COMPLETE GUIDE · THE TRADE, SETUP AND EVERY SCREEN

Water Delivery Management for Odoo 19

Bottled water run container by container: the ledger and deposits, coupon books, subscriptions, standing orders, daily runs that have to balance, batches with a test log and recall list, and dispenser rentals. Every screen and every step, shown on a live demo. No Odoo background needed.

START

About this guide

A bottled water business does not really sell bottles. It lends them. Every full container that leaves the truck is an asset in somebody's kitchen and a deposit on your balance sheet, and every one has to come back. This guide walks the module from the plant to the doorstep and back, one screen at a time. You do not need to have used Odoo before.

Who it is for

The owner or manager setting the business up, the dispatcher who plans the rounds and reconciles the trucks, the plant's quality officer, the drivers, and anyone being shown the system for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and a short thing to try on the live demo, then walks every field and every button.

The live demo

Qamra Clearwater Company, an invented bottler in Riyadh with a plant, a depot, four rounds, about thirty accounts and three months of history. Open it and follow along.

HOW IT WORKS

The demo business

Address	**waterdelivery-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Business	Qamra Clearwater Company · bottling plant in the Second Industrial City, a depot in Al Yasmin, four delivery rounds
Runs on	Odoo 19, Community edition, with Inventory and Invoicing
Currency	Saudi riyal (SAR), 15% VAT

Every company, person and number on the demo is invented. The demo is shared and may be reset, so anything you change may be changed back or seen by the next person.

What is in the guide

PART 1	How a water round is run	PART 2	The map: menus and who uses them
PART 3	Signing in	PART 4	Setting up from zero: plants, containers and prices
PART 5	Drivers, vehicles and rounds	PART 6	Customer accounts and standing orders
PART 7	The container ledger and deposits	PART 8	Building and loading the run
PART 9	At the door: deliveries and missed stops	PART 10	Back at the plant: reconciling the run
PART 11	Coupon books, subscriptions and monthly billing	PART 12	Quality: batches, tests and recalls
PART 13	Dispensers and service visits	PART 14	Reporting
PART 15	Printed documents and emails	PART 16	Users, roles and phones
PART 17	A fifteen minute walk-through	PART 18	The menu map

PART 1 How a water round is run

Five minutes on the trade, so the screens make sense.

IN THIS PART YOU WILL LEARN

- Why the container ledger is the heart of the business
- Deposits, and the shortfall nobody budgets for
- Cash, coupons, subscriptions and accounts
- The daily run: load, deliver, come back, reconcile
- Batches and the test log an inspector asks for

You lend the bottle

A household on an 18.9 litre bottle keeps one full and one or two empties at all times. When the driver calls he swaps full for empty. The customer never owns the bottle. So the number that matters is not how many were sold but how many are out there, with whom, and whether a **deposit** sits behind each one. Containers out with no deposit behind them are the loss that turns up at the annual count as a hole nobody can explain.

Four ways to pay

PAYMENT	HOW IT WORKS	IN THE MODULE
Cash at the door	The driver takes the money	The run expects that cash back
Coupon book	Coupons bought in advance, one per bottle	Coupons redeemed at the door, oldest book first
Monthly subscription	A bottle allowance for a fixed price	Deliveries eat the allowance; extra bottles are overage
On account	An office or school billed monthly	One invoice a month from the deliveries

The run

A day on a round

What went out has to equal what was delivered plus what came back. If it does not, a bottle walked off the truck, and the run stays open until somebody explains it.

Quality and traceability

Every fill is a **batch**, tested for pH, dissolved solids, turbidity, chlorine, coliform and more. A batch is only released onto the trucks on a clean test log, every delivery names the batch its bottles came from, and if a batch has to be pulled the module lists every customer who already has it.

Coolers

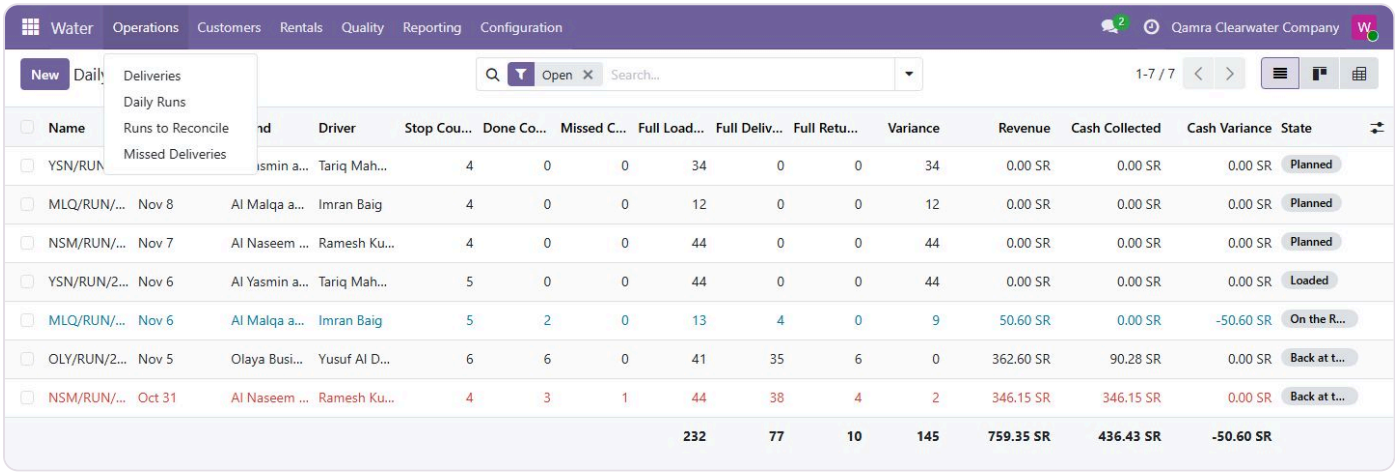

Most offices and many homes rent a **dispenser** as well. It earns a monthly fee, it has to be sanitised on a cycle, and when it breaks the customer stops ordering water.

PART 2 The map: menus and who uses them

The module adds one app, Water, with six menus. A driver sees only his own runs and stops; the lab sees batches and the trail; the dispatcher runs the rounds and accounts; the manager sees everything.

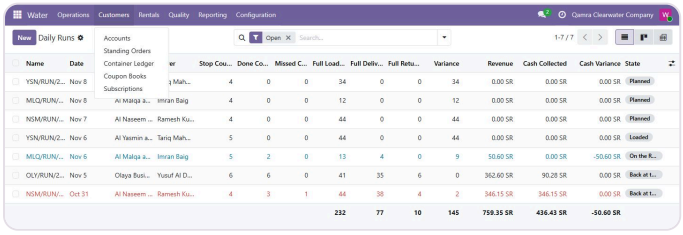

IN THIS PART YOU WILL LEARN

- The six menus and what sits under each
- The four roles

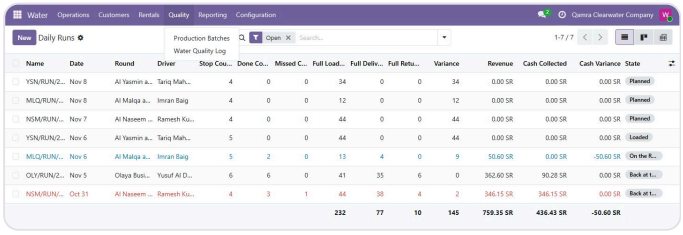

Operations: deliveries, runs, runs to reconcile and missed deliveries.

MENU	SCREENS	USED BY
Operations	Deliveries, Daily Runs, Runs to Reconcile, Missed Deliveries	Drivers (own), dispatchers
Customers	Accounts, Standing Orders, Container Ledger, Coupon Books, Subscriptions	Dispatchers
Rentals	Dispensers, Sanitisation Due, Service Visits	Dispatchers (visits also drivers)
Quality	Production Batches, Water Quality Log	Quality officers
Reporting	Revenue by Round, Deposit Liability, Container Losses	Managers
Configuration	Settings, Plants and Depots, Rounds, Container Types, Price Plans, Subscription Plans, Drivers, Vehicles	Managers (Settings: administrators)

Customers: accounts, standing orders, ledger, coupons, subscriptions.

Quality: batches and the test log.

The four roles

ROLE	CAN DO

Driver	Work his own runs and stops: what was left, what came back, what was collected. No pricing, no ledger edits.
Water Quality Officer	Run the test log, release or quarantine batches, follow a batch to the door.
Dispatcher	Everything a driver does, plus plan rounds, build runs, reconcile trucks and keep the customer accounts.
Water Delivery Manager	Everything: plants, rate cards, deposits, coupon liability, rentals and reporting.

The money records move only through their buttons. A run, a delivery, a batch, a coupon book or a subscription cannot have its status written by hand or dragged across a kanban column, so every check behind a button is always applied.

PART 3 Signing in

The demo runs in any browser. Nothing to install.

TRY IT YOURSELF ON THE DEMO

1. Open waterdelivery-demo.way4tech.com
2. Sign in as w4demo with the password Demo2026
3. Open the Water app

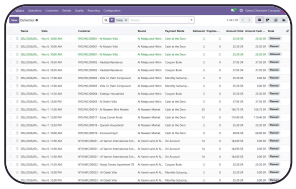

1

Open the sign in page

Go to **waterdelivery-demo.way4tech.com**, type the login and password and press **Log in**.

Public sign up is switched off on the demo.

2

Water, Operations, Deliveries

The Water app opens on today's deliveries.

Remove the Today filter to see the history.

PART 4 Setting up from zero: plants, containers and prices

Before the first round goes out you need the settings, at least one plant, the container types and the price plans. The demo has all of it.

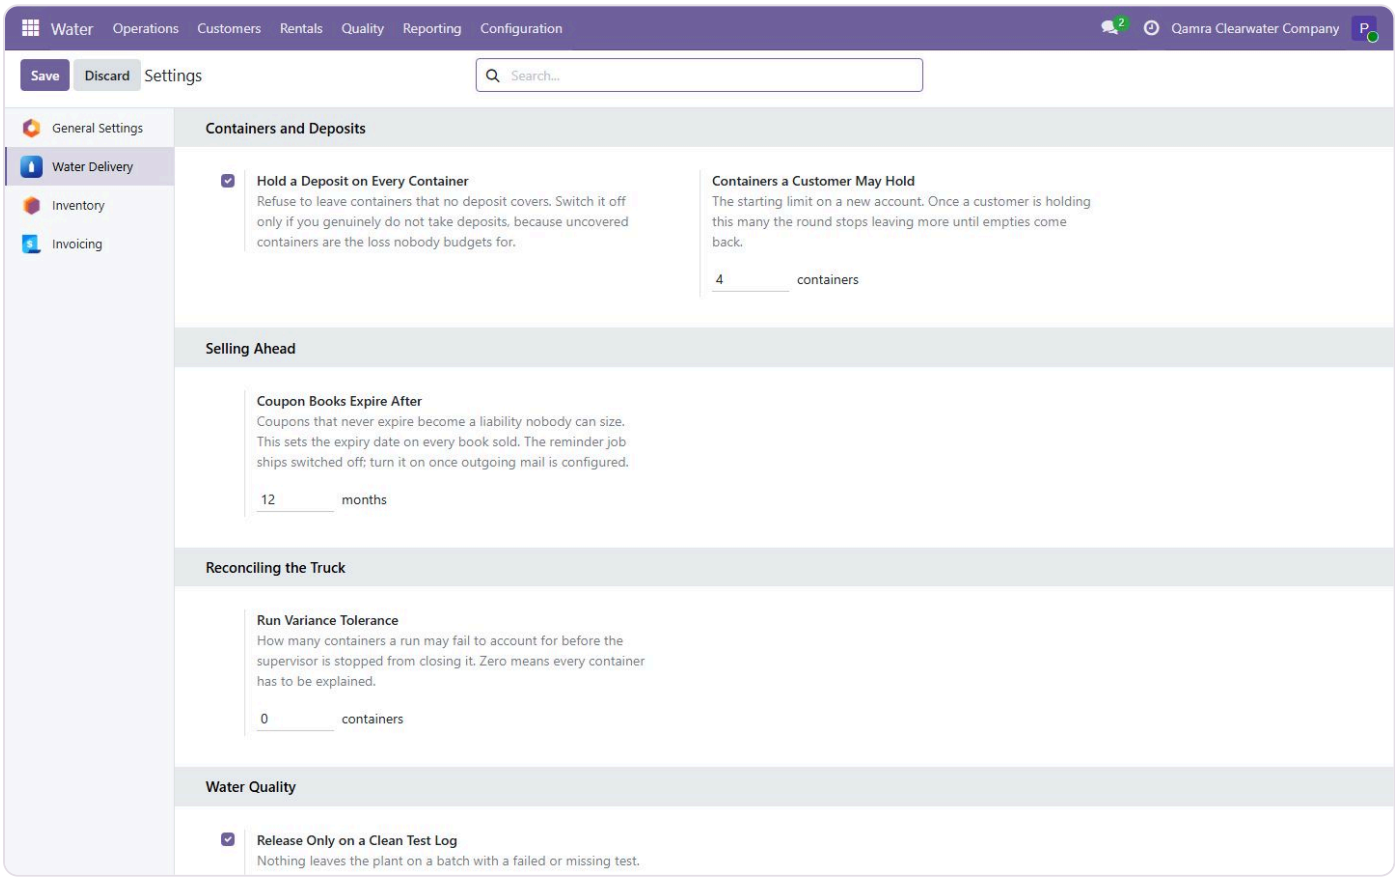

IN THIS PART YOU WILL LEARN

- The six company settings
- Plants and depots
- Container types and deposits
- Price plans with volume breaks, and subscription plans

TRY IT YOURSELF ON THE DEMO

1. Configuration, Container Types: open 18.9 Litre Returnable
2. Configuration, Price Plans: open Office and Trade Rate and read the volume break

1. The settings

The Water Delivery section of Settings (administrators).

SETTING	DEFAULT	WHAT IT DOES
Hold a Deposit on Every Container	On	A delivery that would leave containers without enough deposit behind them is refused.
Containers a Customer May Hold	3	The starting container limit on a new account (4 on the demo).
Coupon Books Expire After	12 months	Sets the expiry date on every book sold.
Run Variance Tolerance	0	How many containers a run may fail to account for and still be reconciled.

Release Only on a Clean Test Log	On	A batch with a failed test, or no tests, cannot be released.
Sanitise Dispensers Every	90 days	The cycle that sets the next service date on each cooler.

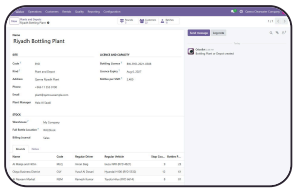

2. Plants and depots

1

Configuration, Plants and Depots

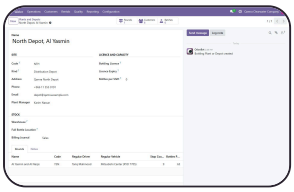

A **plant** fills bottles, a **depot** only stores and delivers, and a site can be both.

2

The plant

Code (it prefixes account, run and batch numbers), address, warehouse and full bottle location, billing journal, plant manager, bottles per shift, and the **bottling licence** with its expiry. A site that fills bottles cannot be saved without a licence number. Buttons open its rounds, customers and batches.

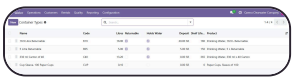

3

The depot

The North Depot has no licence and no batches: batches can only be filled at a plant.

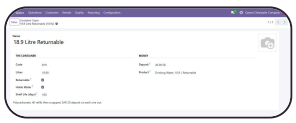

3. Container types

4

Configuration, Container Types

Four on the demo: the 18.9 litre returnable, a 5 litre returnable, a carton of 330 ml bottles and a sleeve of paper cups.

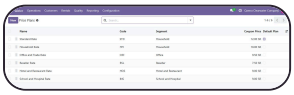

5

A container

Litres; **Returnable** (stays on the ledger until it comes back); **Holds Water** (must name its batch on delivery); the **deposit** per container; the product that is invoiced; and the shelf life that sets each batch's expiry.

A container that is not returnable cannot carry a deposit.

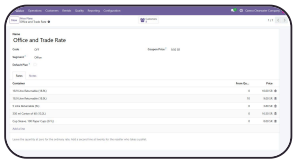

4. Price plans

6

Configuration, Price Plans

One plan per segment: household, office, reseller, hotel and restaurant, school and hospital. One plan is the **default** for a new customer, and only one can be.

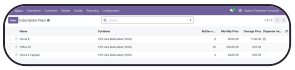

7

Rates and volume breaks

Each rate line is a container, a price and a **from quantity**. Ten or more bottles a drop on the office plan pays the ten line. The **coupon price** is what one coupon costs when a book is sold under the plan.

With no rate for a container the product's sale price is charged.

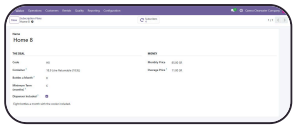

5. Subscription plans

8

Configuration, Subscription Plans

A plan covers one container: bottles a month, monthly price, overage price per extra bottle, dispenser included, and a minimum term.

9

Overage or a hard stop

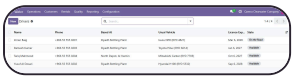

With an overage price, bottles past the allowance are counted and billed. At zero, the round refuses to deliver past the allowance. The demo's Home 4 Capped plan works that way.

PART 5 Drivers, vehicles and rounds

A round is a regular run: a patch of the city, a driver, a vehicle and an ordered list of stops.

IN THIS PART YOU WILL LEARN

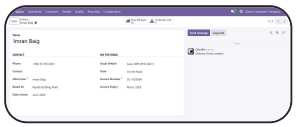

- Drivers and what stops one going out
- Vehicles and their capacity
- Rounds and their figures

1

Configuration, Drivers

Phone, plant, usual vehicle, licence expiry, status, and the runs and bottles lost in the last ninety days.

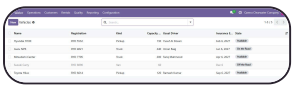

2

A driver

Link the **Odoo User** and the driver sees only his own runs and stops. The licence number is visible to managers only.

A driver whose licence has expired cannot be put on the road: the run refuses to leave.

3

Configuration, Vehicles

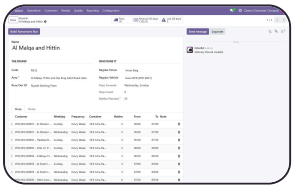

Registration (unique), kind, **capacity in bottles**, usual driver, odometer, insurance expiry and status. Load Out is refused if the count will not fit on the vehicle.

4

Configuration, Rounds

Four rounds on the demo, three out of the plant and one out of the depot.

5

A round

The plant it runs out of, regular driver and vehicle, the area in the drivers' words, the stops (standing orders), bottles planned a week, days covered, and revenue and bottles lost over the last thirty days.

The regular driver has to be based at the round's plant.

PART 6 Customer accounts and standing orders

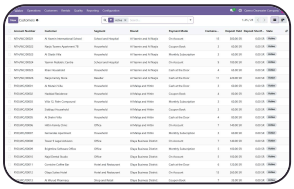

A customer account is where the water goes, how it is paid for, which round covers it, and what the customer is holding.

IN THIS PART YOU WILL LEARN

- Opening an account and activating it
- Standing orders: which days, which container, how many
- Putting an account on hold and closing it

TRY IT YOURSELF ON THE DEMO

1. Customers, Accounts: filter Deposit Short
2. Open Al Mutairi Villa and read the Delivery Schedule tab
3. Open Sahra Insurance Brokers, which is on hold

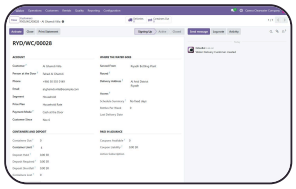

1

Customers, Accounts

Account number, customer, round, segment, how they pay, containers out, deposit held and any shortfall.

Filters: Active, On Hold, Deposit Short, Holding Containers, Has Lost Containers, On Coupons, On Subscription, On Account. Group by round, segment, payment, status or plant.

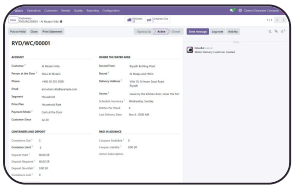

2

A new account

Pick the customer (the invoice goes to them), the plant it is served from, the segment (the matching price plan fills in), the payment mode, the delivery address (a loading bay, not the registered office), the person at the door, the access note and the round. It starts as **Signing Up**; press **Activate** when it is ready to be delivered.

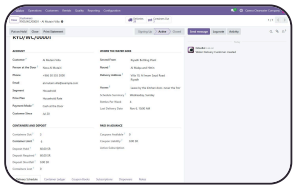

An account set to pay by subscription cannot be activated without a subscription.

3

The account form

The **Containers and Deposit** group shows containers out, the limit, deposit held, required and short, and containers lost. **Paid in Advance** shows coupons left, their value and the live subscription. The Deliveries and Ledger buttons open the history.

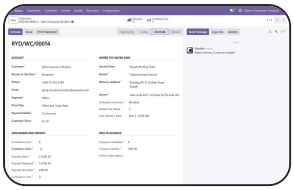

4

Standing orders

The Delivery Schedule tab lists the standing orders: weekday, every week or every other week (even or odd ISO weeks), container, bottles and a delivery window. **Customers, Standing Orders** lists them for every customer, grouped by round.

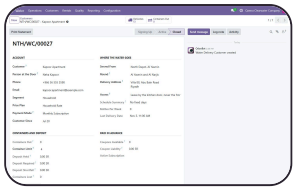

One standing order per customer, day and container, and its round must run out of the customer's plant.

5

On hold

Write the reason and press **Put on Hold**. The account drops off newly built runs, and a driver who tries to deliver is refused with the reason.

6

Closing an account

Close is refused while the customer still holds containers or has unredeemed coupons. Collect the empties, or write them off on the ledger, first. A closed account cannot be revived; open a fresh one.

PART 7 The container ledger and deposits

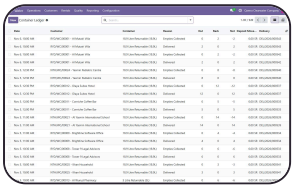

Every container that moves writes a line on the customer's ledger. The running balance is what the customer is holding; the deposit movements are what you owe them back.

IN THIS PART YOU WILL LEARN

- The six kinds of ledger line
- Deposit held, required and short
- Writing off lost containers, and the statement

TRY IT YOURSELF ON THE DEMO

1. Customers, Container Ledger: filter Written Off
2. Open Naseem Shawarma House and read the shortfall
3. Reporting, Deposit Liability

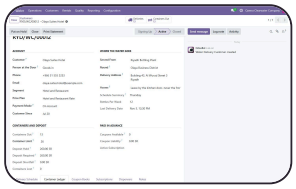

1

Customers, Container Ledger

One line per movement: date, customer, container, out, back, net, deposit movement, the delivery and round it came from, and the balance after.

Filters: Went Out, Came Back, Written Off, Deposit Movements, This Month.

2

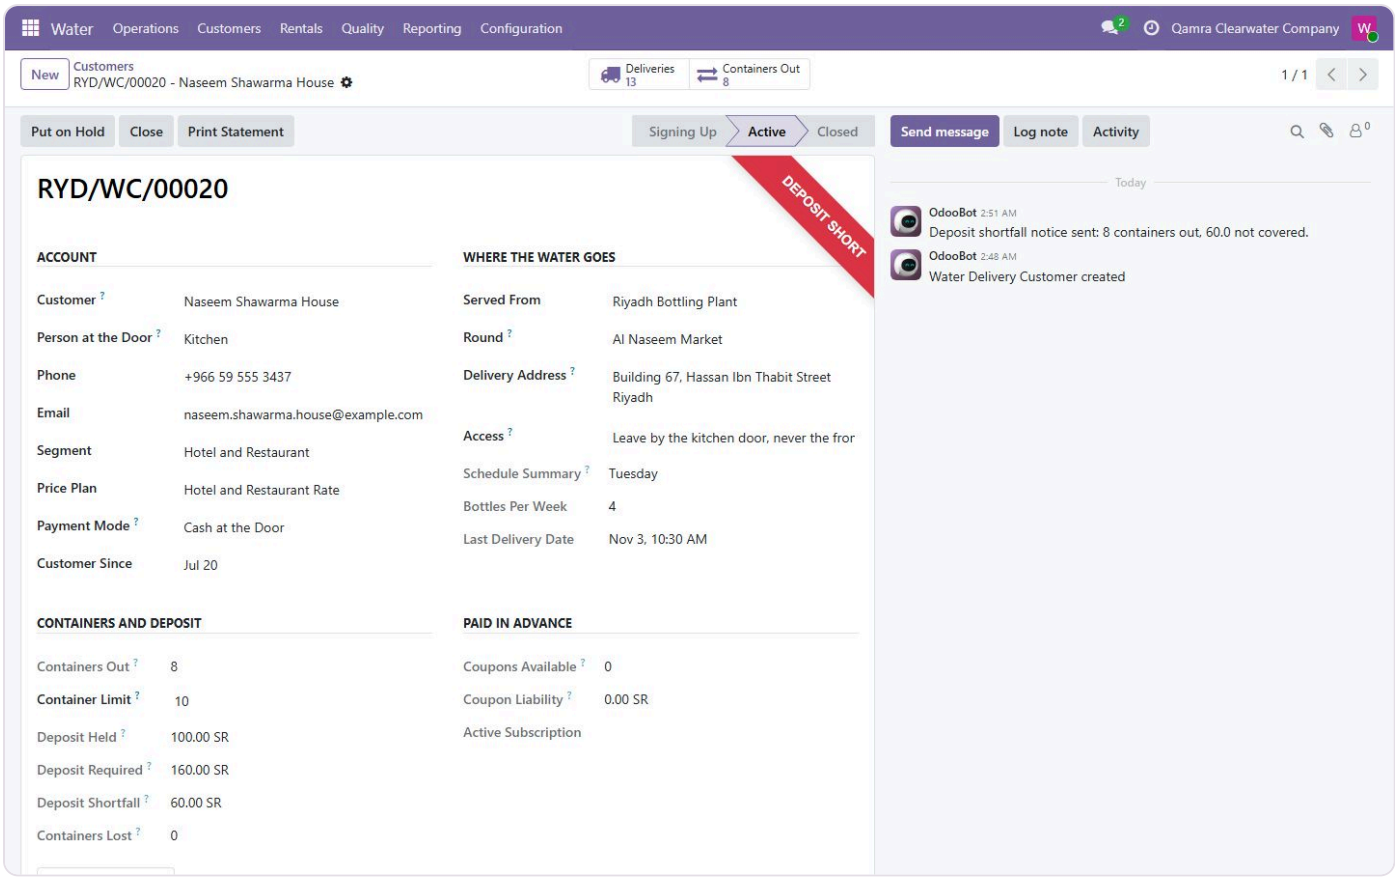

On the account

The Container Ledger tab shows the same lines for one customer.

LINE	WRITTEN BY	MEANS
Opening Balance	You, when taking over an existing round	Containers already with the customer
Delivered	A delivery	Full containers left
Empties Collected	A delivery	Empties taken back
Written Off	You	Containers the customer cannot produce; usually the deposit is kept
Count Adjustment	You	A correction after a physical count
Deposit Only	You or a delivery	Money moved with no container, for example a top up

Deposits

Deposit required is the containers the customer holds times the deposit per container. **Deposit held** is what has actually been taken, less refunds. The difference is the **shortfall**. With the deposit setting on, a delivery that would leave the customer short is refused until the driver takes the difference at the door or brings empties back.

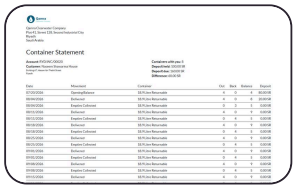

A restaurant with three containers found at a count and no deposit behind them: SAR 60 short.

3

Write off a loss

Create a ledger line with reason **Written Off**, the containers that came back as Back, and the deposit consumed as a negative movement. The account's containers lost count goes up.

4

Print Statement

From the account, **Print Statement** gives the customer the ledger with the running balance, for the one who argues about the count.

The scheduled action **Water: chase uncovered container deposits** emails every active customer with a shortfall, using the Containers Outstanding email, and notes it on the account.

> Deposits live in the module, not in the accounts. Taking or refunding a deposit at the door does not post a journal entry: the Deposit Liability report gives the figure for your accountant to book.

PART 8 Building and loading the run

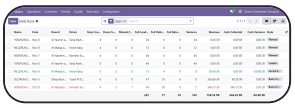

A run is one round on one date and shift. It is built from the standing orders, loaded with a counted number of bottles from a released batch, and sent out.

IN THIS PART YOU WILL LEARN

- Building a run from the standing orders
- The load out and the checks on it
- Leaving the yard

TRY IT YOURSELF ON THE DEMO

1. Operations, Daily Runs: open a Planned run for tomorrow
2. Open YSN/RUN/2026/00128, loaded and waiting on the ramp

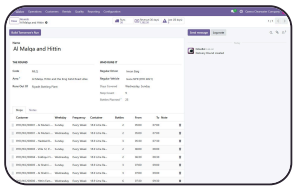

1

Operations, Daily Runs

Run number (round code first), date, round, driver, vehicle, stops, done and missed, loaded, delivered, variance, revenue and cash. It opens on open runs.

Filters: Open, On the Road, Not Reconciled, Does Not Balance, Cash Short, Today.

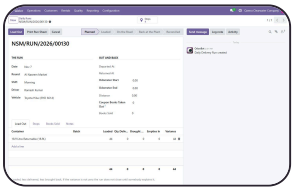

2

Build Tomorrow's Run

On a round, **Build Tomorrow's Run** creates tomorrow's run with one planned stop per standing order due that day for an active customer, priced from the customer's plan. The scheduled action **Water: build tomorrow's runs** does the same for every round with a driver.

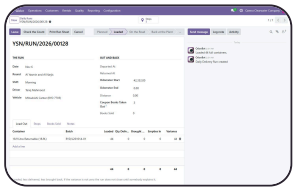

It is refused if nothing is due or the run already exists.

3

A planned run

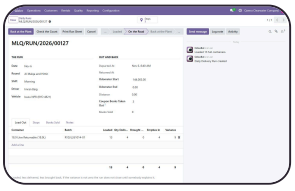

The **Load Out** tab already holds one line per container: the standing orders plus a spare 10%, at least two, because someone always wants an extra bottle at the door.

4

Load Out

Name the **batch** on each load line, correct the counts to what was actually put on, set the odometer and the coupon books handed to the driver, and press **Load Out**. It is refused if nothing is loaded, if the load will not fit on the vehicle, or if a batch has not been released by the lab.

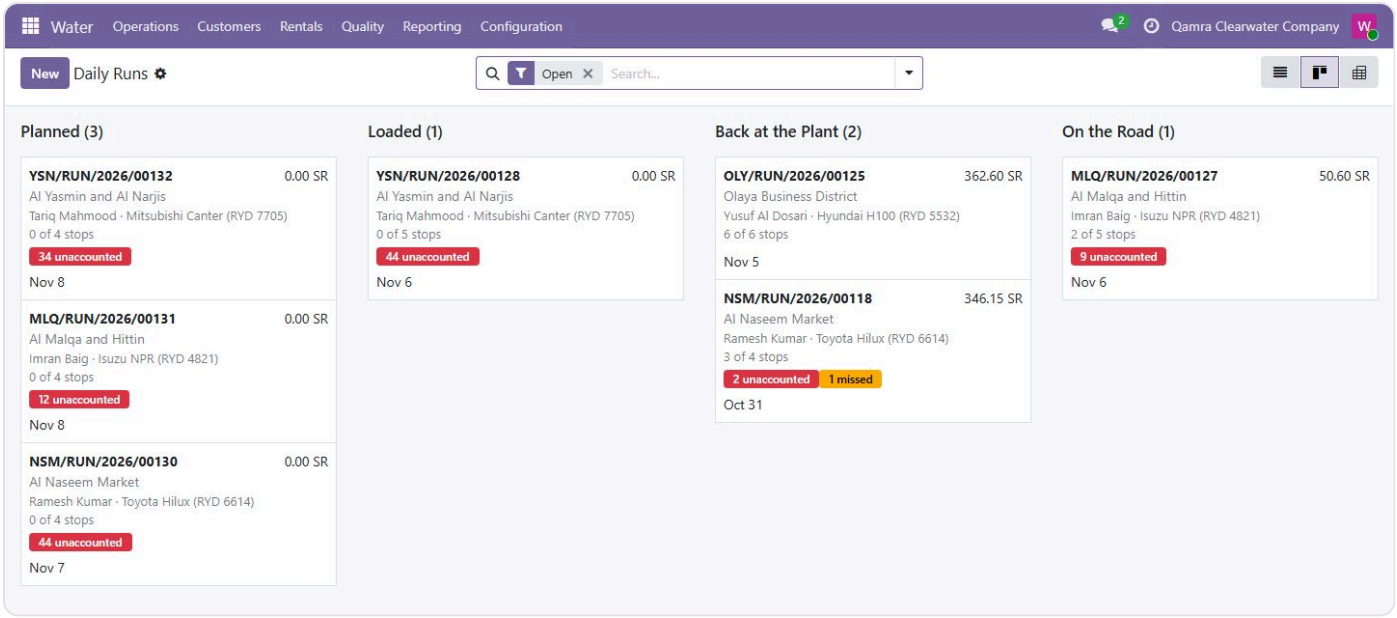

5

Leave

Leave puts the run, the driver and the vehicle On the Road and stamps the departure time. **Print Run Sheet** gives the driver his stops on paper.

One driver, one truck, one run per shift: a second open run for the same driver and shift is refused.

Runs by status, from planned to reconciled.

PART 9 At the door: deliveries and missed stops

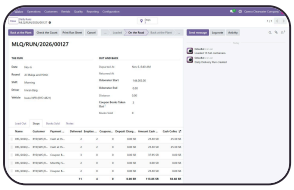

A delivery records what was left, what came back, how it was paid and who signed. It moves the ledger, redeems coupons, uses up the allowance and tells the run what cash it owes.

IN THIS PART YOU WILL LEARN

- Recording a delivery for each way of paying
- The checks that stop a bad delivery
- Missed stops and the return visit

TRY IT YOURSELF ON THE DEMO

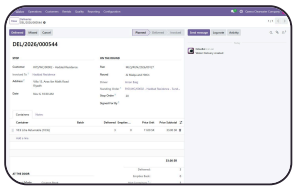

1. Operations, Deliveries: open a coupon delivery and read the Paid by Coupon value
2. Operations, Missed Deliveries: grouped by reason

1

The stops on the run

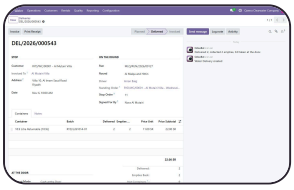

The run's Stops tab lists every delivery in stop order with its status.

2

A planned stop

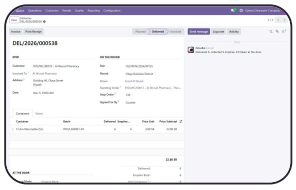

The **Containers** tab has a line per container: delivered, empties back, the batch, price and tax. The **At the Door** group holds coupons taken, deposit charged or refunded, cash collected and **Signed For By**.

3

Cash

Cash due is the water plus any deposit charged, less any refund. Type what was taken; the difference shows as the cash variance.

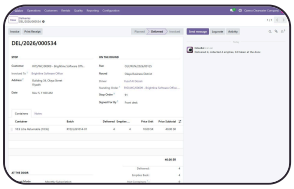

4

Coupons

Enter the coupons handed over. They are taken off the customer's books for that container, oldest first, and the delivery shows what they were worth. A coupon buys one bottle, so more coupons than bottles is refused, and so is a delivery with no coupons recorded.

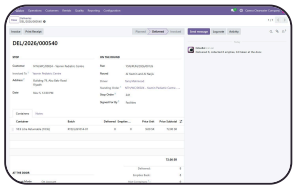

A driver cannot edit a coupon book; the redemption runs behind the button.

5

Subscription

The bottles come off the month's allowance. Past it, they count as overage. On a plan with no overage price a delivery past the allowance is refused, and the driver sells the extra bottle for cash instead.

6

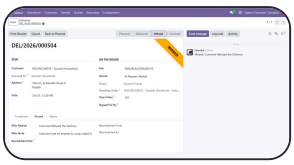

On account

Nothing changes hands but the deposit. The water goes on the monthly invoice.

What Delivered checks

CHECK	REFUSED WHEN
The account	It is on hold (the reason is shown) or closed
The batch	A water line names no batch, or the batch is not released

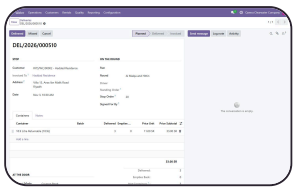

The container limit	The customer would hold more than the limit on the account
The deposit	The customer would hold containers with too little deposit behind them
The payment	Coupons missing or too many, or the allowance exhausted with no overage price

7

A missed stop

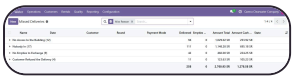

Set the **miss reason** (Nobody In, No Access to the Building, Customer Refused, No Empties to Exchange, Account on Stop, Vehicle Problem, Road or Weather, Other) and press **Missed**. Fill in a **reschedule date** first and the module creates the return visit for you.

8

The return visit

The new stop records which one it replaces. **Back to Planned** on the original cancels the return visit, so the water is not delivered twice.

9

Operations, Missed Deliveries

Every missed stop, grouped by reason.

10

Print Receipt

An 80 mm receipt for the customer.

> Delivery times are built from the standing order window without the company's time zone, so in Riyadh a 07:00 window shows as 10:00. Enter windows three hours earlier, or have the code adjusted.

PART 10 Back at the plant: reconciling the run

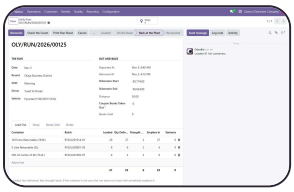

Loaded, less delivered, less brought back. If that is not zero, the run does not close until somebody explains it.

IN THIS PART YOU WILL LEARN

- Signing the truck back in
- The variance, and Check the Count
- Cash expected against cash counted

TRY IT YOURSELF ON THE DEMO

1. Operations, Runs to Reconcile
2. Open NSM/RUN/2026/00118, two bottles short

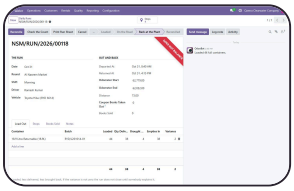

1 Back at the Plant

Press **Back at the Plant** when the truck returns. It is refused while any stop is still planned: every stop is delivered or missed first. Driver and vehicle become available, and the odometer moves to the vehicle.

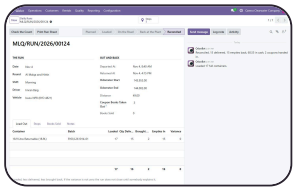

2 Operations, Runs to Reconcile

Every run that is back but not yet reconciled.

3 The count

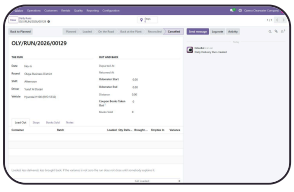

Type the **brought back** full containers on each load line and the **cash counted**. The run shows loaded, delivered, brought back, empties, the **variance**, coupons collected, cash expected and the cash variance. **Check the Count** shows the balance without changing anything.

4 Reconcile

Reconcile is refused while the variance is beyond the tolerance in Settings, zero on the demo. Count again, or write the missing bottles off against the customers who kept them. Once it balances the run is **Reconciled** and the chatter records the totals.

Cash short does not stop reconciliation; filter Cash Short to follow it up.

5 Cancel

A run that has delivered to anybody cannot be cancelled. Cancelling a run that has not takes its planned stops off it; **Back to Planned** reopens a cancelled run.

PART 11 Coupon books, subscriptions and monthly billing

Coupon books and subscriptions are paid before the water moves, and account customers after. Each is billed its own way, and the module refuses to bill the same water twice.

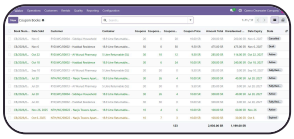

IN THIS PART YOU WILL LEARN

- Selling, invoicing and expiring a coupon book
- Starting, suspending and billing a subscription
- The monthly invoice for account customers

TRY IT YOURSELF ON THE DEMO

1. Customers, Coupon Books: filter Coupons Outstanding
2. Customers, Subscriptions: open one and press the Invoices button

Coupon books

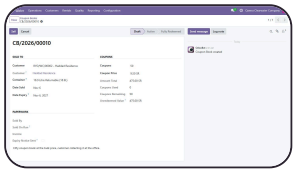

1

Customers, Coupon Books

Book number, customer, container, coupons, used, remaining, unredeemed value, sold and expiry dates and status.

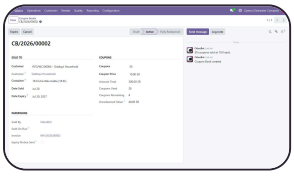

Filters: Live, Coupons Outstanding, Expired, Not Invoiced. The pivot sizes the unredeemed coupon liability.

2

Sell a book

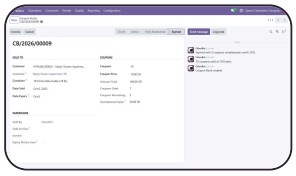

Pick the customer and the container; the coupon price comes from the customer's plan. Press **Sell**; a book with no price is refused. The expiry is the sale date plus the months in Settings. A book sold off the truck carries its run, and the run counts the books it sold.

3

Invoice it

Invoice raises the invoice for the whole book: coupon money is taken up front. Coupons are then redeemed at the door, and the book becomes **Fully Redeemed** when the last one is used.

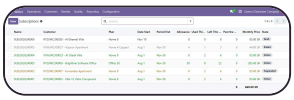

4

Expiry

The scheduled action **Water: expire coupon books** writes once to each customer whose book runs out within thirty days, then expires books past their date and notes the unredeemed value. **Cancel** is refused once a coupon has been used or the book is on a posted invoice.

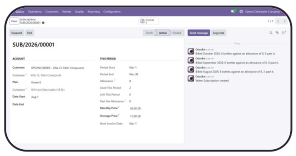

Subscriptions

5

Customers, Subscriptions

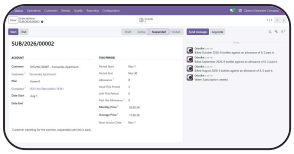

Customer, plan, allowance, used, past the allowance, left this period, monthly price and status. One live subscription per customer.

6

Start

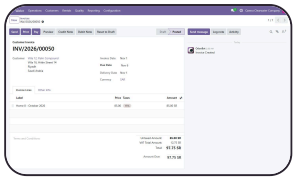

Pick the plan; the monthly and overage prices are copied from it and then left alone, so a negotiated price does not move when the plan is edited. **Start** opens the first period and sets the next invoice date.

7

Suspend and resume

Suspend stops the allowance; **Start** again picks the period back up.

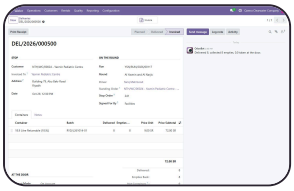

8

Monthly billing

The scheduled action **Water: bill and roll subscriptions** invoices every subscription whose period has ended: the monthly price, plus the overage bottles at the overage price, then starts the next period with the allowance reset.

End closes a subscription; **Cancel** is refused once bottles have been delivered on it.

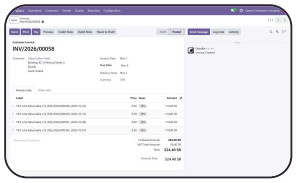

Account customers

9

One invoice a month

The scheduled action **Water: monthly invoices for account customers** takes last month's delivered stops for every customer paying on account and puts them on one invoice, one line per container per stop with the delivery number and date. The deliveries become **Invoiced**, and the Monthly Statement email goes to the customer.

10

The invoice

An ordinary Odoo customer invoice in the plant's sales journal, with VAT.

Invoice on a delivery bills cash stops by hand; it refuses coupon and subscription stops, which were paid before the water came off the truck.

PART 12 Quality: batches, tests and recalls

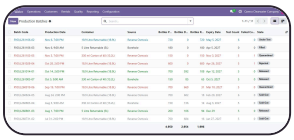

This is the part a health inspector asks for. Every fill is a batch, every batch carries its test log, and every delivery names its batch.

IN THIS PART YOU WILL LEARN

- Filling a batch and sending it for testing
- The test log and its limits
- Release, quarantine, reject, and the recall list

TRY IT YOURSELF ON THE DEMO

1. Quality, Production Batches: open a Released batch, then Where It Went
2. Open the Quarantined batch filled in September and press Recall List

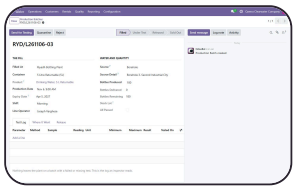

1

Quality, Production Batches

Batch code, plant, container, filled, expiry, source, produced, delivered, remaining, tests and status.

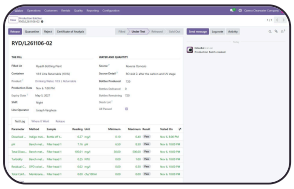

Filters: Released, Under Test, Held or Rejected, Has a Failed Test, No Tests Yet, Past Shelf Life.

2

A new fill

Plant (a depot cannot fill), container, production date, shift, line operator, **source** (Borehole, Municipal Mains, Spring, Reverse Osmosis, Blended) with detail, and bottles produced. The expiry follows from the container's shelf life.

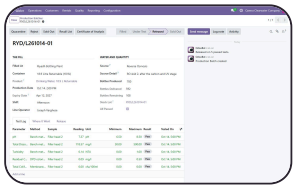

3

Send for Testing

Adds the five routine tests, pH, total dissolved solids, turbidity, residual chlorine and total coliform, with their limits. Add more (conductivity, hardness, nitrate, fluoride, plate count, ozone) on the Test Log tab.

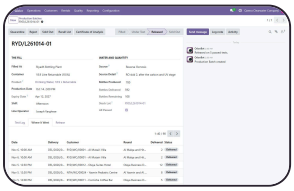

The routine lines start with the reading at the lower limit, which passes. Type every real reading before release.

4

Release

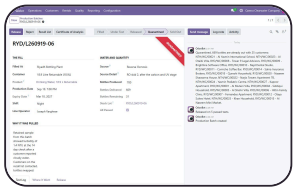

With a clean test log, **Release** lets the batch onto the trucks, records who released it and, when the product is tracked by lot, creates the matching stock lot. A failed or missing test blocks release while the setting is on.

5

Where It Went

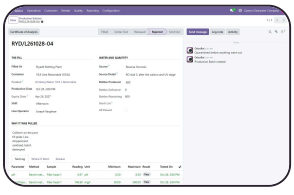

Every delivery line and load line that carried the batch. A batch cannot have more delivered than it produced.

6

Quarantine and recall

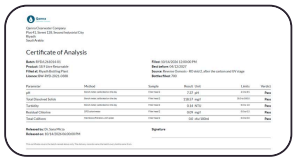

Write the reason and press **Quarantine**. The chatter lists how many bottles are already out and with which customers, and **Recall List** opens their deliveries.

7

Reject

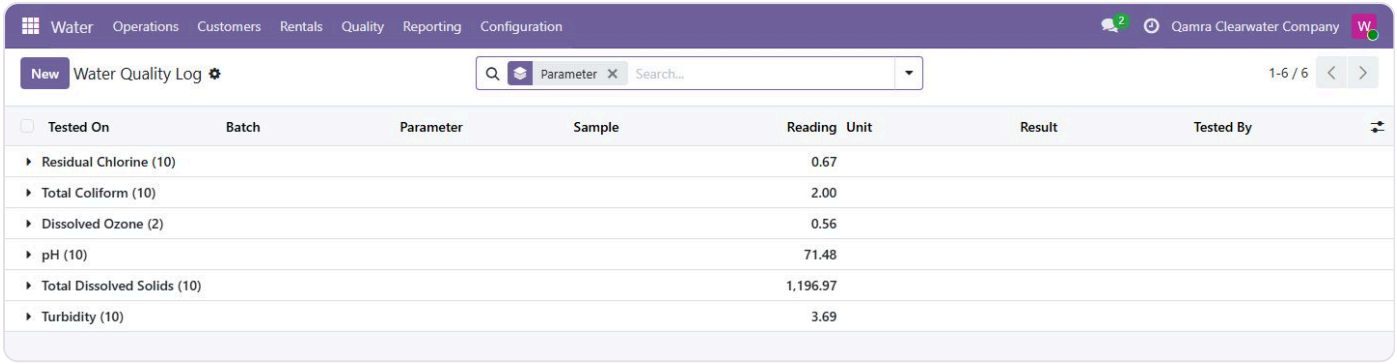

A batch that never left the plant can be rejected. Once bottles are out, quarantine it instead.

8

Certificate of Analysis

Prints the batch, plant, licence and every test with its limits and result.

Quality, Water Quality Log: every reading, grouped by parameter.

Sold Out marks a released batch as finished. The scheduled action **Water: pull batches past their shelf life** quarantines released stock past its expiry.

PART 13 Dispensers and service visits

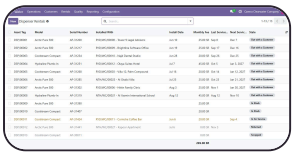

A cooler is the other thing you lend out. It earns a fee, needs sanitising on a cycle, and is the first thing an office complains about.

IN THIS PART YOU WILL LEARN

- A dispenser from stock to rental to scrap
- Service visits and the sanitisation cycle
- Monthly rental billing

TRY IT YOURSELF ON THE DEMO

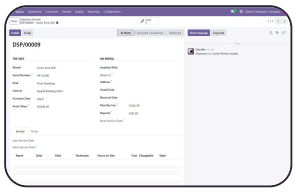

1. Rentals, Dispensers: one unit in every state
2. Rentals, Service Visits: open the planned repair

1

Rentals, Dispensers

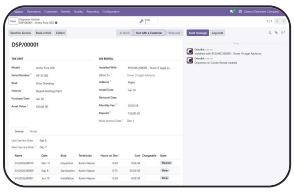

Asset tag, serial, model, kind (floor standing, table top, plumbed in, cooler only), customer, fee, next service and status.

2

In stock

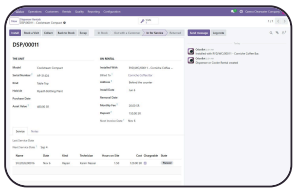

Serial, model, kind, value and fee. Set the customer and press **Install**.

3

Out with a customer

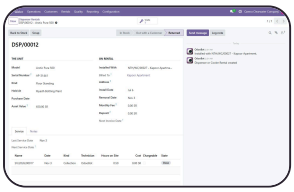

Install date, address in the building, monthly fee, deposit, last and next service. **Book a Visit** creates the next sanitisation visit.

4

In for service

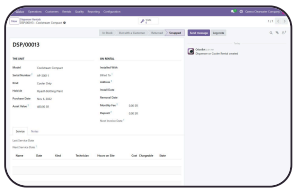

Send for Service, then **Install** again or **Back to Stock**.

5

Collected

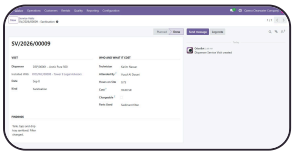

Collect, or a done collection visit, returns the unit and stops its billing.

6

Scrapped

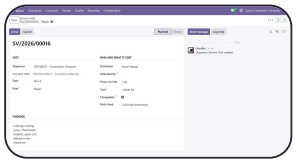

Scrap is refused while the unit is still in a customer's kitchen.

7

A service visit

Date, kind (installation, sanitisation, repair, inspection, collection), technician or the driver who attended, hours, cost, chargeable, parts and findings. **Done** moves the unit's last service date and with it the next.

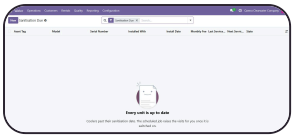

8

A repair

A repair cannot be marked done without findings: three repairs on one cooler means it should be scrapped.

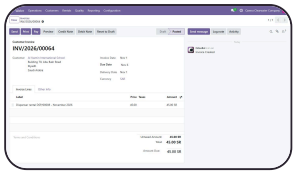

Chargeable marks a visit for billing; the visit itself does not raise an invoice.

9

Rentals, Sanitisation Due

Units whose next service date has arrived. The scheduled action **Water: raise dispenser sanitisation visits** books one visit for each.

10

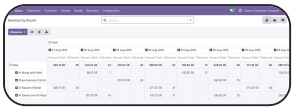

Rental billing

The scheduled action **Water: bill dispenser rentals** raises one invoice per customer for the month's fees, and skips customers whose subscription includes the dispenser.

Rental lines carry no product and no tax. Add VAT to them by hand, or have the job given a product.

PART 14 Reporting

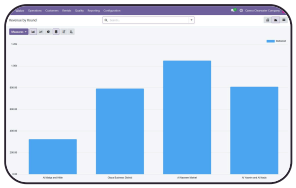

Three reports for the manager and the accountant.

1

Revenue by Round

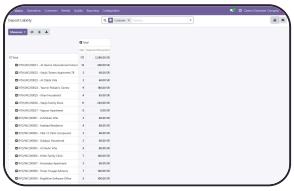

Delivered and invoiced stops by round and day: value and bottles. Change the column interval to week or month from its header.

2

The graph

The same figures as a chart.

3

Deposit Liability

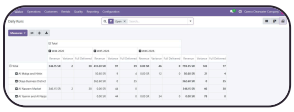

Deposit movements summed by customer: the figure the accountant needs at year end.

4

Container Losses

Every write off, by customer, so you can see which accounts lose bottles.

5

Runs

The run pivot adds up revenue, variance and bottles delivered by round and week.

Coupon book liability is on the coupon book pivot (Part 11), and the account form shows each customer's deposit and coupon position.

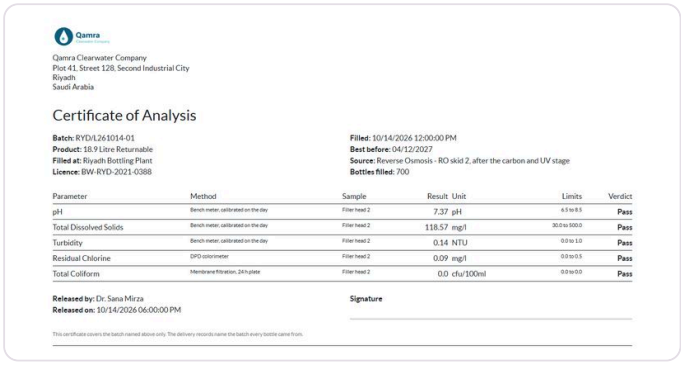

PART 15 Printed documents and emails

Four printouts and three emails come with the module.

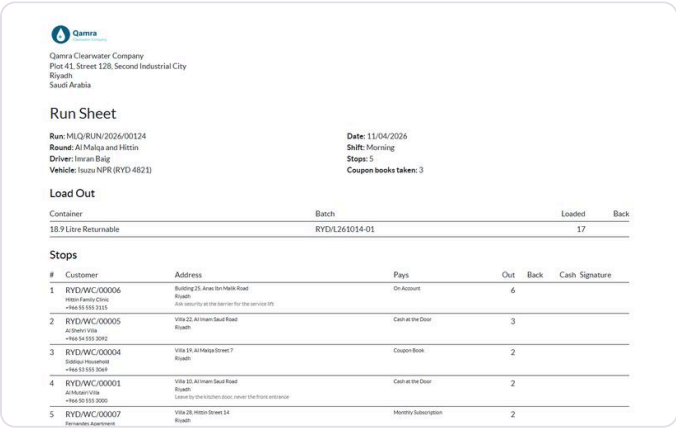

DOCUMENT	PRINTED OR SENT FROM	PURPOSE
Delivery Receipt (80 mm)	Delivery, Print Receipt	What was left and collected at the door
Run Sheet	Run, Print Run Sheet	The driver's stops, loads and columns to fill in
Certificate of Analysis	Batch	The test log for one batch, for an inspector or a customer
Container Statement	Account, Print Statement	The ledger with its running balance
Monthly Statement email	Monthly invoices job	The month's deliveries to an account customer
Containers Outstanding email	Deposit shortfall job	Containers held without enough deposit
Coupon Book Expiring email	Coupon expiry job	A book running out within thirty days

Container statement.

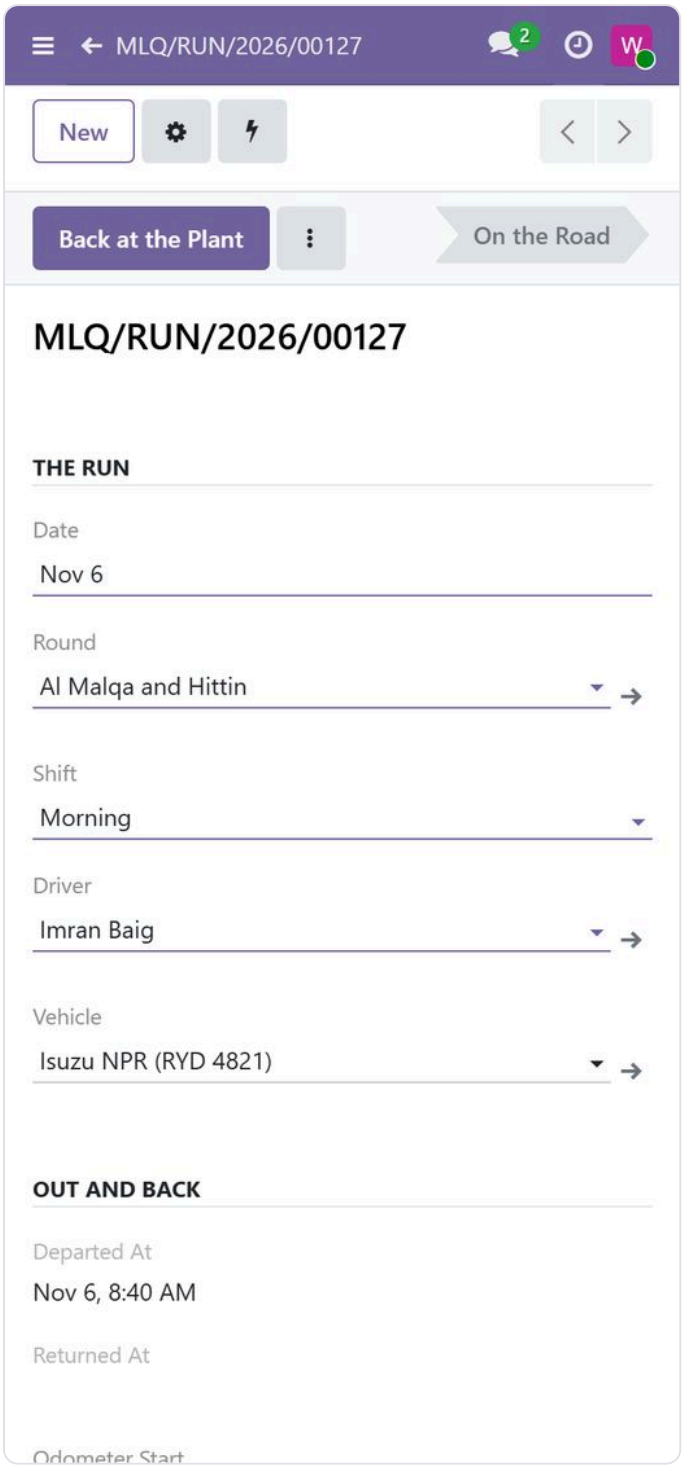

Every scheduled job ships switched off. Turn on the ones you want in Settings, Technical, Scheduled Actions once the rounds, rate cards and outgoing mail are set up.

PART 16 Users, roles and phones

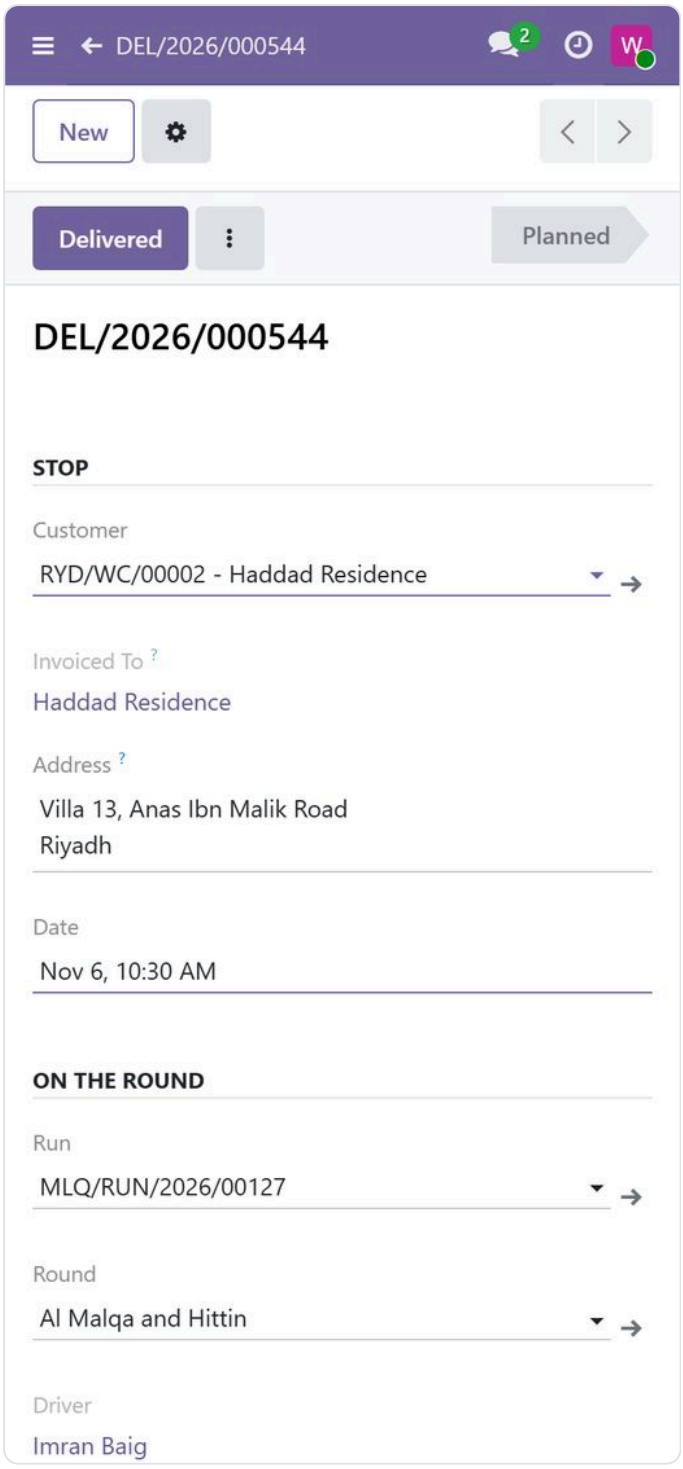

Who sees what, and what a driver sees on the road.

Give each user one of the four roles in the Water Delivery section of their access rights. The demo has a manager, a dispatcher, two quality staff and four drivers, all invented.

RULE	EFFECT
A driver sees his own runs and rounds	Runs and rounds whose driver is linked to his user.
A driver sees his own stops	Deliveries on his runs, plus stops not yet on any run.
Dispatch sees everything	Every run, stop and round.
The lab follows a batch	Quality officers can read every delivery line that carried a batch.
Per company	Every record is kept per company.

A run on a phone.

A stop on a phone.

There is no separate driver app: the driver signs into Odoo in the phone's browser and works the same screens.

PART 17 A fifteen minute walk-through

If you have the demo open and fifteen minutes, this path shows the whole business, and it is the order to show it to somebody else in.

#	DO THIS	AND NOTICE
1	Operations, Daily Runs	*Runs from planned to reconciled; one on the road, one loaded on the ramp.*
2	Open MLQ/RUN/2026/00127, then the Stops tab	*The load out with its batch, and stops half done.*
3	Open a delivered coupon stop	*Coupons taken, what they were worth, empties back, signed for.*
4	Operations, Runs to Reconcile, NSM/RUN/2026/00118	*Two bottles unaccounted for: Reconcile refuses.*
5	Customers, Accounts, filter Deposit Short	*Containers out with no deposit behind them.*
6	Open an account, Container Ledger tab, then Print Statement	*Every bottle in and out with a running balance.*
7	Customers, Coupon Books and Subscriptions	*Unredeemed value, an expired book, an allowance being used.*
8	Quality, Production Batches, a released batch	*The test log, then Where It Went.*
9	The quarantined September batch, Recall List	*Every customer who already has it.*
10	Rentals, Dispensers	*Units in stock, out, in for service, collected and scrapped.*
11	Reporting, Deposit Liability	*The figure the accountant needs.*

Questions people ask

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community with Inventory and Invoicing, both part of Community.
Is there a customer portal or ordering page?	No. The module has no website or portal pages. Customers get receipts, statements and the emails.
Is there a driver app?	No separate app. Drivers sign into Odoo in the phone browser and see only their own runs and stops.
Does it move stock in Inventory?	No. Plants name a warehouse and location and a released batch can create a stock lot, but deliveries do not create stock moves.
Does it post deposits to the accounts?	No. Deposits are tracked on the ledger and reported as a liability; booking them is left to your accountant.
Can a driver edit a coupon book or the ledger?	No. Coupons are redeemed and the ledger written behind the Delivered button; the driver has no rights to change either.
Can a batch go out untested?	Not while Release Only on a Clean Test Log is on. Load Out and Delivered both refuse an unreleased batch.

PART 18

The menu map

Every screen in the module, on one page.

Operations

Deliveries	Each stop: bottles, empties, coupons, cash, signature
Daily Runs	Built, loaded, out, back, reconciled
Runs to Reconcile	Back at the plant, not yet balanced
Missed Deliveries	Grouped by reason, with return visits

Customers

Accounts	Payment mode, round, containers and deposit
Standing Orders	Day, container and bottles, by round
Container Ledger	Every container in and out
Coupon Books	Sold, redeemed, expired, liability
Subscriptions	Allowance, overage, monthly billing

Rentals

Dispensers	From stock to rental to scrap
Sanitisation Due	Units due a service
Service Visits	Sanitise, repair, inspect, collect

Quality

Production Batches	Fill, test, release, quarantine, recall
Water Quality Log	Every reading against its limits

Reporting

Revenue by Round	Value and bottles by round and day
Deposit Liability	Deposits held, by customer
Container Losses	Write offs by customer

Configuration

Settings	Deposits, limits, expiry, tolerance, release, cycle
Plants and Depots	Licence, capacity, warehouse, journal
Rounds	Driver, vehicle, stops, 30 day figures
Container Types	Returnable, deposit, shelf life
Price Plans	Rates by segment with volume breaks
Subscription Plans	Allowance, price, overage
Drivers	User, licence, vehicle
Vehicles	Plate, capacity, odometer

Want this for your rounds?

We set it up from your container count and your customer list, load the opening balances and deposits, build the rounds and standing orders, connect the invoices to your accounts and VAT, and train dispatch, the lab and the drivers. The same module runs one plant or a plant with several depots.
