COMPLETE GUIDE · EIGHT MODULES, EVERY SCREEN

The Productivity Pack for Odoo 19 Community

Gantt planning with dependencies, maps and route planning, a timesheet grid, document management, approval rules, an audit log, recently viewed records and Excel import and export. Every screen and every step, shown on one live demo.

GANTT VIEW · MAP VIEW · TIMESHEET GRID · DOCUMENTS · APPROVALS · AUDIT LOG · RECENT RECORDS · IMPORT EXPORT

START

About this guide

Odoo Community is a strong base with a few missing tools that every office notices in its first month: no Gantt chart, no map, no timesheet grid, no document folders with real permissions, no sign-off on a large order, no record of who changed what. This guide covers the eight Way4Tech modules that fill those gaps, one screen at a time, on one live demo.

Who it is for

The person setting Odoo up, the managers who will plan, approve and audit, and anyone being shown the modules before buying. No Odoo background is needed.

How to read it

Each module has its own parts, and each part opens with what you will learn and something to try on the demo. The coloured badge on a part tells you which module it needs.

The live demo

Kestrelmoor Digital Ltd, an invented design and web agency in Manchester with eight staff, sixteen clients, three months of timesheets, sales and purchases, and all eight modules installed together.

HOW IT WORKS

The demo agency

Address	**productivity-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Company	Kestrelmoor Digital Ltd · Ancoats, Manchester · prices in GBP with UK VAT at 20%
Runs on	Odoo 19 Community with Project, Timesheets, Sales, Purchase and Invoicing

Every company, person, address and number on the demo is invented. The demo is shared and is reset from time to time, so anything you change may be changed back or seen by the next visitor.

What is in the guide

PART 1 What the pack adds to Odoo Community

PART 2 The demo at a glance

PART 3 Sign in, install and set up

PART 4 Gantt: plans and tasks

PART 5 Gantt: dependencies, rescheduling and the critical path

PART 6 Gantt: the board, resources and conflicts

PART 7 Maps on any model

PART 8 Maps: geocoding and the address cache

PART 9 Maps: route planning

PART 10 Grid: the timesheet grid

PART 11 Grid: setting up grids, locks and copying a period

PART 12 Documents: folders and who can open them

PART 13 Documents: filing, versions, locks and expiry

PART 14 Documents: upload requests and PDF tools

PART 15 Approvals on sales, purchases and invoices

PART 16 Audit log: who changed what, and when

PART 17 Recently viewed and pinned records

PART 18 Excel and CSV import and export

PART 19 Printed documents

PART 20 A fifteen minute walk-through

PART 21 The menu map

PART 1 What the pack adds to Odoo Community

Odoo Enterprise ships a Gantt view, a map view, a grid view, a Documents app and approvals. Community ships none of them. Each module here is a separate purchase that brings one of those tools to Community, written from scratch, with its own data and its own rules.

IN THIS PART YOU WILL LEARN

- What each of the eight modules does, and what it costs
- Which ones depend on standard Odoo apps
- How the four view modules let you point them at any model
- The badge used for each module in the rest of this guide

The eight modules

MODULE	TECHNICAL NAME	PRICE	WHAT IT ADDS
GANTT VIEW	wt_gantt_view	USD 199	Plans with four kinds of dependency link, cascade rescheduling over working days, a critical path, resource conflicts, a drag and drop board for any model with two dates, and a printable planning sheet.
MAP VIEW	wt_map_view	USD 89	Pins for any model, coloured by a field, geocoding that remembers every answer, and route planning with leg distances, arrival times and a route sheet.
TIMESHEET GRID	wt_grid_view	USD 69	A spreadsheet style grid for any model: rows you choose, days, weeks or months across, an editable total in every cell, period locks and a copy wizard.
DOCUMENTS	wt_documents_dms	USD 69	Folders with read, write and manage groups, versions with restore, locks, expiry dates, upload links for people outside the company, and PDF split and merge.
APPROVALS	wt_approval_workflow	USD 89	Multi level sign-off on sales orders, purchase orders and invoices, chosen by amount band and condition, with a to-do for each approver.
AUDIT LOG	wt_audit_log	USD 10	Who created, changed or deleted a record, with old and new values per field, a dashboard and automatic purging of old entries.
RECENT RECORDS	wt_recent_records	USD 15	A clock icon in the top bar with the last records you opened and the ones you pinned.
IMPORT EXPORT	wt_import_export	USD 10	Saved import and export profiles in Excel, CSV or JSON, update or upsert by any field, a dry run, a log of problem rows and scheduled exports by email.

What each one needs

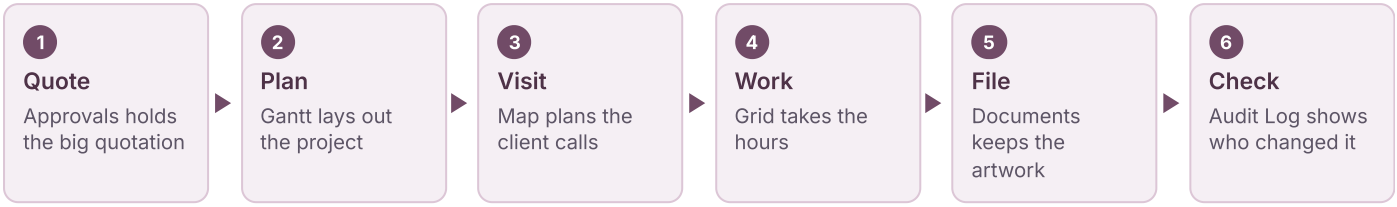

Gantt View, Timesheet Grid and Recent Records need nothing but Odoo itself. Map View needs **base_geolocalize**, which ships with Odoo. Documents needs Discuss and the portal. Approvals needs Sales, Purchase and Invoicing, because those are the documents it holds. Audit Log and Import Export need only the base. None of them needs Enterprise, and none of them installs anything from it.

Built to point at your own data

The Gantt board, the map and the grid are all driven by a configuration record: you name a model and the fields to use, and the module draws it. The demo has a Gantt board on the module's own planning tasks, a second on projects

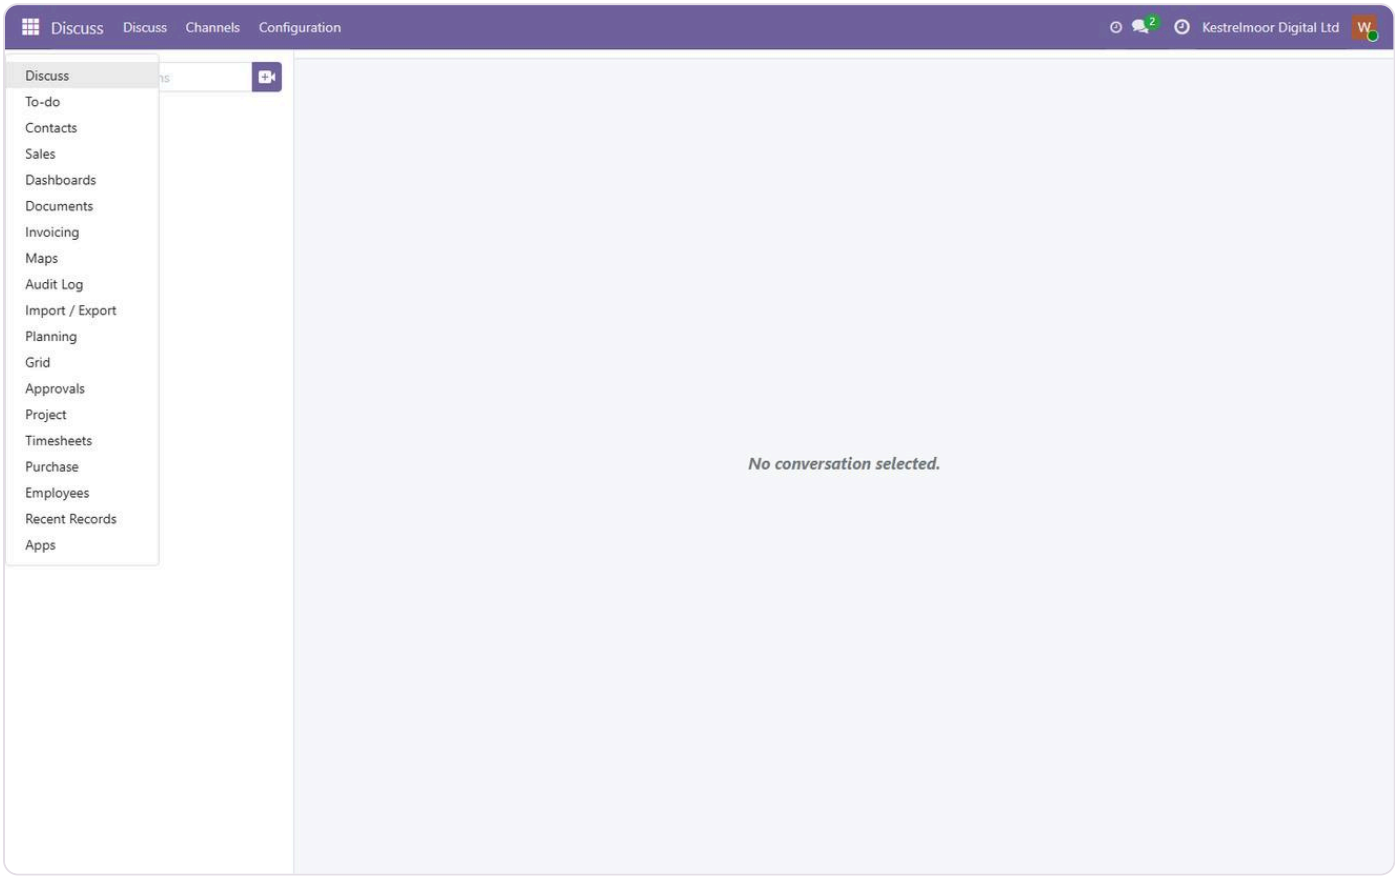

and a third on sales orders; maps of customers, quotations, projects and suppliers; and grids on timesheets, planning entries and sales. You can add your own without writing a view.

A week at the agency, and where each module comes in

PART 2 The demo at a glance

Each module adds its own app to the home screen. This part is the map of those apps and the groups that decide who sees what.

The apps menu as the demo user sees it: Planning, Maps, Grid, Documents, Approvals, Audit Log, Import / Export and Recent Records sit beside the standard Project, Timesheets, Sales and Purchase apps.

The apps and their menus

APP	MENUS
Planning	Board, Plans, Tasks, Dependencies, Configuration (Resources, Boards)
Maps	Map, Maps, Routes, Stops, Geocoding (Contacts To Locate, Cached Addresses), Configuration (Maps)
Grid	Grid, Entries, Copy a Period, Configuration (Grids, Categories, Period Locks)
Documents	Documents, Folders, Upload Requests, Review (Expiring Soon, Versions), Configuration (Tag Categories, Tags)
Approvals	Requests (To Approve, All Requests), Configuration (Approval Rules)
Audit Log	Overview, Audit Log, Audit Rules, Settings
Import / Export	Profiles, Run History
Recent Records	History, plus the clock icon in the top bar

Who sees what

Under Settings, Users, each module adds its own access line. The planning, grid, map and document modules have a user level and a configuring level; the others have one manager group.

MODULE	GROUPS	WHAT THE HIGHER GROUP ADDS
Gantt View	Plan Work, Configure Planning	Boards and resources
Map View	Use Maps, Configure Maps	Map configurations. Locating an address needs Use Maps, because it calls an outside service
Timesheet Grid	Fill In Grids, Configure Grids	Grids, categories and period locks
Documents	User, Administrator	Tags, forcing a lock open, and every restricted folder
Approvals	Configure Approvals	Approval rules. Anybody named on a level can approve
Audit Log	Audit Manager	The log, the rules and the dashboard
Import Export	Data Import / Export Manager	Profiles and their runs
Recent Records	none	Every internal user gets their own list

The demo login **w4demo** has every module's higher group but not Odoo's own Settings, so it can use and configure the modules without touching users, companies or technical settings.

PART 3 Sign in, install and set up

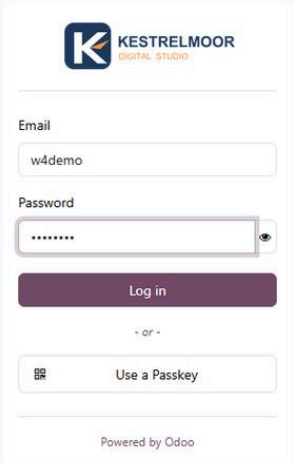

The modules install like any Odoo app. This part covers signing in to the demo, the order to install in on your own database, and the few settings there are.

IN THIS PART YOU WILL LEARN

- How to sign in to the demo
- Which standard apps to install first
- The settings each module adds, and their defaults
- What has to be in place before the map can locate an address

TRY IT YOURSELF ON THE DEMO

1. Open productivity-demo.way4tech.com and sign in as w4demo
2. Open the home screen and find the eight new apps
3. Open Audit Log, Overview, to see the agency's recent changes

The demo sign-in page. Type **w4demo** and **Demo2026**.

Install order on your own database

1

Install the standard apps you need

Project and Timesheets if you will plan and log hours, Sales, Purchase and Invoicing for approvals. Install Timesheets before Timesheet Grid if you want the timesheet grid made for you.

2

Install the Way4Tech modules

From Apps, or by placing them in your addons path and updating the app list. They can go in one at a time or together.

Timesheet Grid looks for the timesheet app when it installs. Installed first, it still works on its own planning entries, and you can add a timesheet grid by hand later.

3

Give people their groups

Settings, Users, then the access lines described in Part 2. Nothing is visible to a user until they are in a module's group.

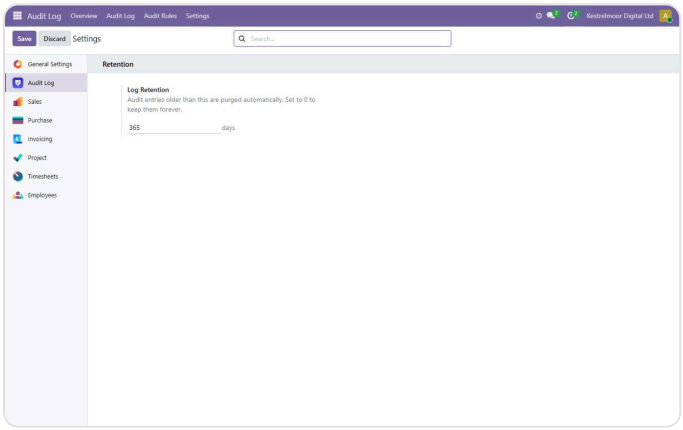

4

Create your first rule or board

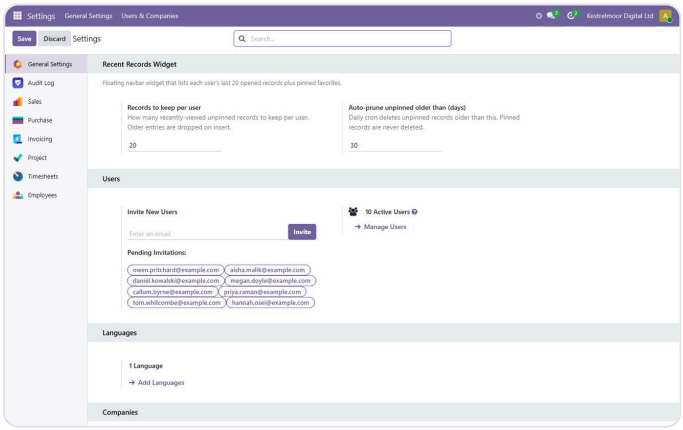

Approvals and Audit Log do nothing until you create a rule, so installing them changes no existing behaviour.

The settings

SETTING	WHERE	DEFAULT	WHAT IT DOES
Audit Log Retention (Days)	Audit Log, Settings	90	Entries older than this are deleted by a daily job. Zero keeps them forever.
Recent records to keep per user	Settings, Recent Records	20	How many entries each user sees in the clock panel.
Auto-prune unpinned older than (days)	Settings, Recent Records	30	A daily job removes older entries that are not pinned.
Geolocation provider	Settings, Integrations (standard Odoo)	OpenStreetMap	Map View geocodes through Odoo's own provider setting.
Locate contacts with no coordinates	Settings, Technical, Scheduled Actions	Off	A daily job that geocodes 50 contacts per run. Shipped off on purpose.

Audit Log settings: the retention window.

Recent Records settings in the general settings page.

> Everything else lives on the records themselves: a plan carries its own calendar rules, a grid its own editing rules, a folder its own permissions and a rule its own amounts. That is why two teams can use the same module differently in one database.

PART 4 Gantt: plans and tasks

GANTT VIEW

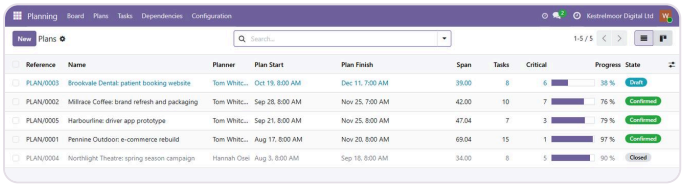

A plan is a schedule: the tasks, the links between them and the calendar rules the engine uses when it moves them. The agency runs one plan per client project, so the Pennine Outdoor rebuild and the Millrace Coffee packaging each keep their own rules.

IN THIS PART YOU WILL LEARN

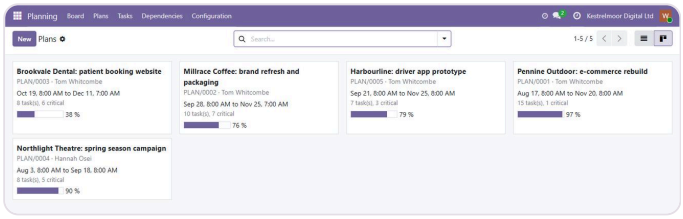

- What a plan holds, and its three states
- How a duration in working days turns into a finish date
- Milestones, summary tasks and task states
- Pinning a task and holding it to a date

TRY IT YOURSELF ON THE DEMO

1. Planning, Plans, open PLAN/0001 Pennine Outdoor
2. Look at Skip Weekends and Hours per Day under Scheduling Rules
3. Open the task Black Friday code freeze and read its constraint

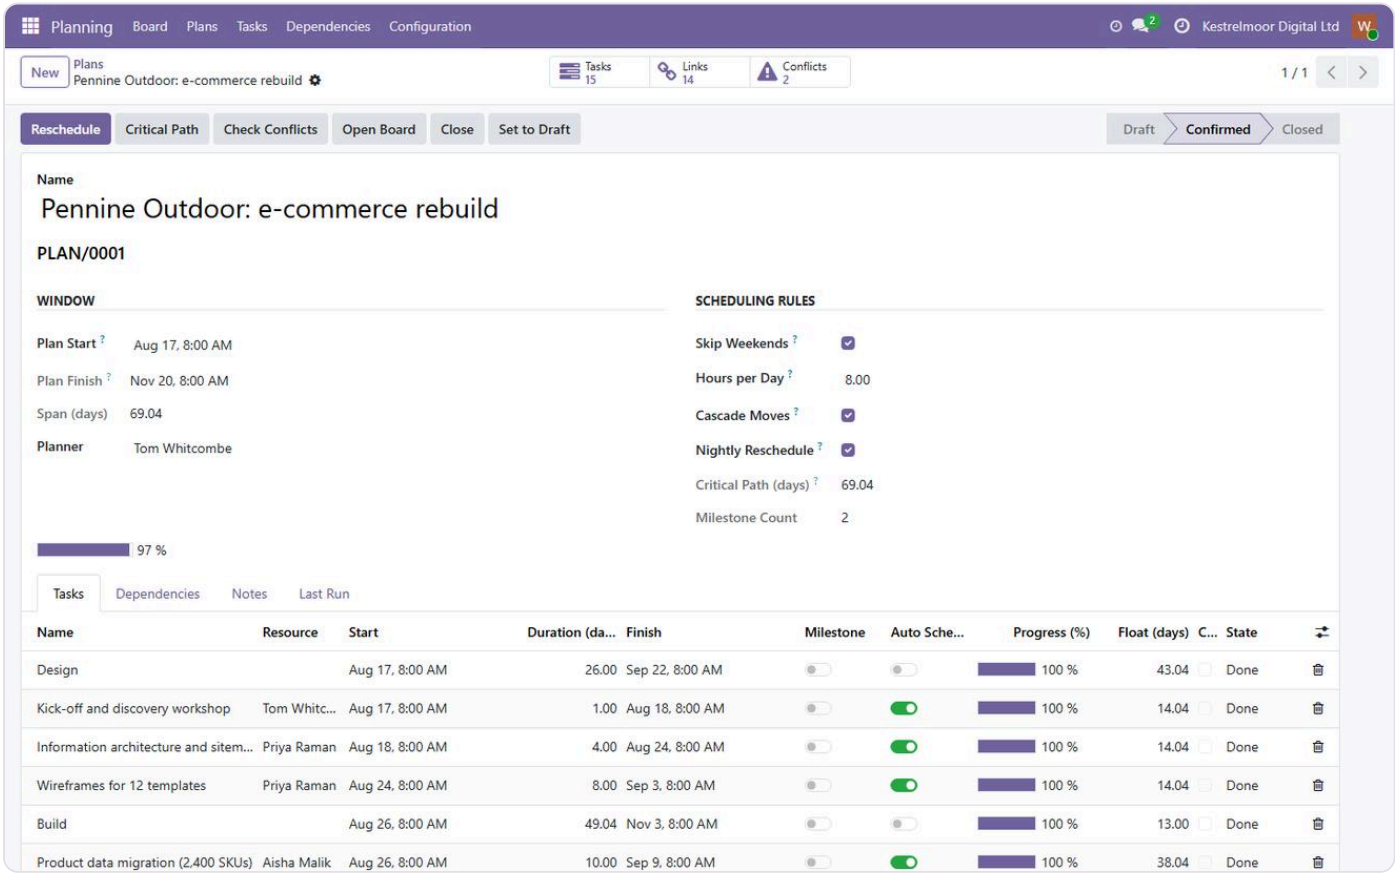

Planning, Plans: five plans in Draft, Confirmed and Closed, with progress and finish.

The same plans as cards.

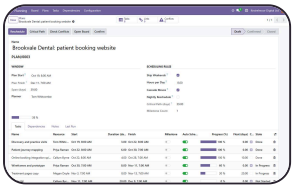

The plan form

PLAN/0001, Pennine Outdoor e-commerce rebuild. The window on the left (plan start, computed finish and span), the scheduling rules on the right, and the tasks below. The smart buttons count tasks, links and resource conflicts.

FIELD	WHAT IT DOES
Plan Start	Nothing is scheduled before it. Rescheduling pushes every task with no predecessor back to this date.
Plan Finish, Span	Worked out from the last task. Span is in working days when weekends are skipped.
Skip Weekends	Saturday and Sunday carry no duration, so a two day task starting on Friday finishes on Tuesday.
Hours per Day	Turns a duration in days into planned hours on each task.
Cascade Moves	Moving a task drags everything that depends on it. Untick to move one task alone.
Nightly Reschedule	Lets the scheduled action reschedule this plan, and redo its critical path, every night.
Progress	Weighted by duration, so a long task counts for more than a short one.
Critical Path (days)	Length of the longest chain, filled in by the Critical Path button.

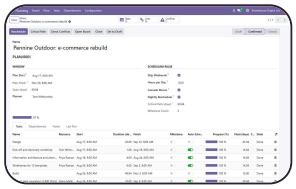

Three states

1

Draft

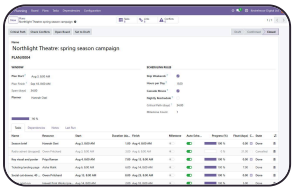

Brookvale Dental is still being shaped. A draft plan can be rescheduled and changed freely.

2

Confirmed

Confirm refuses a plan with no tasks. Only confirmed plans are picked up by the nightly reschedule.

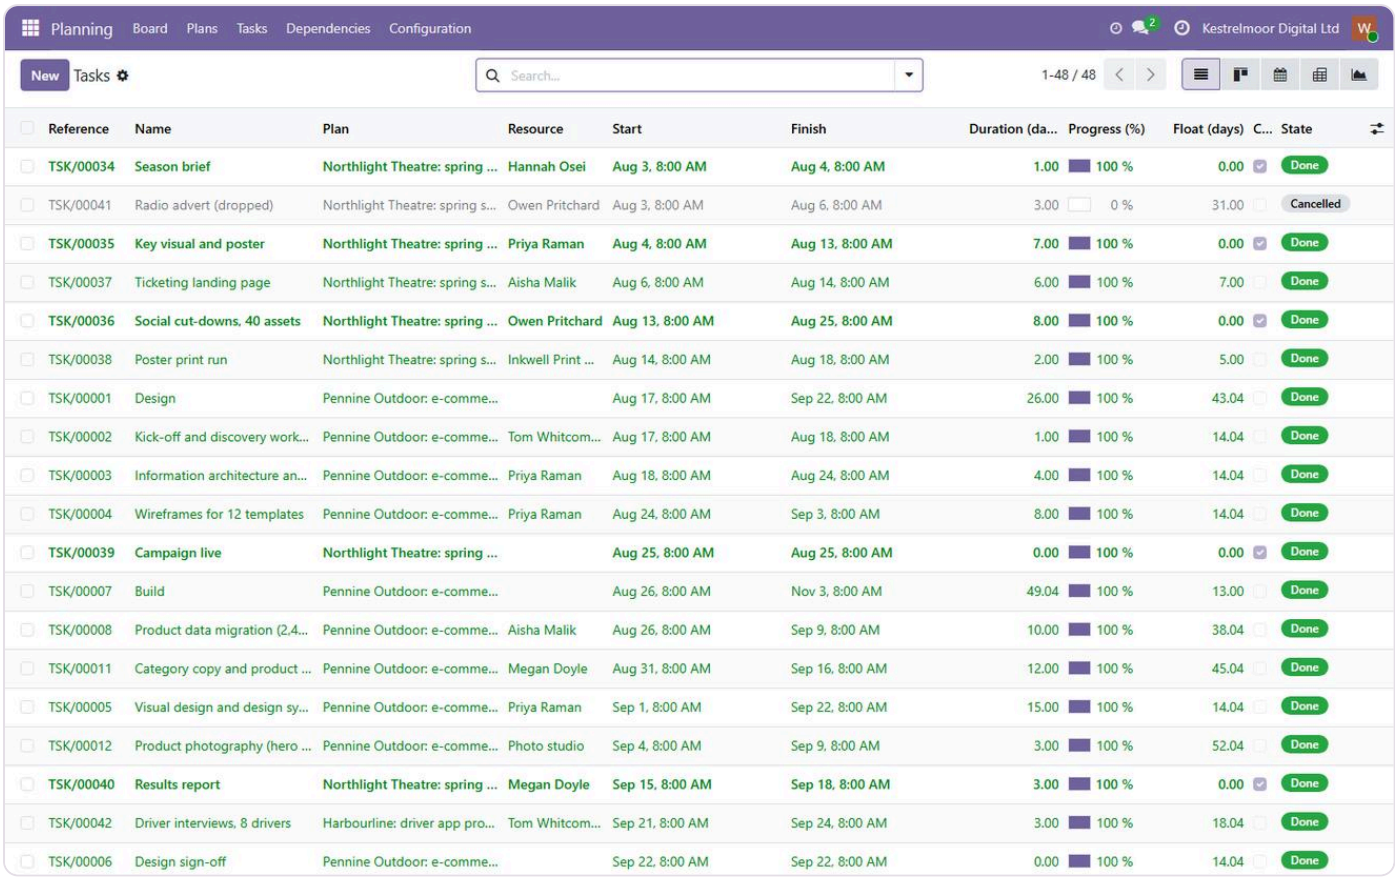

3

Closed

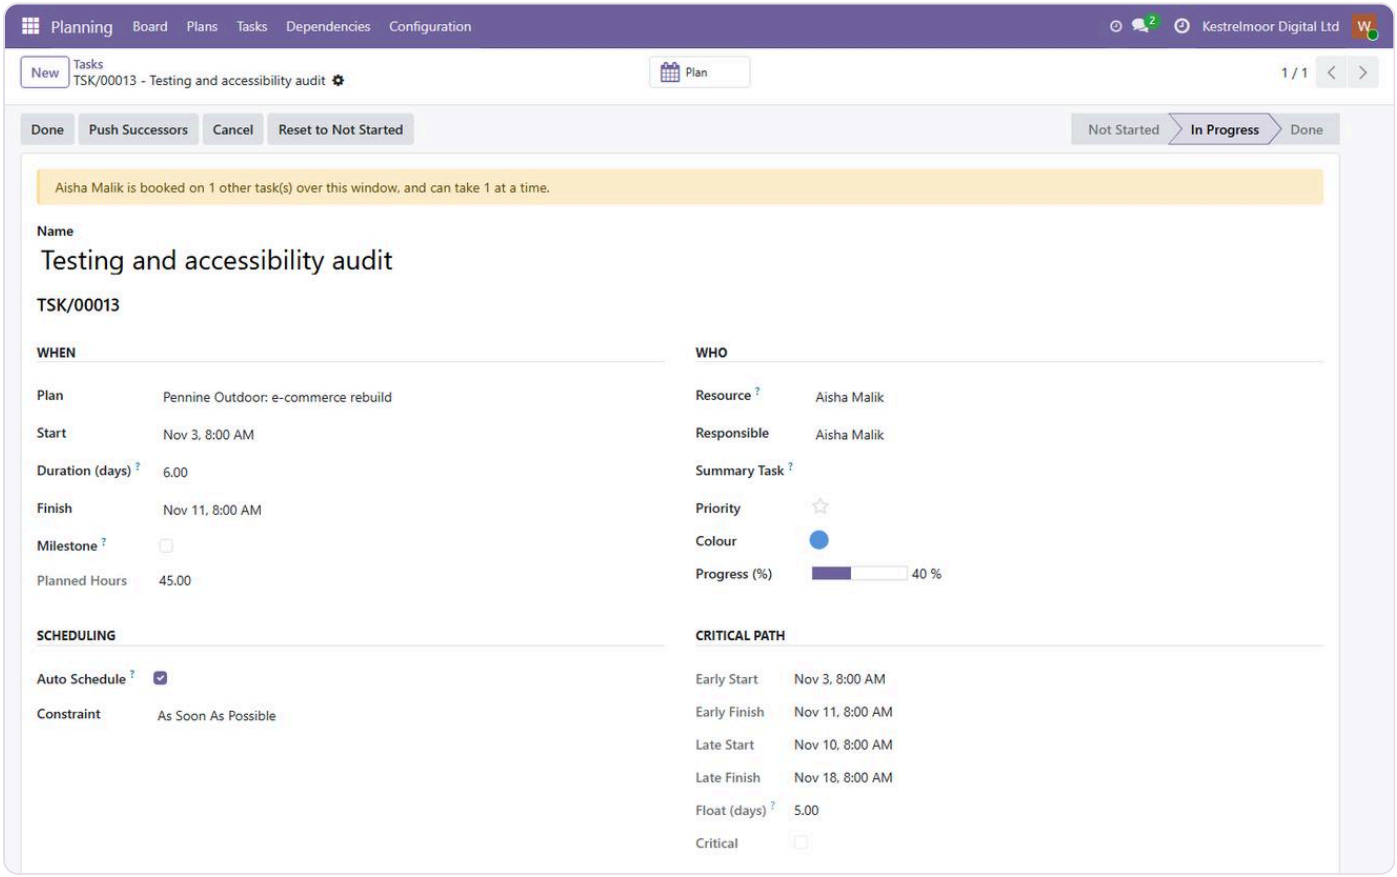

Northlight Theatre's campaign is finished. Close it with the Close button; Set to Draft opens it again.

Tasks

Planning, Tasks: every task in every plan, with resource, dates, duration, progress, float and whether it is on the critical path. Kanban, calendar, pivot and graph views are there too.

TSK/00013 Testing and accessibility audit: six working days, assigned to Aisha, in progress. The buttons at the top are Start, Done, Cancel and Push Successors.

FIELD	WHAT IT DOES
Duration (days)	Working days between start and finish. Typing a duration moves the finish; typing a finish changes the duration.
Planned Hours	Duration times the plan's hours per day.
Milestone	A moment rather than a stretch of work. Its finish is its start, and it never counts as a resource conflict.
Summary Task	Folds detail under a heading. It carries no scheduling rule; use a link for that.
Resource	The row the bar is drawn on and the unit conflicts are counted against.
Auto Schedule	Untick to pin the task where it is. Its successors still follow it.
Constraint	As Soon As Possible, Start No Earlier Than or Must Start On, read with the constraint date.
Early and late dates, Float	Filled in by the critical path run. Float is how far the task can slip before the plan finishes later.

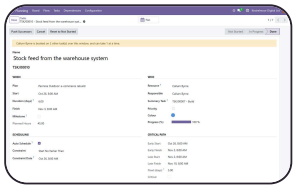

Special tasks on the demo

4

A fixed date

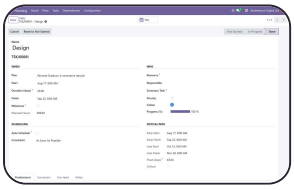

The Black Friday code freeze is a milestone that Must Start On 20 November and is pinned. The engine reports the dates a network cannot honour instead of moving a fixed date behind your back.

5

Not before a date

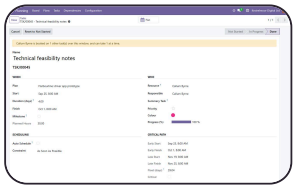

The stock feed cannot start before the warehouse system is ready on 26 October, so it has Start No Earlier Than.

6

A summary task

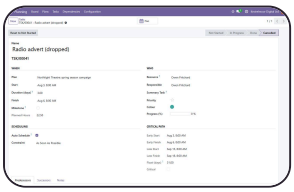

Design folds the four design tasks. Its dates span its children.

7

A pinned task

Harbourline's feasibility notes were placed by hand, so Auto Schedule is off.

8

A cancelled task

The radio advert was dropped from the Northlight campaign. Cancelled tasks stay on record and drop off the board.

Checks on save. A task cannot finish before it starts, progress must be between 0 and 100, a summary task must be in the same plan, and a constraint other than As Soon As Possible needs a date.

PART 5

Gantt: dependencies, rescheduling and the critical path

GANTT VIEW

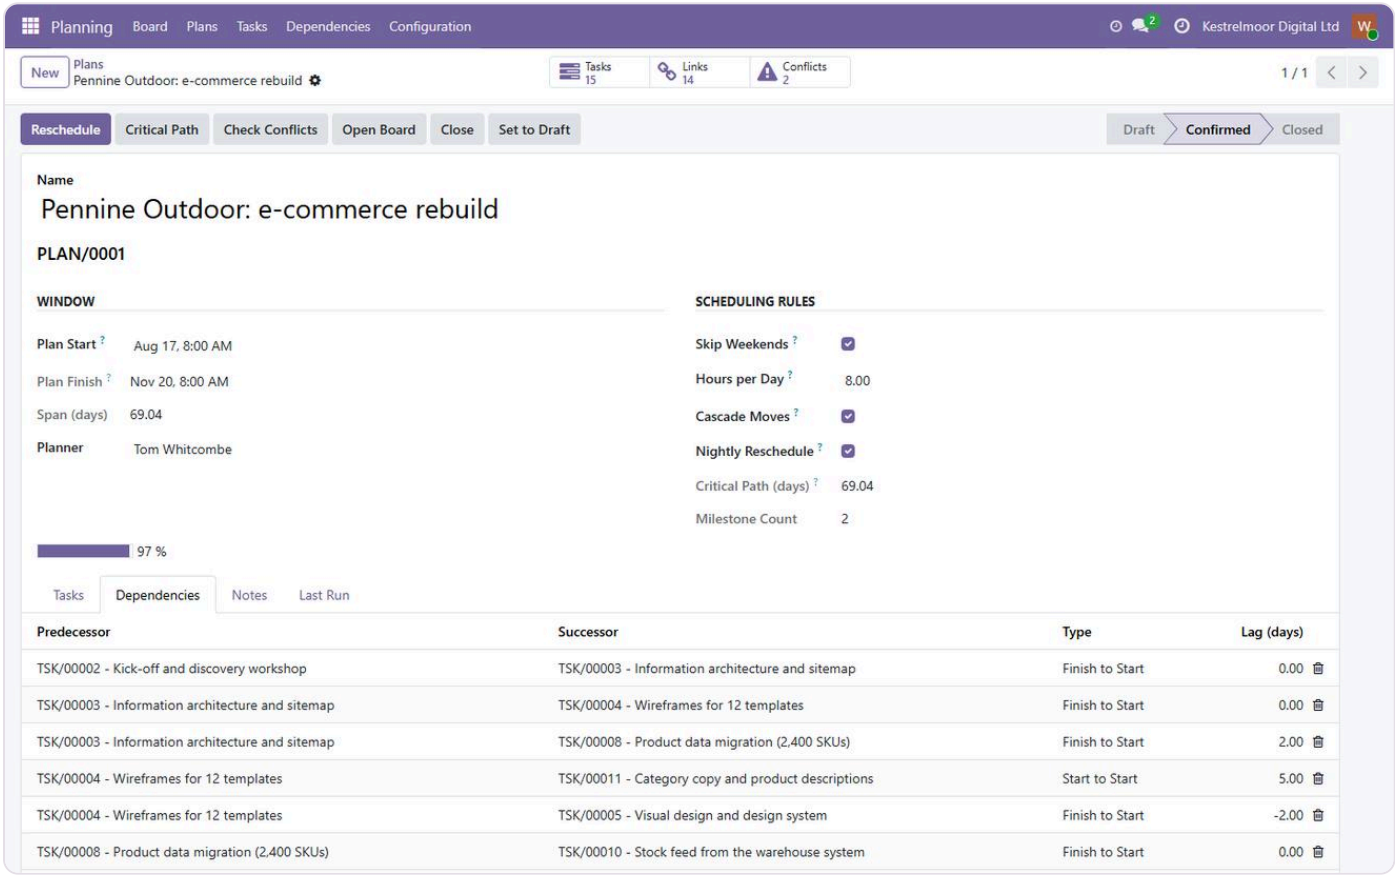

A Gantt chart is only worth having when the dates move by themselves. The links say what waits for what; the engine does the arithmetic over working days and keeps parallel work where it is.

IN THIS PART YOU WILL LEARN

- The four link types and lag
- What Reschedule and Critical Path do
- How a move cascades to successors
- Shifting a set of tasks with the wizard
- Why a loop can never be saved

TRY IT YOURSELF ON THE DEMO

1. Open PLAN/0001 and the Dependencies tab
2. Find the Start to Start link with a five day lag
3. Open the Last Run tab to read what the last reschedule did

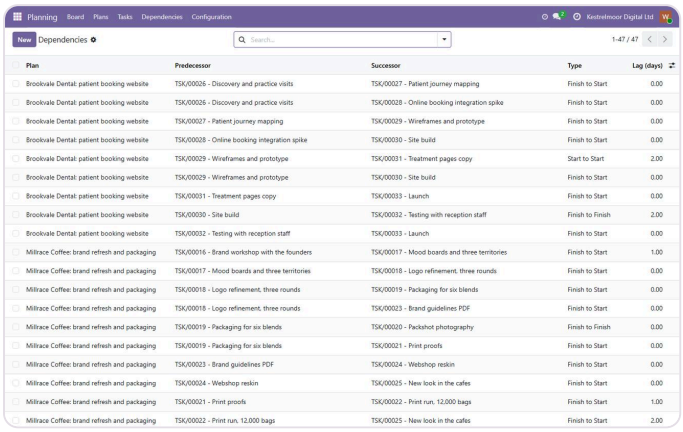

The Dependencies tab of PLAN/0001: predecessor, successor, type and lag. The visual design starts two days before the wireframes finish (lag -2), and copywriting starts five days after the wireframes start.

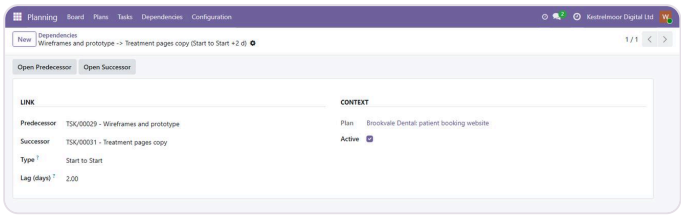

LINK	MEANS	ON THE DEMO
Finish to Start	The successor waits for the predecessor to finish.	Wireframes wait for the sitemap.
Start to Start	They begin together, plus any lag.	Category copy starts five days after the wireframes start.
Finish to Finish	They end together, plus any lag.	Testing ends two days after the theme build ends.

Start to Finish	The successor cannot end until the predecessor has begun.	The code freeze and the go-live.

Lag is in working days and can be negative, which is a lead: the successor may start before the predecessor is done. A link must join two tasks in the same plan, cannot point at itself and cannot be entered twice.

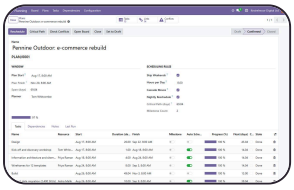

Planning, Dependencies: every link in every plan.

A link on its own, with Open Predecessor and Open Successor.

No loops. A link that would close a circle is refused when it is saved, and the error names the tasks in the circle in order, so you know which link to remove.

The engine

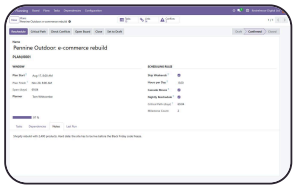

1

Reschedule

A forward pass: every task with Auto Schedule on is placed as early as its links and constraints allow, starting from the plan start. Pinned tasks stay put and their successors follow them.

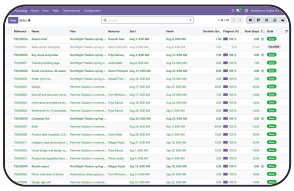

Weekends carry no duration while Skip Weekends is ticked.

2

Read the last run

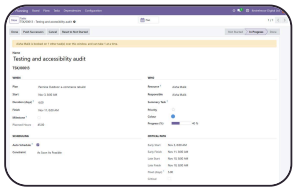

The Last Run tab says how many tasks moved and lists any fixed date the network could not honour, with the date it would have needed.

3

Critical Path

A backward pass fills in early and late start and finish on every task, the float, and ticks Critical on the tasks with none. The plan shows the length of the chain in days.

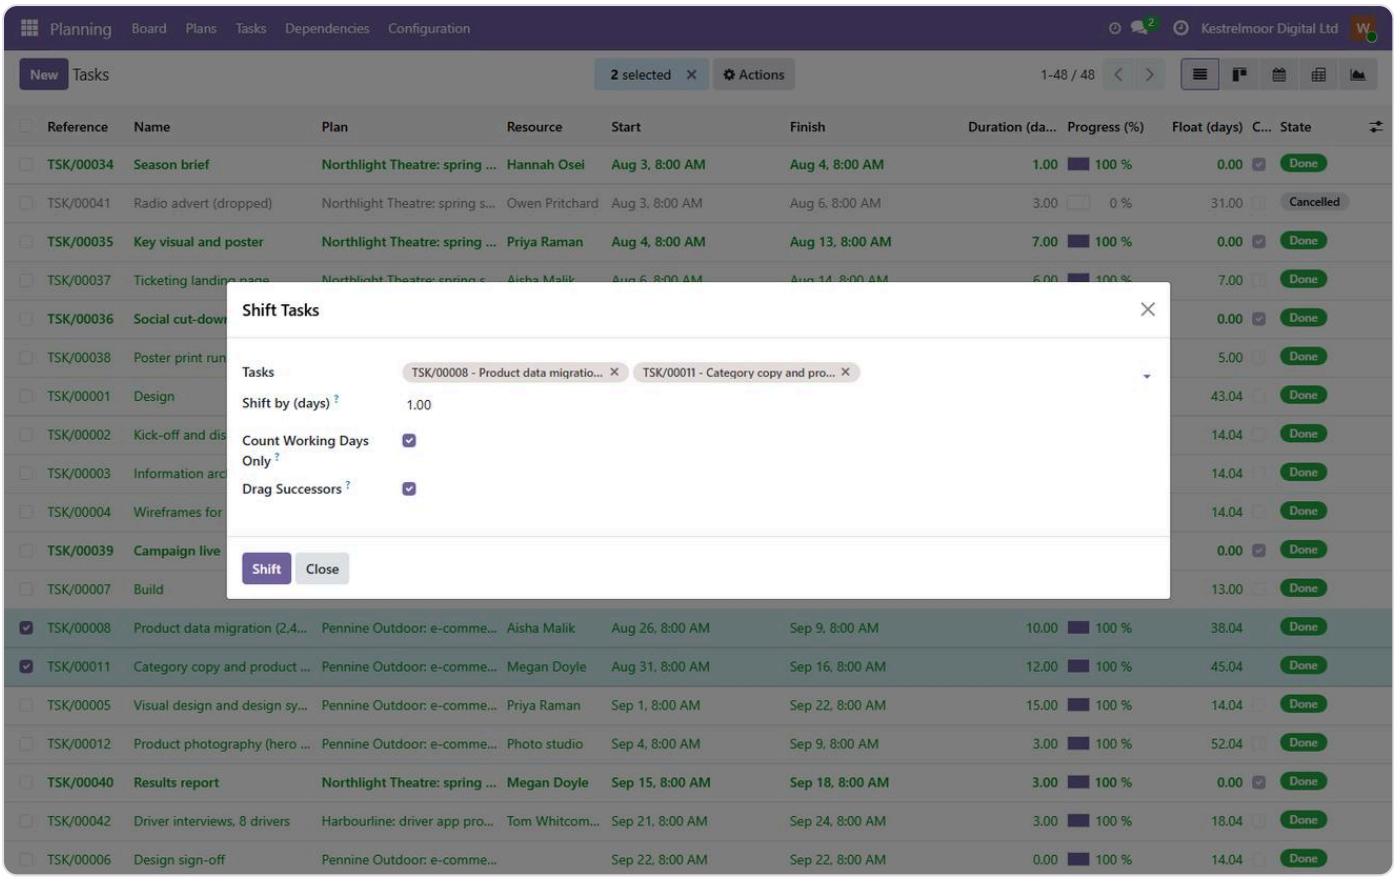

4

Cascade

Change a task's dates or duration on the form, or drag it on the board, and everything that depends on it moves in one pass, in dependency order. Work on a parallel branch does not budge.

Untick Cascade Moves on the plan to move one task alone. Push Successors on the task runs the cascade on demand.

Shifting several tasks at once

Select tasks in the list or open one, then Action, Shift. Give the number of days (negative to pull earlier), choose whether successors are dragged and whether only working days count, and the preview says what will move before you press Shift.

Every night

The scheduled action **Planning: reschedule plans marked for it** runs daily. It takes every confirmed plan with Nightly Reschedule ticked, reschedules it and redoes its critical path. One bad plan does not stop the rest: the reason is written in that plan's Last Run note and the run carries on.

PART 6 Gantt: the board, resources and conflicts

GANTT VIEW

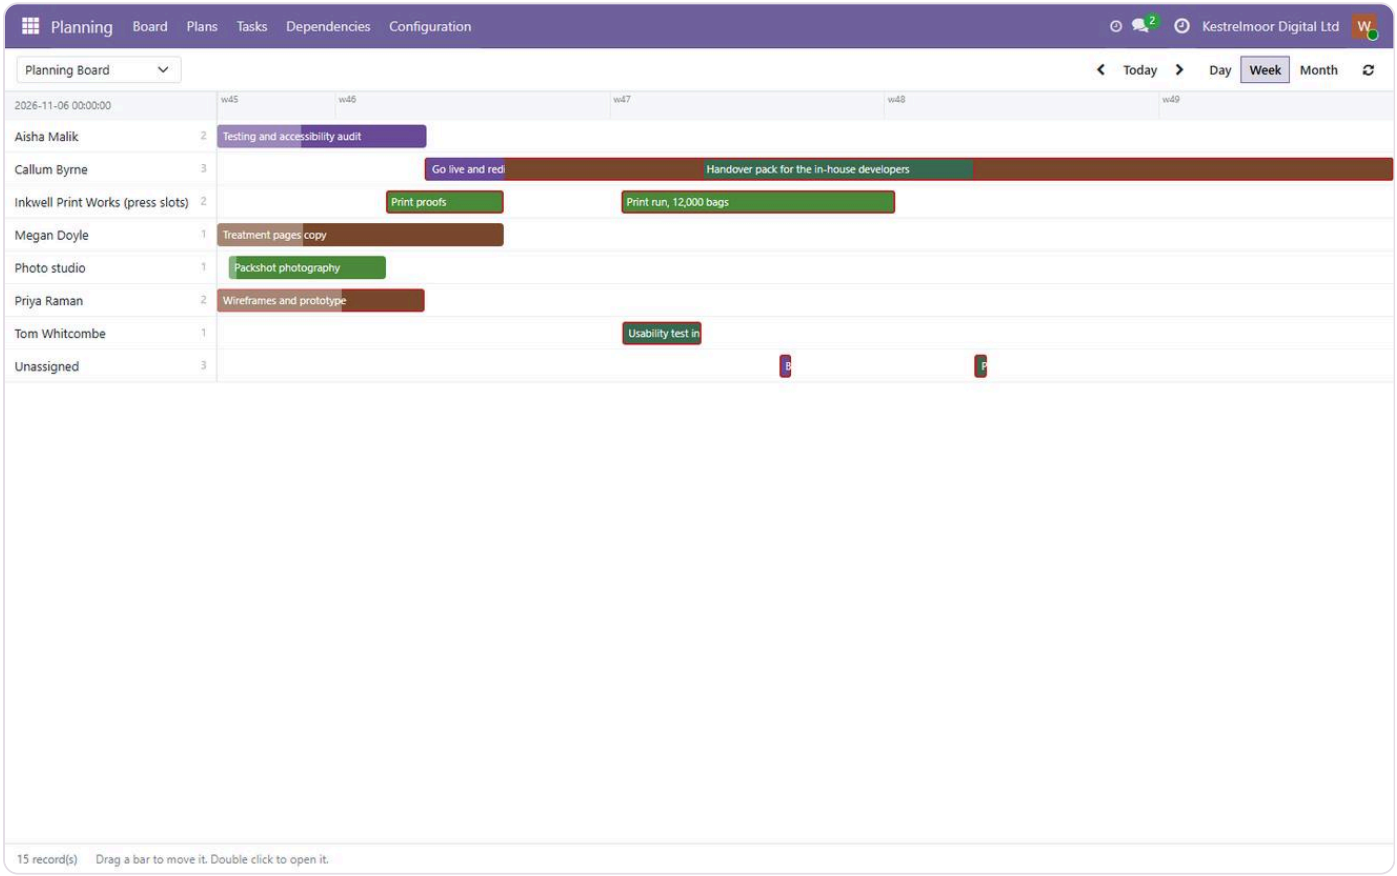

The board draws what the engine works out. One row per resource, or per any field you choose, and bars you can drag. Behind it, resources carry a capacity so double bookings are found before they happen.

IN THIS PART YOU WILL LEARN

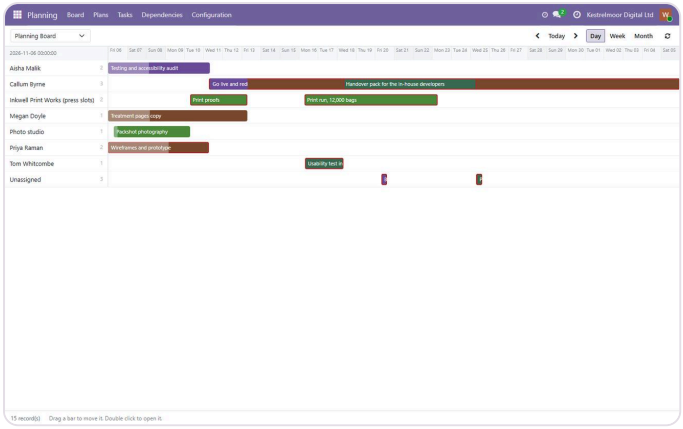

- Reading the board at day, week and month scale
- Dragging a bar, and what happens when you drop it
- Resources, capacity and conflicts
- Pointing a board at any model with two dates
- Printing the planning sheet

TRY IT YOURSELF ON THE DEMO

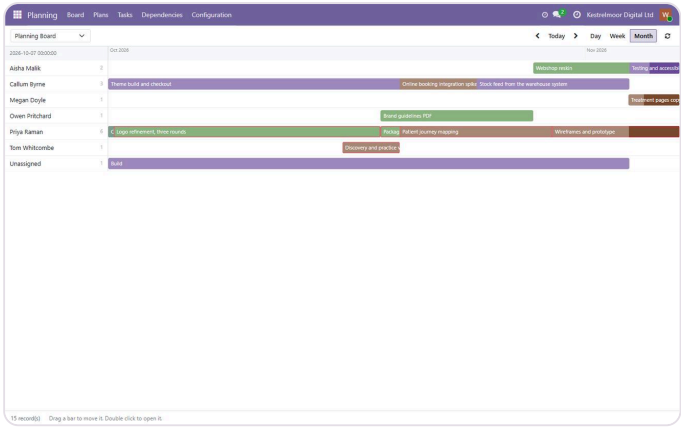

1. Planning, Board, then click Week
2. Pick Project Timeline from the list at the top left
3. Open PLAN/0001 and click Check Conflicts

Planning, Board at week scale. Rows are resources, bars are tasks coloured by plan, the darker part of a bar is its progress, and a red outline means the task is on the critical path.

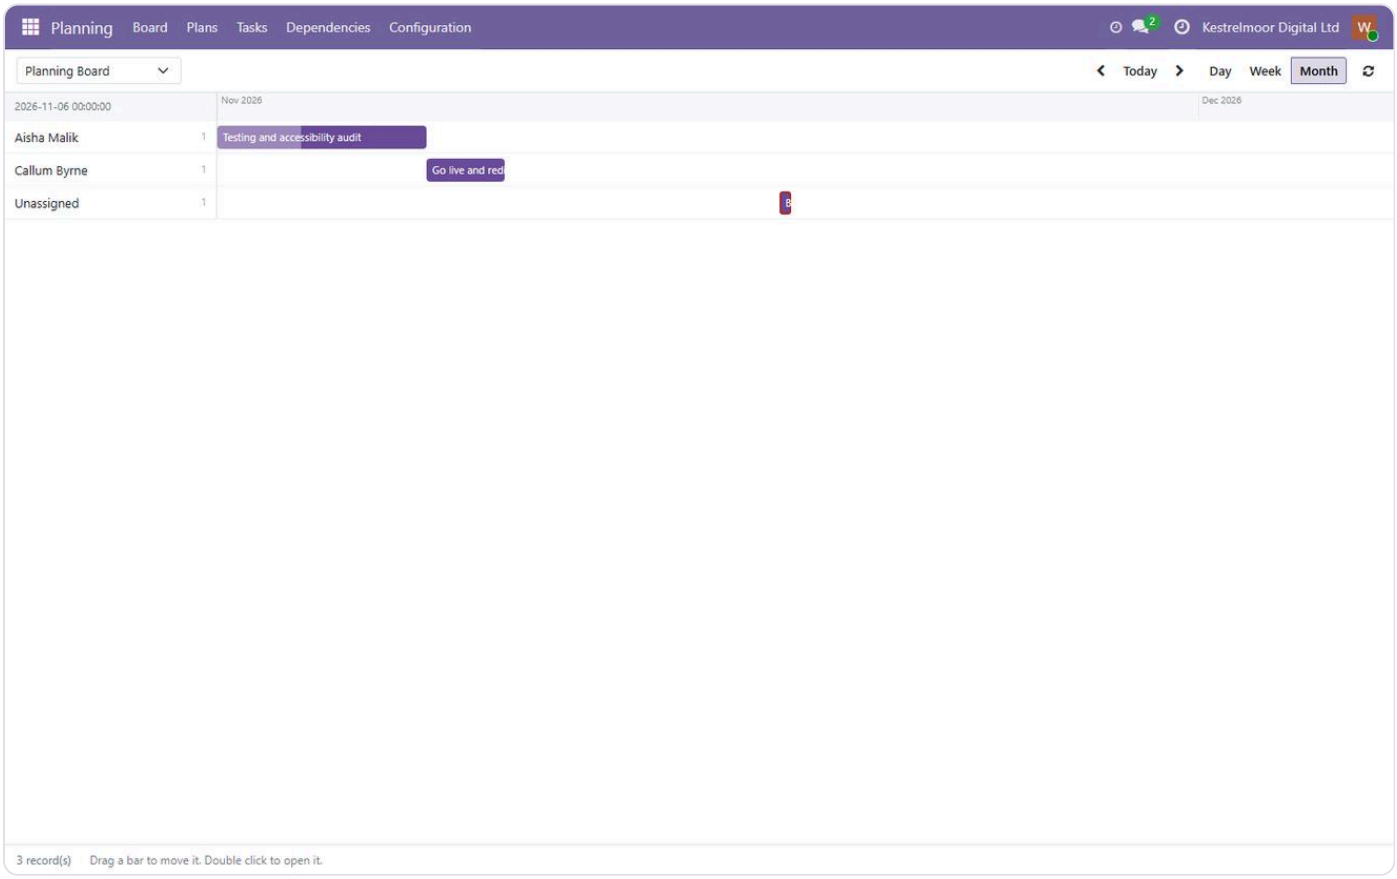

Day scale: the next 30 days, weekends shaded.

Month scale, panned back one window with the left arrow.

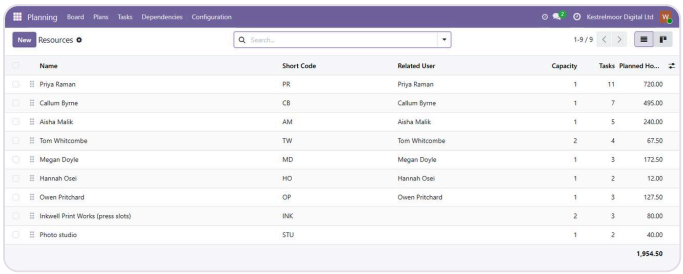

CONTROL	WHAT IT DOES
Board list (top left)	Switch between the boards configured under Configuration, Boards.
Arrows and Today	Move the window back or forward by its own length, or back to today.
Day, Week, Month	Change the scale. Each board has its own default scale and window length.
Refresh	Read the data again.
Drag a bar	Moves the record. The drop goes through the ordinary write, so the cascade and every constraint apply as they do on the form.
Double click a bar	Opens the record.
Footer	Records drawn, and a warning when the board's row limit was reached.

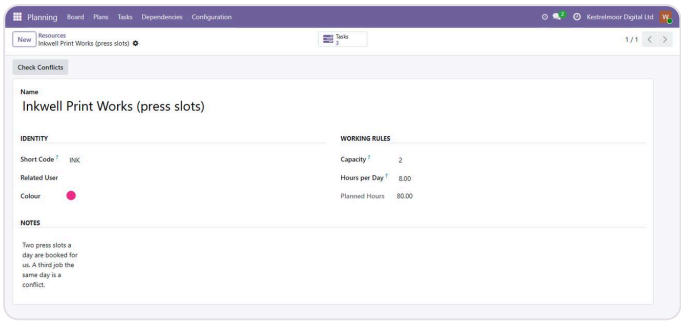

Open Board on a plan opens the board filtered to that plan's tasks.

Two bars that overlap on the same row are drawn on top of each other, so check Conflicts or the task list when a row looks short. The board draws bars, not the link arrows: links are on the plan and in Dependencies.

Resources and capacity

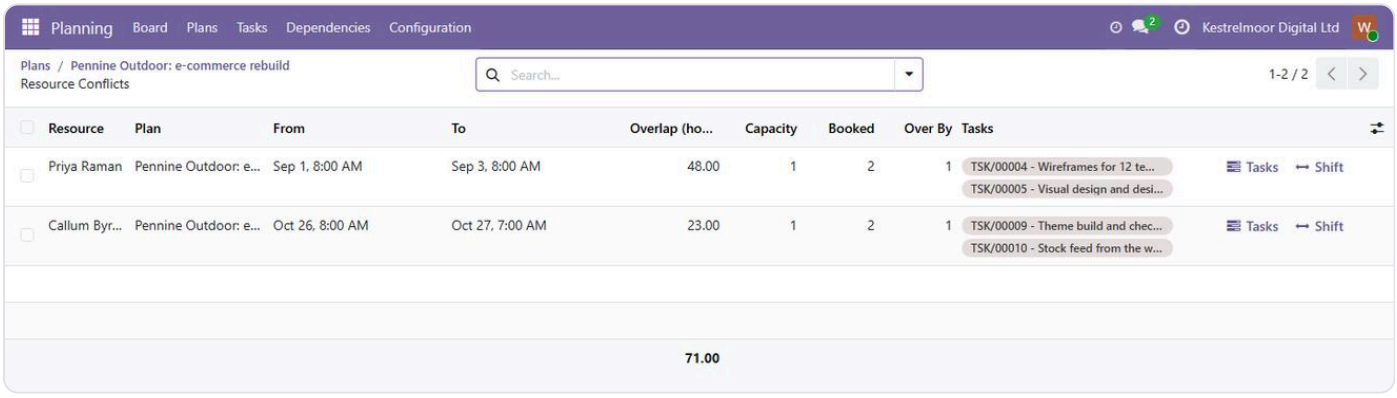

Configuration, Resources: seven people, the print supplier and the photo studio.

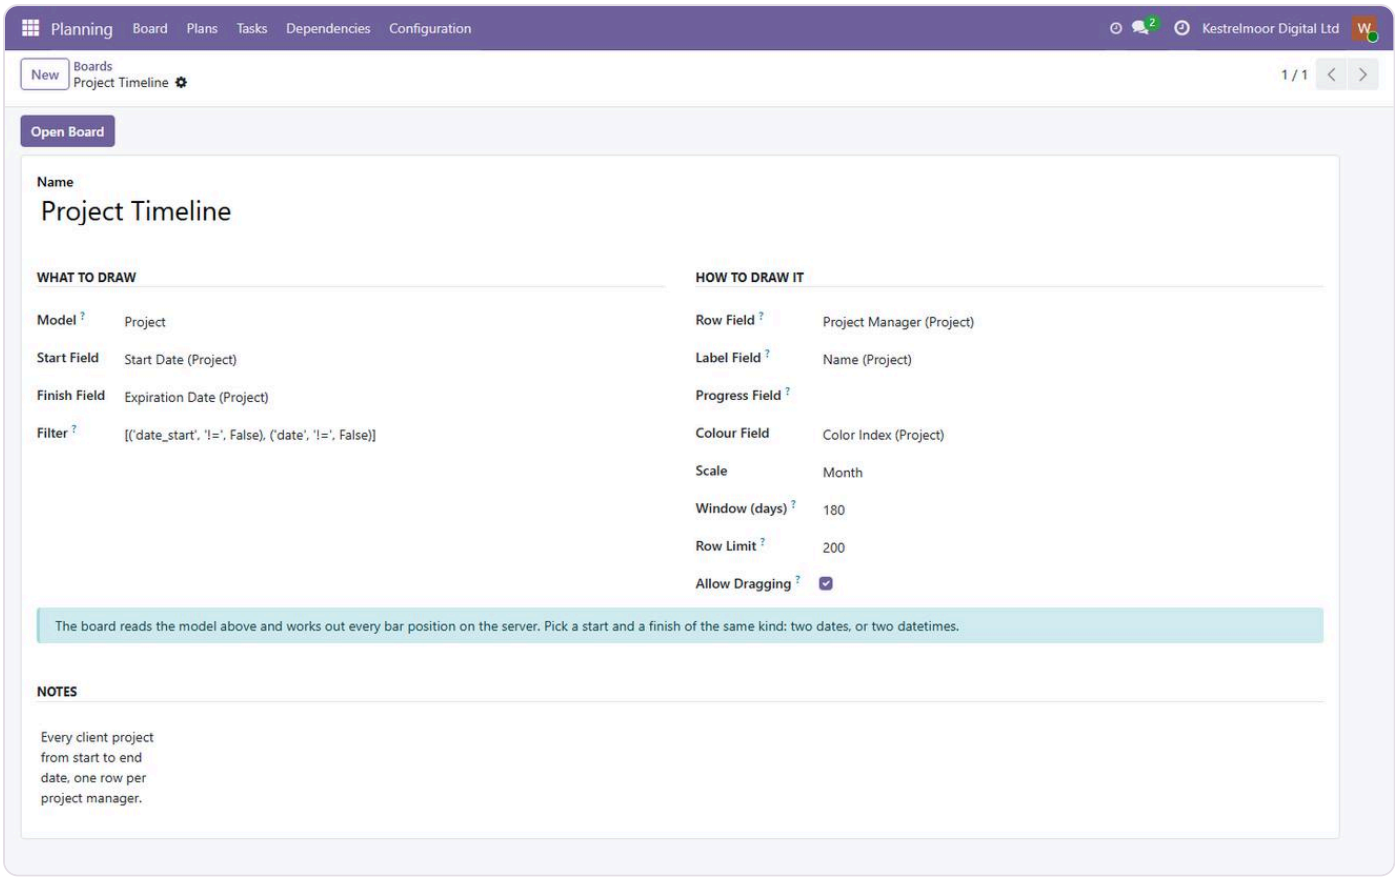

Inkwell Print Works has capacity 2: two press slots a day before it is a conflict.

Capacity is how many tasks a resource can run at the same time. Hours per day turns a duration into hours. A resource can be linked to a user, and its form lists its tasks and planned hours.

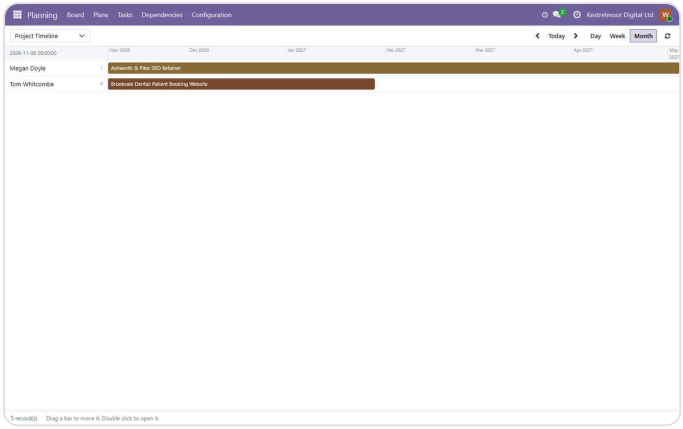

Check Conflicts on PLAN/0001: every window where a resource is booked past its capacity, with the tasks involved, how many were booked against the capacity and the hours of overlap. Tasks opens them; Shift opens the shift wizard on the tasks in that window.

Boards on any model

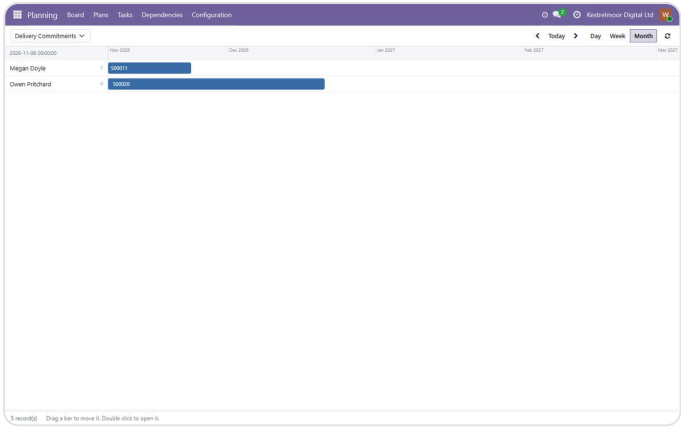

Configuration, Boards, Project Timeline: the standard project model, start date to expiration date, one row per project manager, coloured by the project colour.

FIELD	WHAT IT DOES
Model	Any model in the database.
Start Field, Finish Field	Two date or two datetime fields of the same type.
Row Field	A many2one, selection or text field to group rows by. Empty draws one row.
Progress, Colour, Label	Optional fields for the bar's fill, colour and text.
Filter	A domain applied on top, for example confirmed orders only.
Default Scale, Window (days), Row Limit	How the board opens and how much it reads.
Allow Dragging	Untick for a read-only board.

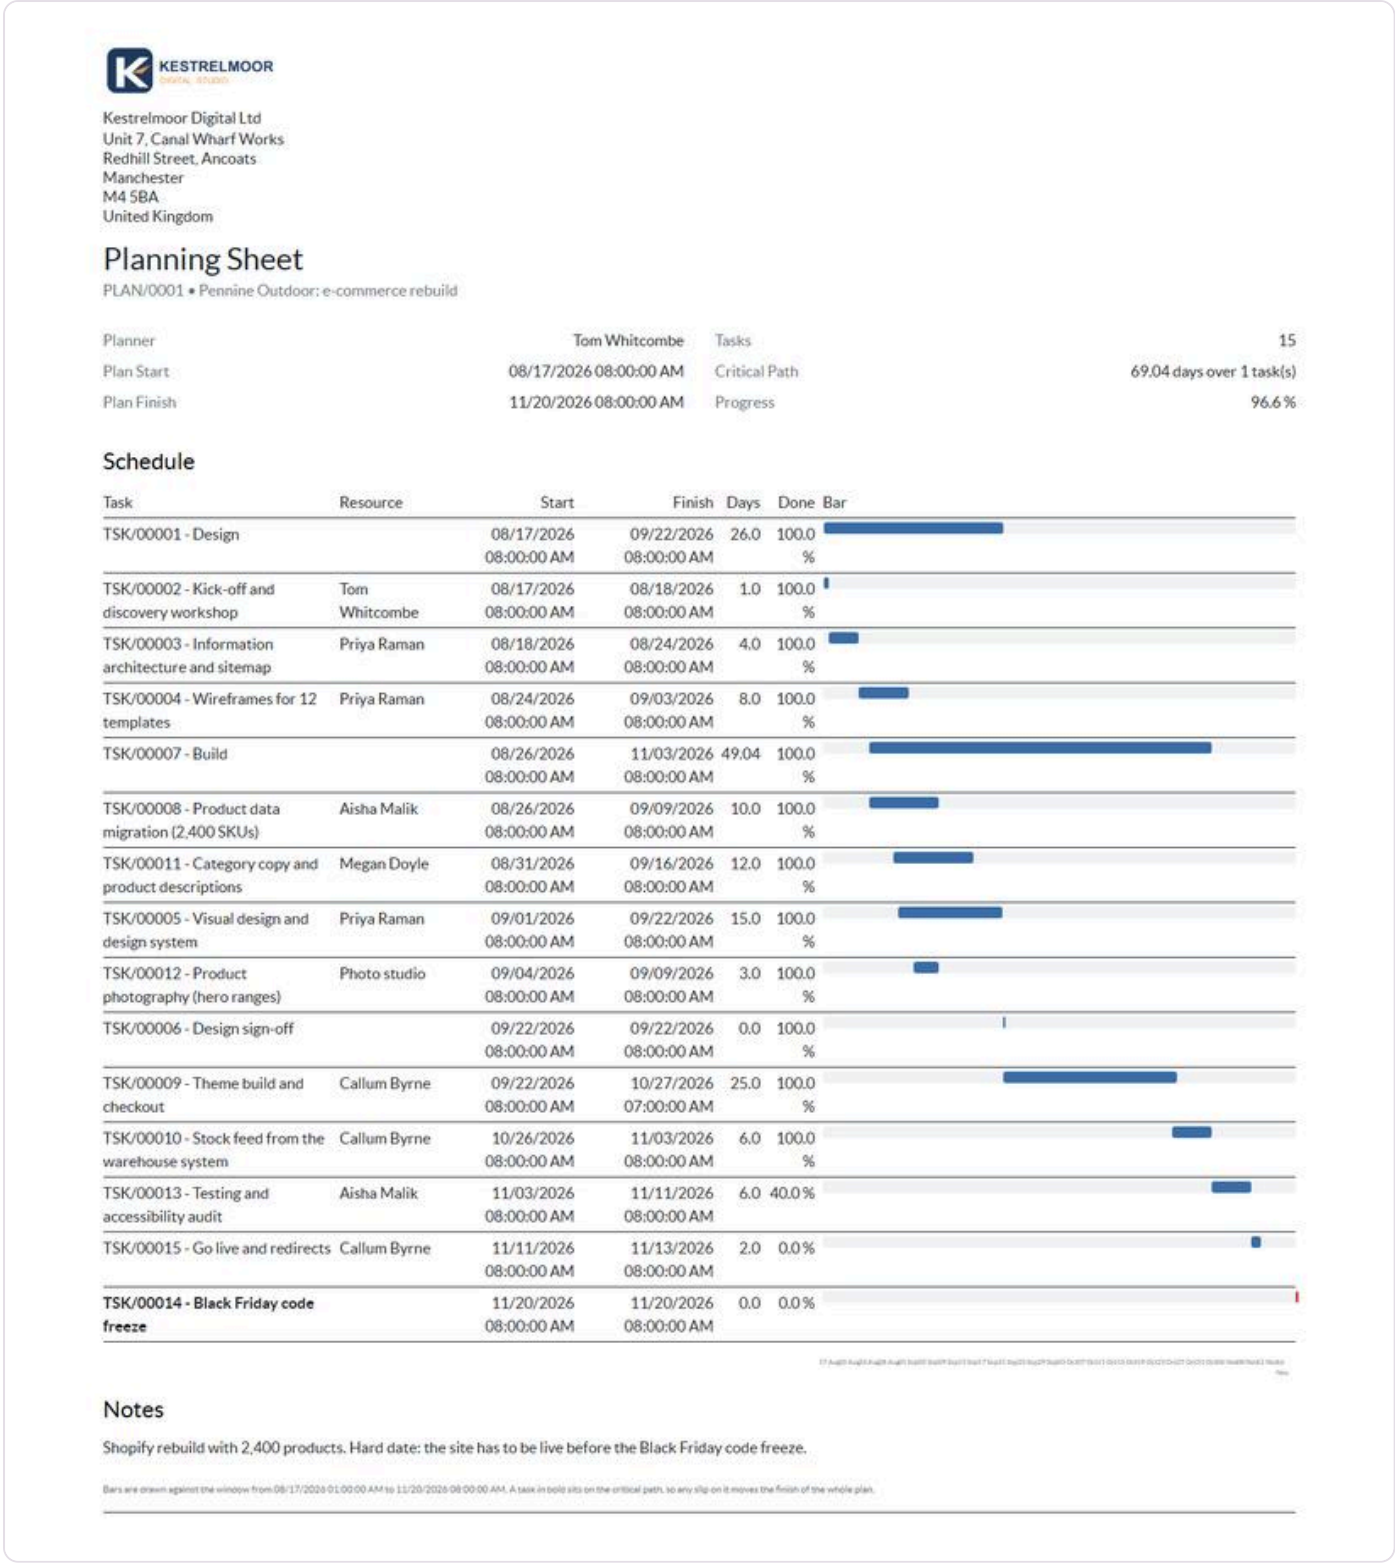

The Project Timeline board.

Delivery Commitments: confirmed orders from order date to promised date, dragging off.

The planning sheet

KESTRELMOOR

Kestrelmoor Digital Ltd

TSK/00004 - Wireframes for 12 templates	Priya Raman	08/24/2026 08:00:00 AM	09/03/2026 08:00:00 AM	8.0	100.0 %	
TSK/00007 - Build		08/26/2026 08:00:00 AM	11/03/2026 08:00:00 AM	49.04	100.0 %	
TSK/00008 - Product data migration (2,400 SKUs)	Aisha Malik	08/26/2026 08:00:00 AM	09/09/2026 08:00:00 AM	10.0	100.0 %	
TSK/00011 - Category copy and product descriptions	Megan Doyle	08/31/2026 08:00:00 AM	09/16/2026 08:00:00 AM	12.0	100.0 %	
TSK/00005 - Visual design and design system	Priya Raman	09/01/2026 08:00:00 AM	09/22/2026 08:00:00 AM	15.0	100.0 %	
TSK/00012 - Product photography (hero ranges)	Photo studio	09/04/2026 08:00:00 AM	09/09/2026 08:00:00 AM	3.0	100.0 %	
TSK/00006 - Design sign-off		09/22/2026 08:00:00 AM	09/22/2026 08:00:00 AM	0.0	100.0 %	
TSK/00009 - Theme build and checkout	Callum Byrne	09/22/2026 08:00:00 AM	10/27/2026 07:00:00 AM	25.0	100.0 %	
TSK/00010 - Stock feed from the warehouse system	Callum Byrne	10/26/2026 08:00:00 AM	11/03/2026 08:00:00 AM	6.0	100.0 %	
TSK/00013 - Testing and accessibility audit	Aisha Malik	11/03/2026 08:00:00 AM	11/11/2026 08:00:00 AM	6.0	40.0 %	
TSK/00015 - Go live and redirects	Callum Byrne	11/11/2026 08:00:00 AM	11/13/2026 08:00:00 AM	2.0	0.0 %	
TSK/00014 - Black Friday code freeze		11/20/2026 08:00:00 AM	11/20/2026 08:00:00 AM	0.0	0.0 %	

Notes

Shopify rebuild with 2,400 products. Hard date: the site has to be live before the Black Friday code freeze.

Bars are drawn against the window from 08/17/2026 01:00:00 AM to 11/20/2026 08:00:00 AM. A task in bold sits on the critical path, so any slip on it moves the finish of the whole plan.

Print, Planning Sheet on a plan: the schedule as a table with the bars drawn beside it, the critical path in bold, the float on every task and the length of the chain.

PART 7 Maps on any model

MAP VIEW

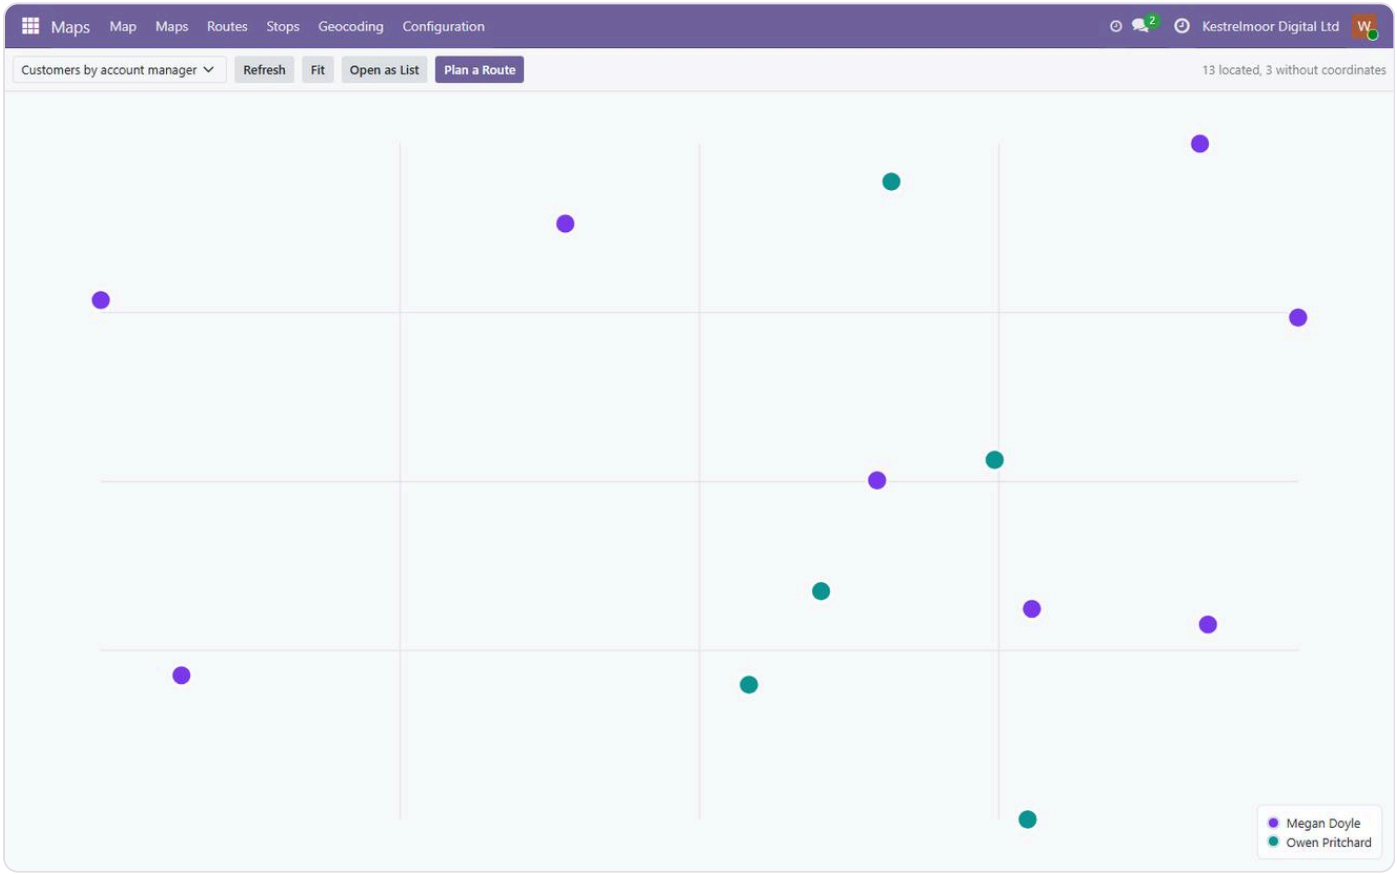

Odoo Community has no map view. Map View adds one, and lets you put any model on it: customers by account manager, quotations by status, live projects, suppliers. Each map is a configuration record, so one model can carry several maps.

IN THIS PART YOU WILL LEARN

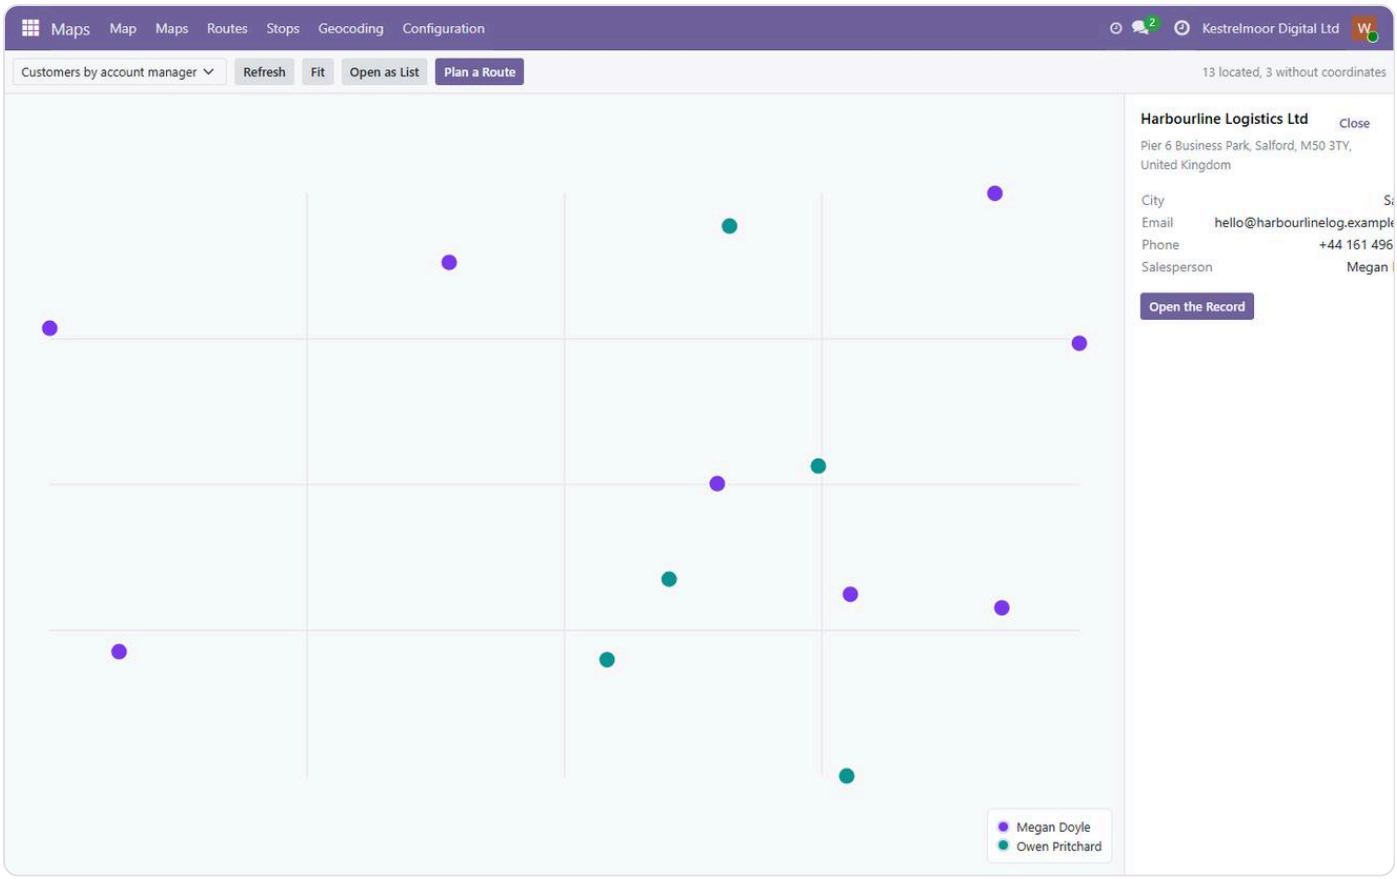

- Reading the map, the legend and a pin
- Where a pin's position comes from
- Colouring pins by a field with colour rules
- Choosing what a pin shows when clicked
- Why the map works with no internet and no tile subscription

TRY IT YOURSELF ON THE DEMO

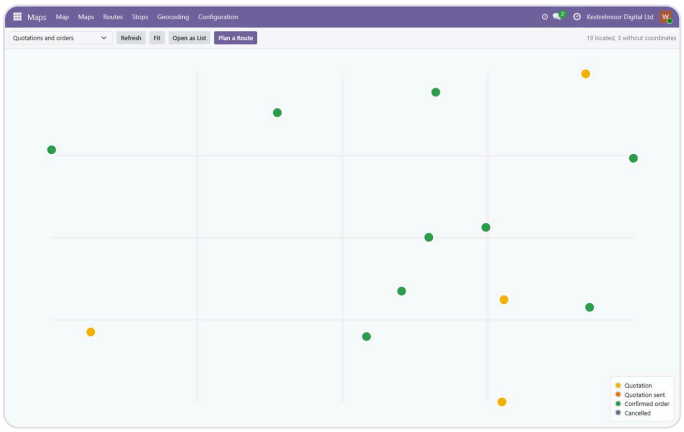

1. Maps, Map: the customers, purple for Megan and teal for Owen
2. Click a pin to see the contact's details
3. Switch the list at the top left to Quotations and orders

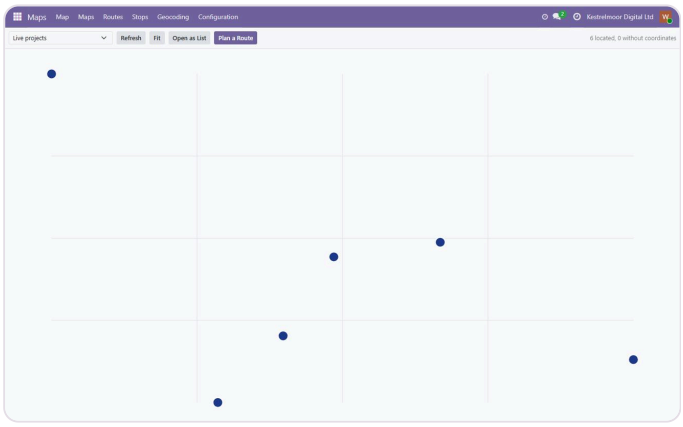

Maps, Map, Customers by account manager. The counter top right says 13 customers are located and 3 have no coordinates. The legend bottom right explains the colours.

Click a pin and a panel opens with the address and the fields chosen for the pop-up: town, phone, email and account manager.

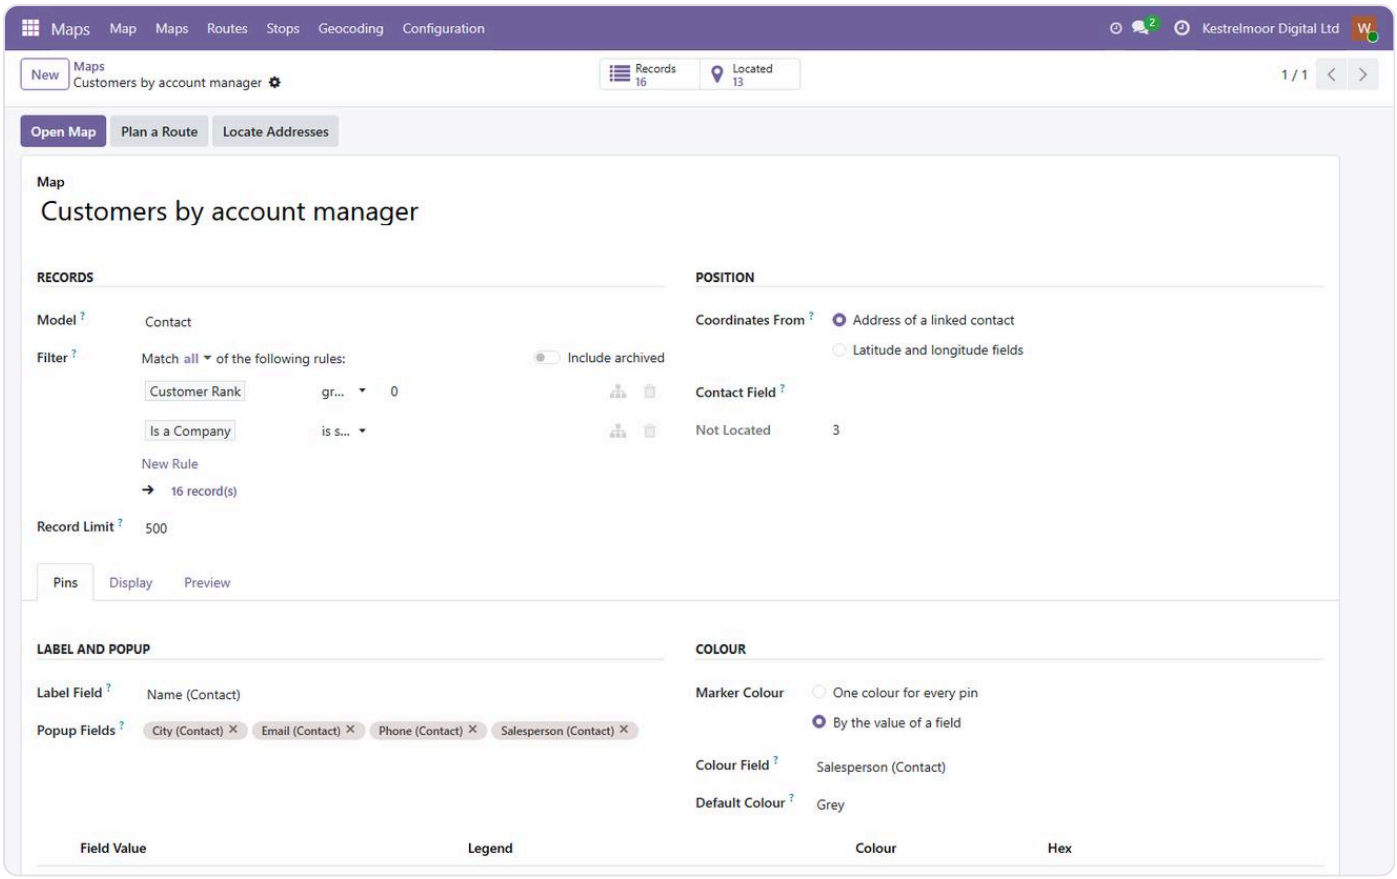

Quotations and orders, coloured by status: amber quotation, green confirmed, grey cancelled.

Live projects in one colour, positioned by the project's customer.

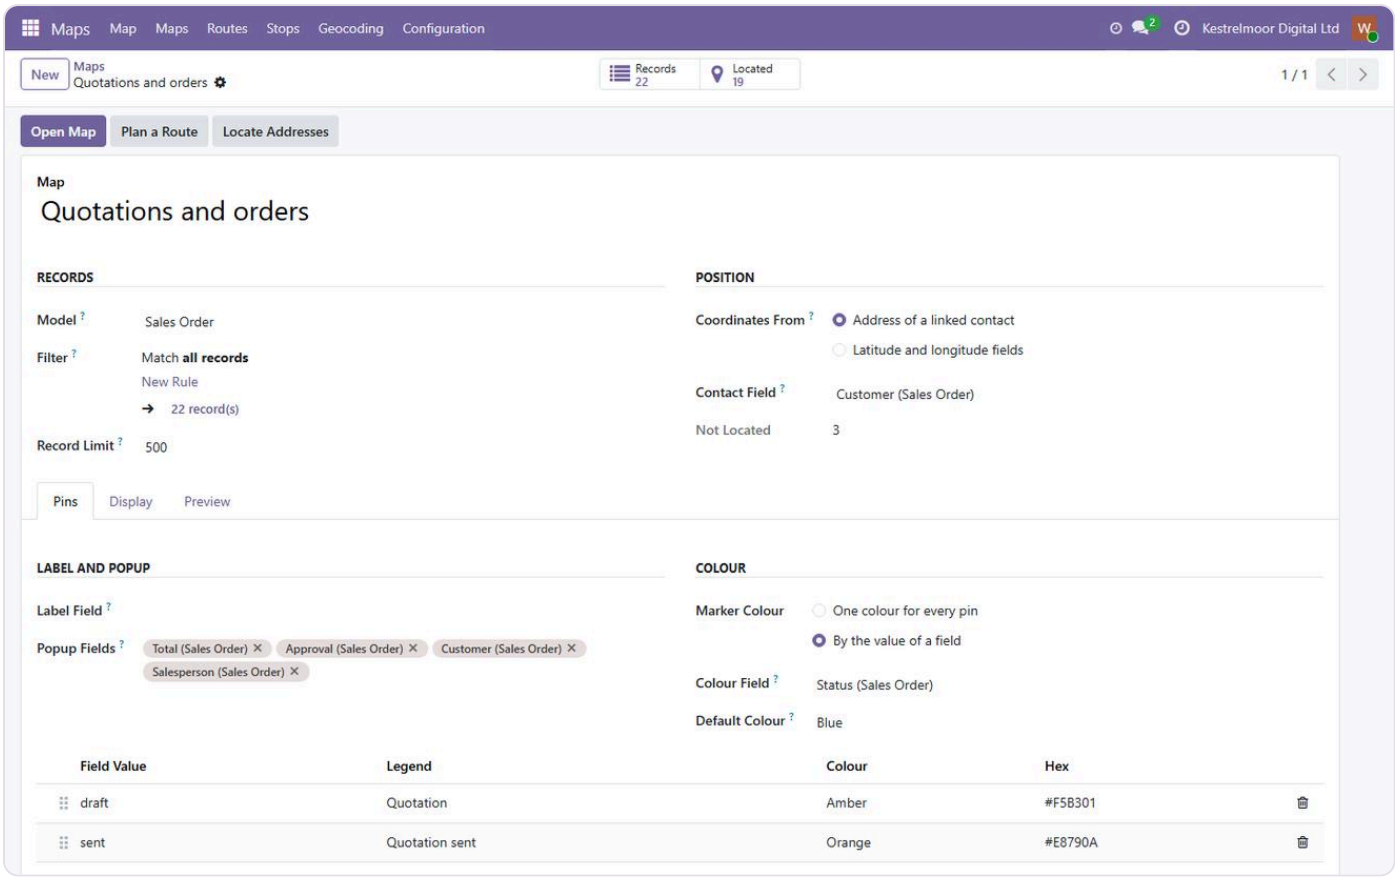

BUTTON	WHAT IT DOES
Map list	Switch to another map configuration.
Refresh	Read the records again.
Fit	Zoom back to show every pin.
Records and Plan a Route	On the map configuration: the Records smart button lists the records, Plan a Route opens the route wizard (Part 9).

Setting up a map

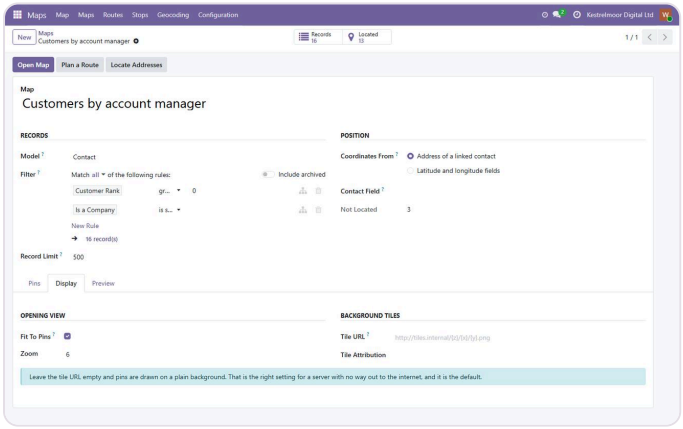

Maps, Configuration, Maps, Customers by account manager. The model is Contact, so the pin comes from the contact's own address; the label is the name; colours come from the Salesperson field.

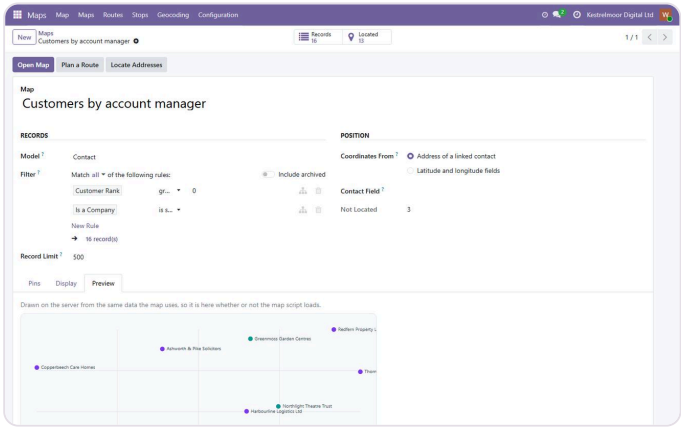

FIELD	WHAT IT DOES
Model	Any model. Contact, Sales Order and Project on the demo.
Coordinates From	Address of a linked contact, or latitude and longitude fields the model already has.
Contact Field	The many2one to a contact whose address positions the pin. Empty when the model is Contact.
Label Field	The pin label. Defaults to the record name.
Marker Colour	One colour for every pin, or by the value of a field.
Filter, Record Limit	A domain on top of everything, and the most pins fetched in one go (500 by default).
Fit To Pins, Centre, Zoom	Open centred on the pins, or on a fixed point.
Tile URL, Attribution	Optional. See the note below.

The Pins tab on Quotations and orders: the label, the pop-up fields (total, approval, customer, salesperson), colour by the Status field, and the colour rules below, each a field value with its legend wording and a colour from the palette.

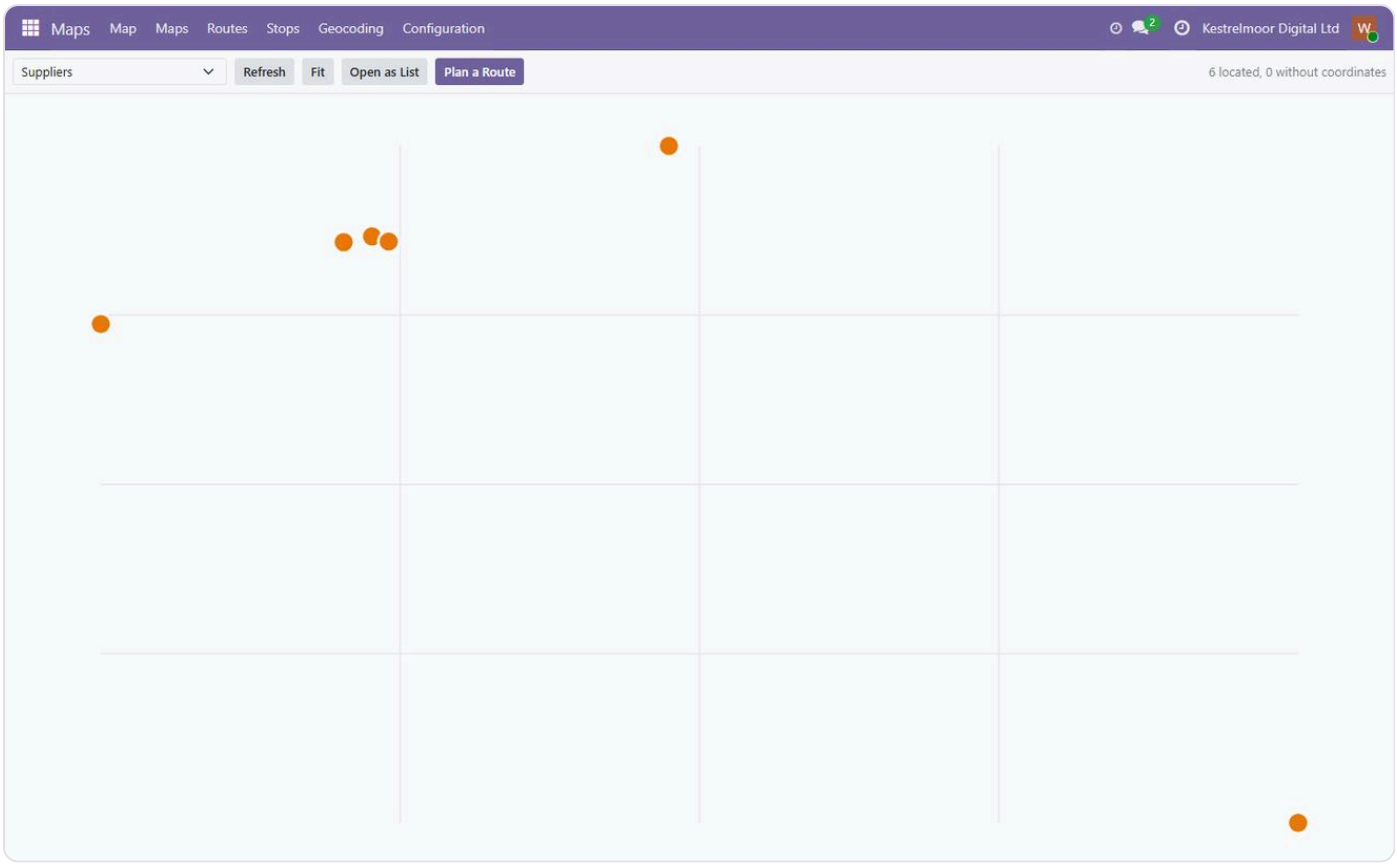

The Display tab: fit to pins or a fixed centre and zoom, and the optional tile URL.

The Preview tab: the same pins drawn on the server, with no browser code.

> **No tiles, no CDN.** Out of the box the pins are drawn on a plain background by the module's own renderer, and nothing is loaded from outside. If you add a Leaflet build to the module's static folder and set a tile URL from your own tile server on the map, it switches to a slippy map. Leaflet is not shipped with the module.

Suppliers, with Fit To Pins off and a fixed centre and zoom so London and Leeds stay in view.

PART 8 Maps: geocoding and the address cache

MAP VIEW

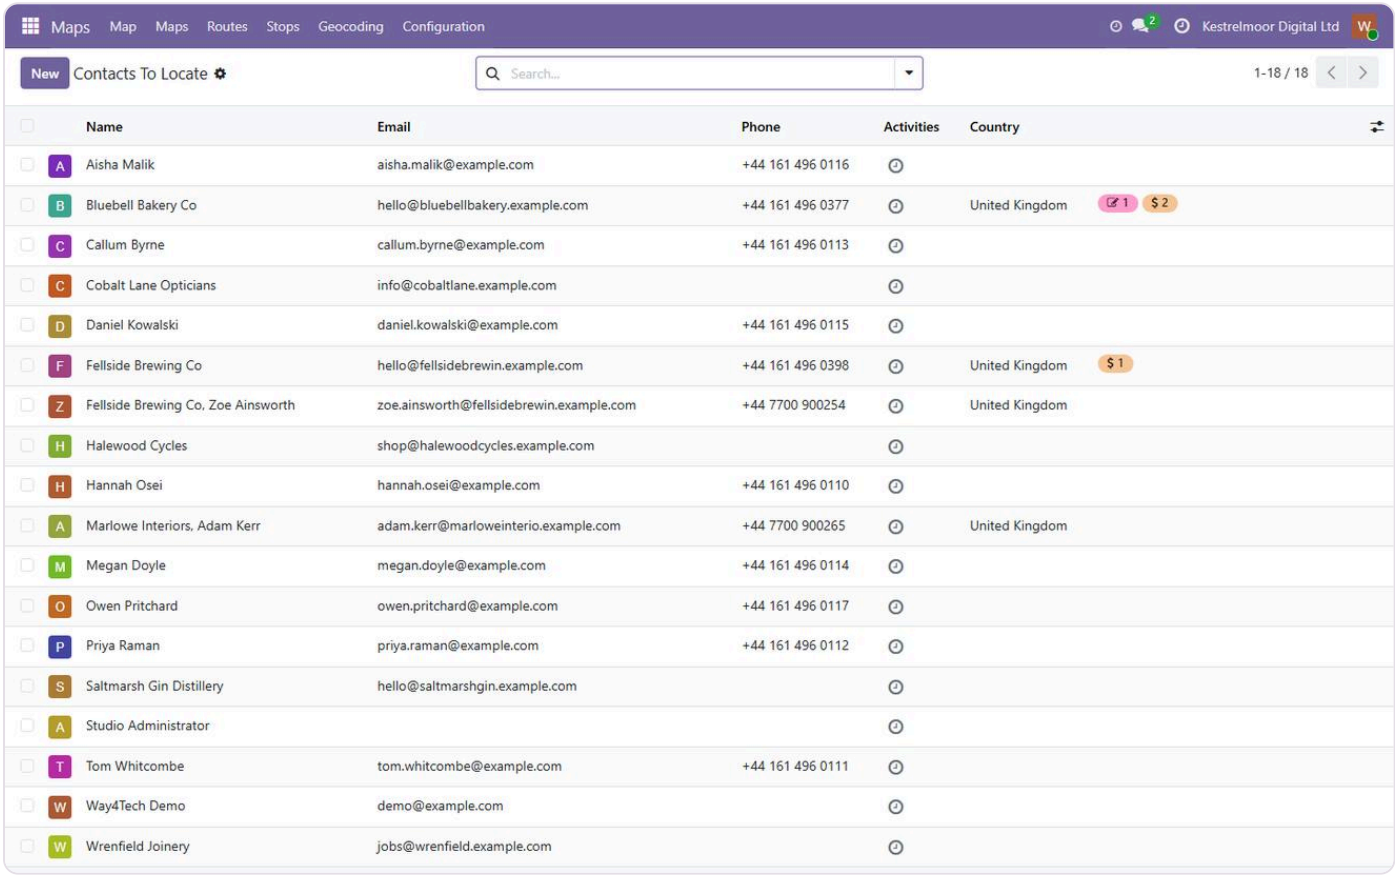

A pin needs a latitude and longitude. Map View gets them from Odoo's own geolocation provider, once per address, and keeps every answer, so two hundred contacts in one office block cost one lookup and a bad address is not tried again on every run.

IN THIS PART YOU WILL LEARN

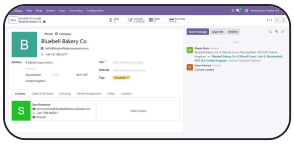

- Which contacts still need locating
- Locating one contact, or many
- What the cache keeps, and how to make it forget
- What happens when an address changes

TRY IT YOURSELF ON THE DEMO

1. Maps, Geocoding, Contacts To Locate
2. Open Bluebell Bakery Co and look for Locate This Address
3. Maps, Geocoding, Cached Addresses

Contacts To Locate: every contact with no usable coordinates whose lookup has not failed, including people with no address, who are skipped. Bluebell Bakery is here because its street was edited, which cleared its pin; Fellside Brewing was added without being located.

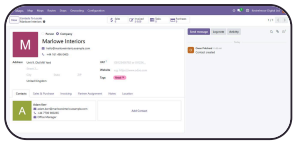

1

Locate one contact

Locate This Address on the contact asks the provider, or answers from the cache if that address was seen before, and stores the pin. A message says how many were located, answered from the cache, not found or skipped.

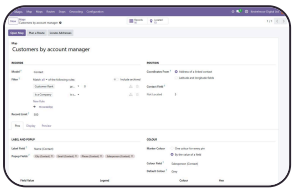

Locating needs the Use Maps group, because each lookup can go to a metered outside service.

2

An address the provider cannot find

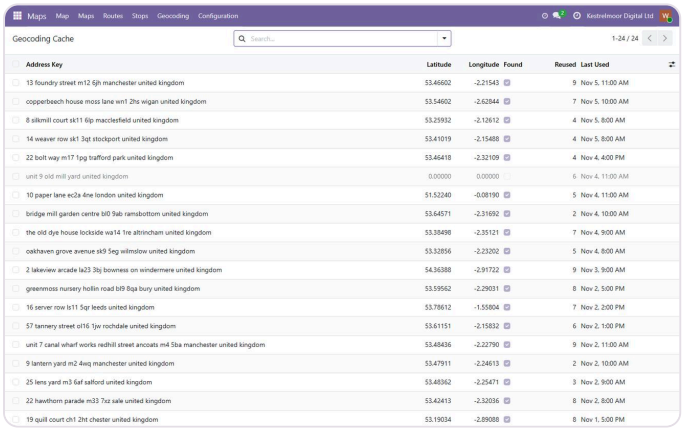

Marlowe Interiors has a street but no town or postcode. The lookup failed, so Geocoding Failed is ticked, it leaves Contacts To Locate and it is not retried until the address is edited.

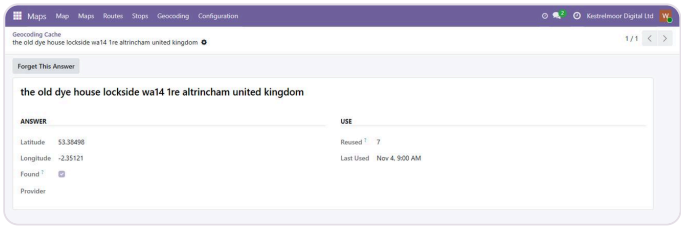

3

Locate a whole map

Locate Addresses on a map configuration sends every unlocated contact behind that map in one batch, through the cache.

Cached Addresses: the normalised address, coordinates, whether it was found, and how often it was reused.

One cached answer. Forget This Answer removes it so the next lookup goes out again.

The rules it follows

Once per address

Addresses are normalised before the lookup, so the same address typed twice is one cache row.

Misses are kept too

An address that came back empty is cached as not found, which is what stops it being retried.

Edits reset the pin

Changing the street, town, postcode, state or country clears the stored key, and the contact goes back in the queue.

A scheduled action, **Maps: locate contacts that have no coordinates**, works through the queue 50 contacts a day. It ships switched off, because the free OpenStreetMap service is rate limited; turn it on when you are happy with the provider set in Odoo's settings.

PART 9 Maps: route planning

MAP VIEW

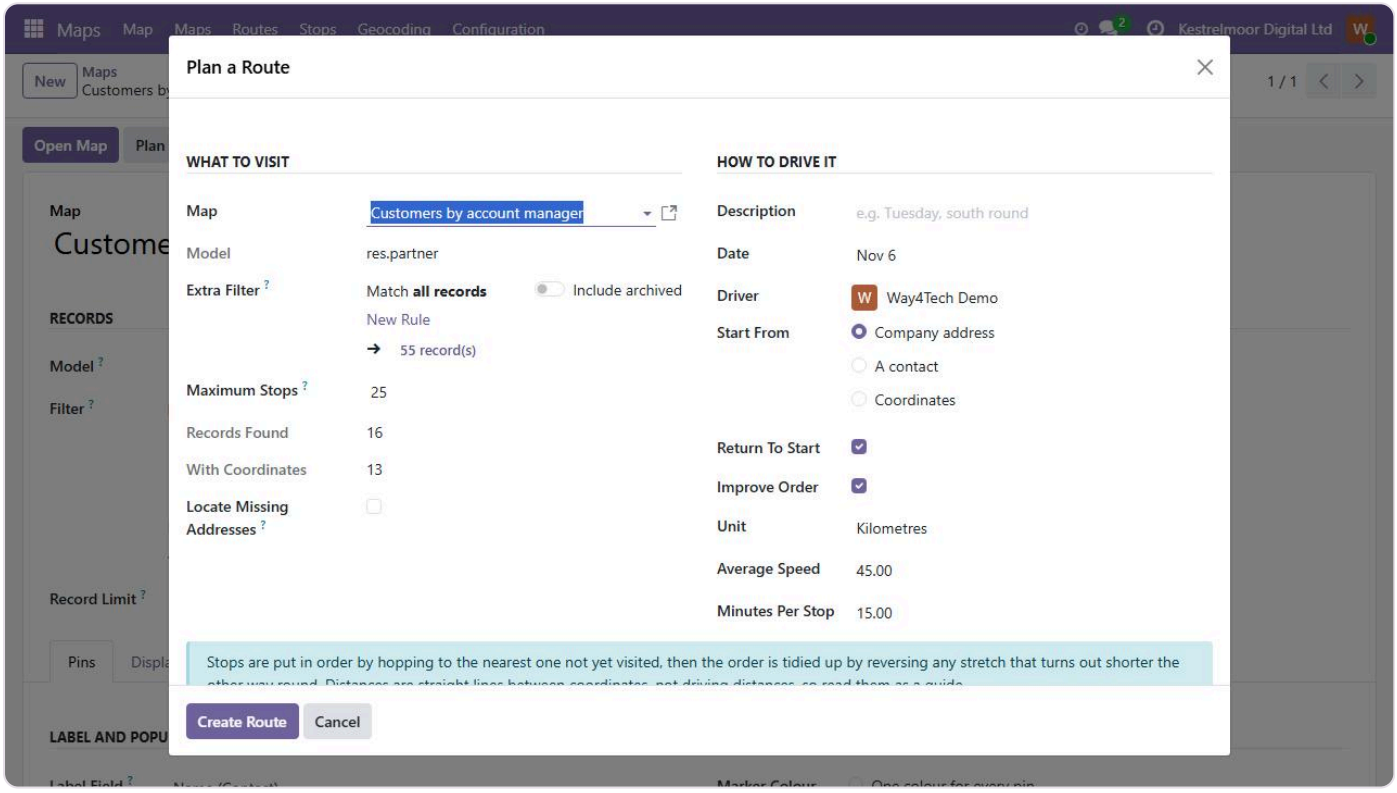

A map of customers becomes a day out in the van when you put the calls in a sensible order. Map View takes the records on a map, or the ones you selected, and works out a visiting order with leg distances and arrival times.

IN THIS PART YOU WILL LEARN

- Creating a route from a map
- How the visiting order is worked out
- Route states, and marking stops visited
- Printing the route sheet for the driver

TRY IT YOURSELF ON THE DEMO

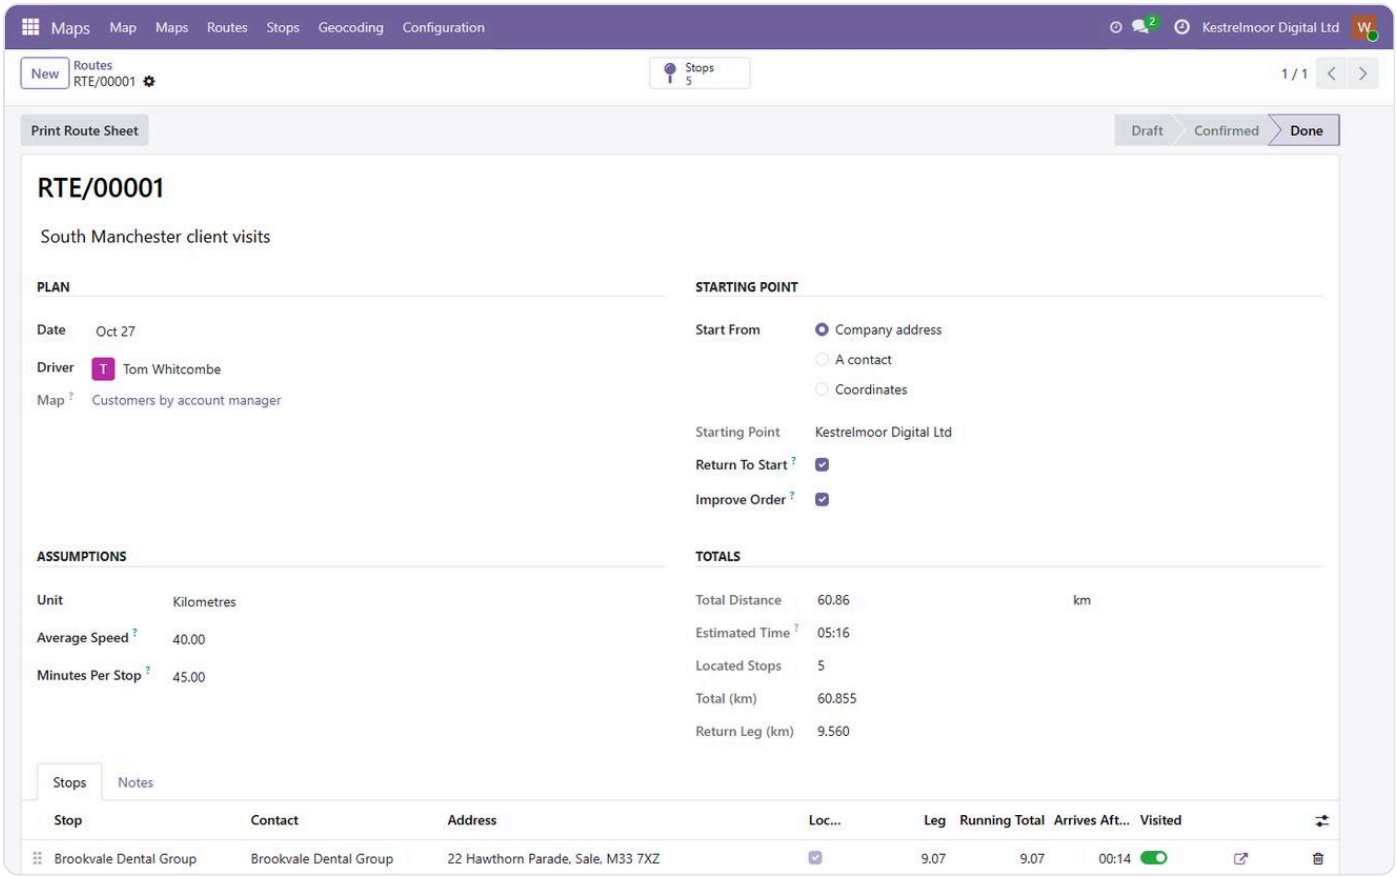

1. Maps, Routes, open RTE/00001 South Manchester client visits
2. Look at the leg and running total on each stop
3. Open RTE/00003 Print delivery round, still a draft

Plan a Route on a map configuration opens the wizard. Pick the date and driver, where the day starts, whether to come back, kilometres or miles, the average speed and the time at each stop. It shows how many records were found and how many have coordinates.

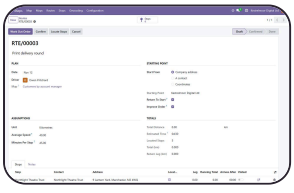

WIZARD FIELD	WHAT IT DOES
Start From	The company address, a contact, or coordinates you type.
Return To Start	Adds the leg home to the total.
Improve Order	Runs a 2-opt pass after the nearest neighbour walk, which untangles crossings a greedy route leaves.
Unit	Kilometres or miles. Switching later does not recompute anything.
Average Speed, Minutes Per Stop	45 per hour and 15 minutes by default; used for arrival estimates.
Maximum Stops	25 by default.

Use My Selection	Plan only the records selected in the list.
Extra Filter	A domain on top of the map's own.
Locate Missing Addresses	Geocode unplaced records before planning.

RTE/00001, South Manchester client visits, Done. The stops are in visiting order with the leg distance, the running total and the time after departure each one is reached. All five are marked visited.

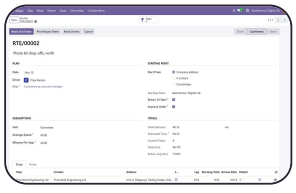

From draft to driven

1

Draft

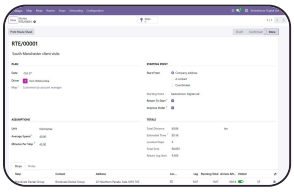

The print round has six stops, one of them Marlowe Interiors with no coordinates. Work Out Order sequences the located stops and puts unlocated ones at the end; Locate Stops geocodes them.

2

Confirmed

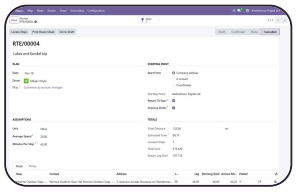

The order is worked out and the route is booked for its date. Print Route Sheet gives the driver a paper copy.

3

Done

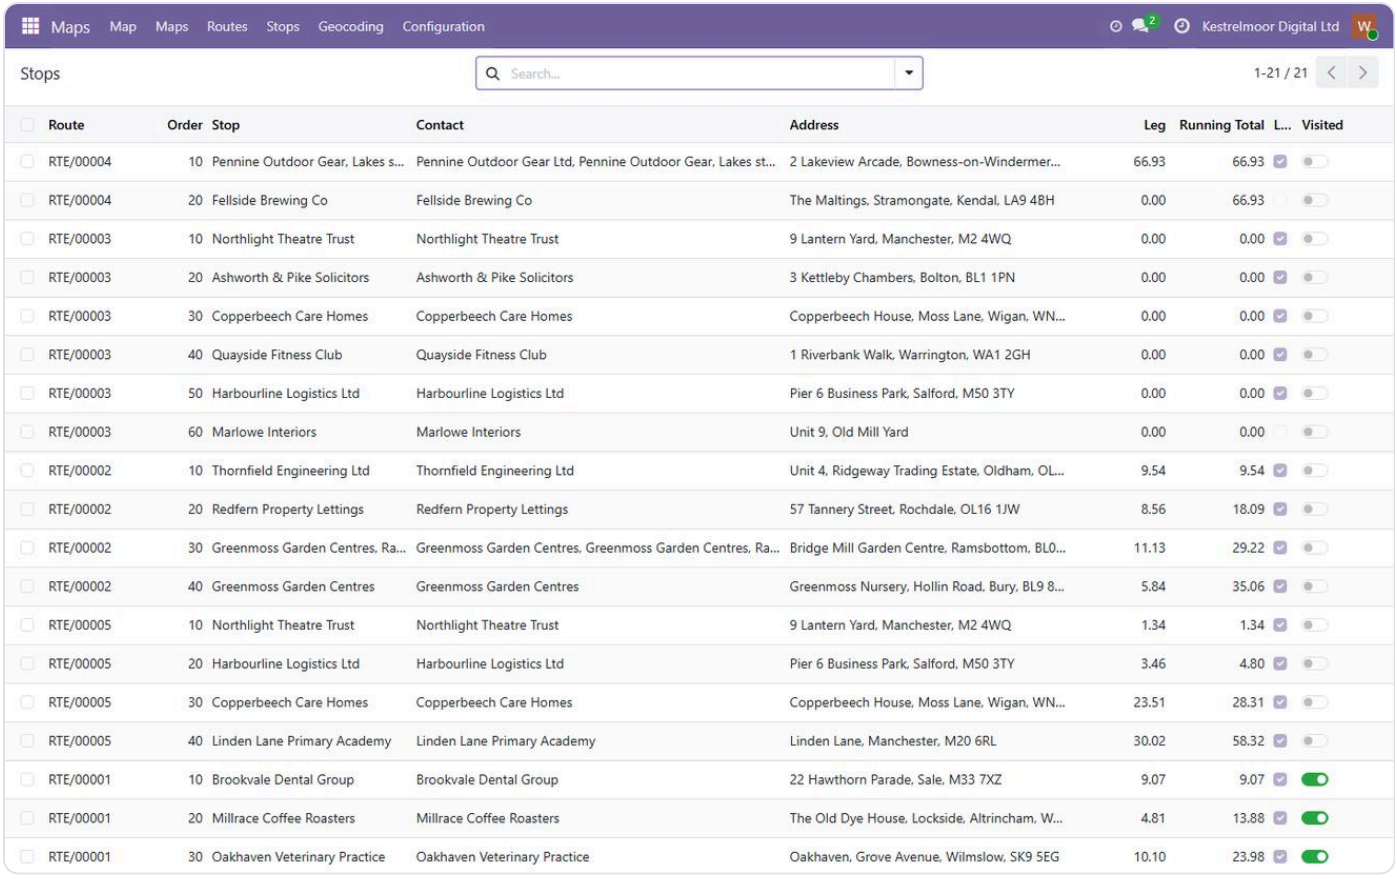

Mark Visited on each stop as you go, then Mark Driven.

4

Cancelled

The Lakes trip was called off. It is in miles, and Set to Draft brings it back.

Route Sheet

RTE/00002 — Photo kit drop-offs, north

Date	11/10/2026	Stops	4
Driver	Priya Raman	Total Distance	48.1 km
Starts From	Kestrelmoor Digital Ltd	Estimated Time	4 h 12 min
Returns To Start	Yes	Average Speed	40 km / h

#	Stop	Address	Leg	Running Total	Arrives After	Done
1	Thornfield Engineering Ltd	Unit 4, Ridgeway Trading Estate, Oldham, OL9 6FD	9.5	9.5	0 h 14 min	☐
2	Redfern Property Lettings	57 Tannery Street, Rochdale, OL16 1JW	8.6	18.1	1 h 12 min	☐
3	Greenmoss Garden Centres, Ramsbottom	Bridge Mill Garden Centre, Ramsbottom, BL0 9AB	11.1	29.2	2 h 14 min	☐
4	Greenmoss Garden Centres	Greenmoss Nursery, Hollin Road, Bury, BL9 8QA	5.8	35.1	3 h 08 min	☐
←	Return to the starting point		13.0	48.1		

Distances are straight lines between coordinates. Real driving distance will be longer, and by how much depends on the road network.

Notes
Drop the light stands at Greenmoss first.

The route sheet for RTE/00002: where the driver starts, each stop with its address, leg, running total and arrival estimate, and the return leg.

> Distances are straight-line great-circle distances between the pins, not road distances, so treat the totals and arrival times as estimates. The module does not call a routing service.

PART 10 Grid: the timesheet grid

TIMESHEET GRID

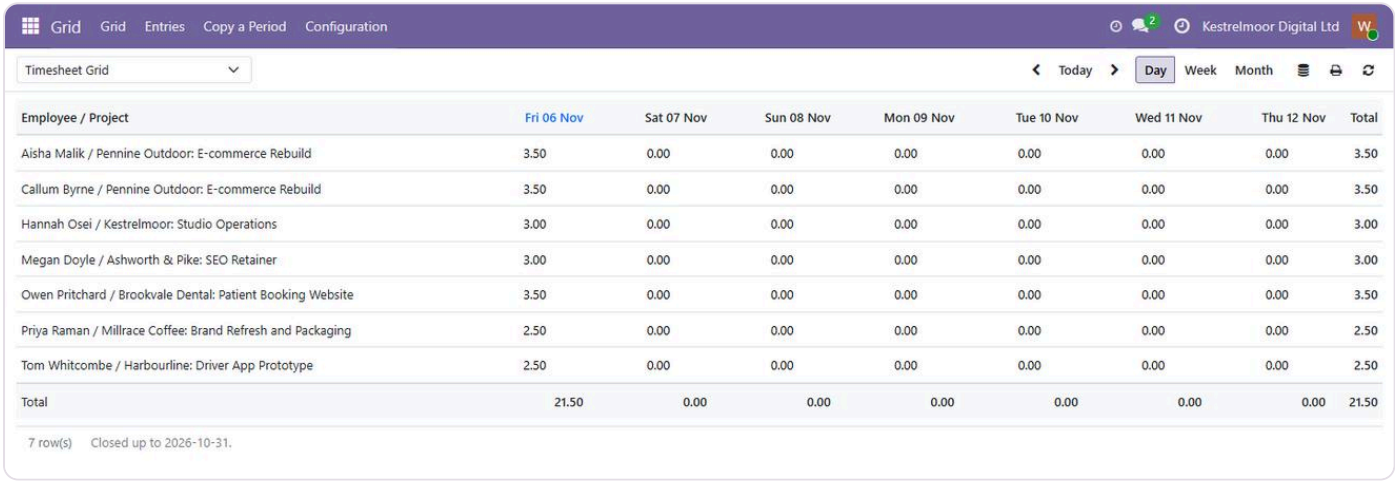

Rows down the side, days across the top, a number in every cell, and you type into it. That is how people want to enter hours, and Odoo Community has nowhere to do it. The grid writes every figure back through Odoo's normal create and write, so the timesheet rules still apply.

IN THIS PART YOU WILL LEARN

- Reading a grid and moving through periods
- What happens when you type into a cell
- The timesheet grid that is set up for you
- Read-only grids for reporting

TRY IT YOURSELF ON THE DEMO

1. Grid, Grid, then pick Timesheet Grid
2. Click the left arrow to reach a week before 1 November: those cells are locked
3. Pick Monthly Sales by Account Manager

Employee / Project	Fri 06 Nov	Sat 07 Nov	Sun 08 Nov	Mon 09 Nov	Tue 10 Nov	Wed 11 Nov	Thu 12 Nov	Total
Aisha Malik / Pennine Outdoor: E-commerce Rebuild	3.50	0.00	0.00	0.00	0.00	0.00	0.00	3.50
Callum Byrne / Pennine Outdoor: E-commerce Rebuild	3.50	0.00	0.00	0.00	0.00	0.00	0.00	3.50
Hannah Osei / Kestrelmoor: Studio Operations	3.00	0.00	0.00	0.00	0.00	0.00	0.00	3.00
Megan Doyle / Ashworth & Pike: SEO Retainer	3.00	0.00	0.00	0.00	0.00	0.00	0.00	3.00
Owen Pritchard / Brookvale Dental: Patient Booking Website	3.50	0.00	0.00	0.00	0.00	0.00	0.00	3.50
Priya Raman / Millrace Coffee: Brand Refresh and Packaging	2.50	0.00	0.00	0.00	0.00	0.00	0.00	2.50
Tom Whitcombe / Harbourline: Driver App Prototype	2.50	0.00	0.00	0.00	0.00	0.00	0.00	2.50
Total	21.50	0.00	0.00	0.00	0.00	0.00	0.00	21.50

7 row(s) Closed up to 2026-10-31.

Grid, Grid, Timesheet Grid: one row per employee and project, a column per day, hours in each cell and totals along the bottom.

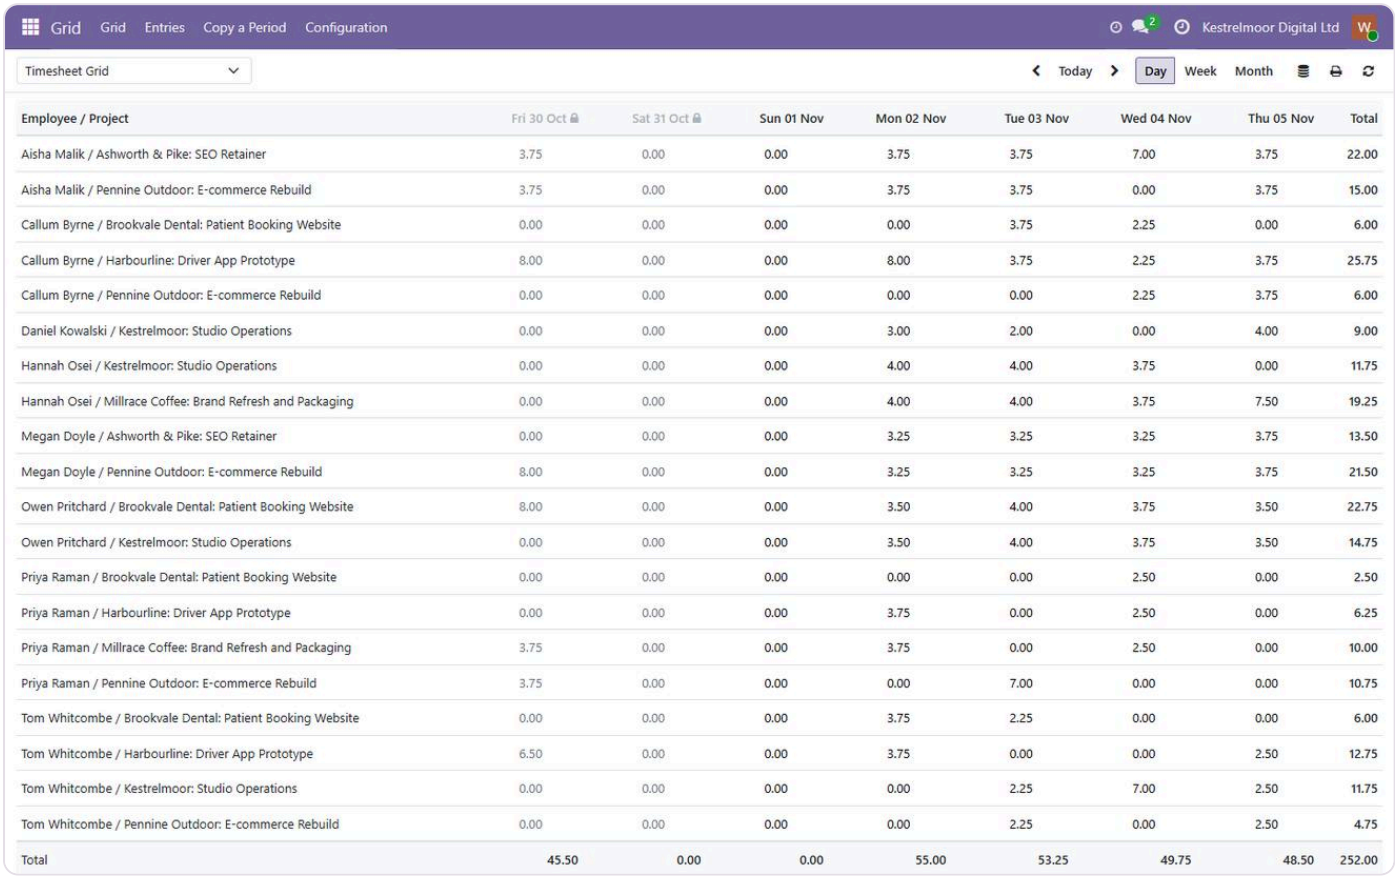

CONTROL	WHAT IT DOES
Grid list	Switch between grids configured under Configuration, Grids.
Arrows and Today	Move one window back or forward, or back to the current period.
Day, Week, Month	Change the columns for this view.
Print	The Grid Sheet, with the same figures as the screen.
Refresh	Read the records again.
Footer	The number of rows and the date the grid is closed up to.

A cell is a total

A cell adds up every record behind it, so typing into one is a change of the total, and the module has to decide where the difference goes. It does this on the server, inside the ordinary write, so record rules, required fields and the chatter all apply.

THE CELL HAS	TYPING A NEW FIGURE
No records	Creates one, with the row values, the date and the values on create set on the grid.
One record	Writes the difference on it, so it ends on the figure you typed.

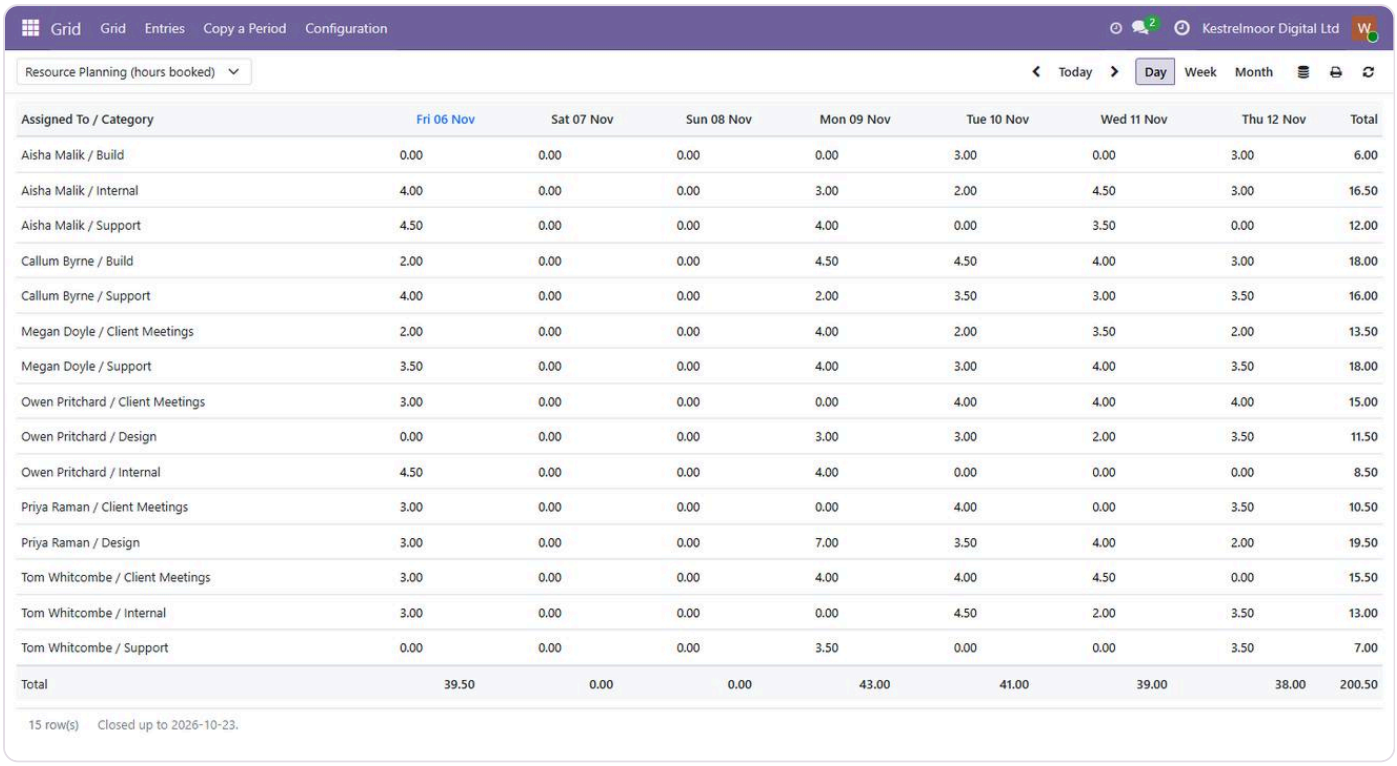

Several records	Writes on the newest one, or adds a balancing record and leaves history alone, as the grid is set.
Any records, and you type 0	Clears every record behind the cell (when Zero Clears the Cell is ticked).
A negative figure	Refused unless the grid allows negative values.

Employee / Project	Fri 30 Oct	Sat 31 Oct	Sun 01 Nov	Mon 02 Nov	Tue 03 Nov	Wed 04 Nov	Thu 05 Nov	Total

15 row(s) Closed up to 2026-10-23.

Resource Planning: the module's own planning entries, by person and kind of work, a column per day. Used for booking next week's hours before they are worked.

Weekly Hours by Project: timesheets rolled up by week.
Editable is off, so it is a report.

Monthly Sales by Account Manager: confirmed orders by month, untaxed amount, no decimals.

> Install Timesheet Grid after the Timesheets app and the timesheet grid is made for you: employee and project down the side, days across, hours in the cell, only lines with a project. Without Timesheets it still works on its own planning entries.

PART 11 Grid: setting up grids, locks and copying a period

TIMESHEET GRID

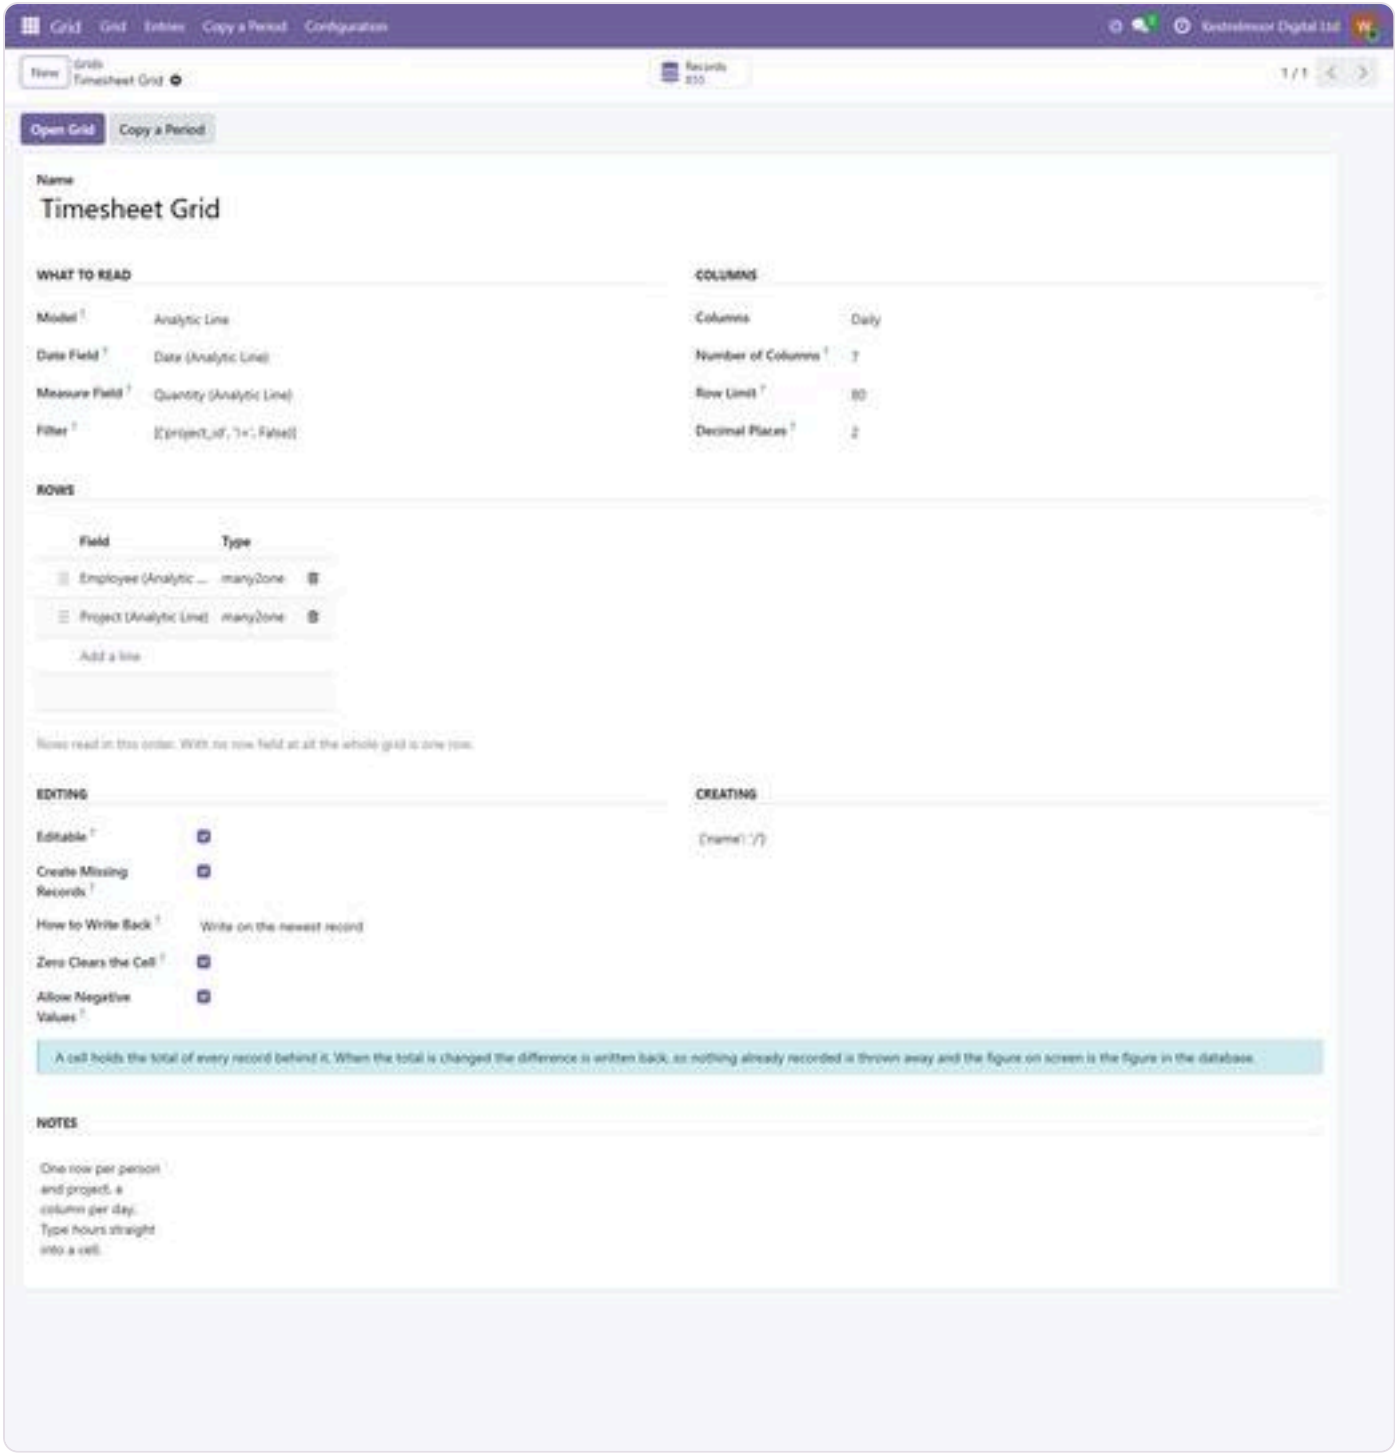

A grid is a configuration: a model, the date that picks a column, the number that fills a cell and the fields the rows are grouped by. Hours against a project, units against a warehouse, budget against a cost centre: the shape is the same.

IN THIS PART YOU WILL LEARN

- Every setting on a grid
- Planning entries and categories
- Closing a period by hand or on a rolling basis
- Copying one period onto another
- Printing the grid sheet

TRY IT YOURSELF ON THE DEMO

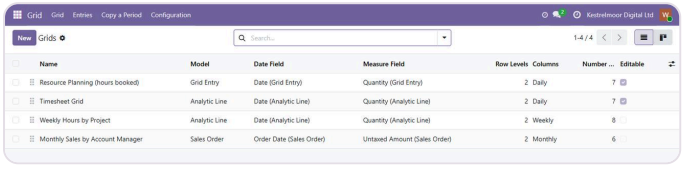

1. Grid, Configuration, Grids, open Timesheet Grid
2. Grid, Configuration, Period Locks, open the rolling lock
3. Grid, Copy a Period, and look at the options (then Discard)

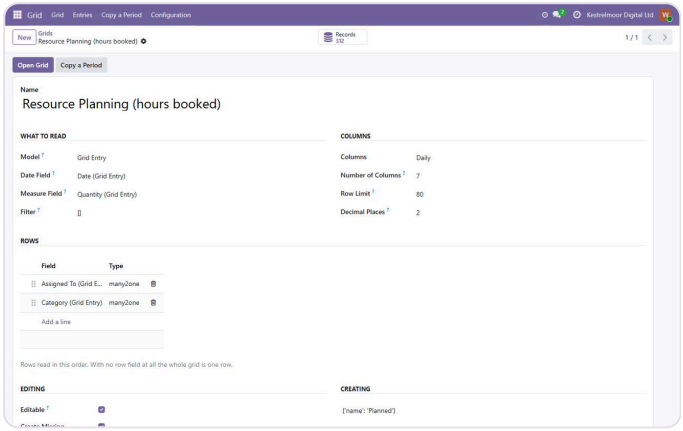

The Timesheet Grid configuration: model Analytic Line, the date field, Quantity as the measure, daily columns, seven of them, the filter that keeps out lines with no project, the row fields in the order they read (employee, then project), and the editing and creating rules below.

SETTING	WHAT IT DOES
Model, Date Field, Measure Field	Any model, a date or datetime for the column (a datetime falls on the day in the reader's timezone), a stored number for the cell.
Row Fields	The fields rows are grouped by, in order.
Columns, Number of Columns	Daily, weekly or monthly, and how many to show.
Row Limit, Filter	Most rows drawn at once, and a domain on top.
Editable	Untick for a read-only grid.

Create Missing Records	Typing into an empty cell creates the record it needs.
How to Write Back	Write on the newest record, or add a balancing record.
Zero Clears the Cell, Allow Negative Values	As described in Part 10.
Decimal Places	Rounding used for the cells.
Values on Create	A Python dictionary added to every record the grid creates, for example a description.

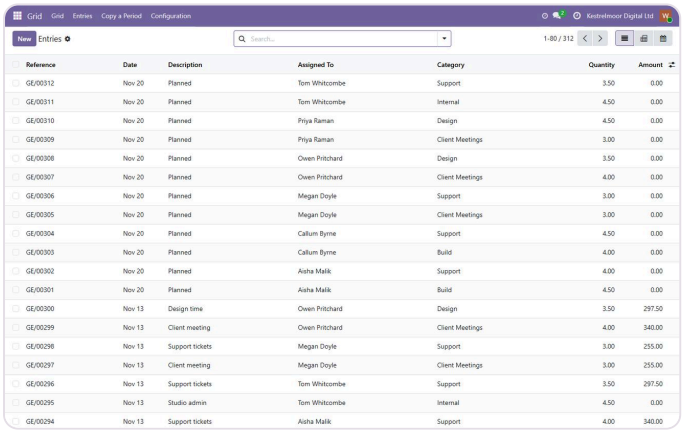

Configuration, Grids: four grids on three models.

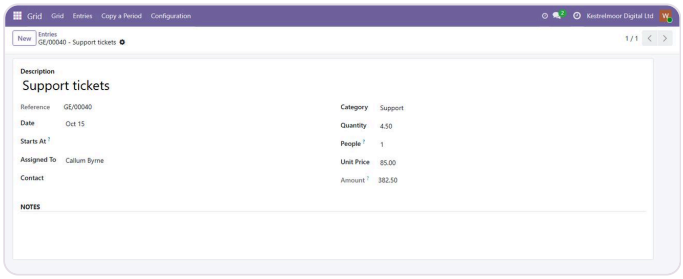

Resource Planning, on the module's own entries.

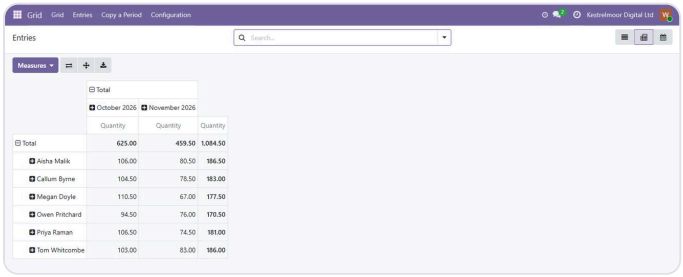

Planning entries and categories

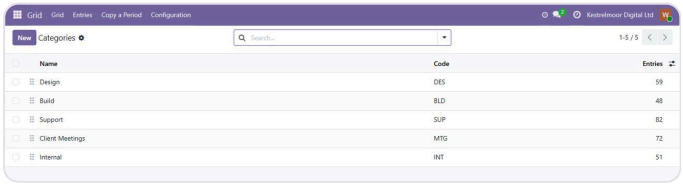

Grid, Entries: each booking with person, category, contact, quantity, unit price and amount.

One entry. Amount is quantity times unit price.

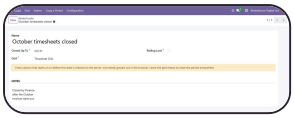

Entries as a pivot, by person and category.

Configuration, Categories: Design, Build, Support, Client Meetings, Internal.

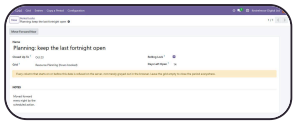

Period locks

1

A fixed lock

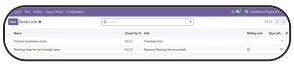

October timesheets closed: everything up to 31 October on the timesheet grid. Leave the grid empty to close every grid.

2

A rolling lock

Rolling, with 14 days left open. The daily scheduled action moves the date forward, and Move Forward Now does it at once. It never reopens a period closed by hand.

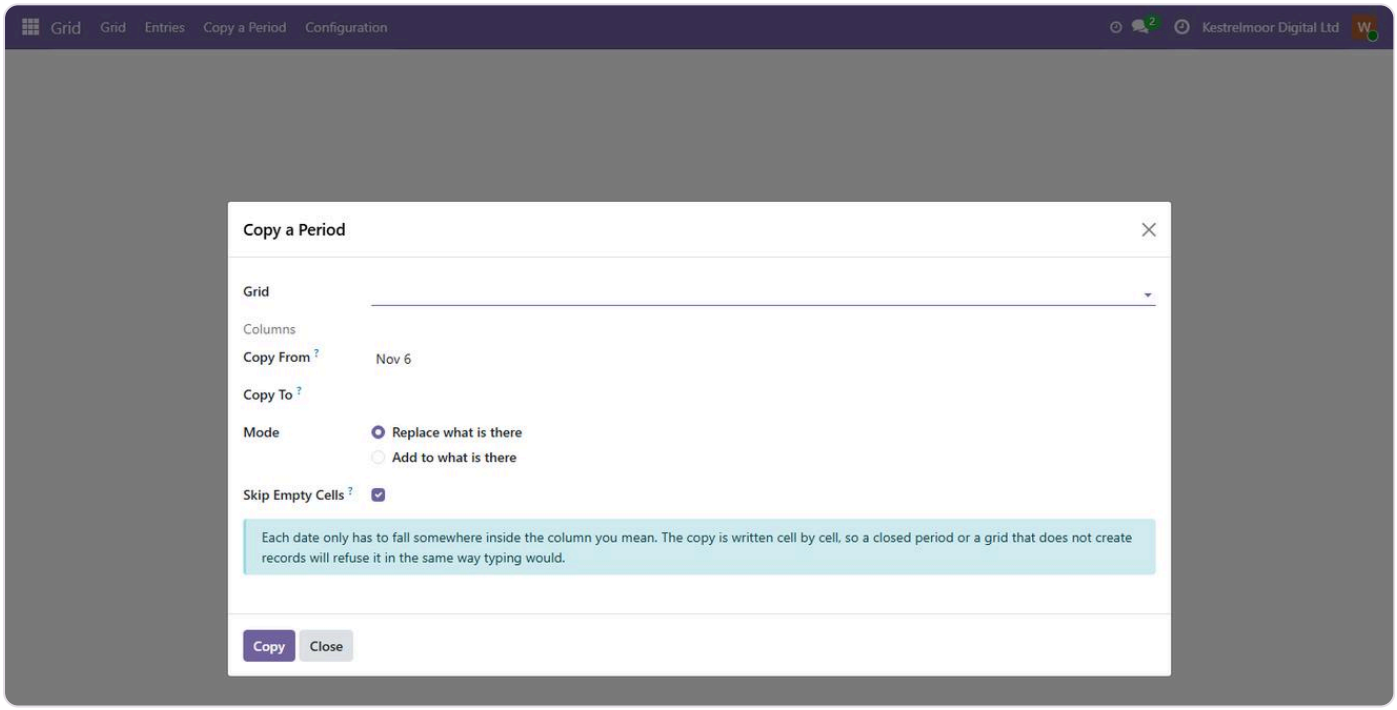

3

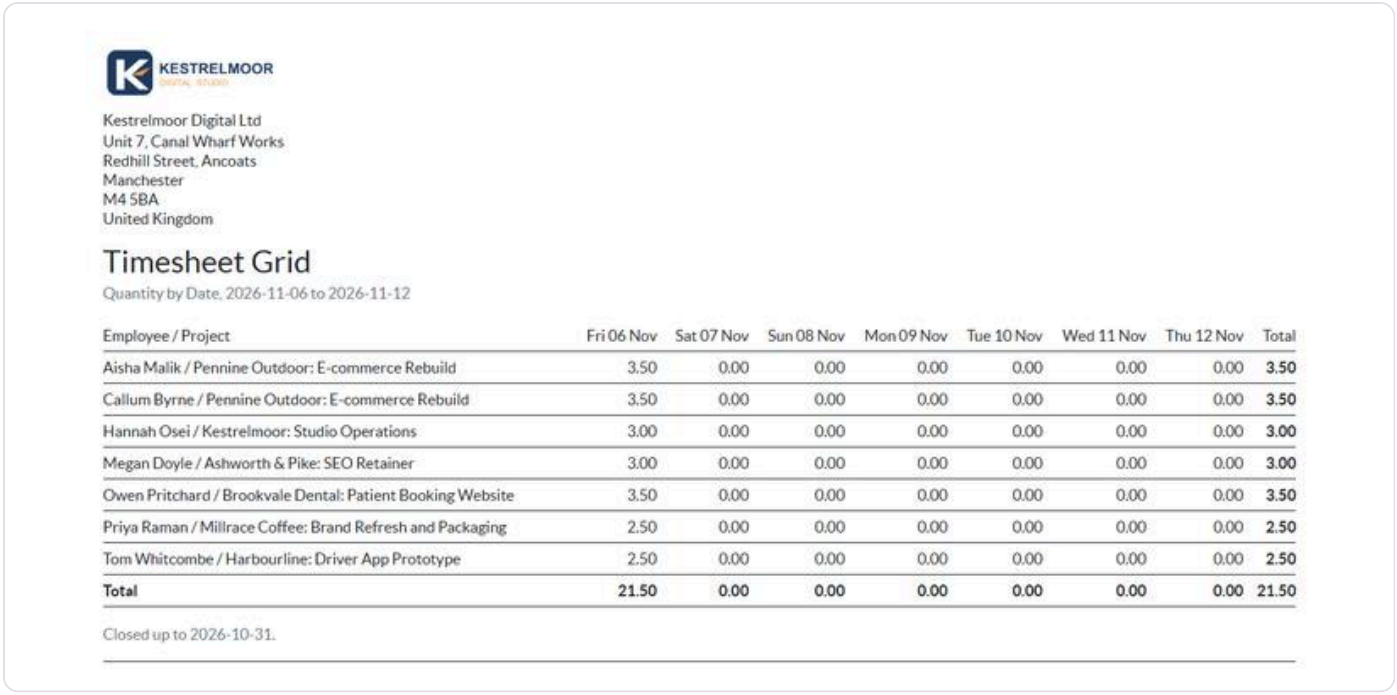

All locks

Configuration, Period Locks. An archived lock no longer applies.

Copy a period

Grid, Copy a Period: pick the grid, the column to copy from and the column to copy to, then replace what is there or add to it, and whether empty cells are skipped. It writes cell by cell through the same write back, so a closed period still refuses it. On the demo, 13 November was copied onto 20 November.

Closed up to 2026-10-31.

Print on the grid, or Print, Grid Sheet on a grid configuration: the same rows, columns and totals as the screen.

PART 12 Documents: folders and who can open them

DOCUMENTS

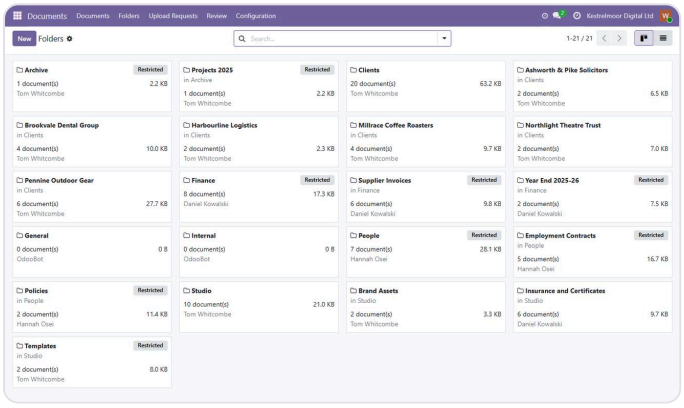

Documents is built on Odoo's own attachments, so files stay in the normal filestore. What it adds is folders that carry real access rights: three group lists per folder, enforced by record rules on the folder, the documents, their versions and the download link itself.

IN THIS PART YOU WILL LEARN

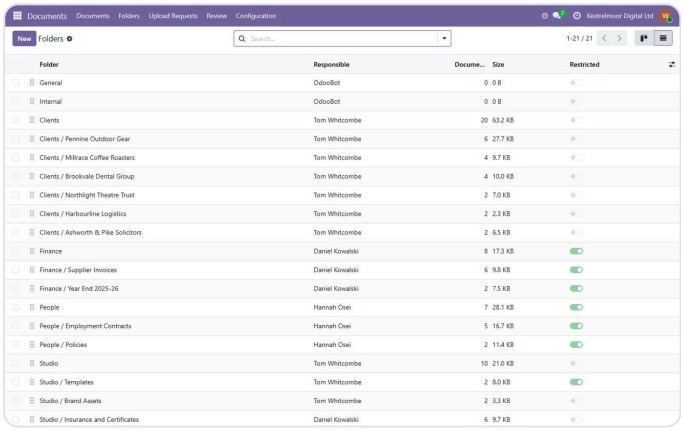

- The folder tree on the demo
- Read, write and manage groups
- Inheriting a parent's access, and reapplying it
- The printable folder index

TRY IT YOURSELF ON THE DEMO

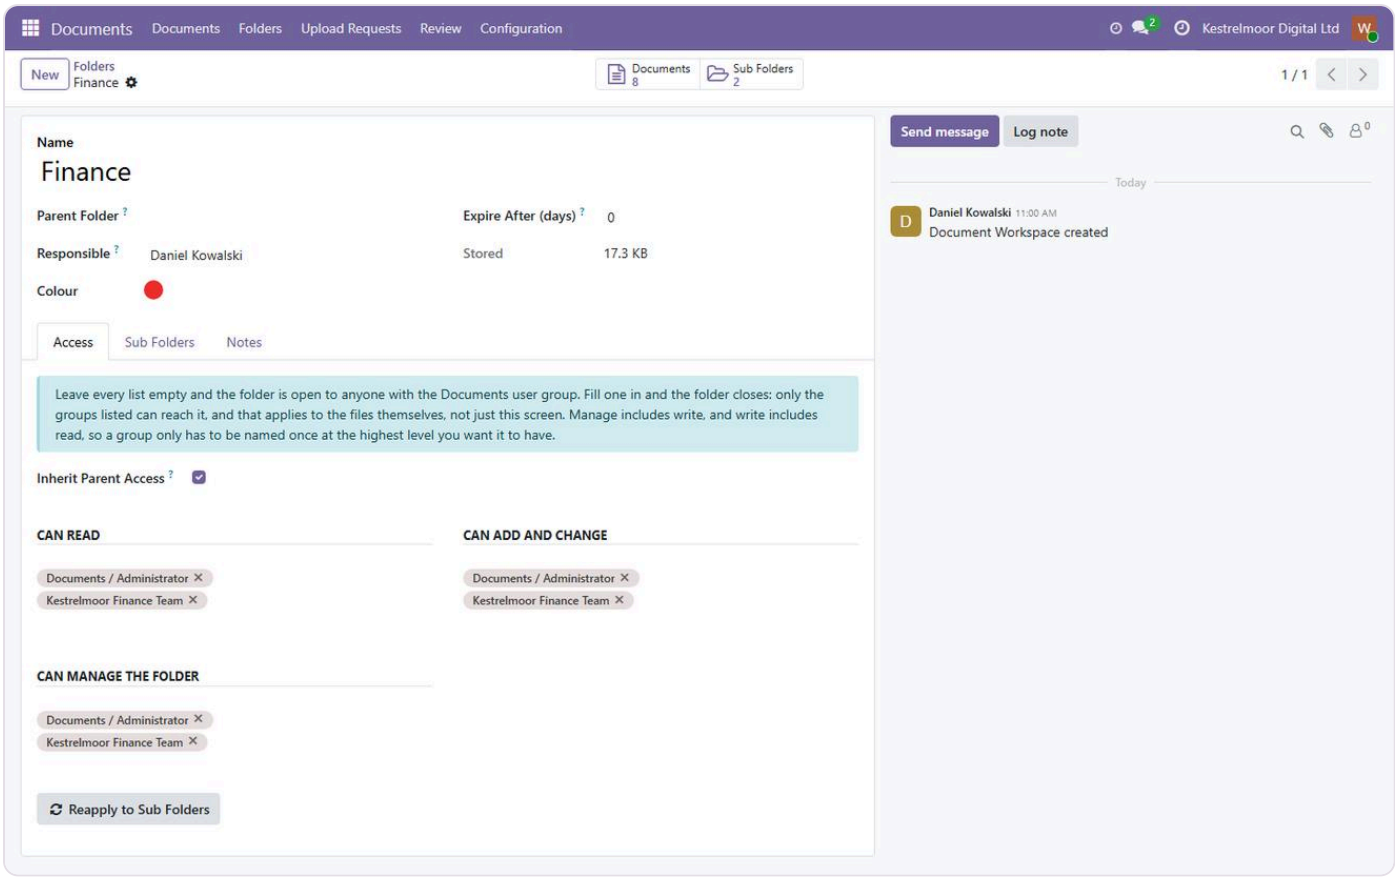

1. Documents, Folders
2. Open Finance and read its Access tab
3. Open People / Policies: open to read for the whole studio

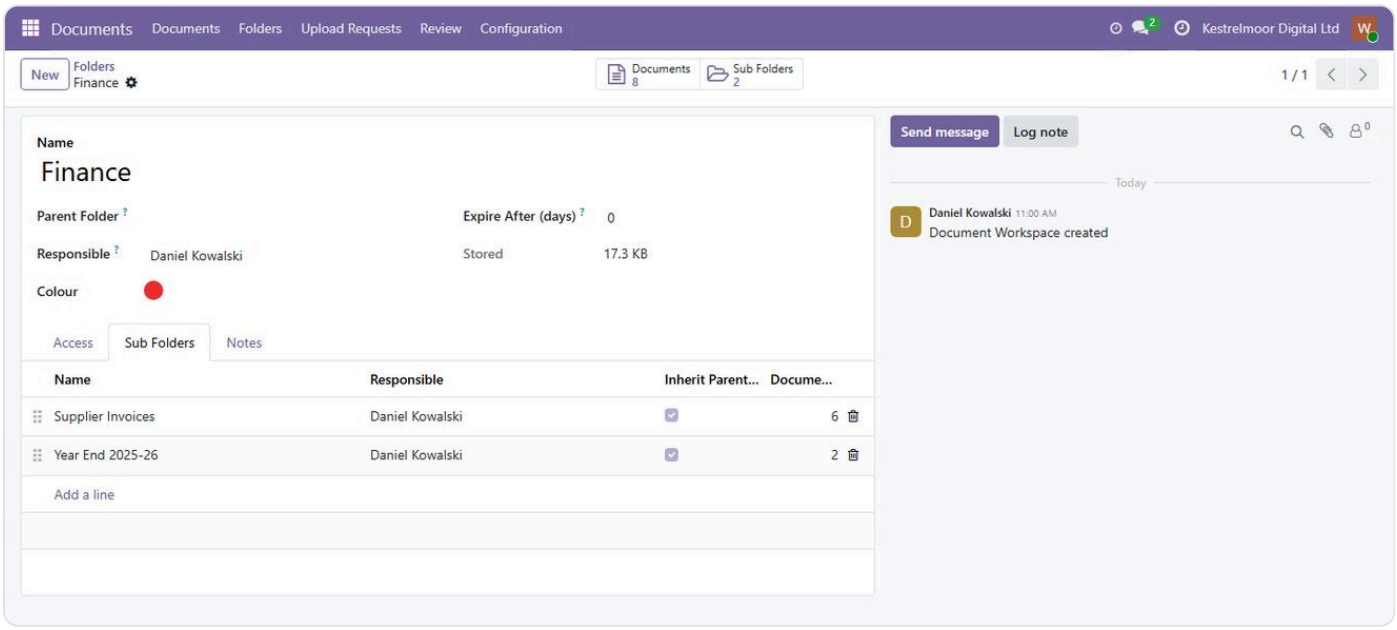

Documents, Folders as cards: Clients, Finance, People, Studio, Archive and the shipped General and Internal.

The same tree as a list, with full paths.

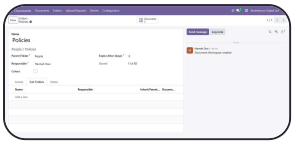

The Finance folder: responsible person, description, documents and size, and its sub folders.

Finance's access: read, write and manage all limited to the Kestrelmoor Finance Team. Anybody outside it gets nothing, whichever way they ask, including the download URL.

SETTING	WHAT IT DOES
Read groups	Who may see the folder and open its documents. Empty means every Documents user.
Write groups	Who may add and change documents. Write includes read.
Manage groups	Who may configure the folder. Manage includes write.
Inherit Parent Access	Adds the parent folder's groups, so a tree can be secured at the top.

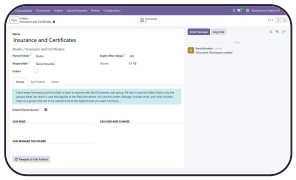

Reapply to Sub Folders	Pushes this folder's access down the tree.
Expire After (days)	Sets an expiry date on new documents, counted from upload.

1

A folder that breaks inheritance

People is closed to the people team, but Policies under it has Inherit Parent Access off and read open to every Documents user, so the whole studio can read the handbook while only the people team can change it.

2

A folder with expiry

Insurance and Certificates gives every new file an expiry a year out unless a date is typed.

> The Documents Administrator group is kept on every restricted folder, so a folder can never be left with nobody able to open it.

Print, Folder Index on a folder: every document with its tags, owner, state and dates.

PART 13 Documents: filing, versions, locks and expiry

DOCUMENTS

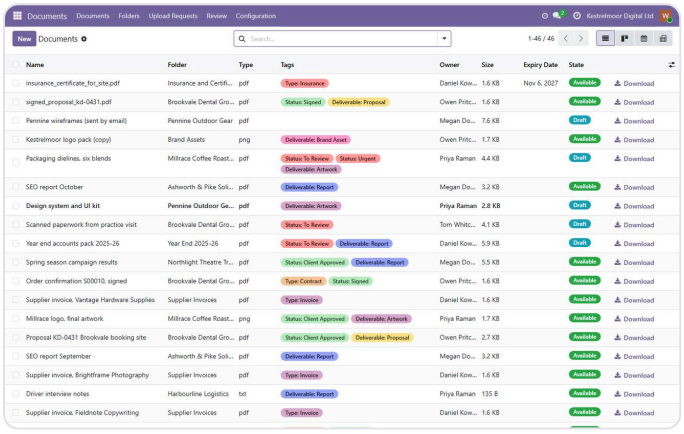

A document is one file plus everything around it: the folder, tags, the contact it concerns, an owner, a state, an expiry date, the record in Odoo it belongs to, and every earlier copy of the file.

IN THIS PART YOU WILL LEARN

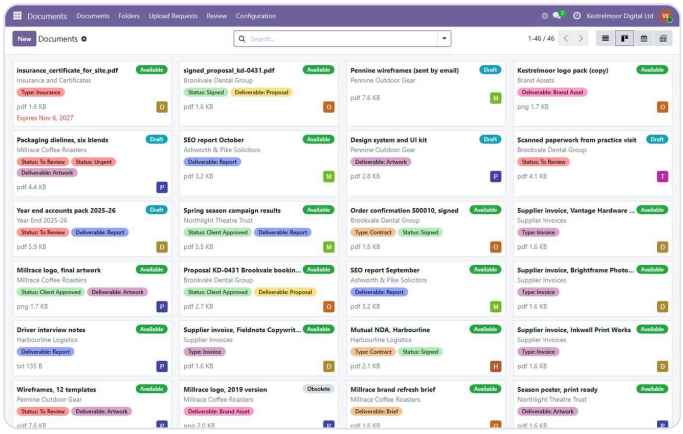

- The four document states
- Uploading over a file, and restoring a version
- Locking a document while you work on it
- Expiry dates and the daily check
- Finding duplicates and filing attachments in bulk

TRY IT YOURSELF ON THE DEMO

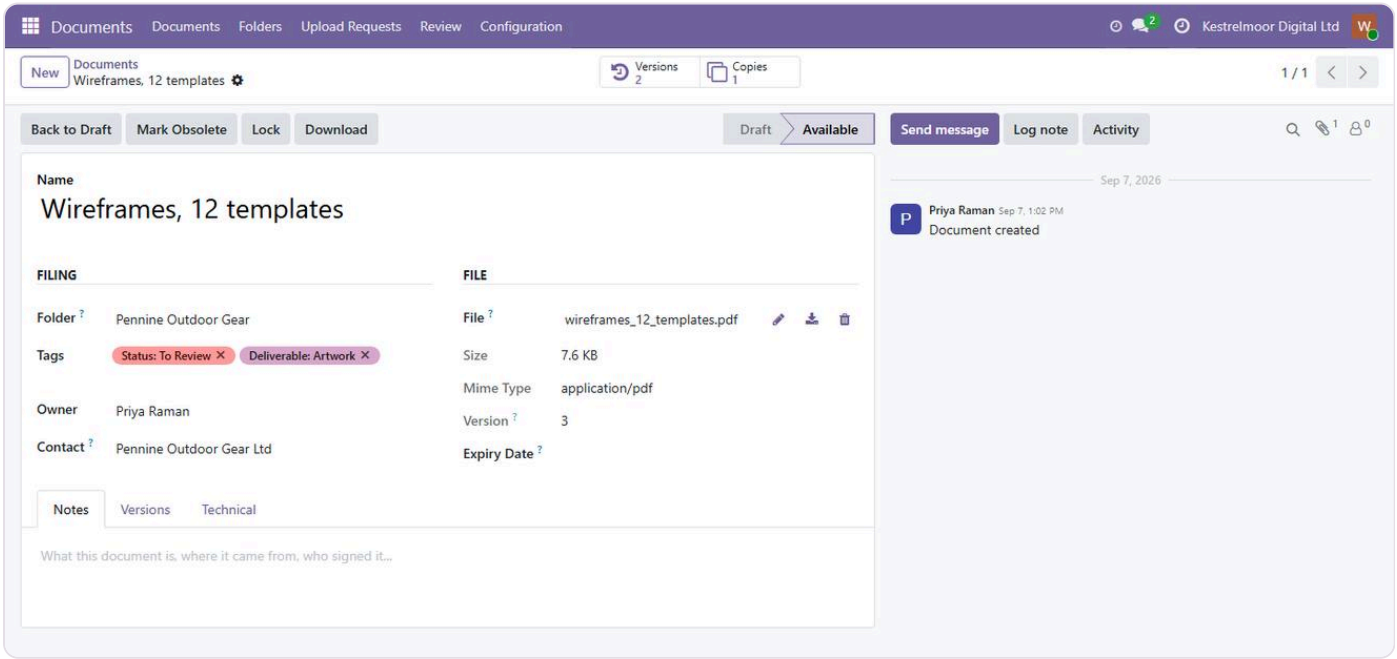

1. Documents, Documents, open Wireframes, 12 templates
2. Click the Versions smart button and open version 1
3. Documents, Review, Expiring Soon

Documents, Documents: name, folder, tags, owner, state and expiry.

The same documents as cards.

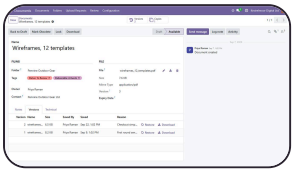

Wireframes, 12 templates in the Pennine Outdoor folder. The header buttons move it between states and lock it; the smart buttons count versions and copies (files with the same content).

STATE	MEANING	HOW IT GETS THERE

Draft	Work in progress.	New uploads, and Back to Draft.
Available	The copy people should use.	Make Available, which needs a file.
Expired	Past its expiry date.	Set by the daily job on available documents only.
Obsolete	Kept for the record.	Mark Obsolete.

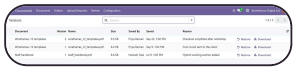

Versions

1

Upload over the file

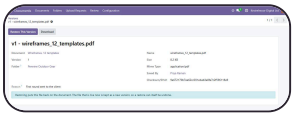

Replacing the file keeps the old one as a numbered version, with who did it and why. The wireframes have two earlier rounds.

2

Every version

Documents, Review, Versions lists every earlier copy in every folder you can read.

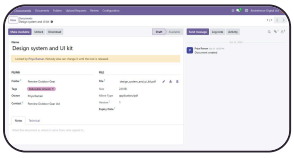

3

Restore

Restore puts an old version back and pushes the live file into a new version, so a restore can itself be undone. Each version owns its own copy of the file.

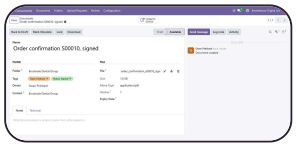

Locks, links and duplicates

4

Locked

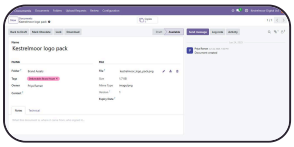

Priya locked the UI kit while she works on it. Nobody else can change its file, name, folder, tags or state until she releases it; a Documents administrator can force it open.

5

Linked to a record

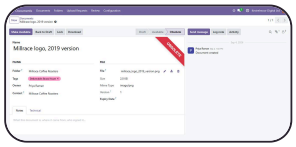

This signed confirmation is linked to sales order S00010. The Linked to button jumps to the order.

6

Duplicates

The logo pack was uploaded twice. Documents with the same file checksum are counted on the Copies button.

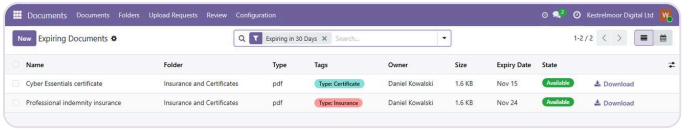

7

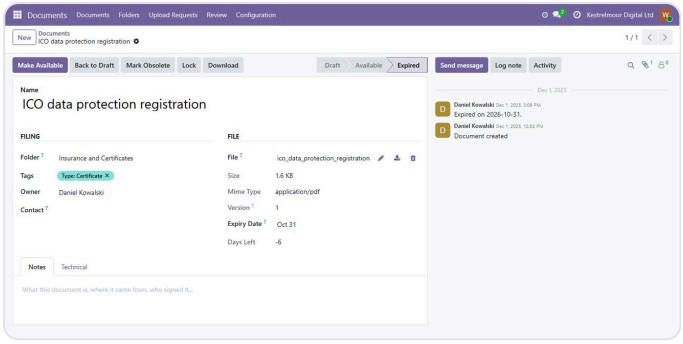

Obsolete

The 2019 Millrace logo is kept but marked obsolete.

Expiry

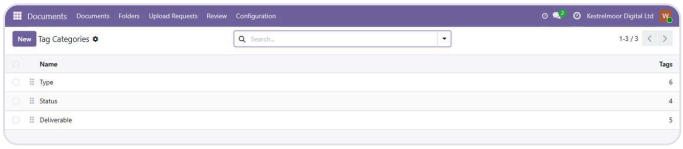

Review, Expiring Soon: insurance and certificates with their expiry dates.

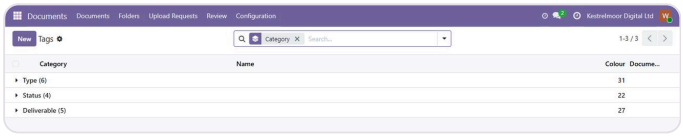

The ICO registration passed its date, so the daily job moved it to Expired.

The scheduled action **Documents: flag expired documents** runs daily and moves available documents past their expiry date to Expired, with a note in the chatter. Drafts and obsolete documents are left alone.

Tags

Configuration, Tag Categories: Type, Status and the demo's Deliverable.

Configuration, Tags, each in a category with a colour.

Filing attachments that are already in Odoo

Files attached to orders, tasks or emails can be filed in bulk: select them in the attachment list, then Action, File Attachments into a Folder. Pick the folder, tags, owner, state and expiry date. Keep the Link Back remembers which record each file came from, and the original attachment stays where it is.

PART 14 Documents: upload requests and PDF tools

DOCUMENTS

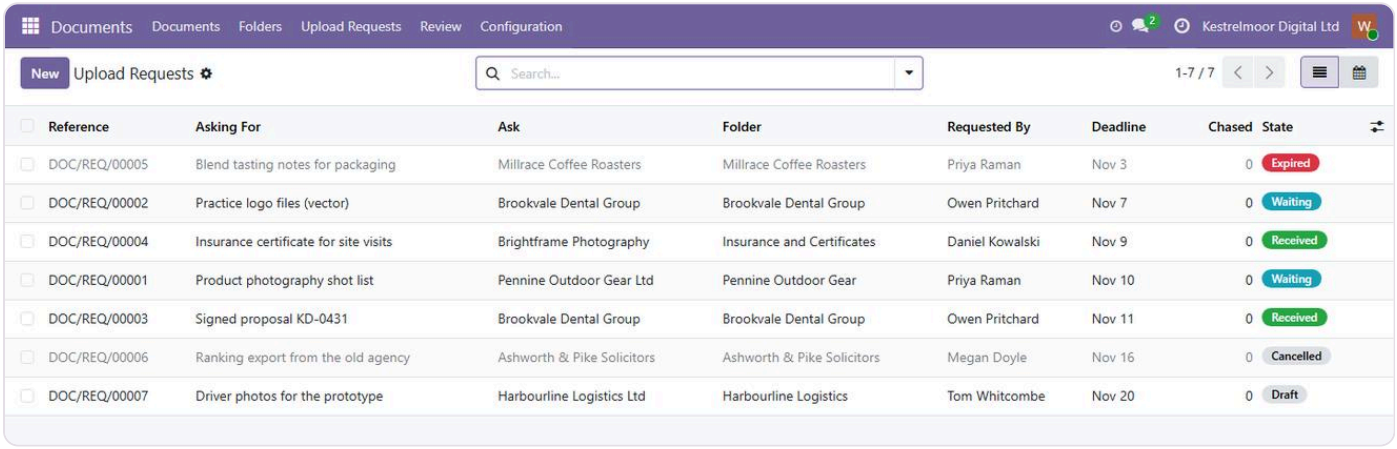

The file you need is usually on somebody else's computer. An upload request sends a customer or supplier a link; what they upload lands in the right folder with the right tags, and no account is needed. Two wizards split and merge PDFs.

IN THIS PART YOU WILL LEARN

- Asking for a file and the request states
- What the person outside the company sees
- Reminders and deadlines
- Splitting a scanned batch and merging documents

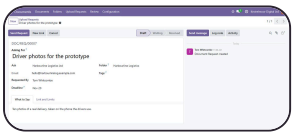

TRY IT YOURSELF ON THE DEMO

1. Documents, Upload Requests
2. Open DOC/REQ/00001, waiting for a shot list from Pennine Outdoor
3. Open the scanned paperwork, then Action, Split (then Discard)

Reference	Asking For	Ask	Folder	Requested By	Deadline	Chased	State
DOC/REQ/00005	Blend tasting notes for packaging	Millrace Coffee Roasters	Millrace Coffee Roasters	Priya Raman	Nov 3	0	Expired
DOC/REQ/00002	Practice logo files (vector)	Brookvale Dental Group	Brookvale Dental Group	Owen Pritchard	Nov 7	0	Waiting
DOC/REQ/00004	Insurance certificate for site visits	Brightframe Photography	Insurance and Certificates	Daniel Kowalski	Nov 9	0	Received
DOC/REQ/00001	Product photography shot list	Pennine Outdoor Gear Ltd	Pennine Outdoor Gear	Priya Raman	Nov 10	0	Waiting
DOC/REQ/00003	Signed proposal KD-0431	Brookvale Dental Group	Brookvale Dental Group	Owen Pritchard	Nov 11	0	Received
DOC/REQ/00006	Ranking export from the old agency	Ashworth & Pike Solicitors	Ashworth & Pike Solicitors	Megan Doyle	Nov 16	0	Cancelled
DOC/REQ/00007	Driver photos for the prototype	Harbourline Logistics Ltd	Harbourline Logistics	Tom Whitcombe	Nov 20	0	Draft

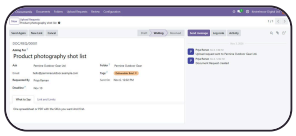

Documents, Upload Requests: what was asked for, from whom, the deadline and the state.

1

Draft

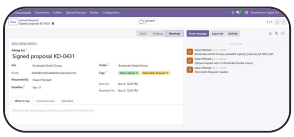

Fill in what you need, from whom, the folder and tags it lands in, instructions, a deadline (a week by default), a size limit (25 MB by default) and the accepted file types.

2

Waiting

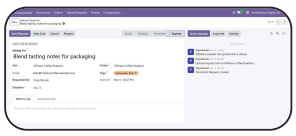

Send Request emails the link. The request now waits; New Link replaces the token if a link went to the wrong person.

3

Received

The practice uploaded the signed proposal. The document is in the folder, tagged, and listed on the request.

4

Expired

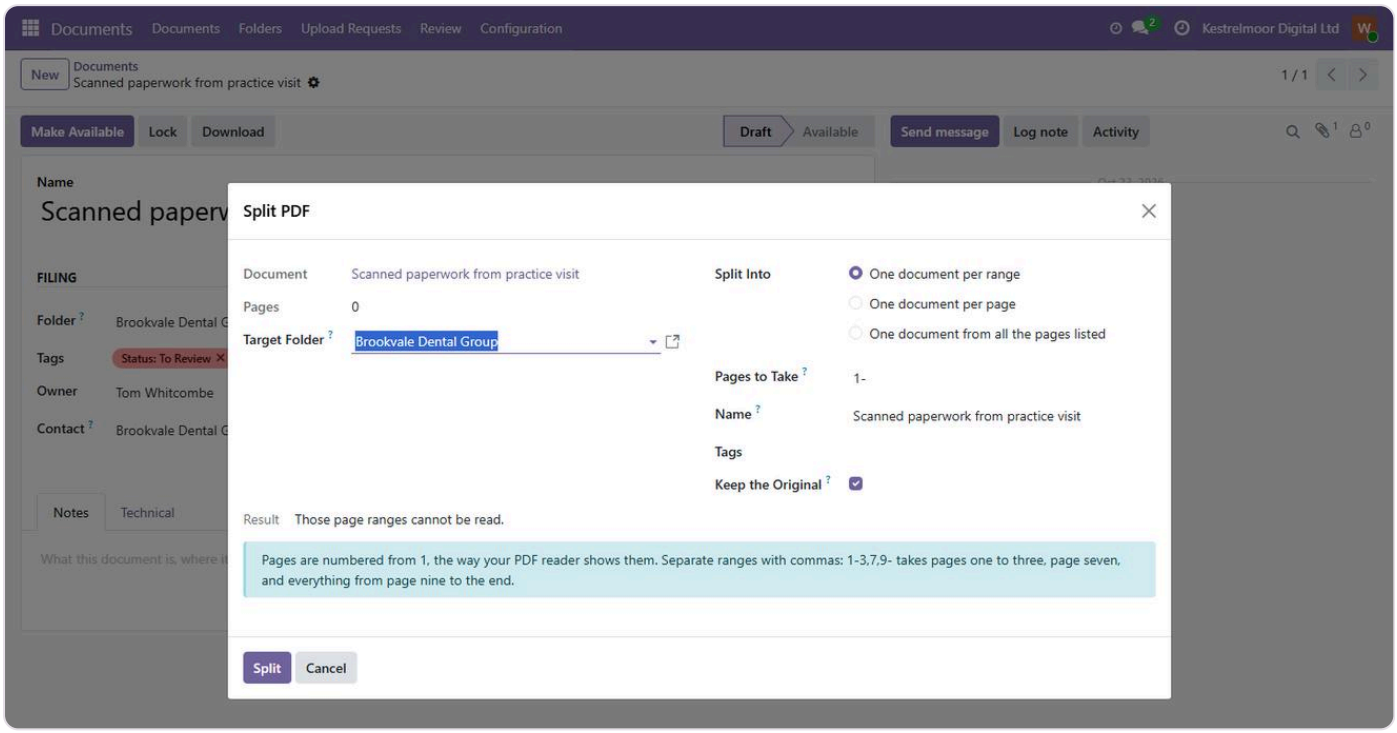

The tasting notes never came. Once the deadline passed the link closed.

The person who receives the link opens a public page at /dms/upload/ followed by the token. It shows the request's instructions and an upload box, and needs no login. A link past its deadline, received or cancelled shows a closed page instead.

> Executable and script file types are refused whatever the request allows, and so are files over the size limit. A link is a long random token compared in constant time.

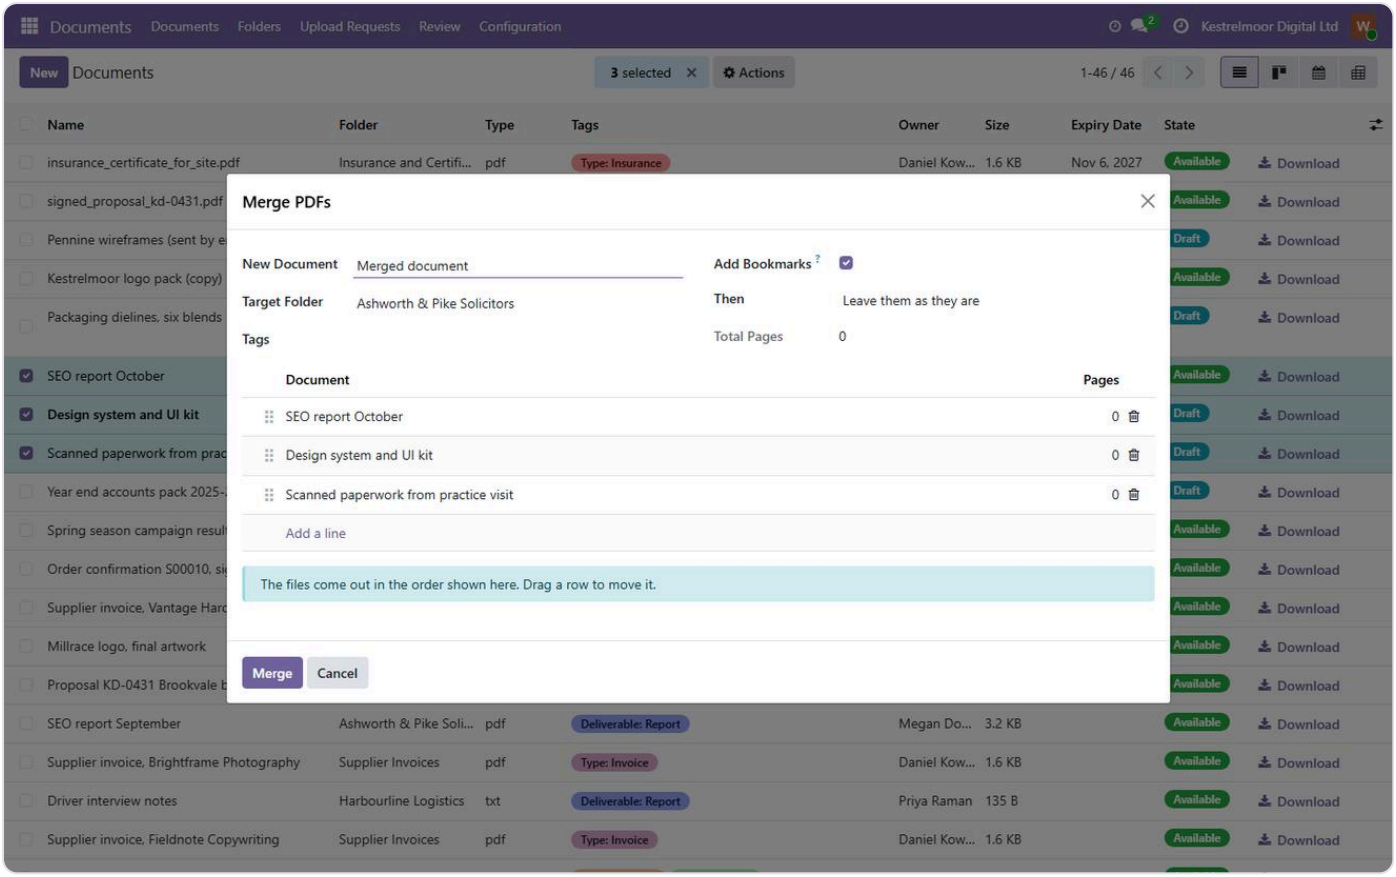

The scheduled action **Documents: chase upload requests** runs daily. It sends a reminder on each waiting request every so many days (Chase Every, 3 by default) up to the Reminder Limit (3), and closes requests whose deadline has passed.

Split and merge PDFs

Action, Split on a PDF. One document per range, one per page, or one document from all the pages listed. Ranges read the way you would write them: 1-3,7,9- takes pages one to three, page seven, and everything from nine on. The preview says what will be made; Keep the Original leaves the scan as it is.

> Split and merge read PDFs with the **pypdf** Python package. Check it is installed on your server: the official Odoo 19 Docker image ships the older PyPDF2 instead, and without pypdf the page count shows 0.

Action, Merge on several documents: put them in order, choose the target folder and tags, add a bookmark at the start of each source, and choose whether the originals are left alone, marked obsolete or deleted.

PART 15 Approvals on sales, purchases and invoices

APPROVALS

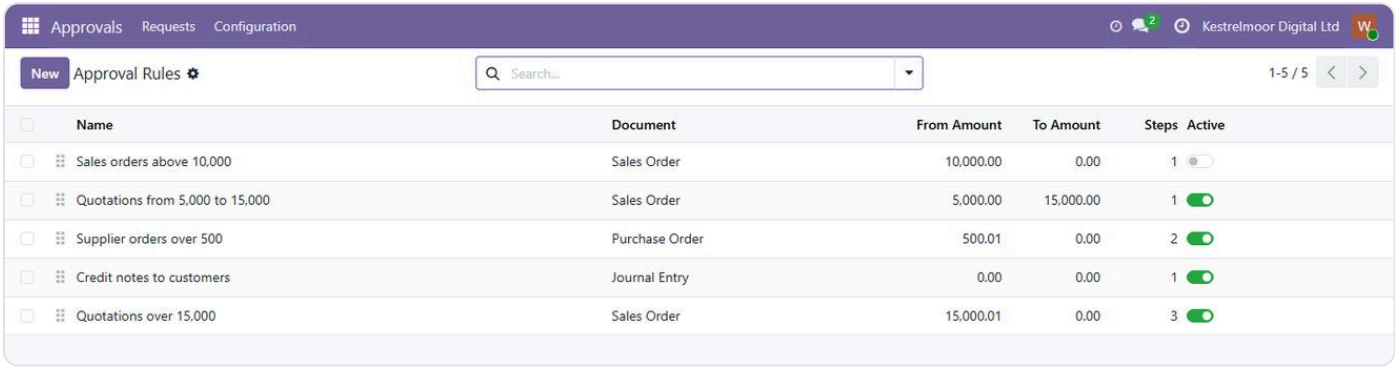

Stop a document leaving the building without a signature. A rule says which sales orders, purchase orders or invoices need sign-off, by amount band and condition, and who signs at each level. Until the last level approves, Confirm and Post send the document for approval instead.

IN THIS PART YOU WILL LEARN

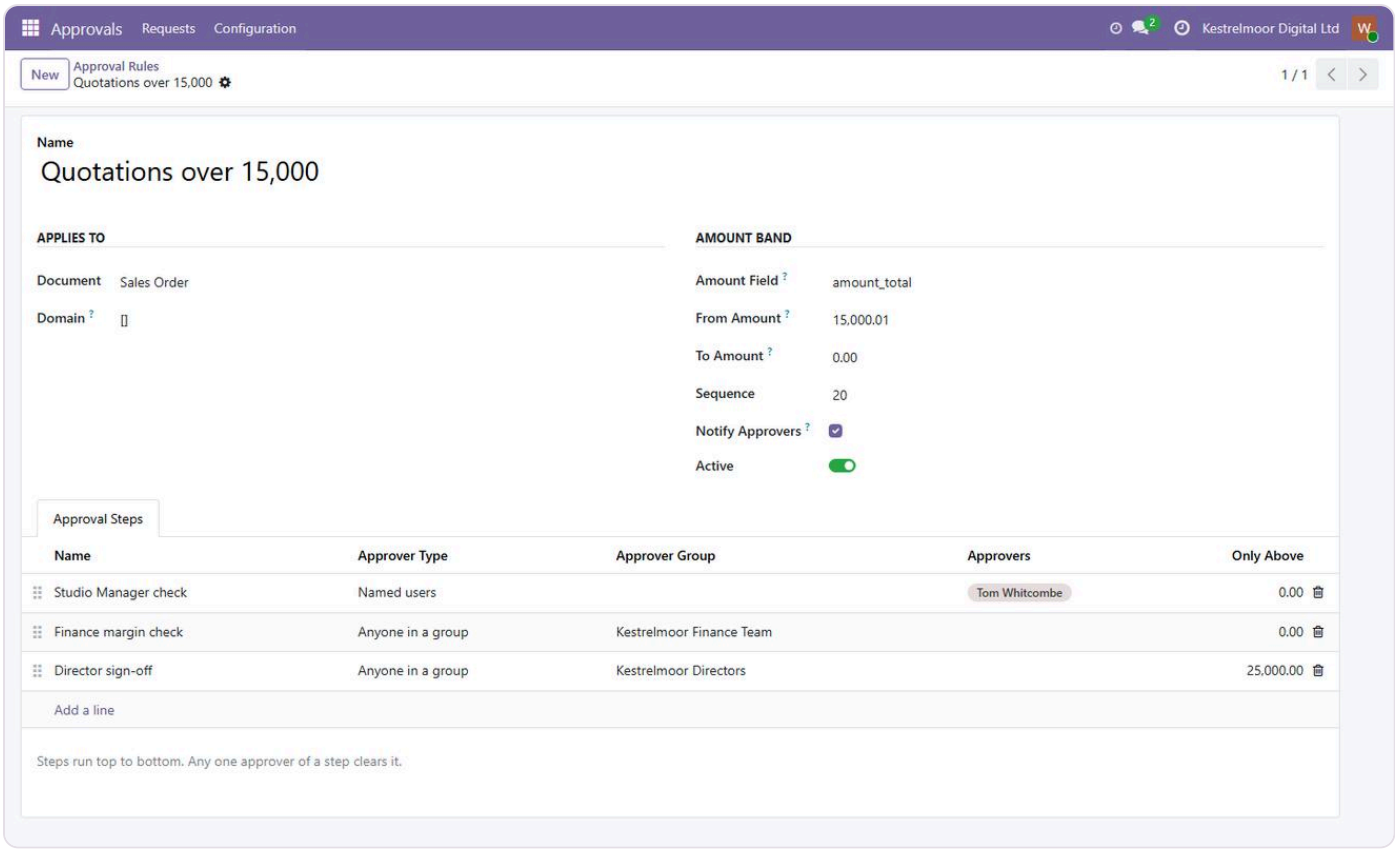

- Rules, amount bands and conditions
- Levels with named users or a group, and skipping a level below an amount
- What happens when a salesperson presses Confirm
- Approving, rejecting and sending round again
- Why changing the amount after approval starts again

TRY IT YOURSELF ON THE DEMO

1. Approvals, Requests, All Requests, filter on Waiting Approval
2. Open APR/2026/0012 for S00016, waiting on Director sign-off
3. Approvals, Configuration, Approval Rules, open Quotations over 15,000

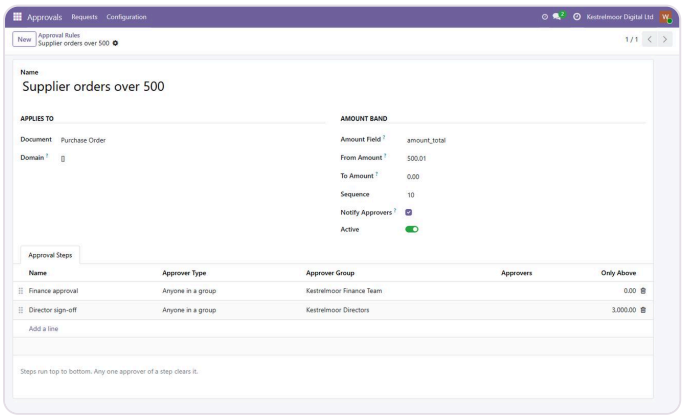

Approvals, Configuration, Approval Rules: two bands for quotations, one for supplier orders and one for credit notes.

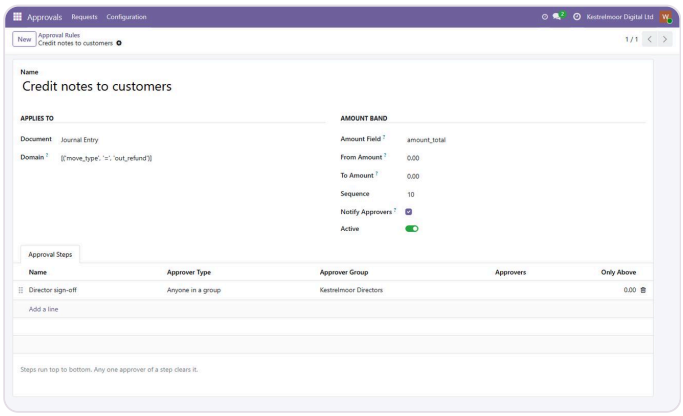

Quotations over 15,000: three levels in order. The studio manager checks, anyone in the Finance Team checks the margin, and anyone in Directors signs off, but only on orders of 25,000 or more.

FIELD	WHAT IT DOES
Document	Sales Order, Purchase Order or Journal Entry (invoices and credit notes).
Sequence	Rules are tried in order; the first one that matches owns the document.
Condition	An Odoo domain the document must match, for example credit notes only.
Amount Field	The amount the band is measured on. Total by default.
From Amount, To Amount	The band. Leave To at zero for no upper limit.
Levels	Steps in order: named users or anyone in a group, with an optional Only Above amount that skips the step on smaller documents.
Notify Approvers	Puts a to-do activity on each approver when their step comes round.

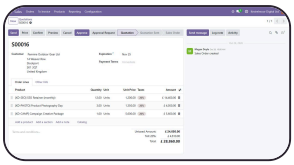

Supplier orders over 500: Finance, then Directors above 3,000.

Credit notes to customers: a condition on the move type, any amount.

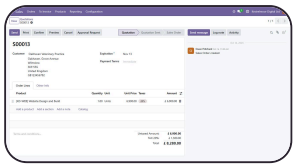

On the document

1

Confirm sends it for approval

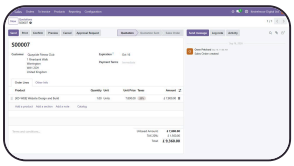

Megan pressed Confirm on S00016, 28,860. It matched Quotations over 15,000, so a request was created instead and the order stayed a quotation. Approve and Approval Request appear in the header.

2

Approved, not yet confirmed

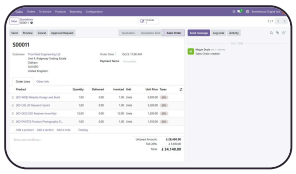

S00013 is approved. Confirm now goes through.

3

Rejected

Tom rejected S00007. Press Confirm again after fixing it and the same request goes round from the first step.

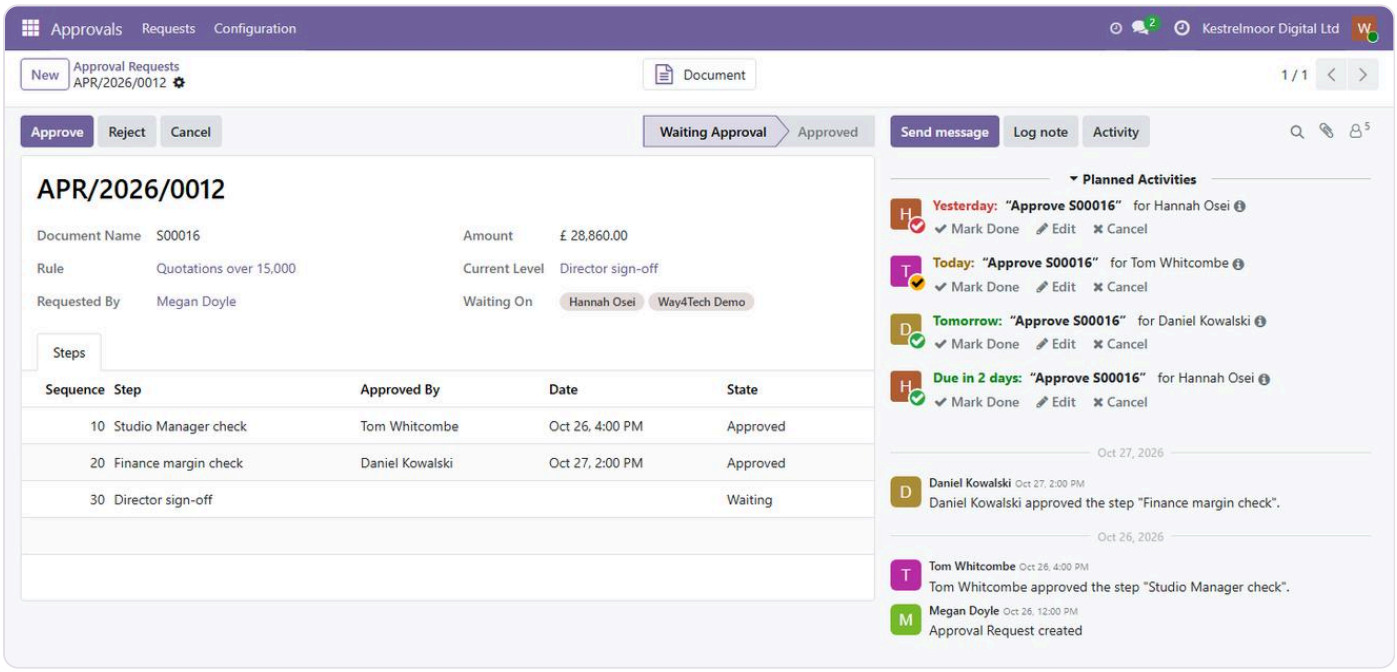

4

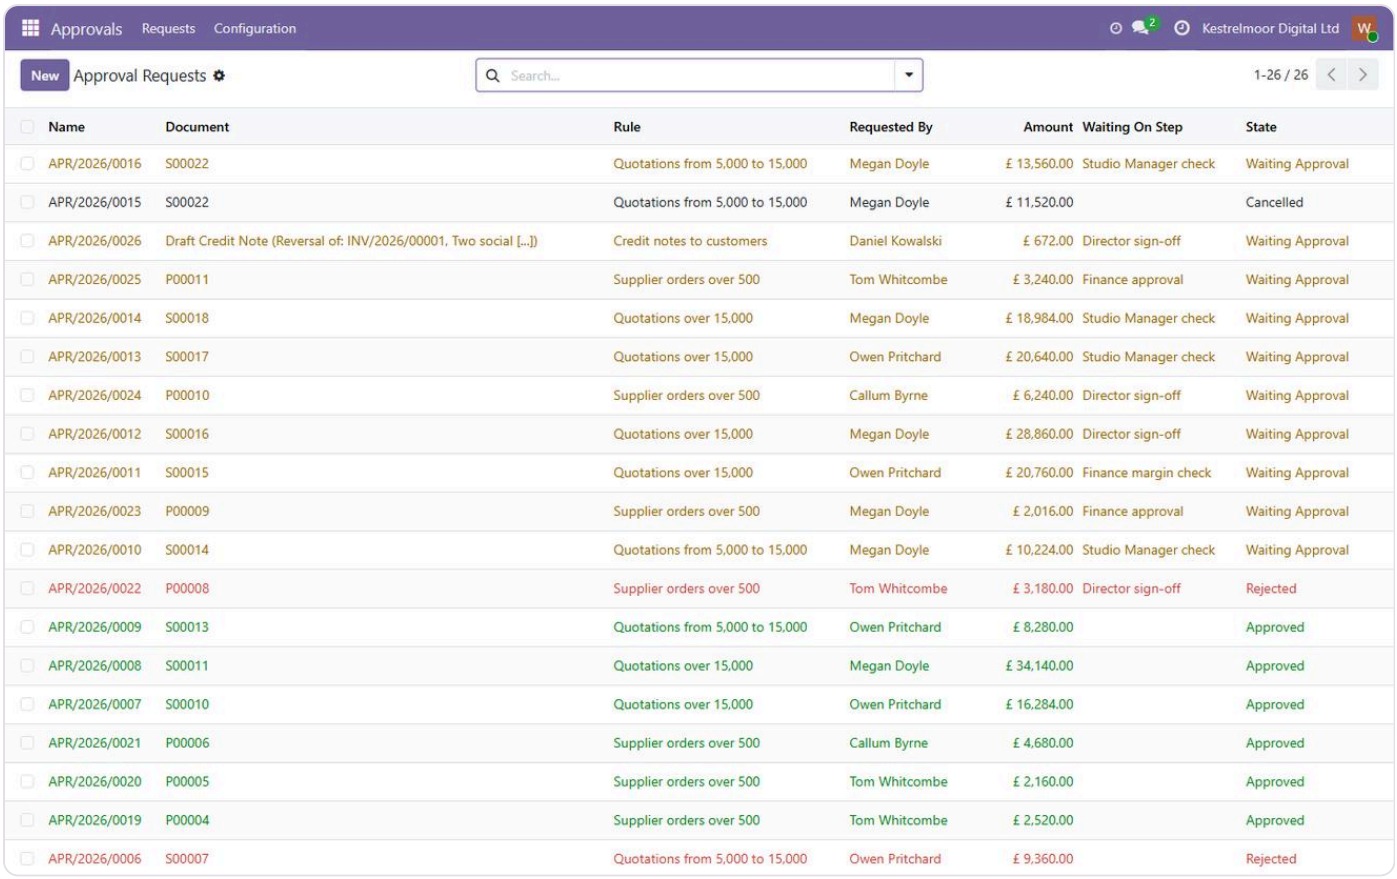

Approved and confirmed

S00011 passed all three levels and was confirmed.

The request

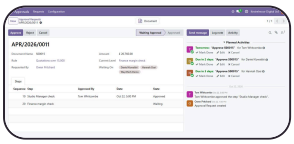

APR/2026/0012: the steps, who approved each and when, the step it is waiting on and the people who can act. Every step is stamped in the chatter.

Name	Document	Rule	Requested By	Amount	Waiting On Step	State
APR/2026/0016	S00022	Quotations from 5,000 to 15,000	Megan Doyle	£ 13,560.00	Studio Manager check	Waiting Approval
APR/2026/0015	S00022	Quotations from 5,000 to 15,000	Megan Doyle	£ 11,520.00		Cancelled
APR/2026/0026	Draft Credit Note (Reversal of: INV/2026/00001, Two social [...])	Credit notes to customers	Daniel Kowalski	£ 672.00	Director sign-off	Waiting Approval
APR/2026/0025	P00011	Supplier orders over 500	Tom Whitcombe	£ 3,240.00	Finance approval	Waiting Approval
APR/2026/0014	S00018	Quotations over 15,000	Megan Doyle	£ 18,984.00	Studio Manager check	Waiting Approval
APR/2026/0013	S00017	Quotations over 15,000	Owen Pritchard	£ 20,640.00	Studio Manager check	Waiting Approval
APR/2026/0024	P00010	Supplier orders over 500	Callum Byrne	£ 6,240.00	Director sign-off	Waiting Approval
APR/2026/0012	S00016	Quotations over 15,000	Megan Doyle	£ 28,860.00	Director sign-off	Waiting Approval
APR/2026/0011	S00015	Quotations over 15,000	Owen Pritchard	£ 20,760.00	Finance margin check	Waiting Approval
APR/2026/0023	P00009	Supplier orders over 500	Megan Doyle	£ 2,016.00	Finance approval	Waiting Approval
APR/2026/0010	S00014	Quotations from 5,000 to 15,000	Megan Doyle	£ 10,224.00	Studio Manager check	Waiting Approval
APR/2026/0022	P00008	Supplier orders over 500	Tom Whitcombe	£ 3,180.00	Director sign-off	Rejected
APR/2026/0009	S00013	Quotations from 5,000 to 15,000	Owen Pritchard	£ 8,280.00		Approved
APR/2026/0008	S00011	Quotations over 15,000	Megan Doyle	£ 34,140.00		Approved
APR/2026/0007	S00010	Quotations over 15,000	Owen Pritchard	£ 16,284.00		Approved
APR/2026/0021	P00006	Supplier orders over 500	Callum Byrne	£ 4,680.00		Approved
APR/2026/0020	P00005	Supplier orders over 500	Tom Whitcombe	£ 2,160.00		Approved
APR/2026/0019	P00004	Supplier orders over 500	Tom Whitcombe	£ 2,520.00		Approved
APR/2026/0006	S00007	Quotations from 5,000 to 15,000	Owen Pritchard	£ 9,360.00		Rejected

Requests, All Requests: every request with its rule, requester, amount, the step it is waiting on and its state.

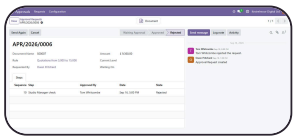

REQUEST STATE	MEANING	ON THE DEMO
Waiting Approval	A step is still open.	S00014, S00015, S00016, P00009, P00010, the credit note
Approved	Every step approved. The document can be confirmed or posted.	S00011, P00006
Rejected	An approver said no. Send Again restarts it.	S00007, P00008
Cancelled	Replaced: the document changed after approval.	APR/2026/0015 for S00022

5

Part way

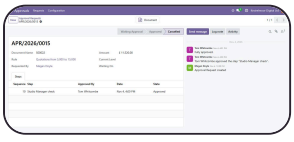

S00015 has the studio manager's approval and waits on Finance.

6

A rejection

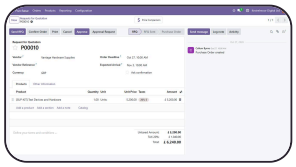

The step that rejected is stamped with who and when, and a note.

7

Amount changed

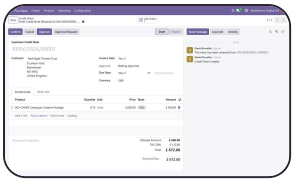

S00022 was approved, then 20 hours were added. The approval covered the old amount, so it was cancelled and a new request started.

8

A purchase order

P00010 for test hardware waits on Director sign-off after Finance approved.

9

A credit note

Posting the credit note was held for a director.

> The verdict comes from the request, never from the Approval field on the document, so nobody can mark their own order approved by editing it. An approver who cannot edit sales orders can still approve one.

PART 16 Audit log: who changed what, and when

AUDIT LOG

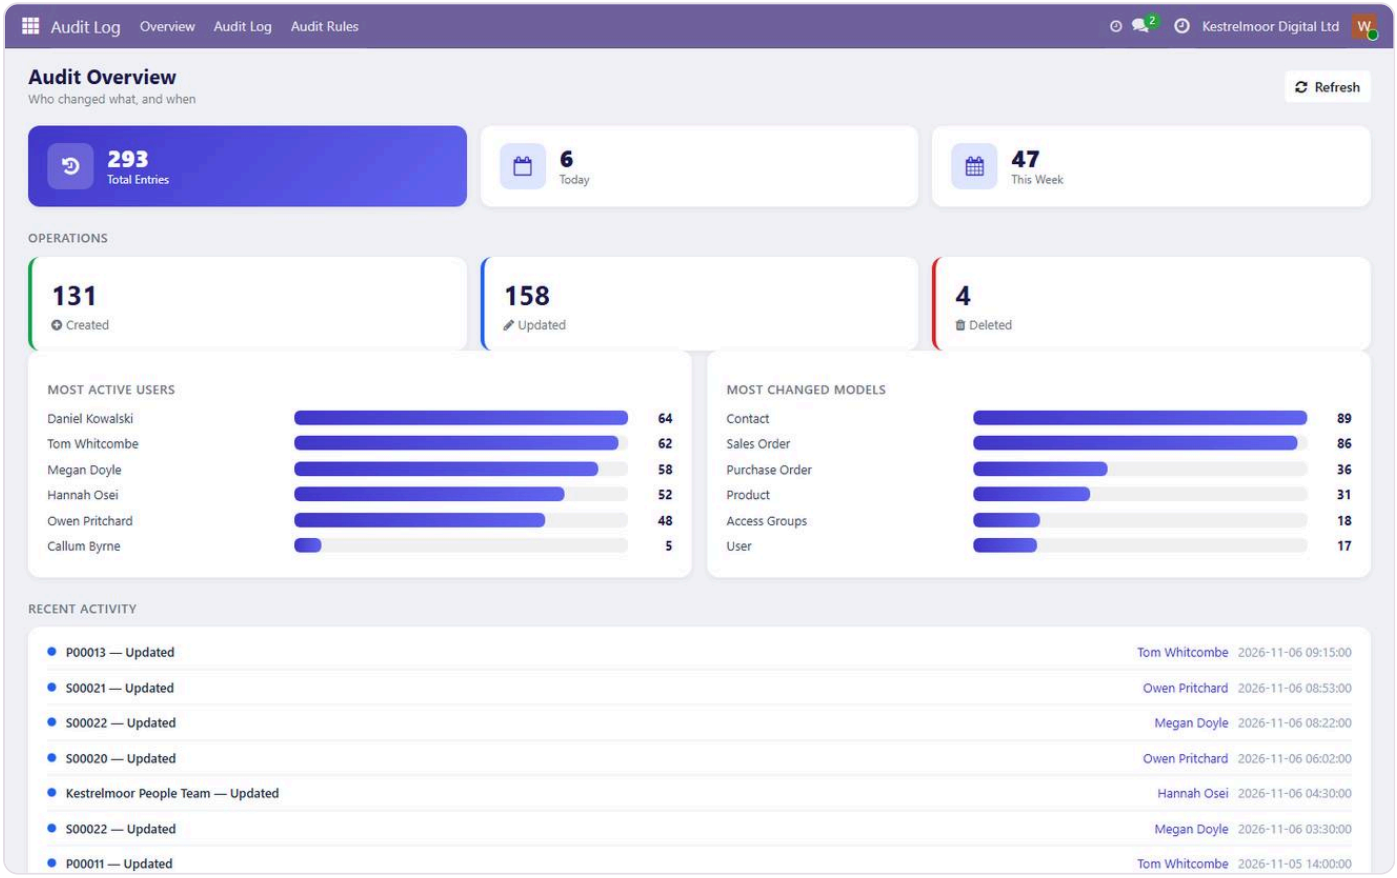

When a price or a customer's bank details change, someone will ask who did it. Audit Log records creations, changes and deletions on the models you choose, with the old and the new value of every tracked field.

IN THIS PART YOU WILL LEARN

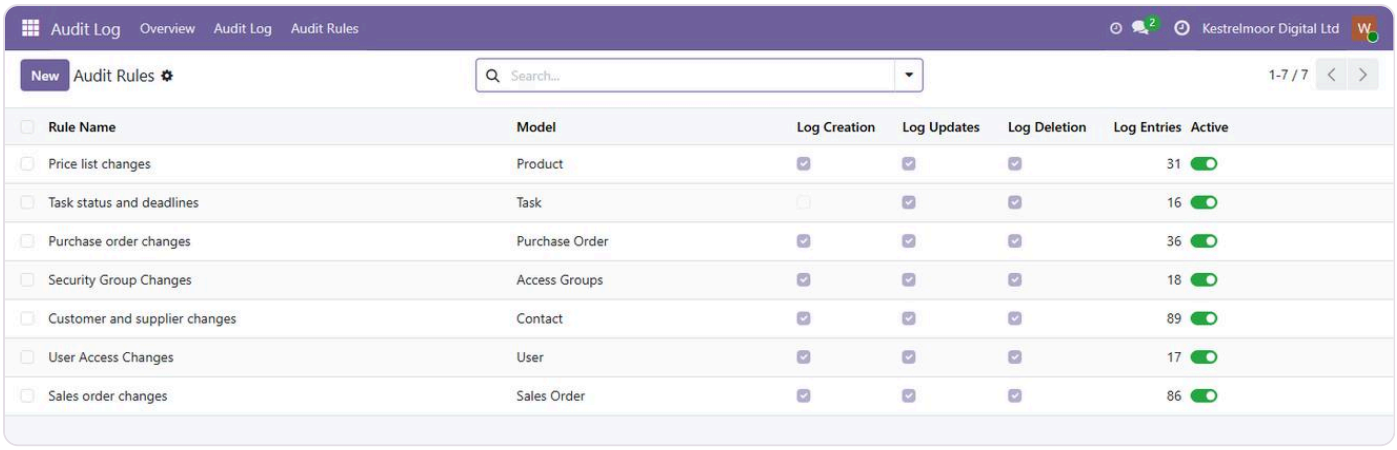

- Choosing what is audited
- Reading an entry and its field changes
- The overview dashboard
- How long entries are kept

TRY IT YOURSELF ON THE DEMO

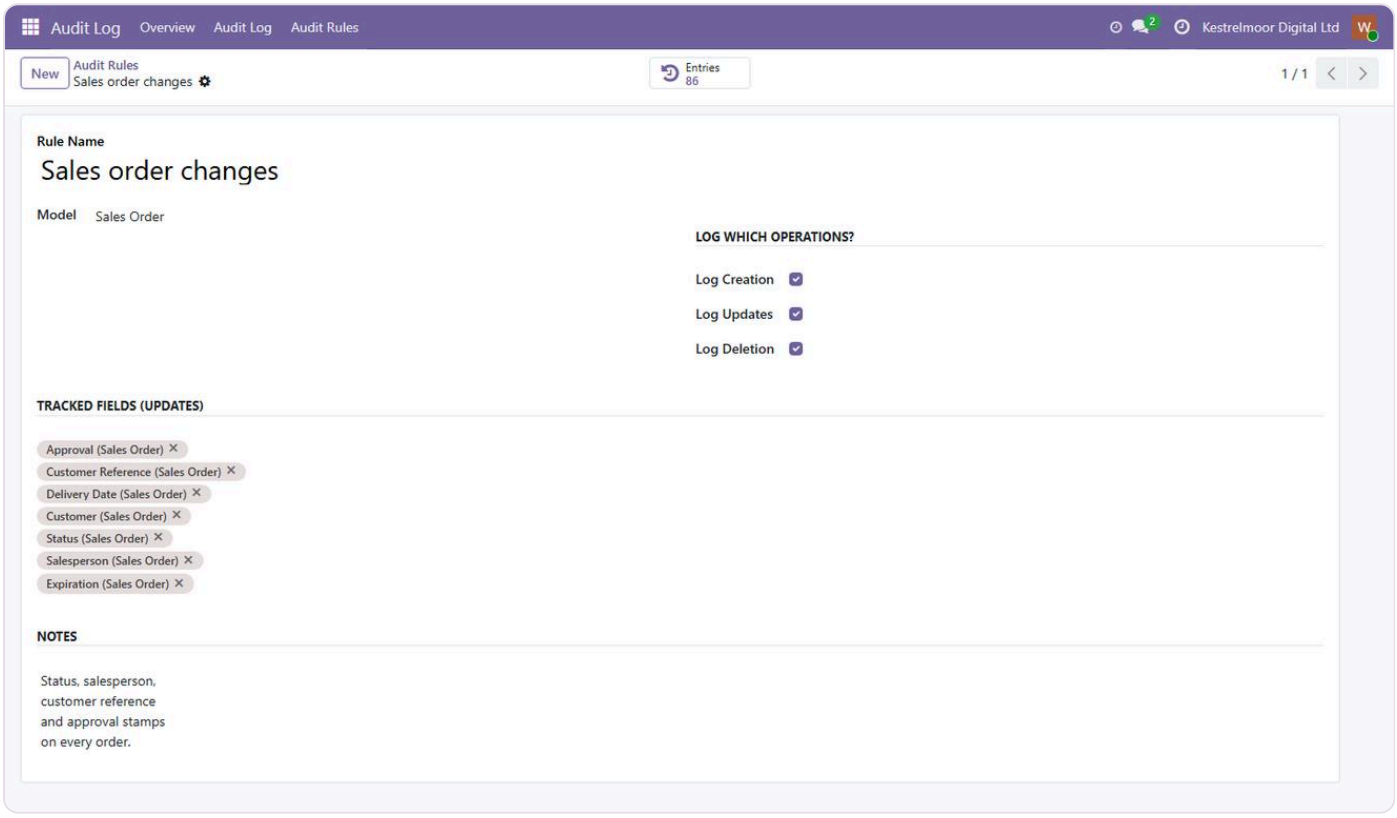

1. Audit Log, Overview
2. Audit Log, Audit Log, filter on Deleted
3. Open Audit Rules, Sales order changes

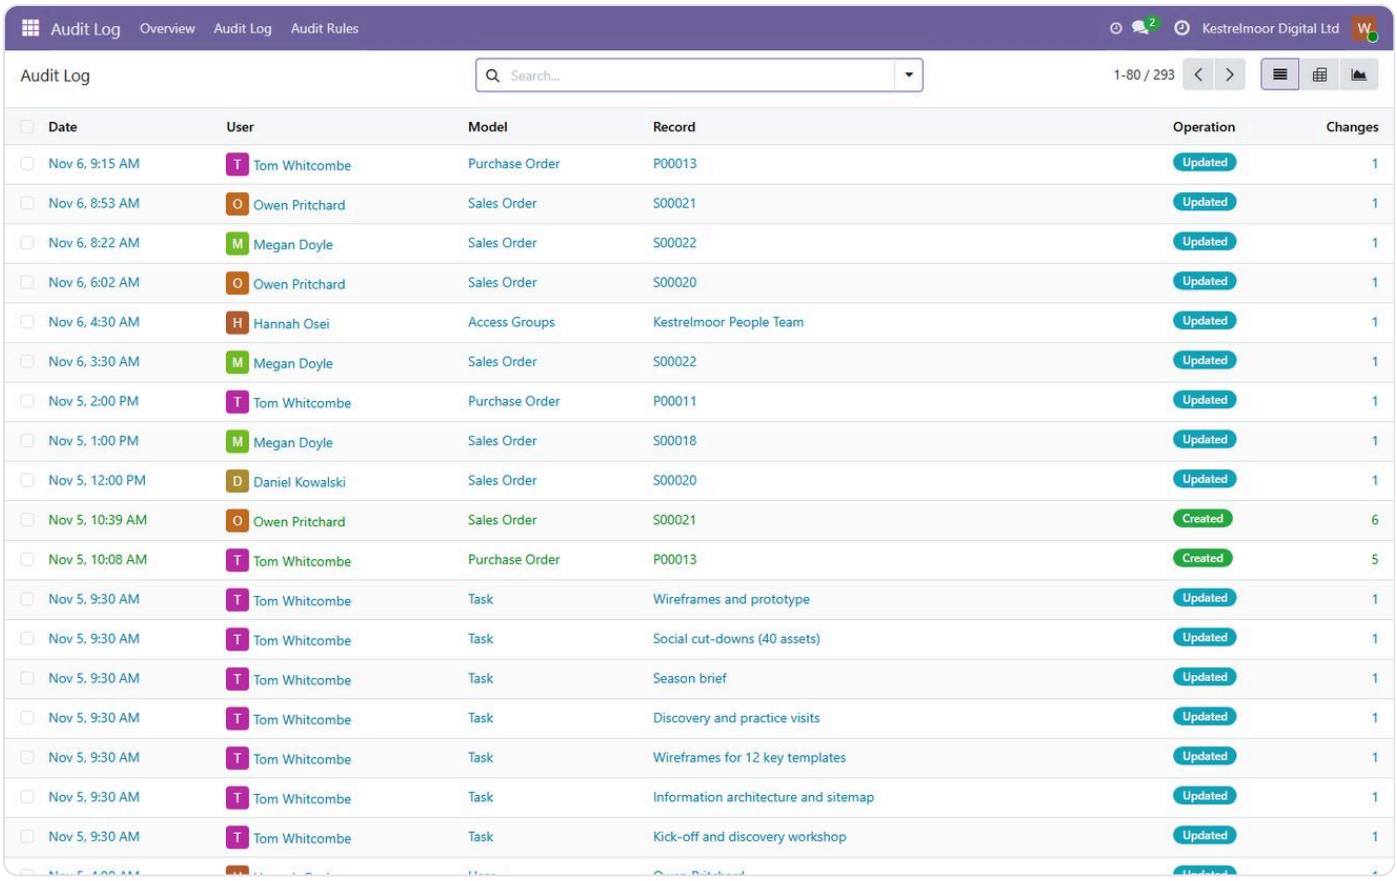

Audit Log, Overview: totals for all time, today and this week, created, updated and deleted, the most active users, the most changed models and the latest entries.

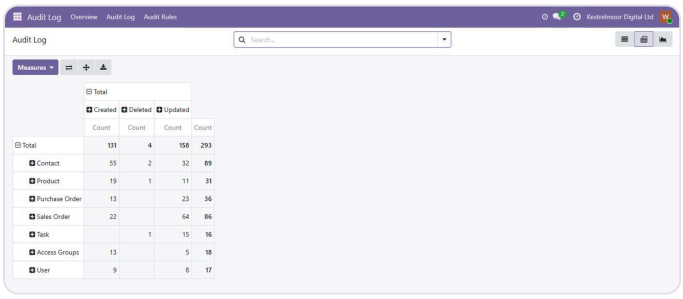

Audit Rules. Two come with the module: User Access Changes and Security Group Changes. The demo adds rules for contacts, sales orders, purchase orders, tasks and prices.

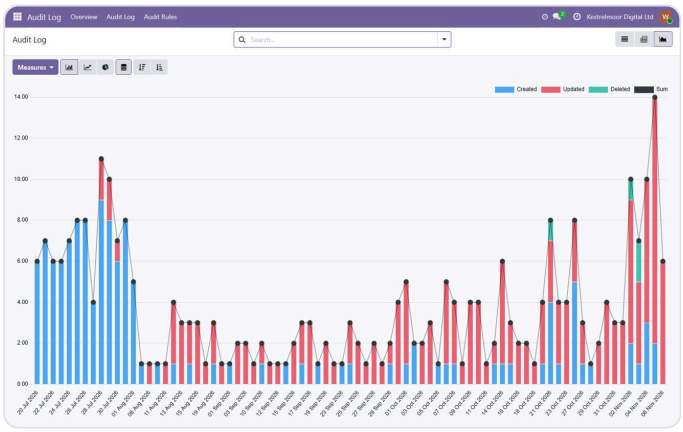

Sales order changes: log creation, updates and deletion, for the tracked fields listed. Leave Tracked Fields empty to track every stored field.

Audit Log, Audit Log: each entry with date, user, model, record and operation.

The log as a pivot, by user and operation.

And as a graph.

Read only

Entries cannot be edited, only reviewed.

No cost when idle

Models with no rule take a fast path; logging never raises an error into the change itself.

Retention

A daily job, Audit: Purge Old Log Entries, deletes entries older than the retention set in Settings (90 days by default, 0 keeps everything).

PART 17 Recently viewed and pinned records

RECENT RECORDS

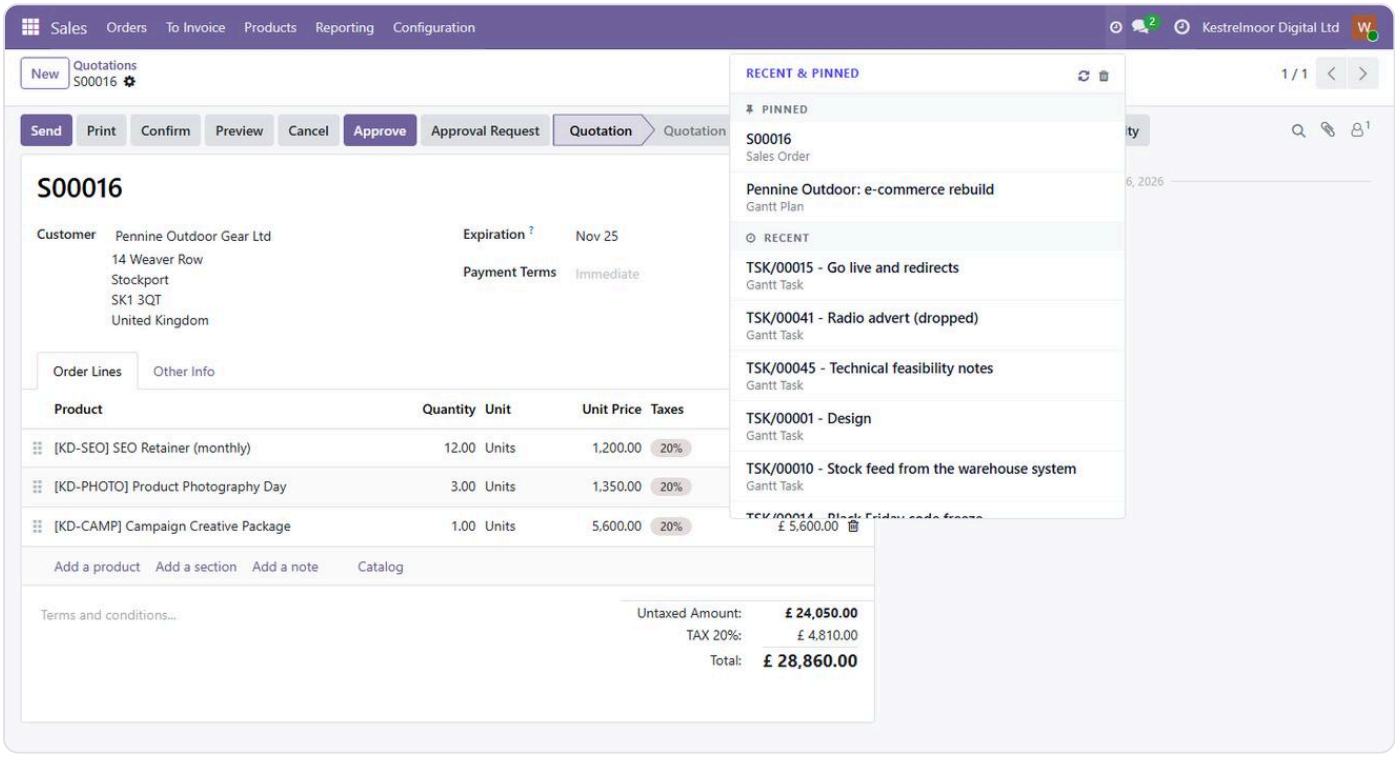

People open the same twenty records all day: the current order, the customer, the project. Recent Records adds a clock icon to the top bar with the last records you opened and the ones you pinned.

IN THIS PART YOU WILL LEARN

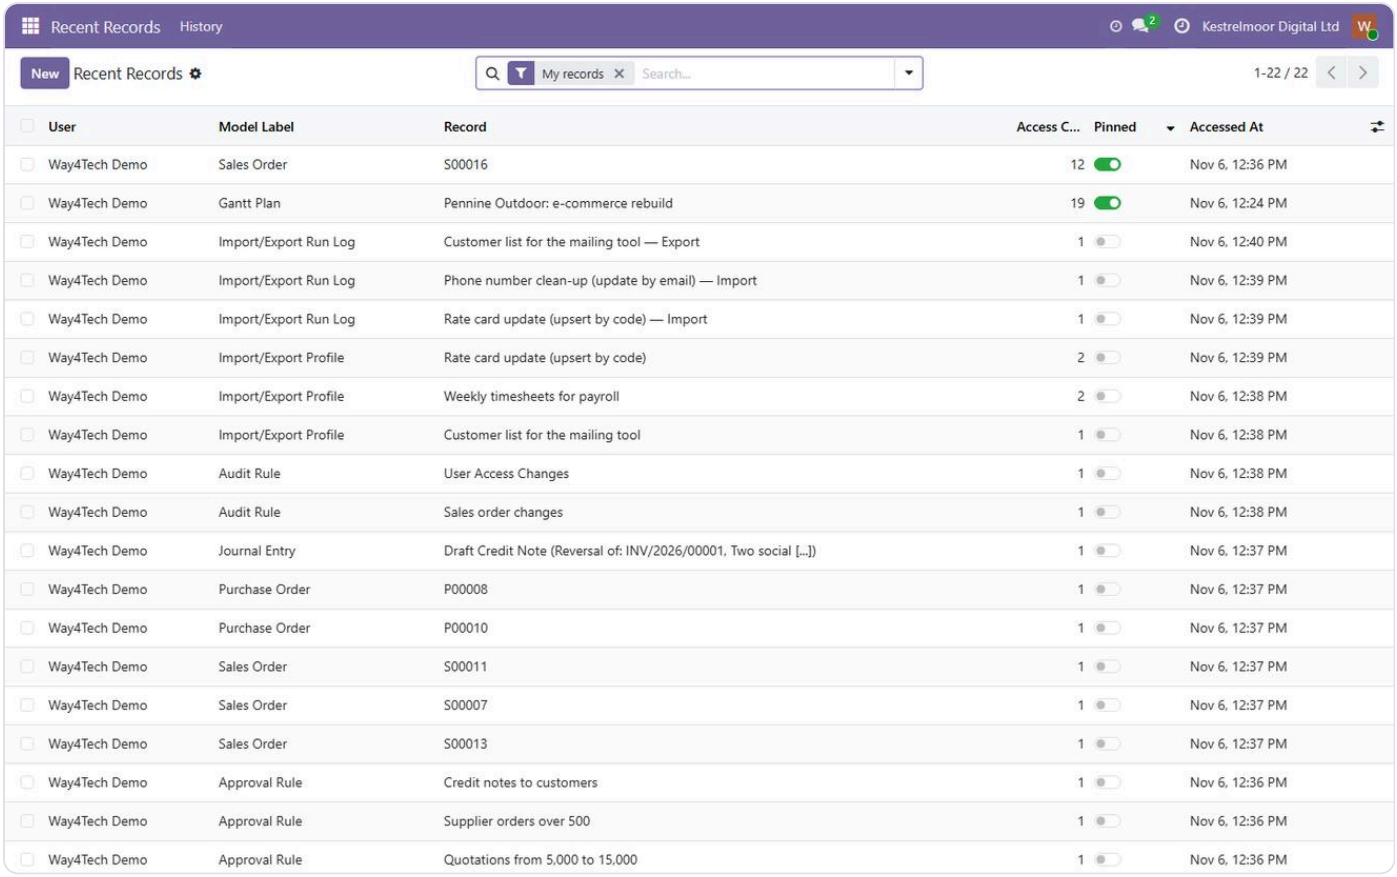

- Opening the panel and jumping back to a record
- Pinning a record so it stays
- The settings and the daily tidy-up

TRY IT YOURSELF ON THE DEMO

1. Click the clock icon in the top bar
2. Click a pinned record to jump to it
3. Recent Records, History

The Recent and Pinned panel. Pinned records sit at the top; below them are the last records opened, newest first. Each line has a pin button, and the header has refresh and clear.

User	Model Label	Record	Access C...	Pinned	Accessed At
Way4Tech Demo	Sales Order	S00016	12	●	Nov 6, 12:36 PM
Way4Tech Demo	Gantt Plan	Pennine Outdoor: e-commerce rebuild	19	●	Nov 6, 12:24 PM
Way4Tech Demo	Import/Export Run Log	Customer list for the mailing tool — Export	1		Nov 6, 12:40 PM
Way4Tech Demo	Import/Export Run Log	Phone number clean-up (update by email) — Import	1		Nov 6, 12:39 PM
Way4Tech Demo	Import/Export Run Log	Rate card update (upsert by code) — Import	1		Nov 6, 12:39 PM
Way4Tech Demo	Import/Export Profile	Rate card update (upsert by code)	2		Nov 6, 12:39 PM
Way4Tech Demo	Import/Export Profile	Weekly timesheets for payroll	2		Nov 6, 12:38 PM
Way4Tech Demo	Import/Export Profile	Customer list for the mailing tool	1		Nov 6, 12:38 PM
Way4Tech Demo	Audit Rule	User Access Changes	1		Nov 6, 12:38 PM

Way4Tech Demo	Journal Entry	Draft Credit Note (Reversal of: INV/2026/00001, Two social [...])	1		Nov 6, 12:37 PM
Way4Tech Demo	Purchase Order	P00008	1		Nov 6, 12:37 PM
Way4Tech Demo	Purchase Order	P00010	1		Nov 6, 12:37 PM
Way4Tech Demo	Sales Order	S00011	1		Nov 6, 12:37 PM
Way4Tech Demo	Sales Order	S00007	1		Nov 6, 12:37 PM
Way4Tech Demo	Sales Order	S00013	1		Nov 6, 12:37 PM
Way4Tech Demo	Approval Rule	Credit notes to customers	1		Nov 6, 12:36 PM
Way4Tech Demo	Approval Rule	Supplier orders over 500	1		Nov 6, 12:36 PM
Way4Tech Demo	Approval Rule	Quotations from 5,000 to 15,000	1		Nov 6, 12:36 PM

Recent Records, History: the table behind the panel, with user, model, record, when it was last opened and how many times.

A record is added when you open it in a form. Each user has their own list. Settings set how many are kept per user (20) and when unpinned entries are pruned (after 30 days); a daily scheduled action does the pruning.

PART 18 Excel and CSV import and export

IMPORT EXPORT

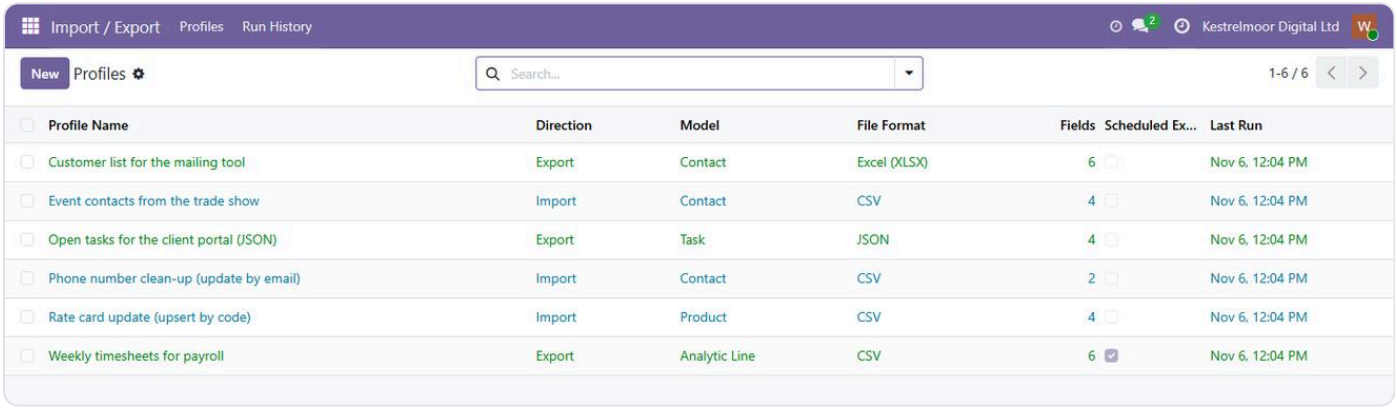

Odoo's own import matches on the external ID and starts from scratch each time. Import Export keeps the mapping in a profile, matches on any field, creates linked records it cannot find, checks a file before saving anything and keeps a log of every row that failed.

IN THIS PART YOU WILL LEARN

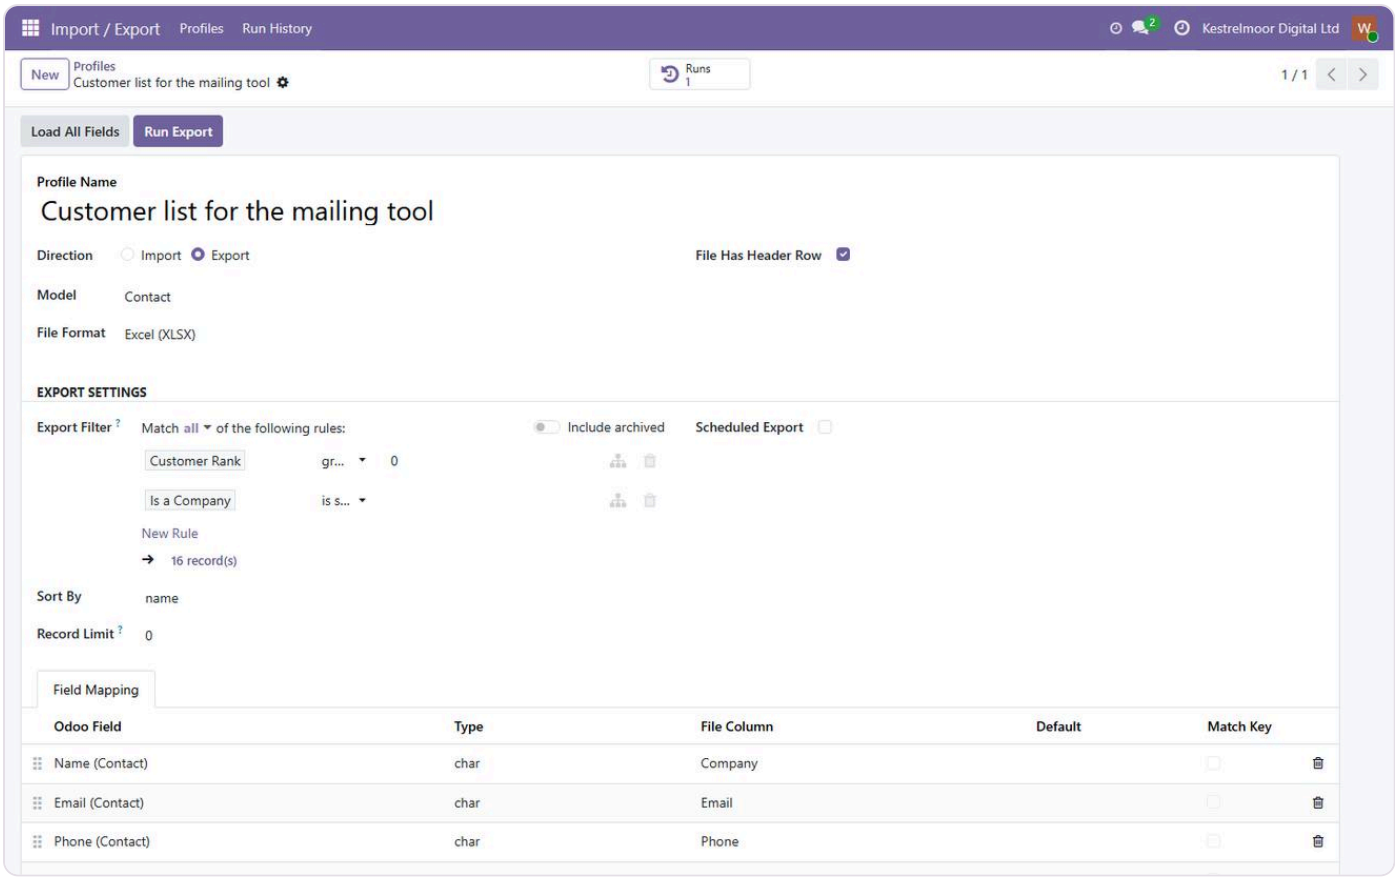

- Export profiles in Excel, CSV or JSON
- Import modes: create, update and upsert
- Match keys, defaults and creating missing links
- The dry run and the problem rows
- Scheduled exports by email

TRY IT YOURSELF ON THE DEMO

1. Import / Export, Profiles
2. Open Rate card update and look at the Match Key column
3. Run History, open the Partial run

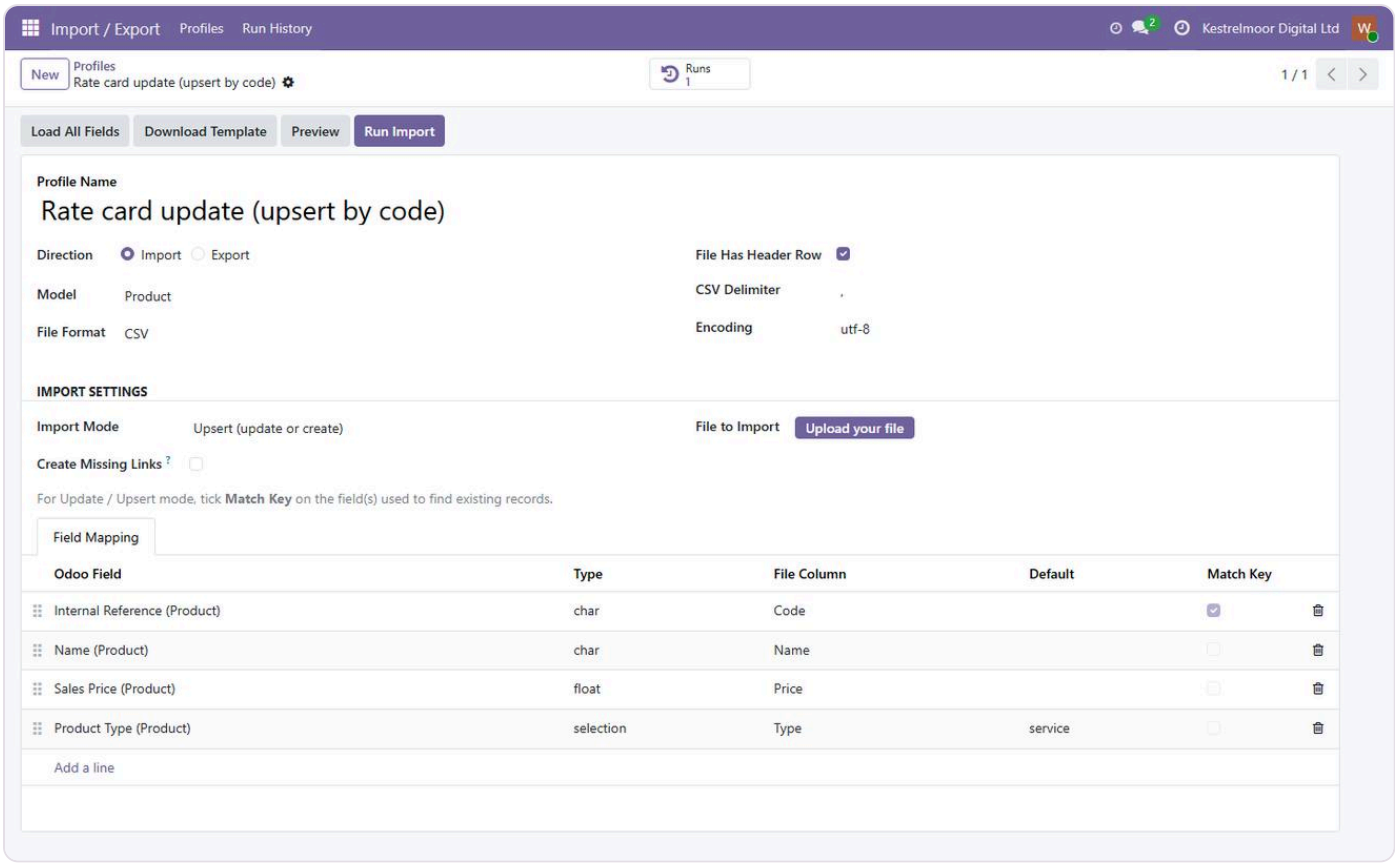

Import / Export, Profiles: three exports and three imports on contacts, timesheets, tasks and products.

Customer list for the mailing tool: export, Excel, contacts filtered to customer companies and sorted by name. Each mapping line names a field and the column header to use.

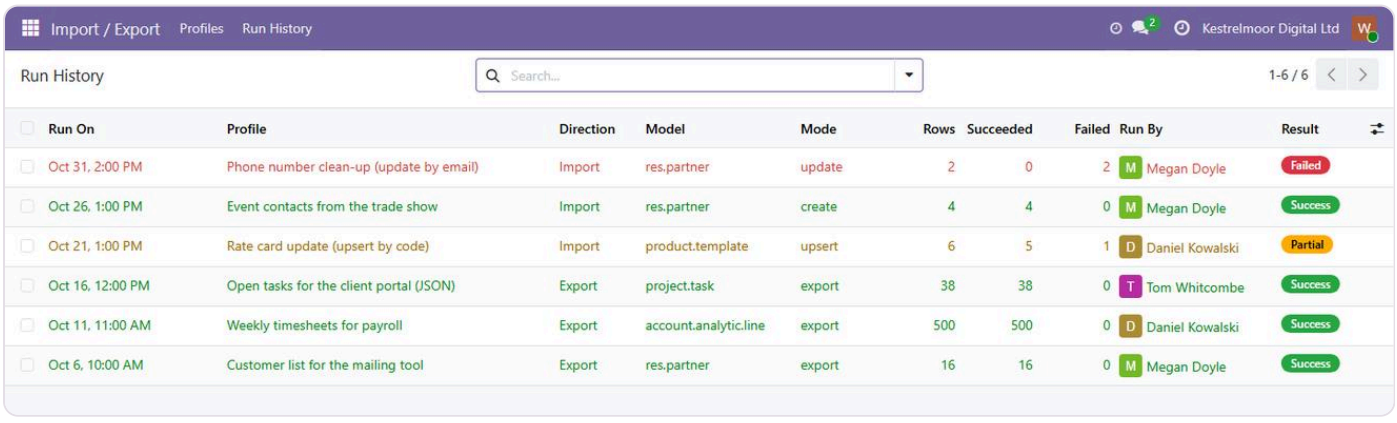

BUTTON	WHAT IT DOES
Load All Fields	Fills the mapping with every field of the model, to trim down.
Run Export	Builds the file and keeps it on a log entry.
Download Template	A blank file with the mapped headers, for someone to fill in.
Preview	A dry run: the file is processed and rolled back, and you are told how many rows would work and why the rest would not.
Run Import	Imports the file and opens the log.

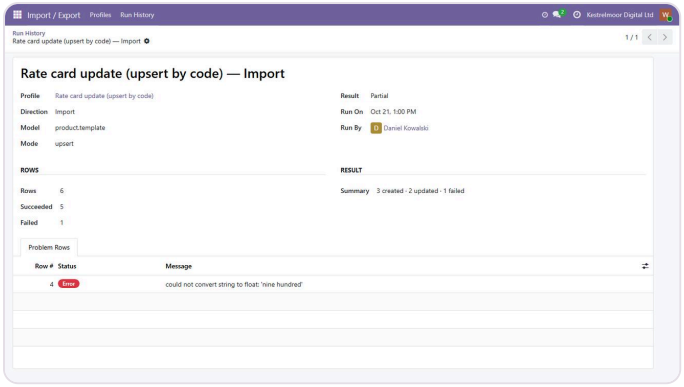

Rate card update: import, CSV, upsert. Code is the Match Key, so a row with a known code updates that product and a new code creates one. Type has a default of service for empty cells.

MODE	DOES
Create	Every row is a new record.
Update	Rows that match an existing record on the key update it; rows that match nothing are reported.
Upsert	Update when a match is found, create when not.

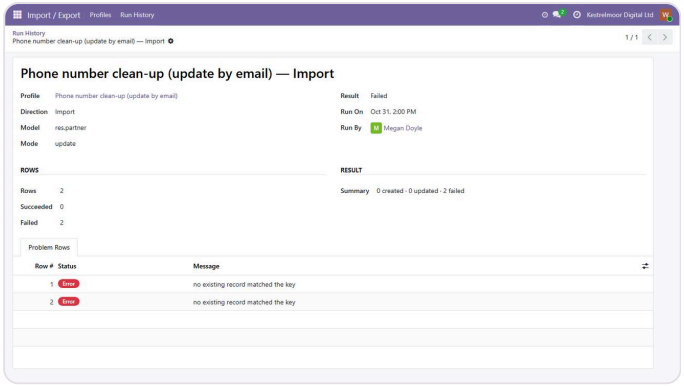

Create Missing Links finds or creates the related record named in a cell. The trade show import used it to create a contact tag that did not exist yet. One bad row never stops the run: it is logged and the rest carry on.

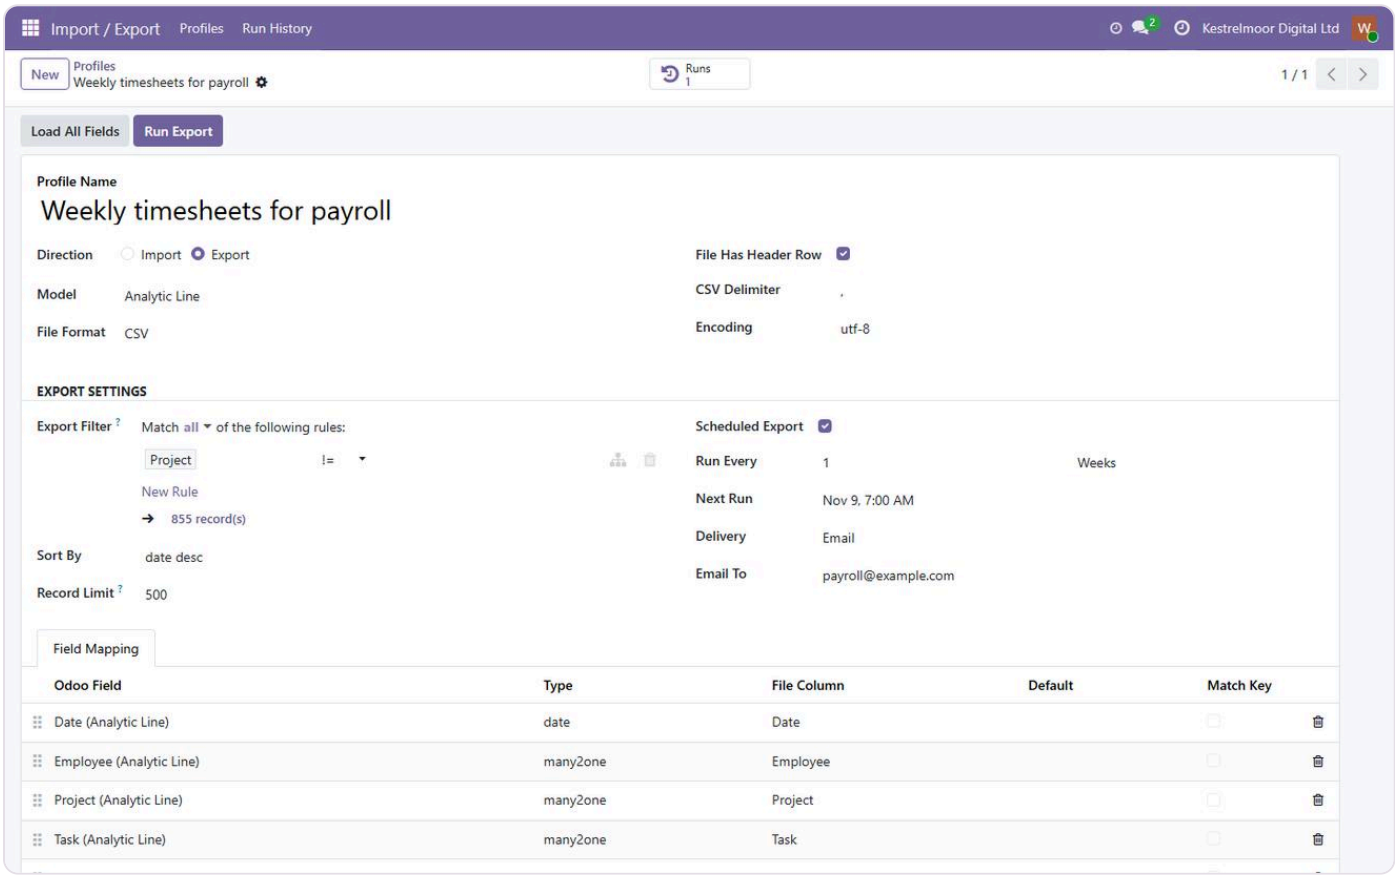

Run History: every run with direction, model, mode, result and row counts.

A partial import: one row had text in the Price column. The row, the message and the data are kept.

A failed update: no contact matched either email.

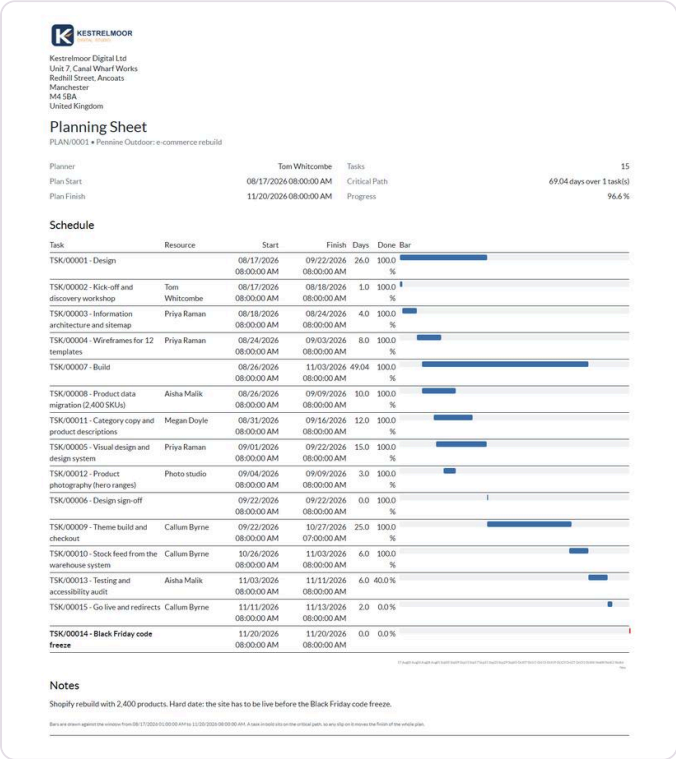

Weekly timesheets for payroll: a scheduled export, every week, delivered by email. The hourly scheduled action, Import/Export: Run Scheduled Exports, runs any profile whose next run has passed.

PART 19 Printed documents

Four of the modules print. Each report is under Print on its record.

REPORT	FROM	SHOWS	COVERED IN
GANTT VIEW Planning Sheet	A plan	Tasks as a table with bars, critical path in bold, float, chain length	Part 6
MAP VIEW Route Sheet	A route	Start, stops in order with address, leg, running total and arrival, return leg	Part 9
TIMESHEET GRID Grid Sheet	A grid, or Print on the grid	The rows, columns and totals on screen	Part 11
DOCUMENTS Folder Index	A folder	Every document in the folder with tags, owner, state and dates	Part 12

3	Greenmoss Garden Centres, Ramsbottom	Bridge Mill Garden Centre, Ramsbottom, BL0 9AB	11.1	29.2	2 h 14 min	☐
4	Greenmoss Garden Centres	Greenmoss Nursery, Hollin Road, Bury, BL9 8QA	5.8	35.1	3 h 08 min	☐
←	Return to the starting point		13.0	48.1		

Distances are straight lines between coordinates. Real driving distance will be longer, and by how much depends on the road network.

Notes

Drop the light stands at Greenmoss first.

Route Sheet, RTE/00002.

PART 20 A fifteen minute walk-through

With the demo open and fifteen minutes, this path shows all eight modules. It is also the order to show them to somebody else in.

#	DO THIS	AND NOTICE
1	Planning, Board, click Week	*Bars by person coloured by project, progress inside the bar, critical tasks outlined in red.*
2	Planning, Plans, PLAN/0001, Dependencies tab	*All four link types, a negative lag, and the Black Friday freeze held to its date.*
3	On the same plan, Check Conflicts	*Where a resource is booked past its capacity, with the hours of overlap.*
4	Maps, Map, click a pin, then pick Quotations and orders	*Pins coloured by account manager, then by order status.*
5	Maps, Routes, RTE/00001	*Visiting order, leg distances and arrival times; Print Route Sheet.*
6	Grid, Grid, Timesheet Grid, one window back	*Hours by person and project, and October closed with a padlock.*
7	Documents, Folders, Finance, Access tab	*A folder only the finance team can open, download link included.*
8	Documents, Wireframes, 12 templates, Versions	*Two earlier rounds kept, each restorable.*
9	Documents, Upload Requests, DOC/REQ/00001	*A link sent to a customer, no login, lands in the right folder.*
10	Approvals, All Requests, then Sales, S00016	*A 28,860 quotation held for director sign-off; Approve it from the order.*
11	Audit Log, Overview	*Who changed what this week, and the deleted records.*
12	Clock icon in the top bar	*Pinned and recent records, one click back.*
13	Import / Export, Run History, the Partial run	*The one bad row kept with its data and the reason.*

Questions people ask

QUESTION	ANSWER
Do these need Odoo Enterprise?	No. All eight run on Odoo 19 Community and install nothing from Enterprise.
Can I buy only one?	Yes. Each is a separate module with its own price; none of them depends on another.
Does the Gantt work on Project tasks?	A board can draw any model with two date fields of the same type. The scheduling engine (links, cascade, critical path) works on the module's own plans and tasks.
Does the map need Google Maps or a tile subscription?	No. Pins are drawn without tiles, and geocoding uses the provider set in Odoo. A tile server can be added if you run one.
Are route distances road distances?	No. They are straight-line distances between pins, good for ordering calls and rough timings.

Do grid edits bypass Odoo rules?	No. Every cell edit is an ordinary create or write on the server, so access rules, constraints and locks apply.
Can a customer upload without an account?	Yes, through an upload request link with a token, until its deadline.
Can an approver approve without edit rights on sales?	Yes. Being named on the step is enough; the stamp on the document is written for them.
Does the audit log slow Odoo down?	Only models with a rule are logged; the rest take a fast path.
Can exports run on a schedule?	Yes, hourly to monthly, stored in the log or emailed.

PART 21 The menu map

Every screen in the eight modules, on one page.

Planning (Gantt View)

Board	The Gantt board, any configured model, day, week or month
Plans	Schedules: tasks, links, calendar rules, state
Tasks	Every task with dates, float and constraint
Dependencies	Finish or start links with lag
Configuration: Resources	People and equipment with capacity
Configuration: Boards	Which model a board draws, and how

Maps (Map View)

Map	Pins for any configured model
Maps	Map configurations, colours and pop-ups
Routes	Visiting orders with legs and timings
Stops	Every stop on every route
Geocoding: Contacts To Locate	Contacts with an address but no pin
Geocoding: Cached Addresses	Answers kept from the geocoder
Configuration: Maps	Same list as Maps, for administrators

Grid (Timesheet Grid)

Grid	The editable grid, any configured model
Entries	Planning entries behind the shipped grid
Copy a Period	One column copied onto another
Configuration: Grids	Model, date, measure, rows and rules
Configuration: Categories	Kinds of work for planning entries
Configuration: Period Locks	Closed periods, fixed or rolling

Documents

Documents	Every filed document
Folders	The tree with read, write and manage groups
Upload Requests	Links that ask somebody for a file
Review: Expiring Soon	Documents near or past expiry
Review: Versions	Every earlier copy of every file
Configuration: Tag Categories, Tags	How documents are labelled

Approvals

Requests: To Approve	Requests waiting on you
Requests: All Requests	Every request in every state
Configuration: Approval Rules	Which documents need sign-off, and from whom

Audit Log

Overview	Counts, most active users, recent changes
Audit Log	Every logged change with old and new values
Audit Rules	Which models are watched
Settings	How long entries are kept (administrators)

Import / Export

Profiles	Saved imports and exports
Run History	Every run, with problem rows and files

Recent Records

Clock icon in the top bar	Pinned and recently opened records
History	The table behind it

Want these on your own Odoo?

We install the modules you pick on your Odoo 19 Community database, point the Gantt board, the map and the grid at your own models, set the folder permissions and approval rules with you, and load your history through import profiles. Each module is sold on its own, so you only pay for the ones you use.
