WAY4TECH

Way4Tech HRMS for Odoo 19

Implementation and user guide. Set up the company from zero, import your people, go live, then run day to day HR, leave, attendance and payroll, step by step.

WT HRMS Suite wt_hrms_suite, 26 modules, core wt_hrms_core 19.0.4.8

For HR managers, line managers, employees and payroll officers

Edition 1, October 2026

www.way4tech.com | info@way4tech.com

Contents

Part 1 is for the person setting the system up. Read it in order, because each chapter builds on the one before. Part 2 is the daily routine for each kind of user, and you can hand those chapters to the people concerned. Part 3 is the monthly routine, answers to common questions and a printable checklist.

PART 1. IMPLEMENTATION

1 What the suite does — 4
The modules, how they fit together, the example company used in this guide

2 Users, roles and access — 8
Who sees what, and how to give each person the right rights

3 The implementation plan — 11
The right order, a three week plan, who decides what

4 The company foundation — 14
Company details, working hours, settings, departments, jobs, holidays

5 Importing your people — 21
The onboarding workbook, the import templates, opening leave balances, fixing errors

6 Leave, approvals and HR lists — 29
Leave policies, approval chains, letters, checklists and the small lists HR keeps

7 Payroll set-up — 36
Salary structures, Pakistan rates, rules, accounts, bank formats

8 Attendance and devices — 42
Manual check-in or a ZKTeco machine, shifts

9 Testing and go-live — 45
A test script to run before day one, and the go-live checklist

PART 2. DAILY USE

10 Employees: My Space — 47
Check in, time off, advances, expenses and other requests, payslips

11 Line managers — 52
Approving requests and keeping an eye on the team

12 The HR manager — 55
Approvals, a new joiner from offer to confirmation, people records, leavers

13 The payroll officer 63
The monthly run from batch to bank file, loans, advances, overtime

PART 3. REFERENCE

14 Month end, questions and glossary 68
The monthly routine, common questions, import errors explained, terms

15 Implementation checklist 72
Printable, to tick off as you go

Screens in this guide were taken in October 2026 from a Way4Tech demonstration database for a fictional company, Crescent Textiles (Pvt) Ltd, Lahore. All names, CNIC numbers and bank accounts are invented. Your colours, menus you have not installed and figures will differ.

PART 1. IMPLEMENTATION

CHAPTER 1

What the suite does

Way4Tech HRMS turns Odoo 19 into a complete HR and payroll system. This chapter tells you what each part does, so you know what you are setting up before you start.

One app, many modules

The suite is 26 modules that install together as **WT HRMS Suite**. They sit on top of the standard Odoo Employees, Time Off and Attendances apps and add what a working HR department needs: approvals, payroll, loans, letters, onboarding and much more. Everything appears under one app called **WT HRMS**, with a menu bar grouped the way HR people think.

Menu	What is under it
My Space	Every user's home page: check in, leave balances, one-tap requests, things to approve, notices. Also To Approve, My Team and My Checklist.
Dashboard	The HR dashboard: headcount, people on leave, contracts and probations ending, birthdays, pending approvals, expiring documents. HR only.
People	Employees, Departments, Contract Versions, Announcements, Documents, Assets and Allocations, Resignations, Rewards and Disciplinary, Letters.
Time	Leaves (requests, allocations, encashments, comp-off), Attendance (check in/out, monthly summary), Shifts (schedule, swaps), Overtime, Work From Home.
Pay	Loans, Salary Advances, Expenses, Payroll (payslips, batches, bank files).
Growth	Recruitment, Training, Appraisals and goals.
Requests	Travel and Service Requests (the internal help desk).
Help	The Guide, and Set up in ten minutes.
Configuration	Settings, Company Onboarding, Approval Chains and every list HR maintains. HR managers only.

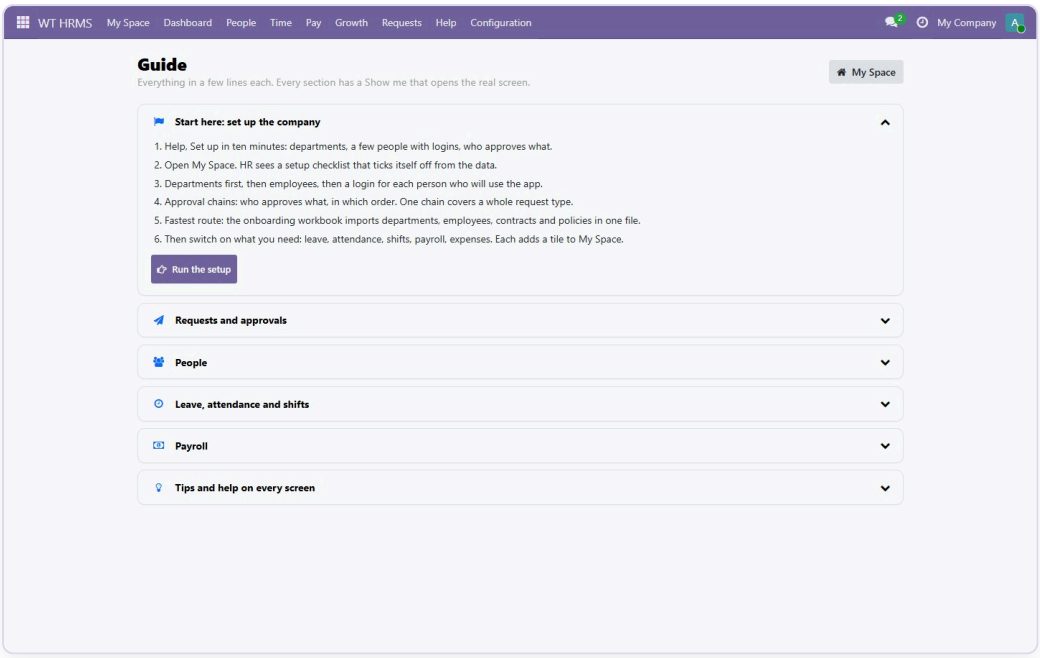

Figure 1. Help, Guide: a short built-in tour of the app. Each section has a button that opens the real screen.

The modules at a glance

Module	What it gives you
Core wt_hrms_core	The WT HRMS app and menu, My Space, the HR dashboard, the approval engine used by every request, announcements, extra employee details (CNIC, passport, licence, emergency contacts, dependants, education, experience, references), the set-up wizard.
Company Onboarding	One Excel workbook that sets up the company, departments, every employee with manager, login, bank account and salary, pay rules, leave policies and public holidays in one import.
Leave	Leave policies on top of Odoo Time Off: yearly entitlement in one click, carry forward, service and probation rules, longest request, supporting document rules, compensatory off, leave encashment paid through payroll.
Attendance	Late arrival and early leaving flags, worked and overtime hours, and a monthly attendance summary per employee.
Shifts	Shift types, a roster by date, and shift swap requests approved by the manager.
Overtime	Overtime requests against a policy with weekday, weekend and holiday rates. Approved hours land on the payslip.
Work From Home	Remote work requests with approval, recorded on the employee.
Payroll	Salary structures, editable payroll rules, per-employee pay components, tax bands, payslips and payslip batches, PDF payslips.
Pakistan Payroll	FBR income tax slabs by tax year, EOBI employee and employer shares, provincial social security, provident fund, and a ready Pakistan Standard salary structure.

Module	What it gives you
Payroll Accounting	Posts each confirmed payslip to the general ledger in a Salaries journal, with accounts per rule or per category.
Payroll Bank Files	Turns a payroll run into a salary transfer file. Formats for HBL, MCB, UBL and Meezan Bank, plus a generic CSV.
Payroll Portal	Employees see their own payslips, year to date totals and loan and advance balances, and download the PDF.
Loans	Employee loans with an instalment schedule, approval, and the monthly instalment deducted on the payslip.
Salary Advances	Advances against salary, with a limit, a recovery schedule and recovery on the payslip.
Expenses	Expense claims grouped into sheets, approved, then reimbursed by a payment from the bank or cash journal.
Letters	Offer, appointment, experience, salary certificate, NOC, warning, termination, promotion, transfer and increment letters from editable templates, printed to PDF and kept on record.
Documents	Employee documents by type with issue and expiry dates, and an early warning before CNICs, passports or licences expire.
Lifecycle	Onboarding and offboarding checklists with an owner per task, resignations with notice period and approval. A person cannot be confirmed or marked as departed with tasks still open.
Assets	Laptops, phones, SIM cards, safety gear and keys issued to people and returned, with history.
Rewards and Disciplinary	Appreciation, verbal, written and final warnings, suspension, with severity and history.
Appraisals	Appraisal periods, weighted KRAs with self and manager scores, goals, approval.
Training	Skills and levels, training programmes and training requests with approval.
Recruitment	Vacancies, candidates by stage, interviews and scorecards, offers that become employees in one click.
Travel	Business trip requests with destination, dates, advance needed, visa and hotel details.
Service Requests	An internal desk for IT, admin and facility requests, with a response deadline per category.
Workforce Structure	Team sizes at every level, management levels, managers with too many reports, people with no manager.

> SEPARATE ADD-ON: ZKTECO DEVICES
>
> If attendance comes from a biometric machine, Way4Tech installs a separate module, **WT ZKTeco ADMS**, that receives punches from ZKTeco devices over the internet in real time. Chapter 8 covers what you need to decide about it.

How the pieces fit

Almost every request in the suite works the same way, which makes the system easy to learn. An employee raises it from My Space. It goes through an **approval chain**, for example the line manager and then HR. Each approver sees it in their **To Approve** list and approves or rejects with one click. Once approved, anything with money in it (overtime, a loan instalment, an advance recovery, leave encashment) is picked up by the next payroll run on its own. Nobody types the same figure twice.

Time off is the one exception: it uses Odoo's own Time Off approval, which you set per leave type (chapter 6). It still shows up in the same To Approve list.

The example company

All screens in this guide come from **Crescent Textiles (Pvt) Ltd**, a fictional textile mill in Kot Lakhpat, Lahore, with 20 staff in seven departments, working Monday to Saturday, 09:00 to 17:30, paid in PKR on the Pakistan Standard salary structure. You will meet the same people throughout:

Person	Job	Role in this guide
Ayesha Siddiqui	HR Manager	Sets the system up and runs HR
Hina Aslam	Payroll Officer	Runs the monthly payroll
Faisal Raza	Shift Supervisor	A line manager with two machine operators
Shahid Iqbal	Machine Operator	An employee using My Space
Adeel Shah	Dyeing Operator	A new joiner going through onboarding
Hamza Saleem	Sales Executive	Claims expenses, later resigns

CHAPTER 2

Users, roles and access

Who can see salaries, who approves leave, who runs payroll. Decide this early, because the import in chapter 5 creates the logins.

The four kinds of user

User	What they do	Rights to give
Employee	Checks in, asks for time off, raises requests and claims, sees own payslips and balances.	An ordinary internal user. Nothing else. In the workbook: Login role **Employee**.
Line manager	Everything an employee does, plus approves the requests of the people who report to them and sees My Team.	Same as an employee. Approval rights come from being set as the **Manager** on the team's employee records, not from a role.
HR officer	Keeps employee records, documents, letters, assets. Sees all employees.	Employees: **Officer**. Time Off: Officer. Attendances: Officer.
HR manager	All of the above, plus configuration, approvals for HR steps, policies, payroll.	Employees: **Administrator**. Time Off: Administrator. Attendances: Administrator. Recruitment: Recruiter.

PAYROLL IS CONFIDENTIAL, PLAN FOR IT

In this version there is no separate payroll role. Running payroll needs **Employees: Administrator**, and an **Employees: Officer** can read every payslip, read only. If your HR officers should not see salaries, keep them on the plain Employee role and let only the HR manager and the payroll officer have Employees rights. The payroll officer also needs **Invoicing: Accountant** or higher to post salaries to the ledger and to trust bank accounts.

Give a person their rights

1. Open the app grid, then **Settings** > **Users & Companies** > **Users**.
2. Open the person. The **Access Rights** tab lists every app with a drop down.
   Under Human Resources you see Employees, Time Off, Attendances and Recruitment.
3. Choose the level for each, as in the table above, then **Save**.

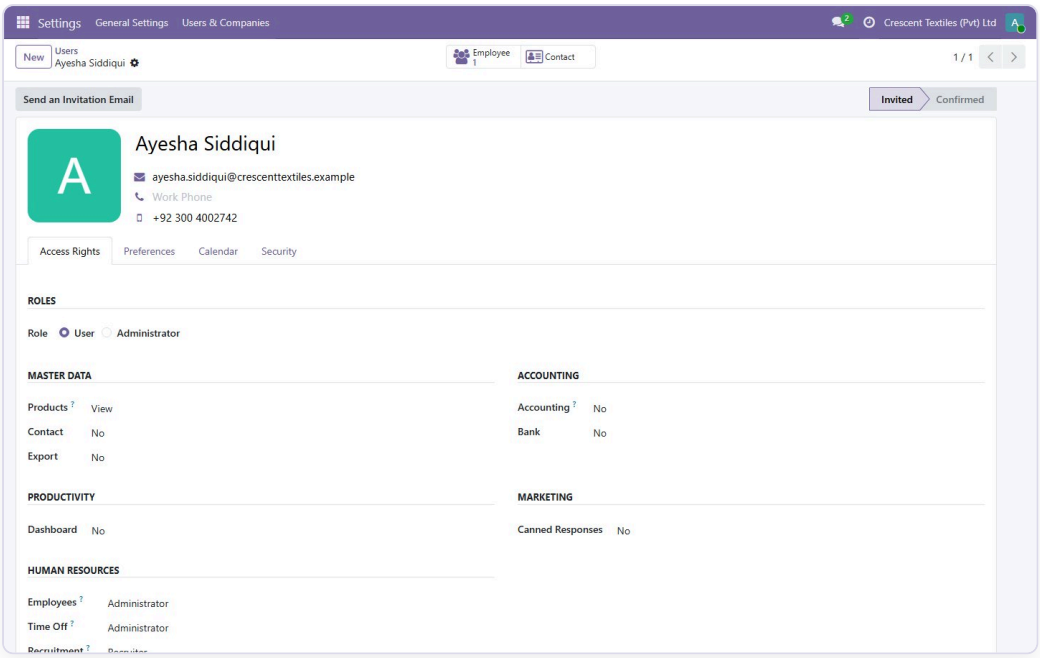

Figure 2. Ayesha Siddiqui, HR manager: Employees, Time Off and Attendances set to Administrator, Recruitment to Recruiter.

> **AFTER THE WORKBOOK IMPORT, CHECK THE HR PEOPLE ONCE**
>
> The onboarding workbook (chapter 5) gives an HR Officer or HR Manager the right Employees level, but it does not touch Time Off, Attendances or Recruitment. Open each HR person afterwards and set those three, otherwise they cannot approve leave or correct attendance.

How line managers get their approvals

Nobody is given a "manager" role. The system reads the reporting line. When Shahid Iqbal's employee record says his **Manager** is Faisal Raza, then:

- Faisal sees Shahid's requests in his To Approve list whenever an approval chain has a **Direct Manager** step.
- Faisal can approve Shahid's time off if the leave type asks for the employee's approver (chapter 6). The approver is the **Time Off** field on the employee's Work Information, normally the manager's user.
- Faisal sees Shahid on **My Space > My Team**.

So the reporting lines in your import are not decoration. A person with no manager has no one to approve their requests except HR, and the Workforce Structure report lists such people for you (chapter 12).

Employees without a computer

Machine operators and drivers often have no email. You have three choices, and you can mix them:

- **No login.** HR raises requests for them. Their payslip is printed. Simplest.
- **A login on a shared or personal phone.** My Space works on a phone browser. Use their mobile number or an invented address such as *shahid.iqbal@crescenttextiles.example* as the login.
- **Attendance from a device.** They punch in at a ZKTeco machine and never log in at all (chapter 8).

> **WHY IT MATTERS**
>
> Every internal user counts as a user for your Odoo subscription or hosting plan. Decide with the company owner how many people really need a login before the import, not after.

CHAPTER 3

The implementation plan

Most HR systems that go wrong go wrong in the order of the work, not in the software. Here is the order that works, a realistic timetable and who has to decide what.

The right order

Each step needs the one before it. Departments need the company. Employees need departments, jobs and managers. Leave allocations need employees and leave types. Payroll needs employees, wages, bank accounts and the accounts finance wants to use.

1. **Company and working hours.** Name, address, currency PKR, the working week, the timezone.
   Chapter 4.
2. **Settings.** Manual check-in or device, the salary journal.
   Chapters 4 and 7.
3. **Departments and job positions.**
   Chapter 4, or straight from the workbook in chapter 5.
4. **Public holidays.**
   Chapter 4.
5. **Leave types and leave policies.**
   Chapter 6.
6. **Employees, managers, logins, bank accounts, wages.**
   Chapter 5.
7. **Leave entitlements for the year, then opening balances** from the old system.
   Chapters 5 and 6.
8. **Approval chains.**
   Chapter 6.
9. **HR lists:** letter templates, checklists, document types, expense, asset and service categories, shifts, overtime policy, appraisal period.
   Chapter 6.
10. **Payroll:** structure, rates, rules, accounts, bank format, trusted bank accounts.
    Chapter 7.
11. **Attendance device**, if any.
    Chapter 8.
12. **Test, train, go live.**
    Chapter 9.

A three week plan

When	Work	Who
Week 1, days 1 to 2	Kick-off meeting. Agree the decisions on the next page. Collect the data: staff list, CNICs, joining dates, salaries, bank accounts, leave balances, holidays.	Owner, HR, Finance
Week 1, days 3 to 5	Company, settings, departments, jobs, holidays, leave types and policies. Fill the onboarding workbook. First import on a test copy if you have one.	HR
Week 2, days 1 to 2	Import for real. Check every manager and Time Off approver. Allocate the year's leave, import opening balances. Approval chains.	HR
Week 2, days 3 to 4	Payroll set-up with Finance: structure, allowances, accounts, journal, bank format. Mark bank accounts as trusted. Install and connect the attendance device.	HR, Finance, IT
Week 2, day 5	Parallel payroll: run last month in the system and compare every payslip with the old system, line by line.	Payroll officer, Finance
Week 3, days 1 to 2	Fix differences. Letters, checklists and other HR lists. Test script in chapter 9 with real managers.	HR, two managers
Week 3, days 3 to 4	Train managers (30 minutes, chapter 11) and staff (15 minutes, chapter 10). Send logins.	HR
Week 3, day 5	Go live. Old process stops. HR watches the To Approve list closely for the first week.	Everyone

A company of 20 to 100 people fits comfortably in this plan. For several hundred people allow an extra week for data cleaning, which is always the slowest part.

Who decides what

Decision	Decided by	Where it goes
Working days and hours, timezone	Owner	Working schedule, chapter 4
Department structure and who heads each one	Owner	Departments, chapter 4
Reporting line for every person	Owner with HR	Manager on each employee
Leave types, days per year, carry forward, encashment, probation rules	Owner with HR	Leave policies, chapter 6
Public holidays for the year	HR	Public holidays, chapter 4
Who approves which request, in which order	Owner with HR	Approval chains, chapter 6
Who gets a login and with which rights	Owner with HR	Chapter 2
Salary structure: allowances as % of basic or fixed, PF, overtime rate	Owner with Finance	Payroll rules, chapter 7

Decision	Decided by	Where it goes
Ledger accounts and salary journal	Finance	Payroll accounts, chapter 7
Salary bank and file format; who trusts bank accounts	Finance	Bank formats, chapter 7
Loan and advance limits	Owner with Finance	Chapter 13
Device model, location, network, internet access for the device	IT	Chapter 8
Manual check-in allowed or device only	Owner with HR	Settings, chapter 4

The data to collect

Ask for these in the first two days. Missing data is what stalls an implementation.

- [ ] Company legal name, NTN, address, phone, HR email.
- [ ] List of departments, their heads and parent departments.
- [ ] For every employee: full name, work email or mobile, department, job title, manager, joining date, date of birth, gender, CNIC, personal email and phone, home address, emergency contact.
- [ ] Monthly basic salary for each person, and any per-person allowances.
- [ ] Salary bank and account number or IBAN for each person.
- [ ] Badge or user number on the attendance machine, if there is one.
- [ ] Leave rules from the company policy or handbook, and each person's remaining balance on the go-live date.
- [ ] Outstanding loans and advances, with the remaining instalments.
- [ ] The last two months of payroll from the old system, for the parallel run.

CHAPTER 4

The company foundation

Company details, working hours, the few settings that change behaviour, departments, job positions and public holidays. An hour of work, and everything else rests on it.

Your first look: My Space as HR

Log in as the HR manager and open **WT HRMS**. You land on My Space. On a new company it shows a **Set up HRMS** panel with eight steps. Each step ticks itself off when the data exists, so it doubles as your progress list. The buttons under each step open the right screen.

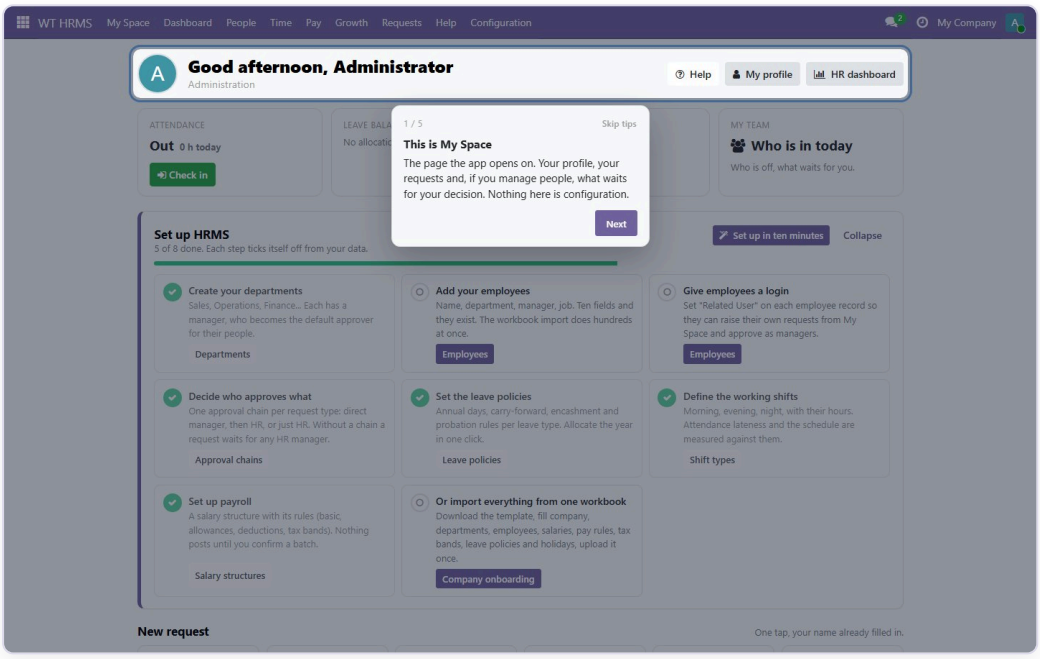

Figure 3. My Space on a new database. The Set up HRMS panel lists the steps; the tip bubble appears once per user and can be skipped.

Company details

1. Open **Settings** > **Users & Companies** > **Companies** and open your company.
2. Fill in the legal name, address, phone, email, website and NTN. Upload the logo; it prints on payslips and letters.
3. Check **Currency** is **PKR**, then **Save**.

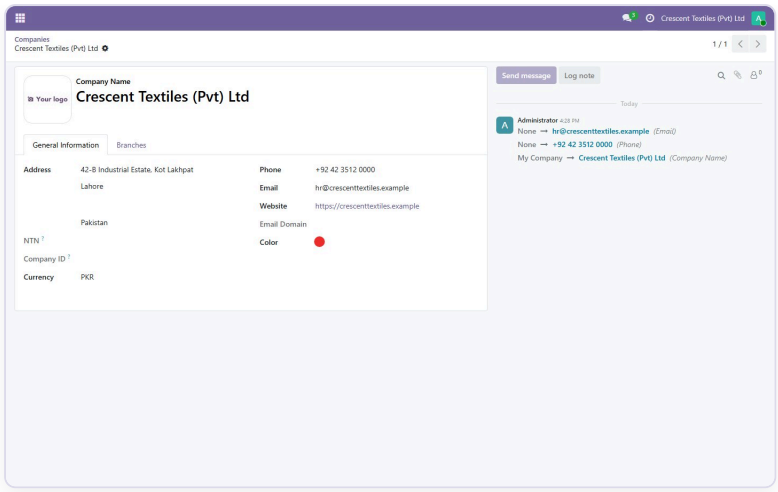

Figure 4. The company record. The onboarding workbook fills these fields for you if you use it.

> **TIP**
>
> Set your own timezone too: click your name at the top right, **My Preferences**, Timezone **Asia/Karachi**. Every user's dates and check-in times are shown in their own timezone.

Working hours

The working schedule tells Odoo which hours count as work. Leave is deducted in days of this schedule, lateness is measured against it, and public holidays are laid over it.

1. Open **Settings** > **Employees**, find **Company Working Hours** and click the arrow next to the schedule.
2. Name it plainly, for example *Monday to Saturday, 09:00 to 17:30*. Set **Timezone** to **Asia/Karachi**.
3. In **Working Hours**, keep one morning line, one break line and one afternoon line for each working day. Delete Sunday if it is listed.
4. **Save**. If shifts work different hours, make a second schedule and set it on those employees.

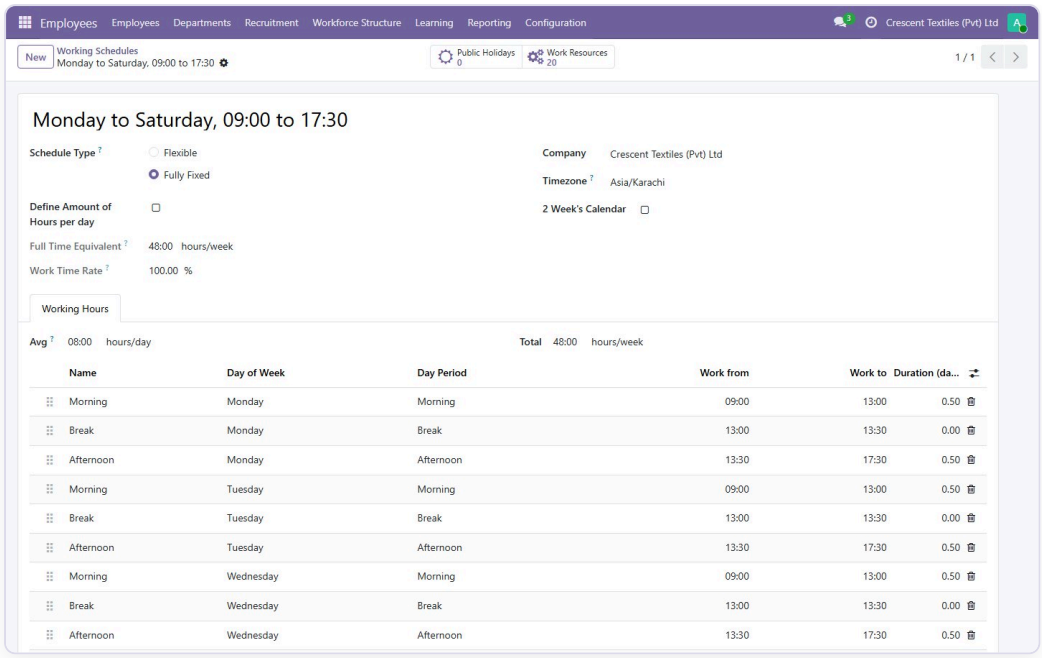

Figure 5. A six day week, 09:00 to 13:00 and 13:30 to 17:30, 48 hours. The workbook builds this from three answers.

Settings that change behaviour

Open **WT HRMS > Configuration > Settings**. The WT HRMS block sits at the top.

Setting	What it does	Recommended
Check in and out from My Space	**Unless a device does it** shows the Check in button until a ZKTeco device is active, then hides it. **Always** keeps it. **Never** removes it.	Unless a device does it
Presence Display	How the green or orange dot on employee cards is decided.	Based on attendances
Company Working Hours	The default schedule for new employees.	Your main schedule
Default Salary Journal (Invoicing settings)	The journal payslips post to. See chapter 7.	Salaries

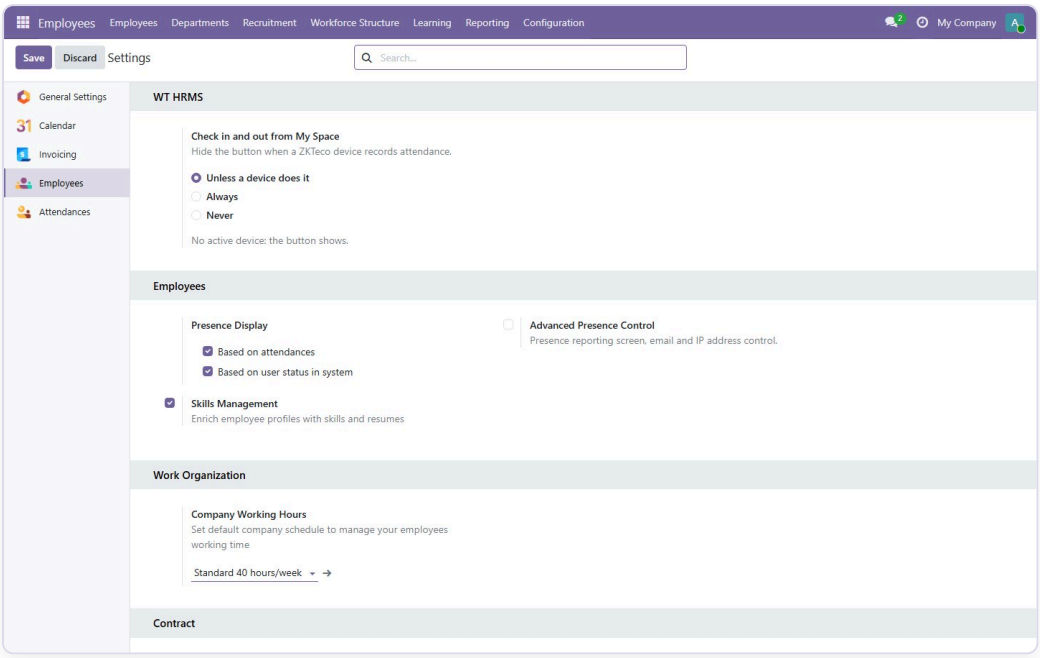

Figure 6. Configuration, Settings. The manual check-in choice tells you whether a device is active right now.

Departments

Create the departments before the people, top level first, then the ones under them. Each department has a **manager**, the head of department. HR uses departments for reports, announcements and filters.

1. Open **People > Departments** and click **New**.
2. Type the name. Choose a **Parent Department** if it sits under another one, for example Quality Control under Production.
3. Leave **Manager** empty for now if the employees are not in yet; the workbook or a second pass fills it.

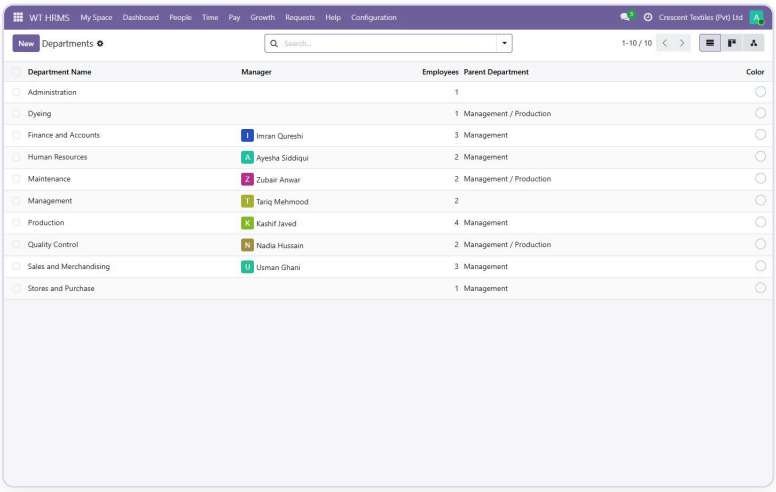

Figure 7. Crescent Textiles: seven departments under Management, each with its head. Odoo shows a department by its full path, for example Management / Production.

Job positions

Open **Employees > Configuration > Job Positions**. One line per job, for example Machine Operator or Accountant, with its department. Letters and the org chart read the job position. The workbook creates any job title it meets, so you only need this screen for jobs nobody holds yet.

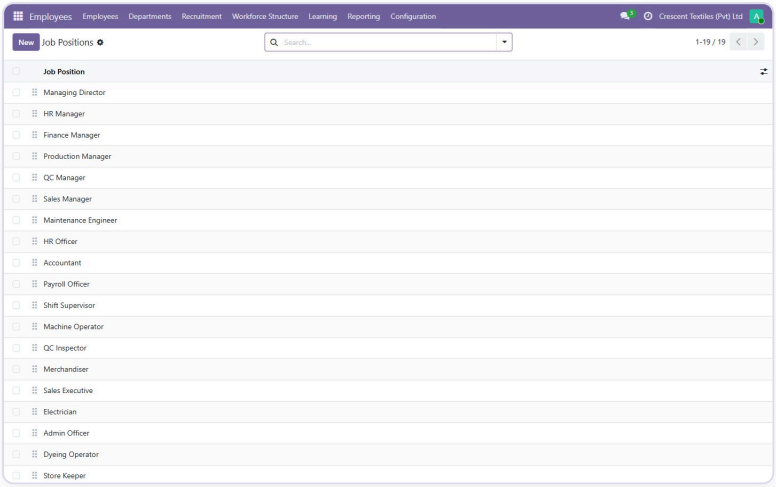

Figure 8. Job positions created by the import.

Public holidays

1. Open the **Time Off** app, then **Configuration > Public Holidays**.
2. Click **New**, type the name, set the start and end. A one day holiday runs from 12:00 AM to 11:59 PM that day.
3. Leave **Working Hours** empty so it applies to everyone. Fill it only for a holiday that applies to one schedule.

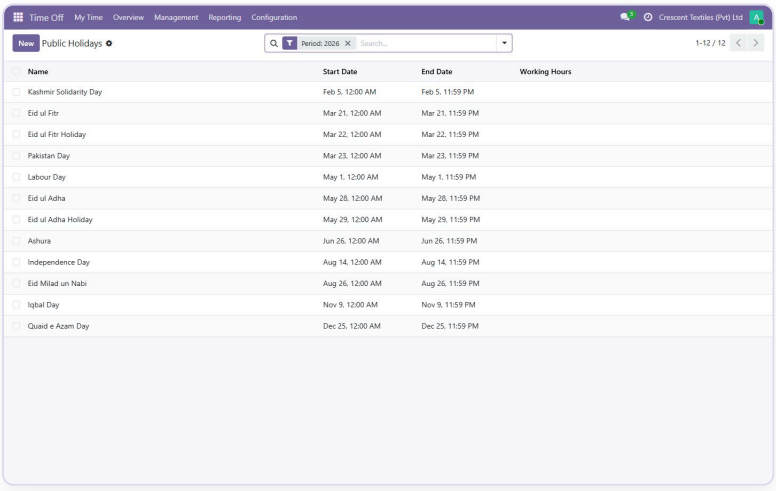

Figure 9. The 2026 Pakistan public holidays. Islamic holidays move with the moon, so update them when the dates are announced.

> **CHECK THE TIMES AFTER A WORKBOOK IMPORT**
>
> Open the list after importing holidays from the workbook and look at the Start Date column. Each should read 12:00 AM. If they read 5:00 AM, the holidays were stored in the wrong timezone: open each one and set it back to 12:00 AM to 11:59 PM. Way4Tech has a fix for this in the next release.

The quick route: Set up in ten minutes

For a small company, **Help > Set up in ten minutes** does departments, a handful of people with logins and the approval chains in four short steps. It is safe to run more than once: what already exists is kept.

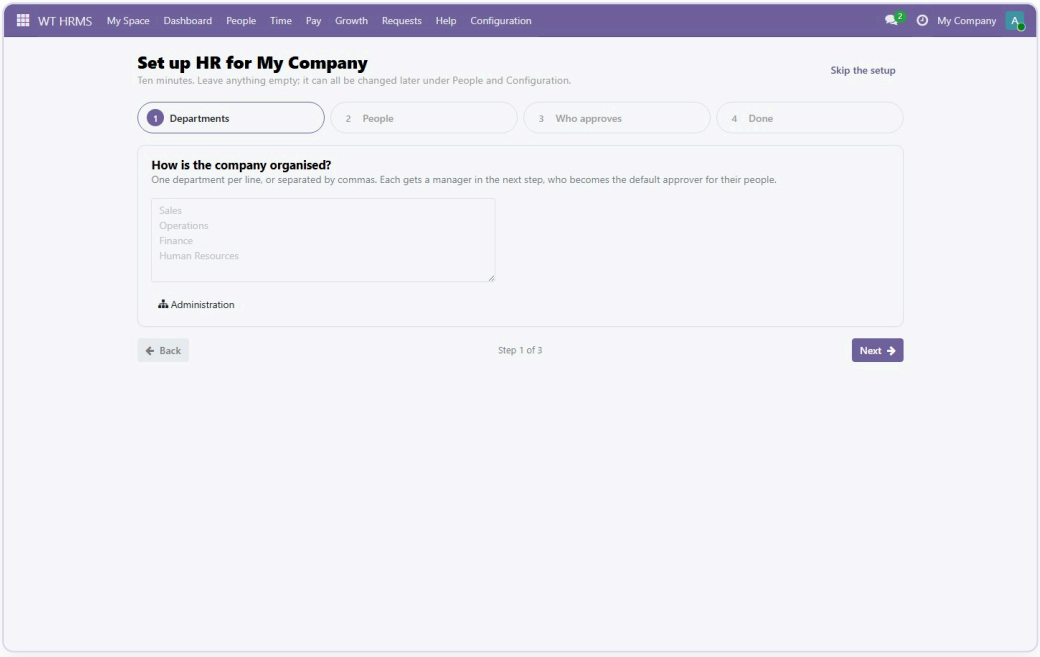

Figure 10. Step 1: one department per line.

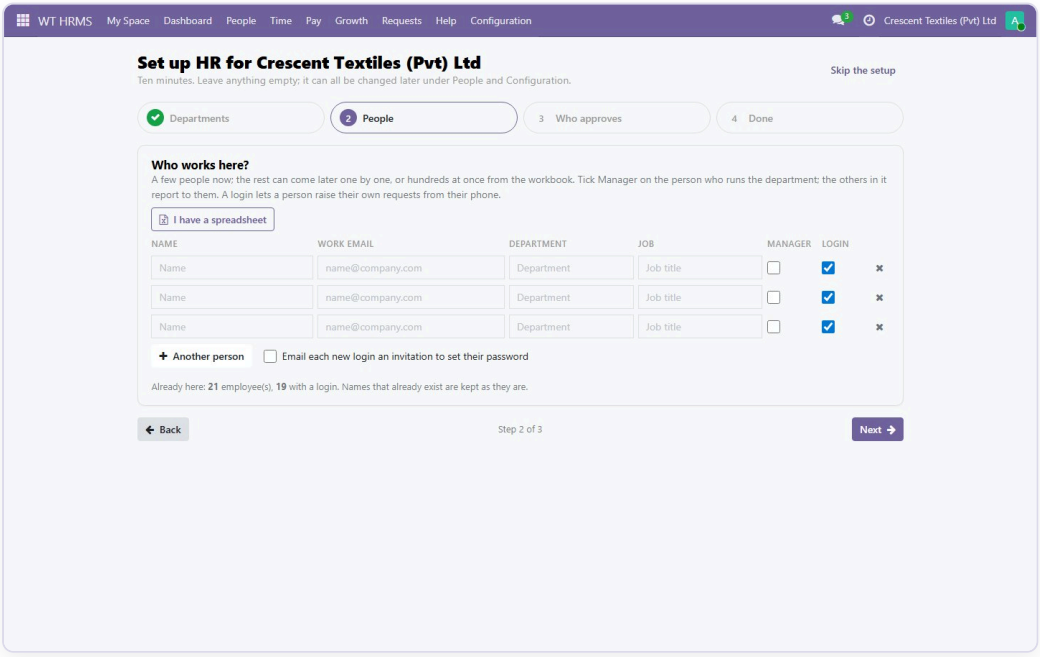

Figure 11. Step 2: a few people typed in, or the button I have a spreadsheet that takes you to the workbook.

Step 3, Who approves, is covered in chapter 6. Step 4 tells you what was created.

CHAPTER 5

Importing your people

Two ways in. The onboarding workbook loads the whole company at once and is the one to use on day one. The standard import templates are for adding departments, jobs, people or leave balances later.

Files supplied with this guide (folder *templates*)

- 0_Company_Onboarding_Workbook_blank.xlsx
- 0_Company_Onboarding_Workbook_Crescent_sample.xlsx
- 1_Departments.xlsx and .csv
- 2_Job_Positions.xlsx and .csv
- 3_Employees.xlsx and .csv
- 4_Leave_Opening_Balances.xlsx and .csv

Route A: the onboarding workbook

One Excel file with a sheet for each part of the set-up. You fill it in plain words, the system checks every cell and tells you exactly what is wrong before it writes anything, and then it imports everything in one go. Importing the same file again later updates people rather than duplicating them, because each person is recognised by their work email.

Sheet	What to put in it
Start here	Instructions only.
Company	A short form: name, country **Pakistan**, currency **PKR**, address, working days (for example Monday to Saturday), start and end time, lunch break, whether to create logins and whether to email invitations.
Departments	One row per department, with its parent and the work email of its head.
Employees	One row per person: number, name, work email, mobile, department, job title, manager's work email, joining date, date of birth, gender, CNIC, personal email, address, city, bank, account or IBAN, badge ID, login role, password (optional).
Salaries	Work email and monthly basic salary. Extra columns are per-person allowances for rules marked "Amount per employee".
Pay rules	Your own allowances and deductions. **Leave it empty in Pakistan** if you use the ready Pakistan Standard structure (chapter 7).
Tax bands	**Leave empty in Pakistan.** The Pakistan pack carries the FBR slabs.
Leave policies	One row per leave type: days per year, carry forward, encashment, minimum service months, allowed during probation, longest single request.
Public holidays	Date and name.

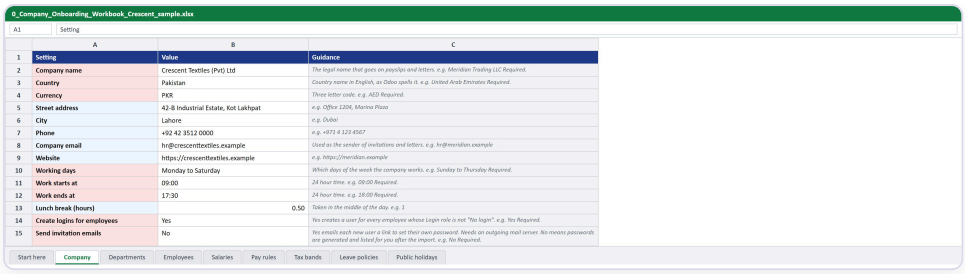

Figure 12. The Company sheet is a short form: one answer per row, with guidance beside it.

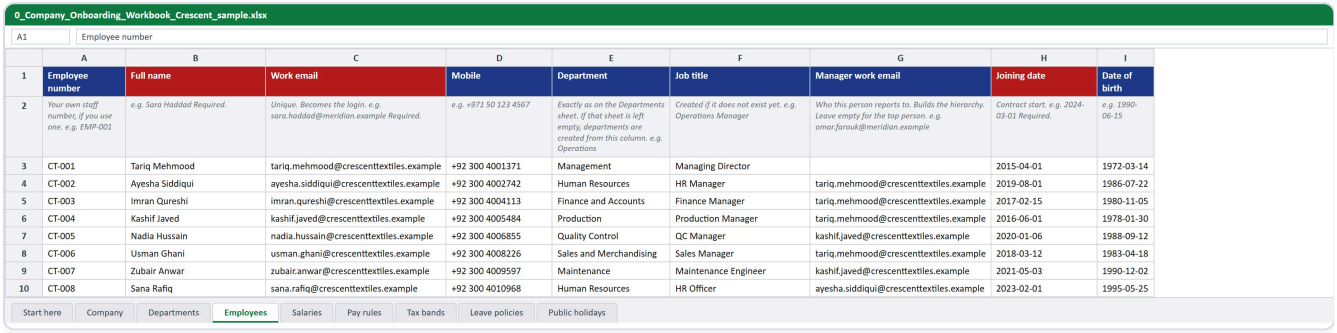

Figure 13. The Employees sheet. Red headers are required. Row 2 explains each column with an example; your data starts on row 3.

Fill it in

1. Open **WT HRMS > Configuration > Company Onboarding** and click **New**.
2. Click **1. Download Template**. You can also download the sample company to see a filled example.
   The template already lists the departments that exist in the system.
3. Fill the sheets. Use the drop downs where there are any. Dates as YYYY-MM-DD.
4. Do not change the headers, the order of the sheets or row 2.

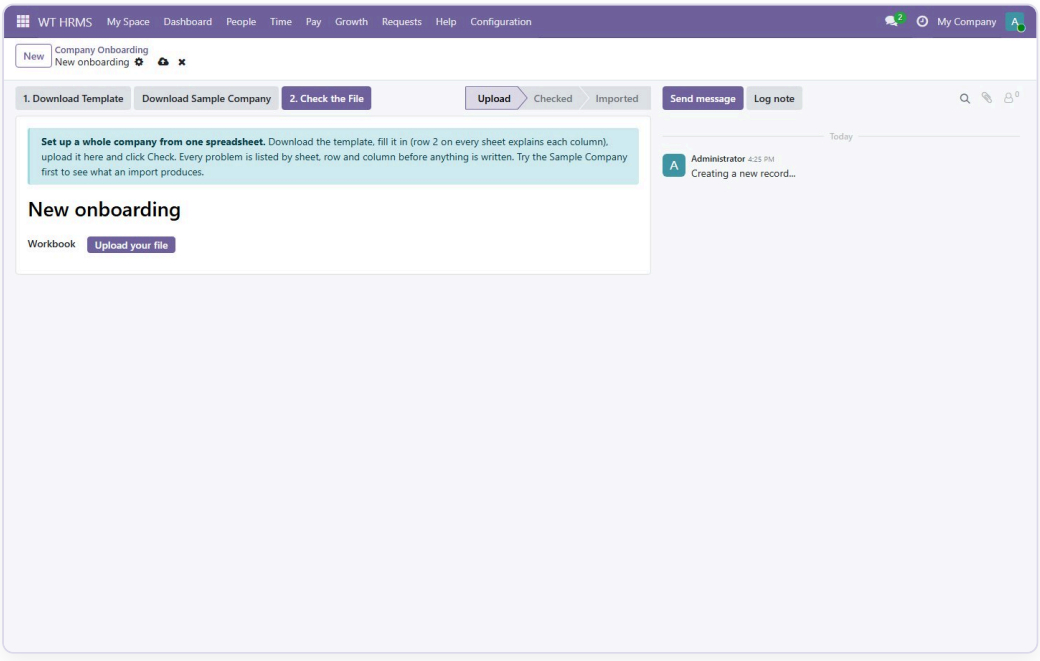

Figure 14. A new onboarding import, before the file is uploaded.

> **TIPS FROM EXPERIENCE**
>
> Put the CNIC with dashes, exactly as on the card. Give every person a unique work email, even factory staff, because the email is the key that links the sheets. Fill the manager column for everyone except the very top person; it builds the approval routes. Use the bank account exactly as the bank's file expects it, normally the IBAN.

Check, fix, import

1. Click **Upload your file** and choose the filled workbook.
2. Click **2. Check the File**.
   Nothing is written yet. If there are problems, each is listed with its sheet, row and column.
3. Fix the problems in Excel, upload the corrected file over the old one and check again.
4. When the green bar says *The file checks out*, read the **What the File Contains** counts, then click **3. Import** and confirm.
5. If logins were created without invitations, click **Download Logins** for the list of users and passwords. Keep it safe and hand each person their own.

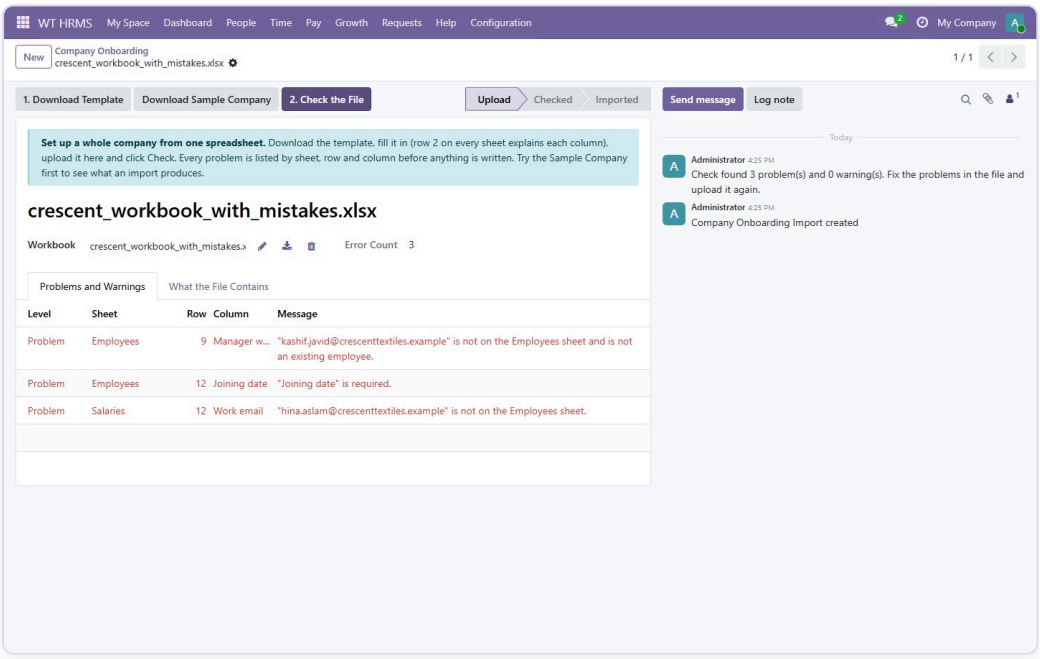

Figure 15. A file with two mistakes: a misspelt manager email on row 9, and a missing joining date on row 12. The third line follows from the second: a person who failed the Employees sheet cannot have a salary.

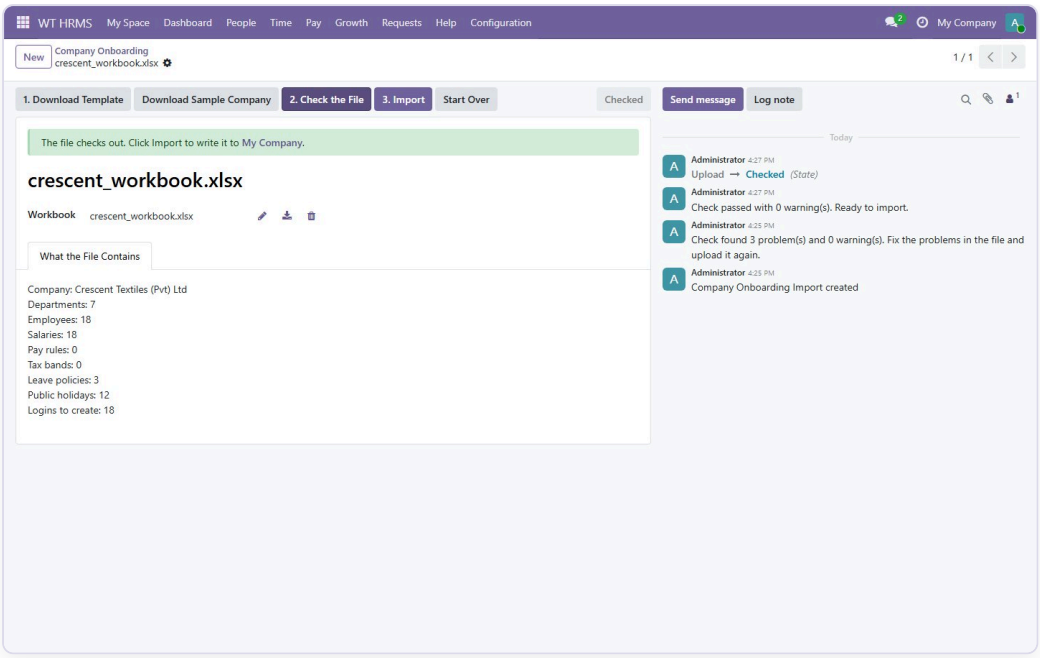

Figure 16. The corrected file checks out: 7 departments, 18 employees, 18 salaries, 3 leave policies, 12 holidays, 18 logins.

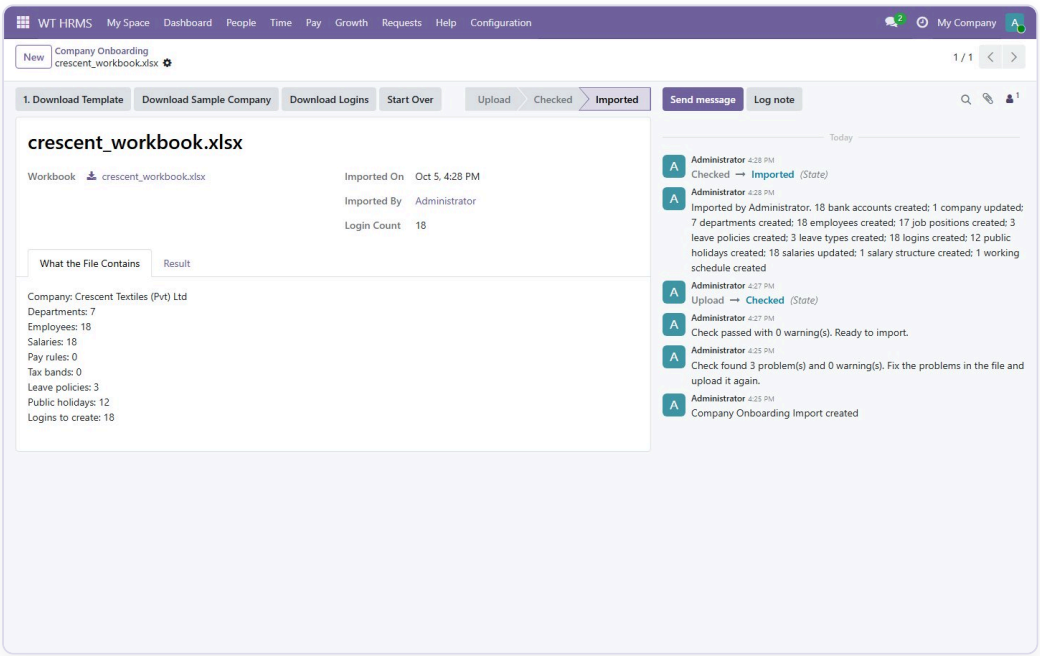

Figure 17. Imported. The log on the right lists exactly what was created; Download Logins gives the passwords.

Straight after the import

- [ ] Open a few employees and compare them with your source list.
- [ ] On each employee, Work Information tab, check the **Time Off** approver is the manager's user. If it is empty, choose the manager and save. (The workbook in this version leaves it empty; a fix is in the next release. The standard import fills it.)
- [ ] Give the HR people their Time Off and Attendances rights (chapter 2).
- [ ] Check public holiday times (chapter 4).
- [ ] Ask Finance to trust the salary bank accounts (chapter 7).

> **WHERE THE CNIC GOES**
>
> The workbook puts the CNIC in **Identification No** on the employee's Personal tab. That is the field payslips and letters print. The HR Details tab also has a field called National ID / CNIC; you can leave it empty. To be warned before a CNIC expires, upload it as a document with its expiry date (chapter 12).

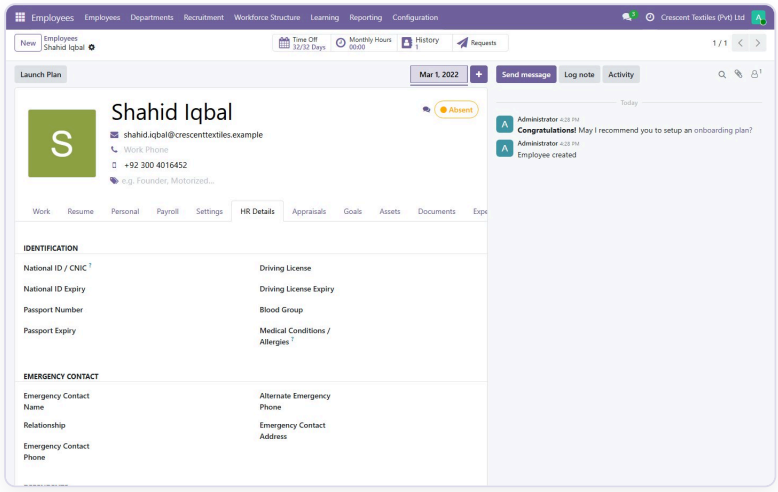

Figure 18. The HR Details tab: identification, passport and licence expiry, blood group, emergency contact.

Route B: the standard import templates

Every list in Odoo has an import button. The four templates supplied are laid out so the import screen recognises every column by itself. Use them for later additions, or if you prefer to load the company piece by piece. Always import in this order: departments, job positions, employees, then leave balances.

Template	Import it from	Notes
1_Departments	People > Departments	Parent Department written as its full path, for example *Management / Production*.
2_Job_Positions	Employees > Configuration > Job Positions	Department as its full path.
3_Employees	People > Employees	Name, work email, department path, job, manager's full name, contract start date, wage, CNIC in Identification No, badge, birthday, gender, emergency contact.
4_Leave_Opening_Balances	Time > Leaves > Allocations	Employee, leave type, number of days, description, start and end date.

Each template has a **Data** sheet with two shaded sample rows to replace, and a **Column guide** sheet that explains every column. A CSV copy is included for people who prefer it.

How to import a template

1. Open the list, for example **People > Employees**.
2. Click the gear icon next to the screen title and choose **Import records**.

3. Click **Upload Data File** and choose the filled template. If it has several sheets, pick **Data** in the Sheet box.
   Each column of the file is shown next to the Odoo field it will go into.
4. Check every column has a field. A column shown with no field will be ignored; pick the field from the list or remove the column.
5. Click **Test**. Nothing is saved.
   "Everything seems valid." or a list of errors with the row.
6. Fix errors in the file, click **Load Data File** to reload it, and test again. When clean, click **Import**.

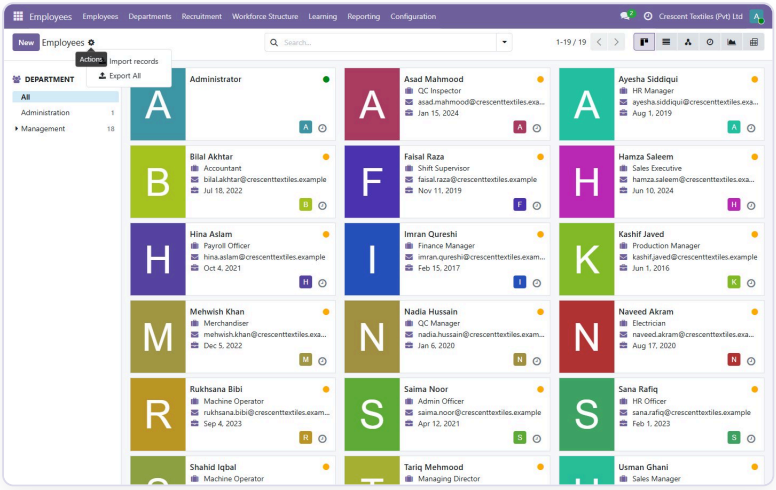

Figure 19. The gear icon beside the title opens Import records.

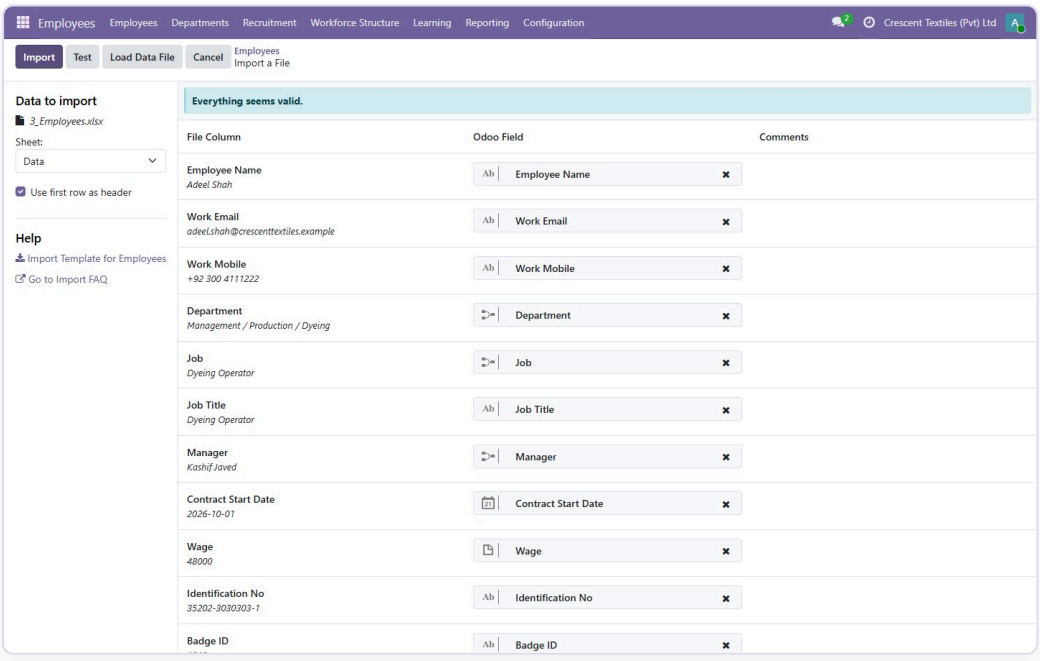

Figure 20. The employees template after Test: every column found its field and the file is valid.

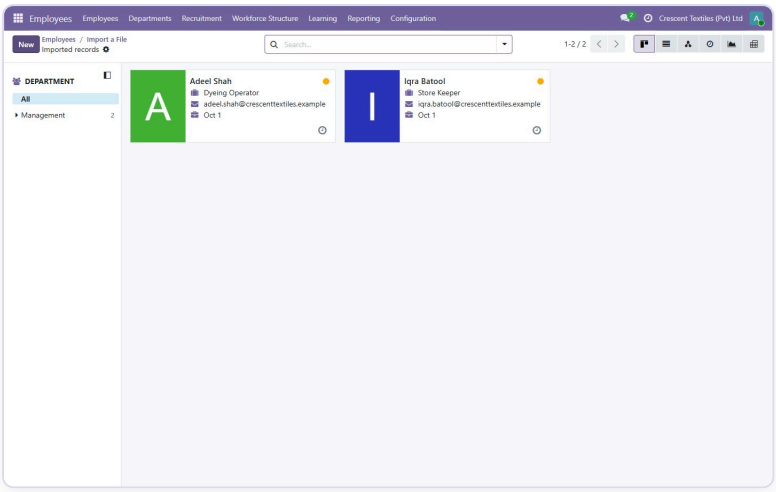

Figure 21. After Import, the screen shows only the records just created, so you can check them at once.

> **TEST ON TWO ROWS FIRST**
>
> For a big file, import the first two rows, open both records and check them. Only then import the rest. Removing 300 wrongly imported people takes far longer than a two row test.

Opening leave balances

On go-live day each person has some leave left from the old system. Do this **after** you have allocated the year's entitlement from the leave policies (chapter 6), and decide with the owner whether the balance replaces or adds to it. The usual answer for a mid-year go-live: allocate the full year from the policy, then import the days already *taken* this year as approved time off, or simply import the remaining days as the opening balance and skip the policy run for this year.

1. Fill **4_Leave_Opening_Balances**: one row per person and leave type.
2. Open **Time** > **Leaves** > **Allocations**, gear icon, **Import records**, upload, **Test**, **Import**.
3. The imported allocations wait in **To Approve**. In the list, remove the filters, select the new lines and click **Approve**.

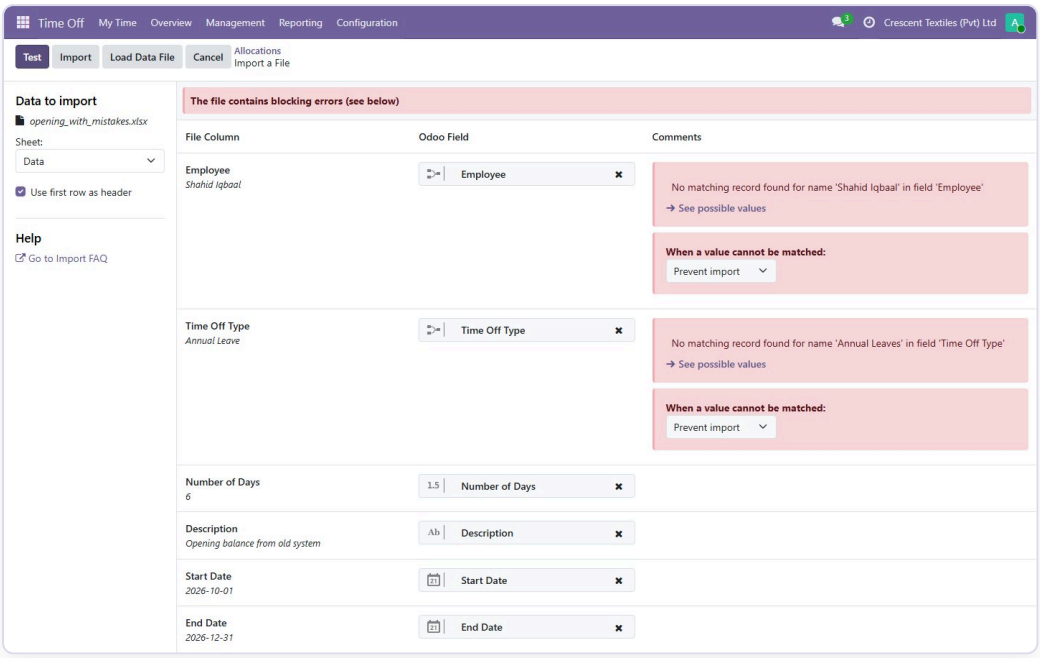

Figure 22. Test catches the mistakes: "Shahid Iqbaal" is not an employee and "Annual Leaves" is not a leave type. Names must match the system exactly.

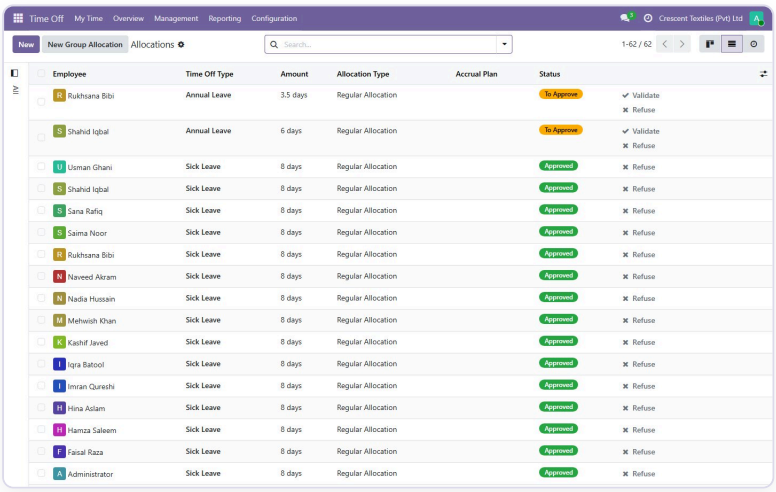

Figure 23. The allocations list after the policy run and the opening balances import.

CHAPTER 6

Leave, approvals and HR lists

The rules the company runs on: how much leave people get and who approves what. Then the small lists that HR keeps, each of which takes a few minutes.

Leave types

A leave type is a kind of time off: Annual, Casual, Sick, Maternity. The workbook creates the ones on its Leave policies sheet. Open them in the **Time Off** app, **Configuration > Time Off Types**.

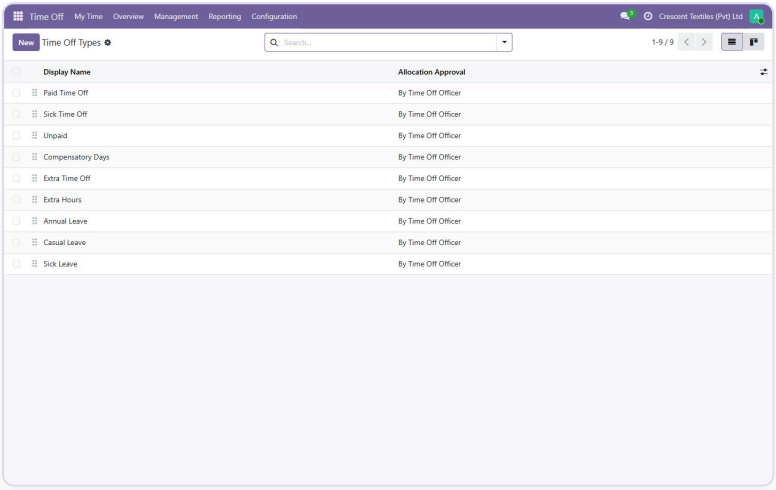

Figure 24. The leave types available to a Pakistan company. Odoo's own starters (Paid Time Off, Sick Time Off, Unpaid) sit beside the three from the workbook; archive any you will not use.

On each type, set **Time Off Validation**, the most important leave decision:

Choice	Meaning	Use it for
By Employee's Approver	The line manager approves; done.	Sick leave, short casual leave
By Employee's Approver and Time Off Officer	The manager approves, then HR gives the second approval.	Annual leave (recommended)
By Time Off Officer	HR alone approves. The manager is not asked.	Maternity, Hajj, unpaid
None needed	Approved the moment it is asked.	Rarely

> **THE DEFAULT IS HR ONLY**
>
> Leave types made by the workbook start as *By Time Off Officer*, so line managers are never asked. Change Annual and Casual leave to the two-step option before go-live if managers should approve their own people's leave.

Leave policies

A leave policy is where the rules of each leave type live. Open **WT HRMS > Configuration > Leave Policies**.

Field	What it does	Crescent example
Annual Days	Days each eligible person gets per year when you allocate.	Annual 14
Max Carry Forward Days	Unused days that may roll into next year. The rest lapse.	7
Allow Encashment, Encashment Rate	Lets people sell unused days back. The amount is paid on the next payslip. Leave the rate at 0 to use the person's daily wage.	Annual only
Min Service (months)	Months of service before the type can be allocated or taken.	Annual 12
Probation Eligible	Whether people on probation may take it.	Casual yes, Annual no
Max Consecutive Days	Longest single request. 0 means no limit.	Annual 14, Casual 3
Requires Attachment, after days	A document is required for requests longer than the given days, for example a medical certificate after 2 sick days.	Sick, after 2

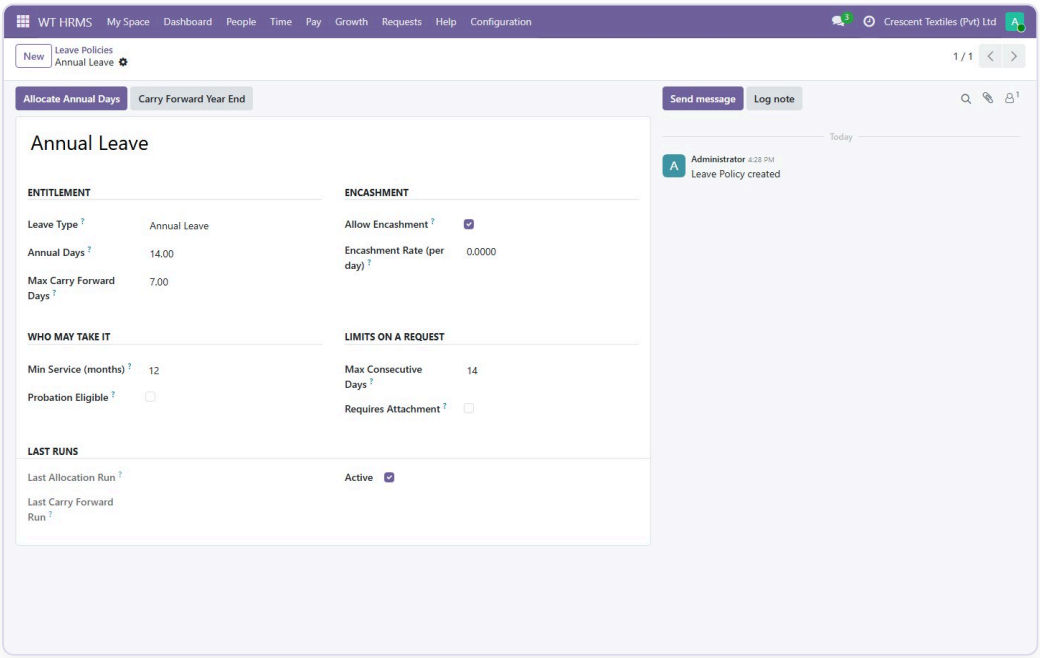

Figure 25. The Annual Leave policy: 14 days, 7 may be carried forward, encashable, after 12 months of service, not during probation, 14 days at most in one go.

Allocate the year

1. Open a policy and click **Allocate Annual Days**.

   Every eligible employee gets an approved allocation for this calendar year. People who do not meet the service rule are skipped.

2. Repeat for each policy.
3. Open **Time > Leaves > Allocations** to see the result.

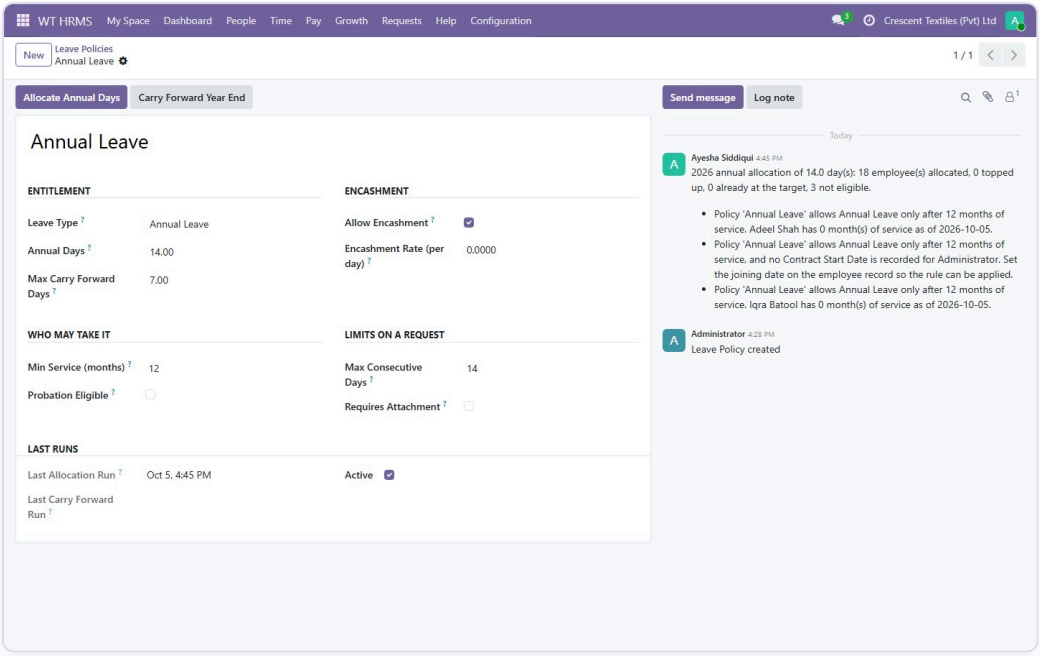

Figure 26. After the run, Last Allocation Run shows when it happened. Running it again does not give anyone the days twice.

At the year end, **Carry Forward Year End** moves unused days into the new year up to the limit. Both runs also happen on their own each January through scheduled jobs, so you only press the buttons on go-live day or to correct something.

Approval chains

Every request other than time off follows an approval chain: one per request type, made of steps in order. Open **WT HRMS > Configuration > Approval Chains**.

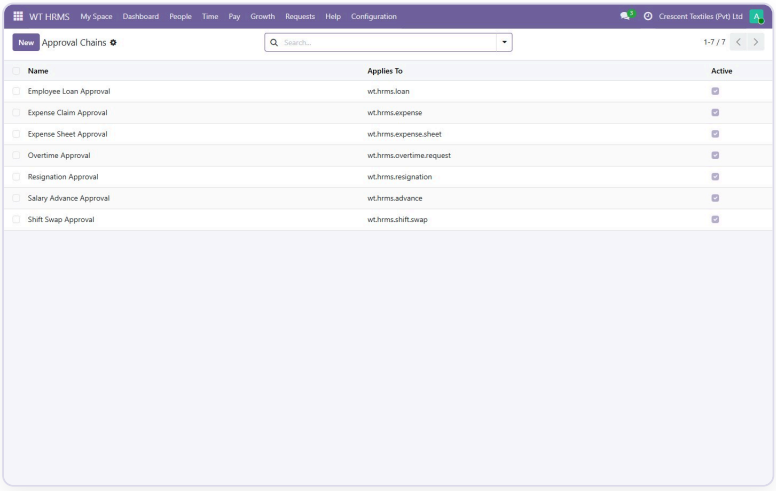

Figure 27. The chains that come with the suite.

Each step names who approves:

Approver type	Who it means
Direct Manager	The Manager on the requester's employee record.
Manager's Manager	One level higher.
HR Manager	Any user with Employees: Administrator.
Security Group	Anybody in a group you choose, for example Invoicing: Accountant for a finance step on loans.
Specific User	One named person, for example the Managing Director.

A step can also have **escalation hours**: if nobody acts in that time the request moves on to the next step (0 turns this off). A step can carry a **condition**, a short formula that skips the step when it does not apply, for example so only loans above PKR 200,000 go to the director. Ask Way4Tech to write conditions for you.

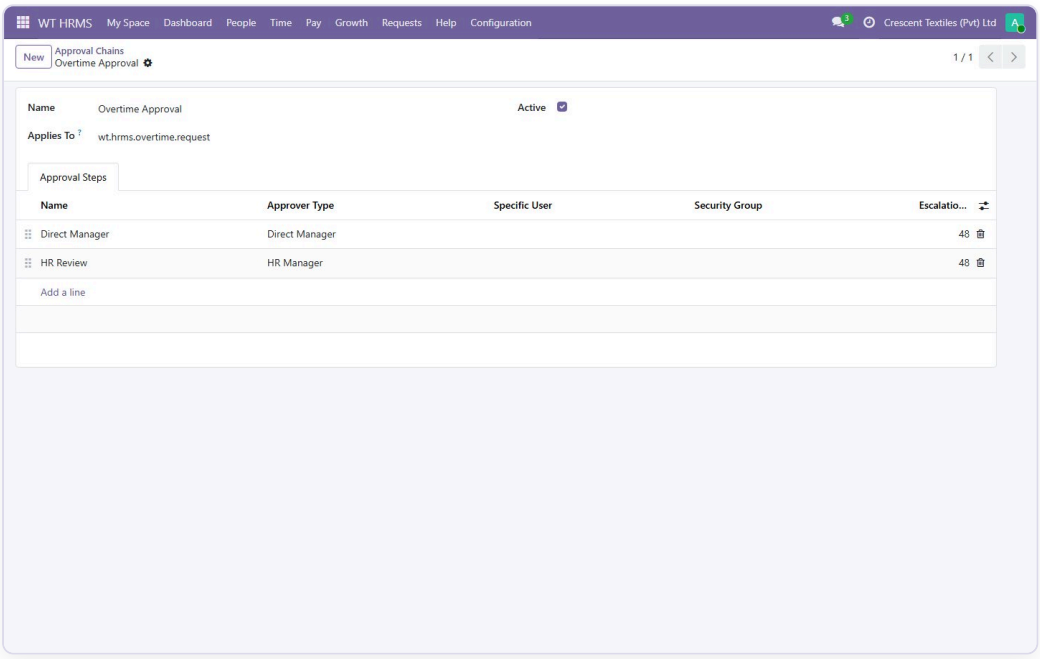

Figure 28. The overtime chain: the supervisor first, then HR, each with 48 hours before escalation.

The quick way: presets

Help > Set up in ten minutes, step 3, lists every request type with a choice of *Direct manager*, *Direct manager, then HR* or *HR only*. Types that already have a chain are shown with a tick and left alone. Click **Finish**.

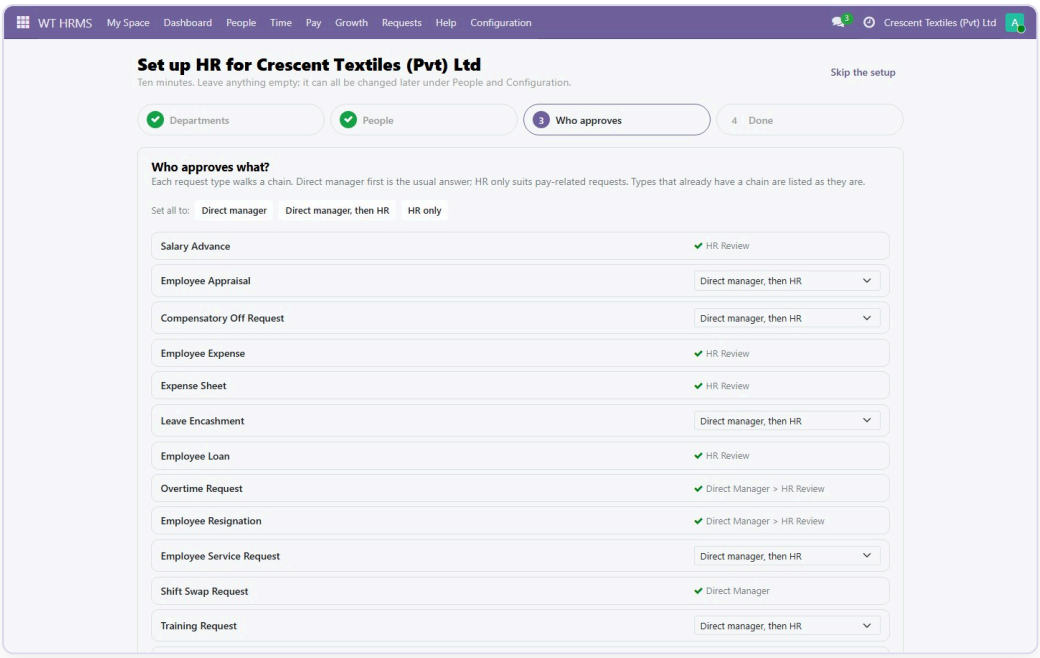

Figure 29. Who approves what. A sensible default for a factory: manager then HR for most things, HR only for money (loans, advances, expenses).

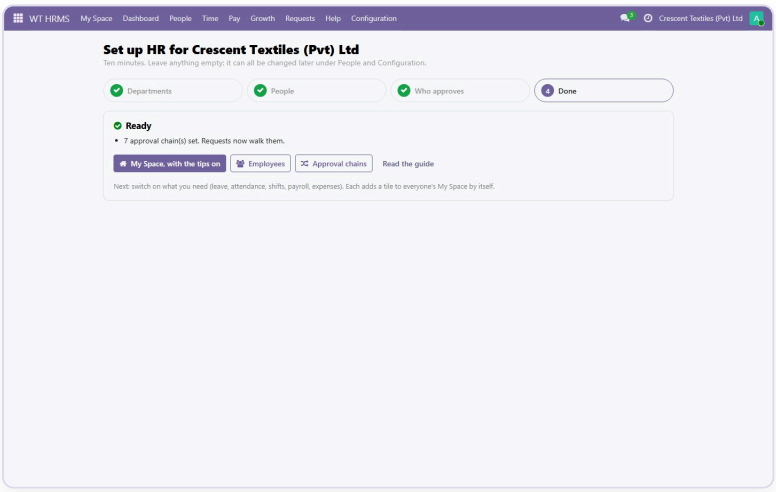

Figure 30. Done: seven chains set. Requests now walk them.

> WHY IT MATTERS
>
> A request type with no chain waits for any HR manager. That is safe but it puts everything on HR's desk. Decide the chains with the owner before go-live, because people judge a new system by how fast their first request gets an answer.

The HR lists

All under **WT HRMS > Configuration**. Fill them before go-live; each takes minutes.

List	What to set up
Letter Templates	Ten templates are supplied. Open each, put in your wording and the right signatory. Placeholders such as *{{employee.name}}*, *{{employee.job_title}}*, *{{employee.joining_date}}*, *{{wage}}*, *{{company.name}}*, *{{signatory.name}}* are filled in when a letter is made. Note that *{{wage}}* is the basic wage, not gross pay.
Checklist Templates	A Standard Onboarding and a Standard Offboarding list are supplied. Add your own tasks and who does each: HR, IT, Administration, Direct Manager, the Employee.
Document Types	CNIC, Passport, Driving License, Degree, Experience Letter, Medical Certificate are supplied. Add others, for example Police Character Certificate. Set how many days before expiry HR is warned.
Expense Categories	Travel, Accommodation, Meals, Local Transport and others are supplied.
Asset Categories	Empty. Add Laptop, Mobile Phone, SIM Card, Safety Gear, Locker Key, Vehicle.
Service Categories	Empty. Add IT Support, Admin, Maintenance, each with the hours allowed to resolve it (SLA) and the department that handles it.
Shift Types	Morning, Day, Evening and Night are supplied. Correct the times and breaks.
Overtime Policies	Rates for weekday (1.5), weekend (2.0) and holiday (3.0) overtime and a weekly cap. See chapter 7 for how overtime is paid.
Appraisal Periods	Add the review period, for example Annual Review 2026, 1 January to 31 December.
Skills	The supplied list is aimed at software (Python, SQL). Replace it with your own: Loom operation, Dyeing, Quality inspection, Forklift.

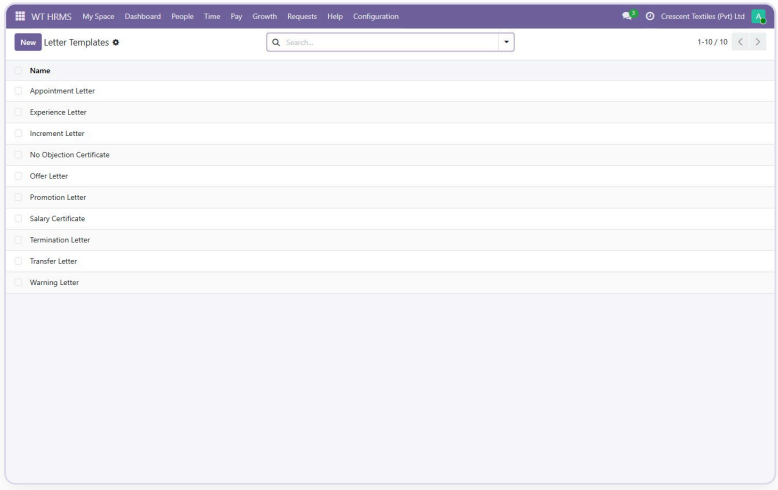

Figure 31. The ten letter templates supplied.

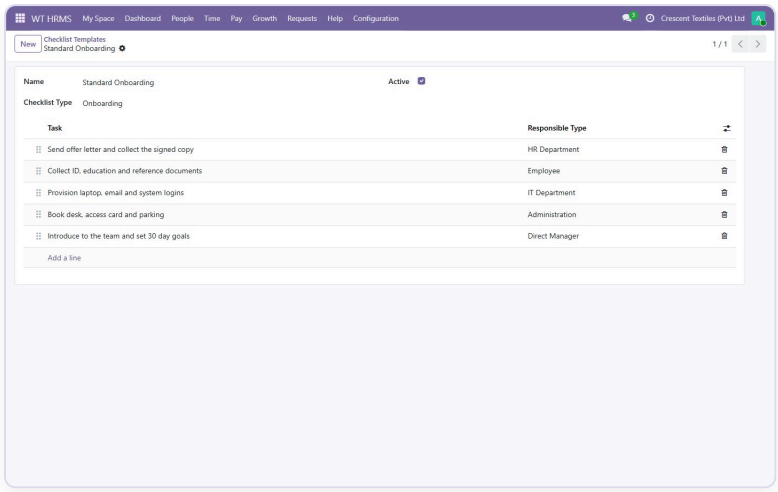

Figure 32. The Standard Onboarding checklist: five tasks, each with the team responsible.

CHAPTER 7

Payroll set-up

Do this with the finance manager in the room. The aim is a payslip that matches the old system to the rupee, posts to the right accounts and produces a bank file the bank accepts.

How a payslip is worked out

A **salary structure** is an ordered list of **payroll rules**. When a payslip is computed, the rules run top to bottom: basic, then allowances, gross, deductions and employer contributions, then net. Each rule is a fixed amount, a percentage of another rule, an amount per employee, a tax table or a short formula. After the rules, the suite adds what other modules owe: the loan instalment due, the advance recovery due, leave encashment.

The figure everything starts from is the employee's **Wage** on the Payroll tab: the monthly **basic** salary.

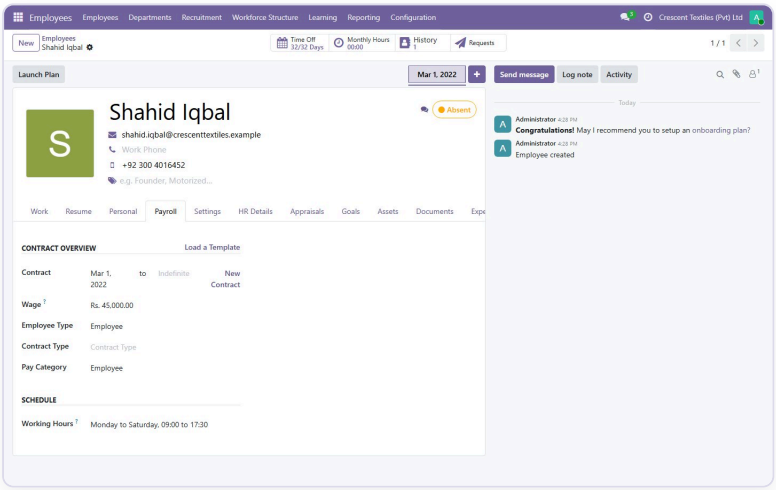

Figure 33. The Payroll tab of an employee: contract dates, Wage (the basic, PKR 45,000) and working hours.

Salary structures

Open **WT HRMS > Configuration > Payroll Config > Salary Structures**.

Structure	Use
Pakistan Standard	The one to use in Pakistan. Basic, house rent, medical, conveyance, EOBI, provident fund, FBR income tax, social security.
Monthly Salary	A plain basic-only structure, useful as a starting point for a non-Pakistan company.
Standard Salary	Made by the workbook from its Pay rules sheet. If you left Pay rules empty it only has Basic; archive it so nobody picks it by mistake.

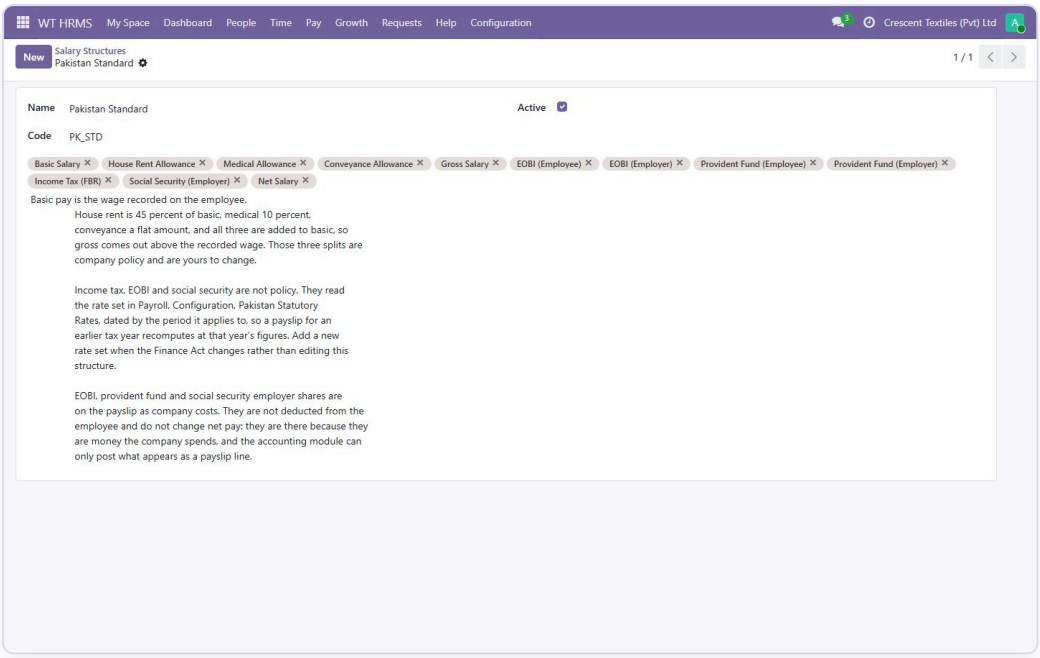

Figure 34. Pakistan Standard: the rules it runs and the note explaining the split.

The Pakistan Standard rules

Rule (code)	As supplied	Decide with Finance
Basic Salary (BASIC)	The employee's wage.	
House Rent Allowance (HRA)	45% of basic.	Your company's %
Medical Allowance (MED)	10% of basic.	Your company's %
Conveyance Allowance (CONV)	PKR 5,000 fixed.	Amount, or per employee
Gross Salary (GROSS)	Sum of the above.	
EOBI (Employee / Employer)	From the statutory rates: 1% and 5% of the EOBI wage base.	Registered with EOBI?
Provident Fund (Employee / Employer)	8.33% of basic each.	Do you run a PF? If not, remove both
Income Tax (FBR)	Annual slabs applied to the year's taxable pay, spread over twelve months.	
Social Security (Employer)	From the statutory rates, provincial (PESSI in Punjab).	Registered?
Net Salary (NET)	Gross less employee deductions.	

> **PART MONTHS AND UNPAID LEAVE**
>
> As supplied, the Basic rule pays the full monthly wage whatever the days. If you deduct unpaid leave or pay joiners and leavers for part of a month, change the Basic rule's formula to *round(wage * worked_days / 30.0, 2)* during set-up. The payroll officer then types the worked days on the payslips that need it (chapter 13).

To change a rule, open **Payroll Config > Payroll Rules**, open it, change the percentage or amount and save. To remove one from the structure, open the structure and click the small x on its tag.

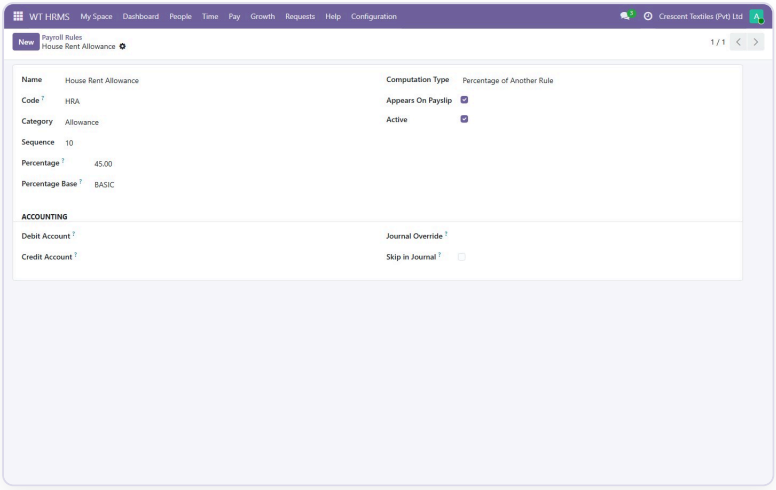

Figure 35. House Rent Allowance: 45% of BASIC. The Accounting block can name the accounts for this rule only.

Statutory rates

Payroll Config > Pakistan Statutory Rates holds the FBR income tax slabs, the EOBI wage base and percentages, and the social security percentage and wage ceiling, each set dated by when it is in force. A payslip uses the set in force on its dates.

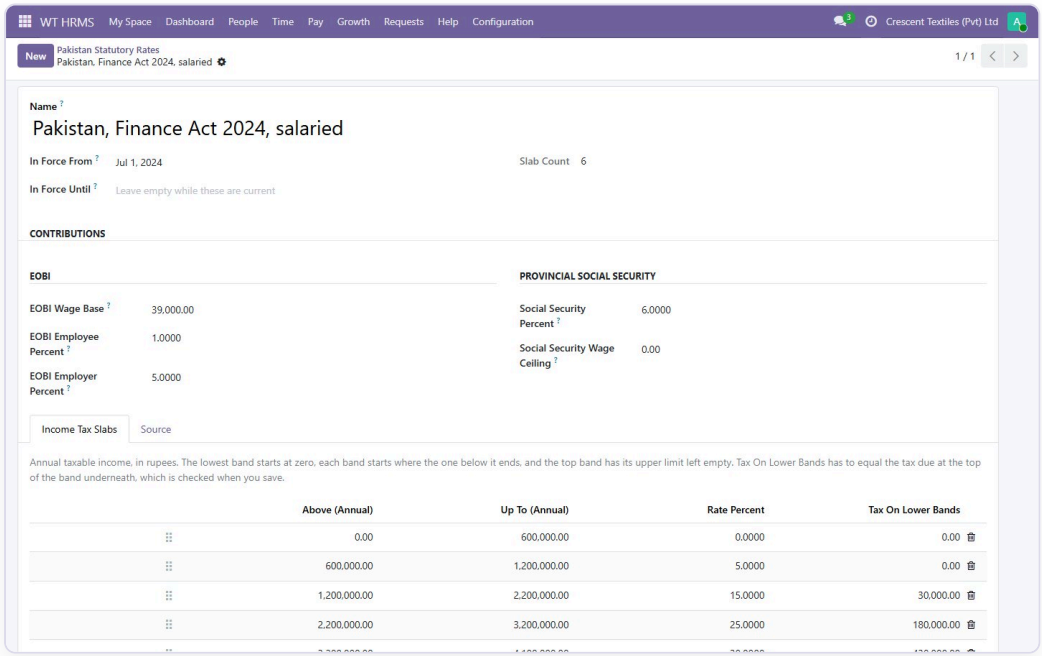

Figure 36. The supplied rate set, Finance Act 2024, salaried. Check every figure with your tax adviser.

> **EVERY JULY, CHECK THE RATES**
>
> The Finance Act changes tax slabs and EOBI figures most years from 1 July. Do not edit last year's set. Click **New**, enter the new figures with **In Force From** 1 July, and close the old set with an **In Force Until** of 30 June. Payslips for earlier months then still recompute correctly. Before go-live, confirm with Finance that the supplied slabs match the tax year you are paying in.

Overtime: add one rule

Approved overtime hours are written on the payslip automatically (the Overtime Hours field), but a rule has to turn hours into money. Add it once:

1. **Payroll Config > Payroll Rules**, **New**. Name **Overtime**, Code **OT**, Category **Allowance**, Sequence **25** (after conveyance, before gross).
2. Computation Type **Python Expression**, and the formula agreed with Finance, for example *round(wage / 208.0 * 1.5 * overtime_hours, 2)*: basic divided by 208 monthly hours (48 a week), times 1.5.
3. Open the Pakistan Standard structure and add the Overtime rule to it.

Per-person amounts

Some allowances differ by person, for example a fuel allowance only for sales staff. Make a rule with computation **Amount set per employee**, add it to the structure, then put each person's amount on their employee record, **Salary Components** tab. The workbook's Salaries sheet fills the same tab.

Accounting

The salary journal

1. In the Invoicing app, **Configuration > Journals**, create a journal **Salaries**, type Miscellaneous, short code SAL.
2. In **Settings > Invoicing**, find **Default Salary Journal** and choose Salaries. Save.

Which account each line posts to

Payroll Config > Payroll Accounts gives a debit and a credit account per payslip category. A rule that names its own accounts wins over this list. Ask Finance to fill it; a common Pakistan set-up:

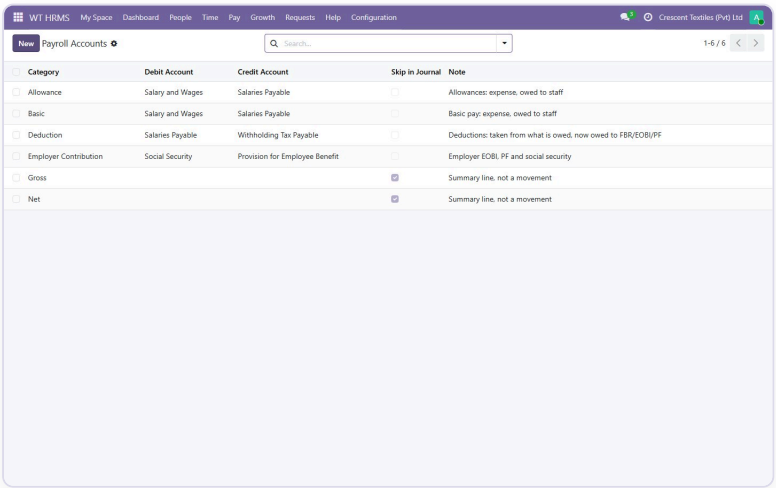

Figure 37. Basic and allowances: Salary and Wages against Salaries Payable. Deductions: from Salaries Payable to Withholding Tax Payable. Employer contributions: Social Security expense against Provision for Employee Benefit. Gross and Net are summary lines and are skipped.

> **TIP**
>
> Give Income Tax, EOBI and PF their own credit accounts on the rule itself, so the ledger shows what is owed to the FBR, EOBI and the PF trust separately. The loan and advance lines fall under Deductions unless you name accounts for them.

Bank files

Pay > Payroll > Bank Files > Bank Formats lists HBL, MCB, UBL, Meezan Bank and a Generic CSV. Open the format for your salary bank and compare it with the sample file your bank gave you: columns, separator, decimal places, header row. The most common reason a bank rejects a file is the amount format, so check that first.

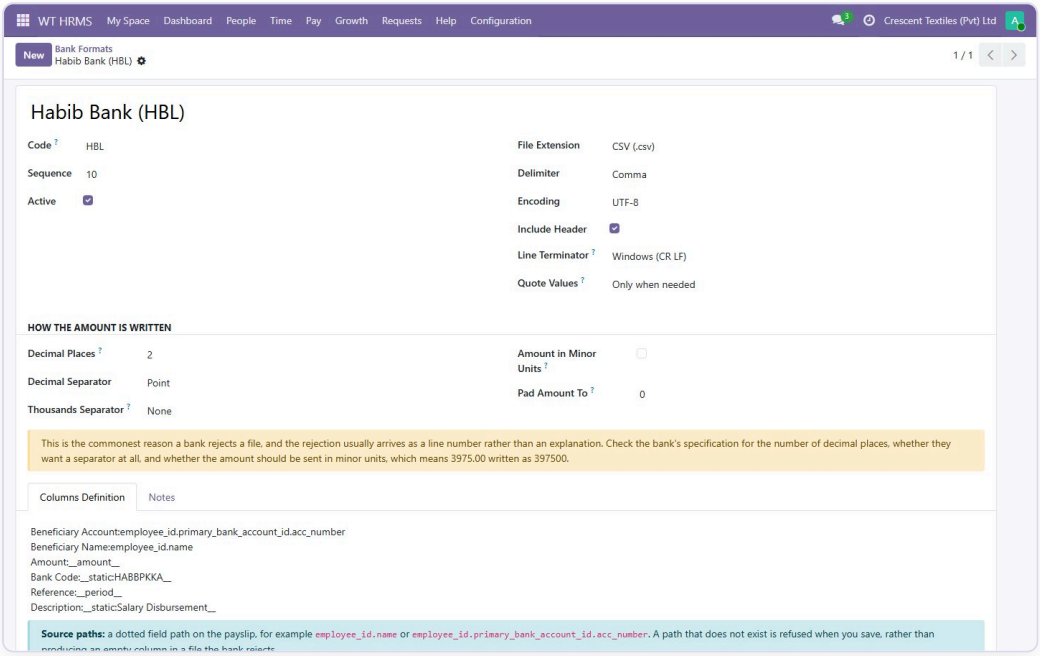

Figure 38. The HBL format: CSV, comma separated, two decimals, header row, and the columns it writes.

Trusted bank accounts

Odoo pays only into bank accounts that someone with accounting rights has marked as trusted, and the bank file refuses anybody whose account is not. New accounts, including those from the workbook, start untrusted. This is a fraud control: whoever types an account number should not be the one who approves paying into it.

1. A Finance user opens the employee, Personal tab, and clicks into the bank account (or opens the list of bank accounts).
2. Compare the account number with the bank letter or cheque the employee gave.
3. Switch **Send Money** on. It shows **Trusted**. Save.

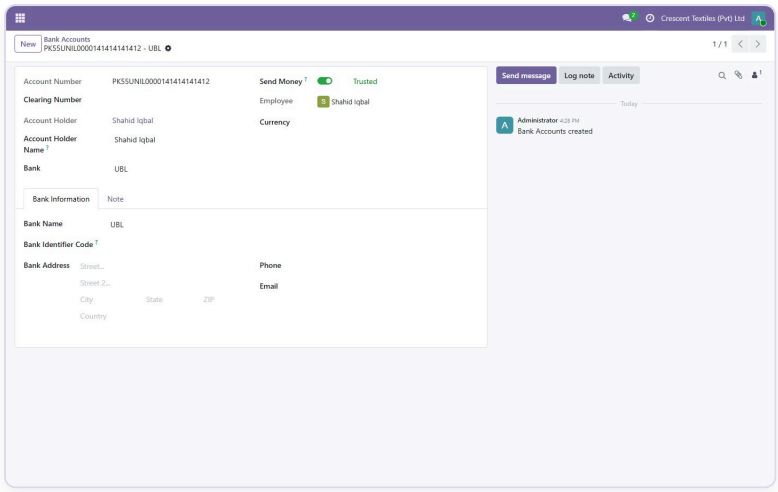

Figure 39. A salary account switched to Trusted.

CHAPTER 8

Attendance and devices

Attendance can come from a button on My Space, from a ZKTeco biometric machine, or both. Decide which, then set up shifts if people do not all work the same hours.

Choose how people check in

Method	Good for	Watch out for
My Space button	Offices, small teams, people who work from a laptop or phone.	Anyone can check in from anywhere. Fine with trust, weak without.
ZKTeco device	Factories, gates, any site where attendance drives pay.	Needs a device on the internet and an IT person for half a day.
Both	A device at the factory gate, the button for sales staff in the field.	Set the setting to **Always**, otherwise the button disappears once the device is active.

The choice is the setting **Check in and out from My Space** under **WT HRMS > Configuration > Settings** (chapter 4).

ZKTeco devices: what IT needs to know

The **WT ZKTeco ADMS** add-on turns your Odoo into the server the machine reports to, using the device's own Cloud Server (ADMS, push) function. There is no PC or script in the office: each punch reaches Odoo within seconds over the internet. Way4Tech installs the add-on; your IT person does the steps below.

1. **Device.** A ZKTeco model with the ADMS or Cloud Server menu (most current fingerprint and face models). Note its serial number from the device's System Info screen.
2. **Network.** The device needs internet access on a cable or Wi-Fi. No inbound port has to be opened.
3. **On the device**, in Comm. > Cloud Server Setting: Server address = your Odoo address, for example *hr.crescenttextiles.example*, port 443 with HTTPS on (or 80 without), path */iclock/*. Save and restart the device.
4. **In Odoo**, **Attendances > ZKTeco > Devices**. A device that has called in appears on its own, inactive. Check the serial number is yours, give it a name and location, set **Timezone Offset** to **5** for Pakistan, and tick **Active**.
5. **Match people.** Each person's user number on the device (the PIN) must match their **ZKTeco User ID** on the employee record, or their **Badge ID** if that field is empty. The workbook's Badge ID column fills this.
6. **Test.** Two people punch. Within a minute they should appear in **Time > Attendance > Check In/Out**.

Device setting in Odoo	What it does
Active	Off: punches are logged but no attendance is written. Use it while testing a new device.
Timezone Offset (hours)	The timezone the device clock runs in. Pakistan 5.
Auto-Close Stale Sessions After (h)	If someone forgot to punch out, their open day is closed after this many hours instead of running into the next day. Default 14.
Default Shift Length (h)	The length given to a day closed that way. Default 9.

HOW PUNCHES BECOME ATTENDANCE

The first punch of a person is a check-in, the next one a check-out, and so on. Every raw punch is also kept under **ZKTeco > Raw Punches**. If a person's number was wrong, fix it on the employee, open the device and click **Reprocess Unprocessed Punches**: the waiting punches are paired again.

Correcting attendance

People forget to punch. HR opens **Time > Attendance > Check In/Out**, filters on the person and day, and corrects the times. Every change is logged. Do corrections before the monthly summary and before payroll.

Monthly attendance summary

At the start of each month the system builds a summary of the previous month for everyone: days present and absent, late arrivals and minutes late, early departures, hours worked and overtime hours. To build it by hand, for example after corrections:

1. Open **Time > Attendance > Generate Summary**.
2. Choose year and month. Leave Employees empty for everyone. Click **Run**.
3. Open **Time > Attendance > Monthly Summary**. Group by department or filter on late count.

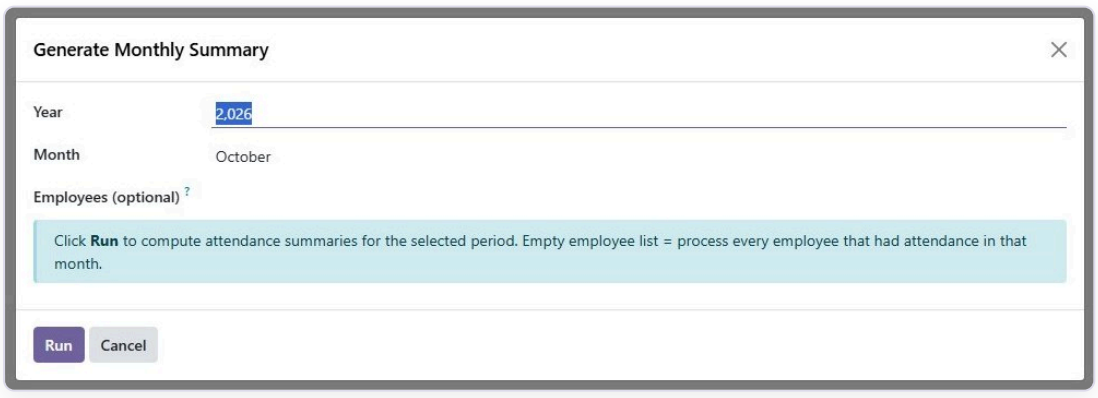

Figure 40. Generate Monthly Summary. Running it again for the same month replaces the earlier figures.

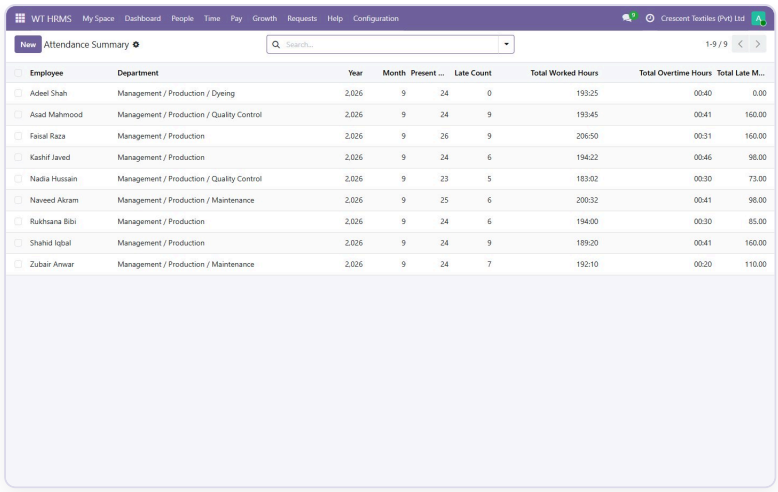

Figure 41. September for the production floor: days present, late count, hours worked, overtime and minutes late.

Shifts

If everybody works the company hours, skip this. For rotating shifts:

1. Correct the shift types in **Configuration > Shift Types**: start, end, break, and Is Night Shift for shifts that cross midnight.
2. Plan the roster in **Time > Shifts > Schedule**: one line per person per day.
3. People see today's shift on My Space. A person who wants to swap raises a **shift swap** from My Space; the manager approves it in To Approve.

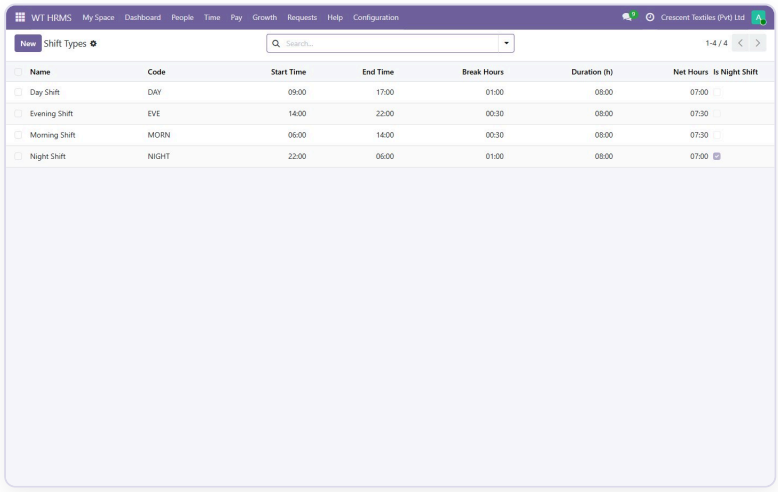

Figure 42. The supplied shift types: Day, Evening, Morning and Night, with net hours after breaks.

CHAPTER 9

Testing and go-live

One afternoon of testing with real users saves weeks of complaints. Use real people from the import, not the administrator account.

The test script

Pick one department with a manager and two staff. Log in as each person in turn (a private browser window per person is easiest). Tick each line when it behaves as described.

#	As	Do this	Expect
1	Employee	Open My Space.	Correct name, job, manager; leave balances shown.
2	Employee	Check in, then check out (if manual check-in is on).	Status changes, hours appear.
3	Employee	Ask for 2 days of annual leave next week.	Shows under My requests, Waiting.
4	Manager	Open My Space.	The leave is under Waiting for your decision.
5	Manager	Approve it.	For a two-step type it moves to Second Approval.
6	HR manager	Approve it.	Approved; the employee's balance drops by 2.
7	Employee	Ask for a salary advance and a work from home day.	Both waiting; each reaches the approver its chain names.
8	Manager	Reject the work from home day and send the reason as a message on it.	Employee sees it under Rejected and gets the message.
9	Employee	Try to ask for more annual leave than allowed in one go.	Refused with a clear message.
10	HR manager	Generate an appointment letter for a new joiner, print the PDF.	Name, job, date and company filled in correctly.
11	Payroll officer	Run last month's payroll as a batch (chapter 13), without posting.	Every payslip matches the old system.
12	Payroll officer	Generate the bank file and send it to the bank as a test.	Bank accepts the format.
13	Employee	Open My Payslips.	Sees own payslip only.
14	Employee	Punch on the device (if any).	Attendance appears within a minute.

The parallel payroll

This is the test that matters most. Run the last closed month in the system and put it beside the old payroll, person by person: basic, each allowance, gross, EOBI, PF, tax, loan and advance deductions, net. Any difference has a reason: a percentage set differently, a missing per-person allowance, an outdated tax slab, a wage that was entered as gross instead of basic. Fix the cause, recompute, compare again, until every net pay agrees. Then cancel and delete that test batch.

> WHY IT MATTERS
>
> Staff forgive a slow leave approval. They do not forgive a wrong salary. A clean parallel run is also what gives the owner the confidence to switch the old system off.

Training

- **Managers, 30 minutes:** My Space, the approval list, My Team, rejecting with a reason. Hand them chapter 11.
- **Staff, 15 minutes** in groups, ideally on their own phones: logging in, checking in, asking for leave, finding the payslip. Hand them chapter 10.
- **Payroll officer, two hours** with Finance: chapter 13, the parallel run, the bank file.

Go-live checklist

- [ ] Company details, logo, currency PKR and timezone correct.
- [ ] Working schedule and public holidays for the year entered and checked.
- [ ] Every employee imported, with department, job, manager, joining date, CNIC, wage and badge ID.
- [ ] Time Off approver set on every employee; no one listed under Employees With No Manager except the top person.
- [ ] Leave policies agreed and allocated for the year; opening balances imported and approved.
- [ ] Leave types set to the right approval; approval chains set for every request type.
- [ ] HR users have Employees, Time Off and Attendances rights; payroll officer has Accounting rights.
- [ ] Letter templates reworded, checklists adjusted, document, asset and service categories filled.
- [ ] Pakistan rates confirmed for the current tax year; overtime rule added; allowances agreed.
- [ ] Salary journal, payroll accounts and bank format set; bank accounts trusted by Finance.
- [ ] Parallel payroll agrees to the rupee.
- [ ] Device active and tested, or manual check-in decided.
- [ ] Logins handed out; managers and staff trained.
- [ ] Old paper forms and spreadsheets withdrawn on the go-live date, with a short notice published on My Space.

PART 2. DAILY USE

CHAPTER 10

Employees: My Space

Everything an employee does happens on one page. This chapter can be printed and handed to staff.

Log in and find your way

1. Open the address HR gave you in Chrome, Edge or Safari, on a computer or a phone.
2. Type your login (usually your work email) and password and press **Log in**.
   You land on My Space. If not, open the app grid and click WT HRMS.

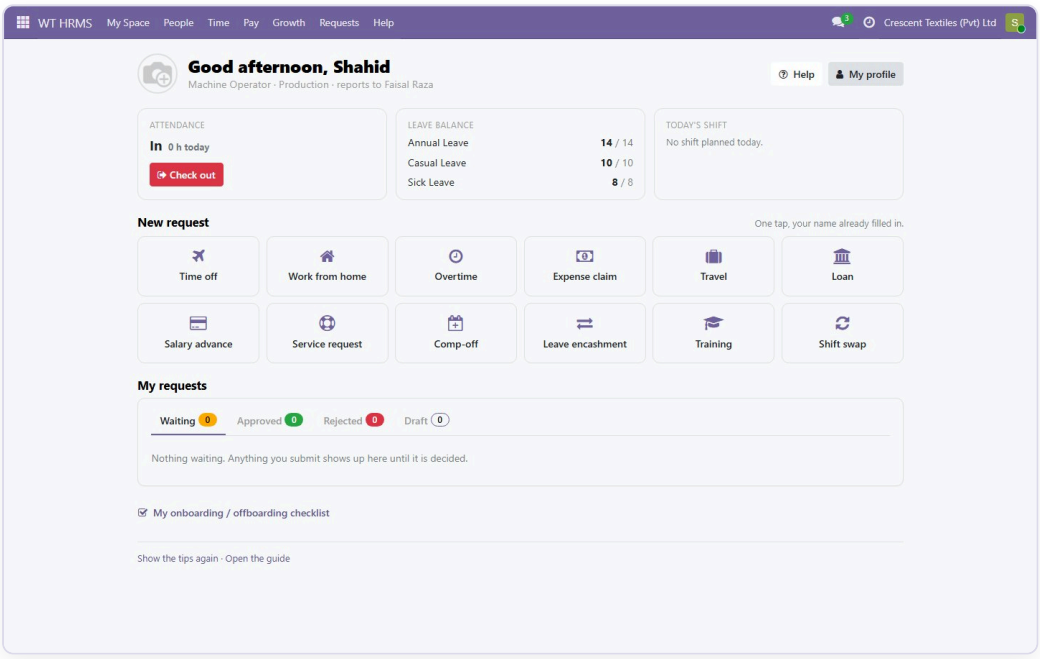

Figure 43. Shahid Iqbal's My Space: checked in, his leave balances (Annual 14, Casual 10, Sick 8), the request buttons and the notices from HR.

Part of the page	What it is for
Attendance	Check in when you arrive and check out when you leave. Hidden if your company uses a fingerprint machine.
Leave balance	Days left out of the days given for the year, per leave type.
Today's shift	Your shift today, if your company plans shifts.
New request	One button per kind of request. Your name is already filled in.
Notices	Announcements from HR.
My requests	Everything you have asked for: Waiting, Approved, Rejected, Draft.
My profile	Your own employee record: contact details, emergency contact, documents.

Ask for time off

1. On My Space click **Time off**.
2. Choose the **Time Off Type**, for example Annual Leave.
3. Click the dates and choose the first and last day. The number of working days is worked out for you; Sundays and public holidays are not counted.
4. Write a short reason. Attach a document if the type asks for one (a medical certificate, for example).
5. Click the save icon (the cloud) at the top.
   The request is sent at once to your manager, and shows under My requests as Waiting.

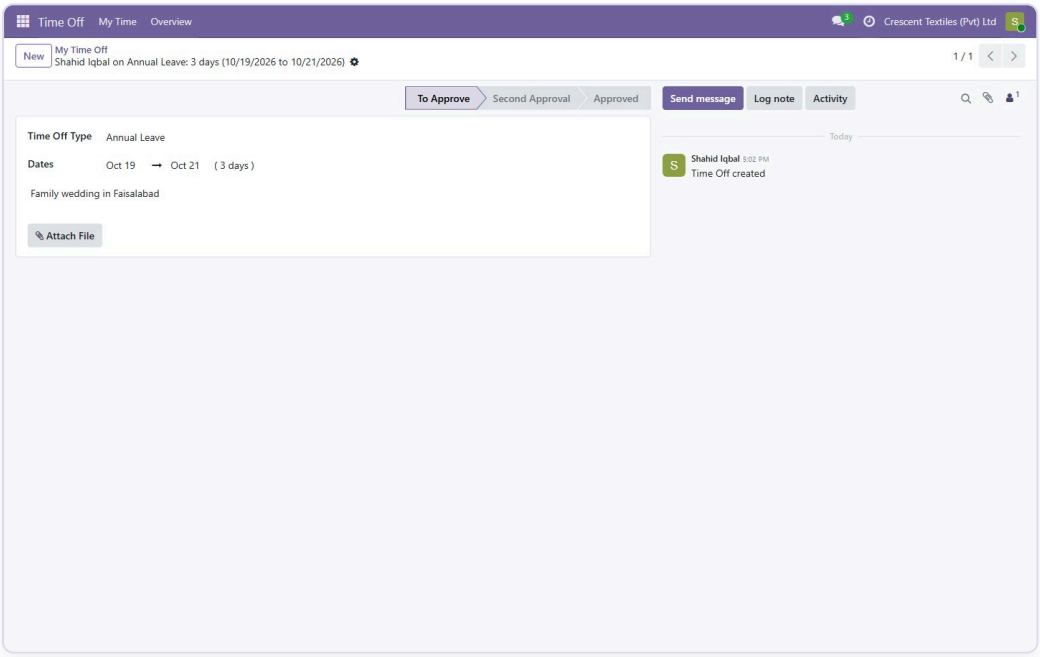

Figure 44. Three days of annual leave for a family wedding, waiting for approval. The bar at the top shows the stages: To Approve, Second Approval, Approved.

> **TIP**
> If the system refuses the request, read the message: it tells you why, for example you have not completed the service months for that leave type, or the request is longer than the policy allows in one go. Speak to HR if you think it is wrong.

Other requests: the same three steps

Every other button works the same way: **click the button, fill the form, click Submit**. A request saved without Submit stays in Draft and nobody sees it.

Button	What to fill
Work from home	Dates, full or half day, reason.
Overtime	Date, hours, weekday/weekend/holiday, reason. Approved hours are paid with your salary.

Button	What to fill
Salary advance	Amount, reason, number of months to repay it and the first month. There is a limit, normally half a month's salary.
Loan	Amount, number of instalments, start date, reason.
Expense claim	Date, category, amount, description, a photo of the receipt. See below.
Travel	Destination, dates, purpose, advance needed, hotel and visa details.
Service request	Category (IT, admin, building), subject, what is wrong.
Comp-off	A day off in return for working on a holiday or weekend.
Leave encashment	Leave type and days to sell back, if your company allows it.
Training	The programme or course you want to attend and why.
Shift swap	Your shift, the colleague and the shift you swap with.

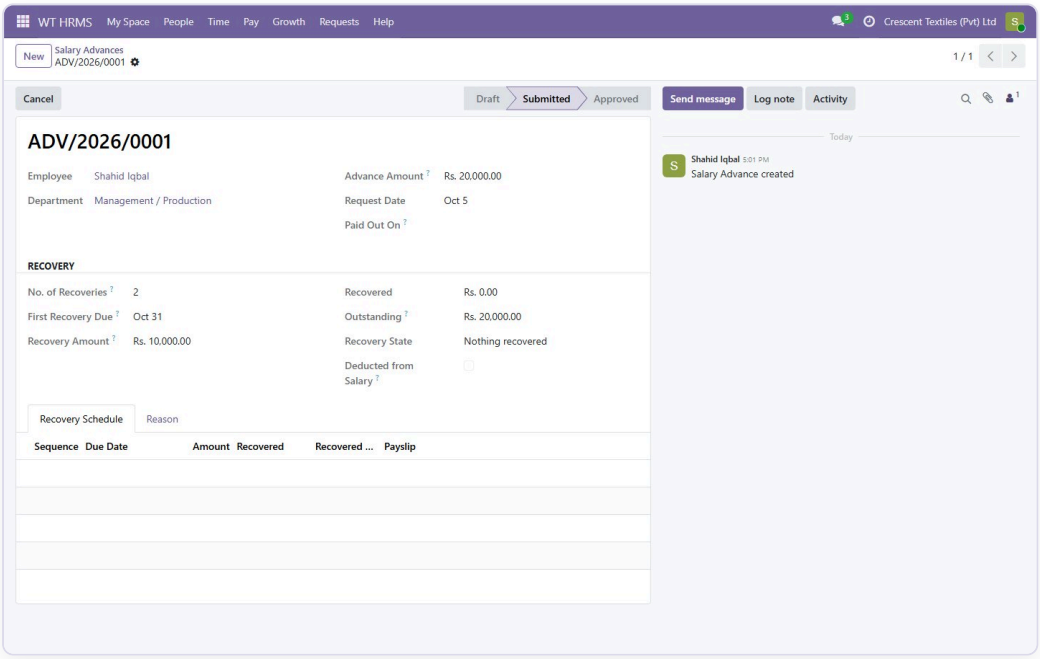

Figure 45. A salary advance of PKR 20,000 to be recovered over two months from 31 October: PKR 10,000 a month. After Submit it shows Submitted.

Expenses: claims go on a sheet

1. Click **Expense claim** once per receipt. Fill it, attach the receipt photo, save.
2. Open **Pay > Expenses > Expense Sheets**, click **New**, give it a name such as *Sialkot client visit, October*.
3. Add your claims to the sheet and click **Submit**.
   The sheet is approved as one. Once paid, it shows Reimbursed.

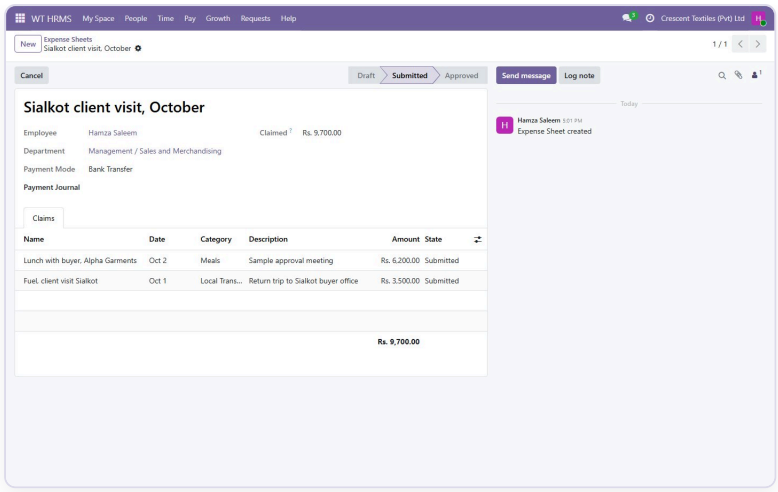

Figure 46. Hamza Saleem's expense sheet: fuel and a lunch with a buyer, PKR 9,700, submitted.

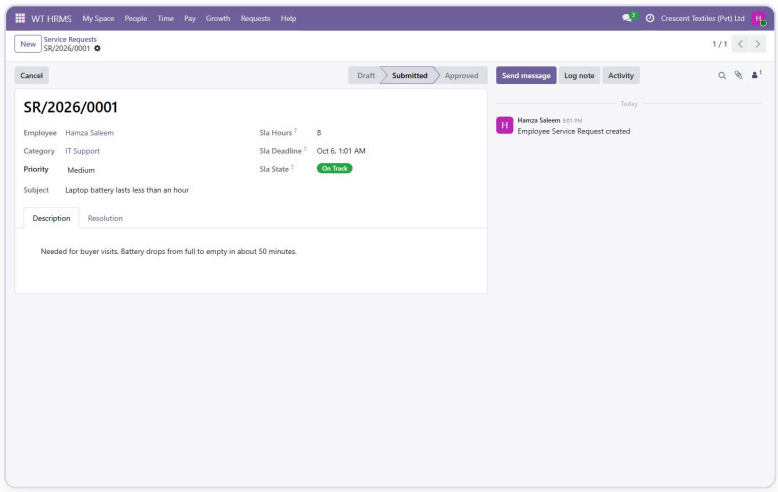

Figure 47. A service request to IT. The deadline comes from the category's hours; the badge turns red if it is missed.

Follow your requests

The **My requests** panel at the bottom of My Space shows everything you asked for, with its status. Click a line to open it and read any message from the approver. You also get a notification in Odoo (the speech bubble at the top) when a request is decided.

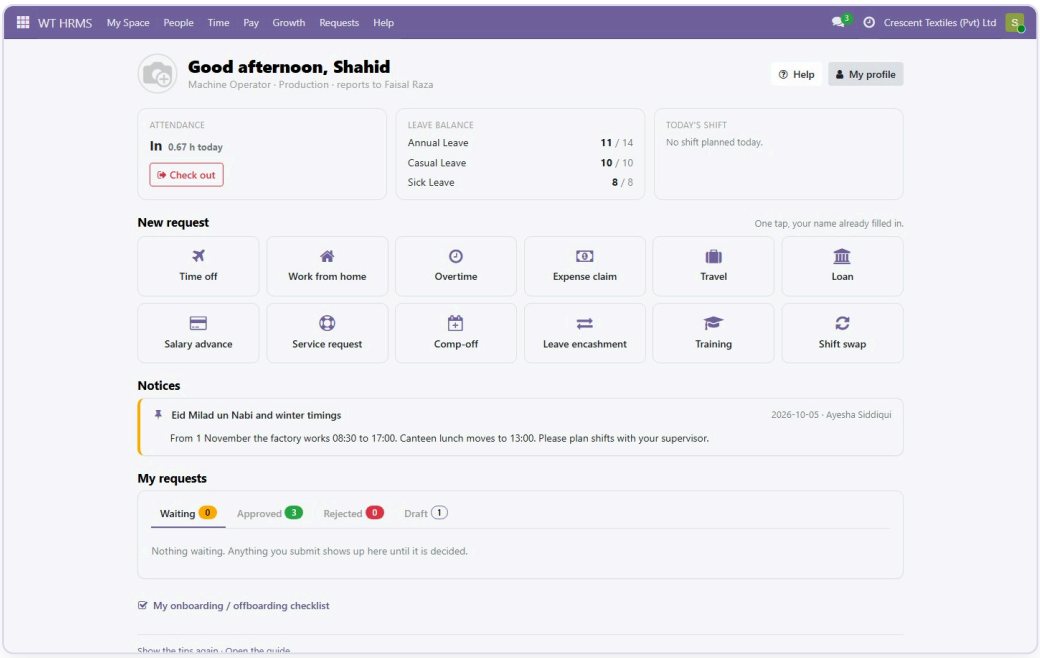

Figure 48. My requests, Waiting tab: the leave, the overtime and the advance, each with its stage.

Your payslips

1. Open your company address followed by **/my/payslips**, for example *hr.crescenttextiles.example/my/payslips*. Save it as a bookmark on your phone.
2. The top shows your gross, deductions and take home pay so far this year.
3. Click **View** to see a payslip line by line, or **PDF** to download it.

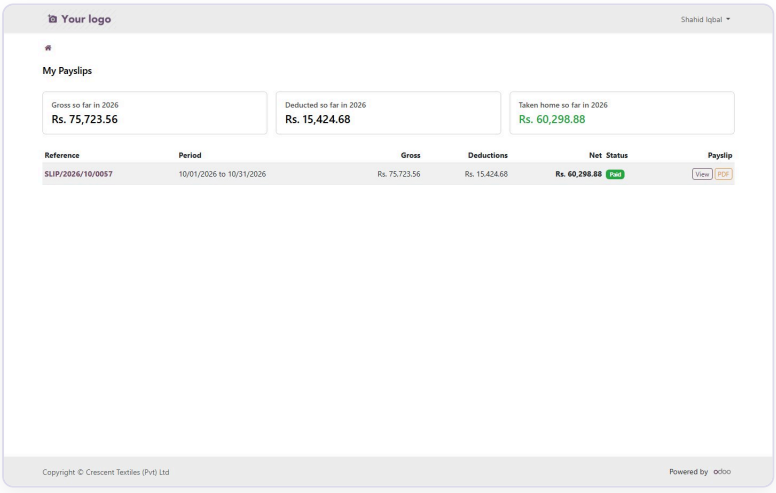

Figure 49. My Payslips: year to date totals and the October payslip, paid. You only ever see your own.

Starting a new job: your checklist

New joiners see **My onboarding / offboarding checklist** at the bottom of My Space: the tasks that are yours, such as handing in copies of your CNIC and degree. Tick them as you finish.

CHAPTER 11

Line managers

A manager's work in the system is short: decide what your people ask for, quickly, and know who is in today. Five minutes a day.

Your My Space

A manager's My Space has everything an employee's has, plus two things: the **Waiting for your decision** panel and the **My Team** tile.

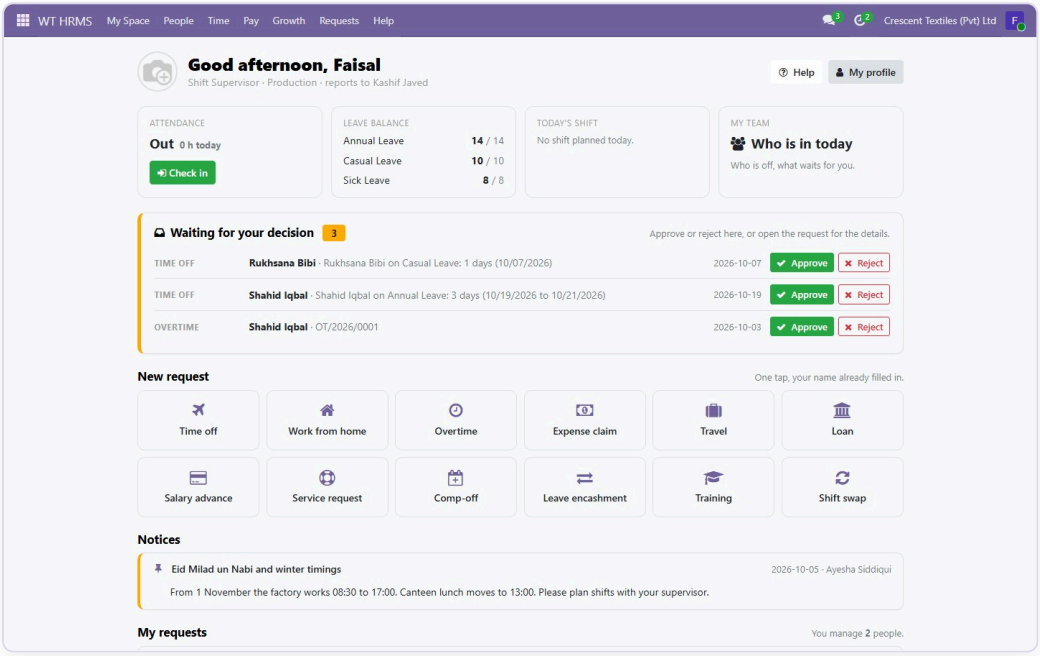

Figure 50. Faisal Raza, shift supervisor: three decisions waiting, two days off and an overtime claim from his operators.

Approve or reject

1. Open My Space, or **My Space > To Approve** for the list on its own.
2. Read the line: what kind of request, who, the summary and the date.
3. To look closer, click the line. The full request opens, with attachments and history.
4. Click **Approve** or **Reject**. When you reject, open the request and write the reason with **Send message**, so the employee reads it.

   The line disappears from your list. The employee is told. If HR has a step after you, it moves to HR.

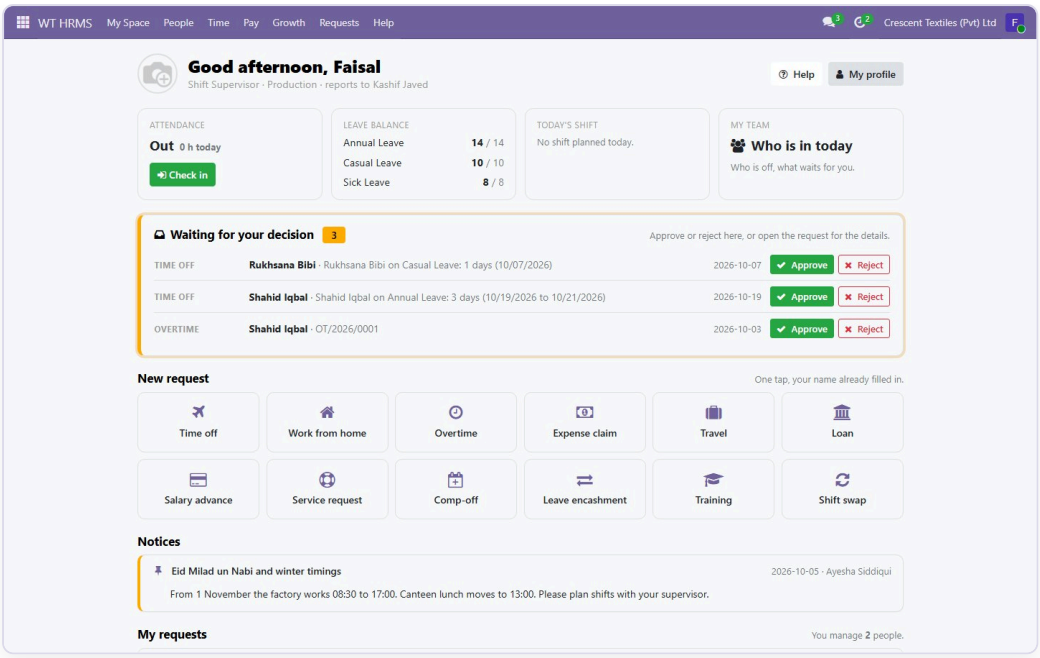

Figure 51. To Approve. One click per decision; nothing to type unless you reject.

> **GOOD HABITS**
>
> Decide within a day. A request left alone may move to the next approver after the escalation time, and the person waiting notices. When you reject, say why and what would be acceptable ("Not that week, we ship the Alpha order. The week after is fine."). For overtime, approve only hours you know were worked; approved hours are paid.

> **LEAVE WITH TWO APPROVALS**
>
> When a leave type needs you and HR, your approval moves it to Second Approval. In this version the line can stay in your list until HR decides; you do not need to act on it again. If you click Approve a second time the system tells you it cannot be approved, which is harmless.

My Team

My Space > My Team shows each person who reports to you: in, not checked in yet, or off today, with how many of their requests wait for you and who is away this week.

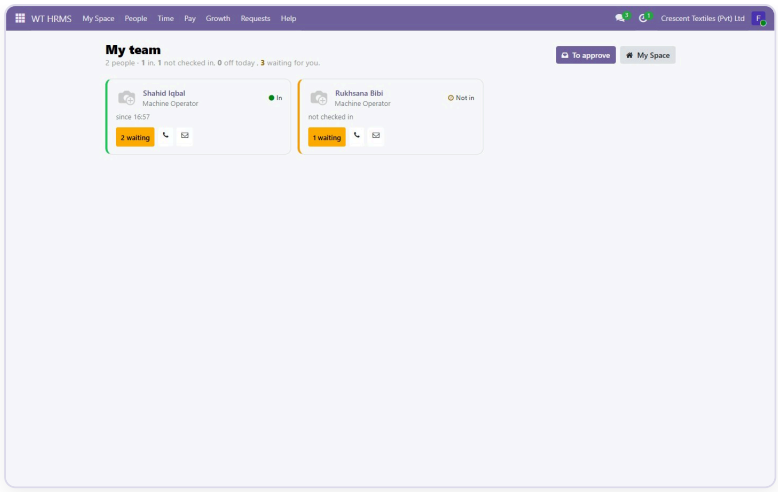

Figure 52. My Team: Shahid is in since 16:57, Rukhsana has not checked in; one decision waits for each.

Asking for a team member

When someone in your team cannot use the system, for example they are off sick without a phone, tell HR. HR can raise the request in their name; you then approve it as usual.

CHAPTER 12

The HR manager

The daily desk, a new joiner from offer letter to confirmation, the people records HR keeps, and a leaver walking out with nothing left open.

In this chapter

- The dashboard
- Approvals
- A new joiner, start to finish
- Documents and expiry
- Assets
- Letters
- Rewards and warnings
- Appraisals and training
- Announcements
- Resignation and offboarding
- Reporting lines

The dashboard

WT HRMS > Dashboard, or **HR dashboard** on My Space. Filter by department and period at the top right.

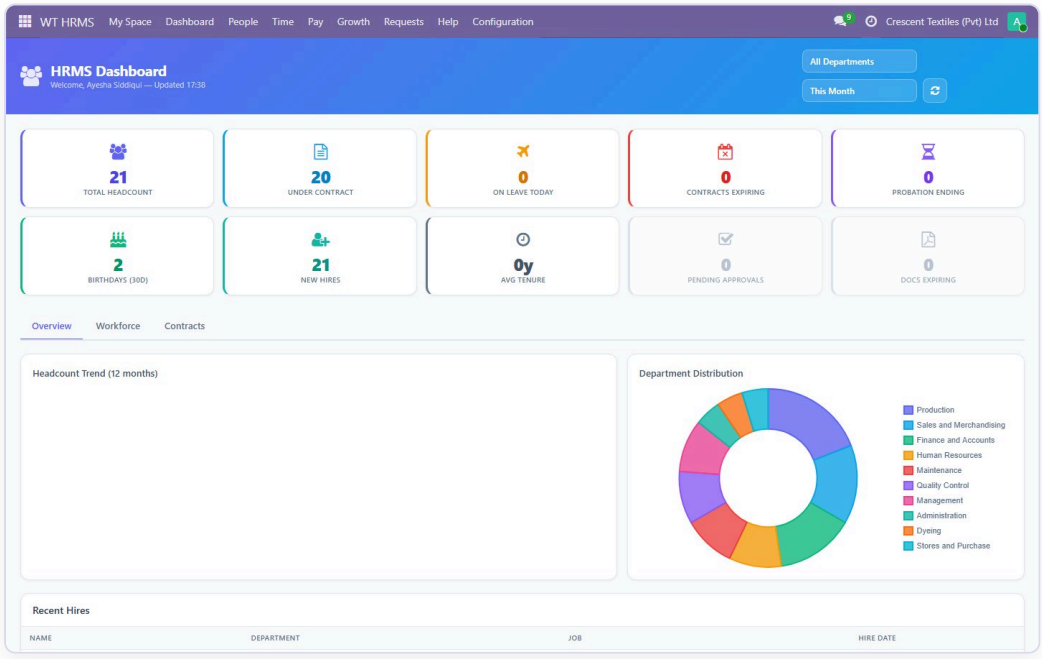

Figure 53. Headcount, people under contract, on leave today, contracts and probations ending, birthdays in the next 30 days, pending approvals, expiring documents, and the split by department.

TIP

Right after the go-live import, New Hires and Average Tenure count from the day the records were created, so every imported person looks new. They settle as real joiners come in. Use the contract dates on employees for service length in the meantime.

Approvals

HR's To Approve list holds every request whose chain has reached an HR step, every leave waiting for a Time Off officer, and anything with no chain at all.

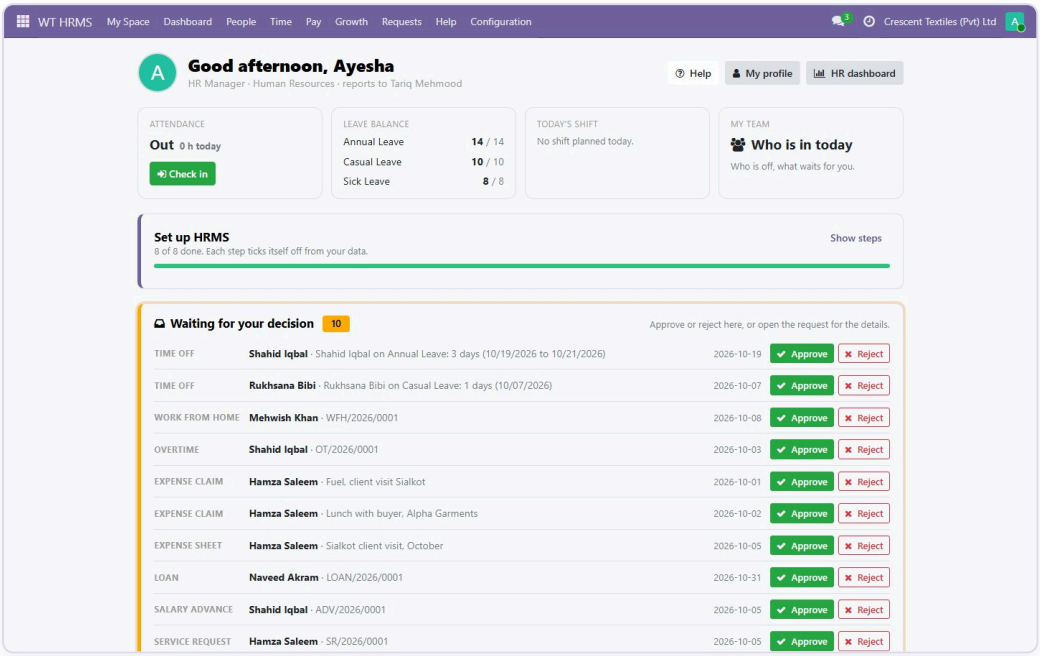

Figure 54. Ayesha's list on a busy morning: leave, work from home, overtime, expenses, a loan, an advance, a service request.

> **EXPENSE CLAIMS: APPROVE THE SHEET**
>
> Claims that sit on an expense sheet appear twice: once each, and once as the sheet. Approve the **Expense Sheet** line; it approves the claims on it. Clicking Approve on a single claim gives a message telling you to approve the sheet instead.

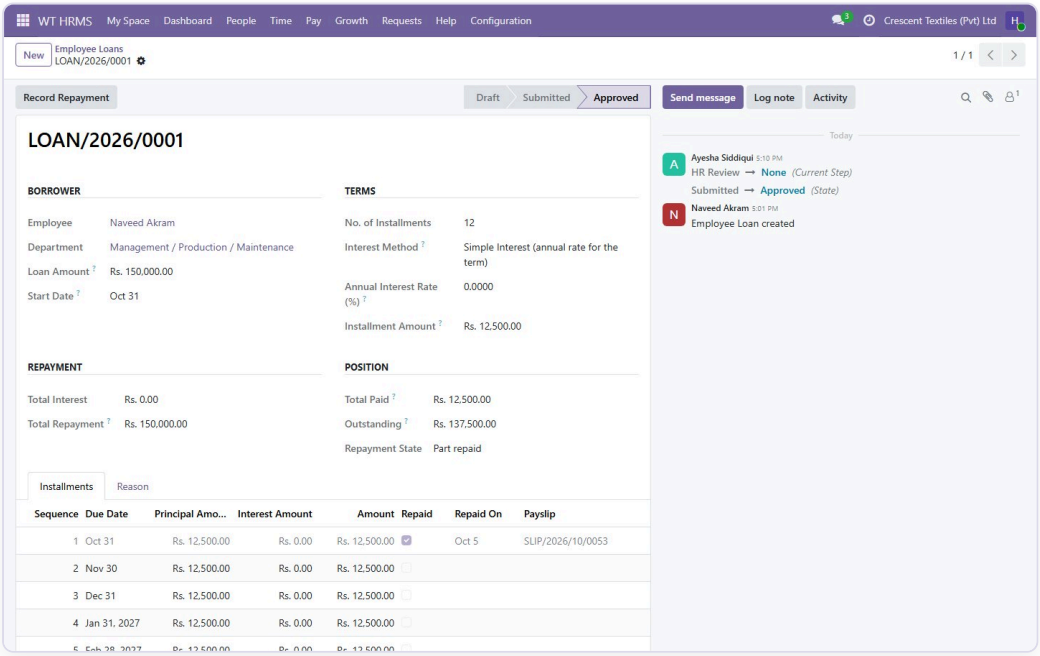

Figure 55. An approved loan of PKR 150,000 over 12 months. Generate Installments made the schedule; the October instalment was deducted from the October payslip and shows as repaid.

A new joiner, start to finish

Adeel Shah joins Dyeing as an operator on 1 October, reporting to Kashif Javed.

1. Create the employee

1. People > Employees, New.
2. Name, work email, mobile. On the **Work** tab: department, job position, manager. The Time Off approver fills in from the manager.
3. **Personal** tab: CNIC in Identification No, date of birth, gender, private address and phone, emergency contact, bank account.
4. **Payroll** tab: contract start date and Wage (monthly basic). Working Hours.
5. **HR Details**: blood group, passport and licence with expiry, emergency details; dependants, education, experience and references on their tabs.
6. **Settings** tab: Badge ID for the attendance machine; Related User to create his login.

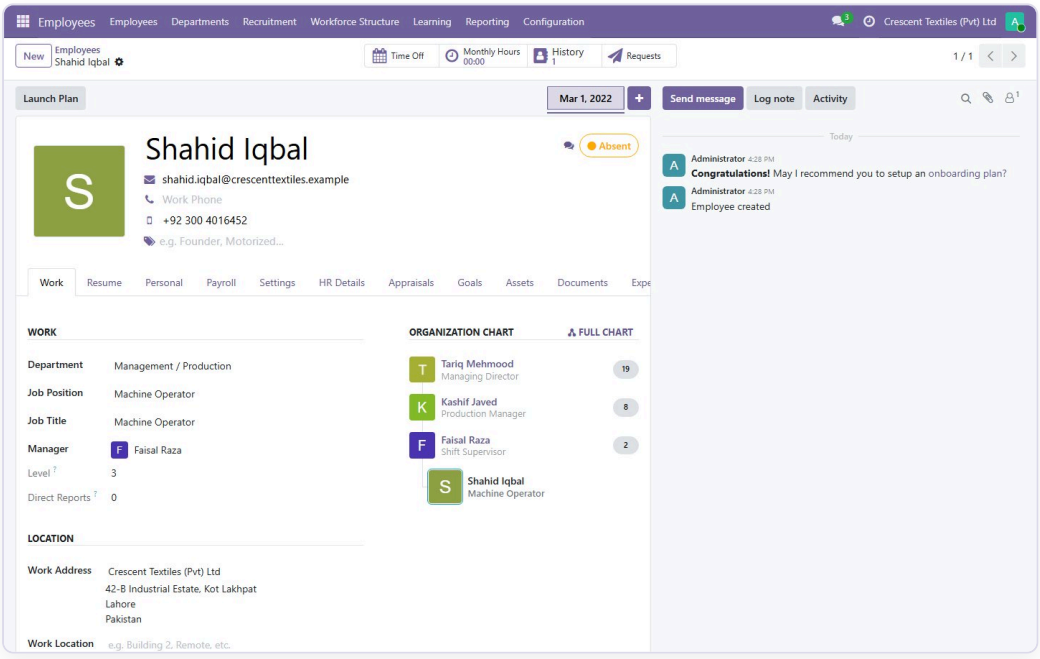

Figure 56. The employee form. The tabs added by the suite (HR Details, Appraisals, Goals, Assets, Documents, Expenses, Onboarding, Offboarding, Salary Components, Rewards, Skills) sit after Odoo's own.

> WHY IT MATTERS
>
> The wage and contract start date are what payroll, service length, leave eligibility and letters all read. Fill them on day one, not at month end.

2. The onboarding checklist

1. On the employee, open the Onboarding tab and click Generate from Template.
   The tasks of the Standard Onboarding checklist are copied to him, each with the team responsible.
2. Tick Done as each task is finished. The person ticking and the date are recorded. Tasks for the employee appear on his My Space.

3. When probation ends, click **Confirm Employee (End Probation)**. The system refuses, naming the tasks, while any task is still open, so nobody is confirmed with documents missing.

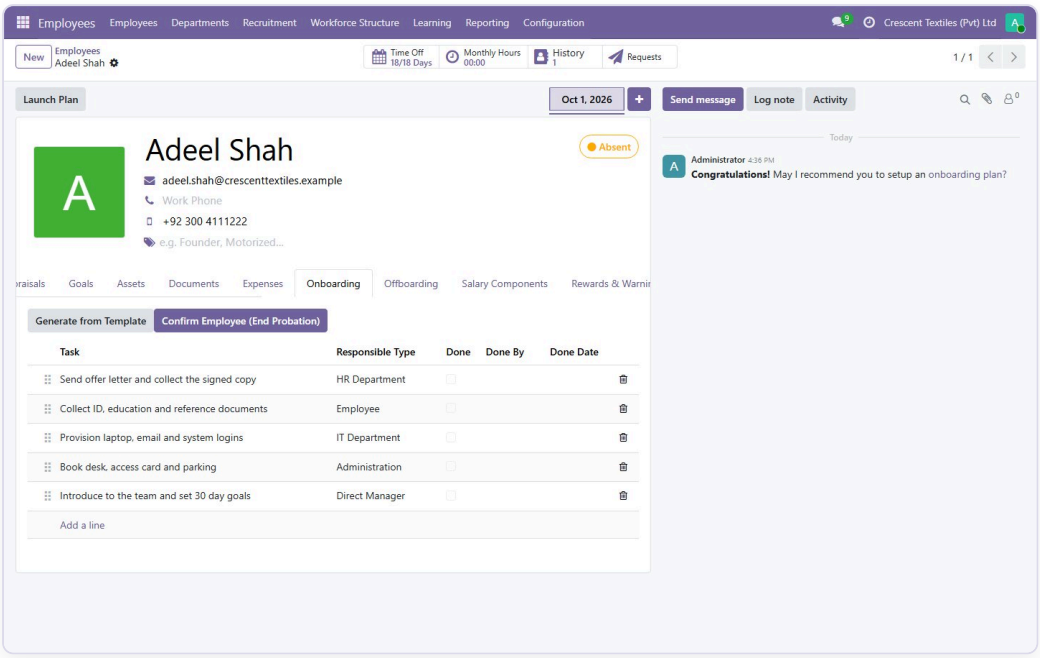

Figure 57. Adeel's onboarding: offer letter, documents, logins, desk and access card, introduction to the team.

3. The appointment letter

1. **People** > **Letters**, **New**. Choose the employee and the template, for example Appointment Letter. Set who signs.
2. Click **Generate Letter**. The text fills in from his record. Correct anything by hand if needed.
3. **Print PDF**, or **Email to Employee**. Then **Mark Sent**. The letter stays on record with its number.

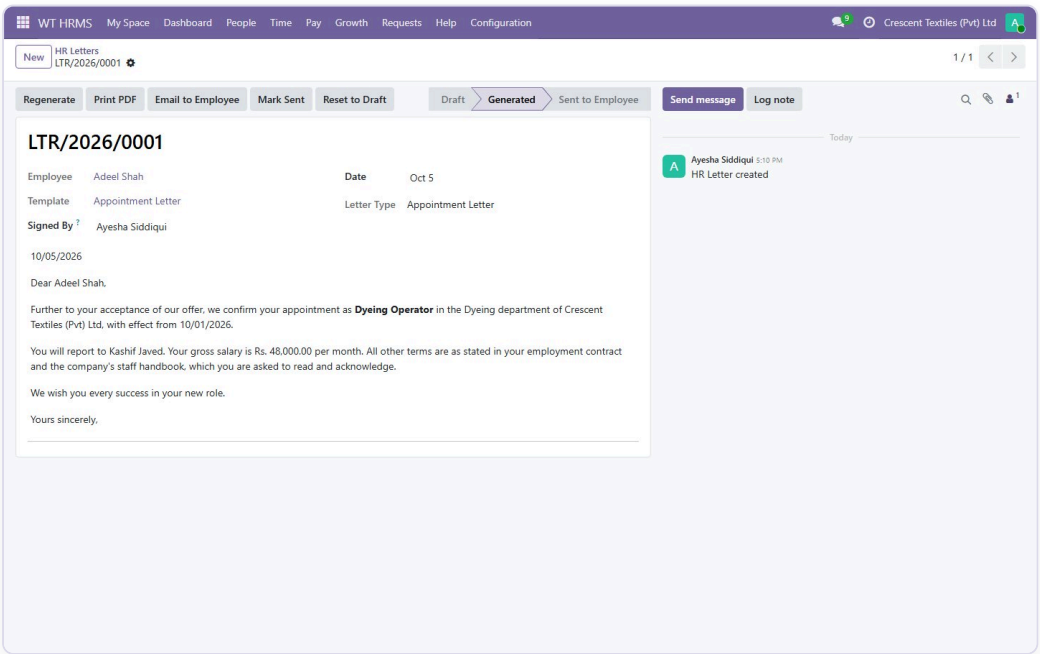

Figure 58. LTR/2026/0001: Adeel's appointment letter, generated from the template.

4. Documents

People > Documents, **New**: employee, document type, number, issue and expiry dates, and the scan attached. A daily job warns HR as the expiry approaches, and the dashboard counts expiring documents.

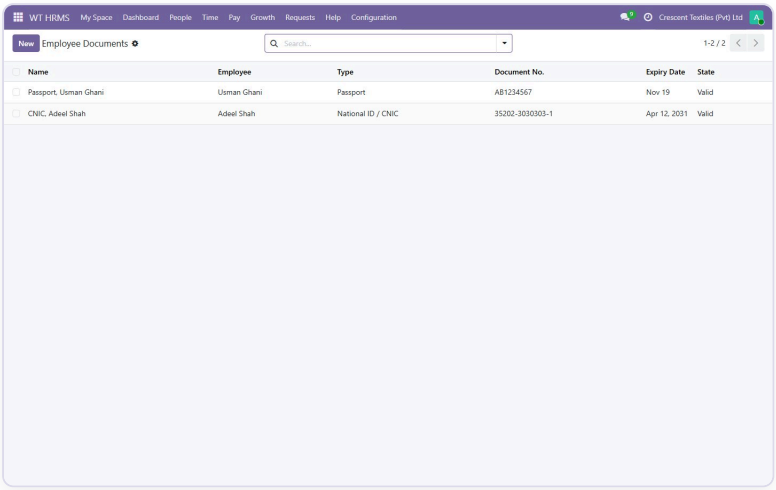

Figure 59. Employee documents with expiry dates. Usman Ghani's passport runs out in November; HR will be warned in good time.

5. Issue his equipment

Register each item once under **People > Assets** (name, category, serial number, value). To hand it over: **People > Allocations**, **New**, asset and employee, save. When it comes back, open the allocation and click **Return Asset** with its condition.

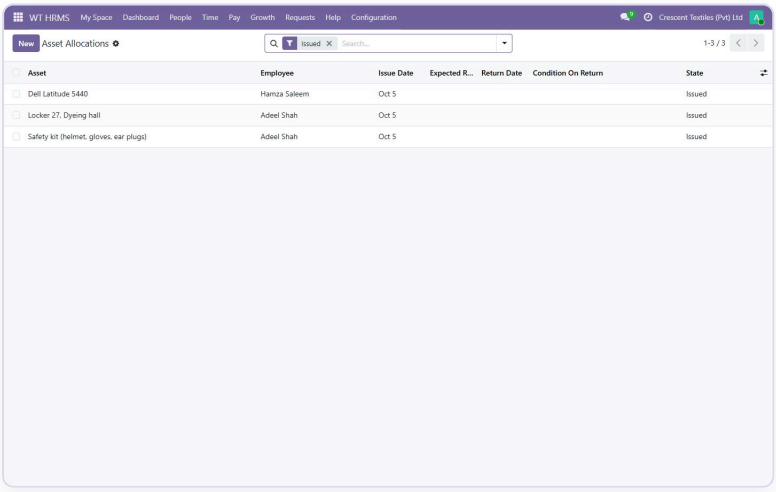

Figure 60. Issued: a safety kit and a locker key to Adeel, a laptop to Hamza.

Rewards and warnings

People > Rewards & Disciplinary, **New**: type (appreciation, verbal, written or final warning, suspension, termination), severity, date, subject and details, evidence attached. **Confirm** it; the employee can acknowledge it. Earlier warnings are counted, so the next step on the ladder is visible.

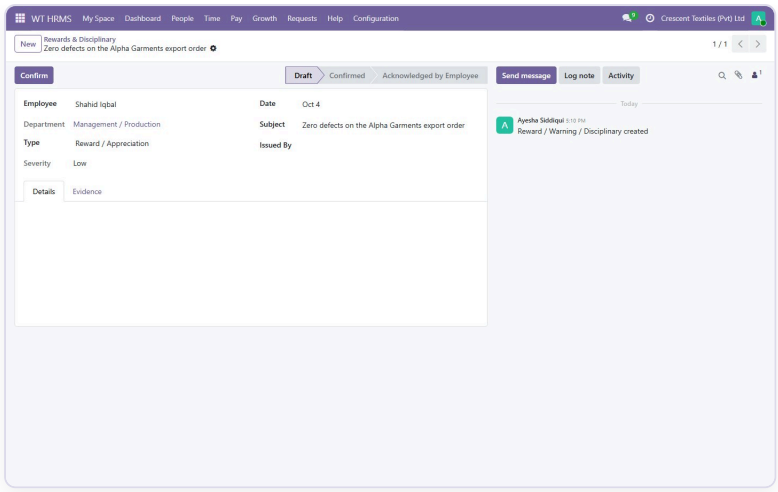

Figure 61. An appreciation for zero defects on an export order.

Appraisals and training

Growth > Appraisals, **New**: employee and period. Add the KRAs with weights that add up to 100. The employee scores himself, the manager scores, the final score and rating follow. Goals with progress sit on the Goals tab. Training requests come from My Space and go through approval; programmes are listed under **Growth > Training > Programs**.

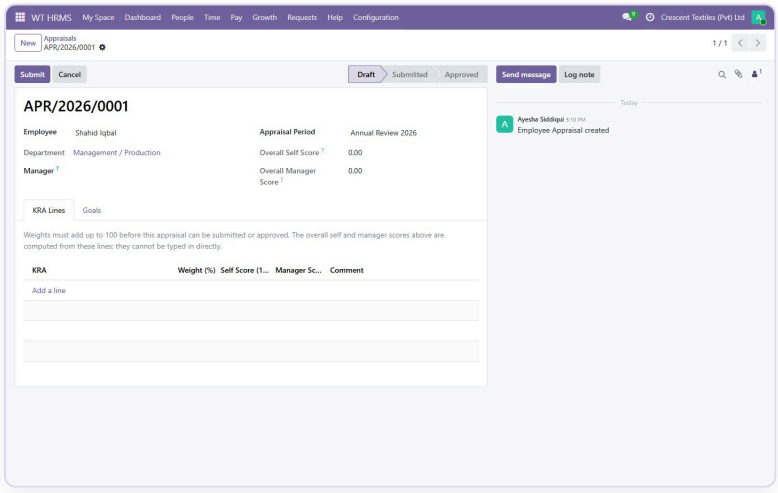

Figure 62. A new appraisal for the 2026 annual review, ready for its KRAs.

Announcements

1. **People > Announcements**, **New**. Title and message.
2. Choose departments, or leave empty for everyone. Tick **Pinned** to keep it at the top. Set Show Until if it should disappear.
3. Click **Publish**. With "Tell people when published" ticked, everyone it reaches gets a notification.

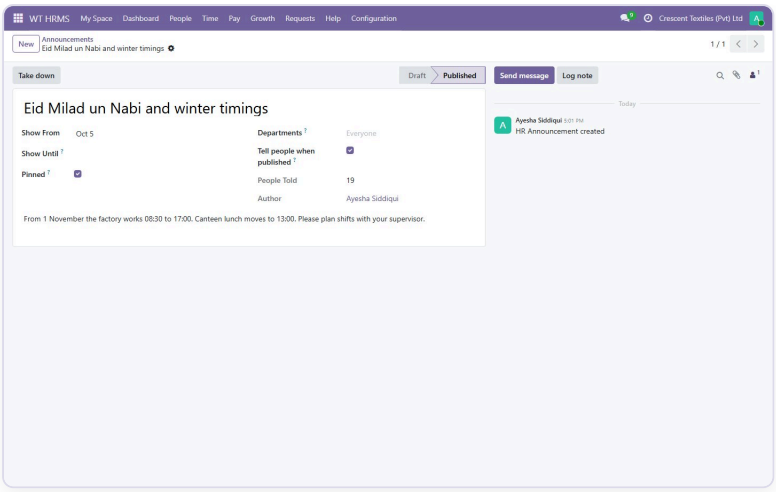

Figure 63. The winter timings notice, published and pinned, told to 19 people.

Resignation and offboarding

Hamza Saleem resigns to move to Karachi.

1. He raises it himself from My Space, or HR creates it under **People > Resignations**: resignation date, last working day, reason. The notice period comes from his contract.
2. It goes through its chain, normally his manager and then HR.
3. On his employee record, **Offboarding** tab, click **Generate from Template**: recover laptop, phone and access card, disable logins, exit interview, final settlement, handover.
4. Return his assets (above), generate his experience letter, and run his final payslip (chapter 13).
5. When every task is ticked, archive the employee. The system will not let you archive him while an offboarding task is still open.

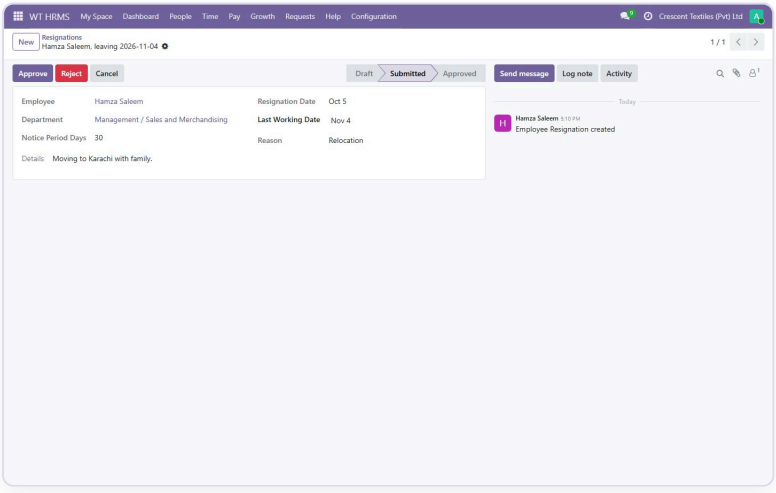

Figure 64. The resignation, submitted, last working day 4 November.

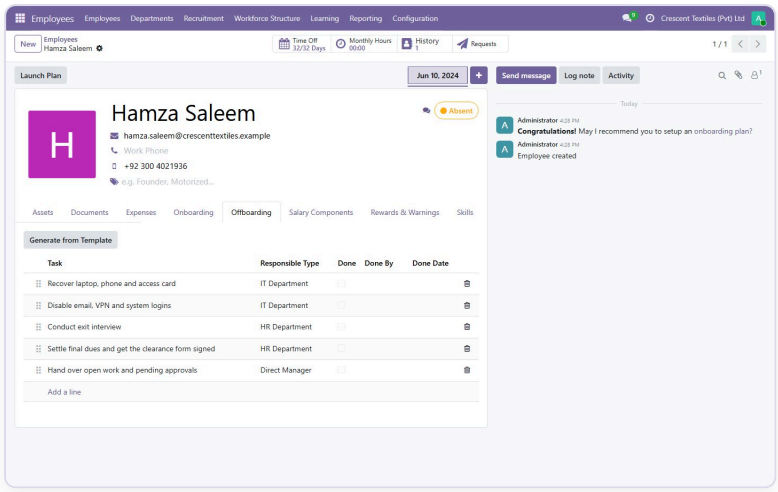

Figure 65. His offboarding checklist, generated from the template.

Reporting lines

Employees > Workforce Structure shows each person's level, direct reports and total team. Check **Employees With No Manager** after every import: anyone listed there has nobody to approve their requests. **Circular Reporting Lines** should always be empty.

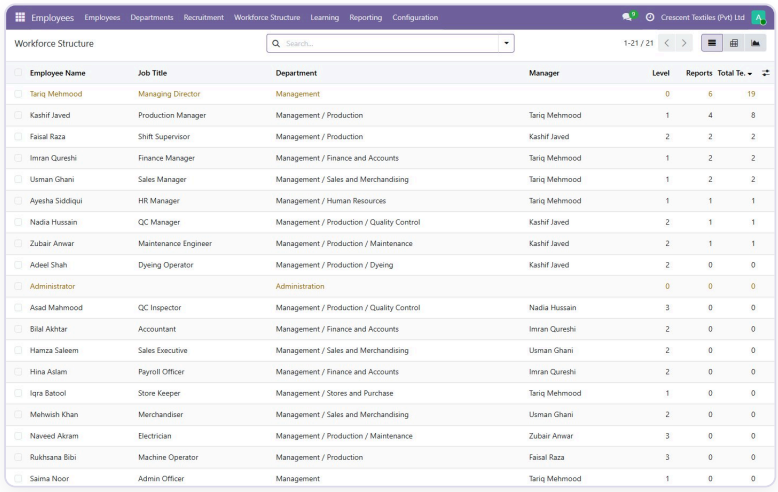

Figure 66. The structure: the Managing Director at level 0 with a total team of 19.

Recruitment, briefly

Under **Growth > Recruitment**: open a **Vacancy**, add **Candidates** and move them through the stages (Applied, Screening, Interviewing, Offer, Hired), schedule **Interviews** with scorecards, and make an **Offer**. An accepted offer becomes an employee record in one click, and you continue from step 1 of the new joiner above. Interviewers need the Recruitment: Interviewer right, HR the Recruiter right.

CHAPTER 13

The payroll officer

The monthly run, from an empty batch to a bank file, with loans, advances and overtime picked up on their own. About an hour a month once it is routine.

Before you start

- [ ] All leave for the month approved or rejected; nothing left waiting.
- [ ] Overtime for the month approved by managers and HR.
- [ ] New joiners have their wage and bank account; leavers have their last working day.
- [ ] Attendance corrected and the monthly summary run (chapter 8), if pay depends on attendance.
- [ ] Any change of salary entered on the employee's Payroll tab with the date it starts.

Run the month

1. **Pay > Payroll > Batches**, **New**. Name it after the month, *October 2026*. Dates 1 to 31 October. Structure **Pakistan Standard**. Save.
2. Click **Generate Payslips**.
   One draft payslip per employee with a wage. People with no wage are skipped and named in the log.
3. Click **Compute All**.
   Every payslip is worked out: the rules, approved overtime hours, the loan instalment and advance recovery due this month.
4. Check the batch: gross and net per person. Open any payslip that looks wrong.
5. Click **Confirm All**. Confirmed payslips can no longer change.
6. Click **Post All to Journal**. One balanced journal entry per payslip goes into the Salaries journal.
7. Generate the bank file (below) and upload it to the bank portal.
8. When the bank confirms the transfer, click **Mark All Paid**.

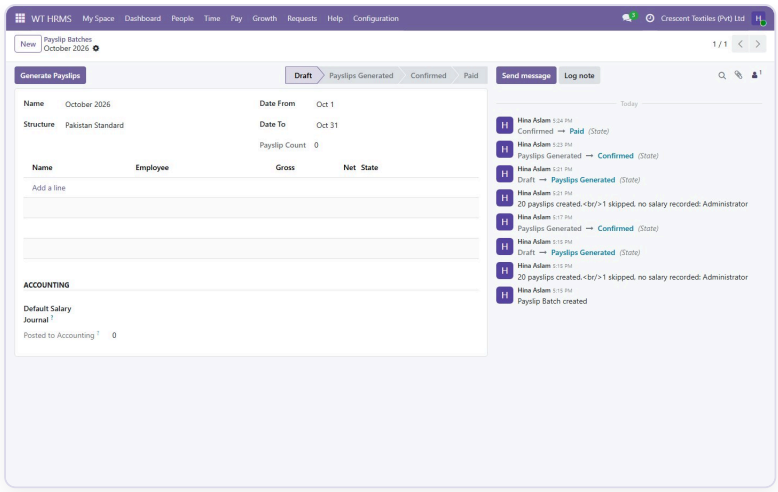

Figure 67. A new batch for October on the Pakistan Standard structure.

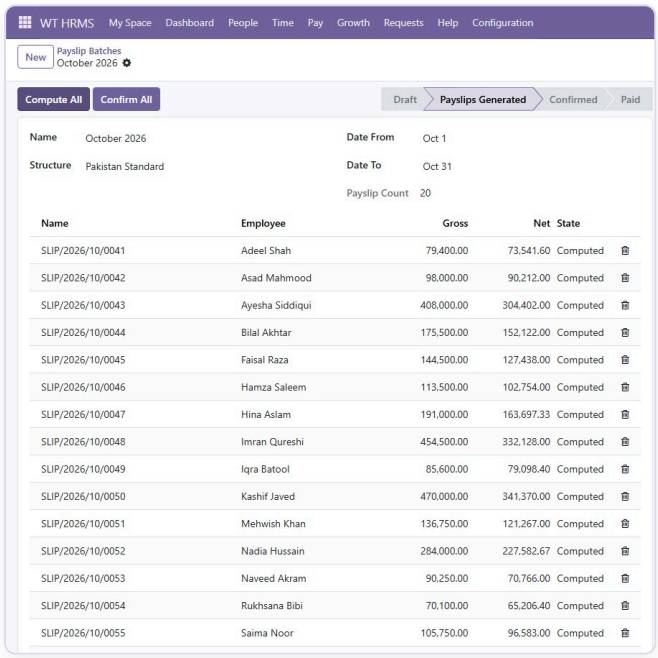

Figure 68. After Compute All: 20 payslips with gross and net, ready to check.

Check a payslip

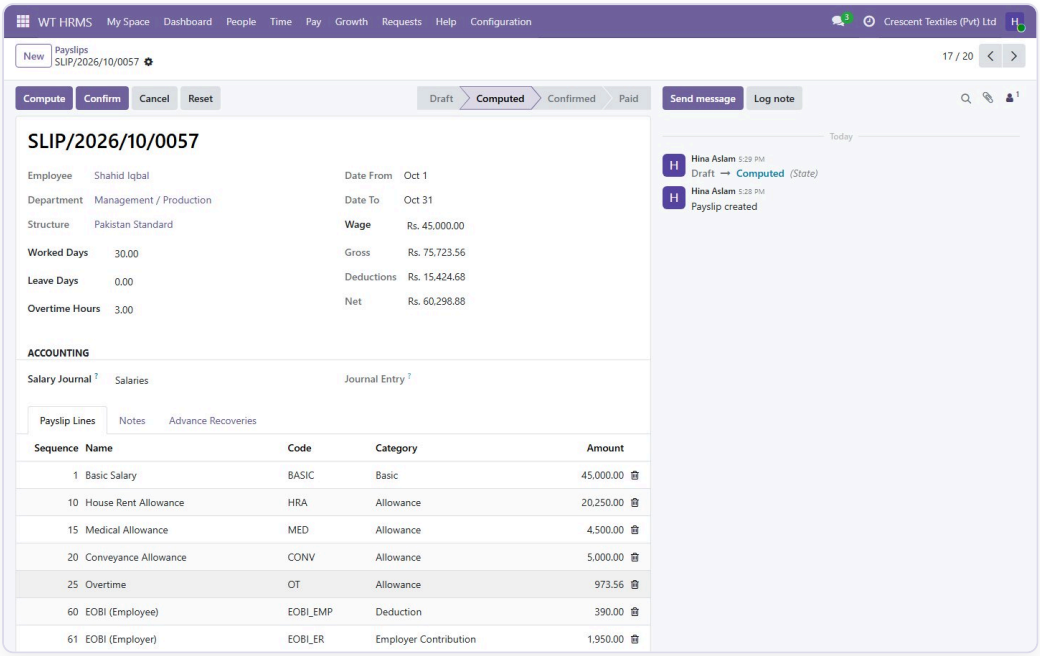

Figure 69. Shahid Iqbal for October: wage 45,000, 3 overtime hours, gross 75,723.56, deductions 15,424.68, net 60,298.88.

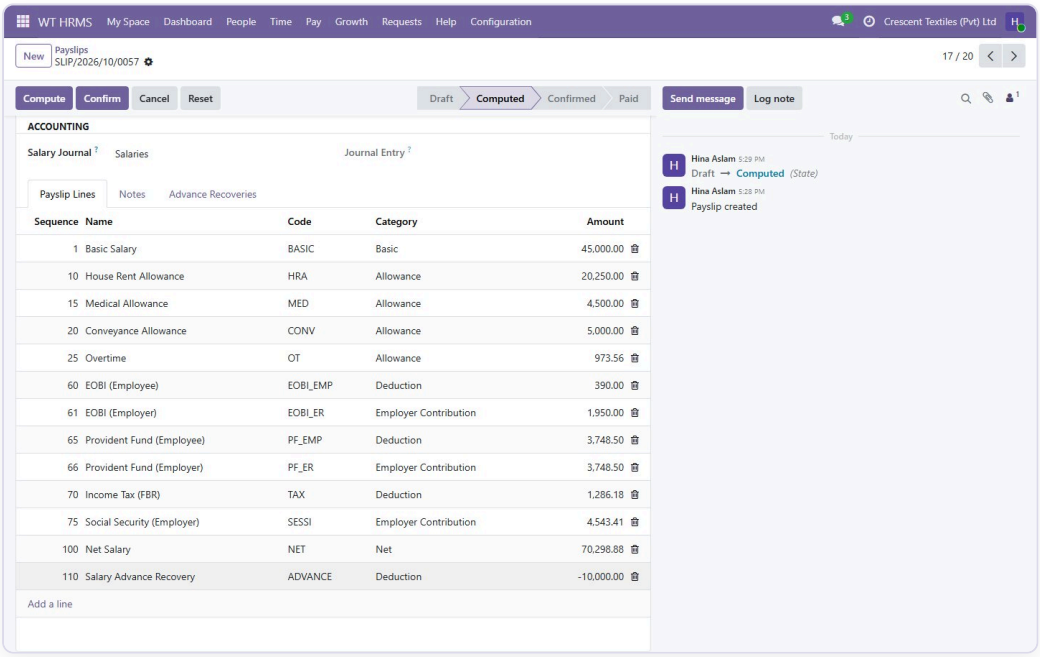

Figure 70. The lines: basic, house rent, medical, conveyance, overtime, EOBI, PF, income tax, employer contributions, net, and the salary advance recovery of 10,000 added after the rules.

What to look at on each payslip:

- **Worked Days and Leave Days.** These start at 30 and 0, and you set them: type the days for anyone with unpaid leave, a late start or a last month. They change pay only if your Basic rule uses them (see the warning in chapter 7).
- **Overtime Hours** come from approved overtime requests in the period; the Overtime line pays them.
- **Advance Recoveries** and loan instalments due this month are added as deductions at the end. The **Net** field at the top is what is paid. The Net Salary line in the list is the figure before these recoveries.

- If something is wrong, fix the cause (the wage, a request, a rule), then click **Compute** on that payslip again. Use **Reset** on a confirmed one only before it is posted.

> **AFTER POSTING, NEVER EDIT**
> A posted payslip is in the ledger. To correct it, cancel it: the system posts a reversing entry rather than deleting what was booked. Then make a new payslip for the difference.

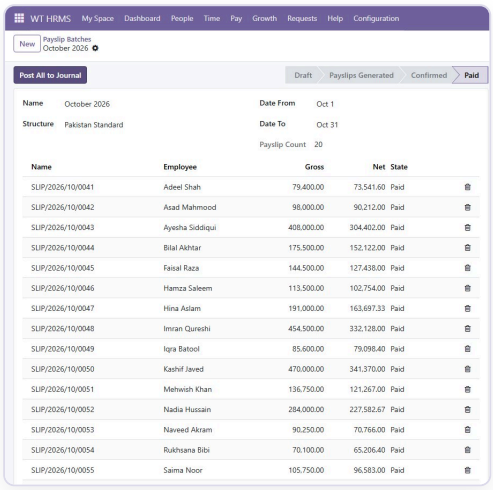

Figure 71. The October batch, posted to the ledger and paid.

The bank file

1. **Pay > Payroll > Bank Files > Generate Bank File.**
2. Choose the batch and your bank's format, for example Habib Bank (HBL). Click **Generate.**
   If anyone has no bank account, or an account Finance has not trusted, no file is made and the people are listed. Fix them, or tick Send Without Everybody to pay the rest now.
3. Click **Download**, upload the file to the bank portal, then **Mark Posted to Bank.**

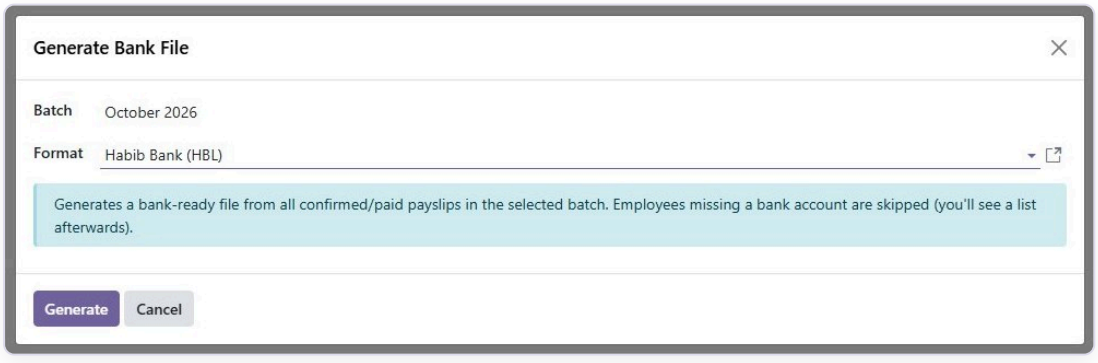

Figure 72. Generate Bank File: batch and format.

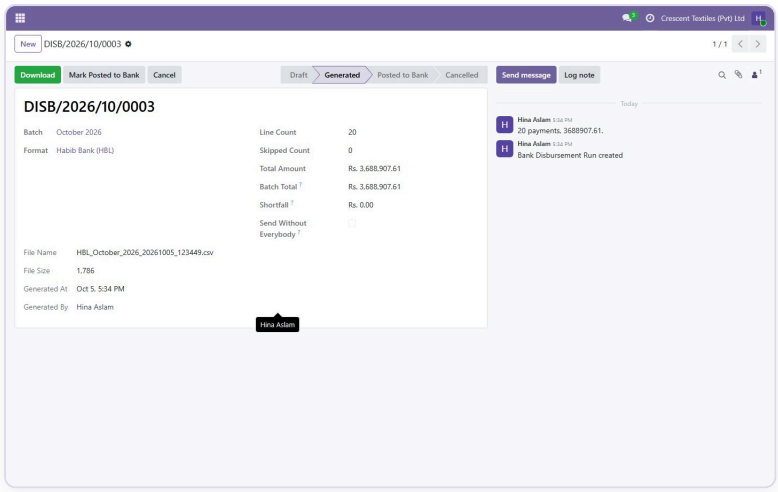

Figure 73. The run: 20 lines, total PKR 3,688,907.61, nobody skipped, the CSV ready to download. Every run is kept under Disbursement History.

Loans, advances, overtime, encashment

Item	What happens	Your part
Loan	After approval, **Generate Installments** builds the schedule. Each month the instalment due is deducted on the payslip and marked repaid.	Pay the loan out from Finance; check the outstanding balance monthly.
Salary advance	After approval and **Mark Paid**, the recovery schedule is deducted month by month.	Mark it paid when the cash goes out.
Overtime	Approved hours in the period land on the payslip and are paid by the Overtime rule.	Make sure the rule exists (chapter 7).
Leave encashment	An approved encashment is added as an allowance on the next payslip.	Nothing.
Expense sheet	Reimbursed through a payment from the bank or cash journal, not through payroll.	Finance records the payment.

A leaver's final pay

Create a single payslip for the leaver under **Pay > Payroll > Payslips**, **New**, dates from the 1st to the last working day. Type the **Worked Days** (for example 4 for a leaver whose last day is the 4th), then compute it. Add any encashment of unused leave through a leave encashment request before computing. Check the outstanding loan balance and agree with Finance how it is settled.

PART 3. REFERENCE

CHAPTER 14

Month end, questions and glossary

The routine that keeps HR data clean, the questions people ask in the first months, and what each import error means.

The month-end routine

When	Task	Who
Day 25	Remind managers to clear their To Approve lists: leave, overtime, work from home.	HR
Day 26 to 28	Correct missed punches. Process new joiners (wage, bank account trusted) and leavers.	HR, Finance
Last day	Approve the remaining overtime, encashments, advances. Run the payroll batch, check, confirm.	Payroll officer
Day 1	Post to the journal, generate the bank file, send it. Monthly attendance summary is built automatically for the month just closed.	Payroll officer, Finance
Day 2 to 5	Mark the batch paid when the bank confirms. Read the summary: late arrivals, absences. Review documents expiring next month on the dashboard.	Payroll officer, HR
July	New Pakistan statutory rates for the tax year (chapter 7).	Finance, Payroll
December	Next year's public holidays. Check leave policies before the January allocation and carry forward run.	HR

Common questions

An employee says the Check in button is missing.

A ZKTeco device is active and the setting is "Unless a device does it". That is intended. If they work away from the device, set the setting to Always.

A manager does not see his team's leave requests.

Either the leave type is approved by Time Off Officer only (chapter 6), or the employee's Time Off approver on the Work tab is empty or someone else.

Nobody approves a request; it sits waiting.

Its chain points at a Direct Manager and the employee has no manager. Set the manager. Workforce Structure, Employees With No Manager lists them all.

The leave balance on My Space shows "No allocation yet".

The year's entitlement has not been allocated for that person. Run Allocate Annual Days on the policy, or check the person meets the service rule.

A salary is wrong.

Look at the payslip lines, not the total. Usually the wage on the Payroll tab, a per-person allowance missing on Salary Components, or a rule percentage. Fix the cause, then Compute that payslip again before confirming.

The bank file is refused with "bank account is not trusted for payments".

Finance has to switch on Send Money on the account after checking it (chapter 7).

Can I delete an employee who left?

No, archive them, after the offboarding checklist is finished. Their payslips, letters and history are kept.

Someone changed department or got a raise.

Change it on the employee. For a raise, set the new wage with the date it starts so the contract history stays right, and generate an Increment or Promotion letter.

Can employees see each other's salaries?

No. They see only their own payslips. Remember that HR officers with Employees rights can read all payslips (chapter 2).

Import errors explained

Message	What it means and what to do
No matching record found for name 'X' in field 'Y'	The text does not match anything in the system. Check spelling, spaces and capitals. Departments must be written as their full path, for example *Management / Production*.
Found multiple matches for value 'X'	Two records have that name, often two departments created twice. Archive the duplicate, or use the full path.
Missing required value for the field	A required column is empty on some row, or not mapped to a field. Fill it, or map the column.
A column shows no field next to it	The header was not recognised. Pick the field from the list, or rename the header to the label shown in the template.
Dates rejected or shifted	Excel has turned the date into its own format. Use YYYY-MM-DD, or set the date format on the import screen's options.
Workbook: "X is not on the Employees sheet"	A manager or salary row names a work email that does not exist, or that person's row failed. Fix the person's row first.
Workbook: "Joining date is required"	Red columns must be filled on every row.
Workbook warning about currency or country	The company already has transactions, so its currency cannot change. The rest still imports.

> **WHEN AN IMPORT GOES WRONG**
>
> Do not try to correct hundreds of records by hand. Archive or delete what was just imported (the import screen shows only those records straight after an import), fix the file and import again. The workbook can simply be imported again: it updates by work email.

Glossary

Allocation

Days of a leave type given to a person for a period.

Approval chain

The ordered steps a request passes through, one chain per request type.

Batch

All payslips of one payroll run, usually one month.

Carry forward

Unused leave moved into the next year, up to a limit.

Encashment

Unused leave paid out as money on the payslip.

EOBI

Employees' Old-Age Benefits Institution contribution, an employee and an employer share.

Gross

Basic plus allowances, before deductions.

Identification No

The CNIC field that payslips and letters print.

My Space

Every user's home page in WT HRMS.

Net

What the employee is paid after all deductions.

Policy

The rules of a leave type: days, carry forward, eligibility, limits.

Rule

One line of the salary calculation, for example House Rent Allowance.

Structure

The ordered set of rules a payslip is computed with.

Time Off approver

The user who approves a person's leave at the first step, normally their manager.

Trusted account

A bank account Finance has checked and switched on for payments.

Wage

The monthly basic salary on the employee's Payroll tab.

Workbook

The Company Onboarding Excel file that sets up the whole company in one import.

CHAPTER 15

Implementation checklist

Print these two pages and keep them on the desk. Write the date and initials as each line is done.

	Task	Owner	Ch.	Done (date, initials)
Week 1. Decide and collect				
☐	Kick-off held; decisions in chapter 3 agreed and written down	Owner, HR	3	
☐	Staff data collected: names, CNICs, joining dates, managers, wages, bank accounts	HR	3	
☐	Leave rules and balances on go-live date collected	HR	3	
☐	Last two months of old payroll collected	Finance	3	
☐	Company details, logo, PKR, timezone	HR	4	
☐	Working schedule	HR	4	
☐	Check-in setting decided	Owner, HR	4, 8	
☐	Onboarding workbook filled and checked without problems	HR	5	
Week 2. Load and configure				
☐	Workbook imported; logins file kept safe	HR	5	
☐	Sample of employees checked against the source	HR	5	
☐	Time Off approver set on every employee	HR	5	
☐	No one under Employees With No Manager except the top	HR	12	
☐	Public holiday times checked (12:00 AM to 11:59 PM)	HR	4	
☐	HR users: Time Off, Attendances, Recruitment rights	HR	2	
☐	Leave types: approval set per type	HR	6	
☐	Leave policies checked; year allocated	HR	6	
☐	Opening balances imported and approved	HR	5	
☐	Approval chains set for every request type	HR	6	
☐	Letter templates reworded; signatories set	HR	6	
☐	Checklists, document, asset and service categories, skills	HR	6	
☐	Shift types and overtime policy	HR	6, 8	

	Task	Owner	Ch.	Done (date, initials)
☐	Salary structure rules agreed; Basic rule pro-rata decided; overtime rule added	Finance, HR	7	
☐	Pakistan rates confirmed for this tax year	Finance	7	
☐	Salaries journal, default salary journal, payroll accounts	Finance	7	
☐	Bank format compared with the bank's sample	Finance	7	
☐	All salary bank accounts checked and trusted	Finance	7	
☐	Device connected, active, people matched by user ID	IT	8	
☐	Parallel payroll matches the old system to the rupee	Payroll, Finance	9	
Week 3. Test, train, go live				
☐	Test script run with a real manager and two staff	HR	9	
☐	Test bank file accepted by the bank	Finance	9	
☐	Managers trained (chapter 11 handed out)	HR	9	
☐	Staff trained (chapter 10 handed out); logins handed out	HR	9	
☐	Go-live notice published on My Space	HR	12	
☐	Old forms and spreadsheets withdrawn	Owner	9	
☐	First live month: payroll run, posted, bank file sent, marked paid	Payroll	13	

Signed off, HR manager, date

Signed off, company owner, date
