COMPLETE GUIDE · THE TRADE, SETUP AND EVERY SCREEN

Laundry Management for Odoo 19

Dry cleaning and laundry run piece by piece: a tag on every garment, damage recorded at the counter, the plant board, racks, express work, hotel and office contracts, collection routes, claims and the monthly invoice. Every screen and every step, shown on a live demo. No Odoo background needed.

START

About this guide

A dry cleaner does not sell a service so much as borrow a customer's clothes and promise to give every piece back, clean, on time and undamaged. Everything in this module follows from that promise. This guide walks it from the counter to the plant, the rack, the van and the invoice, one screen at a time. You do not need to have used Odoo before.

Who it is for

The owner or manager setting the shop up, the counter staff who take orders in and hand them back, the plant supervisor, the drivers, and anyone being shown the system for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and a short thing to try on the live demo, then walks every field and every button.

The live demo

Linenleaf Laundry Services LLC, an invented dry cleaner in Dubai with a plant, two counters and a locker point, five account customers and three months of history. Open it and follow along.

HOW IT WORKS

The demo shop

Address	**laundry-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Business	Linenleaf Laundry Services LLC · plant and shop in Al Barsha, counters in JLT and Dubai Marina, a locker point in Business Bay
Runs on	Odoo 19, Community edition, with Invoicing
Currency	UAE dirham (AED), 5% VAT on every service

Every company, person and number on the demo is invented. The demo is shared and may be reset, so anything you change may be changed back or seen by the next person. Treat it as a shop to walk around, not your own records.

What is in the guide

PART 1 How a laundry is run

PART 2 The map: menus and who uses them

PART 3 Signing in

PART 4 Setting up from zero

PART 5 Account contracts: hotels, offices and households

PART 6 Taking an order in at the counter

PART 7 The plant board

PART 8 Ready, racked and handed over

PART 9 Billing: one order, or one invoice a month

PART 10 Collection and delivery: drivers, routes and jobs

PART 11 Damage and loss claims

PART 12 Reporting: revenue, turnaround and rework

PART 13 Printed documents and emails

PART 14 Users, roles and several branches

PART 15 A fifteen minute walk-through

PART 16 The menu map

PART 1 How a laundry is run

Five minutes on the trade, so the screens make sense. A laundry looks like a shop at the front and a small factory at the back, and most of the arguments happen at the join between the two.

IN THIS PART YOU WILL LEARN

- Why a ticket that says 5 shirts is not enough
- The stages a piece passes through in the plant
- How the trade prices: per piece, per kilo, per square metre
- Walk-in customers against hotel and corporate accounts
- Where the money leaks: rework, claims and work nobody collects

The piece, not the ticket

Most shops still write "5 shirts, 2 trousers" on a paper ticket. The trouble starts at collection when there are four shirts on the hanger, or one has a mark the customer swears was not there. So the module keeps a record for every physical piece, each with its own tag number and barcode, its colour, fabric and brand, and the damage that was already on it when it came in. That last field is the one that settles the argument.

Through the plant

A piece moves through a fixed run of stages. The module ships eight, and you can rename or reorder them:

The plant stages

Anything that fails the quality check goes back through with a reason. Rework is the cost a plant manager most wants to see and the one a paper system never records.

How the trade prices

BASIS	EXAMPLE	IN THE MODULE
Per piece	Shirt dry cleaned, AED 12	Per Piece: quantity × price
Per kilo	Wash and fold bag, AED 14 a kilo	Per Kilo: the weight on the scales × price
Per square metre	Curtains, rugs	Per Square Metre (see the note in Part 4)
Flat fee	A fixed charge per line	Flat Fee: one unit whatever the quantity

On top of the base price sit an **express surcharge** for same day work, a **discount** with a reason, and a **deposit** taken at the counter.

Walk-ins and accounts

A walk-in customer pays the counter price, usually at the counter. A hotel, a clinic or an office has a **contract**: its own rate card, sometimes a headline discount, and one invoice a month instead of a ticket at a time. Contract work is often collected and delivered by van, which is where routes and drivers come in.

Where the money leaks

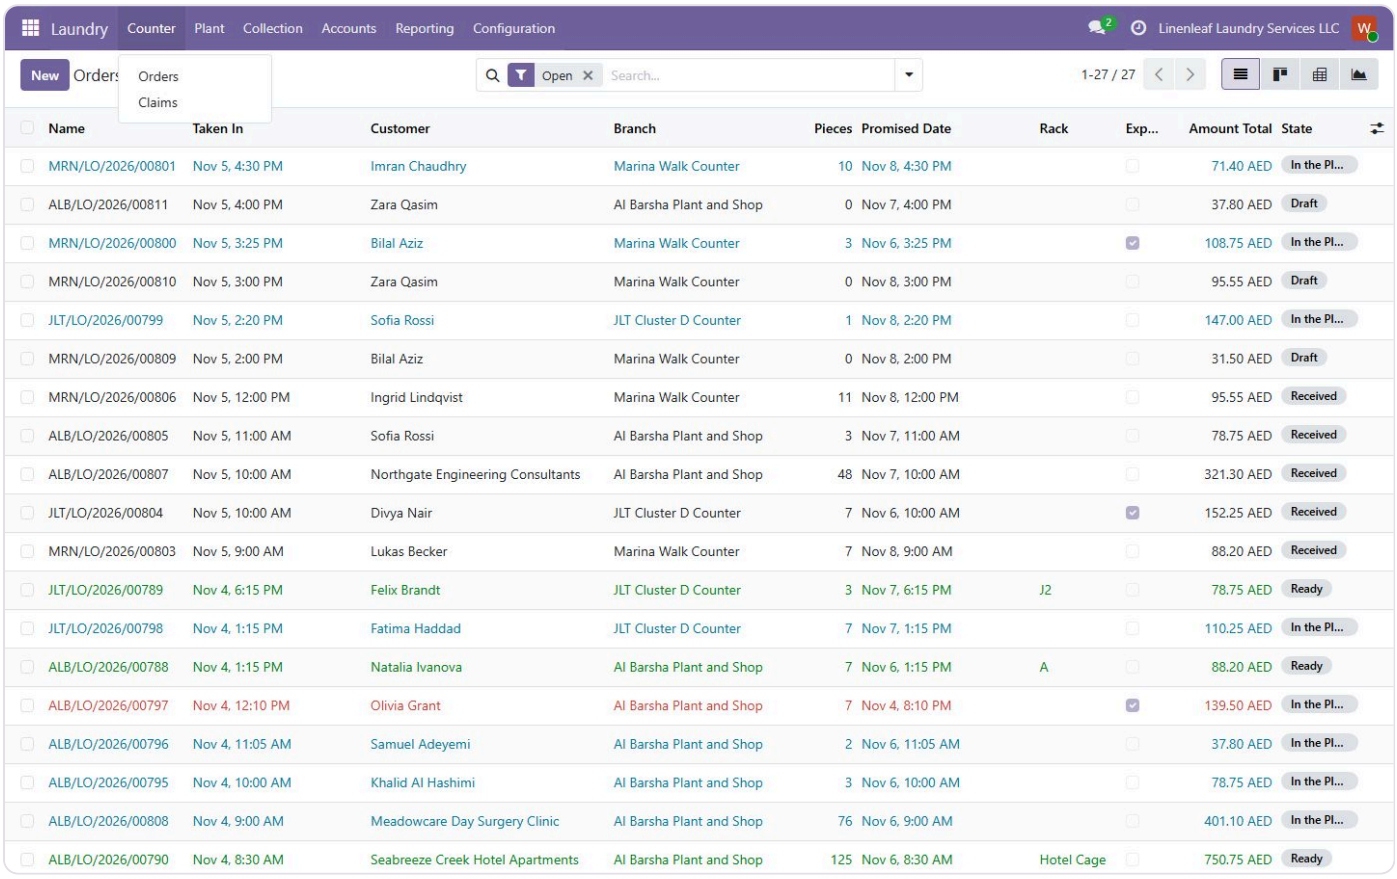

Four places: pieces that go back through the plant, damage and loss claims, orders that sit on the rack for weeks, and work that is collected and never billed. Each has its own screen in the module.

PART 2 The map: menus and who uses them

The module adds one app, Laundry, with six menus. Who sees which menu depends on their role, so a plant operator never sees a price and a driver sees only his own runs.

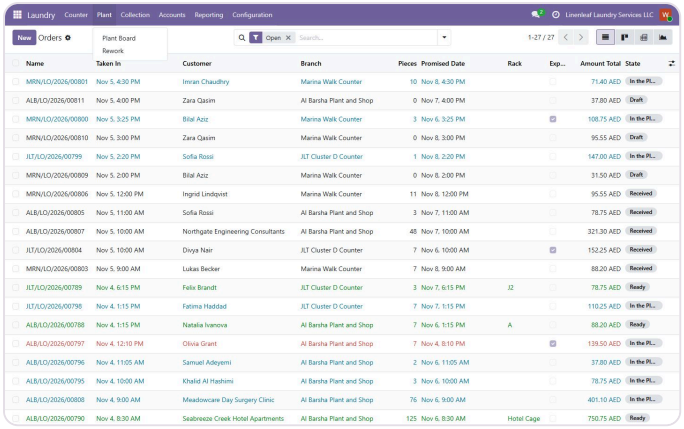

IN THIS PART YOU WILL LEARN

- The six menus and what sits under each
- The four roles and what each one can do

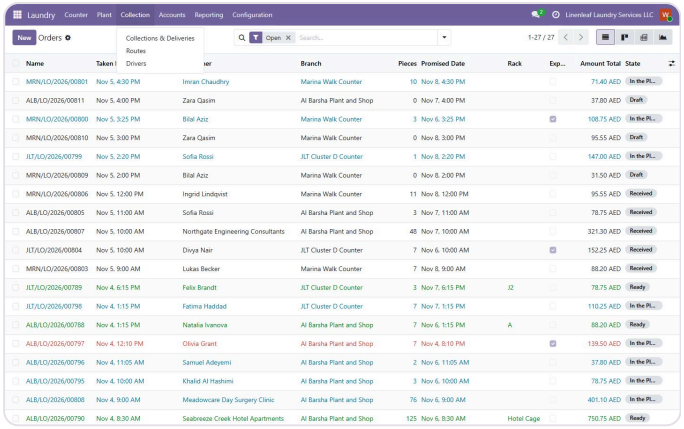

The Laundry app. Counter holds Orders and Claims.

MENU	SCREENS	USED BY
Counter	Orders, Claims	Counter staff (Orders also for operators)
Plant	Plant Board, Rework	Plant operators
Collection	Collections & Deliveries, Routes, Drivers	Counter staff, drivers
Accounts	Contracts	Counter staff and managers
Reporting	Revenue and Turnaround	Managers
Configuration	Settings, Branches, Services, Garment Types, Rate Card, Plant Stages, Racks	Managers (Settings: administrators)

Plant: the board and the rework list.

Collection: jobs, routes and drivers.

The four roles

ROLE	CAN DO	CANNOT
Driver	See and work his own routes and jobs	See other drivers' runs, orders or prices
Plant Operator	Move pieces through the stages, rack finished orders, see orders	Claims, contracts, pricing set up
Counter Staff	Everything an operator does, plus take orders in, price them, hand back, invoice, claims, contracts, all jobs and routes	Configuration and reports
Laundry Manager	Everything: branches, rate cards, stages, racks, contracts, claims and reporting	

The roles build on each other: Counter Staff includes Plant Operator, and Laundry Manager includes Counter Staff and Driver. The demo login has the manager role, so every menu in this guide is open to it except Settings, which needs an administrator.

PART 3 Signing in

The demo runs in any browser. Nothing to install.

TRY IT YOURSELF ON THE DEMO

1. Open laundry-demo.way4tech.com
2. Sign in as w4demo with the password Demo2026
3. Click the grid icon at the top left and open Laundry

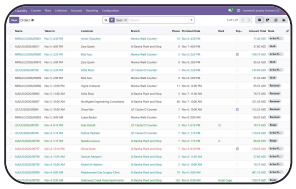

1

Open the sign in page

Go to **laundry-demo.way4tech.com**. Type the login and password and press **Log in**.

There is no sign up link on the demo: public sign up is switched off.

2

Open Laundry, Counter, Orders

Odoo opens on the order list, filtered to **Open** orders: everything from a draft at the counter to an order waiting on the rack.

The purple bar across the top holds the six menus from Part 2.

PART 4 Setting up from zero

Before the first order goes in, the shop needs its branches, racks, services, garment types, plant stages and a rate card. On the demo all of this is done. This part shows what each screen holds and the order to fill them in on a new database.

IN THIS PART YOU WILL LEARN

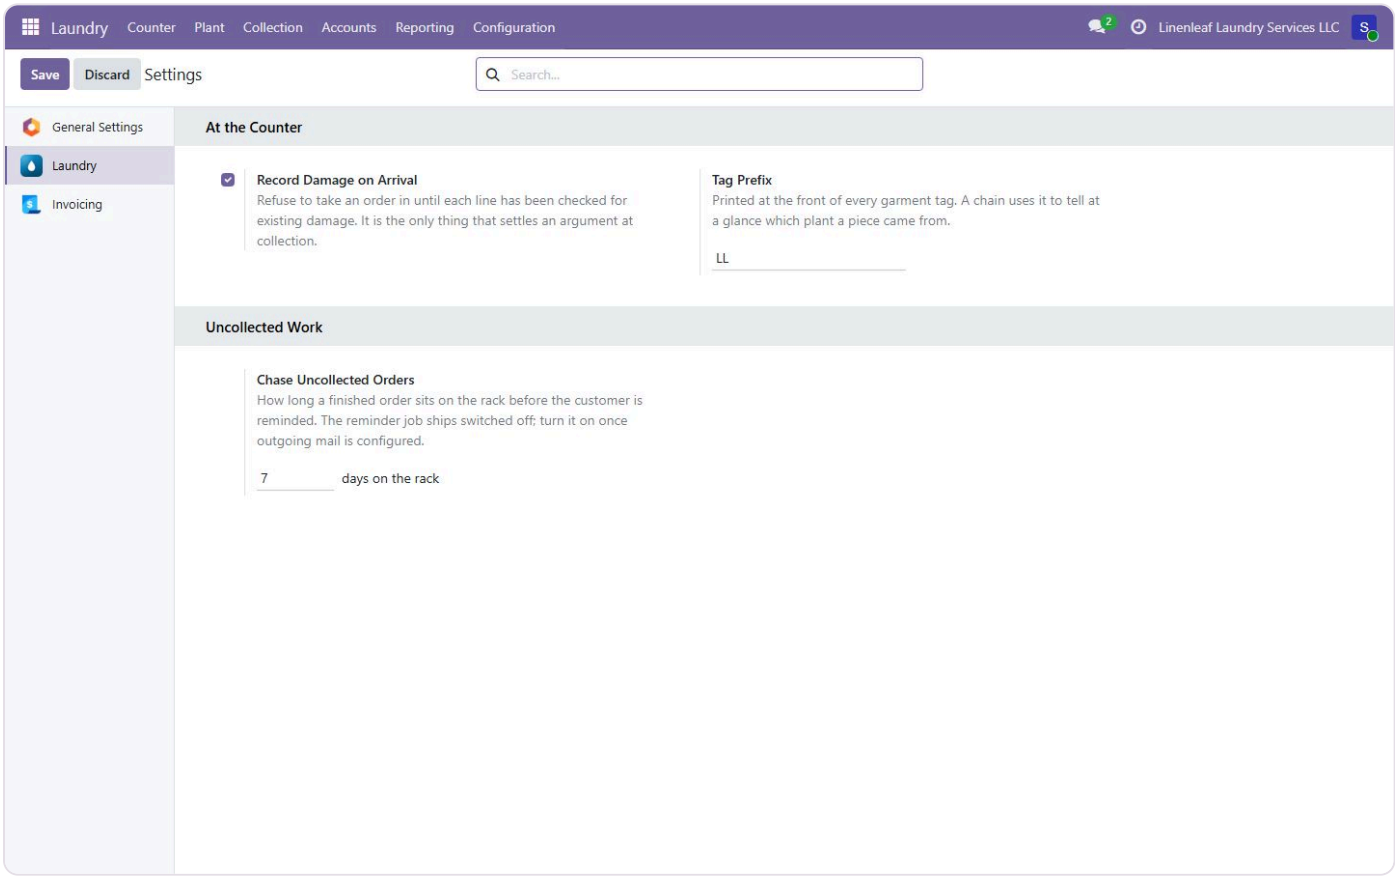

- The three company settings
- Branches, plants, collection points and their racks
- Services, how they are charged and the product behind each
- Garment types, the rate card and plant stages

TRY IT YOURSELF ON THE DEMO

1. Configuration, Branches: open Al Barsha Plant and Shop and read the Racks tab
2. Configuration, Rate Card: group by Service
3. Configuration, Services: open Curtain and Rug Cleaning

1. The settings

Configuration, Settings (administrators only) has a Laundry section with three settings, all per company.

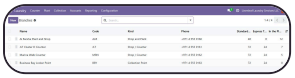

The Laundry section of Settings.

SETTING	DEFAULT	WHAT IT DOES
Record Damage on Arrival	On	Take In is refused until every line is ticked Checked at the Counter.
Tag Prefix	T	Printed at the front of every garment tag. The demo uses LL, so tags read LL2026...
Chase Uncollected Orders	7 days	How long a ready order sits before the reminder job emails the customer.

2. Branches and racks

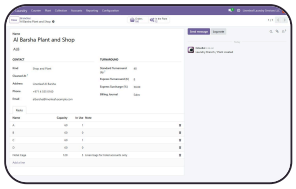

A **branch** is any place that takes orders in or cleans them. Its **code** goes at the front of every order number, so ALB/LO/2026/00797 was taken in at Al Barsha. The **kind** says what the branch does: Shop / Counter, Plant, Shop and Plant, or Collection Point. A shop that sends its work out names the plant in **Cleaned At**.

1

Configuration, Branches

The demo has four. The list shows how many orders each has and how many are in the plant now.

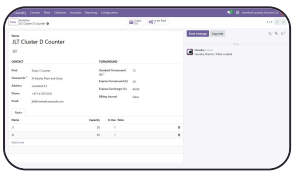

2

Open a branch

Address, phone and email; the **billing journal** its invoices go to; **standard and express turnaround** in hours, which set the promised date on every order; and the **express surcharge** as a percentage. The Orders button opens its orders.

Al Barsha promises 48 hours, or 8 hours express at 50% extra. The counters promise 72 and 24 hours because their work travels to the plant.

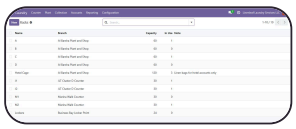

3

A counter that sends work out

JLT Cluster D Counter is a Shop / Counter with Al Barsha in **Cleaned At**. A branch cannot name itself as its plant.

Cleaned At is a record of where the work goes. It does not move pieces or change the promised date.

4

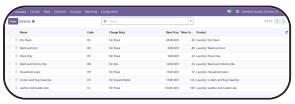

Racks

Each branch has racks, added on the branch's Racks tab or under **Configuration, Racks**. A rack has a capacity and shows how many orders are on it now (ready or in the plant).

Name the racks the way the counter talks about them. The demo keeps a Hotel Cage for linen bags.

3. Services

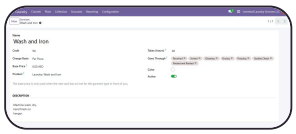

A **service** is what is done to a piece: Dry Clean, Wash and Iron, Press Only and so on. Each one points at a **product**, which is what appears on the invoice and decides the income account and the tax.

5

Configuration, Services

Seven services on the demo, each with its charge basis, base price and how long it normally takes.

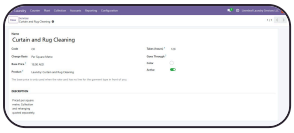

6

Open a service

Charge basis: Per Piece, Per Kilo, Per Square Metre or Flat Fee. **Base price** is used when the rate card has no line for the garment. **Takes (hours)** and **Goes Through** (the stages this service passes) describe the service.

Takes (hours) and Goes Through are kept for reference: the promised date comes from the branch turnaround, and every piece sees every stage on the board.

7

Per square metre

Curtain and Rug Cleaning is set Per Square Metre at AED 18 a square metre for curtains and AED 30 for rugs.

In this version a Per Square Metre line is worked out like a per piece line: quantity times price. Put the square metres in the Quantity column, not the number of panels, and write the panel count in Instructions.

4. Garment types and the rate card

Garment types are what the customer brings: shirt, kandura, abaya, suit, duvet cover, rug. Each has a category, a typical weight (used for a per kilo line when nothing was weighed), a pressing time and a standing care note for the plant.

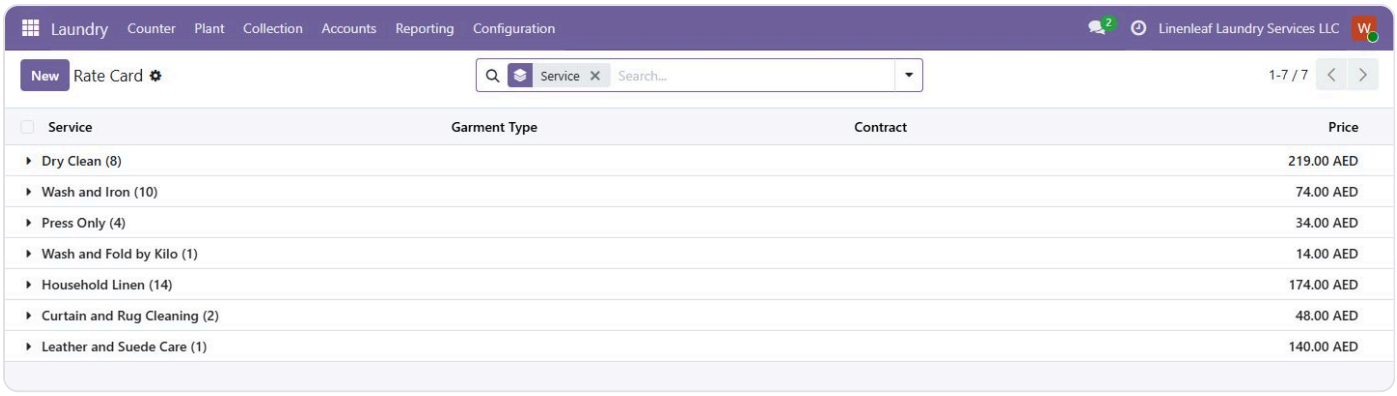

Laundry Counter Plant Collection Accounts Reporting Configuration — Linenleaf Laundry Services LLC

New Garment Types — Search... — 1-20 / 20

Name	Category	Typical Weig...	Pressing ...	Care Note
Shirt	Tops	0.25	3	
T-Shirt	Tops	0.20	1	
Silk Blouse	Tops	0.15	4	Hand finish only, low iron.
Trousers	Bottoms	0.45	4	
Kandura	Other	0.50	5	Press with a sharp front crease.
Abaya	Dresses	0.60	6	Check embellishment before cleaning.
Suit, Two Piece	Suits and Formal	1.40	9	
Evening Dress	Dresses	0.70	8	Beading: bag inside out.
Winter Coat	Outerwear	1.60	8	
Leather Jacket	Leather and Suede	1.50	0	Never wet clean.
Bedsheet	Household Linen	0.80	2	
Pillowcase	Household Linen	0.15	1	
Duvet Cover	Household Linen	1.20	3	
Bath Towel	Household Linen	0.60	0	Tumble dry, no press.
Tablecloth	Household Linen	0.90	4	
Chef Whites	Tops	0.50	3	Hot wash for grease.
Medical Scrubs	Tops	0.35	1	Wash at 60 degrees minimum.
Curtain Panel	Curtains and Drapes	2.50	10	Measure and record drop on intake.
Rug	Rugs and Carpets	6.00	0	Dust beat before wash.

Garment types, edited straight in the list.

The **rate card** joins the two: one price per service and garment. A line with no contract is the counter price; a line with a contract is that account's agreed rate. When a line is added to an order the price is looked up in this order: the account's rate, then the counter rate, then the service's base price.

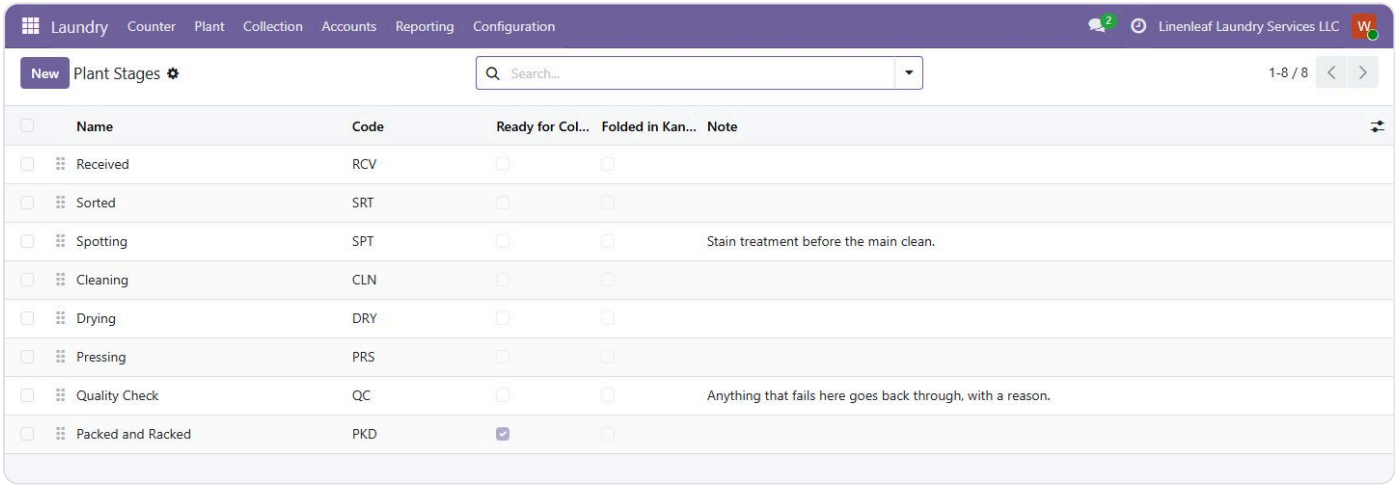

The rate card: counter prices and contract rates side by side.

> There can only be one counter price for a service and garment. Saving a second one is refused, so nobody ends up with two prices for a shirt.

5. Plant stages

Configuration, Plant Stages lists the eight stages in order. Each has a code and a colour. Tick **Ready for Collection** on the last one, and tick **Folded in Kanban** on any column you want collapsed on the board.

The stages. Taking an order in puts every piece in the first one; Ready moves them to the last one ticked Ready for Collection.

PART 5

Account contracts: hotels, offices and households

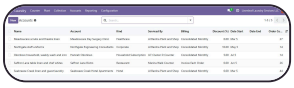

An account customer is anyone who does not pay at the counter: a hotel sending linen every other day, an office with staff uniforms, a clinic with scrubs, a household on a weekly wash. The contract holds their rates and how they are billed.

IN THIS PART YOU WILL LEARN

- The kinds of account and the two ways to bill them
- Agreed rates that override the counter price
- How an order picks up its account

TRY IT YOURSELF ON THE DEMO

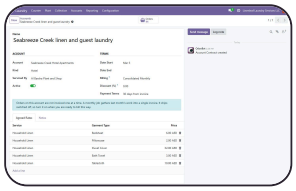

1. Accounts, Contracts: open Seabreeze Creek linen and guest laundry
2. Read the Agreed Rates tab, then press the Orders button

1

Accounts, Contracts

Five live contracts on the demo: a hotel, an engineering firm, a day surgery clinic, a bistro and a household. A sixth, a gym trial that ended, is archived.

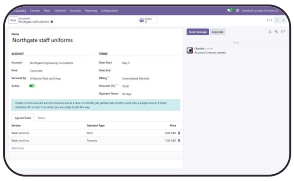

2

Open a contract

Account is the customer it belongs to; **Serviced By** the branch that does the work; the kind (Hotel, Corporate, Healthcare, Restaurant, Retail Partner or Household Subscription); start and end dates; payment terms; and the **Agreed Rates** tab, which is a rate card of its own. The Orders button lists every order on the account.

The hotel pays AED 6 for a bedsheet where a walk-in pays 15.

3

Billing and discount

Billing is either **Invoice Each Order** or **Consolidated Monthly**. Northgate is billed monthly and has a 10% **Discount** written into the contract.

The contract discount is recorded on the contract but is not applied to orders in this version. Put the discount into the agreed rates, or into the Discount field on each order.

When the customer on an order has an active contract, the order's **Account** field fills in and every line added afterwards is priced from the agreed rates. An order can only carry a contract that belongs to its own customer; trying anything else is refused.

> The end date on a contract is not checked when an order is taken in, and an ended contract still prices its orders until it is archived. Archive a contract (as the demo does with the gym trial) when it stops.

PART 6 Taking an order in at the counter

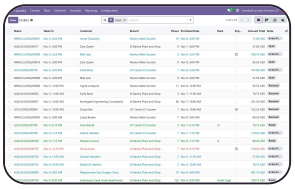

The counter is where the promise is made: what came in, what condition it was in, what it costs and when it will be ready. Get this screen right and the rest of the system runs off it.

IN THIS PART YOU WILL LEARN

- Creating an order and adding lines from the rate card
- Express, discount and deposit
- Why every line has to be checked for damage
- What Take In does: one tagged piece per item

TRY IT YOURSELF ON THE DEMO

1. Counter, Orders: open a Draft order such as MRN/LO/2026/00809
2. Look at the unticked Checked at the Counter box on its line
3. Open a Received order and read its Pieces tab

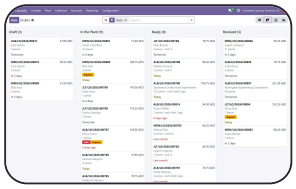

1

Counter, Orders

The list opens on **Open** orders. Late orders are red, ready ones green, those in the plant blue. Pieces and value add up at the bottom.

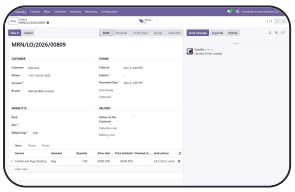

Other filters: In the Plant, Ready and Waiting, Late, Express, To Invoice and Taken In Today. Group by branch, status, customer, account, rack or date.

2

The same orders as cards

Switch to the kanban view to see orders by status, with Late and Express badges and the time left before the promised date.

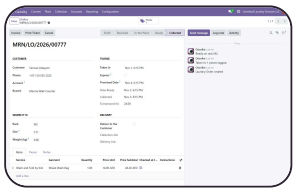

3

A new order

Press **New**. Pick the **Customer**: the phone fills in, and so does the **Account** if they have a contract. **Branch** defaults to the first one. **Taken In** is now; **Promised Date** is worked out from the branch turnaround and can be changed by hand.

Tick **Express** and the promise moves to the express turnaround and the surcharge is added.

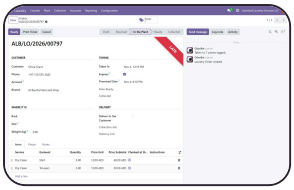

4

The lines

On the **Items** tab add a line per service and garment. The unit price comes from the rate card. For a per kilo service put the bag on the scales and type the **Weight**; the subtotal is weight times price.

Show the Weight and Taxes columns from the column picker at the right of the line header.

5

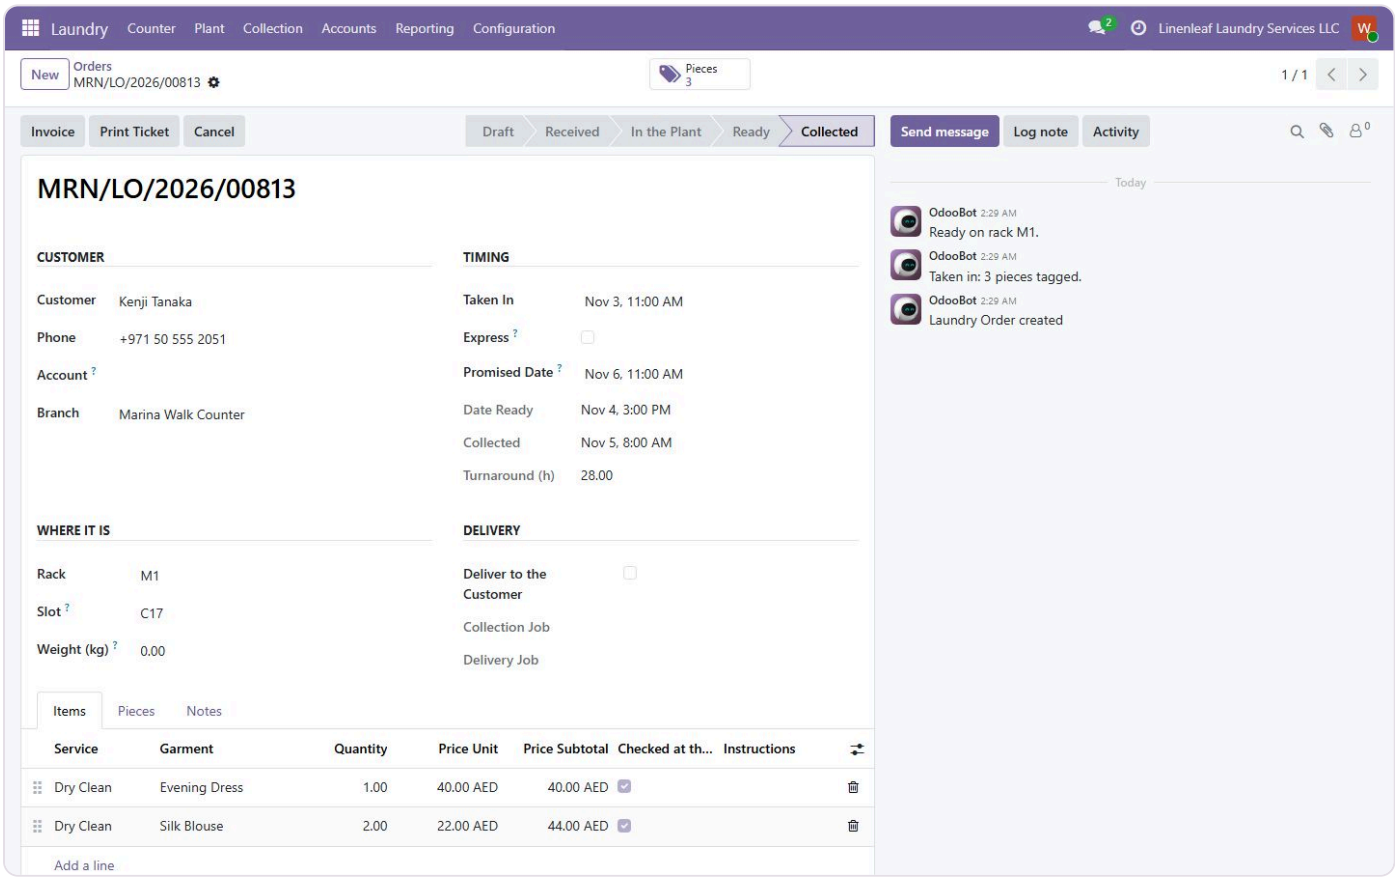

Check every line for damage

Tick **Checked at the Counter** on each line once the pieces have been looked over, and write anything found in **Instructions**. With Record Damage on Arrival switched on, Take In refuses an order with an unchecked line and names the garments still to check.

Draft order 00809 on the demo is left unchecked on purpose.

Totals, express, discount and deposit

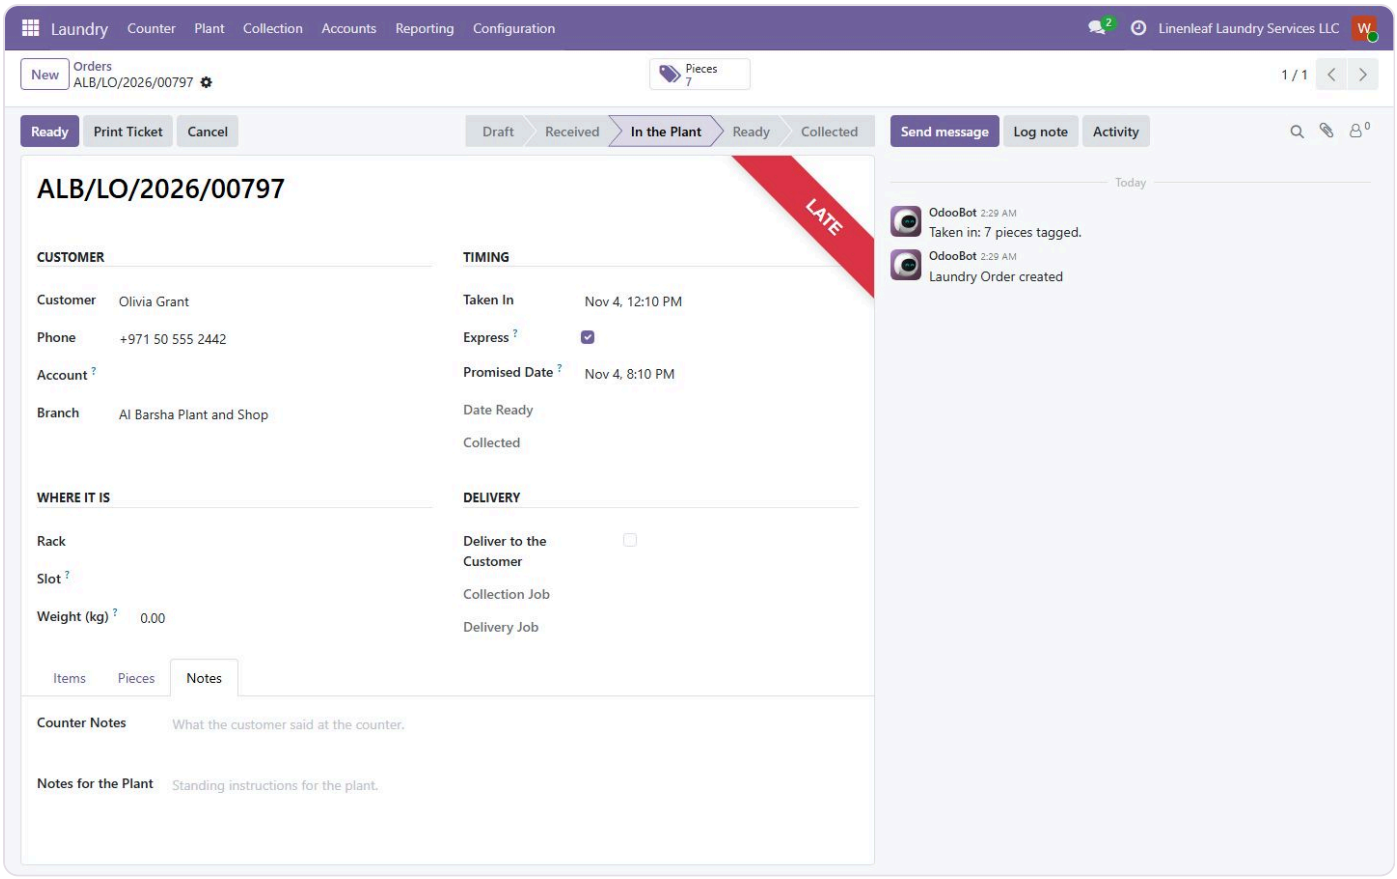

Below the lines the order adds up: the **express surcharge** (the branch percentage of the lines), the **untaxed amount**, the **tax** and the **total**. A **Discount** percentage applies to the whole order, and once it is set a **discount reason** field appears so the reason is on record. A **Deposit** taken at the counter comes off the total to give the **Amount Due**; it cannot be more than the order.

A collected order with a 15% discount and its reason.

Delivery and notes

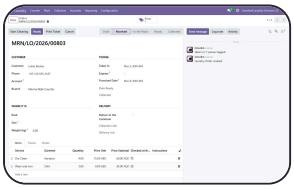

Tick **Deliver to the Customer** if the order goes back by van; the address fills in from the customer. The **Notes** tab has two boxes: **Counter Notes** for what the customer said, and **Notes for the Plant** for standing instructions.

The Notes tab: one note for the counter, one for the plant.

> Ticking Deliver to the Customer does not create a delivery job by itself, and the Collection Job and Delivery Job fields on the order cannot be filled from the order screen. Jobs are created under Collection (Part 10).

Take In

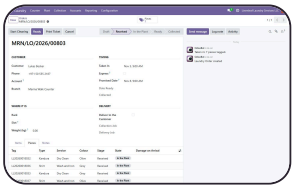

6

Press Take In

The order moves to **Received**. The module creates one **piece** for every item: five shirts become five records, each with its own tag number, all in the first plant stage. The chatter records how many were tagged.

Take In is refused on an empty order or one with an unchecked line.

7

The Pieces tab

Every tag, its garment and service, colour, stage and status. The Pieces button at the top counts them.

Open a piece to record its colour, fabric, brand and damage on arrival; see Part 7.

8

Print the ticket

Print Ticket prints the counter ticket on 80 mm paper for the customer to take away.

Cancel stops an order at any point before it is invoiced; **Reset to Draft** brings a cancelled order back.

PART 7 The plant board

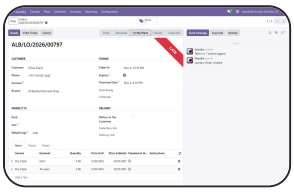

Once an order is taken in, the plant works piece by piece. The board shows every piece in the stage it has reached, so a supervisor can see at a glance where the pile is building up.

IN THIS PART YOU WILL LEARN

- Reading the board and moving a piece on
- Recording colour, fabric, brand, stains and damage
- Sending a piece back through with a reason
- Marking a piece lost, and the rework list

TRY IT YOURSELF ON THE DEMO

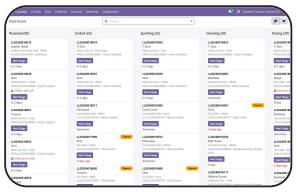

1. Plant, Plant Board: find the Express badges
2. Open a card with a red stain warning
3. Plant, Rework: see what went back through and why

1

Start Cleaning

On the order, **Start Cleaning** moves it from Received to **In the Plant**. From here the work is done on the pieces.

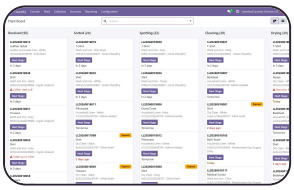

2

Plant, Plant Board

One column per stage, every column shown even when empty. Each card has the tag, the garment, the service and colour, the order and customer, an **Express** badge, a stain warning in red, and the time left before the promised date.

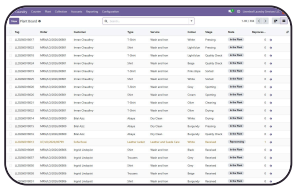

The board only shows pieces that are in the plant or being reprocessed.

3

Next Stage

Press **Next Stage** on a card to move it one column on, or drag the card. The list view has the same button as an arrow on each row.

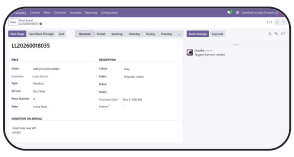

4

The list view

The same pieces as a list, with tag, order, customer, garment, service, colour, stage, status and how many times each piece has been reworked.

Filters: In the Plant, Express, Reworked, Lost or Damaged. Group by stage, service, garment, order or status.

The piece

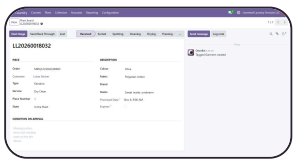

5

Open a piece

Colour, **Fabric**, **Brand** and **Stains** describe it. **Condition on Arrival** holds the damage that was already there. The stage bar at the top can be clicked to jump a piece to any stage.

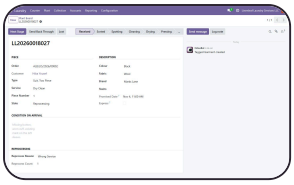

Record damage here at the counter, before the piece goes into the plant. It is the record that settles a claim.

6

Stains

A stain written on the piece shows on its board card in red, so the spotting bench sees it.

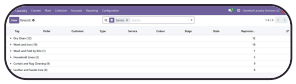

7

Send Back Through

When a piece fails the quality check, set the **Reprocess Reason** (Stain Remained, Poorly Pressed, Odour, Damaged in Process, Wrong Service, Other) and press **Send Back Through**. The piece goes back to the first stage, its status becomes **Reprocessing**, the count goes up by one and the order's chatter says why.

Without a reason the button refuses.

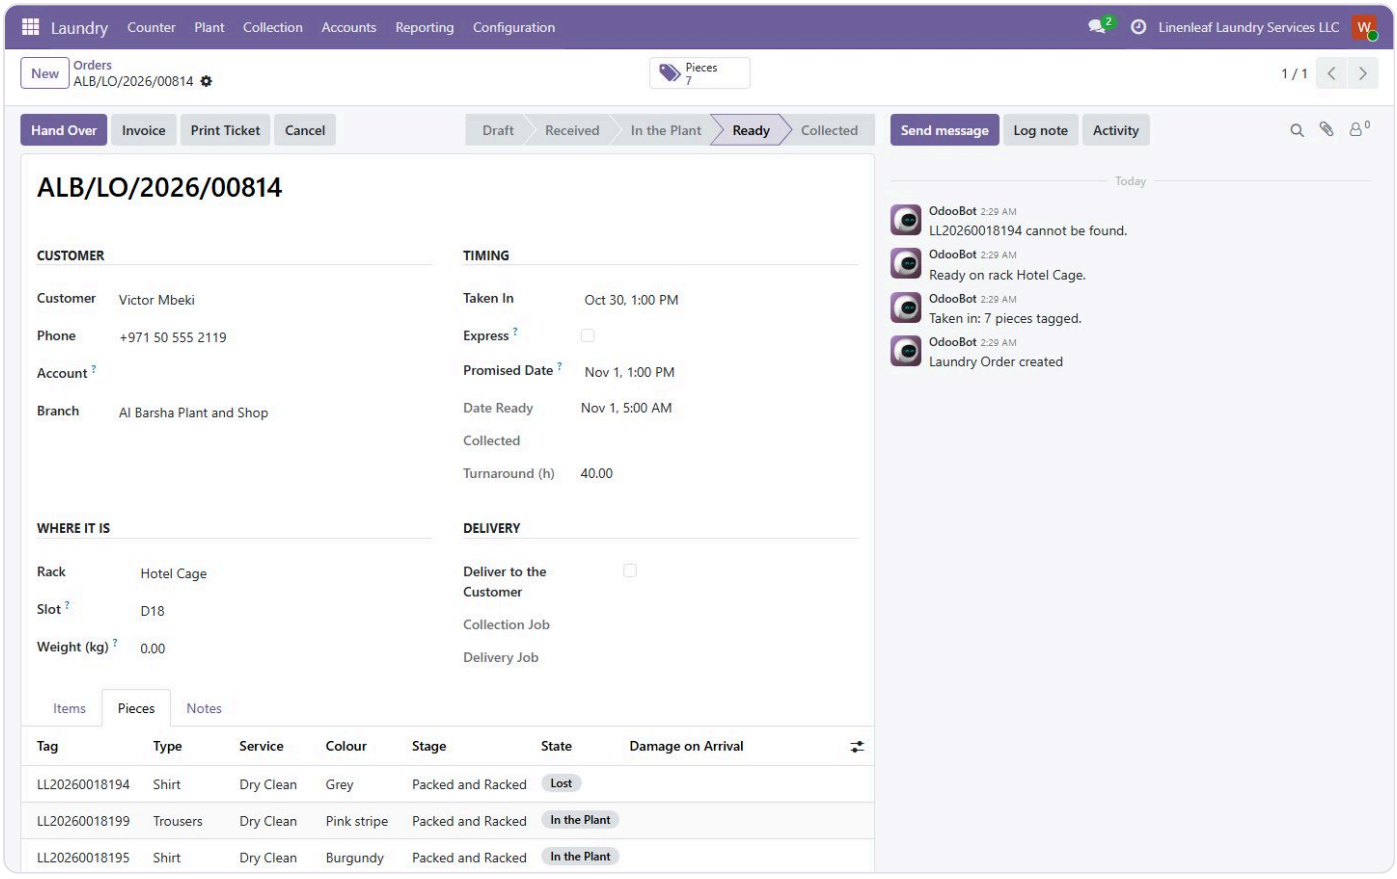

8

Plant, Rework

Every piece that has been sent back at least once, grouped by service. This is the cost of rework in plain sight.

Lost marks a piece that cannot be found, after a confirmation. The order's chatter records it, and the piece leaves the board.

An order with one piece marked Lost. The rest are packed.

A piece sent back through keeps the status Reprocessing until someone changes it: Next Stage moves the stage, not the status, and Hand Over only returns pieces that are In the Plant. Check the Rework list after hand over.

PART 8 Ready, racked and handed over

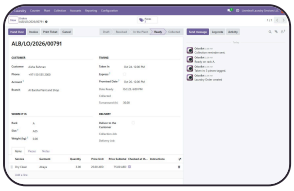

A finished order is only useful if the counter can find it in seconds. Ready means racked, and the rack and slot are what the counter looks up when the customer is standing there.

IN THIS PART YOU WILL LEARN

- Marking an order Ready, with its rack and slot
- Late orders and turnaround
- Handing over, and chasing work nobody collects

TRY IT YOURSELF ON THE DEMO

1. Counter, Orders: filter Ready and Waiting
2. Open ALB/LO/2026/00791 and read the chatter
3. Filter Late and compare the promised dates

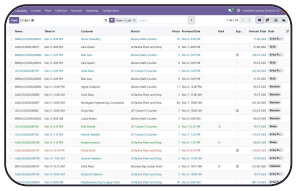

1

Ready

Fill in **Rack** and **Slot** and press **Ready**. Every piece that is not lost moves to the final stage, the order becomes **Ready**, **Date Ready** is stamped and the chatter says which rack it is on.

Ready is refused until a rack is set, so nothing is finished without a place on the rail.

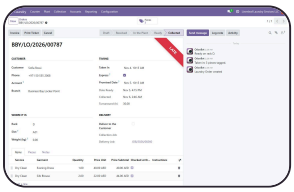

2

Late orders

An order is **late** when it was finished after the promised date, or is still unfinished and the promised date has passed. Late orders show a red ribbon on the form and red in the list. **Turnaround (h)** is the hours from taken in to ready.

The late flag is worked out when the order changes. An order that nobody touches does not turn red on its own as the clock passes the promise; open the Late filter after the day's work has been moved on.

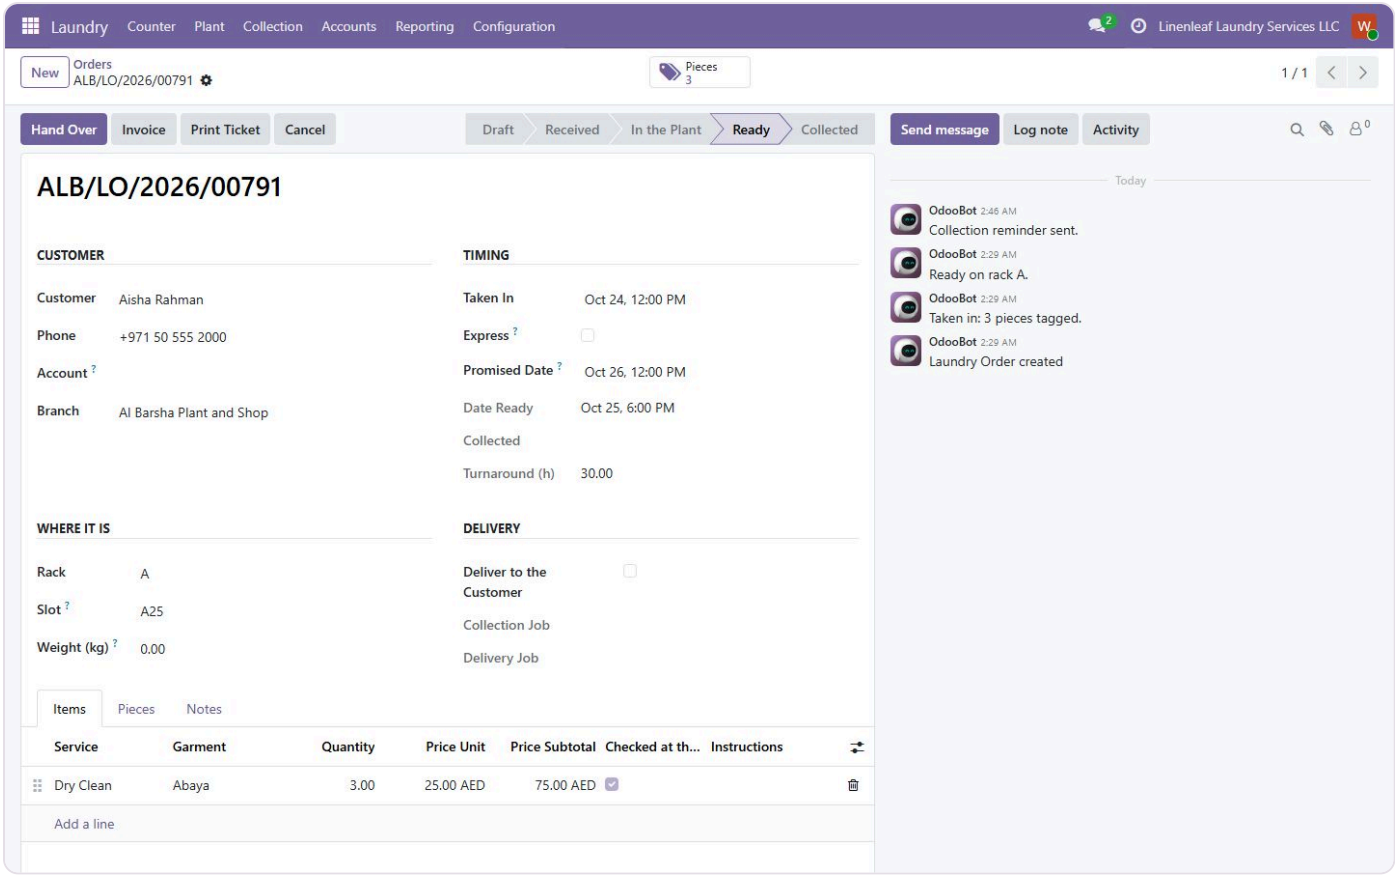

3

Hand Over

When the customer collects, press **Hand Over**. The order becomes **Collected** with the time, and its pieces become Returned. An order delivered by van is handed over when the driver completes the delivery job (Part 10).

Chasing uncollected work

Clean clothes on a rack for weeks take up space and are often never paid for. The scheduled action **Laundry: chase uncollected orders** emails each customer whose order has been ready for longer than the days set in Settings (7 on the demo), using the **Laundry: Order Ready** email, and writes "Collection reminder sent" on the order.

The reminder recorded in the chatter of an order ready for eleven days.

> The job ships switched off, and it runs daily once switched on. It sends again every day the order is still waiting, because it does not remember that it has already written. Customers without an email are skipped. Outgoing mail has to be set up in Odoo first.

PART 9 Billing: one order, or one invoice a month

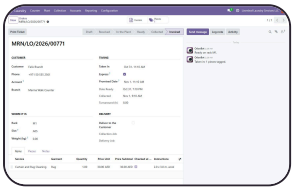

Walk-in orders are billed one at a time. Account customers on a monthly contract get one invoice covering the whole month. Both end up as ordinary Odoo customer invoices, with VAT, in the branch's sales journal.

IN THIS PART YOU WILL LEARN

- Invoicing a single order
- The monthly invoice for contract accounts
- What the invoice lines look like

TRY IT YOURSELF ON THE DEMO

1. Counter, Orders: filter To Invoice
2. Open ALB/LO/2026/00773 and press the Invoice button at the top

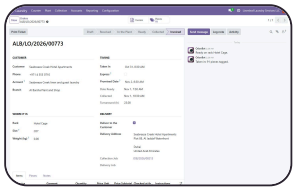

1

Invoice one order

On a Ready or Collected order press **Invoice**. A customer invoice is created with one line per order line (service, garment and quantity, with the order number), plus a line for the express surcharge if there is one. The order becomes **Invoiced** and an **Invoice** button appears at the top.

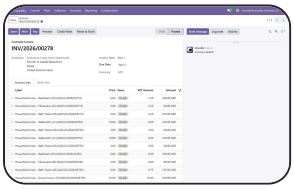

The invoice is created as a draft. Confirm it and register the payment in Invoicing as usual.

2

Contract orders

Orders on a **Consolidated Monthly** contract are left at Collected. They wait for the month end invoice.

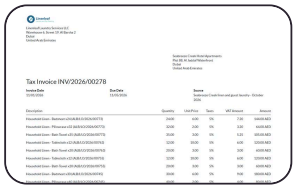

3

The monthly invoice

The scheduled action **Laundry: monthly contract invoices** runs daily. It looks at the previous calendar month and, for each monthly contract, gathers every order taken in that month that is Ready or Collected and not yet invoiced. They go on one invoice, labelled with the contract and the month, and the orders become Invoiced.

The job ships switched off. Switch it on in Settings, Technical, Scheduled Actions once the rate cards are right.

4

The printed invoice

The standard Odoo invoice, one line per order line, each naming the order it came from, so the hotel can match it to its own laundry log.

The order discount is carried onto every invoice line. A contract's own discount is not, as noted in Part 5. Orders taken in before the previous month and still not invoiced are not picked up by the monthly job; invoice them by hand.

PART 10 Collection and delivery: drivers, routes and jobs

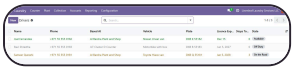

Hotels, offices and busy households want the van to come to them. A job is one stop, a collection or a delivery; a route is one driver's run of stops for a shift.

IN THIS PART YOU WILL LEARN

- Drivers and what a driver sees
- Booking a collection or delivery job
- Building a route, sending it out and closing it
- Proof at the door, failed stops and rescheduling

TRY IT YOURSELF ON THE DEMO

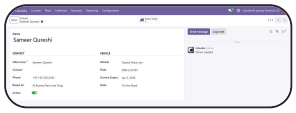

1. Collection, Routes: open RT/2026/0061, which is on the road
2. Collection, Collections & Deliveries: filter Failed
3. Open a completed delivery and read the Orders tab

1

Collection, Drivers

Each driver has a phone, a base branch, a vehicle and plate, a licence expiry date, a status (Available, On the Road, Off Duty) and a count of today's stops.

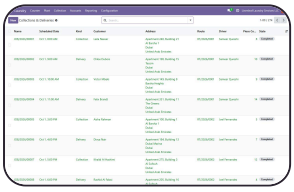

2

Link the driver to a user

Set **Odoo User** and the driver signs in and sees only his own routes and jobs. The Stops Today button lists his jobs.

The licence expiry is a reminder only: nothing stops a driver with an expired licence going out.

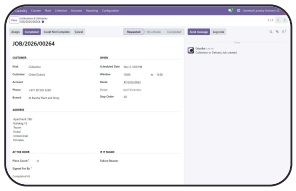

3

Collection, Collections & Deliveries

Every job: kind, customer, address, scheduled time and window, route, pieces and status.

Filters: Not On a Route, Today, Failed, Collections, Deliveries. Group by type, route, status or date.

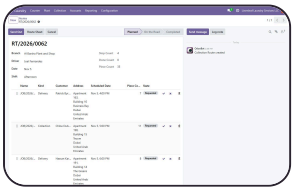

4

Book a job

Press New. Pick the **customer** and the address, phone and account fill in. Choose **Collection** or **Delivery**, the date and the window (From and To, in hours), and the stop order. A new job is **Requested**.

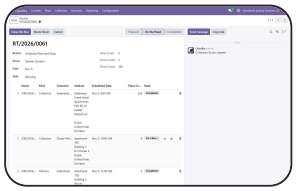

A window that ends before it starts is refused.

5

Build the route

Under **Collection, Routes** create a route with the branch, driver, date and shift (Morning, Afternoon, Evening), and add the stops in the Stops list. Stop count and pieces add up at the top.

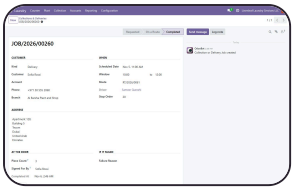

6

Send Out

Send Out puts every requested stop **On a Route** and the driver **On the Road**. Each stop in the list has a tick to complete it and a cross to fail it.

Send Out is refused on a route with no stops.

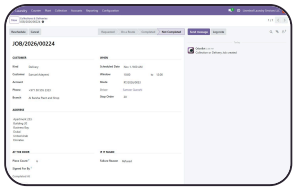

7

Proof at the door

A delivery cannot be completed until **Signed For By** is filled in. Completing it stamps the time and hands over every Ready order on its Orders tab, so the order becomes Collected without anyone touching it at the counter.

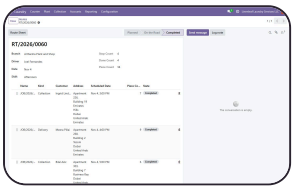

A collection has no such check, but write the piece count in front of the customer: it is the count you will be held to.

8

A stop that did not happen

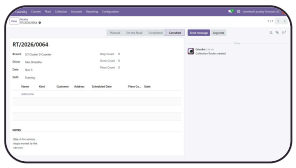

Set the **failure reason** (Nobody In, Refused, Wrong Address, No Access, Vehicle Problem, Other) and press **Could Not Complete**. **Reschedule** takes it off the route and back to Requested for another day.

9

Close the Run

Close the Run is refused while any stop is still requested or on the route. Once every stop is completed or failed the route is **Completed** and the driver is Available again.

10

Cancel a route

Cancelling a route sends its open stops back to Requested with no route, ready for another run.

Which orders a job collects or delivers is shown on the job's Orders tab, but there is no button on the order or the job to link them: it is set by import or by a developer. Without the link, completing a delivery does not hand the order over.

PART 11 Damage and loss claims

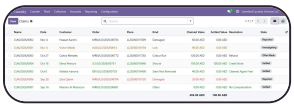

Every laundry damages or loses something eventually. What matters is that the claim is recorded, investigated against the intake record, and settled or rejected with the figures on file.

IN THIS PART YOU WILL LEARN

- Raising a claim against an order and a piece
- Investigating, making an offer and settling
- Rejecting a claim with the intake record behind you

TRY IT YOURSELF ON THE DEMO

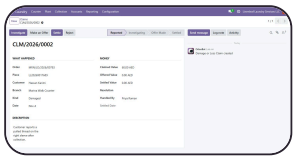

1. Counter, Claims: one claim at every stage
2. Open CLM/2026/0006, rejected because the damage was on the intake record

1

Counter, Claims

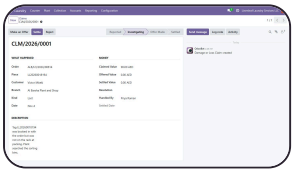

Claim number, date, order, customer, kind, claimed and settled value, who handles it and the stage. Settled claims are green, rejected ones grey.

2

Raise a claim

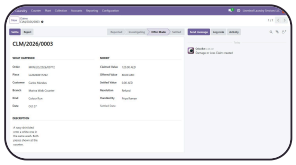

Press New and pick the **Order**: customer and branch fill in. Pick the **Piece** from that order, the kind (Damaged, Lost, Colour Run, Shrunk, Stain Not Removed, Other), the description and the **Claimed Value**. It starts as **Reported**.

3

Investigate

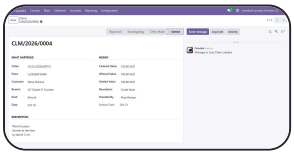

Investigate marks the piece Damaged, or Lost for a loss claim, so it shows on the plant's Lost or Damaged filter.

4

Make an Offer

Fill in the **Offered Value** and the **Resolution** (Refund, Credit Note, Replacement, Cleaned Again Free, No Compensation) and press **Make an Offer**. A refund or credit offer needs an amount.

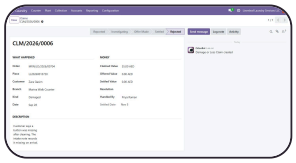

5

Settle

When the customer accepts, enter the **Settled Value** and press **Settle**. The settled date is stamped. A claim cannot be settled for more than was claimed.

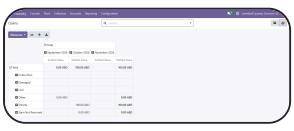

Settling records the outcome. The refund or credit note itself is raised in Invoicing; the claim does not create it.

6

Reject

Reject closes a claim with no payment. Here the missing button was written on the piece when it came in.

7

Cost of claims

The pivot view adds up the settled value by kind of claim and month.

PART 12 Reporting: revenue, turnaround and rework

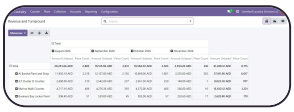

Three questions a laundry owner asks every week: how much did each branch take, are we keeping our promises, and how much work did we do twice.

IN THIS PART YOU WILL LEARN

- Revenue by branch and month
- Turnaround against the promise
- Rework and claims as a cost

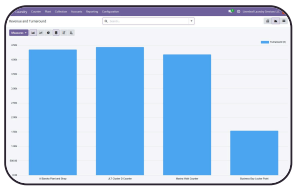

TRY IT YOURSELF ON THE DEMO

1. Reporting, Revenue and Turnaround: swap the rows to Customer
2. Switch to the graph

1 Reporting, Revenue and Turnaround

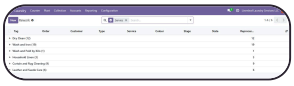

A pivot of collected and invoiced orders: branches down the side, months across, untaxed value and pieces in each cell. Click a header to break it down by customer, account, rack or status.

2 Turnaround

The graph view shows the hours from taken in to ready, by branch.

Use the Late filter on the order list to see which orders broke the promise.

3 Rework

Plant, Rework groups every reworked piece by service with its reason: the plant's quality figure.

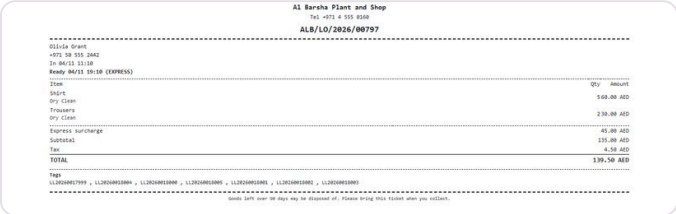

Claims have their own pivot (Part 11), and every list in the module can be grouped and exported to a spreadsheet.

> There is no workload or bottleneck figure per stage beyond the count at the top of each board column, and pressing time on a garment type is not used in any report.

PART 13 Printed documents and emails

Three printouts and one email come with the module.

DOCUMENT	PRINTED FROM	WHAT IS ON IT
Counter Ticket	Order, Print Ticket (80 mm roll)	Shop, order number, customer, dates, items with quantity and amount, totals, deposit, and the tag list
Garment Tags	Pieces, Print, Garment Tags	One tag per piece with its barcode, order, customer and service
Route Sheet	Route, Route Sheet	Route, driver, vehicle, date and shift, then each stop with customer, address, window, type, pieces and a signature box
Laundry: Order Ready email	Sent by the uncollected orders job	Order number, ready since, branch, pieces, rack, and the amount to pay

The counter ticket.

Garment tags with their barcodes.

> The tags carry a Code 128 barcode. The module has no scanning screen of its own: scanning a tag into the search box finds the piece, and moving it is done with Next Stage.

Linenleaf

Linenleaf Laundry Services LLC
Warehouse 6, Street 19, Al Barsha 2
Dubai
United Arab Emirates

Route Sheet

Route: RT/2026/0061
Driver: Sameer Qureshi
Vehicle: Toyota Hiace van (DXB Q 55181)

Date: 11/05/2026
Shift: Morning
Stops: 5

#	Customer	Address	Window	Type	Pieces	Signature
1	Seabreeze Creek Hotel Apartments +971 4 555 0710	Seabreeze Creek Hotel Apartments Plot 88, Al Jaddaf Waterfront Dubai United Arab Emirates	08:00 - 10:00	Collection		
2	Daniel Whitmore +971 50 555 2017	Apartment 107, Building 2 JLT Cluster F Dubai United Arab Emirates	09:00 - 11:00	Collection		
3	Sofia Rossi +971 50 555 2068	Apartment 128, Building 5 Tecom Dubai United Arab Emirates	10:00 - 12:00	Delivery		
4	Tariq Siddiqui +971 50 555 2085	Apartment 135, Building 6 Al Sufouh Dubai United Arab Emirates	11:00 - 13:00	Collection		
5	Patrick Byrne +971 50 555 2153	Apartment 163, Building 10 Business Bay Dubai United Arab Emirates	12:00 - 14:00	Delivery		

Notes
Hotel linen first, then the Marina loop.

The route sheet the driver takes in the van.

PART 14 Users, roles and several branches

Who can do what, and how a chain keeps its branches apart.

Give each user one of the four roles under **Settings, Users**, in the Laundry section of their access rights. The demo has a manager, two counter staff, two plant operators and two drivers set up, all invented.

RULE	EFFECT
Driver sees his own runs	A driver can read only the routes and jobs whose driver record is linked to his user.
Counter sees every run	Counter staff and managers see all routes and jobs.
One company, one set of records	Branches, orders, pieces, jobs, routes, contracts and claims are kept per company. A user sees the companies he is allowed into.
Prices hidden from the plant	Plant operators have no access to claims, contracts or the configuration menus.

A chain with several branches in one company runs them from one database: each order carries its branch, and every list groups by branch. Separate legal entities each get their own company.

PART 15 A fifteen minute walk-through

If you have the demo open and fifteen minutes, this path shows the whole shop. It is also the order to show it to somebody else in.

#	DO THIS	AND NOTICE
1	Counter, Orders	*Open orders by status, late ones in red, express ticked, pieces and value added up.*
2	Open draft MRN/LO/2026/00809	*A rug line not yet checked for damage: Take In would refuse it.*
3	Open ALB/LO/2026/00797, then its Pieces tab	*The Late ribbon on an express order, and seven tagged pieces spread across the plant.*
4	Plant, Plant Board	*Every piece in its stage, express badges, stain warnings in red, Next Stage on each card.*
5	Open a piece, then Plant, Rework	*Colour, fabric, brand and damage on arrival; the pieces that went back and why.*
6	Counter, Orders, filter Ready and Waiting, open 00791	*Rack and slot, turnaround in hours, and the reminder in the chatter.*
7	Accounts, Contracts, Seabreeze Creek	*Agreed rates for linen and one invoice a month.*
8	Collection, Routes, RT/2026/0061	*The morning run on the road: hotel linen collected, a delivery signed for.*
9	Counter, Claims	*One claim at every stage, from reported to settled and rejected.*
10	Reporting, Revenue and Turnaround	*Takings by branch and month, then turnaround by branch.*

Questions people ask

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community and installs Invoicing, which is part of Community.
Is there a customer portal or app?	No. The module has no website or portal pages. Customers get the printed ticket and, when switched on, the ready reminder email.
Is it a point of sale?	No. Orders are taken in the back office screen. Payment is recorded on the invoice in Invoicing.
Can it scan garment tags?	The tags print with a barcode, and scanning into the search box finds the piece. There is no dedicated scanning screen.
Can one shop send work to another plant?	Yes. Each counter names the plant that cleans its work, and orders keep the counter's number prefix.
Can a hotel get one invoice a month?	Yes. Put it on a Consolidated Monthly contract and switch on the monthly invoice job.
Does it handle loyalty points?	No. There is a discount with a reason on each order, but no loyalty scheme.
What happens when a piece is lost?	Mark it Lost on the piece and raise a claim. The claim records the offer and settlement; the refund itself is raised in Invoicing.

PART 16

The menu map

Every screen in the module, on one page.

Counter

Orders	Draft to collected: lines, pieces, rack, totals
Claims	Damage and loss, from reported to settled

Plant

Plant Board	Every piece in its stage, Next Stage on each card
Rework	Pieces sent back through, with the reason

Collection

Collections & Deliveries	One job per stop, signed for at the door
Routes	A driver's run for a shift, sent out and closed
Drivers	Vehicle, plate, licence, status, stops today

Accounts

Contracts	Hotels, offices, households: rates and billing

Reporting

Revenue and Turnaround	Takings by branch and month, hours to ready

Configuration

Settings	Damage check, tag prefix, uncollected days
Branches	Shops, plants, collection points, turnaround
Services	Charge basis, base price, invoice product
Garment Types	Category, weight, care note
Rate Card	Counter prices and contract rates
Plant Stages	The run of stages, the final one ticked
Racks	Where finished orders hang

Want this for your shop?

We set it up from your price list and your branches, load your garment types, contract rates and racks, connect the invoices to your accounts and VAT, and train the counter, the plant and the drivers. The same module runs one shop or a chain with its own plant.
