COMPLETE GUIDE · SEVEN WT HRMS ADD-ONS, EVERY SCREEN

WT HRMS Add-ons for Odoo 19

Work from home, business travel, the internal service desk, training and skills, rewards and disciplinary, workforce structure and the hiring pipeline. Every field, button and rule, step by step, shown on the live demos. No Odoo background needed.

START

About this guide

Leave, attendance and payroll are the heart of HR, and the main WT HRMS guide covers them. Around them sit the smaller things staff ask for every week and the records HR keeps for years: a day at home, a business trip, a broken laptop, a course, a warning, a vacancy. This guide covers the seven add-ons that handle those, one screen at a time. You do not need to have used Odoo before.

Who it is for

The HR manager setting the add-ons up, the line managers who approve, the person who works the service desk, and anyone being shown the system for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and something to try on the demo, then walks every field, button and rule in order.

The live demos

Meridian Group, a fictional company on the HRMS demo, holds the requests, training and disciplinary records. Meridian Facilities Management LLC, a fictional facility company in Dubai, holds workforce structure and recruitment.

HOW IT WORKS

The two demos

HRMS demo	**hr19.way4tech.com**: work from home, travel, service requests, training, rewards and disciplinary
Facility demo	**facility-demo.way4tech.com**: workforce structure and HRMS recruitment, plus the employee form tabs
Sign in	**w4demo** / **Demo2026** on both
Runs on	Odoo 19, Community edition, with Employees

Every company, person and number on the demos is invented, and a few employee rows on the facility demo are blurred in the screenshots. The demos are shared, so anything you change may be seen by the next person or changed back. Treat them as places to look around, not your own records.

What is in the guide

PART 1	What the seven add-ons do	PART 2	Signing in and finding the screens
PART 3	Setting up from zero	PART 4	Work from home
PART 5	Business travel	PART 6	The internal service desk
PART 7	Skills and skill levels	PART 8	Training programmes
PART 9	Training requests and completion	PART 10	Rewards, warnings and disciplinary
PART 11	Workforce structure	PART 12	Recruitment: stages, roles and vacancies
PART 13	Recruitment: candidates and interviews	PART 14	Recruitment: offers and the hire
PART 15	Lists, reports and scheduled jobs	PART 16	A fifteen minute walk-through
PART 17	Questions people ask	PART 18	The menu map

PART 1 What the seven add-ons do

Each add-on is a small module of its own, sold separately and included in the WT HRMS Suite. Four of them are requests that go through approval; three are records HR keeps and reads. This part shows which is which and what they share.

IN THIS PART YOU WILL LEARN

- What each add-on covers and what it costs
- Which ones use the approval engine and My Space
- Who can see and act on what
- What standard Odoo Community already gives you

TRY IT YOURSELF ON THE DEMO

1. Open WT HRMS on the HRMS demo and look at the menus: Time, Growth, Requests, People
2. Open Employees on the facility demo: Workforce Structure and Recruitment live there

The modules and their prices

ADD-ON	MODULE	WHAT IT DOES	USD
Work From Home	`wt_hrms_wfh`	Full and half day home requests counted in working days	15
Travel	`wt_hrms_travel`	Business trips with cost, advance, hotel and visa flags	20
Service Requests	`wt_hrms_service_requests`	Internal IT, admin and facilities desk with SLA deadlines	20
Training	`wt_hrms_training`	Skills, levels, programmes, seats, requests, skills awarded	25
Rewards and Disciplinary	`wt_hrms_rewards`	Rewards and warnings with a 12 month ladder and acknowledgement	15
Workforce Structure	`wt_hrms_workforce_structure`	Team sizes, levels, spans, missing managers, loop guard	25
HRMS Recruitment	`wt_hrms_recruitment`	Vacancies, candidate board, scored interviews, offers to employee	39

Prices are from each module's manifest, once per Odoo version. All seven are on the Odoo Apps Store for version 19 and all seven are part of the WT HRMS Suite. The first five need the free **HRMS Core** (`wt_hrms_core`). Workforce Structure needs only Employees. HRMS Recruitment needs Employees and, in this version, HRMS Core as well (see Part 12).

Two kinds of add-on

Requests with approval

Work from home, travel, service requests and training requests. Each is a numbered record an employee raises, that walks an approval chain, and shows in My Space for the employee and in To Approve for the approver.

Records HR keeps

Rewards and disciplinary, workforce structure and recruitment. HR creates and reads these; there is no approval chain. Rewards has its own confirm and acknowledge steps, and recruitment its own vacancy and offer stages.

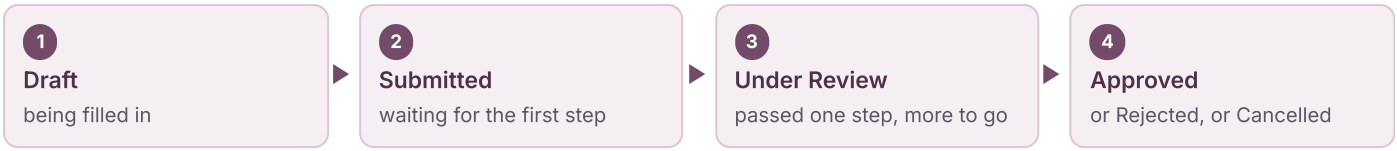

On the employee

Every add-on puts its history on the employee form: tabs for Work From Home, Travel, Skills, Training Requests and Rewards & Warnings, and the Level, Direct Reports and Total Team figures from workforce structure.

The approval engine they share

The four request types use the approval engine from HRMS Core. Every request has the same states:

The life of a request

Who decides comes from an **approval chain**: one per request type, with steps such as the direct manager, the manager's manager, the department head, a named user or a group. If no chain exists for a type, the request waits for any HR manager to decide it. Nobody can approve their own request, HR managers included, unless a system parameter allows it.

Who sees what

PERSON	CAN DO
Employee with a login	Raise and see their own requests; read their own skills; see and acknowledge their own confirmed rewards and warnings
Line manager	Read and decide the requests of people below them (their reports, their reports' reports, their department) from My Space, without any HR role
HR officer (Employees: Officer)	See every request and record in their company; Mark Resolved on service requests; edit skills; run programmes
HR manager (Employees: Administrator)	Everything, including Approve and Reject on the forms, confirm warnings, cancel programmes, the configuration menus and workforce structure
Recruiter / Interviewer	Recruitment has its own two roles, set under the user's access rights (Part 12)

What standard Odoo already has

Odoo 19 Community has Employees with an org chart, Time Off, Attendances, Recruitment and Expenses. It has no work from home request, no travel request, no internal service desk, no training programmes with seats and approval, no disciplinary register, and no arithmetic on the org chart. Odoo's own Recruitment app is a different module from HRMS Recruitment; Part 12 explains when to use which.

PART 2 Signing in and finding the screens

Five of the add-ons live in the WT HRMS app, grouped the way HR people work. The other two sit under Odoo's own Employees app. This part is a map, so the rest of the guide is easy to follow.

IN THIS PART YOU WILL LEARN

- How to sign in to either demo
- Where each add-on's menus are
- What My Space shows an approver

TRY IT YOURSELF ON THE DEMO

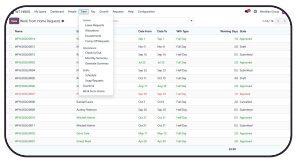

1. Sign in to the HRMS demo and open each menu shown below
2. Sign in to the facility demo and open Employees, Workforce Structure

1

Sign in

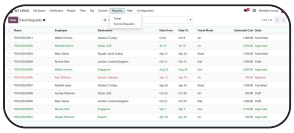

Open **hr19.way4tech.com** or **facility-demo.way4tech.com** and sign in with **w4demo** and **Demo2026**. The demo login is not an administrator, so some settings are out of reach, but every screen in this guide opens.

2

Time, Work From Home

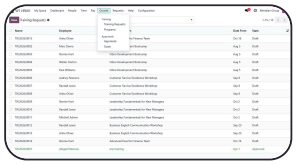

Work from home requests sit with leave, attendance, shifts and overtime under **WT HRMS, Time**.

3

Requests, Travel and Service Requests

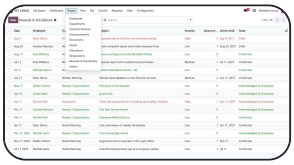

WT HRMS, Requests holds the two request types that are not about time: business trips and the service desk.

4

Growth, Training

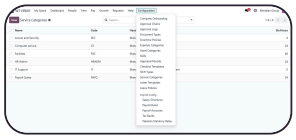

WT HRMS, Growth, Training has Training Requests and Programs, next to Appraisals.

5

People, Rewards & Disciplinary

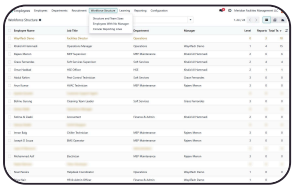

The disciplinary register is a people record, under **WT HRMS, People** with documents, assets, resignations and letters.

6

Configuration

WT HRMS, Configuration (HR managers) holds Approval Chains, Skills and Service Categories, the three settings these add-ons need.

7

Employees, Workforce Structure

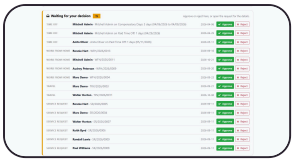

Workforce Structure is a menu of the **Employees** app, visible to HR managers: Structure and Team Sizes, Employees With No Manager, Circular Reporting Lines.

8

Employees, Recruitment

HRMS Recruitment is also under **Employees**: Candidates, Vacancies, Interviews, Offers, Reporting and Configuration.

9

My Space, To Approve

An approver's My Space lists everything waiting for them, across every request type, each line with **Approve** and **Reject**. Work from home, travel and service requests appear here next to time off. An employee's own My Space also has a button per request type to raise a new one.

The demo login is not linked to an employee, so its My Space shows a notice instead of the new request buttons.

PART 3 Setting up from zero

None of the seven add-ons has a Settings page of its own. What they need is a short list of configuration records and the right roles on the right people. Do these once, in this order, before anybody raises a request.

IN THIS PART YOU WILL LEARN

- The setup checklist for all seven
- How to write an approval chain
- Service categories, skills and recruitment stages
- The roles that make the service desk and line approvals work

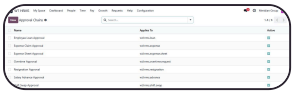

TRY IT YOURSELF ON THE DEMO

1. Open Configuration, Approval Chains and look at an existing chain's steps
2. Open Configuration, Service Categories and Skills

The checklist

WHAT	WHERE	WHY
Every employee has a manager	Employees, each employee, Manager	Approval steps by manager, and workforce structure, both walk this line
Every employee has a working schedule	Employee, Work tab	Work from home counts working days on it
Employees who raise requests have a login	Employee, Related User	Requests and acknowledgements are tied to the user
An approval chain per request type	WT HRMS, Configuration, Approval Chains	Otherwise requests wait for any HR manager
Service categories	WT HRMS, Configuration, Service Categories	Handling department and SLA hours
Skills catalogue	WT HRMS, Configuration, Skills	Programmes award and employees hold these
Recruitment stages	Employees, Recruitment, Configuration, Stages	Board columns and what each one means
Roles	Settings, Users, Access Rights	Service desk handlers need Employees: Officer; recruiters need Recruiter

Approval chains

1

Open Approval Chains

WT HRMS, Configuration, Approval Chains lists one chain per request type. The demo has chains for loans, expenses, overtime, resignations, salary advances and shift swaps, but none for work from home, travel, service requests or training, so those wait for HR.

A chain for a model that is not installed does nothing, so it is safe to set them up in any order.

2

Add a chain for each request type

Click **New**, give it a name (for example Work From Home Approval) and type the request's technical name in **Applies To**: `wt.hrms.wfh.request`, `wt.hrms.travel.request`, `wt.hrms.service.request` or `wt.hrms.training.request`. Then add steps in order. A step's approver type is **Direct Manager**, **Manager's Manager**, **HR Manager**, **Specific User** or **Security Group**. The usual pattern is Direct Manager, then a named HR user.

Applies To is plain text, so a typing mistake gives a chain that never matches anything. The approver type called HR Manager resolves to the manager of the employee's department, not to the HR team.

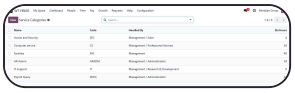

3

Know the fallback

With no chain, the default is that the request waits for any HR manager. Two system parameters in HRMS Core change this: `wt_hrms_core.approval_no_chain_policy` (pending, auto_approve, warn or strict) and `wt_hrms_core.allow_self_approval`.

Leave the default. Auto approval means an employee's own request is approved the moment they submit it.

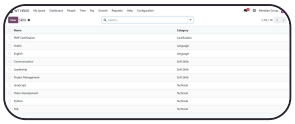

The other three lists

4

Service categories

One line per kind of request: name, short code, the department that handles it (**Handled By**), and the **SLA Hours**, 24 by default. Part 6 covers how they are used.

5

Skills

Ten skills ship with the training add-on, aimed at a software office. Replace them with your trades, licences and languages before you load anybody's levels (Part 7).

6

Recruitment stages

Six stages ship with HRMS Recruitment: Applied, Screening, Interviewing, Offer, Hired and Rejected. Rename and reorder them freely; the **Outcome** column is what the counts read (Part 12).

> The person who works service tickets, an IT lead for example, needs the **Employees: Officer** role. The Mark Resolved button is shown only to HR officers, and the access rules let the requester and the requester's own managers see a request, not the handling department. Set this before go-live.

PART 4 Work from home

WT_HRMS_WFH · USD 15 | NEEDS HRMS CORE

A day at home is a working day, so it should not use up leave or show the person as absent. This add-on keeps it as its own request, with its own approval and history, counted in real working days.

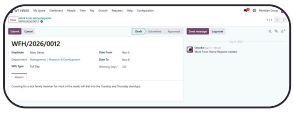

IN THIS PART YOU WILL LEARN

- Raising a full day or a half day request
- How working days are counted
- The overlap and half day rules
- Approving, rejecting, cancelling and resetting
- The list, its filters and the employee tab

TRY IT YOURSELF ON THE DEMO

1. Open Time, Work From Home and look at WFH/2026/0013, a submitted morning
2. Open WFH/2026/0010 and WFH/2026/0011: a morning and an afternoon on the same day
3. Group the list by Status

Raising a request

1

Open a new request

WT HRMS, Time, Work From Home, New, or the Work from home button in My Space. The number comes from the sequence `WFH/2026/0001` when it is saved. Pick the **Employee**; the **Department** fills itself in. Choose **Wfh Type**: Full Day or Half Day.

Employees can only raise requests for themselves; HR can raise them for anybody.

2

Set the dates and the reason

Enter **Date From** and **Date To** and write the **Reason**. **Working Days** is worked out on save: it counts working days on the employee's working schedule, or the company's if they have none. A Thursday to Monday request on a five day week is 3 days, not 5. Without any schedule it counts calendar days.

3

A half day

For Half Day, **Which Half** appears and is required: Morning or Afternoon. A half day covers one date only and always counts as 0.5 working days.

A half day spanning two dates is refused: use a full day request for a range.

4

Two halves on one day

A morning and an afternoon on the same date are allowed together: that is a full day asked for in two pieces. Any other overlap with a live request of the same employee is refused, and the message names the other request.

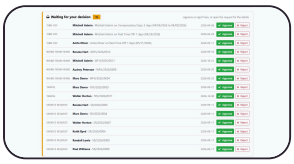

Rejected and cancelled requests are ignored, so a refused request never blocks its replacement.

5

Submit it

Click **Submit**. From now on the employee, dates, type, half and reason are read only: what the manager approves is what stays on file. The end date can never be before the start date; the database refuses it.

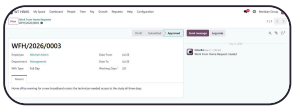

Deciding it

6

From My Space

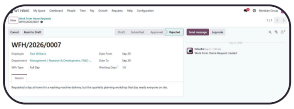

The approver named by the chain sees the request under **My Space, To Approve** and clicks **Approve** or **Reject**. The requester's manager, that manager's manager and their department head can all read it; the one the current step names decides it, without holding any HR role.

7

Approved

An approved request is green in the list and closed. It cannot be cancelled or reset afterwards.

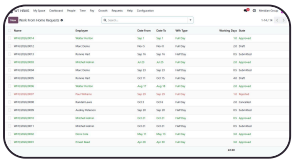

8

Rejected, cancelled, reset

HR managers also see **Approve** and **Reject** on the form. **Cancel** is available until a request is approved. A rejected or cancelled request can be put back with **Reset to Draft**, corrected and submitted again.

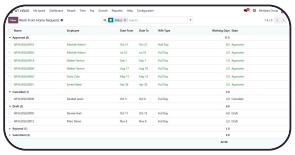

Following up

9

The list

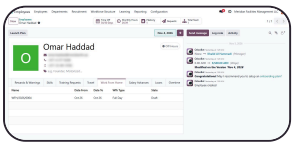

All requests with dates, type, working days and state. The working days are totalled at the bottom. Approved rows are green and rejected rows red.

10

Filters and grouping

Filters: **Approved**, **Pending** (submitted or under review), **Full Day**, **Half Day**. Group by **Employee** or **Status**; each group totals its days.

11

On the employee form

Every employee has a **Work From Home** tab listing their requests with dates, type and state.

> Approved home days are not written into attendance or the time off calendar. The empty list's help text says they show there, but the module does not do that in this version.

PART 5 Business travel

WT_HRMS_TRAVEL · USD 20 | NEEDS HRMS CORE

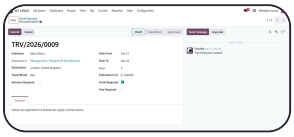

A trip involves the manager who agrees it, finance for the cash, whoever books hotels and the person who chases visas. One request with a flag for each saves the four emails, and refuses the mistakes before they reach month end.

IN THIS PART YOU WILL LEARN

- Every field on a travel request
- The cost and advance rules
- Why two trips cannot overlap
- Approval and the trip history

TRY IT YOURSELF ON THE DEMO

1. Open Requests, Travel, TRV/2026/0003: a road trip with an advance, hotel and visa
2. Group the travel list by Travel Mode

1

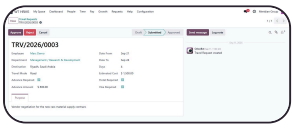

Open a new trip

WT HRMS, Requests, Travel, New. Pick the **Employee**, type the **Destination** and choose the **Travel Mode**: Air, Road, Rail or Sea. Saved requests are numbered `TRV/2026/0001`.

2

Dates and cost

Set **Date From** and **Date To**; **Days** counts them inclusive, so 21 to 24 September is 4. Enter the **Estimated Cost** in the company currency. It cannot be negative.

3

Advance, hotel and visa

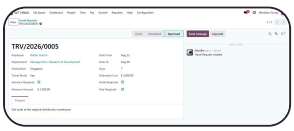

Tick **Advance Required** and the **Advance Amount** appears. Tick **Hotel Required** and **Visa Required** as needed. Write the **Purpose**, which is required, and click **Submit**. Everything is read only after that.

Refused on save: an advance with no amount, a negative advance, and an advance above the estimated cost.

4

One trip at a time

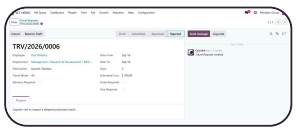

A second live trip for the same person on overlapping dates is refused. The message names the other request and its destination, so the employee knows which one to cancel or change.

5

Approved

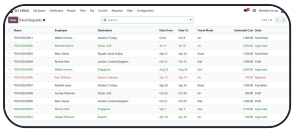

Decided the same way as work from home: from My Space by the chain's approver, or on the form by an HR manager.

6

Rejected

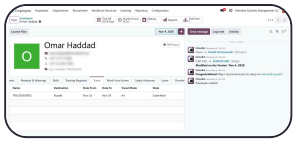

Rejected trips are red in the list. **Reset to Draft** lets the employee change and resubmit; **Cancel** is there until approval.

7

The travel list

Destination, dates, mode, estimated cost and state. Filters **Approved** and **Pending**; group by **Employee**, **Travel Mode** or **Status**.

8

On the employee form

The **Travel** tab is the person's trip history: destination, dates, mode and state.

Approval does not pay or book anything. The advance is a recorded figure: pay it as a salary advance, so payroll recovers it, or from accounting, and claim the real costs as an expense afterwards. The empty list's help text says approval releases the advance; the code does not.

PART 6 The internal service desk

WT_HRMS_SERVICE_REQUESTS · USD 20 | NEEDS HRMS CORE

IT, admin and facilities requests are work for another team, and what matters is whether that team answered in time. Each request carries a deadline from its category, a badge that says how it is doing, and a scheduled check that chases the ones that slip.

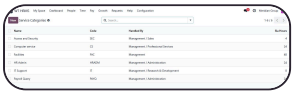

IN THIS PART YOU WILL LEARN

- Categories and SLA hours
- Raising a request and who it goes to
- The SLA states and the 30 minute check
- Resolving, reopening, rejecting and cancelling
- The desk's filters

TRY IT YOURSELF ON THE DEMO

1. Open Requests, Service Requests: it opens on open requests
2. Open SR/2026/0008: urgent, 4 hour SLA, breached
3. Open SR/2026/0011 and its Resolution tab

Categories

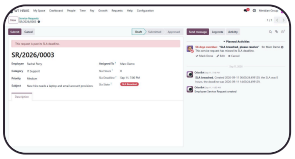

1

One line per kind of request

WT HRMS, Configuration, Service Categories: **Name**, **Code**, **Handled By** (the department that does the work) and **SLA Hours**, 24 by default. The list is edited in place. Archive a category you stop using.

Raising a request

2

Fill it in

WT HRMS, Requests, Service Requests, New. The **Employee** defaults to you. Pick the **Category**, the **Priority** (Low, Medium, High or Urgent), a **Subject** and a **Description**, then **Submit**. Numbers come from `SR/2026/0001`.

The SLA clock starts when the request is created, not when it is submitted, so a draft left unsent can already be breached, as SR/2026/0003 on the demo is.

3

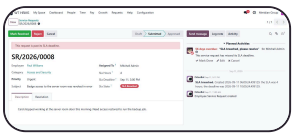

Who picks it up

If **Assigned To** is left empty, the request goes to the manager of the category's handling department. HR officers can change the assignee.

The SLA

BADGE	MEANS
On Track	Open, with more than a fifth of the SLA window left
At Risk	Open and inside the last fifth of the window; an amber banner says so on the form

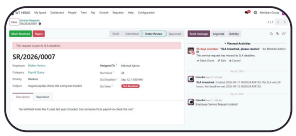

SLA Breached	Open past the deadline, or resolved after it; a red banner on open requests
SLA Met	Resolved before the deadline
No SLA	Rejected, cancelled, or a category with no hours

4

A breached request

SLA Deadline is the creation time plus the category's hours. SR/2026/0008 had 4 hours. The banner, the badge and the activity in the chatter all say it is late.

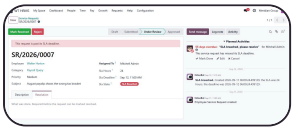

5

The 30 minute check

The scheduled action **WT HRMS Service Requests: SLA Breach Check** runs every thirty minutes. It brings every open request's badge up to the clock, and the first time a request crosses its deadline it posts *SLA breached* in the chatter with the hours and the deadline, and gives the assignee a To Do activity, *SLA breached, please resolve*. Each breach is flagged once.

Because the badge is stored and refreshed by this job, a list filtered on it can be up to thirty minutes behind.

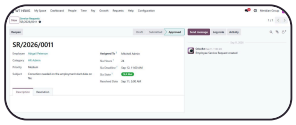

Closing it

6

Write the resolution

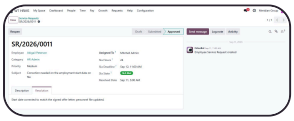

On the **Resolution** tab, write what was done. **Mark Resolved** (HR officers) is refused while it is empty.

7

Resolved

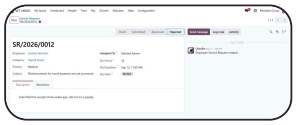

The request moves to the closed state, shown as Approved on the status bar, with the **Resolved Date**. The badge reads SLA Met or SLA Breached.

8

Reopen

If the employee says it is not fixed, **Reopen** puts it back to Submitted. The original deadline still applies; reopening does not restart the clock.

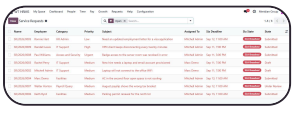

9

Reject or cancel

An HR manager can **Reject** a submitted request. The requester can **Cancel** while it is draft or submitted. Both show No SLA, because nothing was owed.

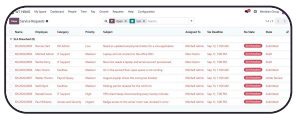

Working the desk

10

The default view

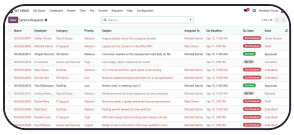

The list opens filtered on **Open** (draft, submitted, under review). Breached rows are red, at risk amber, rejected and cancelled grey.

11

Filters

My Requests, **Assigned to Me**, **Open**, **Resolved**, **SLA Breached**, **At Risk**, **Urgent**; group by **Category**, **Assignee**, **Status** or **SLA**.

12

Everything

Remove the Open filter to see the whole history, including resolved, rejected and cancelled requests.

> Mark Resolved needs Employees: Officer, and the access rules give a request to the requester and the requester's managers, not to the handling department. The auto assigned department manager therefore needs HR officer rights to see and close tickets in this version.

PART 7 Skills and skill levels

WT_HRMS_TRAINING · USD 25 | NEEDS HRMS CORE

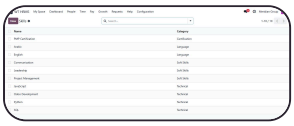

A skills matrix is only as good as its catalogue. Keep one short list everybody picks from, then give each person a level and the date it was assessed.

IN THIS PART YOU WILL LEARN

- The skills catalogue and its five categories
- The four levels
- Who can change a level

TRY IT YOURSELF ON THE DEMO

1. Open Configuration, Skills
2. Open an employee on the facility demo and click the Skills tab

1

The catalogue

WT HRMS, Configuration, Skills. Each skill has a **Name** and a **Category**: Technical, Soft Skills, Language, Certification or Other. Ten ship with the module: Python, JavaScript, SQL, Odoo Development, Project Management, Leadership, Communication, English, Arabic and PMP Certification.

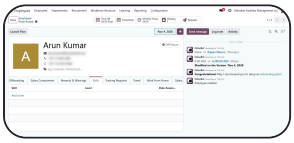

Replace them with your own: forklift licence, first aid, welding, a language, a safety induction.

2

A skill

Name, category and **Active**. Untick Active on a skill you stop using rather than deleting it, so the people who hold it keep their history. A skill that somebody holds cannot be deleted.

3

On the employee

The **Skills** tab on the employee form, edited in place: **Skill**, **Level** (Beginner, Intermediate, Advanced, Expert) and **Date Assessed**. Each person holds a skill once; to change a level, edit the existing line.

Employees can read their own skills but not edit them. HR officers and managers can.

If Odoo's own Skills app (hr_skills) is installed as well, as on the demos, the employee form has two separate skills lists. This add-on's Skills tab is the one training completion updates. The module has no grid screen of people against skills; export the skill lines for that.

PART 8 Training programmes

WT_HRMS_TRAINING

A programme is one course on one set of dates: who teaches it, where, how many seats, what it costs, and which skills it gives. It moves through five states, and completing it is what updates the skills of the people who attended.

IN THIS PART YOU WILL LEARN

- Every field on a programme
- Draft, Scheduled, In Progress, Completed, Cancelled
- Seat limits
- What Cancel does to the requests on it

TRY IT YOURSELF ON THE DEMO

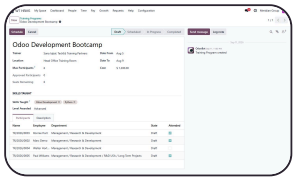

1. Open Growth, Training, Programs, Odoo Development Bootcamp
2. On the facility demo, open Working at Height, a completed programme

1

The programme list

WT HRMS, Growth, Training, Programs: trainer, dates, approved participants, the limit, seats left and state. Show the optional **Cost** column and the list totals it. Filters **Scheduled**, **In Progress**, **Completed**, **Full**; group by Status.

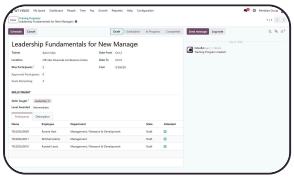

2

Set up a programme

New: **Name**, **Trainer** (a name, which can be an outside company), **Location**, **Date From** and **Date To**, **Max Participants** (0 means no limit) and **Cost** in the company currency. Under **Skills Taught** pick the skills it gives and the **Level Awarded**.

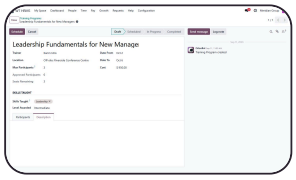

The end date cannot be before the start, and the limit cannot be negative.

3

Seats

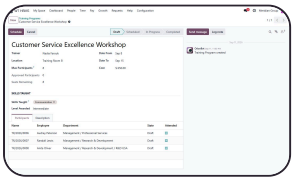

Approved Participants counts approved requests; **Seats Remaining** shows what is left when there is a limit. When the programme is full a warning appears on the form and further approvals are refused. The limit cannot be lowered below the number already approved.

4

Description

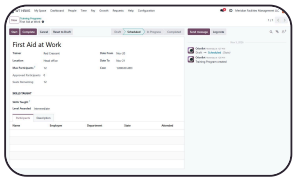

The **Description** tab holds the course outline, the agenda, or what to bring.

5

Schedule it

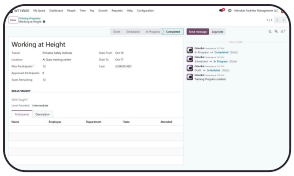

Schedule (HR officers) moves a draft to Scheduled; it needs a start date. Employees can ask for a place while the programme is a draft or scheduled.

6

Start it

On the first day, **Start** moves it to In Progress. It then drops out of the programme choice on new requests.

7

Completed

Complete closes it and awards the skills (Part 9). A completed or cancelled programme is locked: trainer, dates, seats, cost and skills become read only.

8

Cancelled and reset

Cancel (HR managers) asks for confirmation, then cancels every live request on the programme and posts a note in each one saying why. **Reset to Draft** works on a scheduled or cancelled programme.

PART 9 Training requests and completion

`WT_HRMS_TRAINING`

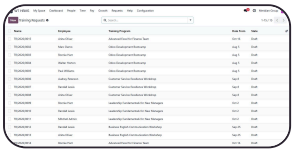

A place on a programme is asked for with a training request, which goes through the training approval chain. After the course, ticking who attended and clicking Complete writes the skills onto each of them.

IN THIS PART YOU WILL LEARN

- Raising a training request
- The three rules that guard a programme
- Attendance
- What Complete does

TRY IT YOURSELF ON THE DEMO

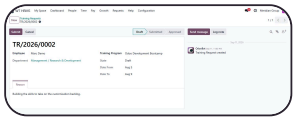

1. Open Growth, Training, Training Requests and group by Program
2. Open TR/2026/0004: a request not marked as attended

1

The request list

WT HRMS, Growth, Training, Training Requests: number (`TR/2026/0001`), employee, programme, start date and state. Filters **Approved**, **Pending**, **My Requests**; group by **Employee**, **Program** or **Status**.

2

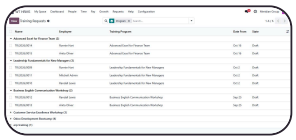

Raise a request

New or the Training button in My Space. The employee defaults to you. Pick the **Training Program** (only draft and scheduled ones are offered); its state and dates show beside it. Write the **Reason** and **Submit**.

3

The rules

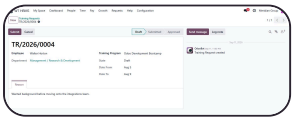

One live request per person per programme: a second one is refused and names the first. Submitting for a completed or cancelled programme is refused. Approval is refused when the programme is full, with the message *Training program ... is full.*

4

Who is booked on what

Grouped by programme, the list shows each course's requests together.

5

Attendance

Each request has an **Attended** tick, on by default. On the programme's **Participants** tab HR unticks anybody who did not turn up, before completing.

6

On the employee

The **Training Requests** tab on the employee form lists the person's requests with programme and state.

HOW IT WORKS

What Complete does

Clicking **Complete** on a scheduled or in progress programme asks for confirmation, then, for every **approved** participant still marked as **attended**, and for every skill taught:

- a skill they did not have is added at the level awarded, dated today;
- a skill they had at a lower level is raised to the level awarded;
- a skill held at that level or higher is left alone.

The programme's chatter then says how many skill lines were created or raised across how many people.

PART 10 Rewards, warnings and disciplinary

WT_HRMS_REWARDS · USD 15 | NEEDS HRMS CORE

One register for recognition and discipline. Every warning knows how many live warnings the person already had, lapses after twelve months, and is acknowledged by the employee themselves.

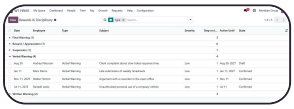

IN THIS PART YOU WILL LEARN

- The six record types and their severity
- The ladder: Active Until, Prior Active Warnings, Step
- Confirm, Acknowledge, Reset to Draft
- Acknowledging for a person with no login
- Who sees what

TRY IT YOURSELF ON THE DEMO

1. Open People, Rewards & Disciplinary with the Active Warnings filter
2. Open Marc Demo's final warning and its Prior Warnings tab

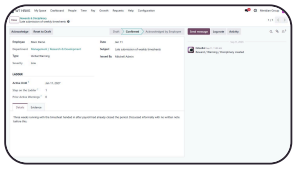

TYPE	SEVERITY	COUNTS ON THE LADDER
Reward / Appreciation	Low	No
Verbal Warning	Low	Yes
Written Warning	Medium	Yes
Final Warning	High	Yes
Suspension	High	Yes
Termination	Critical	Yes

1

The register

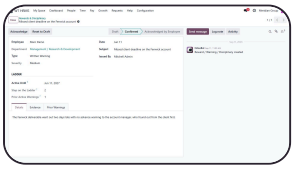

WT HRMS, People, Rewards & Disciplinary, here grouped by type. Rewards are green, high and critical records red. Columns: date, employee, type, subject, severity, step on the ladder, active until, state.

2

Record it

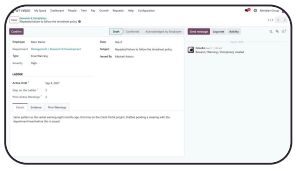

New: **Employee** (department fills in), **Type** (severity follows it), **Date**, **Subject**, **Issued By**. Write the full account on **Details** and attach emails, photos or a signed letter on **Evidence**. It is saved as a **Draft**, which the employee cannot see.

3

The ladder

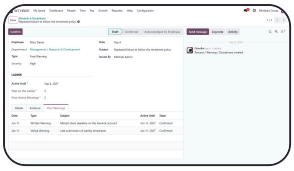

Active Until is twelve months after the date, and can be edited. **Prior Active Warnings** counts the confirmed or acknowledged warnings still active on this warning's date; **Step on the Ladder** is that plus one. This written warning is step 2.

4

A third step

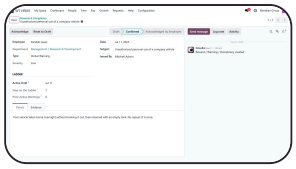

Marc Demo's final warning, still a draft, is step 3 with 2 prior active warnings.

5

Prior Warnings tab

The earlier warnings that were live on the day are listed on the record, visible to HR officers.

6

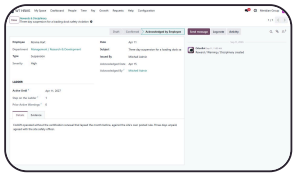

A lapsed warning

Randall Lewis's verbal warning passed its Active Until date. It stays on file but no longer counts and is not a prior warning for anything later.

7

Confirm

Confirm (HR managers) issues the record. The employee can now see it. For a second or later step a note is posted: *Step 2 on the ladder: ... already carried 1 active warning(s)*. **Reset to Draft** (HR managers) takes back a confirmed record issued by mistake.

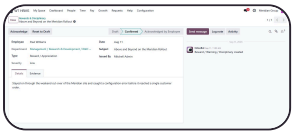

8

Acknowledge

Acknowledge can only be clicked by the employee named on it; anyone else is refused. It records the date and who clicked. For a person with no login an HR manager may record it, and the chatter says it was recorded on their behalf.

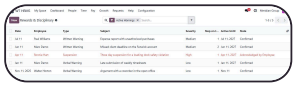

An acknowledged record cannot be reset.

9

Rewards

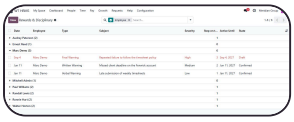

Rewards use the same draft, confirmed, acknowledged steps but have no ladder and no active until date.

10

Active Warnings

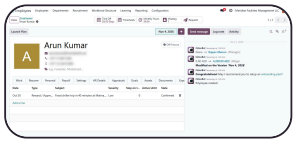

Filters: **Rewards**, **Warnings**, **Active Warnings**, **My Records**, **Awaiting Acknowledgement**; group by **Employee** or **Type**.

11

One person's history

Grouped by employee, Marc Demo's verbal, written and final warnings sit together.

12

On the employee

HR officers see a **Rewards & Warnings** tab on the employee form. The employee also carries reward, warning and Active Warnings counts.

Employees see their own records once confirmed, through the menu with My Records; never drafts and never other people's. HR sees its own company's records. The module prints no letter and has no pay effect: use the warning letter template of the HR Letter Generator, and put unpaid days through leave or payroll.

PART 11 Workforce structure

WT_HRMS_WORKFORCE_STRUCTURE · USD 25 | NEEDS EMPLOYEES ONLY

Odoo draws the org chart. This add-on counts it: total team, management level, span of control, the people with no manager, and a guard against reporting lines that loop.

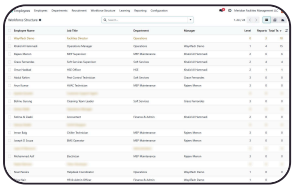

IN THIS PART YOU WILL LEARN

- The six figures it adds
- The structure list, pivot and graph
- The Total Team button
- The two lists to keep empty

TRY IT YOURSELF ON THE DEMO

1. On the facility demo, open Employees, Workforce Structure, Structure and Team Sizes
2. Switch to the pivot view
3. Open Khalid Al Hammadi and click Total Team

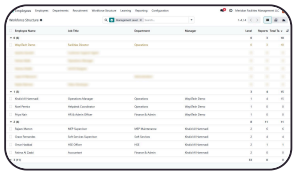

FIELD	MEANING
Direct Reports	People who report to this employee directly
Total Team	Everybody below them, every level, each counted once
Level	Managers between them and the top; 0 means no manager
Manages People	Anybody reports to them
No Manager Set	No manager recorded
Reporting Line Loops	Following their managers upwards comes back to them

1

Structure and Team Sizes

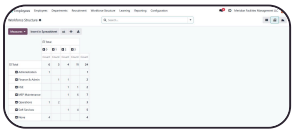

Biggest team first. Amber rows have no manager, red rows are in a loop, and managers with more than eight direct reports are highlighted. The director has 3 direct reports and 18 people in total.

2

Group by level

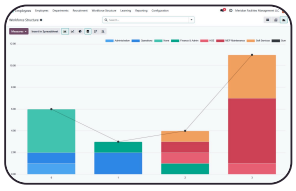

Filters: **No Manager Set**, **Reporting Line Loops**, **Managers**, **Individual Contributors**, **More Than 8 Direct Reports**, **Only One Direct Report**, **Four Or More Levels Down**. Group by **Management Level**, **Department** or **Manager**.

3

Department by level

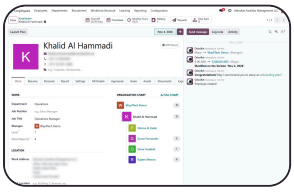

The pivot puts departments down the side and levels across, with a headcount in each cell.

4

Headcount by level

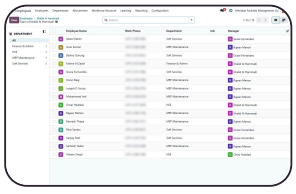

The bar graph shows headcount per level, stacked by department.

5

On the employee form

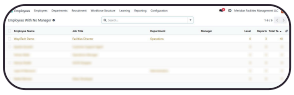

Level and **Direct Reports** sit under the Manager field, and a manager gets a **Total Team** smart button.

6

Total Team

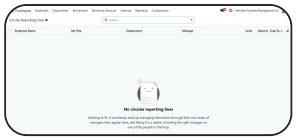

The button opens everybody in the branch, at every level: 15 people under the operations manager.

7

Employees With No Manager

Everybody without a manager. Each one falls out of approval chains that start at the direct manager, so their requests wait for HR. Only the top person should be here.

8

Circular Reporting Lines

Standard Odoo lets a loop save. With this add-on, setting a manager that would make the line circular is refused with a message naming the employee. This list finds loops that existed before the module was installed.

PART 12 Recruitment: stages, roles and vacancies

WT_HRMS_RECRUITMENT · USD 39 | NEEDS EMPLOYEES AND HRMS CORE

HRMS Recruitment is a self-contained hiring pipeline under the Employees app: vacancies, a candidate board, scored interviews and offers that become employee records. It is separate from Odoo's own Recruitment app and changes nothing in it.

IN THIS PART YOU WILL LEARN

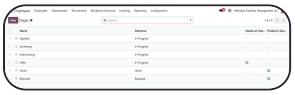

- When to use it rather than Odoo Recruitment
- Stages and outcomes
- Interviewer and Recruiter
- Vacancies

TRY IT YOURSELF ON THE DEMO

1. On the facility demo, open Employees, Recruitment, Configuration, Stages
2. Open Vacancies, New, look, then Discard

The facility demo has the module installed but no vacancies or candidates yet, so the screens in Parts 12 to 14 are blank forms and Odoo's sample views. The descriptions come from the module itself.

USE	WHEN
HRMS Recruitment	An internal pipeline: vacancies with openings and a target date, scored interviews, an offer with approval that creates the employee
Odoo Recruitment with Recruitment Plus	A public careers page, applications from the website, and an offer the candidate accepts online (covered in the main HRMS guide)

1

Stages

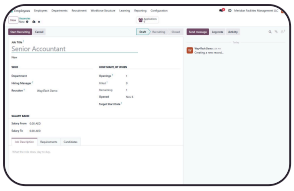

Configuration, Stages, edited in place and ordered by dragging. Each stage has an **Outcome** (In Progress, Hired, Rejected), **Needs an Interview First**, and **Folded in Kanban**. Only one Hired and one Rejected stage per company; two stages cannot share a name.

Offer ships with Needs an Interview First ticked: nobody reaches it without a completed, scored interview.

2

Roles

Under a user's access rights, **Recruitment** has two levels. **Interviewer** reads vacancies, candidates and offers and fills in interview scorecards. **Recruiter** does everything and sees Offers, Reporting and Configuration. The user who installs the module becomes a Recruiter.

3

A vacancy

Vacancies, New: Job Title, **Department**, **Hiring Manager** (the new starter's manager), **Recruiter**, **Openings**, **Target Start Date**, **Salary From** and **Salary To**, and the Job Description, Requirements and Candidates tabs. Numbers come from `JOB/2026/0001`. Filled, Remaining, Applications and In Progress count themselves.

Refused: a salary band that ends below where it starts, and openings below one.

4

Its states

Start Recruiting (Draft to Recruiting), **Put On Hold**, **Resume**, **Close**, **Cancel**, **Back to Draft**. A closed vacancy cannot reopen; duplicate it to hire again. Open vacancies past their target date are flagged. Filters: Recruiting, On Hold, Past Target Date, Still Has Openings, Archived; group by Department, Status, Recruiter. The **Applications** smart button opens its candidates.

Two gaps against the listing. It says the module installs on its own, but it also adds a Recruitment entry under the WT HRMS menu, which needs HRMS Core in the database. And the Openings help says a vacancy closes itself when enough people are hired; in this version Remaining reaches zero but the vacancy stays open until somebody closes it.

PART 13 Recruitment: candidates and interviews

WT_HRMS_RECRUITMENT

Candidates move across a board, one column per stage. Interviews carry a scorecard, and the module will not let an interview be marked done without a score and a recommendation.

IN THIS PART YOU WILL LEARN

- The candidate record and the board
- Duplicate and interview guards
- Scheduling and scoring interviews

TRY IT YOURSELF ON THE DEMO

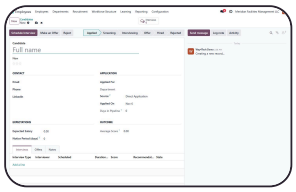

1. Open Recruitment, Candidates
2. Open Interviews in calendar view

1

The board

Recruitment, Candidates opens on In Progress candidates, one column per stage, every column shown even when empty. Hired and Rejected are folded. Also list, graph and pivot views.

2

A candidate

Name, evaluation stars, **Email**, **Phone**, **LinkedIn**, **Applied For**, **Source** (Direct Application, Employee Referral with **Referred By**, LinkedIn, Agency, Job Board, Other), **Applied On**, **Days in Pipeline**, **Expected Salary**, **Notice Period**, **Average Score**, and tabs Interviews, Offers, Notes and, once rejected, Rejection. Numbers come from `CAND/2026/00001`.

The same email cannot apply twice for one vacancy.

3

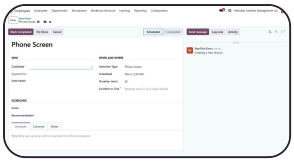

Moving and rejecting

Click a stage on the status bar or drag the card. A stage that needs an interview refuses a candidate with no completed interview. **Reject** asks for confirmation and moves them to the Rejected stage; a red ribbon shows on the form, a green one on hired candidates.

4

Finding candidates

Filters: **In Progress**, **Hired**, **Rejected**, **Waiting Over 30 Days**, **Employee Referrals**, **Archived**; group by Stage, Vacancy, Department, Source, Applied On.

5

Schedule an interview

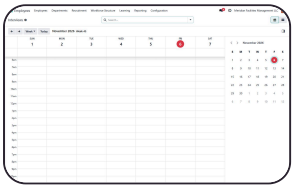

Schedule Interview on the candidate opens the form: **Interview Type** (Phone Screen, Technical, HR, Hiring Manager, Panel, Final), **Interviewer**, **Scheduled**, **Duration** (45 minutes by default) and **Location or Link**.

An interviewer cannot be booked into two interviews that overlap.

6

Score it

Afterwards the interviewer fills the **Scorecard**: **Score** 1 Strong No to 5 Strong Yes, **Recommendation** Advance, Hold or Reject, and the Strengths, Concerns and Notes tabs. **Mark Completed** is refused without a score and a recommendation. **No Show**, **Cancel** and **Reschedule** cover the rest. The candidate's Average Score is the mean of completed, scored interviews.

7

The interview calendar

Recruitment, Interviews opens as a calendar. Filters: My Interviews, Scheduled, Completed, **Waiting For A Score**, Scheduled Date; group by Interviewer, Candidate, Type, Status.

PART 14 Recruitment: offers and the hire

WT_HRMS_RECRUITMENT

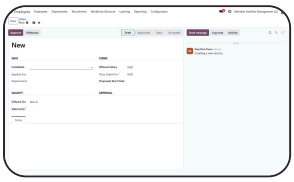

An offer records what was offered against what was asked for, who approved it, and how long it stands. Marking it accepted creates the employee record from the candidate.

IN THIS PART YOU WILL LEARN

- The offer and its seven states
- What the daily job does
- What the new employee record holds
- The hiring funnel

TRY IT YOURSELF ON THE DEMO

1. Open Recruitment, Offers, New and look at the fields, then Discard
2. Open Reporting, Hiring Funnel

1

Make an offer

Make an Offer on an open candidate (or Offers, New): **Candidate**, the vacancy and department, **Offered Salary** (starts at the expected salary), **They Asked For** beside it, **Proposed Start Date**, **Offered On** and **Valid Until**. Numbers come from `OFR/2026/0001`.

Refused: a start date or expiry before the offer date, and a second live offer for the same candidate.

2

Its states

Approve (records who and when), **Mark Sent**, then **Accepted** or **Declined**. **Withdraw** works until there is an answer. A declined offer shows a **Why It Was Declined** tab.

3

Expiry

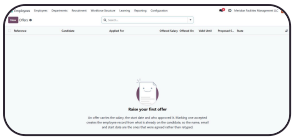

The scheduled action **Recruitment: lapse expired offers** runs daily and marks approved or sent offers past Valid Until as **Expired**.

4

The hire

Accepted asks for confirmation, then creates the employee with the candidate's name, email and phone as work contacts, the department, the hiring manager as manager, the job title and the company. The candidate moves to the Hired stage and the offer gets an **Employee** smart button.

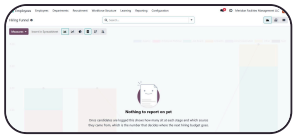

The offered salary and start date stay on the offer; enter them on the employee's contract.

5

The offers list

Filters: **Live Offers**, **Accepted**, **Declined or Expired**, **Waiting For Approval**, Offered On, Start Date; group by Status, Vacancy, Department.

6

Hiring Funnel

Reporting, Hiring Funnel (Recruiters) shows candidates by stage and source as a graph, pivot or list.

Any Recruiter can approve an offer, including their own; there is no separate approver role. The module sends no emails to candidates and has no careers page.

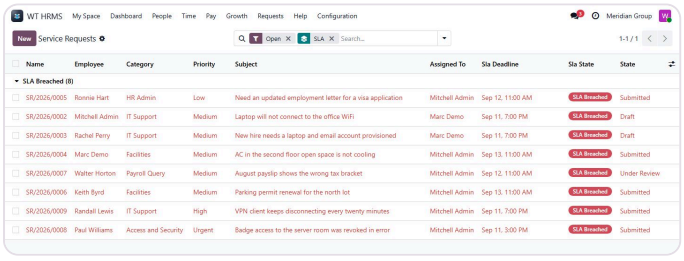

PART 15 Lists, reports and scheduled jobs

None of the seven add-ons prints a document. Their reporting is lists with totals, groupings, pivots and graphs, all exportable from the list's gear menu, plus two scheduled jobs.

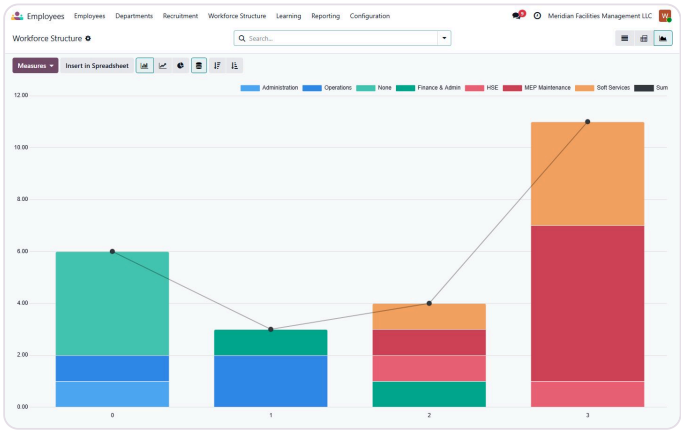

QUESTION	WHERE
Who works from home most, and how many days	Time, Work From Home, group by Employee (working days totalled)
Trips by mode or person	Requests, Travel, group by Travel Mode or Employee
Which tickets are late	Requests, Service Requests, SLA Breached; group by SLA or Assignee
What training cost this quarter	Growth, Training, Programs, show the Cost column (totalled)
Who is booked on which course	Training Requests, group by Program
Who is on the disciplinary ladder	People, Rewards & Disciplinary, Active Warnings
Headcount by department and level	Employees, Workforce Structure, pivot or graph
Where hires come from	Employees, Recruitment, Reporting, Hiring Funnel

Scheduled jobs

JOB	RUNS	DOES
WT HRMS Service Requests: SLA Breach Check	Every 30 minutes	Refreshes SLA badges; posts a note and a To Do on the assignee for each new breach
Recruitment: lapse expired offers	Daily	Marks approved or sent offers past Valid Until as Expired

Service requests grouped by SLA

Headcount by level

PART 16 A fifteen minute walk-through

With both demos open and fifteen minutes, this path shows all seven add-ons. It is also the order to show them to somebody else in.

#	DO THIS	AND NOTICE
1	HRMS demo, My Space	*Work from home, travel and service requests waiting next to time off, each with Approve and Reject.*
2	Time, Work From Home, WFH/2026/0010 and 0011	*A morning and an afternoon on the same day, 0.5 working days each.*
3	Requests, Travel, TRV/2026/0003	*Four days by road, 1,500 estimated, an 800 advance, hotel and visa flagged.*
4	Requests, Service Requests, SR/2026/0008	*Urgent, a 4 hour SLA, the red banner and the To Do on the assignee.*
5	Configuration, Service Categories	*Who handles each kind of request and in how many hours.*
6	Growth, Training, Programs, Odoo Development Bootcamp	*Six seats, two skills taught at Advanced, one person not marked as attended.*
7	People, Rewards & Disciplinary, Active Warnings	*Five live warnings; open the final warning to see step 3 and its prior warnings.*
8	Facility demo, Employees, Workforce Structure	*The director runs 18 people through 3 direct reports. Switch to the pivot.*
9	Employees With No Manager	*The people whose requests would wait for HR.*
10	Recruitment, Candidates, then Configuration, Stages	*The board by stage, and Offer needing a scored interview first.*

PART 17 Questions people ask

The short answers.

QUESTION	ANSWER
Do these need Odoo Enterprise?	No. All seven run on Odoo 19 Community.
Can I buy only one?	Yes. Each is on the Odoo Apps Store on its own, and all seven are in the WT HRMS Suite.
Do line managers need an HR role to approve?	No. Whoever the chain step names, the direct manager, the manager's manager or the department head, decides from My Space.
What if no approval chain is set up?	The request waits for any HR manager. Nobody can approve their own.
Does work from home show in attendance?	No. It is a request with its own history; attendance and the time off calendar are not changed.
Does an approved trip pay the advance?	No. Pay it as a salary advance or from accounting.
When does the SLA clock start?	When the request is created, and reopening does not restart it.
Who can resolve a service request?	Users with Employees: Officer rights, with a resolution note written.
How are skills updated after a course?	Complete the programme: every approved participant marked as attended gets the skills at the level awarded, unless they already hold a higher one.
How long does a warning count?	Twelve months from its date unless Active Until is changed.
Can HR acknowledge for an employee?	Only when the employee has no login, and the record says so.
Does Workforce Structure draw an org chart?	No. Odoo Community already does; this adds the counts and the loop guard.
Does an accepted offer set the salary?	No. It creates the employee with contacts, department, manager and job title; set the wage on the contract.
Which recruitment module should I use?	HRMS Recruitment for an internal pipeline; Odoo Recruitment with Recruitment Plus for a careers page and online acceptance.

PART 18

The menu map

Every screen of the seven add-ons, on one page.

WT HRMS, My Space

Overview	Your requests and the new request shortcuts
To Approve	Every request waiting for your decision

WT HRMS, People

Rewards & Disciplinary	Rewards, warnings, suspensions, the ladder

WT HRMS, Time

Work From Home	Full and half day requests, working days

WT HRMS, Growth

Training, Training Requests	A place on a programme, with approval
Training, Programs	Trainer, dates, seats, cost, skills taught

WT HRMS, Requests

Travel	Trips with advance, hotel and visa flags
Service Requests	IT, admin and facilities desk with SLA

WT HRMS, Configuration

Approval Chains	Who decides each request type (HRMS Core)
Skills	The skills catalogue
Service Categories	Handling department and SLA hours

Employees, Workforce Structure

Structure and Team Sizes	Level, direct reports, total team; pivot and graph
Employees With No Manager	Who falls out of approval chains
Circular Reporting Lines	Managers that loop back

Employees, Recruitment

Candidates	The board by stage, interviews, offers
Vacancies	Openings, target date, salary band
Interviews	Calendar and scorecards
Offers (Recruiter)	Approve, send, accept, decline
Reporting, Hiring Funnel	Candidates by stage and source
Configuration, Stages	The board columns and their outcome

On the employee form

Tabs	Work From Home, Travel, Skills, Training Requests, Rewards & Warnings
Fields	Level, Direct Reports; Total Team smart button

Want these set up for your company?

We write the approval chains with you, load your skills and service categories, set the roles so line managers and the service desk can act, and train HR, managers and staff. The add-ons run on their own with the free HRMS Core or inside the full WT HRMS Suite, on Odoo 19 Community.
