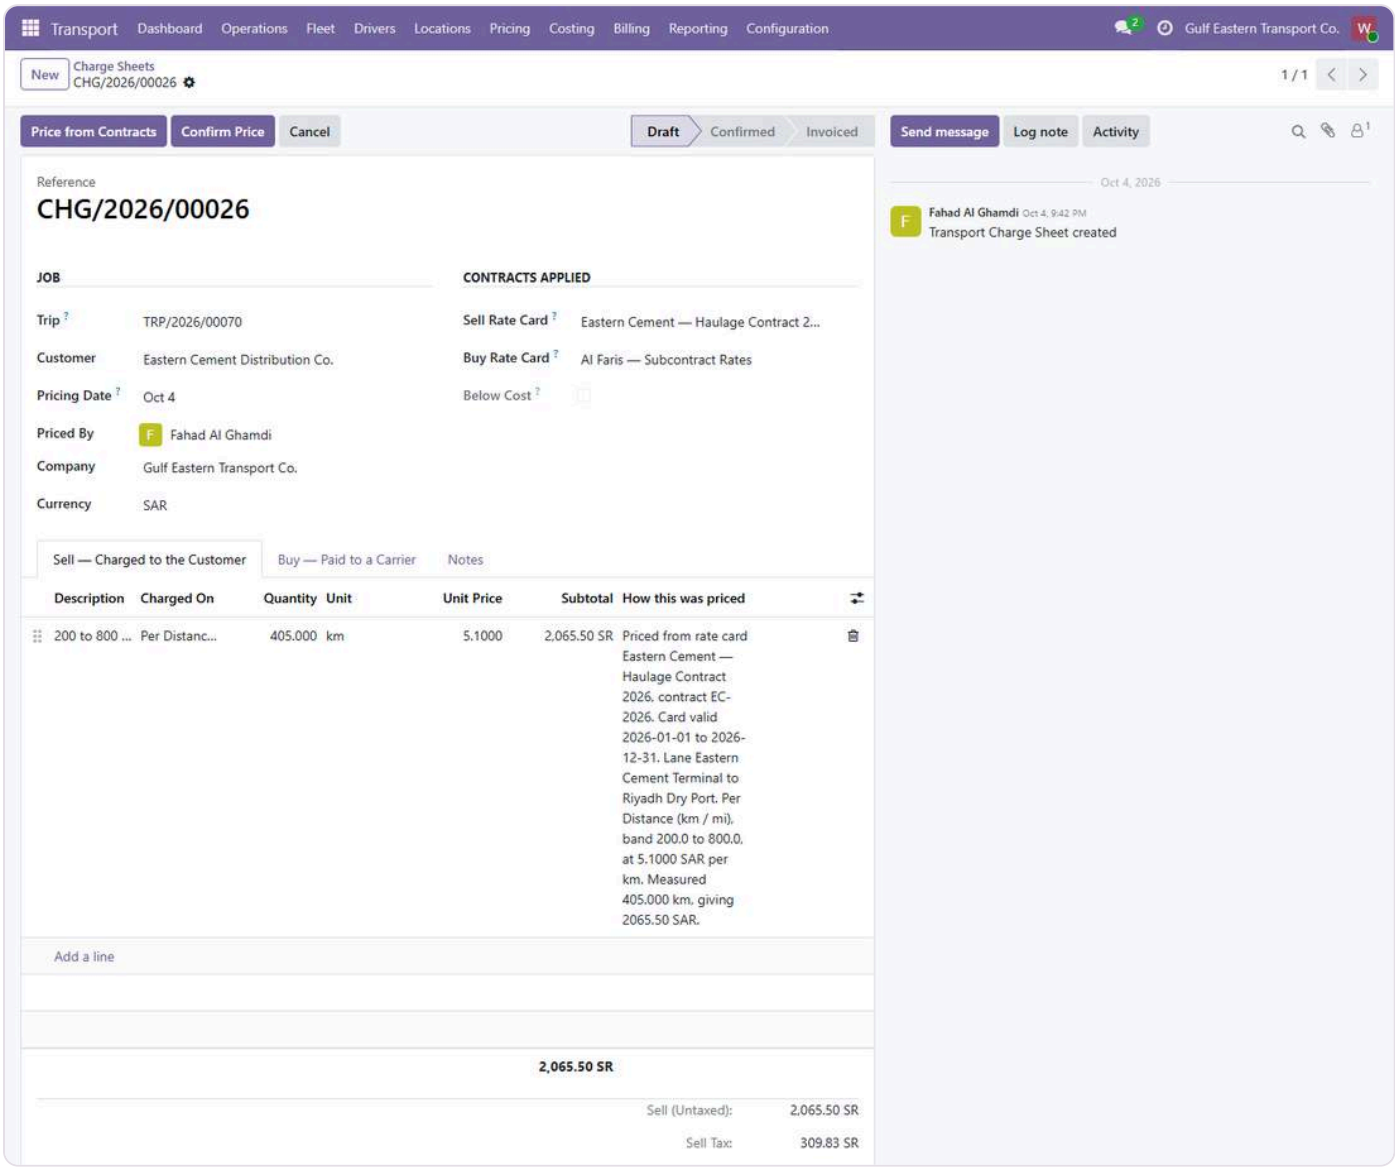

On a trip with a customer, press **Price Job**. A charge sheet is created for the trip and priced from the contracts at once, and opens.

7 Read the draft sheet ENTERPRISE ADD-ON

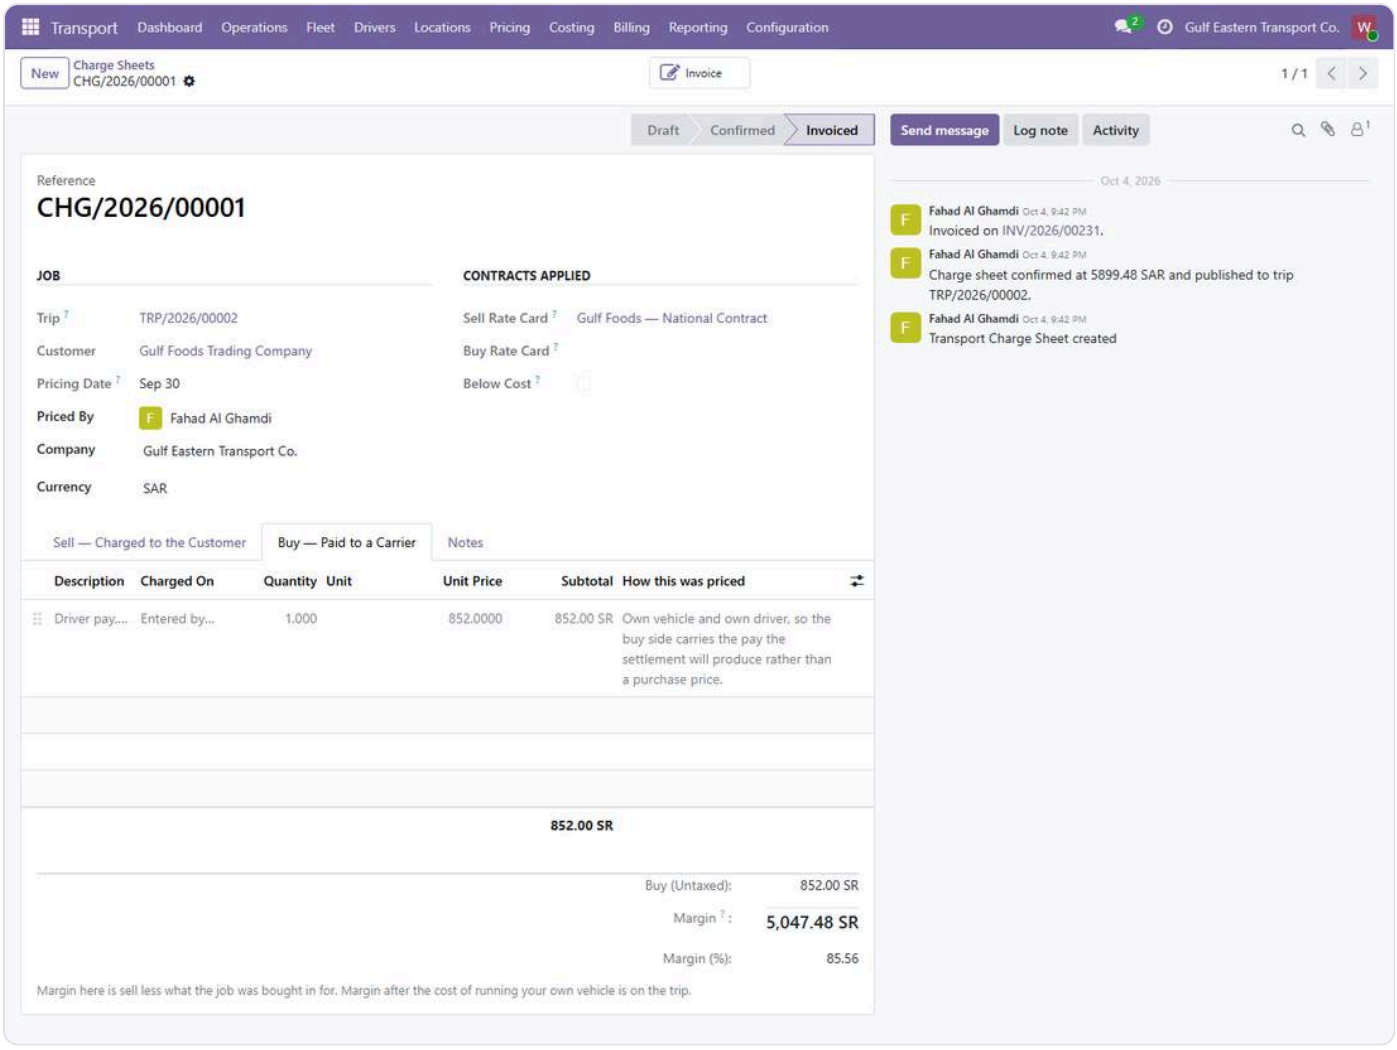

The **Sell** tab lists what the customer is charged, each line with its quantity, unit, rate, taxes and a **How this was priced** sentence naming the card, its validity, the lane, the band, the measured quantity and the rate. The foot of the sheet shows the sell, tax, total, buy, margin and margin percent, the charge per km and the vehicle's break-even per km. **Contracts Applied** names the sell and buy cards used.

> Change a line's numbers and it is marked **Overruled by Hand**; the next pricing run leaves it alone. **Reset to contract** on the line gives it back to the pricing engine.

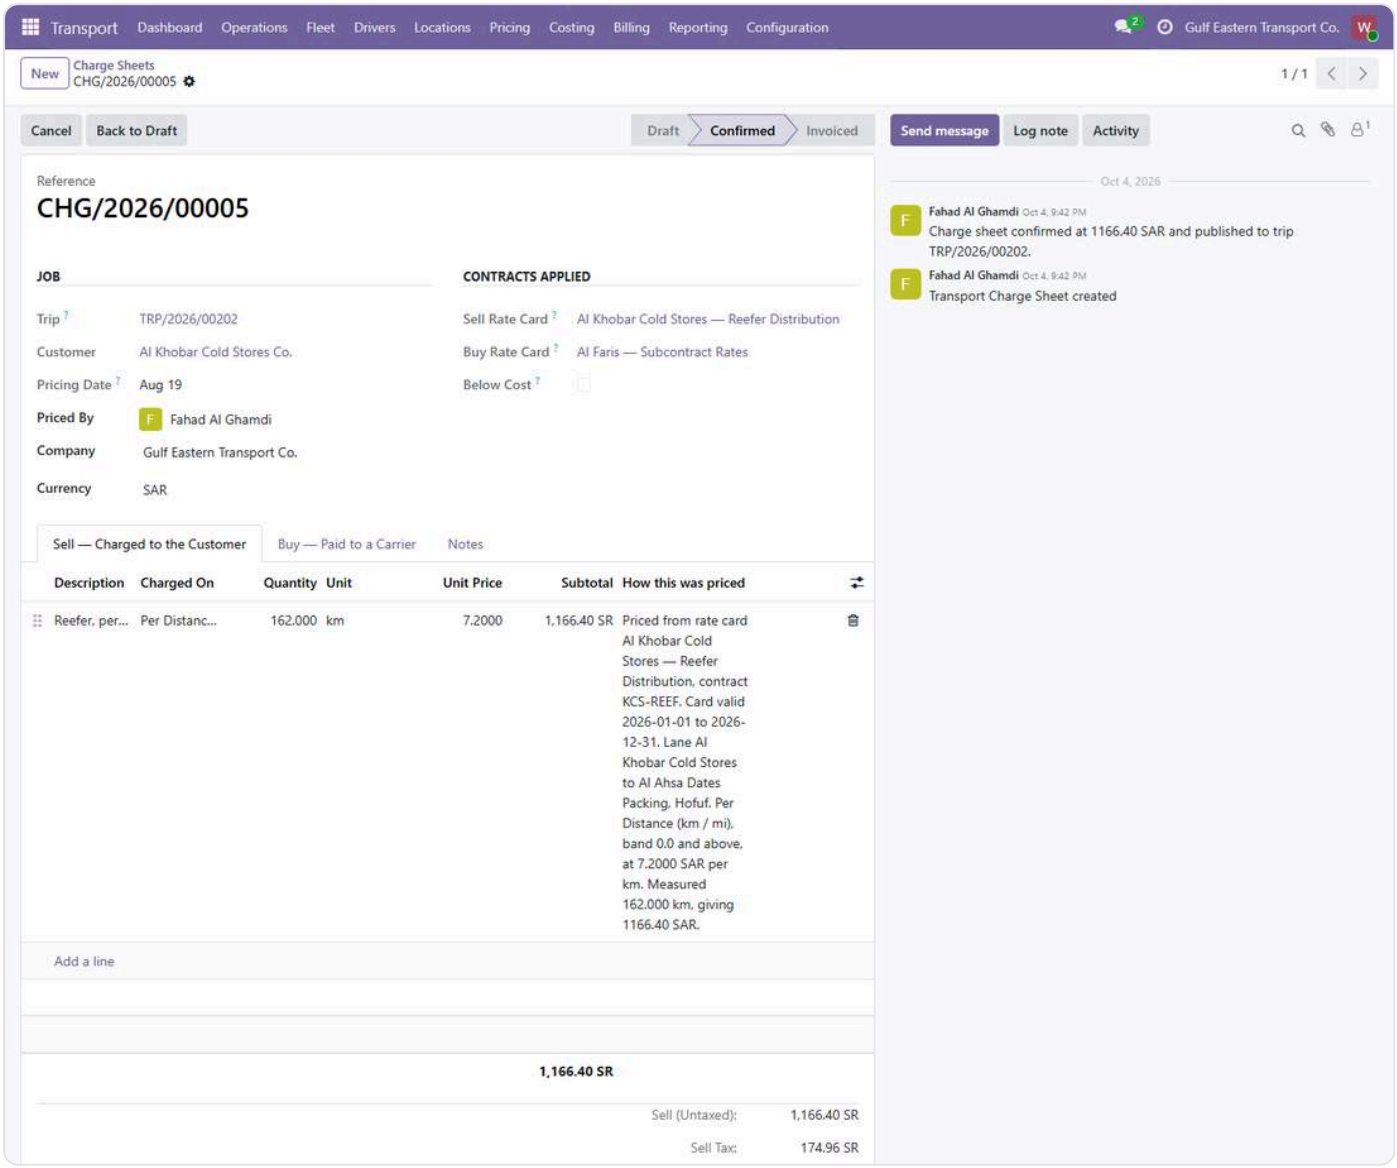

8 The buy side ENTERPRISE ADD-ON

On a subcontracted job the **Buy** tab prices what the carrier is paid from the buy card. The **Loads** tab lists the consignments billed on the sheet.

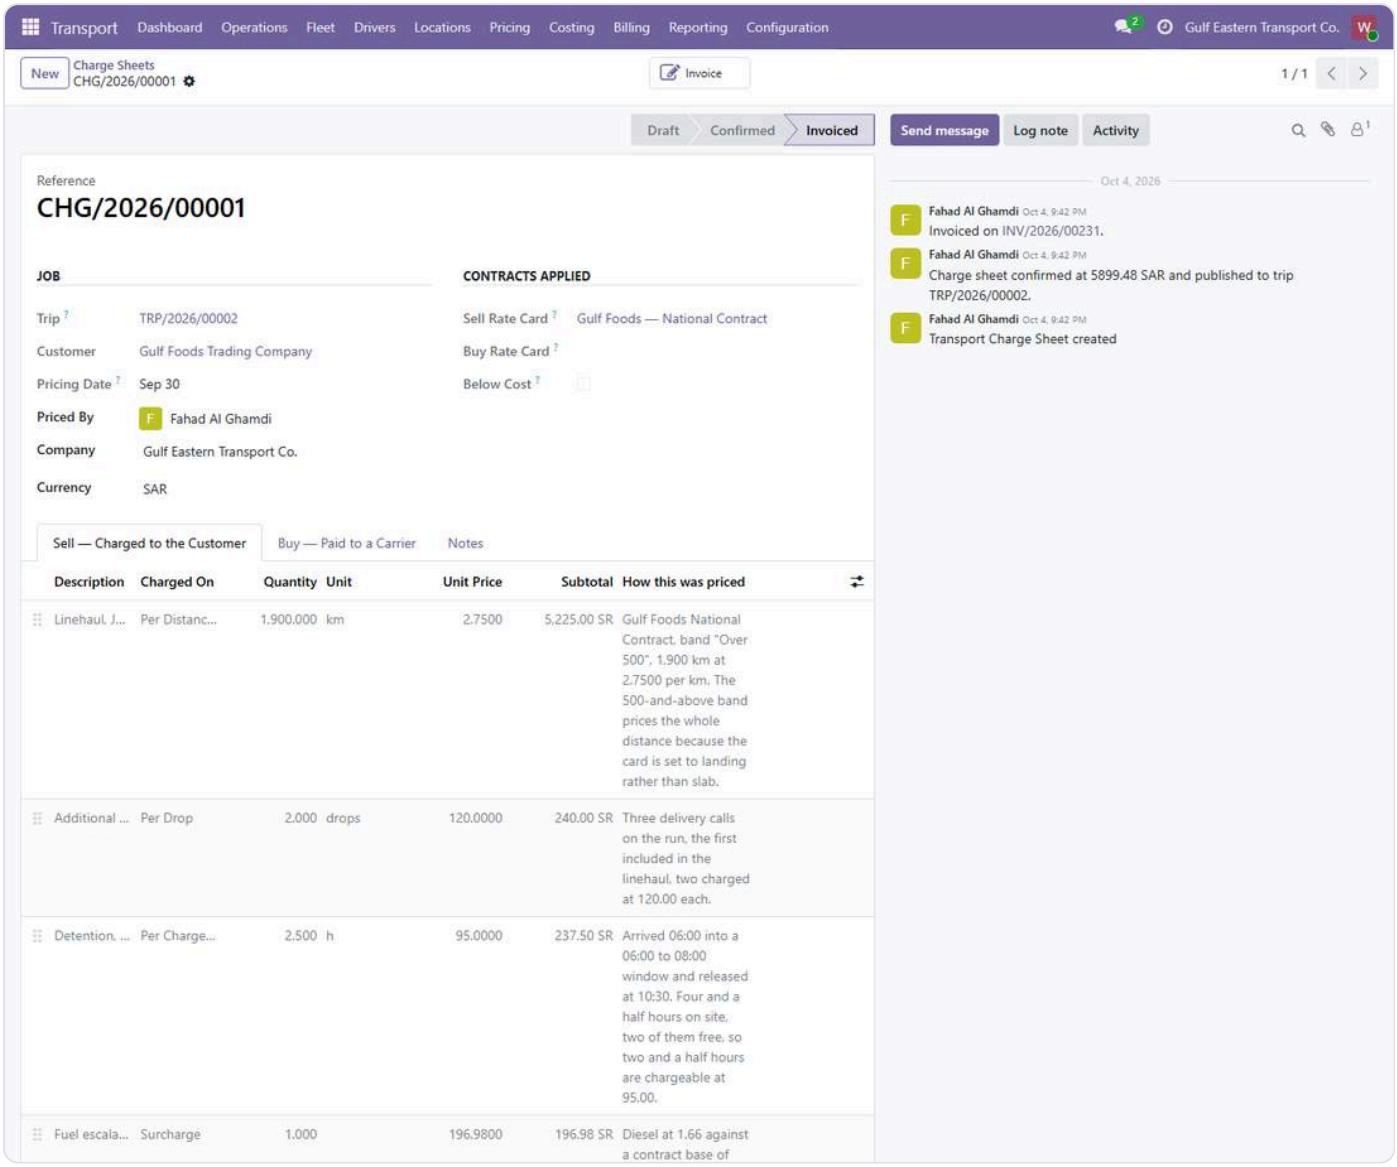

9 Confirm the price ENTERPRISE ADD-ON

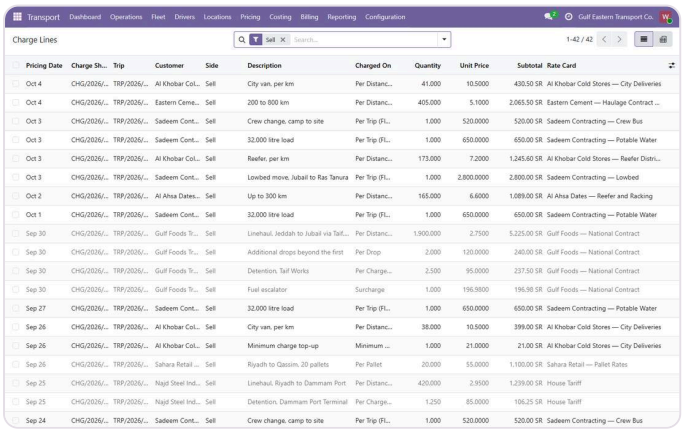

Press **Price from Contracts** to price again, then **Confirm Price**. Confirming publishes the sell amount to the trip charge, converted to company currency if the contract is in another, and summed across the sheets on a groupage trip. If the price is below what the vehicle costs to run, the warning naming both figures is written into the sheet's history. **Cancel** and **Back to Draft** take the money back off the trip.

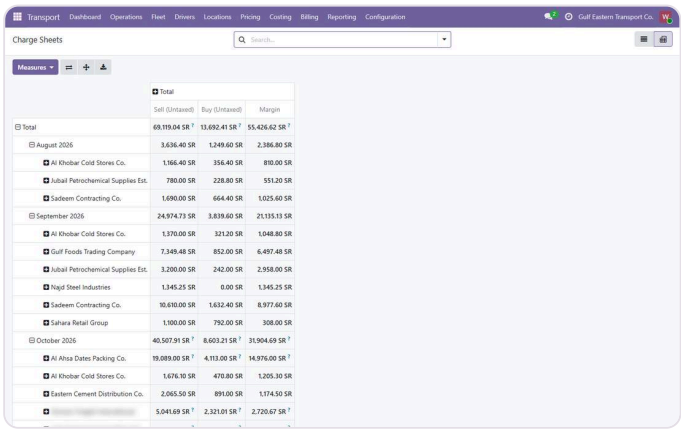

10 Once invoiced ENTERPRISE ADD-ON

An invoiced sheet is frozen: its lines cannot be changed or deleted from any screen, import or action.

ENTERPRISE ADD-ON Pricing, Charge Lines: every line for analysis.

ENTERPRISE ADD-ON Charge sheets as a pivot by customer.

PART 14 Billing: invoices, detention and claims ENTERPRISE ADD-ON

The add-on keeps one rule: a charge sheet is invoiced once. Whether you bill a trip on its own or a customer's whole month together, the same lines reach the invoice, each with its tax and account through the customer's fiscal position.

IN THIS PART YOU WILL LEARN

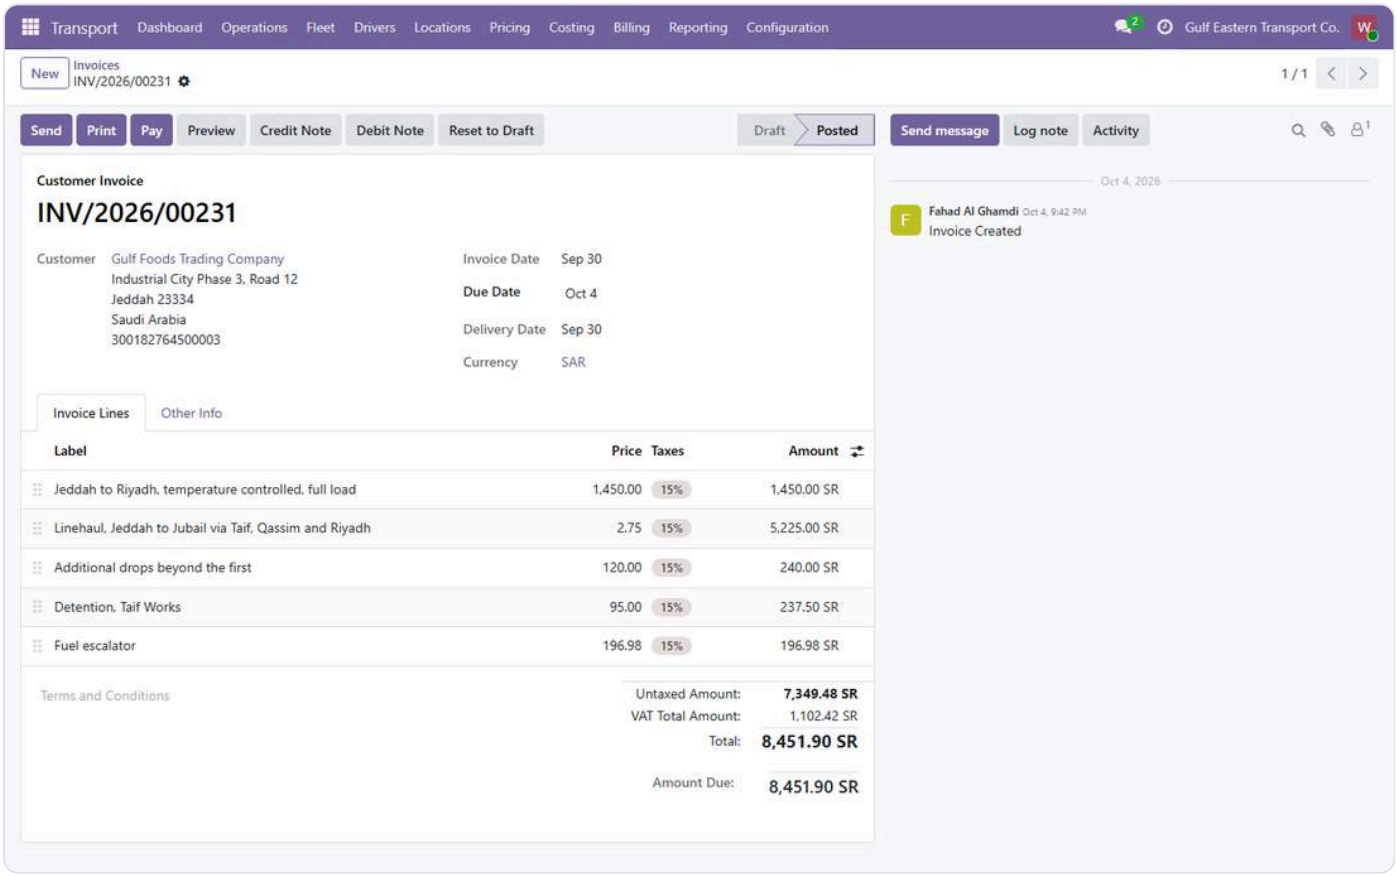

- How a trip invoices from its charge sheet
- How to bill a customer's month in one run
- How detention is worked out
- The three ways an agreed claim is settled

TRY IT YOURSELF ON THE DEMO

1. On transport-pro, open Billing, Consolidated Invoicing and look at the options (then close it)
2. Open Configuration, Detention Rules and the port rule
3. Open Billing, Claims and the damage claim

One trip at a time ENTERPRISE ADD-ON

Create Invoice on a completed trip that has a confirmed charge sheet raises the invoice from the sheet: one invoice line per sell line, with its taxes and account. A trip with no charge sheet at all invoices the base way. The trip's **Invoices** button lists every invoice it appears on, since a consolidated invoice covers many trips.

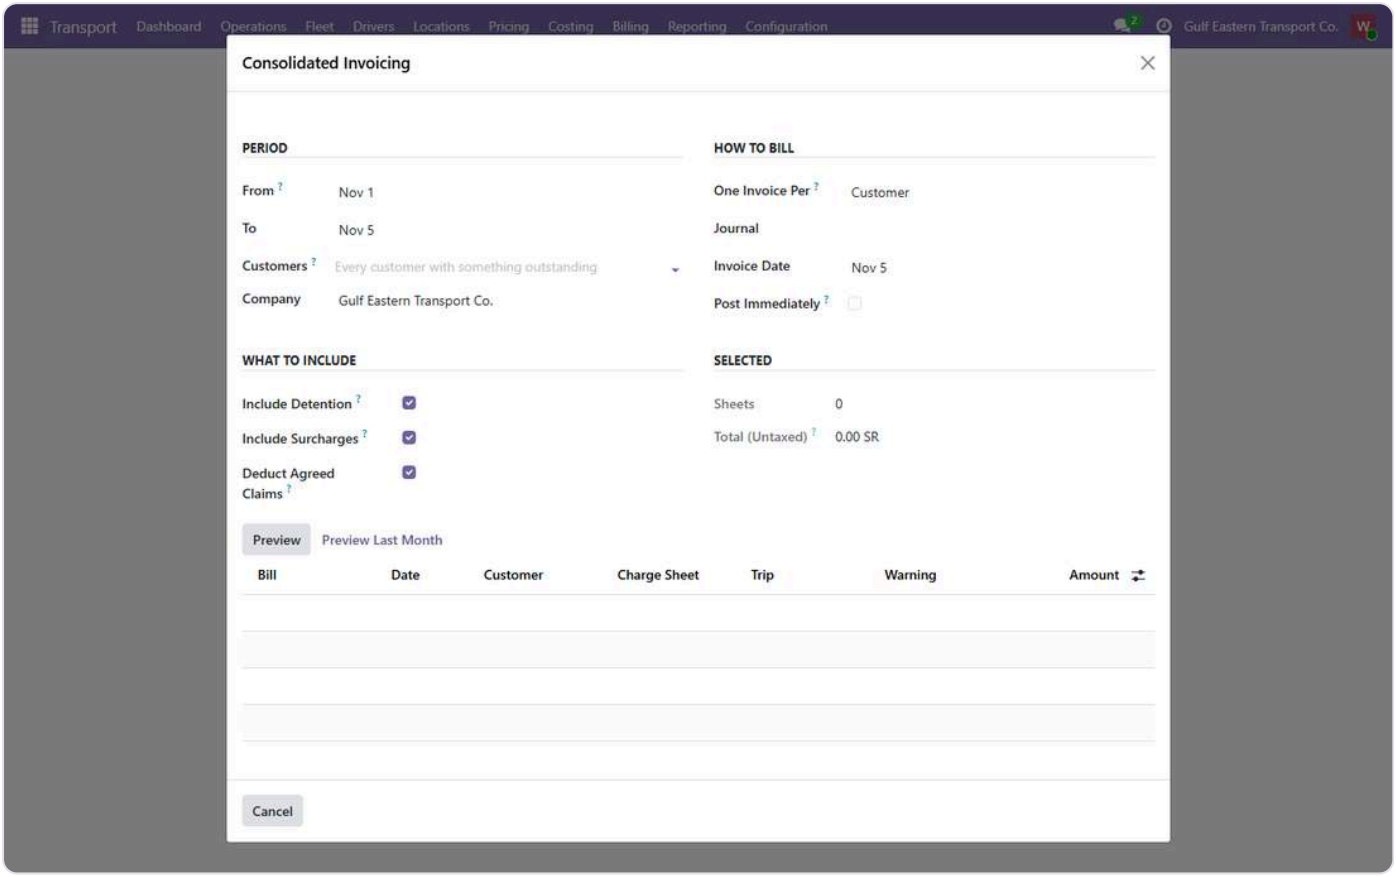

ENTERPRISE ADD-ON An invoice raised from two charge sheets for the same customer, a line per priced line.

Consolidated invoicing ENTERPRISE ADD-ON

1 Open Billing, Consolidated Invoicing ENTERPRISE ADD-ON

Set the period: sheets are collected by their pricing date. Leave Customers empty to bill everyone with something outstanding. Choose **One Invoice Per**: customer, customer and month, customer and trip, customer and load, or charge sheet. Decide whether to include detention, surcharges and agreed claim credits, the journal, the invoice date, and whether to post at once.

> Leave Post Immediately off to review the invoices in Accounting first. A posted invoice can only be corrected with a credit note.

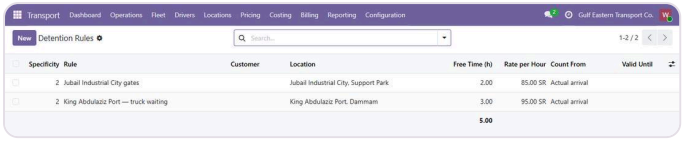

2 Preview ENTERPRISE ADD-ON

Preview (or **Preview Last Month**) lists every sheet that would be billed, its amount, and a warning against any priced below cost, priced with no contract, or on a trip already invoiced by hand. Nothing is created yet; untick anything that should wait.

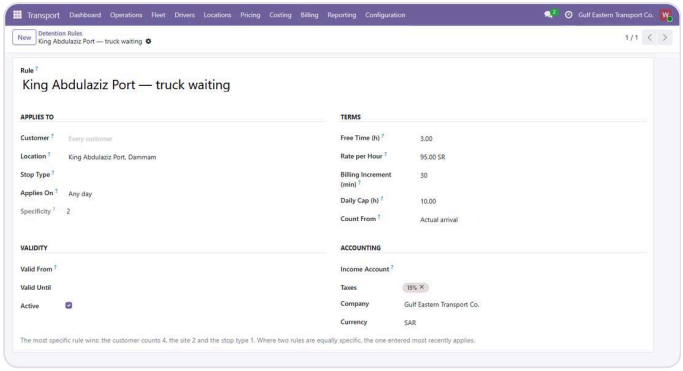

3 Create Invoices ENTERPRISE ADD-ON

Create Invoices groups what is left and raises the invoices. Running it twice bills nobody twice: an invoiced sheet carries its invoice and is not collected again.

Detention: waiting time that is billed ENTERPRISE ADD-ON

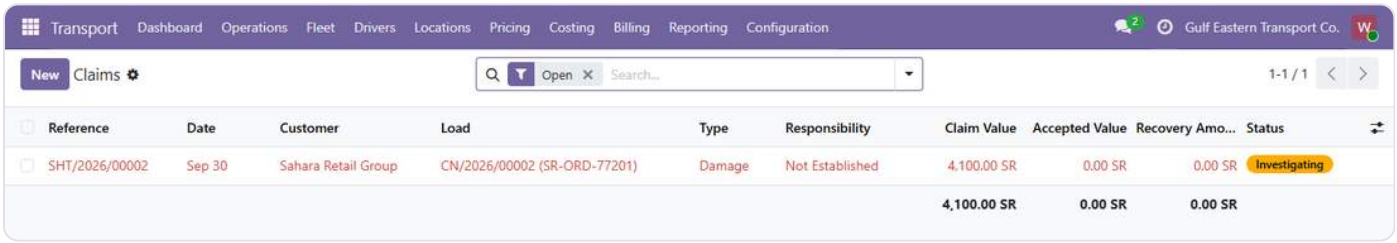

ENTERPRISE ADD-ON Configuration, Detention Rules.

ENTERPRISE ADD-ON A detention rule for the port: free time, rate, increment, cap and when the clock starts.

A rule sets the free time in hours, the rate per hour after it, the billing increment in minutes (60 bills whole hours, 1 bills to the minute), a daily cap, whether the clock counts from the actual arrival or the booked slot, which days it applies on, and validity dates. A rule can be for one customer, one site, one stop type, or all three; the most specific one applies (customer 4, site 2, stop type 1). Each stop's detention is priced from these rules, and the charge sheet bills it when the rate card has no waiting rate of its own.

Claims: shortage, damage, late delivery ENTERPRISE ADD-ON

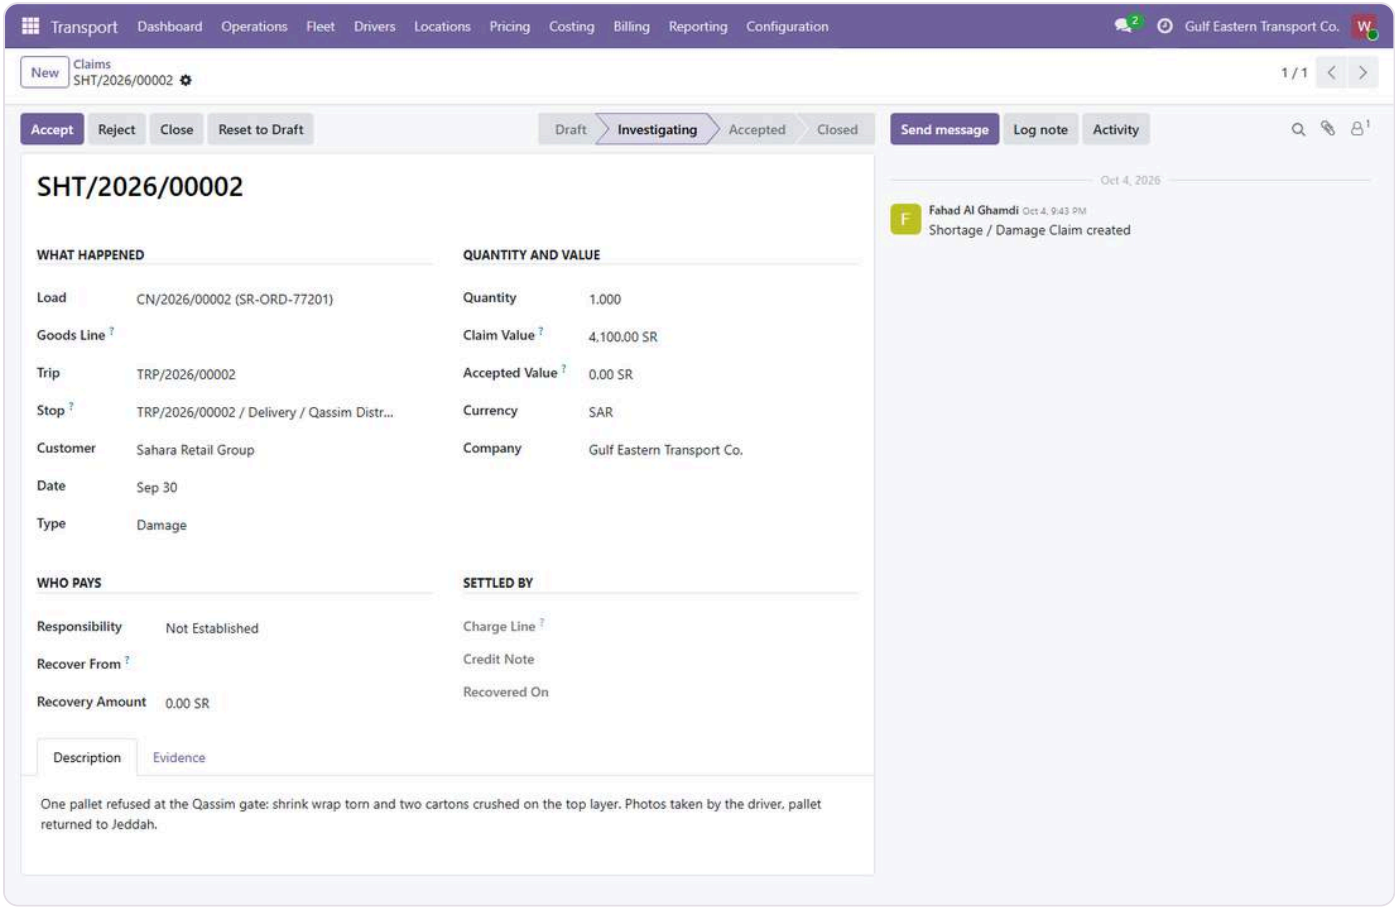

ENTERPRISE ADD-ON Billing, Claims.

4 Raise and investigate a claim ENTERPRISE ADD-ON

A claim is raised against a load, optionally one goods line and the stop where it was found. Types: shortage, damage, total loss, temperature excursion, late delivery, contamination. Record the **Claim Value** as the customer stated it, the description and a photo, then **Investigate**.

> Responsibility is a finding (driver, subcontractor, customer, shipper, third party, force majeure, not established); Recover From is a decision (driver, subcontractor, insurer, absorbed).

5 Accept, then settle it one way ENTERPRISE ADD-ON

Type the **Accepted Value** and press **Accept**. If the load's charge sheet is not invoiced yet, a negative line goes on it and the invoice goes out already net. If it is, press **Raise Credit Note** for the claimed part only. **Recover from Payee** puts the recovery on the responsible driver's or subcontractor's next draft settlement run. **Reject**, **Close** and **Reset to Draft** complete the set.

> A posted invoice is never edited by a claim.

Expenses gain a **Rechargeable** tick for costs the customer agreed to pay back, such as a ferry ticket, and a link to the load they belong to, so they can be passed on and are not passed on twice.

PART 15 True cost per kilometre ENTERPRISE ADD-ON

A cost per kilometre built only from fuel and repairs is wrong, usually by a wide margin. Depreciation, finance, insurance, road tax and licences are paid whether the truck runs or sits. The add-on holds them as standing costs and spreads them over the distance actually run.

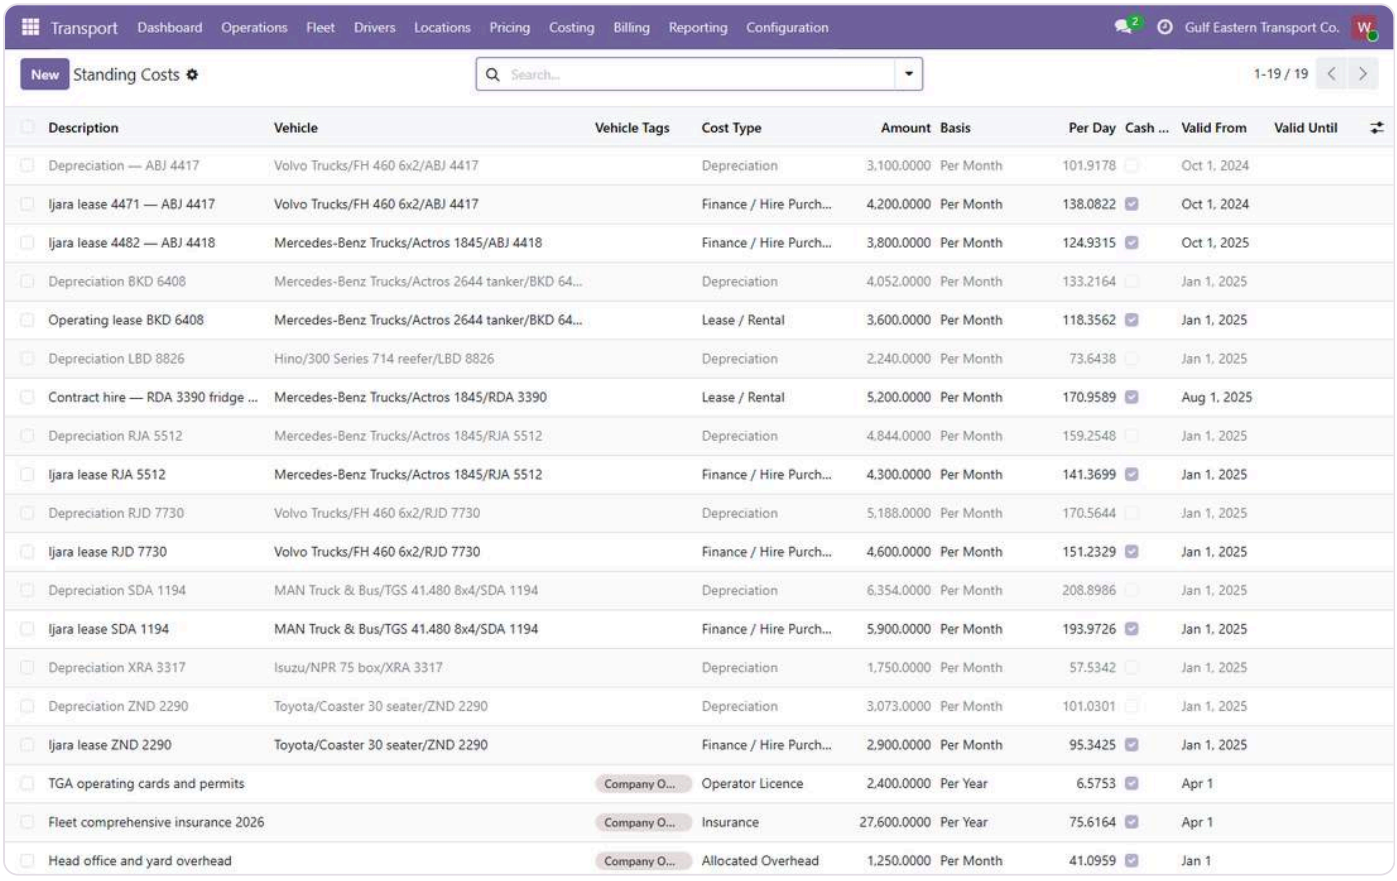

IN THIS PART YOU WILL LEARN

- What a standing cost is and how to record one
- What a cost period holds
- Cost per km against break-even
- How a trip's true margin is worked out

TRY IT YOURSELF ON THE DEMO

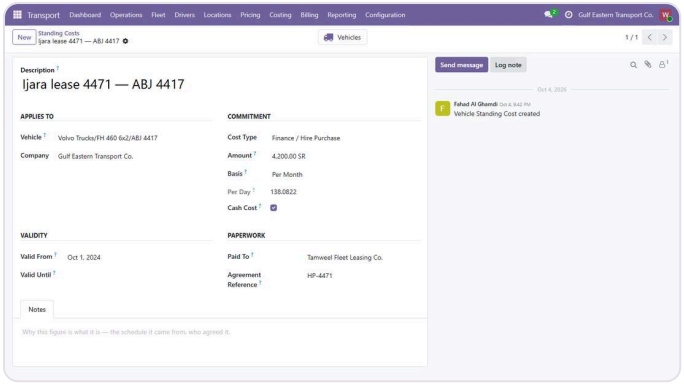

1. On transport-pro, open Costing, Standing Costs
2. Open Costing, Cost Periods and a closed period
3. Compare its cost per distance with its break-even

ENTERPRISE ADD-ON Costing, Standing Costs: leases, depreciation, fleet insurance, operating permits and overhead.

ENTERPRISE ADD-ON A lease on one vehicle.

ENTERPRISE ADD-ON Fleet insurance on every vehicle carrying a tag.

Each commitment has a type (depreciation, finance, lease, insurance, road tax, operator licence, permit, inspection, telematics, overhead, other), an amount on a basis (per day, month, year, or per distance unit for a contract hire mileage charge), validity dates, who is paid and the agreement reference. Set either one vehicle or vehicle tags. Untick **Cash Cost** for book charges such as depreciation: they count in cost per km but never leave the bank.

Cost periods ENTERPRISE ADD-ON

ENTERPRISE ADD-ON Costing, Cost Periods: one row per vehicle per month.

1 Read a closed period ENTERPRISE ADD-ON

A period holds the distance run on completed and invoiced trips, the earning distance, the revenue, running costs (expenses), fuel, driver and subcontractor pay, standing costs and the non-cash part, then the totals: total cost, cash cost, margin, **Cost / Distance**, **Break-Even / Earning Distance** and the **Target Rate** for the target margin.

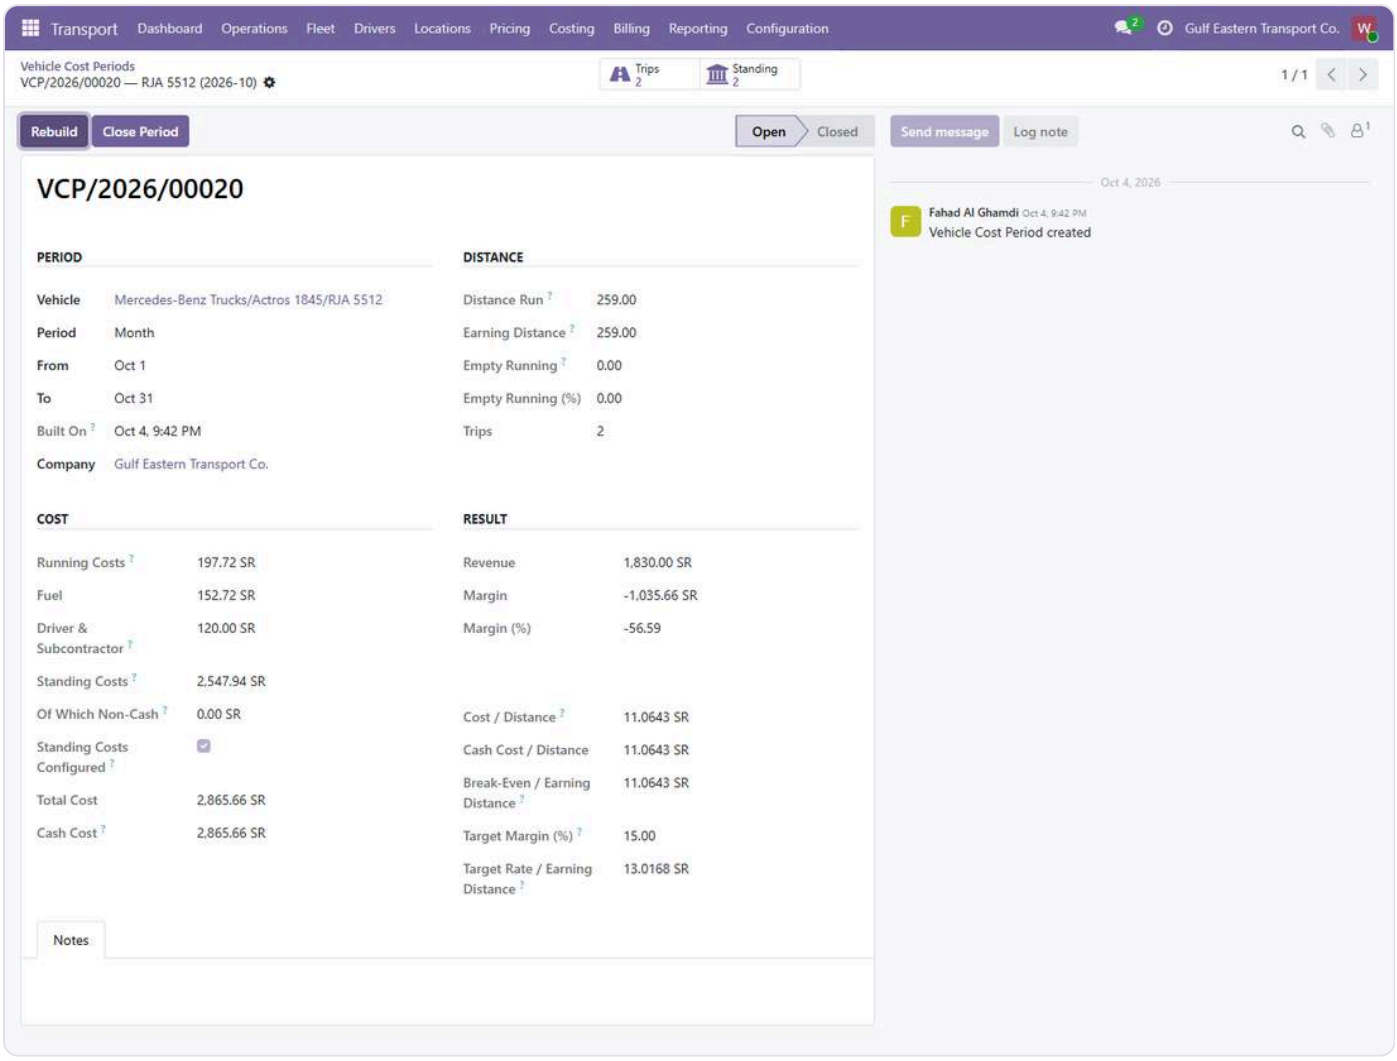

> Break-even divides the whole cost by the distance that earned money, so empty running is paid for. At a target margin of 20% the target rate is break-even divided by 0.8.

2 An open period ENTERPRISE ADD-ON

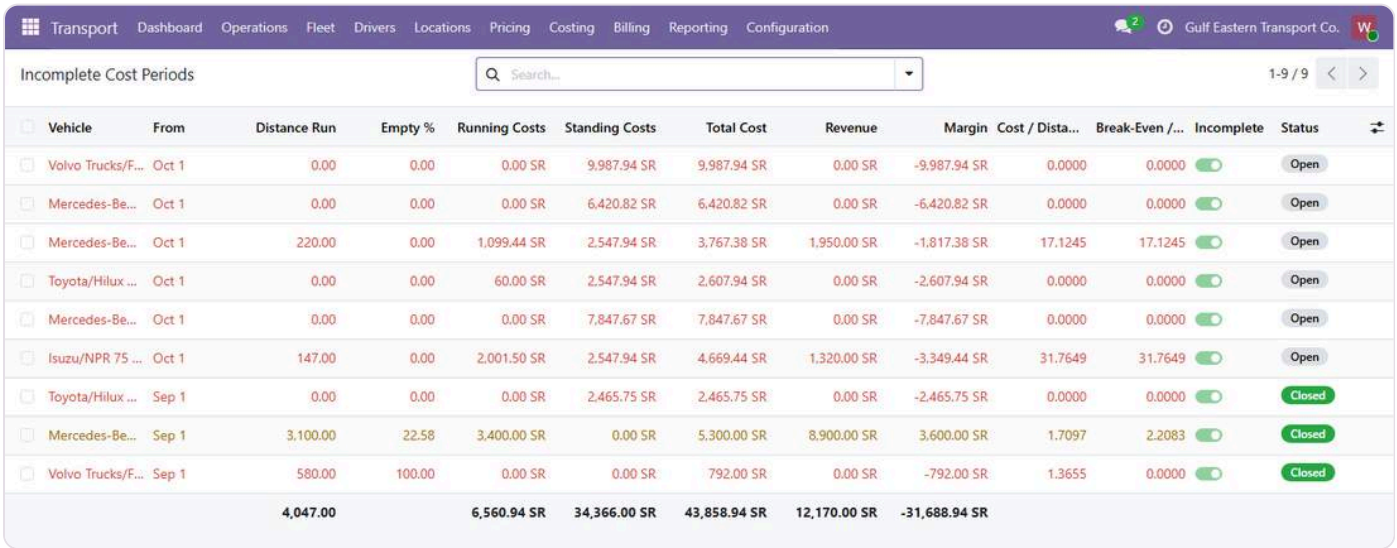

Rebuild recalculates a period from the records; **Close Period** freezes it and publishes its figures to the vehicle, where quotes are checked against them; **Reopen** takes it back.

> Only a closed period with complete figures is published. A period missing something is flagged Figures Incomplete with the reason.

3 Incomplete figures ENTERPRISE ADD-ON

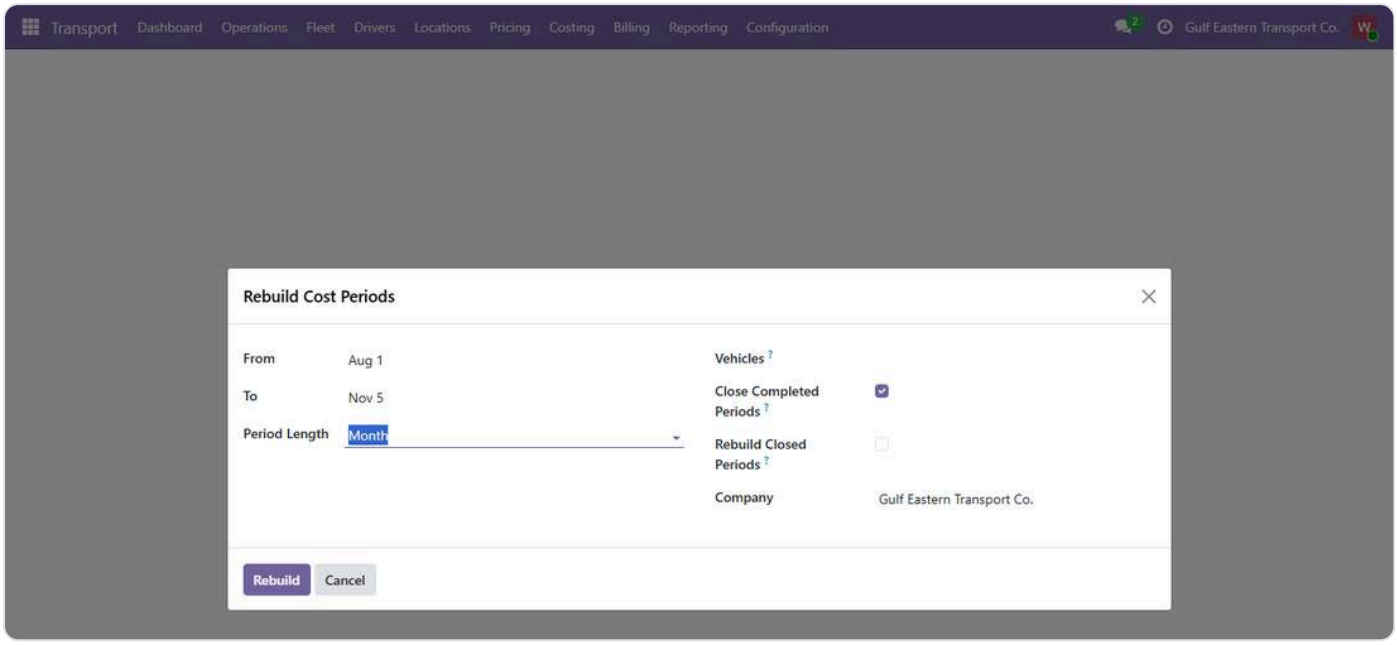

Costing, Incomplete Figures lists the periods to fix before anyone quotes from them, for example a vehicle with no standing cost recorded.

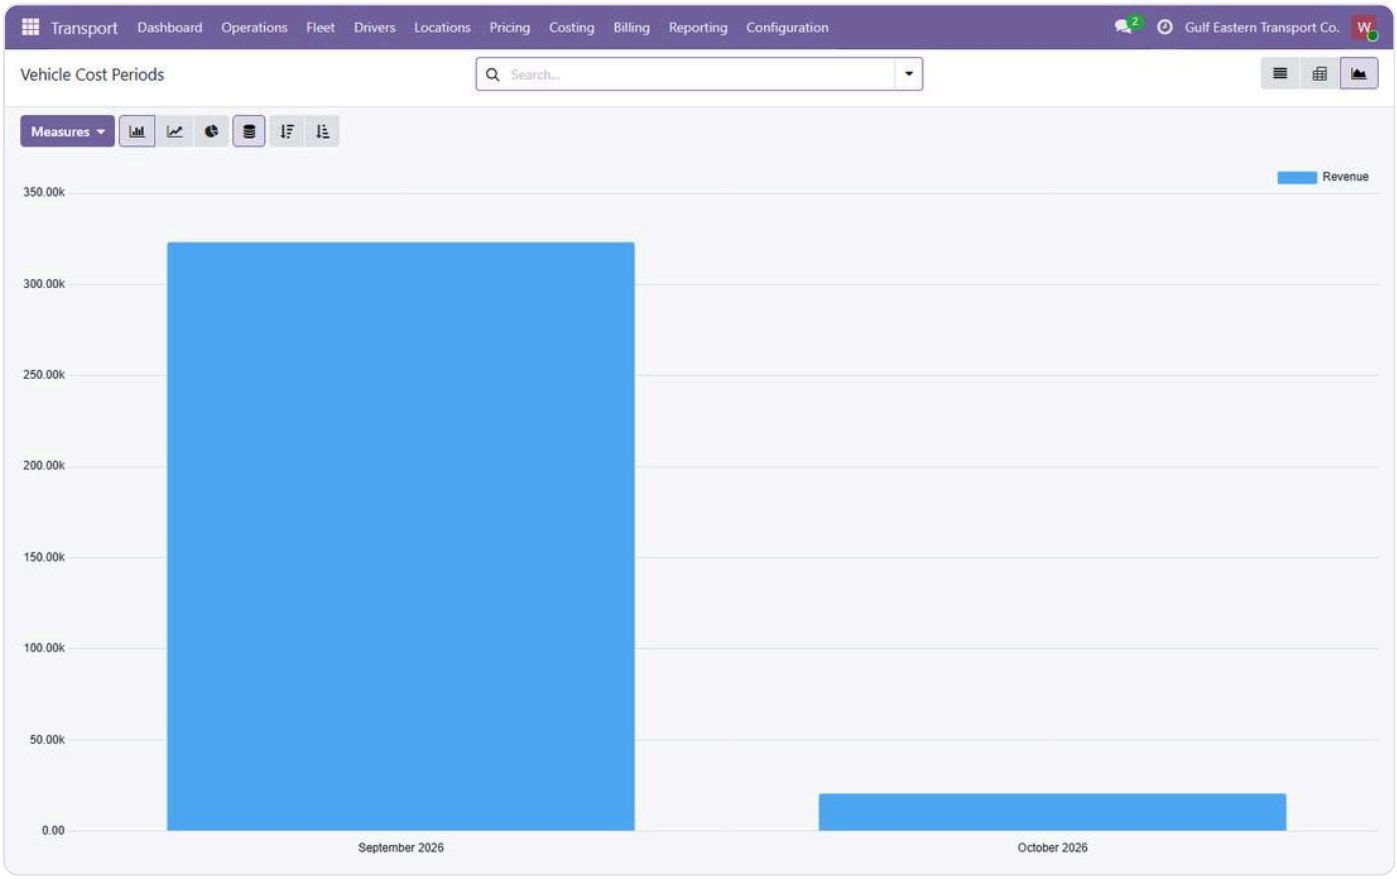

Vehicle	From	Distance Run	Empty %	Running Costs	Standing Costs	Total Cost	Revenue	Margin	Cost / Dista...	Break-Even /...	Incomplete	Status
Volvo Trucks/F...	Oct 1	0.00	0.00	0.00 SR	9,987.94 SR	9,987.94 SR	0.00 SR	-9,987.94 SR	0.0000	0.0000		Open

4 Rebuild a window ENTERPRISE ADD-ON

Costing, Rebuild Cost Periods rebuilds a date range for chosen vehicles (or all), month or quarter, with options to close completed periods and, only if you say so, to rebuild closed ones.

ENTERPRISE ADD-ON Cost periods as a graph.

True margin on the trip ENTERPRISE ADD-ON

The trip's Financials tab gains **What it really cost**: the vehicle cost per km that applied when it ran (frozen when the trip is completed), its share of the standing costs for the days it occupied the vehicle, the **True Cost** (expenses, driver allowance, settlement pay and that share), the **True Margin** and its percent. A trip whose charge does not cover it is marked below cost. See the picture in Part 11, the groupage trip, and the **True Cost** block on a vehicle in Part 17.

PART 16 Fuel, measured tank to tank ENTERPRISE ADD-ON

Fuel is the biggest running cost and the easiest to lose. The add-on keeps a fuel entry for every fill and measures consumption only between two full tanks, so a loss is detected rather than suspected.

IN THIS PART YOU WILL LEARN

- Why consumption is measured only between full tanks
- The six fuel checks
- How to work the alert queue
- How a baseline is set
- How to import a card statement safely

TRY IT YOURSELF ON THE DEMO

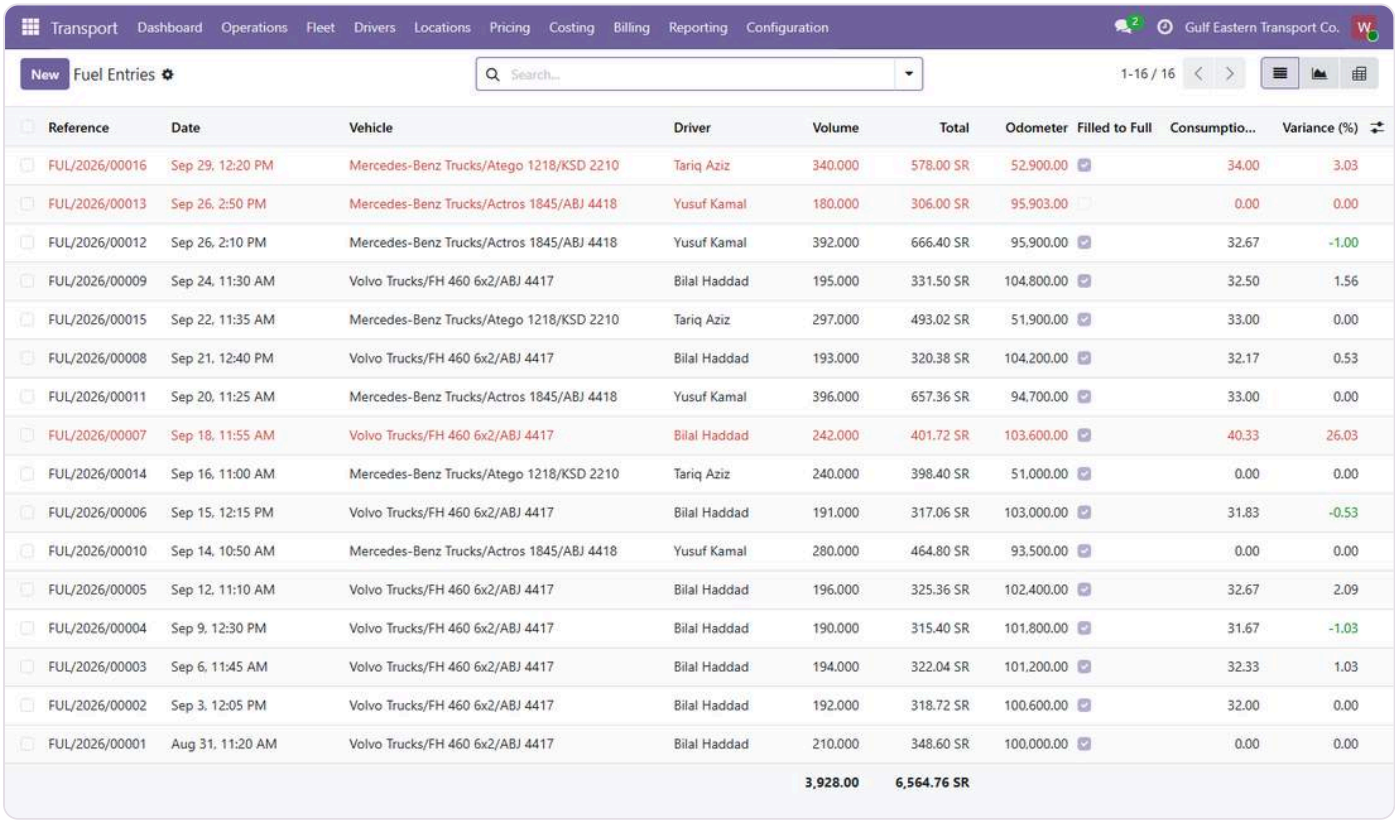

1. On transport-pro, open Fleet, Fuel Alerts
2. Open the Serious over consumption alert and its fuel entry
3. Open the entry's Measurement tab

HOW IT WORKS

The measurement rule

Consumption can only be measured between two consecutive **full** fills, because only a full tank is a known quantity. Fuel burned is every litre put in after the first full fill, up to and including the next one; distance is the odometer at the second less the odometer at the first. A partial fill adds its litres to the window but cannot close it.

So a fill **Closes a Window** only when it is a full fill, a previous full fill exists for the vehicle, and the odometer moved forward. Every consumption figure, baseline and alert is built from those fills only.

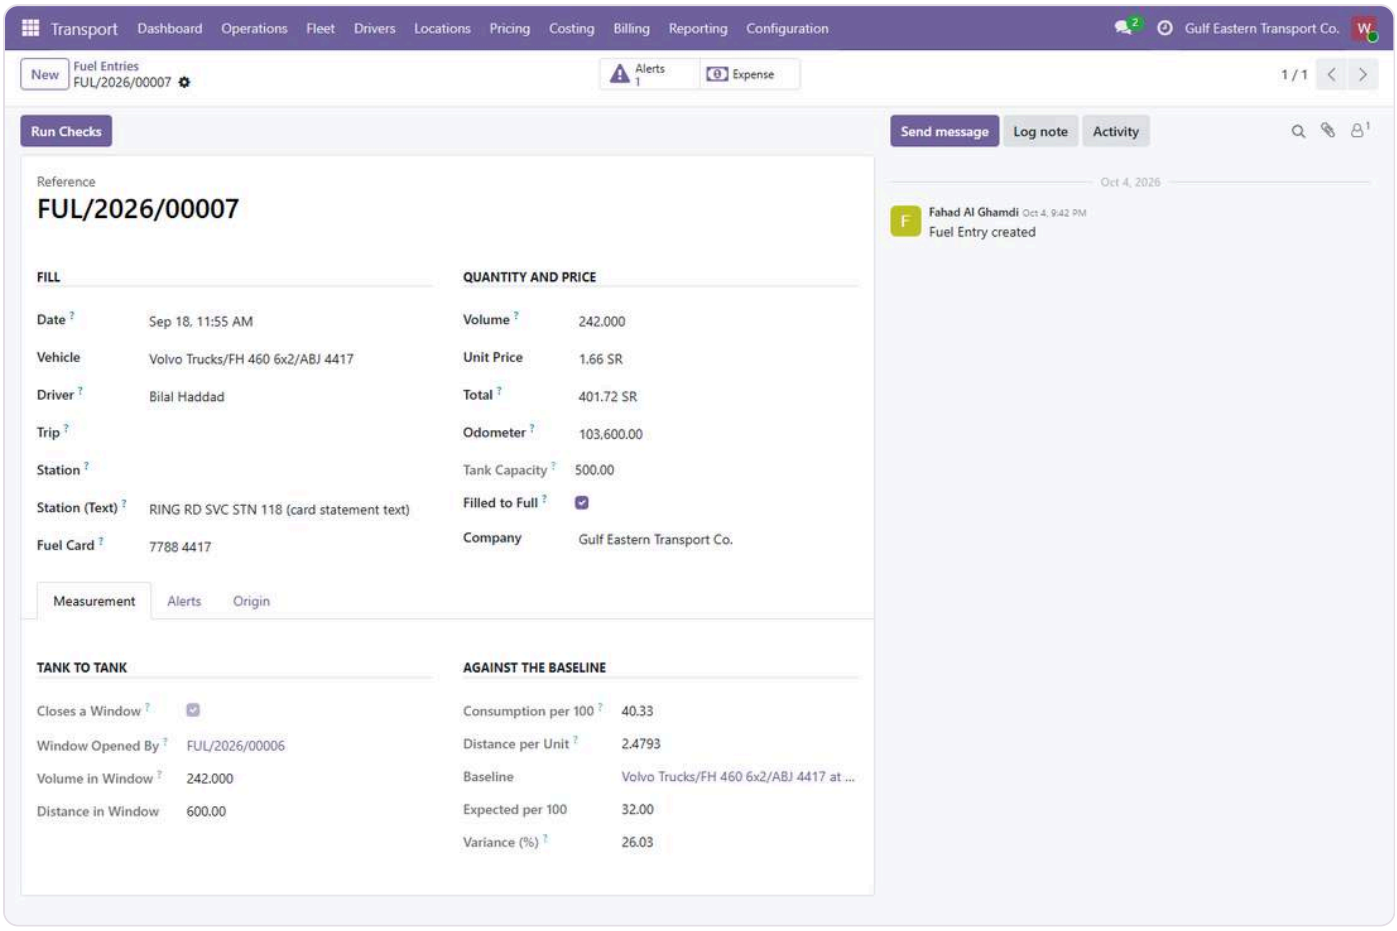

Reference	Date	Vehicle	Driver	Volume	Total	Odometer	Filled to Full	Consumptio...	Variance (%)

				3,928.00	6,564.76 SR				

ENTERPRISE ADD-ON Fleet, Fuel Entries. Each fill with volume, price, odometer, full or partial, and the measured consumption where the fill closes a window.

1 Record a fill ENTERPRISE ADD-ON

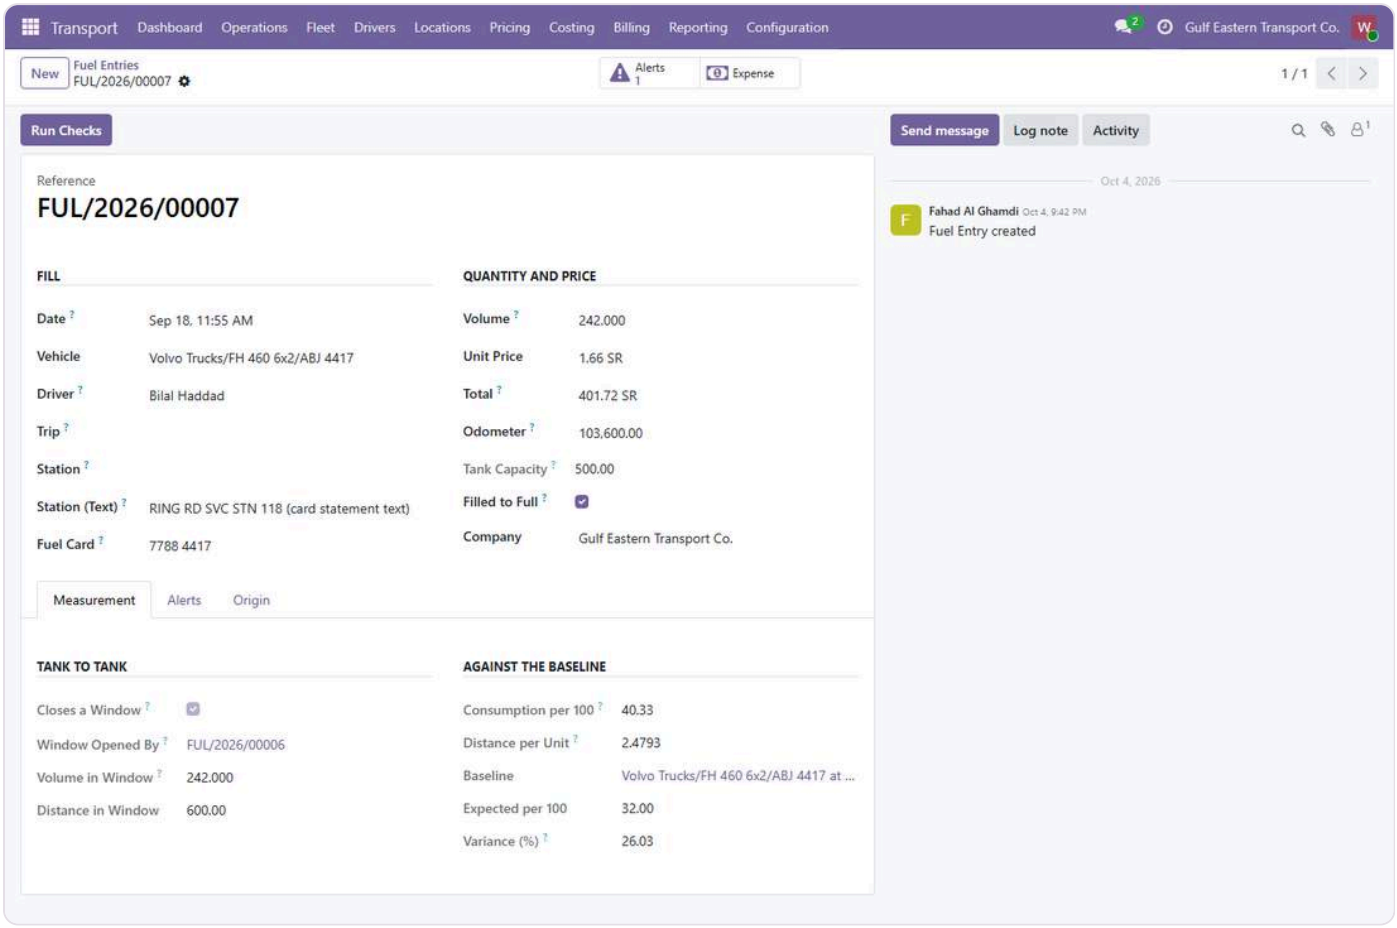

Pick the vehicle and driver, the date and time, the station (or the station name as the card statement prints it), the fuel card, the volume, unit price and odometer, and tick **Filled to Full** only when the tank was brimmed. The provider's transaction reference stops the same row being imported twice.

> A fill can be linked to a trip, but trip fuel cost is indicative: a tank rarely covers exactly one trip.

2 Read the measurement ENTERPRISE ADD-ON

The **Measurement** tab shows the fill that opened the window, the volume and distance in the window, the consumption per 100 and its inverse, the baseline it was compared with and the **Variance**. Positive is bad: more fuel than it should have taken.

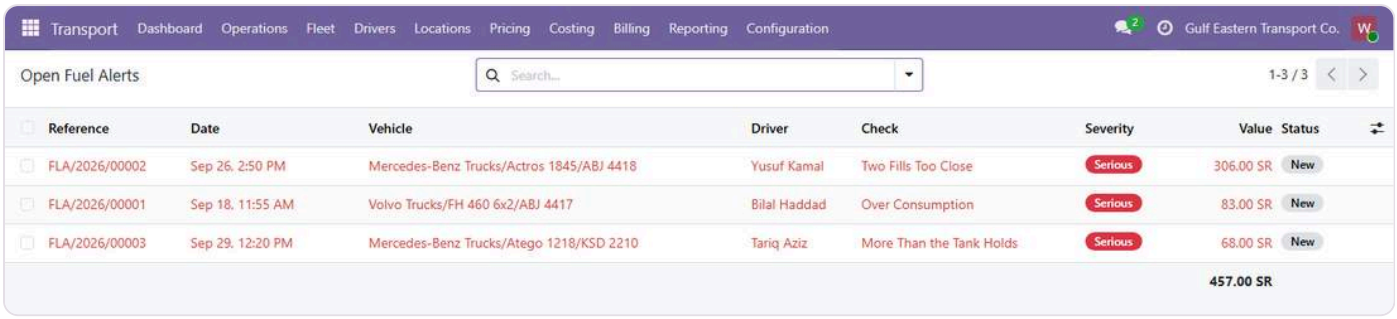

3 Run the checks and raise the expense ENTERPRISE ADD-ON

Run Checks runs the six checks on the fill and opens any alerts raised. **Create Expense** raises the base fuel expense for the fill so the vehicle and dashboard fuel totals stay right.

The six checks ENTERPRISE ADD-ON

CHECK	RAISED WHEN
Over Consumption	A measured window drank more than the vehicle baseline plus the tolerance (10% unless the baseline sets its own).
More Than the Tank Holds	A fill is bigger than the vehicle tank capacity. Zero capacity switches it off.
Odometer Went Backwards	The reading is lower than at the previous fill.
Impossible Distance	The distance since the last fill is more than the days between them allow, at the baseline Max Distance / Day.
Two Fills Too Close	A second fill on the same vehicle inside the duplicate window in hours.
Fill While Off Road	Fuel drawn on a vehicle the workshop has grounded, inside the look-back days.

The alert queue ENTERPRISE ADD-ON

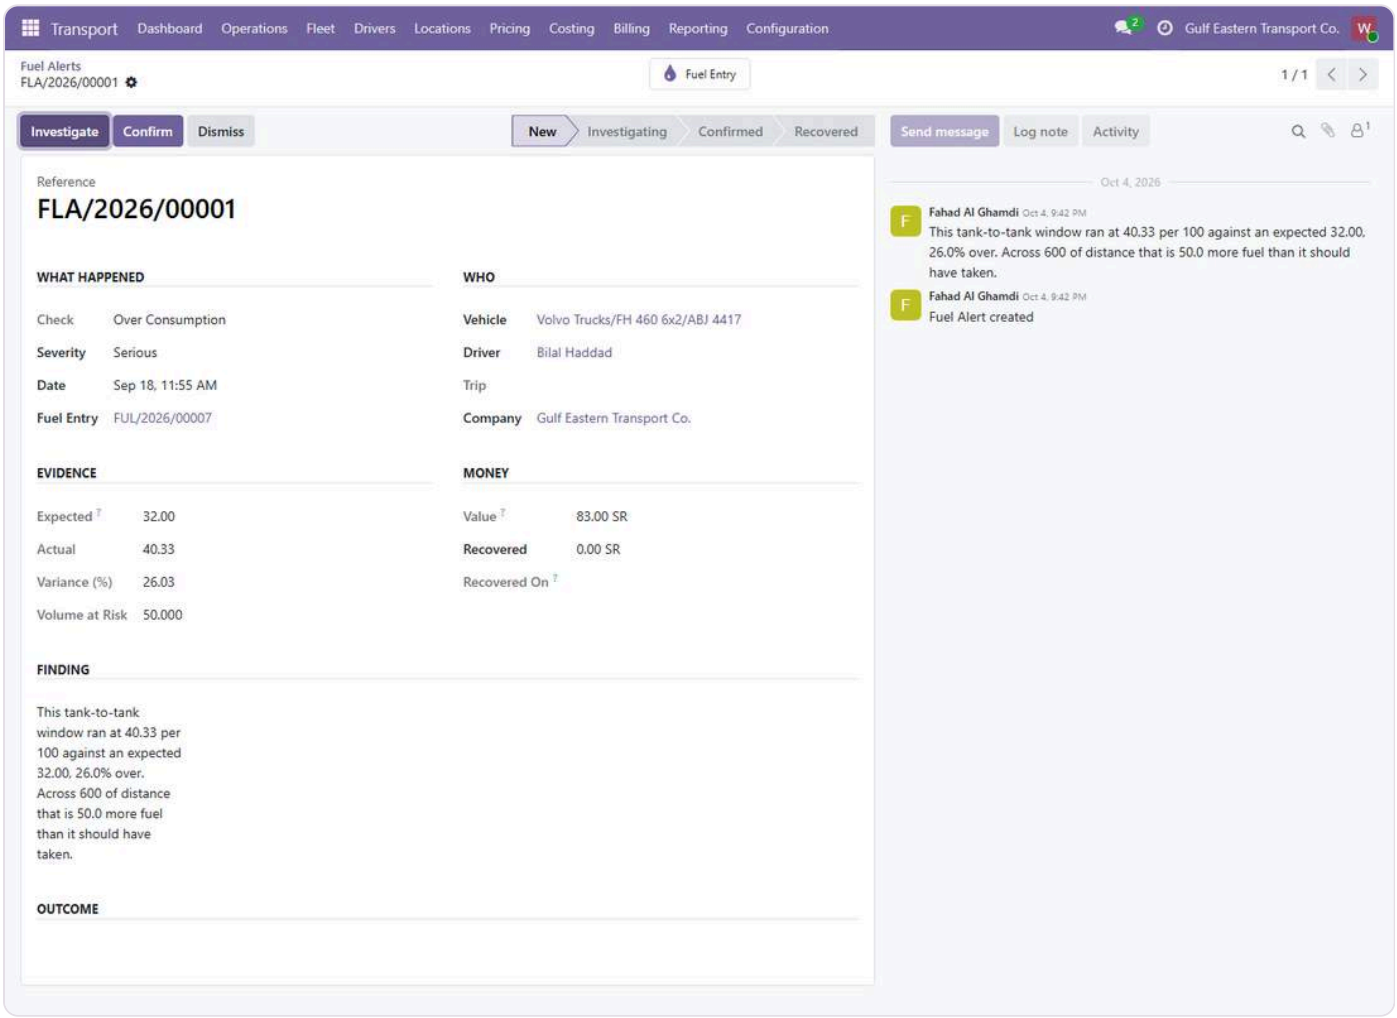

ENTERPRISE ADD-ON Fleet, Fuel Alerts: open alerts, worth the most money first.

4 Work an alert ENTERPRISE ADD-ON

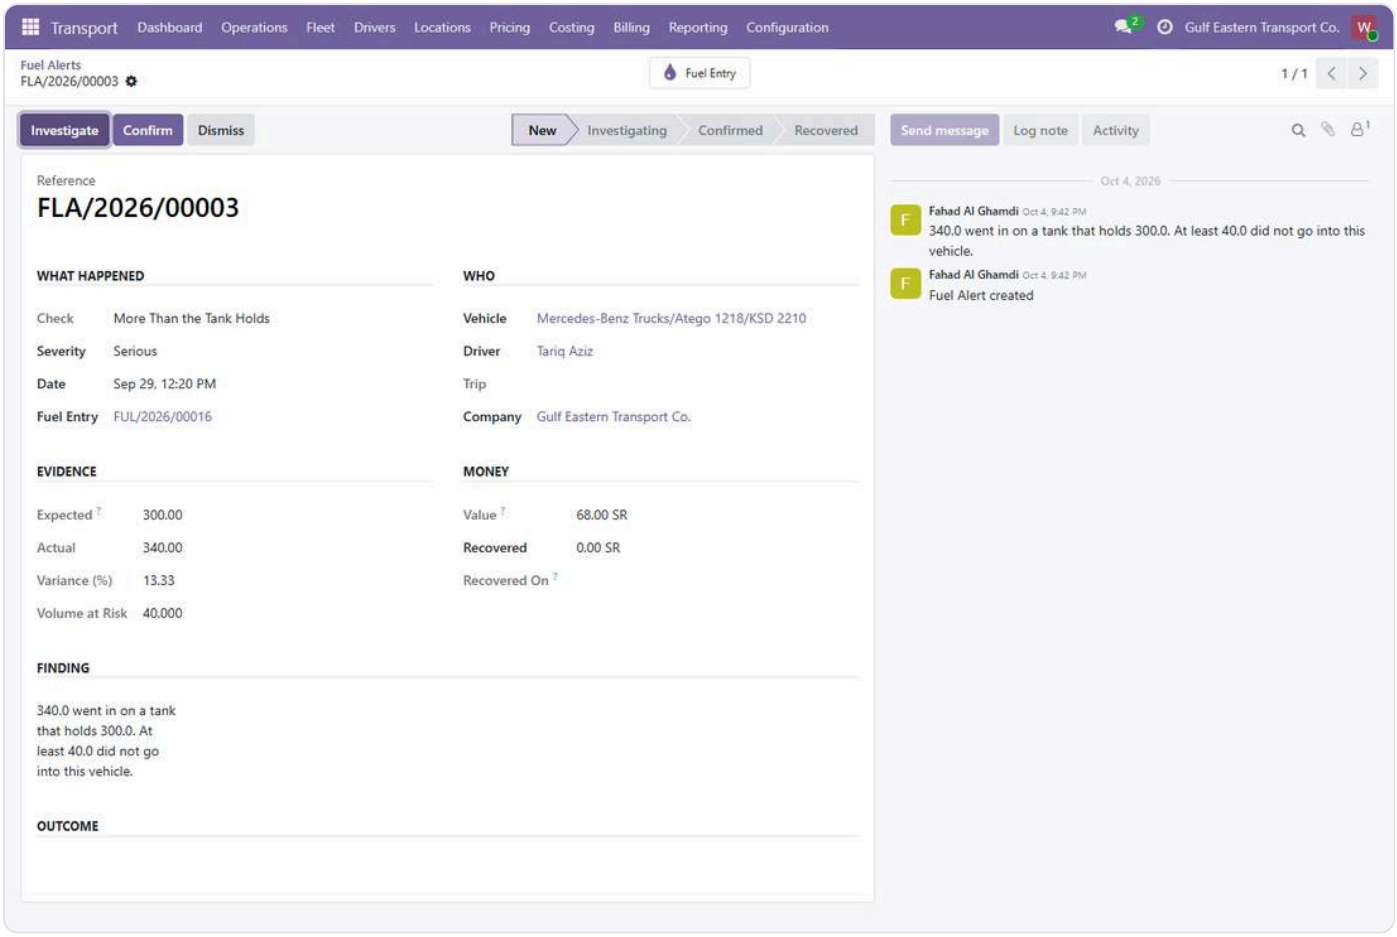

Each alert carries the check, the severity (Note, Worth a Look, Serious), what was expected and what was seen, the litres lost and the **Value**, fixed when the alert was raised. Press **Investigate**, then **Confirm** a real loss or **Dismiss** a false one, with the outcome written down. **Reopen** takes it back.

> A confirmed loss can be recovered from the driver or subcontractor on their next settlement run (Part 18).

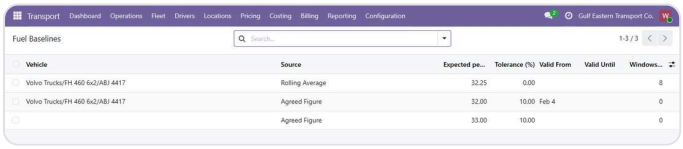

5 A tank overfill ENTERPRISE ADD-ON

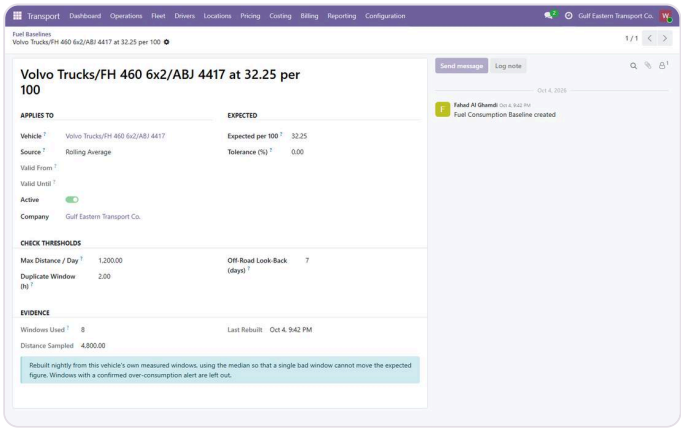

An overfill alert compares the fill with the tank capacity on the vehicle.

Fuel baselines ENTERPRISE ADD-ON

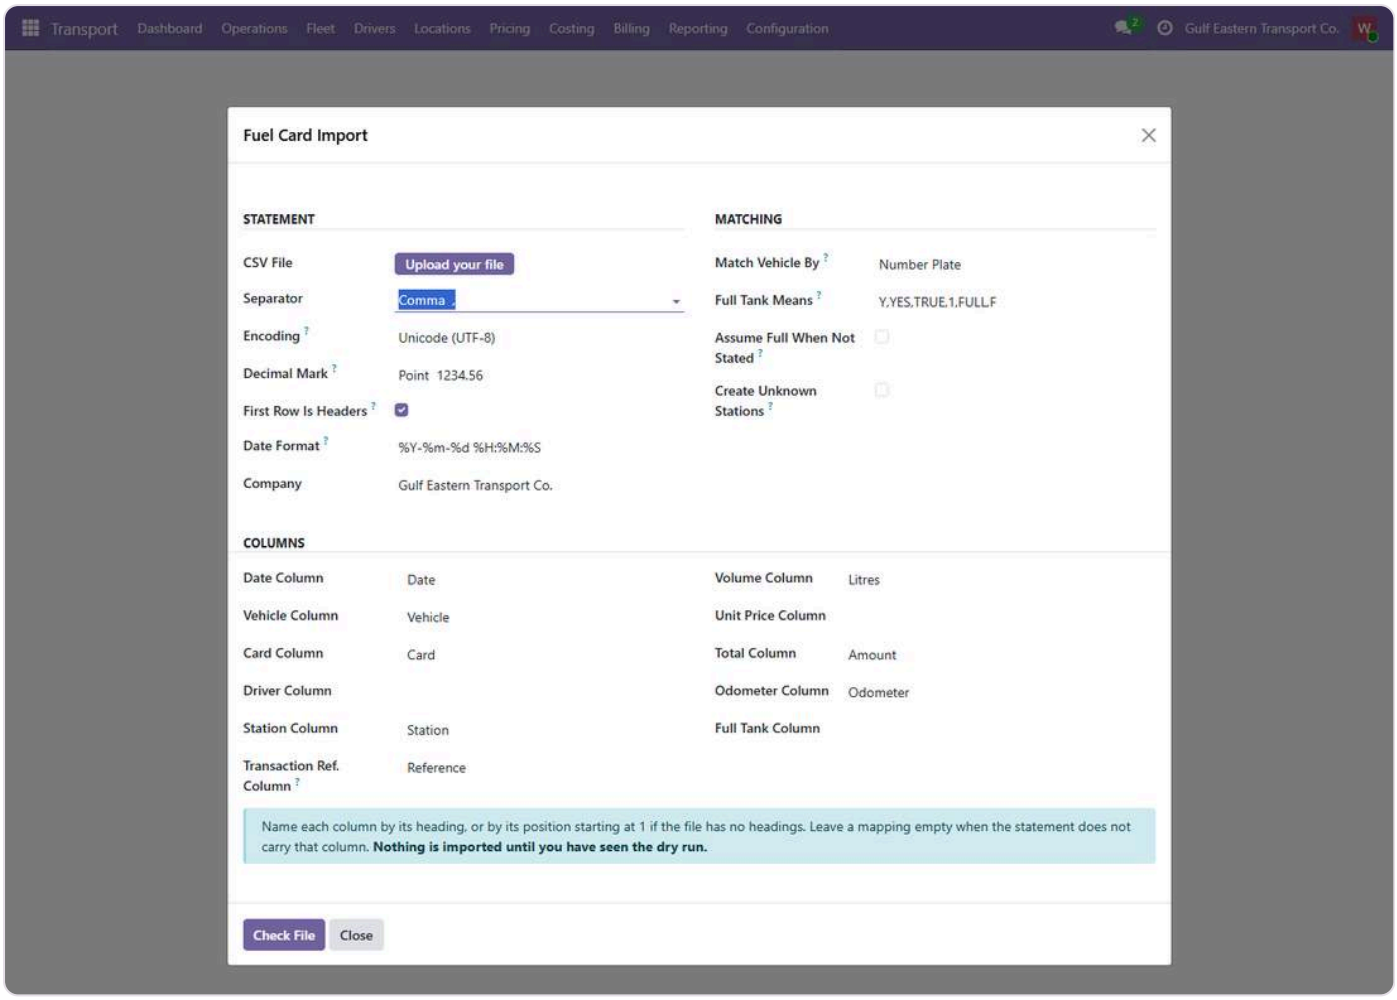

ENTERPRISE ADD-ON Configuration, Fuel Baselines.

ENTERPRISE ADD-ON A rolling baseline for one vehicle, with the windows it was built from.

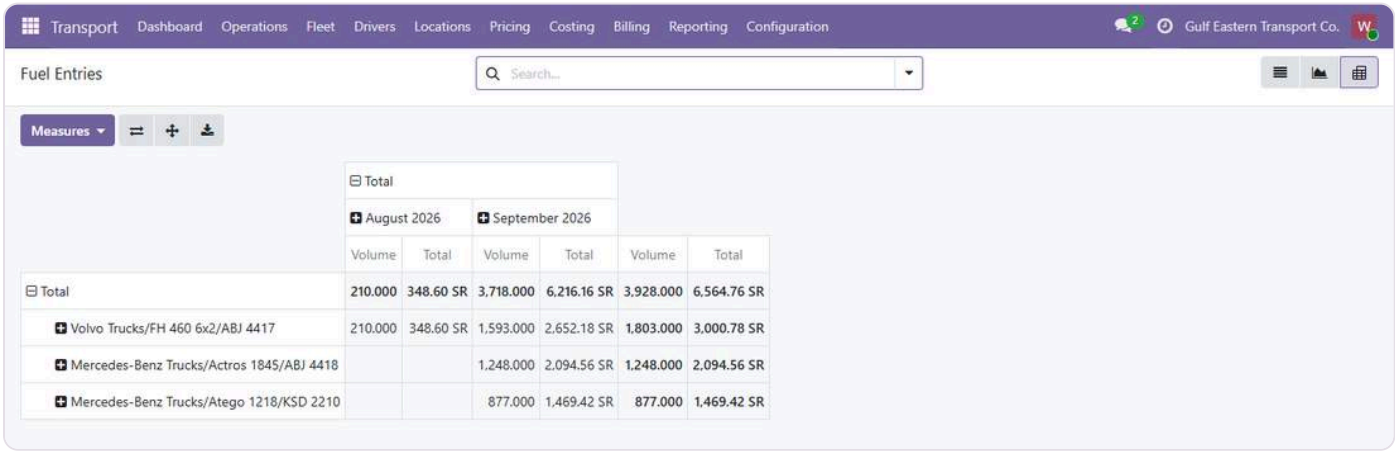

A baseline is what a vehicle is expected to burn per 100 km, dated, so an alert raised in March can still be explained in November. **Agreed Figure** is typed in; **Rolling Average** is the median of the vehicle's own measured windows over the last 90 days. A baseline with no vehicle is the company default. Each baseline also holds the tolerance, the maximum distance per day, the duplicate window and the off-road look-back.

Import a fuel card statement ENTERPRISE ADD-ON

ENTERPRISE ADD-ON Fleet, Import Fuel Card Statement. Map the columns your provider uses, then check the file before anything is written.

Upload the CSV, choose the delimiter, encoding, decimal mark and date format, and type the name or number of each column: date, vehicle, card, driver, station, volume, unit price, total, odometer, full tank and transaction reference. Choose how to match vehicles (number plate, chassis, name, or the card used before) and which values mean a full tank. **Check File** is a dry run: every row is resolved and priced and marked Will Import, Already Imported or Problem. Untick rows you do not want, then **Import**; **See What Was Imported** opens the new entries.

ENTERPRISE ADD-ON Fuel entries as a pivot.

PART 17 Vehicle state, defects, tyres and service plans ENTERPRISE ADD-ON

The add-on gives every vehicle an operational state that dispatch can rely on, and three registers behind it: faults reported, tyres fitted, and preventive services due.

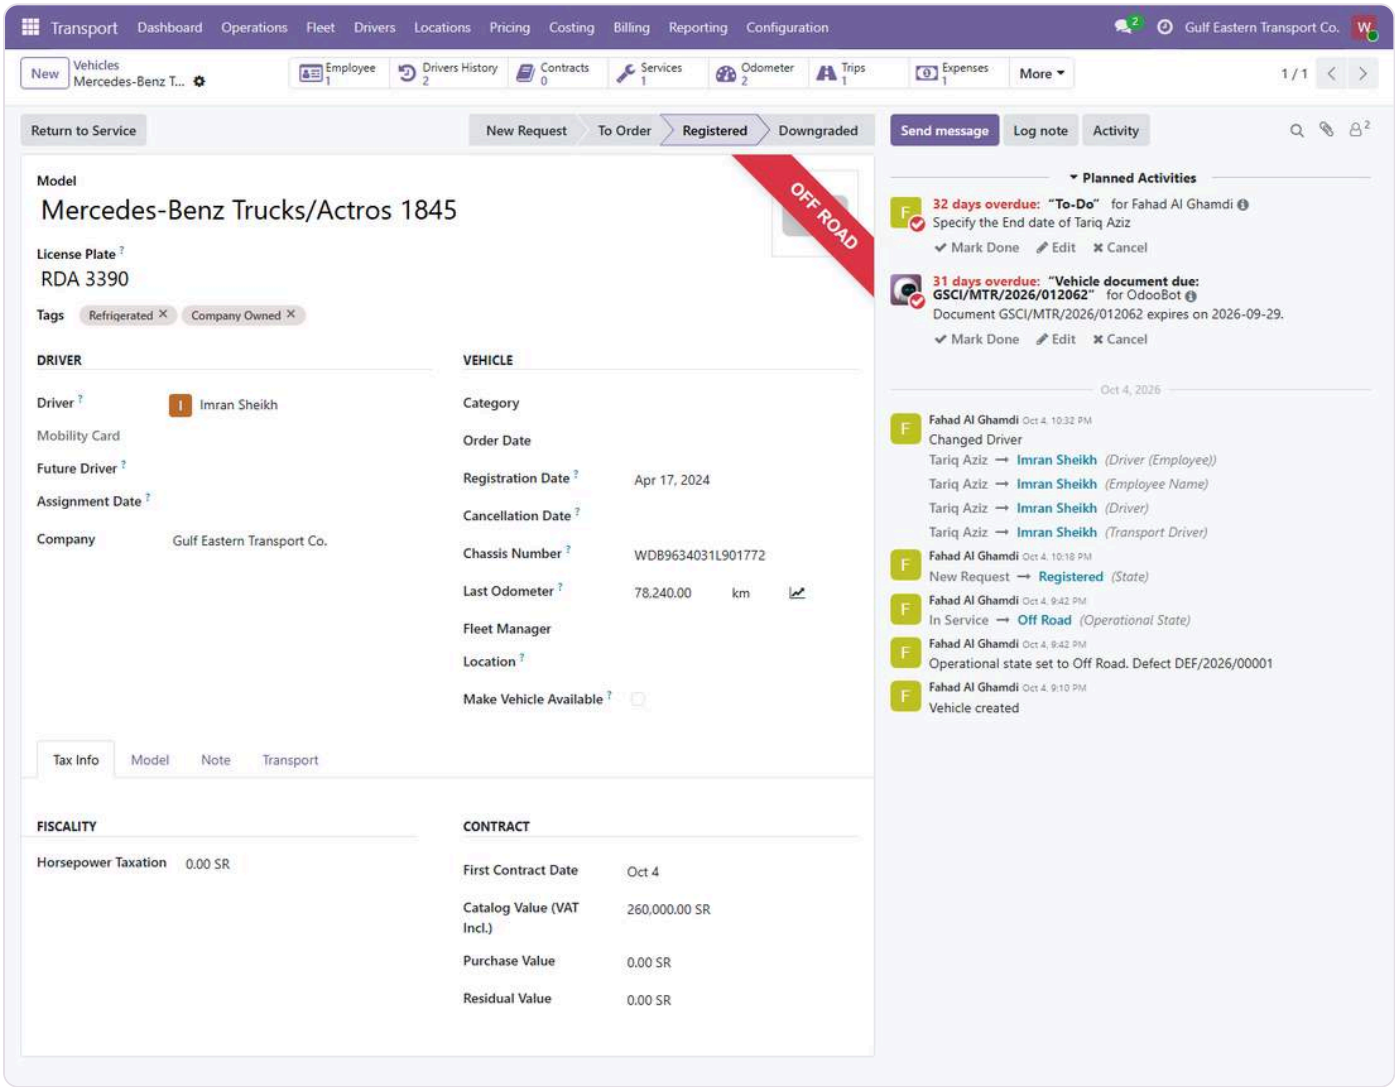

IN THIS PART YOU WILL LEARN

- The three operational states and who may change them
- How a defect grounds a vehicle
- How a tyre's cost per km is built
- How a service plan works out when a service is due

TRY IT YOURSELF ON THE DEMO

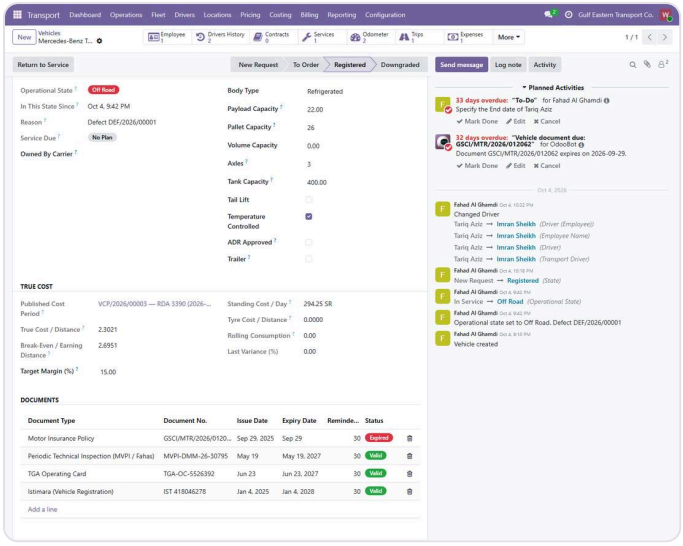

1. On transport-pro, open Fleet, Vehicles, then RDA 3390
2. Open its Open Defects button
3. Open Fleet, Tyres, then TYR/2026/00001 and read its events

Operational state ENTERPRISE ADD-ON

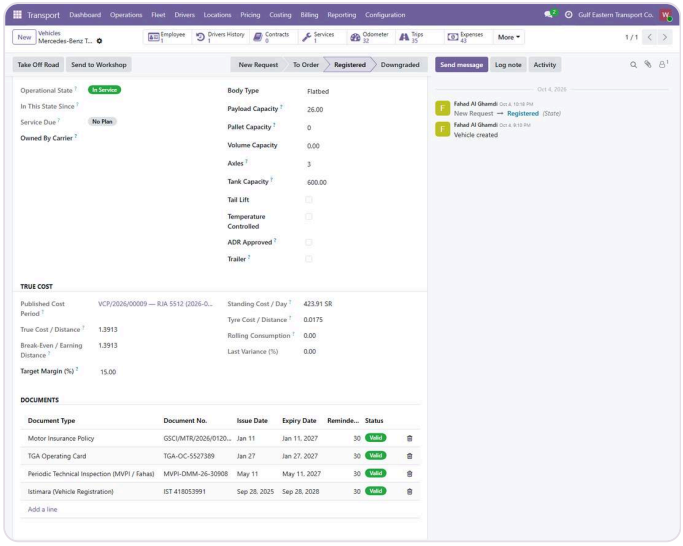

ENTERPRISE ADD-ON A vehicle off the road: the ribbon, the state, since when, the reason, and the buttons to move it.

Every vehicle is **In Service**, **In Workshop** or **Off Road**, stamped with the time it entered the state and a reason. **Take Off Road** first shows the unfinished trips booked on the vehicle and asks again (**Take It Off Road** or **Leave It On The Road**). **Send to Workshop** and **Return to Service** move it back; Return to Service is refused while an immobilising defect is open on it. Smart buttons open its open defects, tyres, fuel alerts, cost periods and service plans.

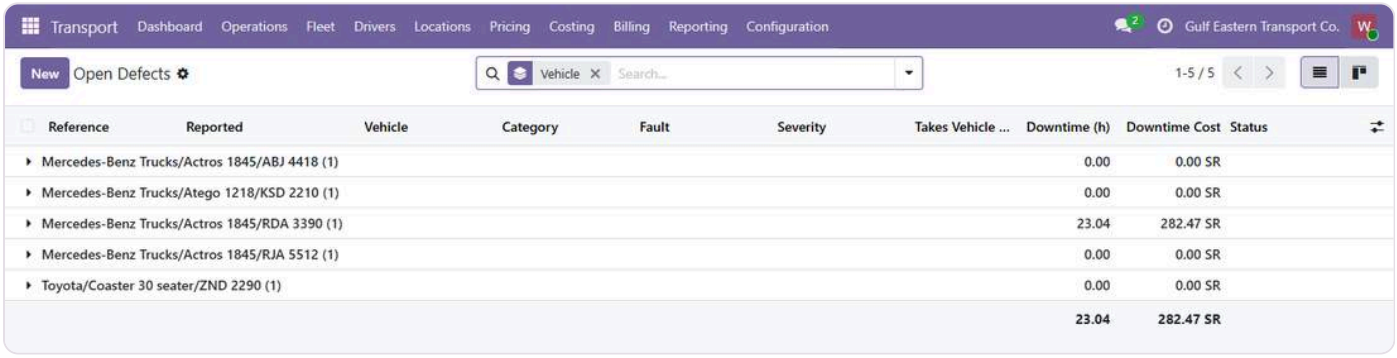

ENTERPRISE ADD-ON Capacity, on the Transport tab: body type, payload, pallets, volume, axles, tank, tail lift, temperature, ADR, trailer.

ENTERPRISE ADD-ON True Cost, on the Transport tab: published cost period, true cost per km, break-even, target margin, standing cost per day.

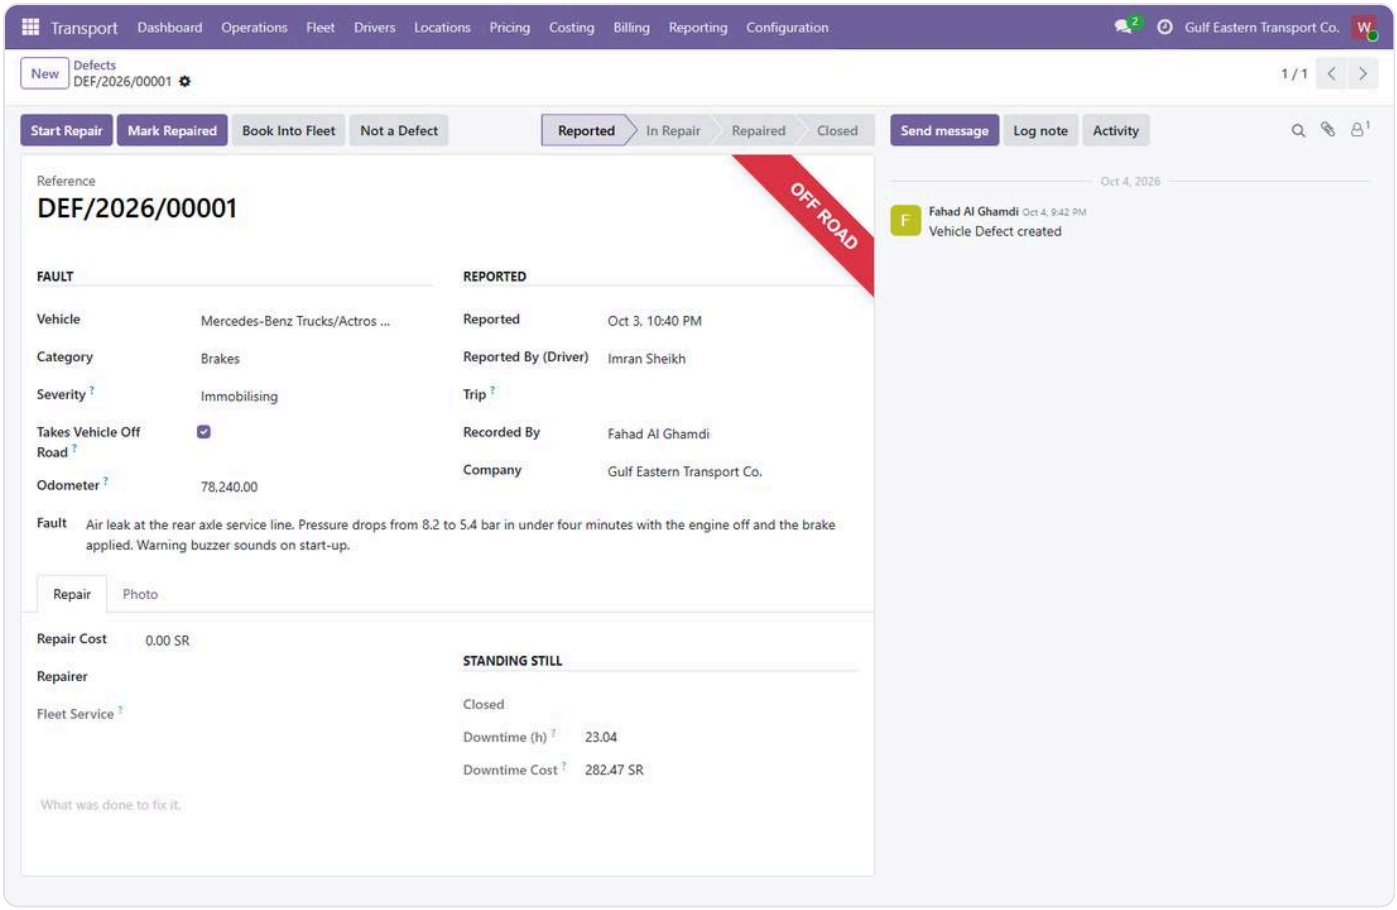

Defects **ENTERPRISE ADD-ON**

ENTERPRISE ADD-ON Fleet, Open Defects.

1 Report a fault ENTERPRISE ADD-ON

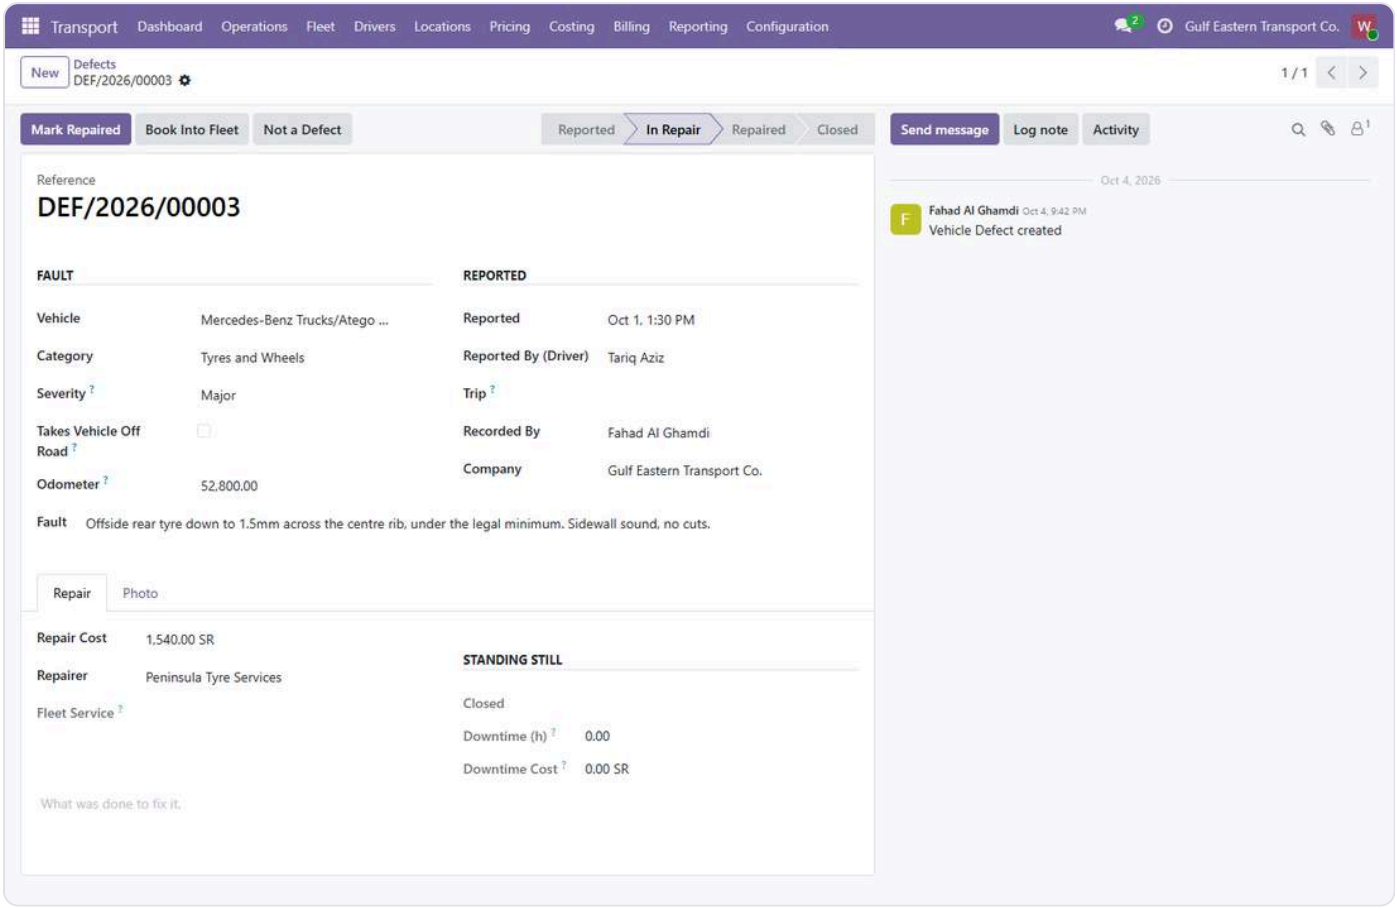

Pick the vehicle, the trip and the driver, the odometer, a category (brakes, tyres, steering, lights, refrigeration and ten more), the **Severity** (Cosmetic, Minor, Major, Immobilising), describe the fault and add a photo. **Takes Vehicle Off Road** is proposed from the severity; an immobilising defect grounds the vehicle and the readiness check blocks it.

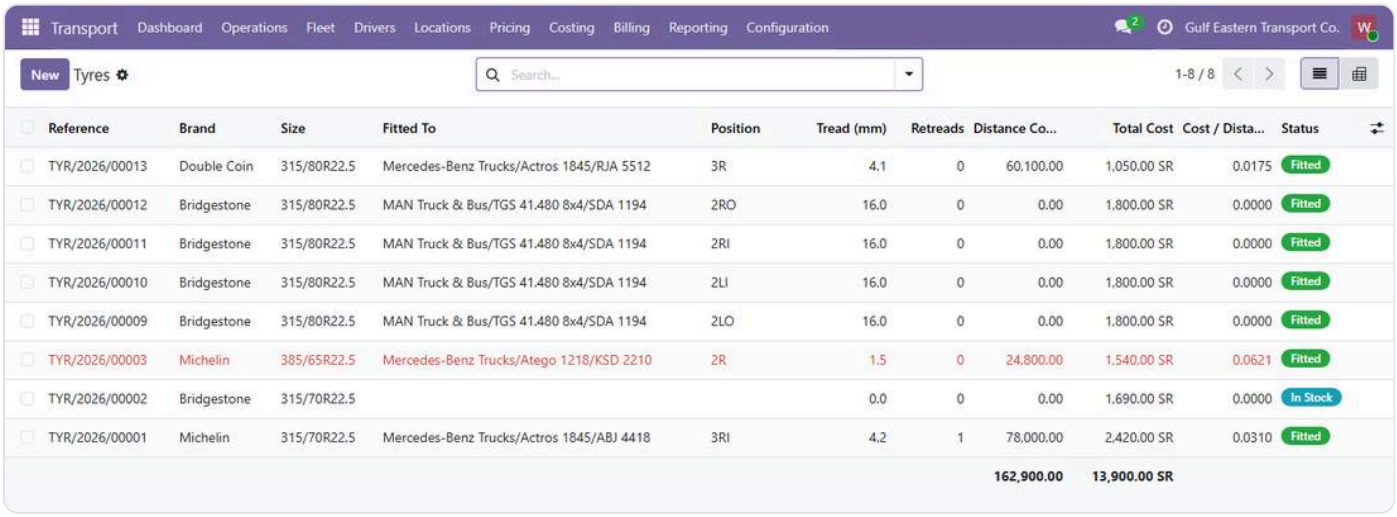

2 Repair and close ENTERPRISE ADD-ON

Start Repair, then **Book Into Fleet** raises a standard Odoo Fleet service record for the job so the workshop history stays in one place. **Mark Repaired** and **Close** finish it; **Defer** parks a fault that can wait (not an immobilising one); **Not a Defect** rejects it; **Reopen** takes it back.

> Downtime hours run from the report to the repair, and the downtime cost is taken from the vehicle's standing cost per day.

Tyres ENTERPRISE ADD-ON

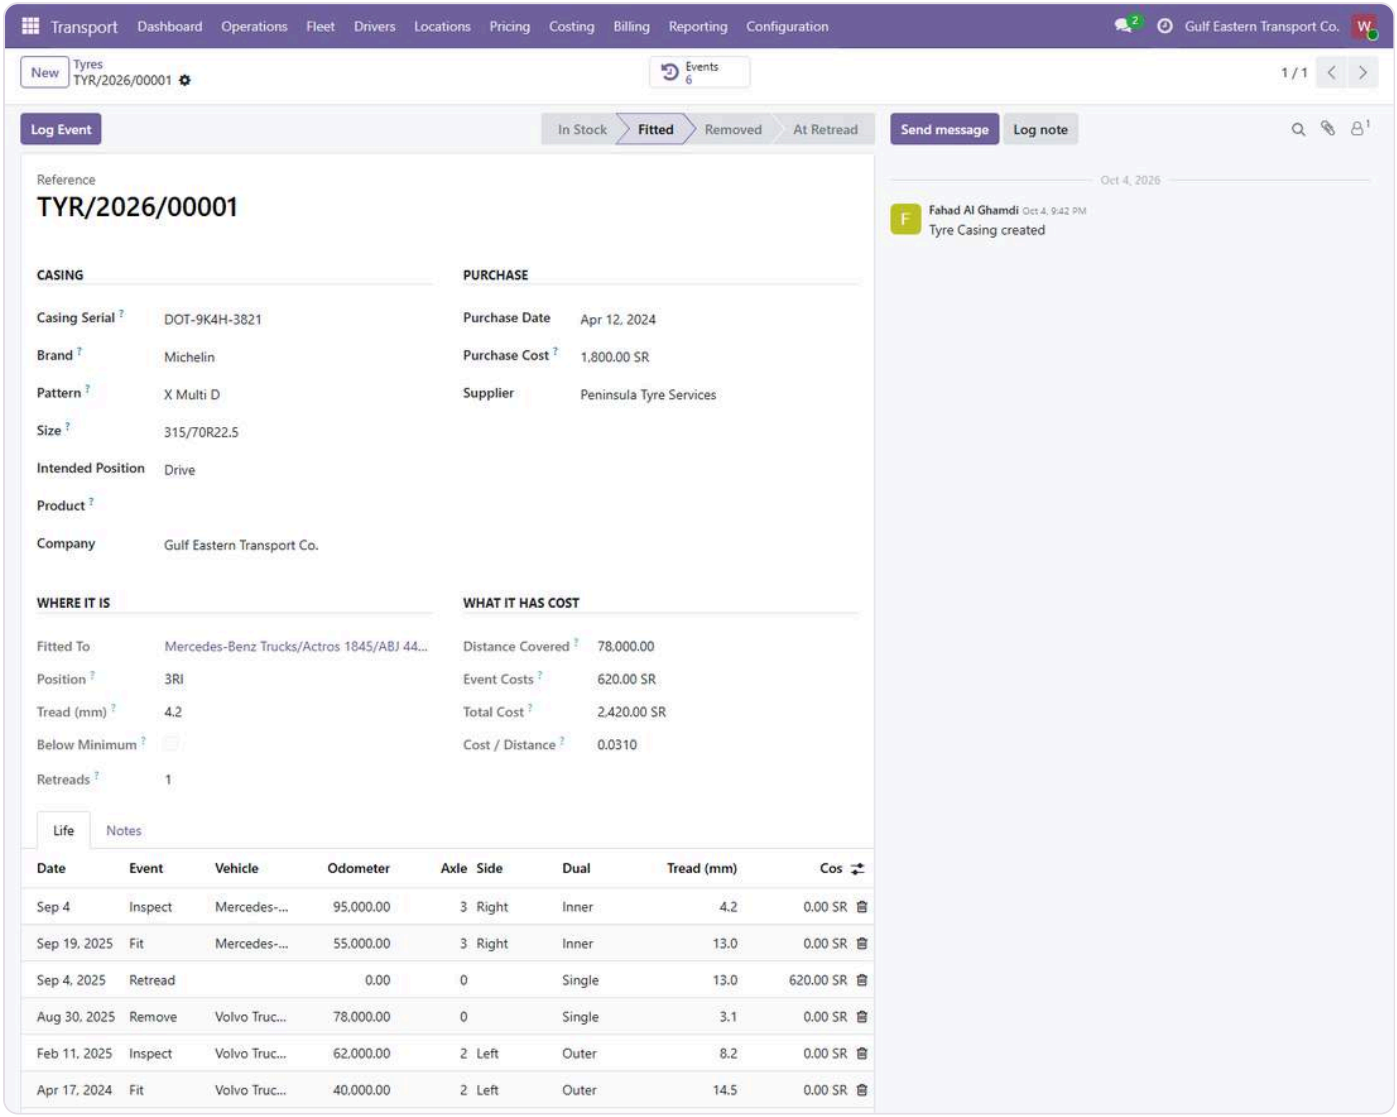

Reference	Brand	Size	Fitted To	Position	Tread (mm)	Retreads	Distance Co...	Total Cost	Cost / Dista...	Status

							162,900.00	13,900.00 SR		

ENTERPRISE ADD-ON Fleet, Tyres. Each casing with serial, brand, size, state, position, tread and cost per km.

3 A casing through its life ENTERPRISE ADD-ON

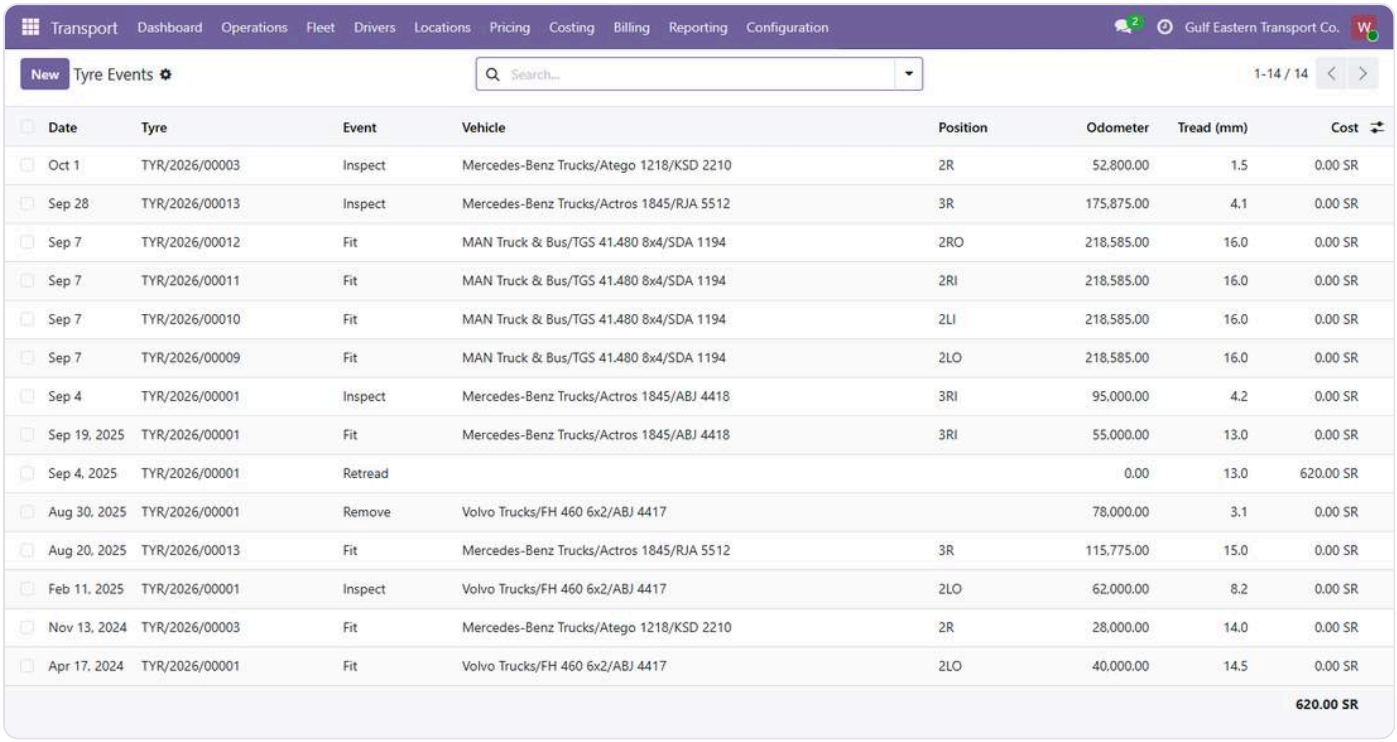

A tyre is tracked by casing serial, from purchase through fitting, rotation, removal, retread and scrap. Its state, vehicle and position come from the event history, never typed. **Log Event** opens a new event already pointed at this casing and its vehicle.

> Cost per km is purchase cost plus every event cost, divided by the distance run while fitted. A dearer casing that retreads twice often wins on this figure.

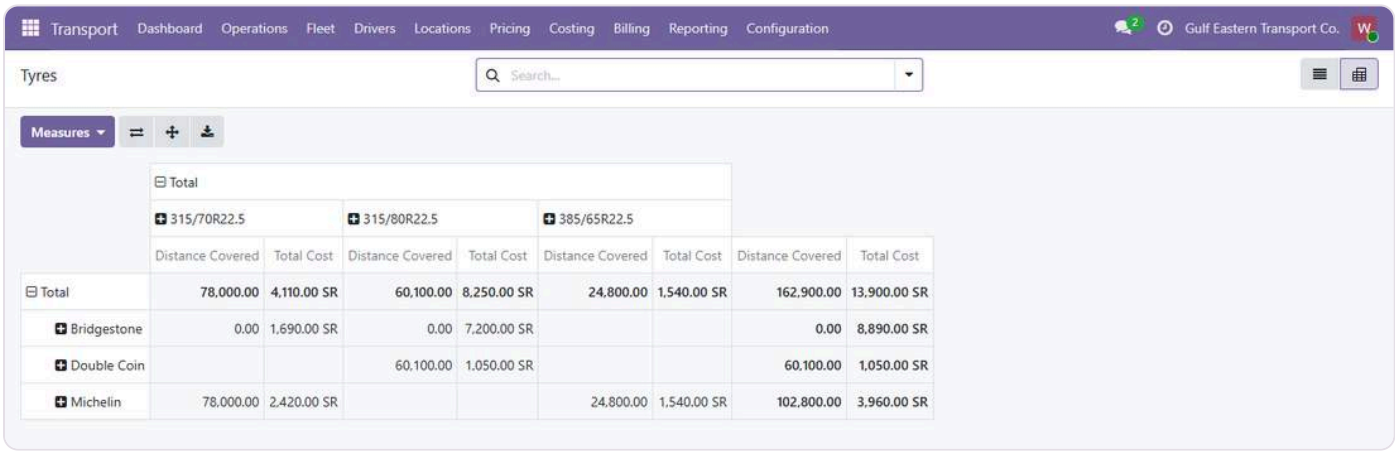

4 Tyre events ENTERPRISE ADD-ON

Each event (Fit, Rotate, Inspect, Remove, Retread, Scrap) carries the date, vehicle, odometer, axle, side, inner or outer, tread depth, cost and fitter. Two casings cannot sit on one position, and nothing can happen to a casing after it is scrapped.

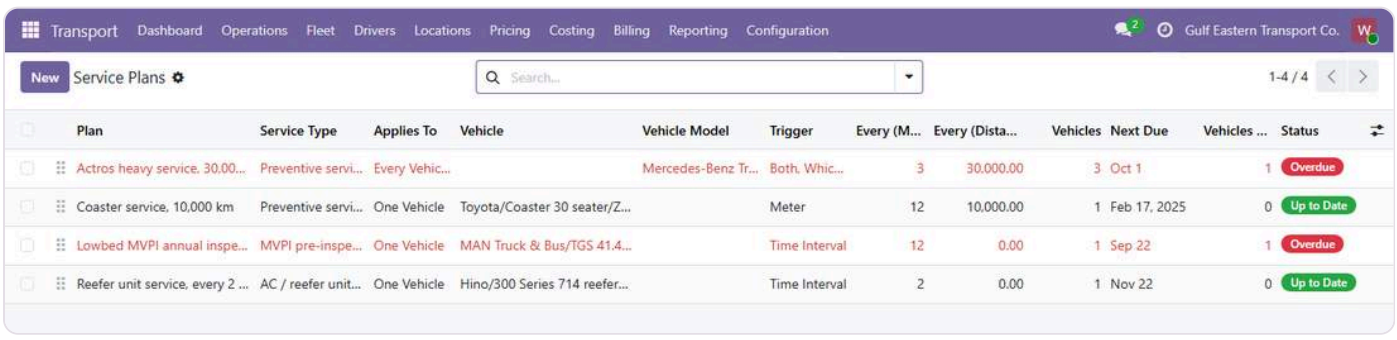

Date	Tyre	Event	Vehicle	Position	Odometer	Tread (mm)	Cost

ENTERPRISE ADD-ON Fleet, Service Plans with their due state.

5 A preventive plan ENTERPRISE ADD-ON

A plan applies to one vehicle or to every vehicle of a model, for an Odoo Fleet service type. The trigger is a time interval in months, a distance on the meter, or both, whichever falls first, with a warning lead in days. The next due date is counted from the last service of that type recorded on the vehicle.

> Raise the Service Now creates the Odoo Fleet service record for every vehicle the plan covers.

The vehicle's **Service Due** state is the worst of every plan covering it, and the readiness check blocks an overdue vehicle and warns on one due soon.

PART 18 Settlement: paying drivers and subcontractors ENTERPRISE ADD-ON

The trade settles an employed driver and a hired subcontractor the same way: gather the work in a window, apply the deal, take off what was advanced, pay the balance. Only the last document differs, so one settlement run does both.

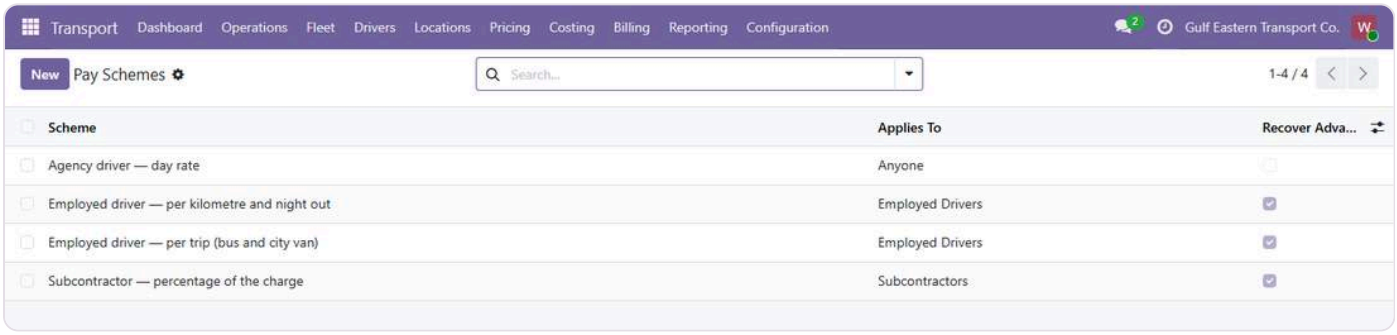

IN THIS PART YOU WILL LEARN

- How a pay scheme is built from components
- What a subcontractor record holds
- How advances are recovered
- The four steps of a settlement run, and where the money lands

TRY IT YOURSELF ON THE DEMO

1. On transport-pro, open Drivers, Settlements, then STL/2026/00001
2. Read its lines and the advance recovery
3. Open STL/2026/00002, the subcontractor run, and its pay scheme

Pay schemes ENTERPRISE ADD-ON

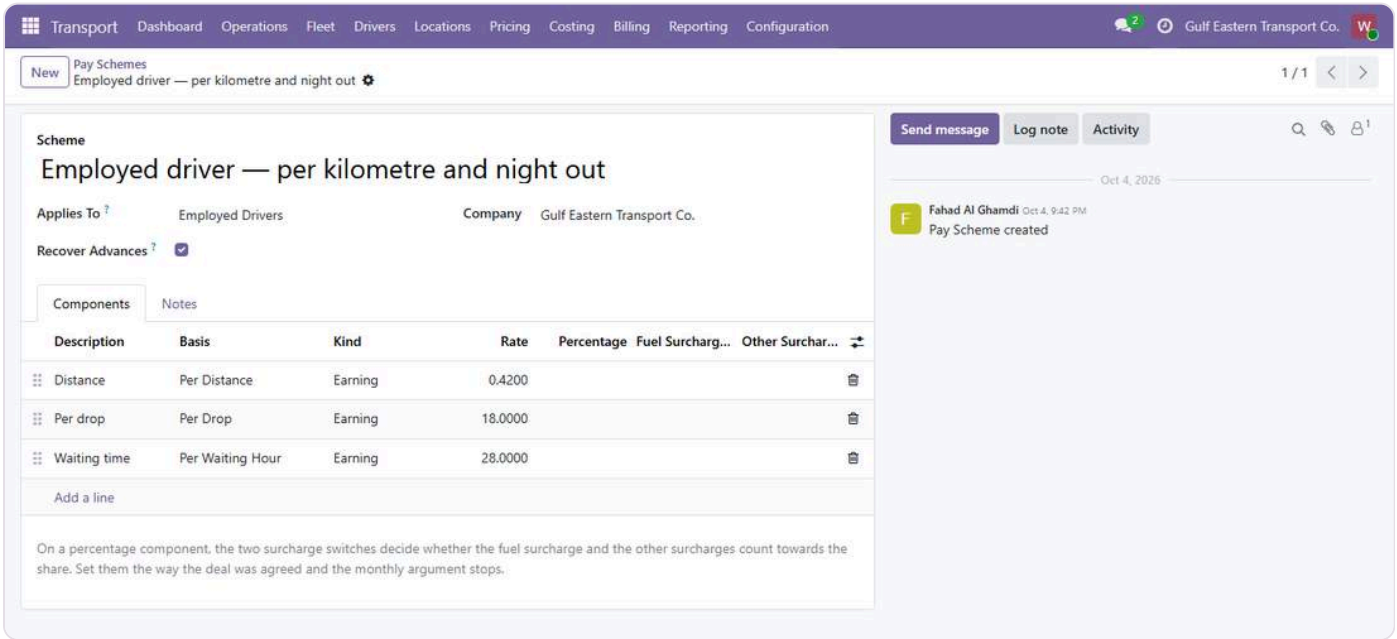

ENTERPRISE ADD-ON Configuration, Pay Schemes.

1 A driver scheme ENTERPRISE ADD-ON

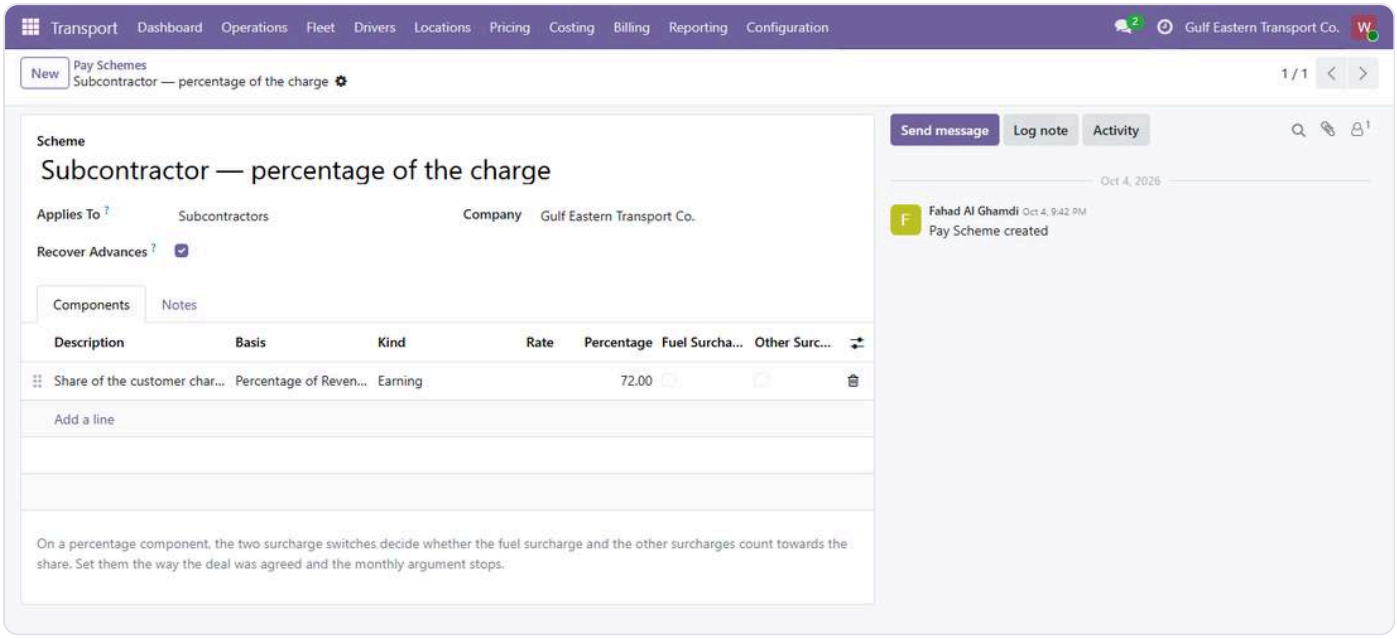

A scheme is a list of components. Each one is an earning or a deduction on a basis: per distance, per tonne, per pallet, per drop, per hour on duty, per waiting hour, per day, per trip, a percentage of revenue, or a fixed amount, with a rate, a minimum and a maximum per trip, and optionally only for one trip type.

Recover Advances on the scheme deducts outstanding advances on every run that uses it.

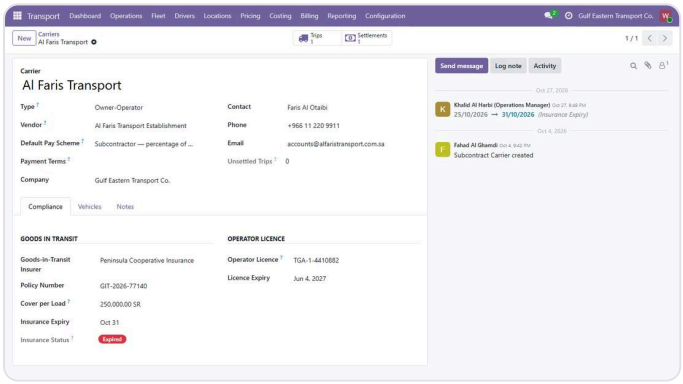

2 A subcontractor scheme ENTERPRISE ADD-ON

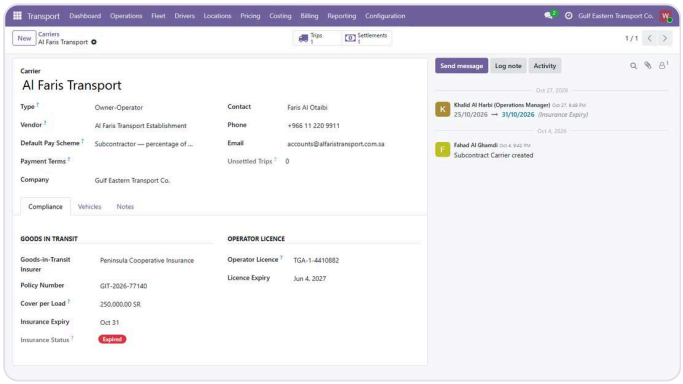

A percentage component pays a share of the job revenue. Two ticks decide whether the fuel surcharge and the other surcharges count in that revenue: the figure every owner-operator queries.

Subcontractors ENTERPRISE ADD-ON

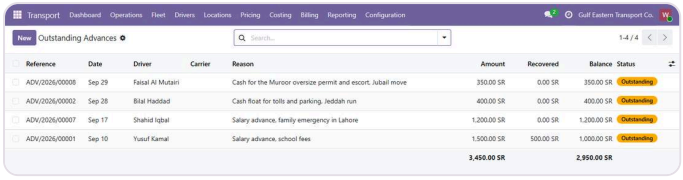

ENTERPRISE ADD-ON A subcontractor: type, vendor, default pay scheme, payment terms, contact.

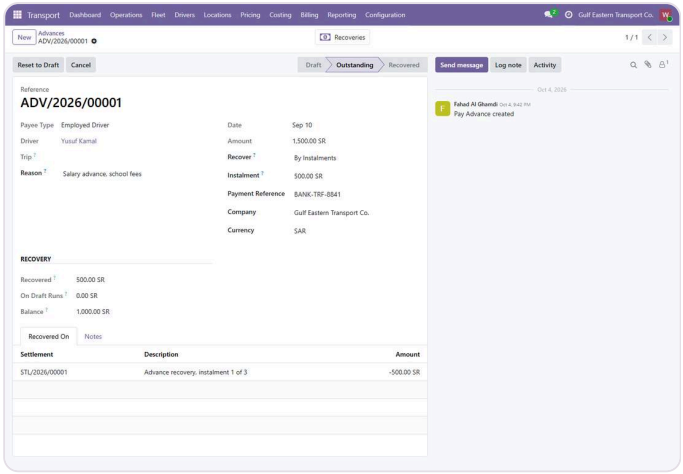

ENTERPRISE ADD-ON Compliance: operator licence and goods in transit insurance with expiry.

A carrier is an owner-operator, a haulage company, a broker or a driver agency. Its **Vendor** is the contact the self-billed document is raised against. Its operator licence and insurance, with expiry and cover per load, feed the readiness check. A vehicle can be marked **Owned By Carrier**; a trip on it takes the carrier automatically, or you set the carrier by hand when work is sublet at short notice.

Advances ENTERPRISE ADD-ON

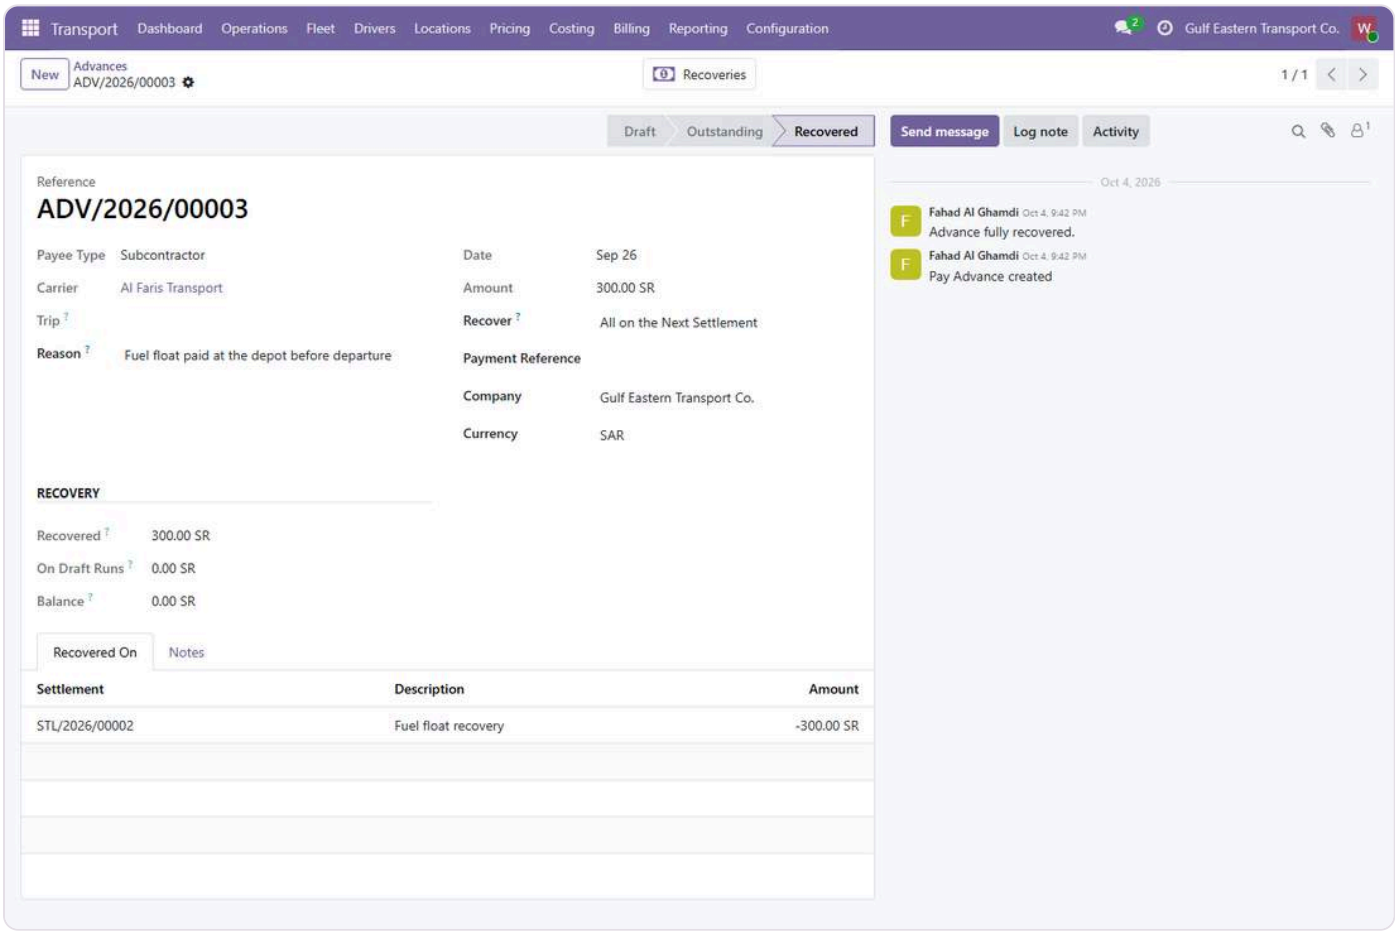

ENTERPRISE ADD-ON Drivers, Outstanding Advances.

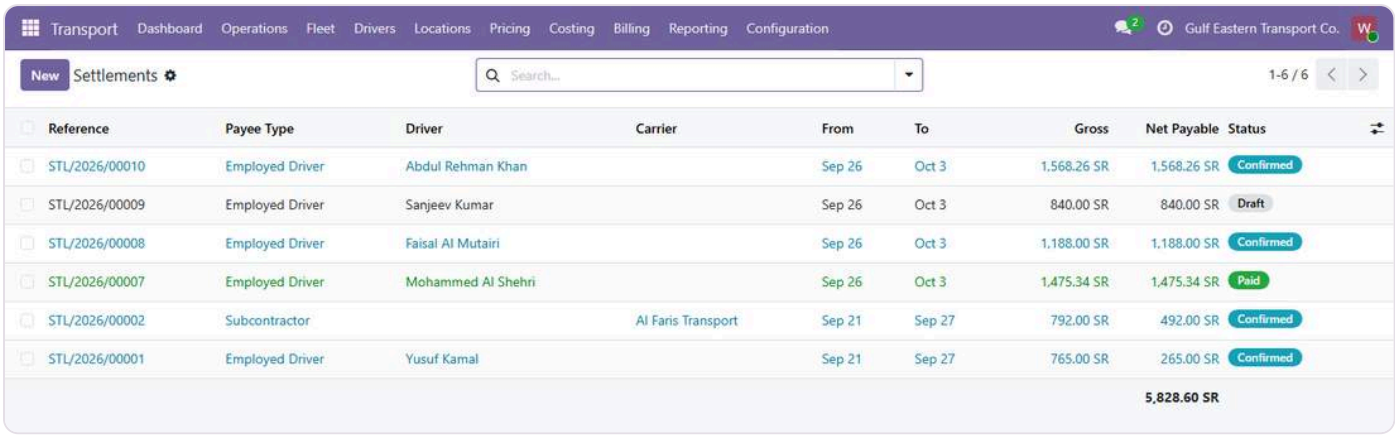

ENTERPRISE ADD-ON An advance with its running balance.

An advance is money handed over before the work is paid for: a fuel float, a sub against wages, a ferry ticket. Record the payee, the amount, the reason and, if it was for one job, the trip. Choose **All on the Next Settlement** or **By Instalments** with the most to take off any one run. **Confirm** makes it outstanding. Recovered, On Draft Runs and Balance show where it stands, and **Recoveries** opens the runs that took it back.

ENTERPRISE ADD-ON A recovered advance.

The settlement run ENTERPRISE ADD-ON

Reference	Payee Type	Driver	Carrier	From	To	Gross	Net Payable	Status
STL/2026/00010	Employed Driver	Abdul Rehman Khan		Sep 26	Oct 3	1,568.26 SR	1,568.26 SR	Confirmed
STL/2026/00009	Employed Driver	Sanjeev Kumar		Sep 26	Oct 3	840.00 SR	840.00 SR	Draft
STL/2026/00008	Employed Driver	Faisal Al Mutairi		Sep 26	Oct 3	1,188.00 SR	1,188.00 SR	Confirmed

							5,828.60 SR	

ENTERPRISE ADD-ON Drivers, Settlements: draft, confirmed and paid runs for drivers and a subcontractor.

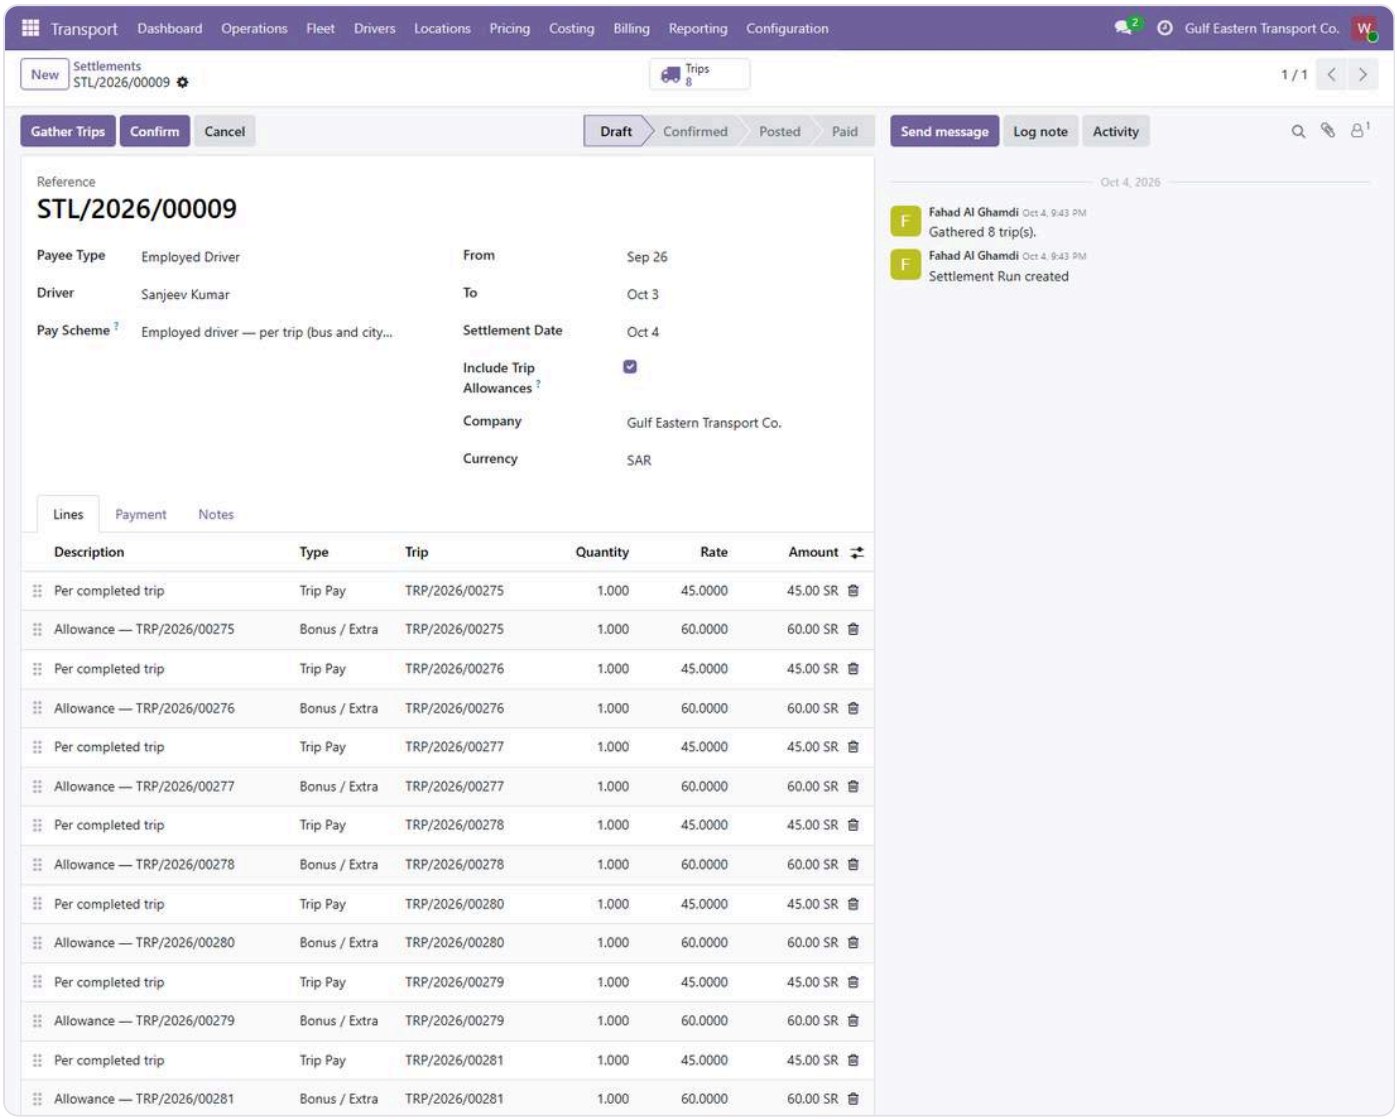

The life of a settlement ENTERPRISE ADD-ON

1. **Draft** — Gather trips
2. **Confirmed** — Frozen figures
3. **Posted** — Payroll or self-bill
4. **Paid** — Date stamped

3 Open a run and gather ENTERPRISE ADD-ON

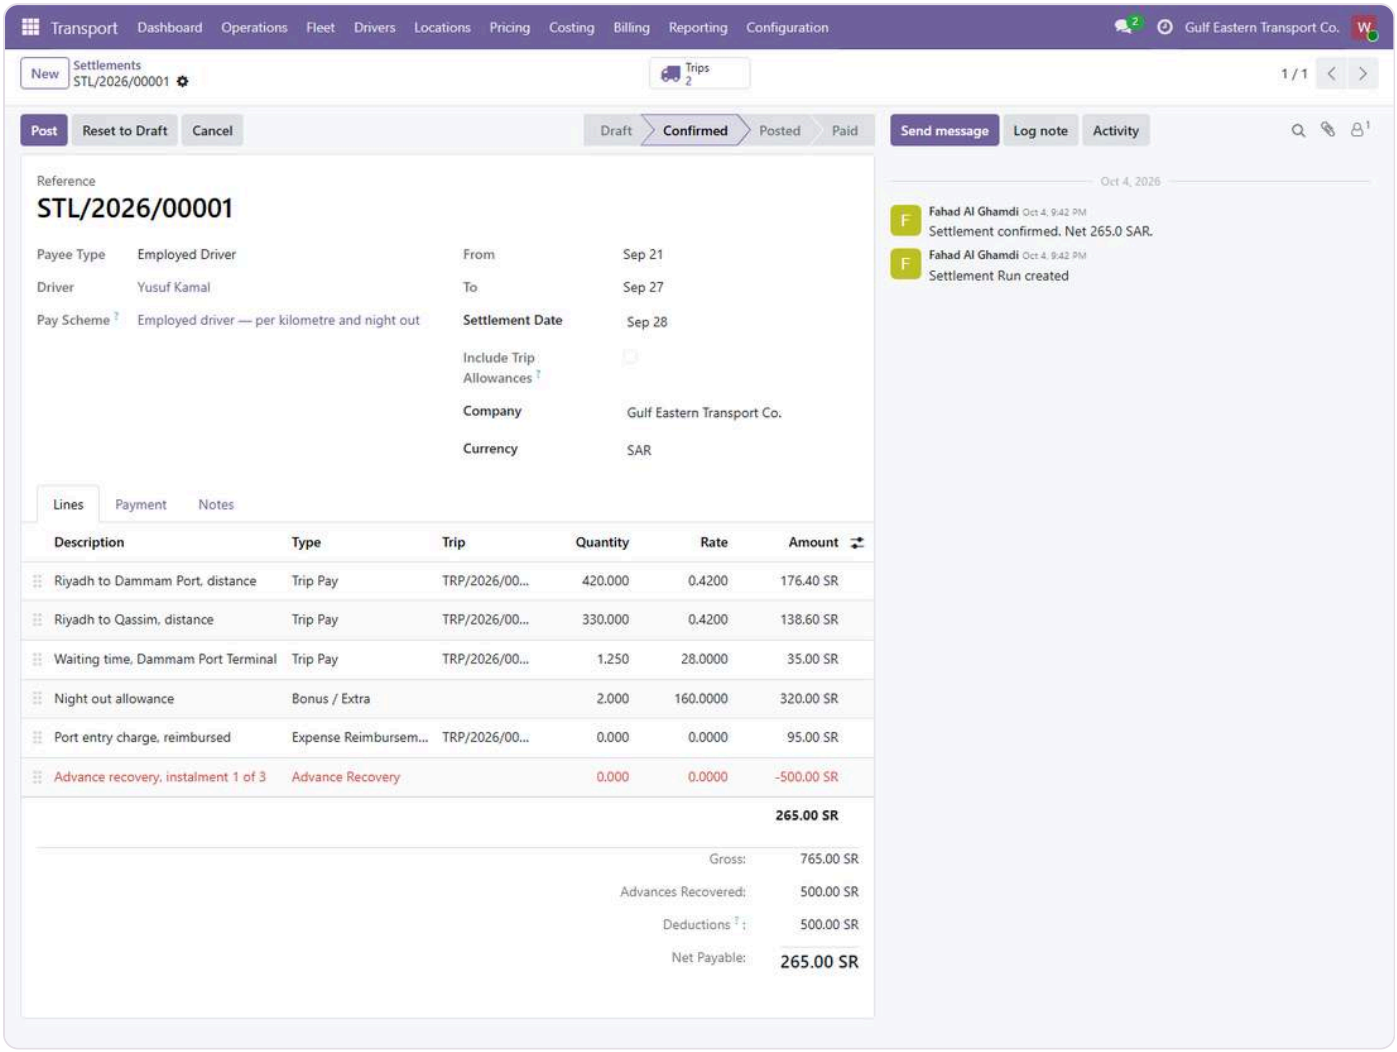

Pick the payee type and the driver or subcontractor, the pay scheme (from the payee) and the window. Press **Gather Trips**: every completed trip in the window not already on another run is priced by the scheme, line by line, and outstanding advances are taken off. Tick **Include Trip Allowances** to pay each trip's allowance here rather than in cash.

> Gathering again clears the generated lines and starts over; a line typed or edited by hand is kept.

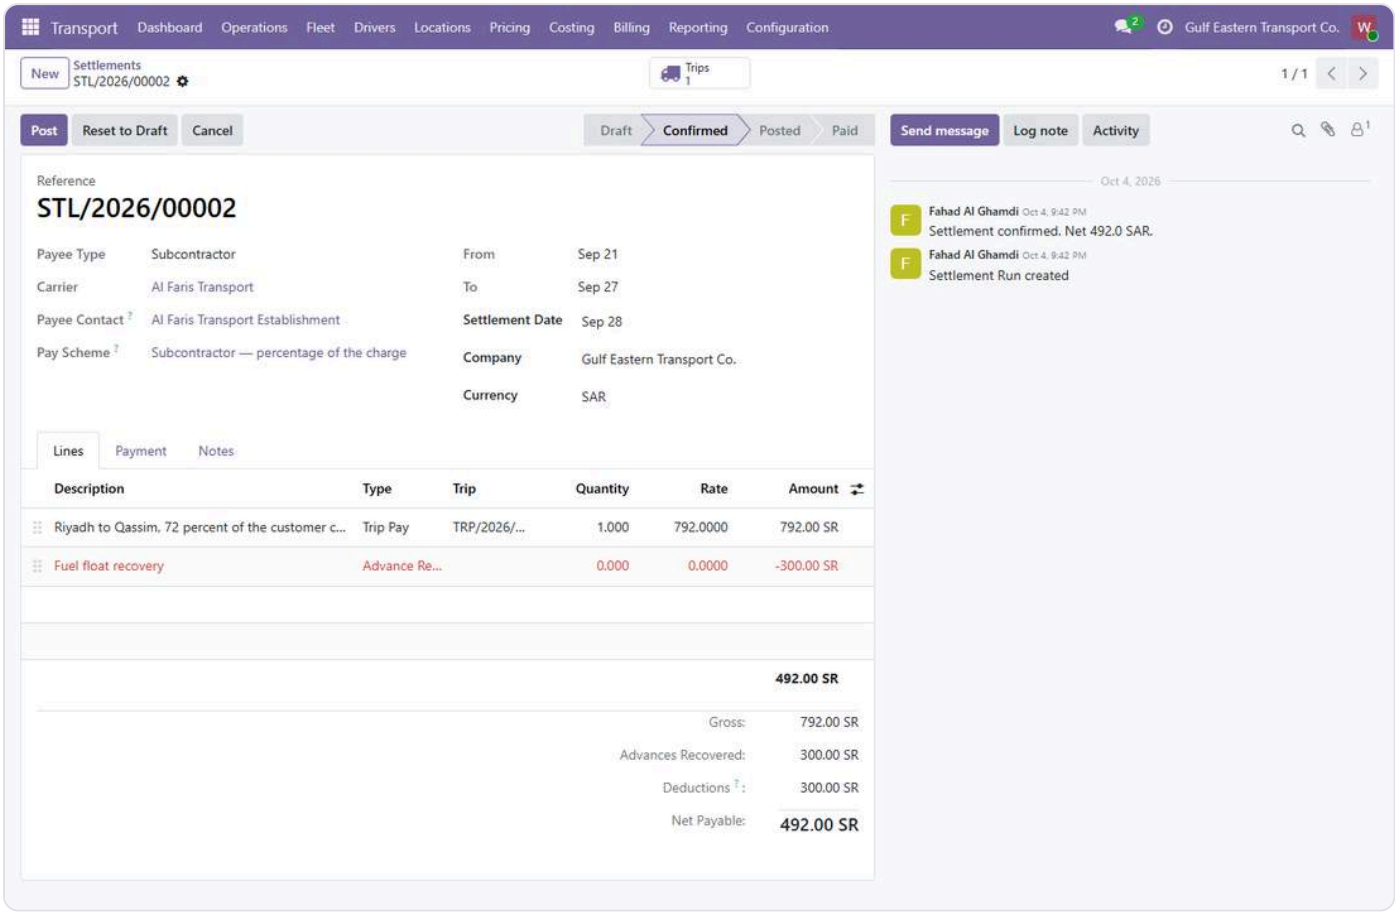

4 Check and confirm ENTERPRISE ADD-ON

Each line has a type (trip pay, bonus, expense reimbursement, deduction, advance recovery, damage or fuel recovery, adjustment), the component that produced it, quantity, rate and amount. Positive is money to the payee, negative is money back, and the net is the sum. **Confirm** freezes it.

5 Post: subcontractor ENTERPRISE ADD-ON

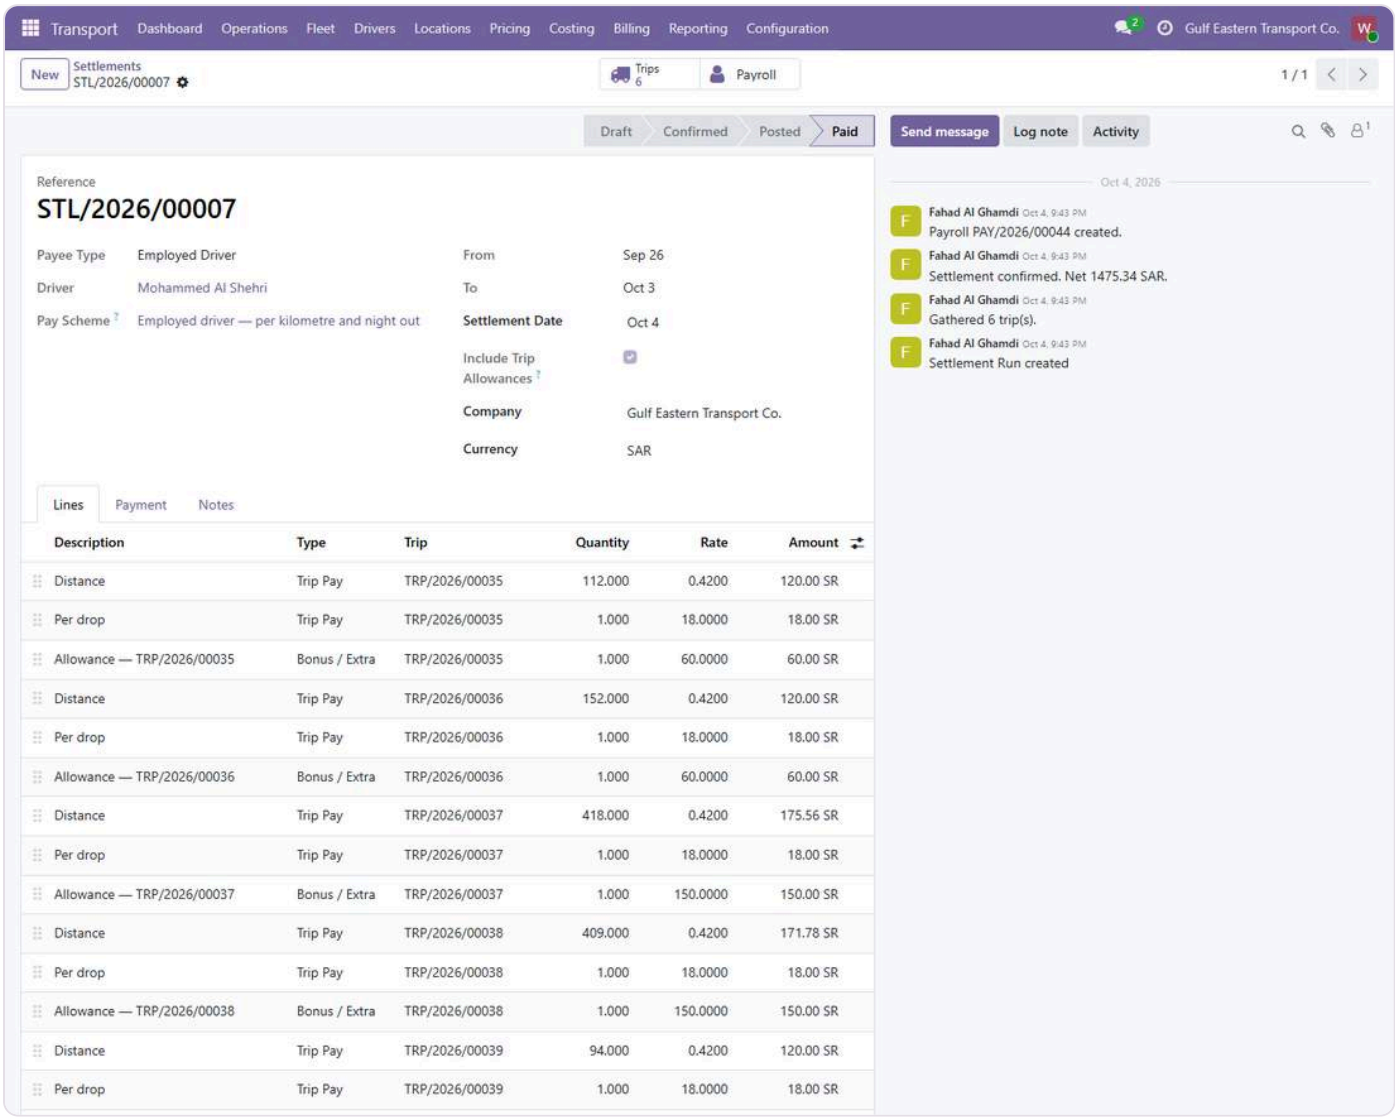

For a subcontractor, **Post** raises a self-billed vendor document against the carrier's vendor, with the payment terms, and a **Self-Bill** button opens it.

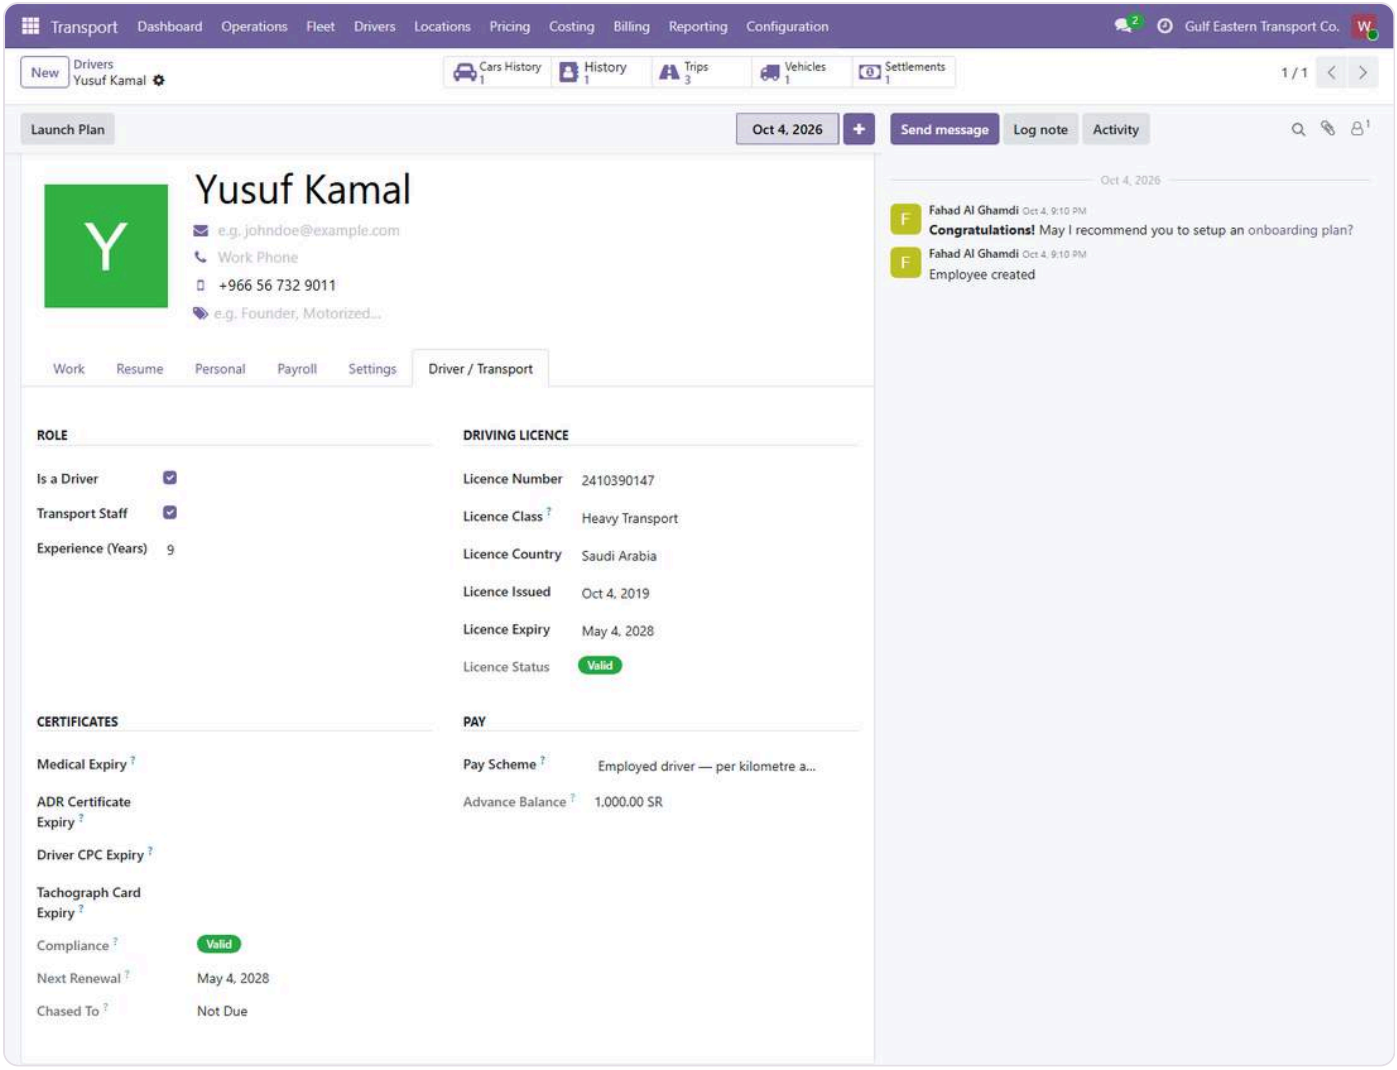

6 Post: employed driver, then pay ENTERPRISE ADD-ON

For an employee, **Post** writes the pay onto the base payroll record, opened by the **Payroll** button, rather than keeping a second pay ledger. **Mark Paid** stamps the payment date.

> Reset to Draft deletes the unposted self-bill or draft payroll it made. A paid run cannot be reopened; correct it on the next one.

Description	Type	Trip	Quantity	Rate	Amount
Distance	Trip Pay	TRP/2026/00035	112.000	0.4200	120.00 SR

Per drop	Trip Pay	TRP/2026/00039	1.000	18.0000	18.00 SR

ENTERPRISE ADD-ON The Pay block on the Driver / Transport tab: settlement currency, pay scheme and advance balance.

On the trip, **Driver Pay**, **Carrier Pay** and **Settlement** (Not Settled, On a Draft Run, Settled, Paid) show whether anybody has been paid for it yet.

PART 19 Printed documents

Five documents can be printed from the Print menu of their record. The base module prints the Trip Sheet, the Expense Voucher and the Payslip; the add-on prints the Waybill for a load and the Proof of Delivery for a trip.

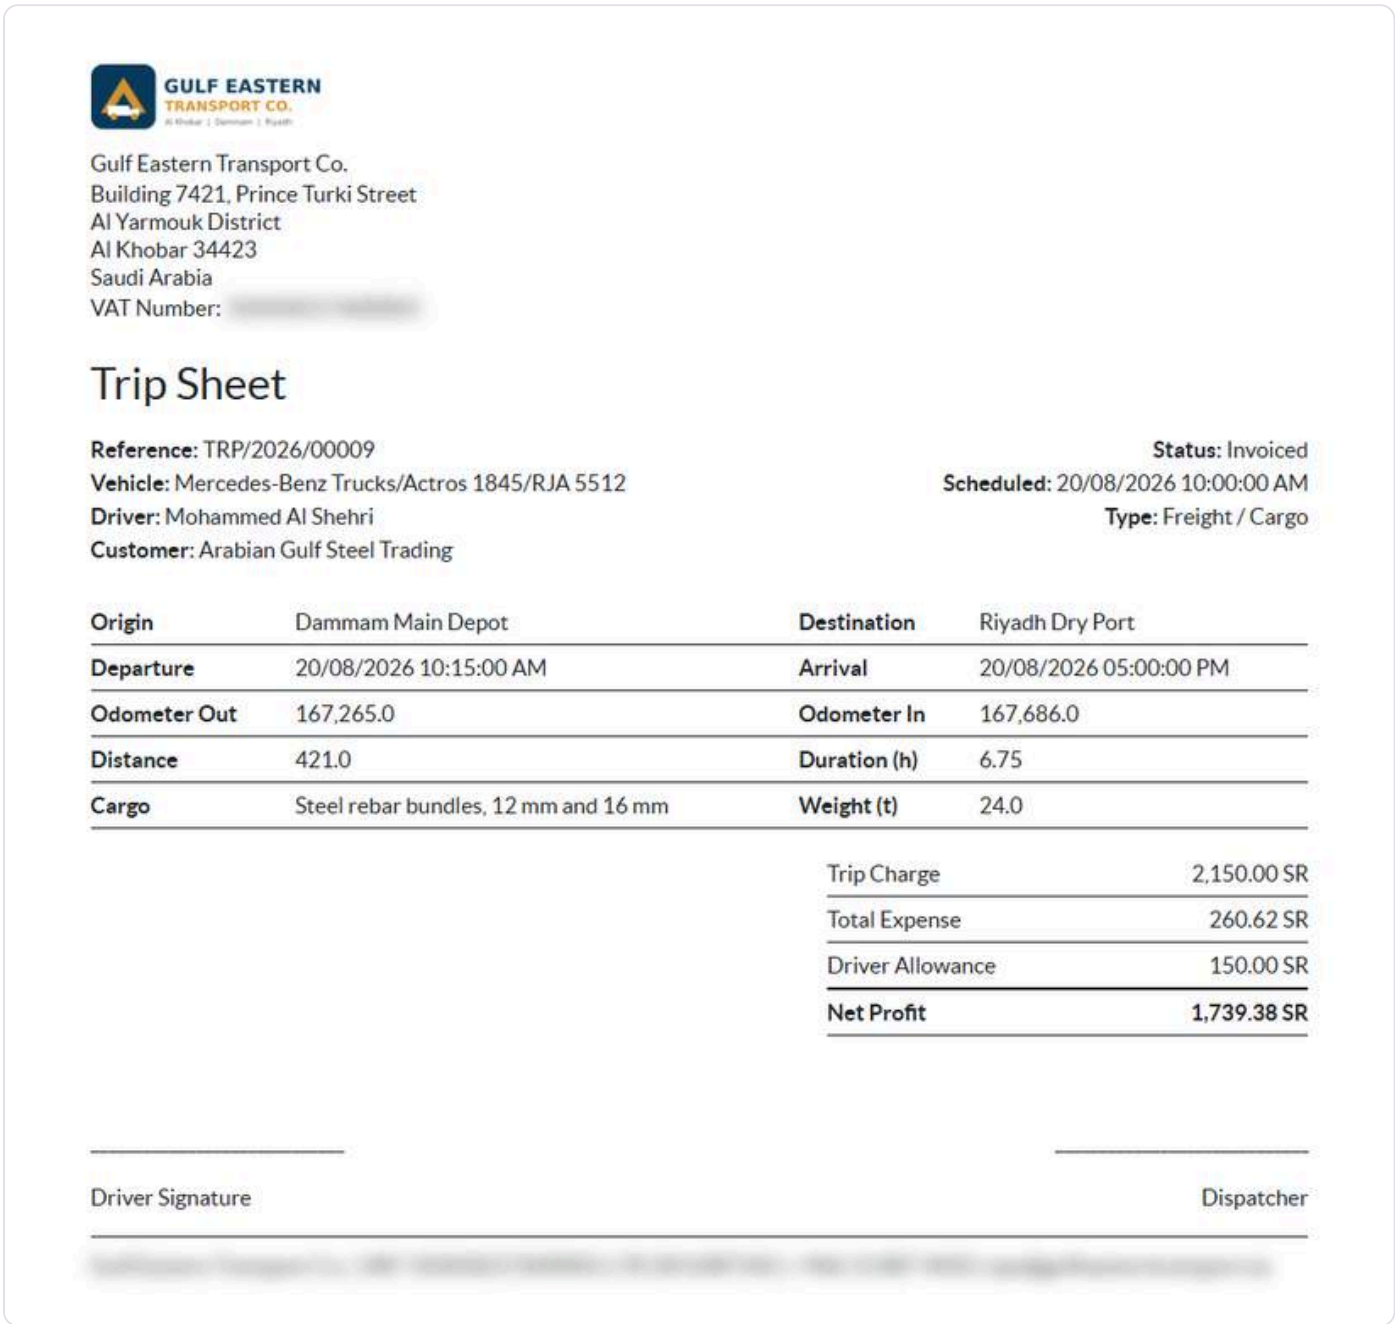

IN THIS PART YOU WILL LEARN

- Which document prints from which record
- What each one shows

TRY IT YOURSELF ON THE DEMO

1. Open a trip, then Print, Trip Sheet
2. On transport-pro, open a load, then Print, Waybill / Consignment Note

ENTERPRISE ADD-ON The proof of delivery for a trip: every call, who signed, when, quantities and exceptions.

PART 20 What runs by itself, and what you press

Some work happens on a schedule; the rest happens when somebody presses a button. Knowing which is which saves a lot of waiting for a figure that will not update on its own.

IN THIS PART YOU WILL LEARN

- The three daily jobs
- What updates on its own
- Which button refreshes which figure

Scheduled jobs in the base module BASE

JOB	WHEN	WHAT IT DOES
Transport: Vehicle Document Reminders	Daily	A to-do on the vehicle for each document expiring or expired, once per document.
Transport: Driver Licence Reminders	Daily	A to-do on each driver whose licence expires within 30 days or has expired, once per driver.
Transport: Trip Departure Reminders	Daily	A to-do on the dispatcher for each draft or scheduled trip whose scheduled time has passed.

Worked out every time you look ENTERPRISE ADD-ON

Readiness and double bookings, document and licence status, driver compliance, carrier insurance status and the dashboard figures are computed when the screen is read, so they are never out of date.

Buttons that refresh figures ENTERPRISE ADD-ON

TO REFRESH	PRESS
Cost per km for one period	**Rebuild** on the cost period
Cost periods for many vehicles or months	Costing, **Rebuild Cost Periods**
Fuel checks on a fill	**Run Checks** on the fuel entry
A preventive service	**Raise the Service Now** on the service plan
A charge sheet after a contract change	**Price from Contracts** on the sheet
A settlement after trips changed	**Gather Trips** on the draft run
A rate card that has ended	**Expire** on the card (an ended card already stops pricing by its date)

The add-on also contains sweep methods for building cost periods, scanning fuel, raising due services, chasing expiring paperwork and expiring rate cards. Your implementer can schedule them as Odoo scheduled actions if you want them to run every night.

PART 21 A 15 minute demo script

Use this to show the product to somebody in a quarter of an hour. The first half is on transport-demo, the second on transport-pro. Sign in to both with w4demo / Demo2026 before you start.

IN THIS PART YOU WILL LEARN

- A route through both demos that covers the product in 15 minutes

MIN	SHOW	SAY
0-2	Dashboard on transport-demo	*This month at a glance: trips, revenue, profit, fuel, paperwork alerts.*
2-4	Operations, Trips, kanban, then TRP/2026/00009	*A trip from draft to invoiced, one button per step. Financials shows the charge, expenses and net profit.*
4-5	Its Invoice button	*One click raises the invoice, with VAT through the customer's fiscal position.*
5-6	Operations, Expenses, a fuel expense	*Litres, price and odometer; submit, approve, vendor bill.*
6-7	Fleet, Documents, filter Expired	*Every piece of paperwork with its expiry, and a daily reminder.*
7-9	transport-pro, TRP/2026/00005	*The red banner: double booked and an expired licence. Start Trip refuses it.*
9-11	TRP/2026/00002, Stops, Loads, Financials	*A groupage run: three customers, six calls, signatures, detention. What it was charged and what it really cost.*
11-12	Pricing, Rate Cards, then a charge sheet	*Contracts as data. Every line says how it was priced.*
12-13	Costing, Cost Periods	*Cost per km with leases and insurance in, and the break-even per earning km.*
13-14	Fleet, Fuel Alerts	*Losses found by measuring tank to tank, worth the most money first.*
14-15	Drivers, Settlements	*Drivers and subcontractors paid the same way, advances taken off.*

PART 22 Questions, and the menu map

Answers to what people ask first, then every menu with the module it comes from.

Frequently asked

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. Both modules run on Odoo 19 Community with Fleet, Employees and Invoicing. Enterprise is the name of the add-on.
Can I start with the base module and add the add-on later?	Yes. Existing trips keep working exactly as they did; loads, stops and charge sheets are only used when you create them.
Does it track trucks by GPS or plan routes?	No. Distance comes from odometer readings or planned leg distances. There is no dispatch board and no driver phone app.
Kilometres or miles?	Either, set once per company in Settings.
Can one invoice cover a month of trips?	Yes, with the add-on: Billing, Consolidated Invoicing.
Is VAT on the trip invoice?	Yes. The base invoice uses the company default sales tax; the add-on uses the taxes on each rate band, both through the customer's fiscal position.
Where do driver salaries go?	The base Payroll. With the add-on, a settlement run for an employee posts onto it.
How are subcontractors paid?	A settlement run posts a self-billed vendor document against their vendor contact.
Can it stop an unsafe trip?	Yes, with the add-on. Turn Refuse Unready Trips off to warn instead of refuse.
Several companies?	Yes. Records are kept per company and each company has its own settings.

Menu map

Dashboard

- **Dashboard** — Fleet Control: this month at a glance

Operations

- **Trips** — Every journey, from draft to invoiced
- **Expenses** — Fuel, tolls, repairs and fines, with approval
- **Loads** — Customer consignments with their own number
- **Loads to Plan** — Consignments not yet on a trip
- **Stops** — Every call on every run, with proof of delivery
- **Trips Not Ready** — Trips the readiness check would stop
- **Double Bookings** — Trips that clash on a vehicle or driver

Fleet

- **Vehicles** — The fleet register, with transport figures
- **Documents** — Registration, insurance, inspection and permits
- **Maintenance & Services** — Odoo Fleet service records
- **Odometer Logs** — Odoo Fleet odometer readings
- **Fuel Entries** — Every fill, measured tank to tank
- **Fuel Alerts / All Fuel Alerts** — The fuel exception queue
- **Import Fuel Card Statement** — Load a card provider CSV
- **Open Defects / All Defects** — Faults reported on vehicles
- **Tyres / Tyre Events** — Each casing through its life
- **Service Plans** — Preventive service by time or distance
- **Dispatch-Blocking Paperwork** — Documents that stop a truck

Drivers

Drivers	Employees marked as drivers, with licences
Driver Compliance	Licence and certificate dates in one list
Payroll	Monthly pay with components and expenses
Settlements	Pay runs for drivers and subcontractors
Outstanding / All Advances	Money paid out before settlement
Subcontractors	Hired hauliers and owner-operators

Locations

Locations	Depots, hubs, customer sites, fuel stations

Pricing

Charge Sheets	What a job is charged and what it costs to buy in
Charge Lines	Every priced line, for analysis
Rate Cards	Customer and carrier contracts
Rate Bands	The priced bands inside the cards

Costing

Cost Periods	Cost per km per vehicle per month
Incomplete Figures	Periods missing something
Standing Costs	Leases, insurance, depreciation, tax
Rebuild Cost Periods	Recalculate a window of periods

Billing

Consolidated Invoicing	One invoice per customer for a period
Claims	Shortage, damage and late delivery claims

Reporting

Trip Analysis	Revenue, cost and profit pivot
Expense Analysis	Expenses by category, vehicle, month

Configuration

Settings	Distance unit, reminders, enforcement
Expense Categories	The kinds of cost you book
Document Types	The paperwork each vehicle needs
Service Types	Odoo Fleet service types
Vehicle Tags	Vehicle classes used by rate cards
Detention Rules	Free time and waiting charges
Rate Zones	Groups of places a contract prices between
Pay Schemes	How drivers and carriers are paid
Fuel Baselines	Expected consumption per vehicle
Readiness Rules	What blocks or warns at dispatch

Base module · Enterprise add-on

Want this for your fleet?

We set it up with your vehicles, drivers, paperwork and customers, load your contracts as rate cards, connect it to your chart of accounts and VAT, and train the traffic office, the workshop and accounts. The same module runs a few vans or a few hundred trucks with subcontractors on top.
