COMPLETE GUIDE · SIX MODULES, SETUP AND EVERY SCREEN

Sales and Messaging Tools for Odoo 19

WhatsApp from quotes and invoices, WhatsApp codes on signup, email drip campaigns, sales commission, quotation follow-up reminders and an AI assistant on leads, quotes and products. Every screen and every step, shown on one live demo. No Odoo background needed.

WHATSAPP · WHATSAPP OTP · DRIP CAMPAIGNS · COMMISSION · FOLLOW-UP · AI ASSISTANT

START

About this guide

A B2B sale is mostly follow-through: the quote that was sent and never chased, the lead that asked for a price list and heard nothing for a week, the customer who answers WhatsApp but not email, and the salesperson who wants to know what they earned this month. This guide covers six Way4Tech modules that sit on top of Odoo CRM and Sales and deal with exactly that follow-through, one screen at a time.

Who it is for

Sales managers and owners deciding what to buy, the person who will set it up, and salespeople who will use it every day. You do not need to have used Odoo before.

How to read it

Parts 1 to 3 explain the tools and connect them. Parts 4 to 12 go module by module, every menu, field and button, with a numbered screenshot for each step. Part 13 onwards is reports, a 15 minute demo script, an FAQ and the menu map.

The live demo

Dunecrest Industrial Supplies LLC, an invented Dubai distributor of PPE, cleaning chemicals, packaging and site tools, with four salespeople, two outside agents, 44 leads, 57 quotations and five months of history.

HOW IT WORKS

The demo company

Address	**sales-demo.way4tech.com**
Sign in	**w4demo / Demo2026**
Company	Dunecrest Industrial Supplies LLC, Al Quoz, Dubai. Prices in AED with 5% VAT
Runs on	Odoo 19 Community with CRM, Sales, Invoicing and Website, plus the six modules below
Connections	None. WhatsApp and the AI Assistant run in simulation mode, and outgoing email stays on the server

Every company, person, phone number and email on the demo is invented (all emails end in example.com). The demo is shared, so anything you change may be seen by the next visitor. **Nothing on the demo reaches a real customer:** no WhatsApp Business number and no Anthropic key are connected, and no outgoing mail server is set up. Where a screen depends on one of those services, this guide says so and explains what happens on a live system, from the module code.

What is in the guide

PART 1 What the six modules do

PART 2 Signing in, the demo and who can do what

PART 3 Connections: WhatsApp numbers, templates, webhook and the AI provider

PART 4 WhatsApp day to day: inbox, sending from documents, receipts and reminders

PART 5 WhatsApp codes on website signup

PART 6 Drip campaigns: audience, flow, steps and testing

PART 7 Campaign results: participants, traces and the summary

PART 8 Commission plans: who earns what

PART 9 Commission earned: orders, invoices and commission lines

PART 10 Settlements and vendor bills

PART 11 Quotation follow-up reminders

PART 12 The AI Assistant: Ask Claude on leads, quotations and products

PART 13 Printed documents and scheduled actions

PART 14 A 15 minute demo script

PART 15 Questions people ask

PART 16 Menu map

PART 1 What the six modules do

Odoo CRM and Sales already track leads, quotations, orders and invoices. What they do not do on their own is chase. Each of these modules adds one kind of chasing or one kind of reward, and they share the same records, so a lead can get a welcome email, a WhatsApp message, an AI summary and, once it turns into an order, a commission line for the salesperson.

IN THIS PART YOU WILL LEARN

- What each module adds and what it costs
- Which coloured badge in this guide belongs to which module
- What standard Odoo Community already covers, and where the gaps are
- How the modules touch the same lead, quote and invoice

The modules and their badges

Every part of this guide carries the badge of the module it needs. Each module is sold on its own on the Odoo Apps store and runs on Odoo 19 Community. Prices are the store prices in US dollars, one time, per database.

Badge	Module	Technical name	Price	What it adds
WHATSAPP	WhatsApp Integration	wt_whatsapp_connector	USD 149	Send from quotes, invoices and contacts through the Meta WhatsApp Cloud API, approved templates with placeholders, an inbox for replies, delivery and read receipts, overdue invoice reminders
WHATSAPP OTP	WhatsApp OTP Verification	wt_whatsapp_otp_odoo	USD 20	A phone field and a six digit WhatsApp code on the website signup page, checked before the account is created
DRIP CAMPAIGNS	Marketing Automation	wt_marketing_automation	USD 129	Email drip campaigns over leads, contacts or any model: a flow of steps triggered by time, opens and clicks, with tags, activities and server actions
COMMISSION	Sales Commission	wt_sales_commission	USD 15	Commission plans by percentage, margin, per unit, per line or tiered, on invoice or on payment, several agents per order, settlements billed as vendor bills
FOLLOW-UP	Quotation Follow Up Reminders	wt_quotation_followup	USD 10	A daily sweep that emails customers about quotations left open after 2, 5, 10 and 15 days, logged in the chatter
AI ASSISTANT	AI Assistant	wt_ai_assistant	USD 199	An Ask Claude button on leads, quotations and products: summaries, lead scores, reply drafts, product copy, with every request and token logged

Bought together the six come to USD 522. None of them needs Odoo Enterprise. WhatsApp and the AI Assistant need accounts of your own with Meta and with Anthropic; those services bill you directly for what you send.

What standard Odoo Community already gives you STANDARD ODOO

CRM

Leads and opportunities, a pipeline by stage, activities, lost reasons, expected revenue and a predicted probability. Nothing chases a lead for you.

Sales

Quotations, online signature and payment, sales orders, invoicing from orders. You can email a quote by hand. Nothing reminds the customer later.

Email

Odoo sends email from any record and logs it in the chatter, and the Email Marketing app sends one-off mailings. Odoo's own Marketing Automation and WhatsApp apps are Enterprise only.

So on Community, a quote that goes quiet stays quiet, a salesperson works out commission in a spreadsheet, and WhatsApp happens on personal phones with nothing in Odoo. The six modules close those gaps without moving you to Enterprise.

How they meet on the same records

One lead, start to finish, on the demo

1. **Enquiry** — Web lead tagged Welcome Series
2. **Drip** — Welcome email, price list 3 days later
3. **AI** — Ask Claude to qualify and summarise
4. **Quote** — Sent by email and on WhatsApp
5. **Chase** — Reminders at +2, +5, +10, +15 days
6. **Paid** — Commission line for the agent

Record	What the modules add to it
Lead / opportunity	DRIP CAMPAIGNS participant, tags and activities from campaign steps AI ASSISTANT Ask Claude button
Quotation	WHATSAPP Send on WhatsApp FOLLOW-UP reminder fields and Send Reminder Now COMMISSION agents and estimate AI ASSISTANT Ask Claude
Customer invoice	WHATSAPP Send on WhatsApp, overdue reminders COMMISSION commission lines, Compute Commission
Contact	WHATSAPP message history COMMISSION agent and plan fields AI ASSISTANT AI requests DRIP CAMPAIGNS tags
Product	AI ASSISTANT Ask Claude for the sales description
Website signup	WHATSAPP OTP phone and code fields

PART 2 Signing in, the demo and who can do what

WHATSAPP DRIP CAMPAIGNS COMMISSION FOLLOW-UP AI ASSISTANT WHATSAPP OTP

Before the screens, the people. Each module brings its own user groups, so a salesperson can send WhatsApp messages without being able to change the Meta token, and can see their own commission without seeing everybody else's.

IN THIS PART YOU WILL LEARN

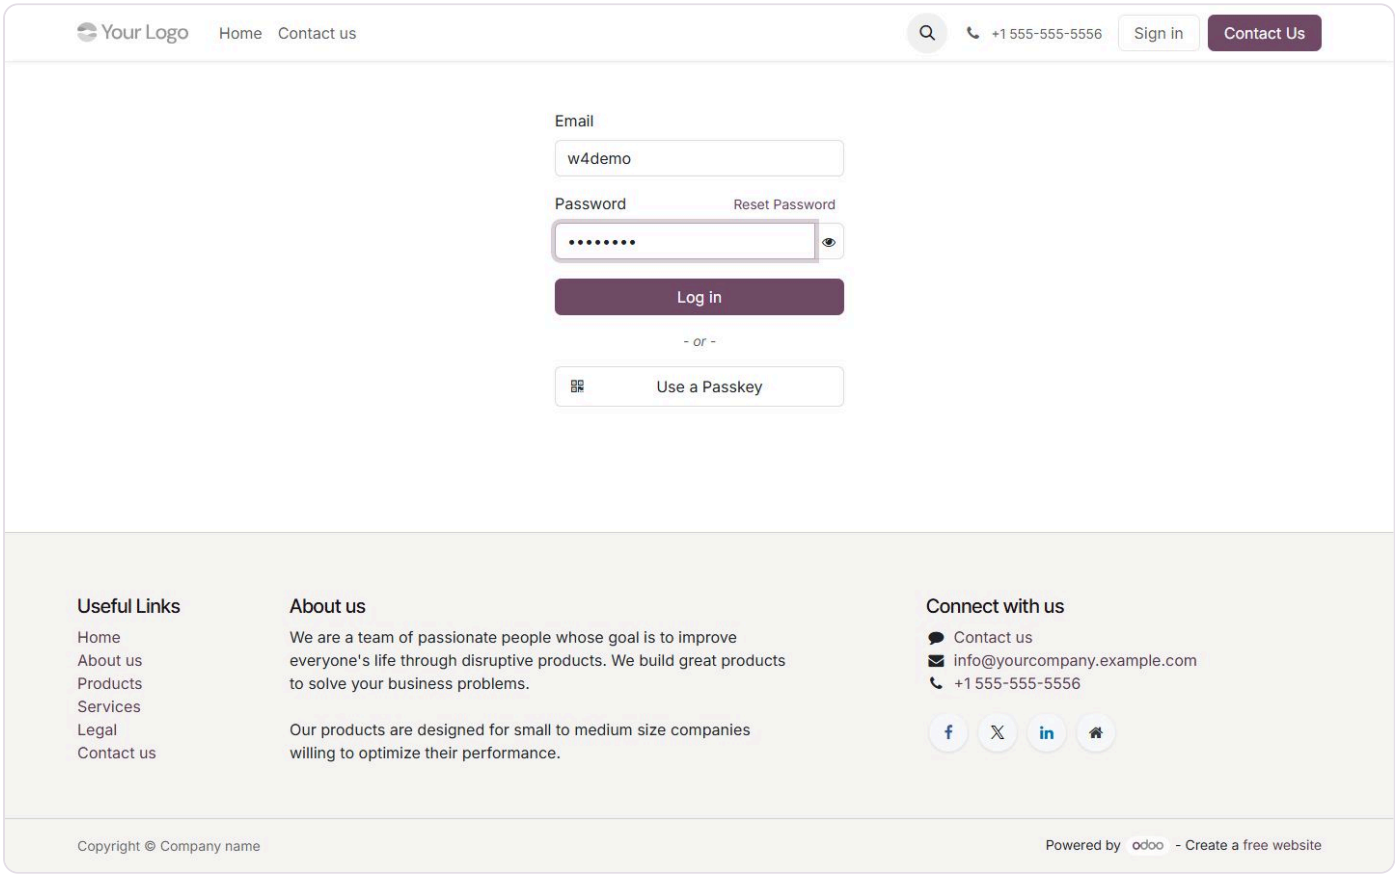

- How to sign in to the demo and find the apps
- The user groups each module adds, and what each allows
- Every setting the modules add, and where it lives

TRY IT YOURSELF ON THE DEMO

1. Sign in as w4demo and open the app menu (the grid top left)
2. Find the WhatsApp, Automation, Commission and AI Assistant apps
3. Open Sales, then Configuration, and find Quotation Follow-Up Rules

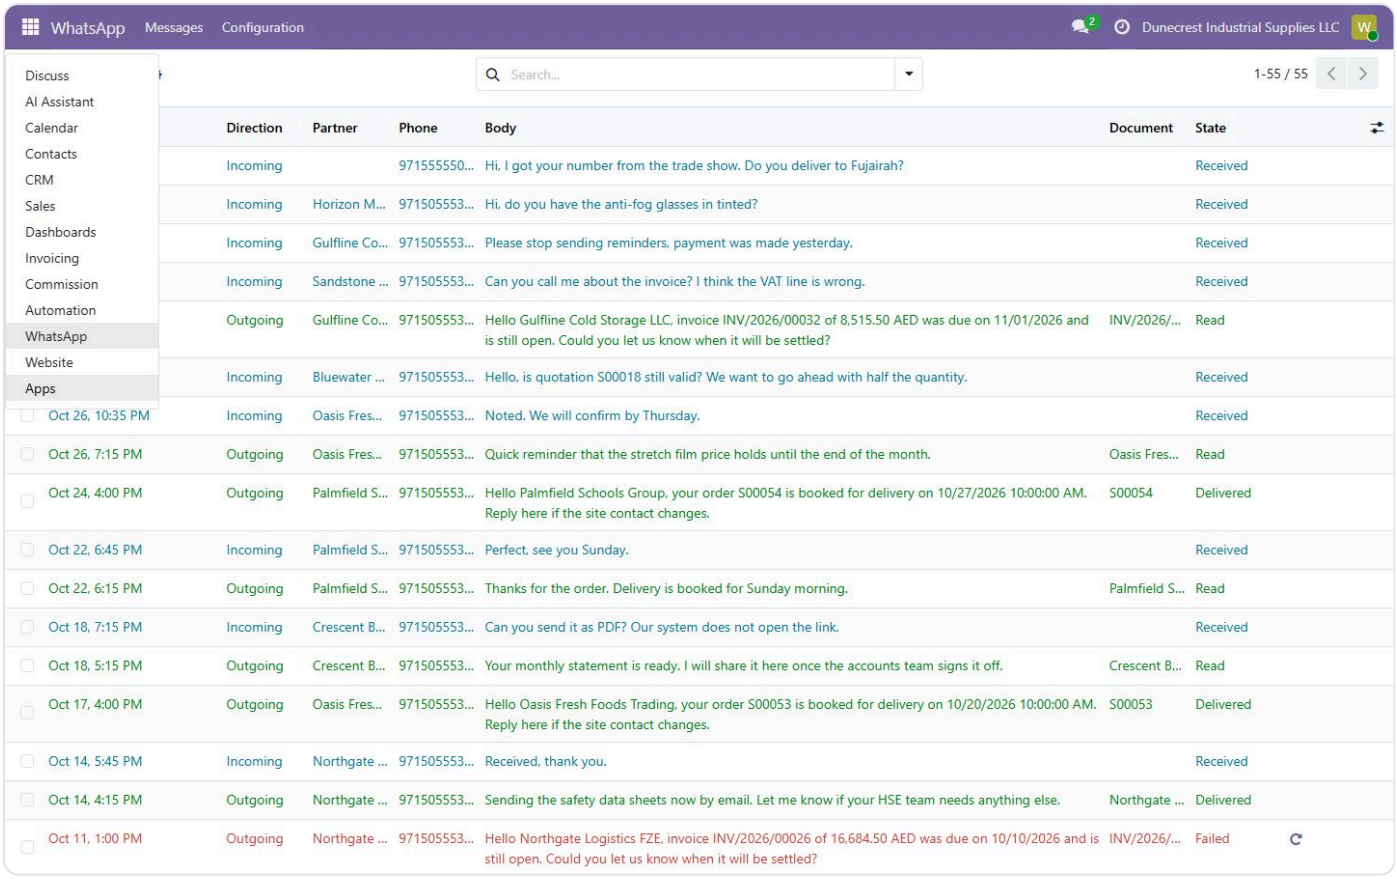

1 Sign in

Open **sales-demo.way4tech.com**, enter `w4demo` and `Demo2026`. The demo user has every module's manager group but not Odoo's own Settings, so it can use and configure the modules but not change the database.

Find the apps

2 The home screen shows the apps. Four are new: **WhatsApp**, **Automation**, **Commission** and **AI Assistant**. Quotation follow-up has no app of its own; it lives inside Sales. WhatsApp OTP has no menu at all; it shows on the website signup page and in Settings.

User groups

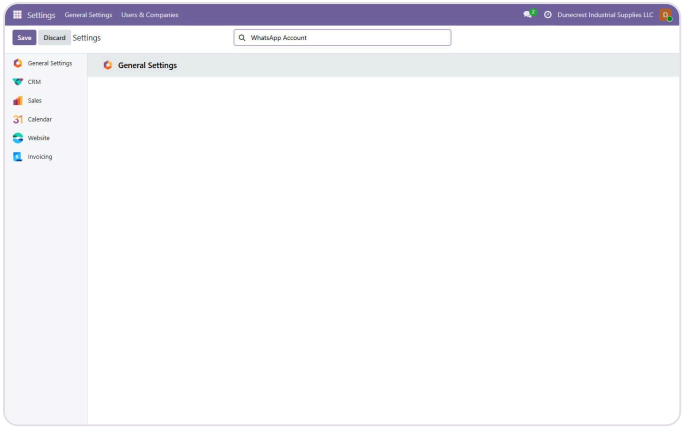

Set these on the user form under the module's heading. Admin is given every manager group at install.

Module	Group	What it allows
WHATSAPP	Send Messages	Send from records and the composer, read the inbox and all messages
	Configure WhatsApp	Also manage accounts (numbers, tokens) and templates. Sees the Configuration menu
DRIP CAMPAIGNS	Run Campaigns	Read campaigns, watch participants and traces, start and stop a campaign
	Configure Campaigns	Build the flow, choose the target model and audience, templates, delete campaign data. Only this group may change the target model or the audience filter
COMMISSION	See Commission	Sees commission lines (salespeople only see their own lines, through a record rule)
	Manage Commission	Sees every agent's lines, settlements and plans
AI ASSISTANT	Use the Assistant	Ask Claude and apply answers. Sees only their own requests
	Configure the Assistant	Holds the API key (the field is hidden from everybody else), edits prompts, sees every request
FOLLOW-UP	Sales / User	Send Reminder Now is shown to salespeople. The rules are under Sales configuration

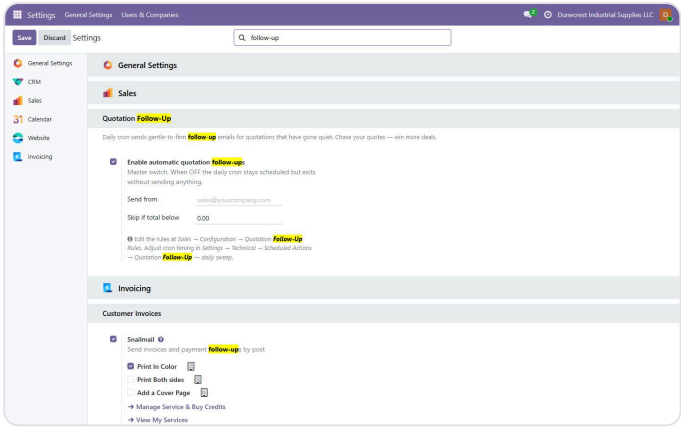

Every setting the modules add

Where	Setting	What it does	Demo value

Settings > General > WhatsApp WHATSAPP	Default WhatsApp Account	The number messages go out from when nothing else is chosen	Dunecrest Sales Line
	Automatic Payment Reminders	Switches the daily overdue invoice reminder on or off (the checkbox reads the scheduled action itself)	On (simulated)
Settings > Website > WhatsApp OTP WHATSAPP OTP	Enable WhatsApp OTP on Signup	Adds the phone and code fields to the signup page	On
	WhatsApp API Token, Phone Number ID	Meta credentials for sending the code. Separate from the WhatsApp Integration account	Empty
	OTP Template Name	Meta approved template with one body placeholder for the code	phone_otp
	OTP Expiry (minutes)	How long a code is valid	10
Settings > Sales > Quotation Follow-Up FOLLOW-UP	Enable automatic quotation follow-ups	Master switch for the daily sweep	On
	Send from	Overrides the sender address of the reminder emails	Empty
	Skip if total below	Quotes under this total are never chased by the sweep	0
Sales > Configuration > Quotation Follow-Up Rules	Rules	Days after the quote, template, CC, minimum	+2, +5, +10, +15
WhatsApp > Configuration WHATSAPP	Accounts, Templates	Part 3	2 accounts, 6 templates
AI Assistant > Configuration AI ASSISTANT	Providers, Prompts	Part 3 and Part 12	Claude, simulation on
Commission > Configuration COMMISSION	Commission Plans	Part 8	6 plans
Automation > Campaign settings DRIP CAMPAIGNS	Per campaign: records per run, reaction window, add once	Part 6	Per campaign

Settings, General: the WhatsApp block. Read as admin, nothing changed.

Settings, Sales: the Quotation Follow-Up block.

PART 3 Connections: WhatsApp numbers, templates, webhook and the AI provider

WHATSAPP AI ASSISTANT

Two of the modules talk to outside services: WhatsApp Integration to Meta's WhatsApp Cloud API, and the AI Assistant to Anthropic's Claude. Both ship with a simulation mode that is switched on at install, so nothing leaves the database until you have real credentials and turn it off. The demo stays in simulation mode on purpose.

IN THIS PART YOU WILL LEARN

- What Meta needs from you before Odoo can send a WhatsApp message
- How an account record holds a number, its token and its webhook
- How templates and their placeholders map to Odoo fields
- What the webhook does with replies and receipts, and why it needs the App Secret
- How the AI provider is set up, and what simulation mode returns

TRY IT YOURSELF ON THE DEMO

1. Open WhatsApp > Configuration > Accounts > Dunecrest Sales Line and read the simulation banner
2. Open Templates > Payment Reminder and look at the Placeholders tab
3. Open AI Assistant > Configuration > Providers > Claude

3.1 Before you start: what Meta gives you WHATSAPP

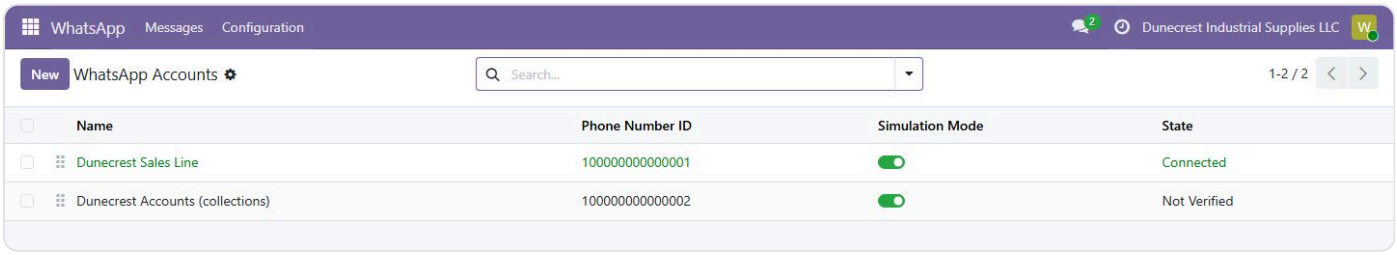

WhatsApp Integration uses the official Cloud API, so there is no reseller in between. You set up a WhatsApp Business account and an app in Meta's developer console, add a phone number, and create a permanent System User token. Meta then gives you four values Odoo needs: the **Phone Number ID** (a long numeric id, not the phone number), the **WhatsApp Business Account ID**, the **access token** and the **App Secret**. Message templates are written and approved on Meta's side; Odoo only stores the approved wording and the mapping of its placeholders.

> Meta only lets a business start a conversation with an approved template. Free text is allowed inside the 24 hour window after the customer last wrote to you. The module sends free text when no template is picked; outside that window Meta rejects it and the message is marked Failed with Meta's error.

3.2 The WhatsApp account WHATSAPP

1 Open the accounts

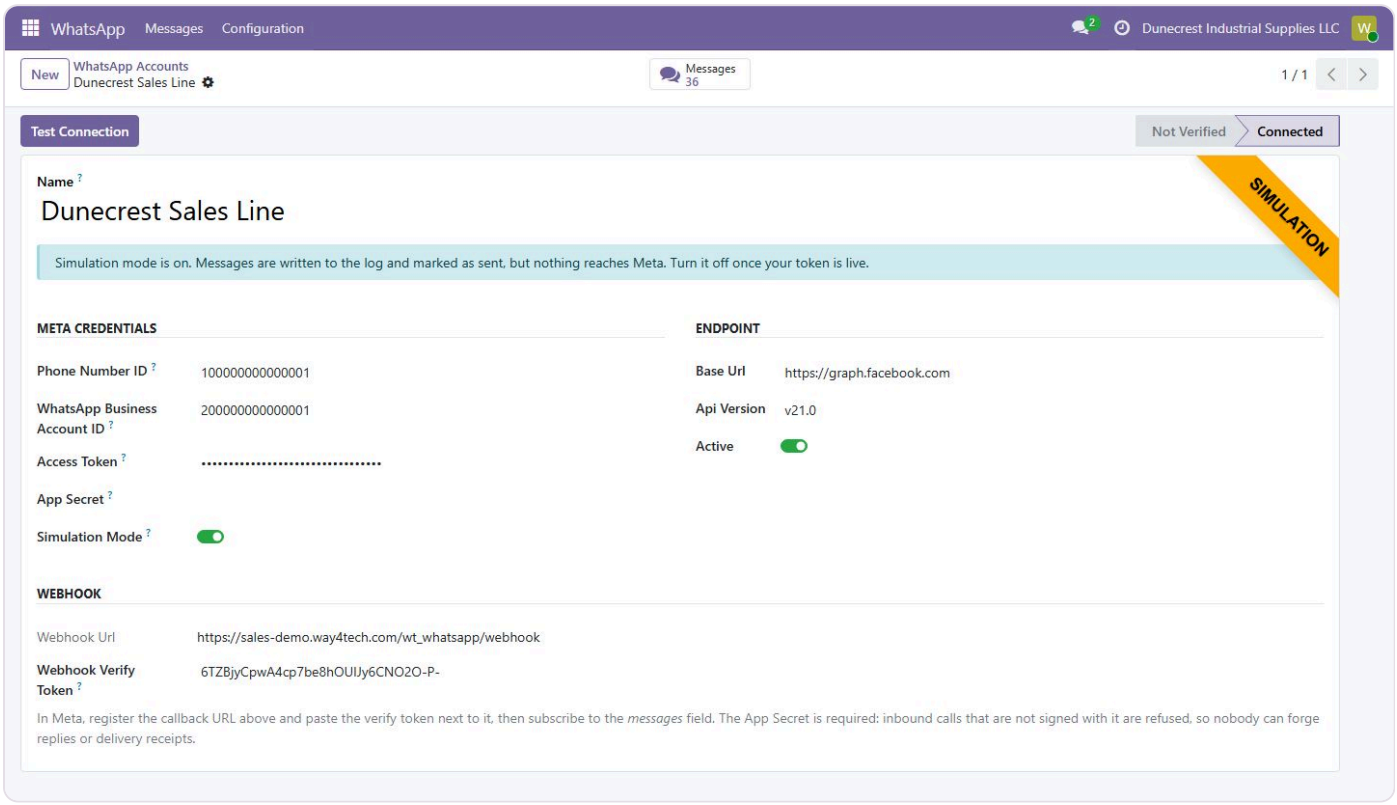

WhatsApp > Configuration > Accounts lists every number in the database. One database can hold several numbers, one per company or brand, each with its own token. The demo has a sales line and a collections line.

Read the account

2 Under **Meta Credentials**: Phone Number ID, WhatsApp Business Account ID (only needed to pull templates from Meta), Access Token (masked) and App Secret. Under **Endpoint**: the Graph base URL and API version (v21.0 by default). The status bar shows Not Verified, Connected or Error, and the last error Meta returned is kept on the form. The **Messages** button opens everything sent from this number.

The orange SIMULATION ribbon and the blue banner show while Simulation Mode is on: messages are logged and marked sent, but nothing reaches Meta.

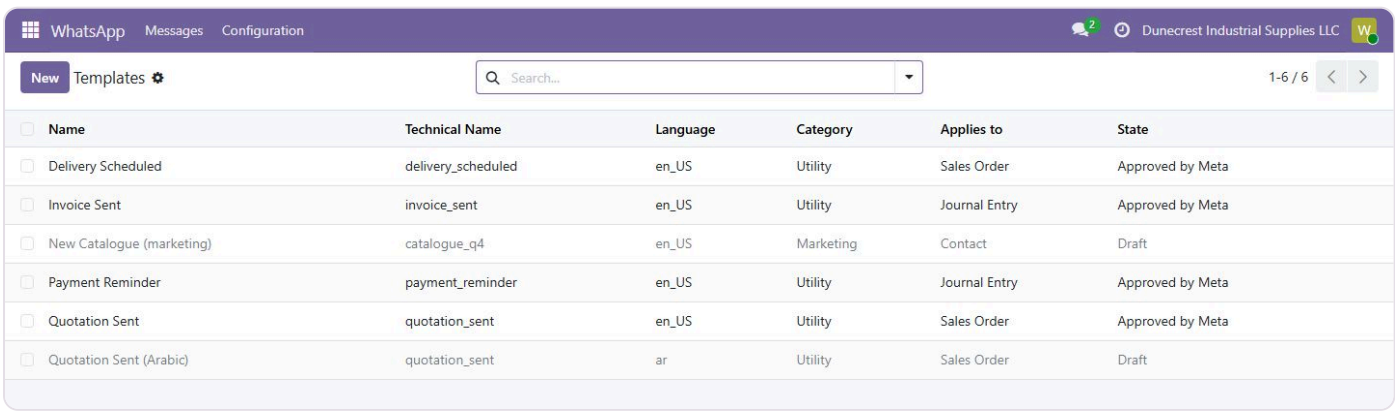

Test Connection asks Meta for the phone number record, which is cheap and read only. In simulation mode it does not call Meta at all: it marks the account Connected and shows a warning that nothing was sent. With simulation off, a good token returns Meta's display number and the account turns Connected; a bad one turns it to Error with Meta's answer in Last Error.

3.3 Templates and placeholders WHATSAPP

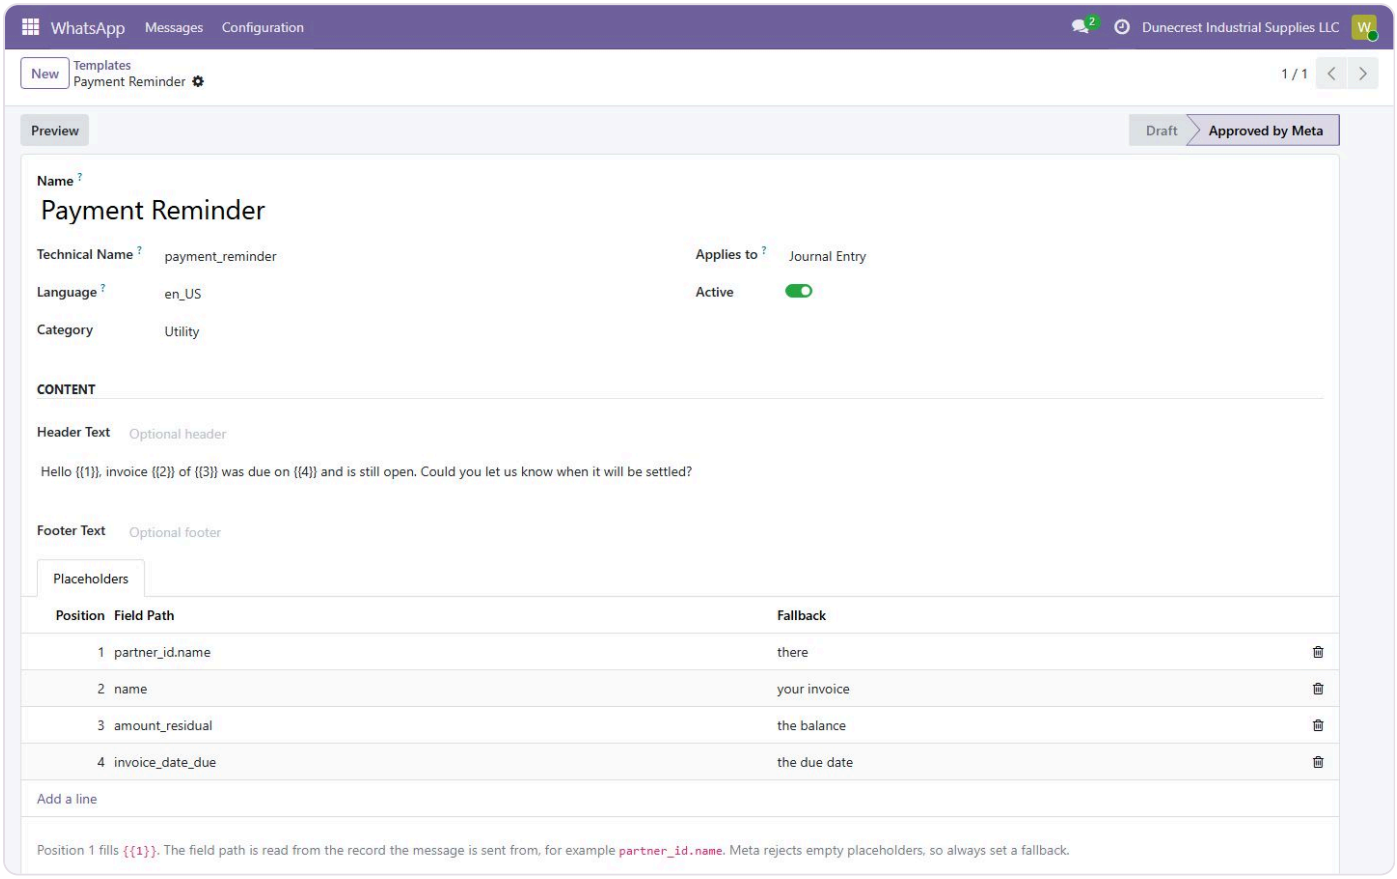

The template list

3 Each row is one template in one language. Draft rows are greyed out: Meta has not approved them yet, so a live send would be refused. The module ships Invoice Sent, Payment Reminder and Quotation Sent in draft; on the demo they are marked approved, and three more were added.

A template

4 Name is the label inside Odoo; **Technical Name** must match the name registered with Meta exactly, lowercase with underscores. Language is Meta's code (en_US, ar). Category is Utility, Marketing or Authentication. **Applies to** ties it to a model, so it is offered on invoices or quotations. Header, body and footer hold the approved wording with {{1}}, {{2}} placeholders.

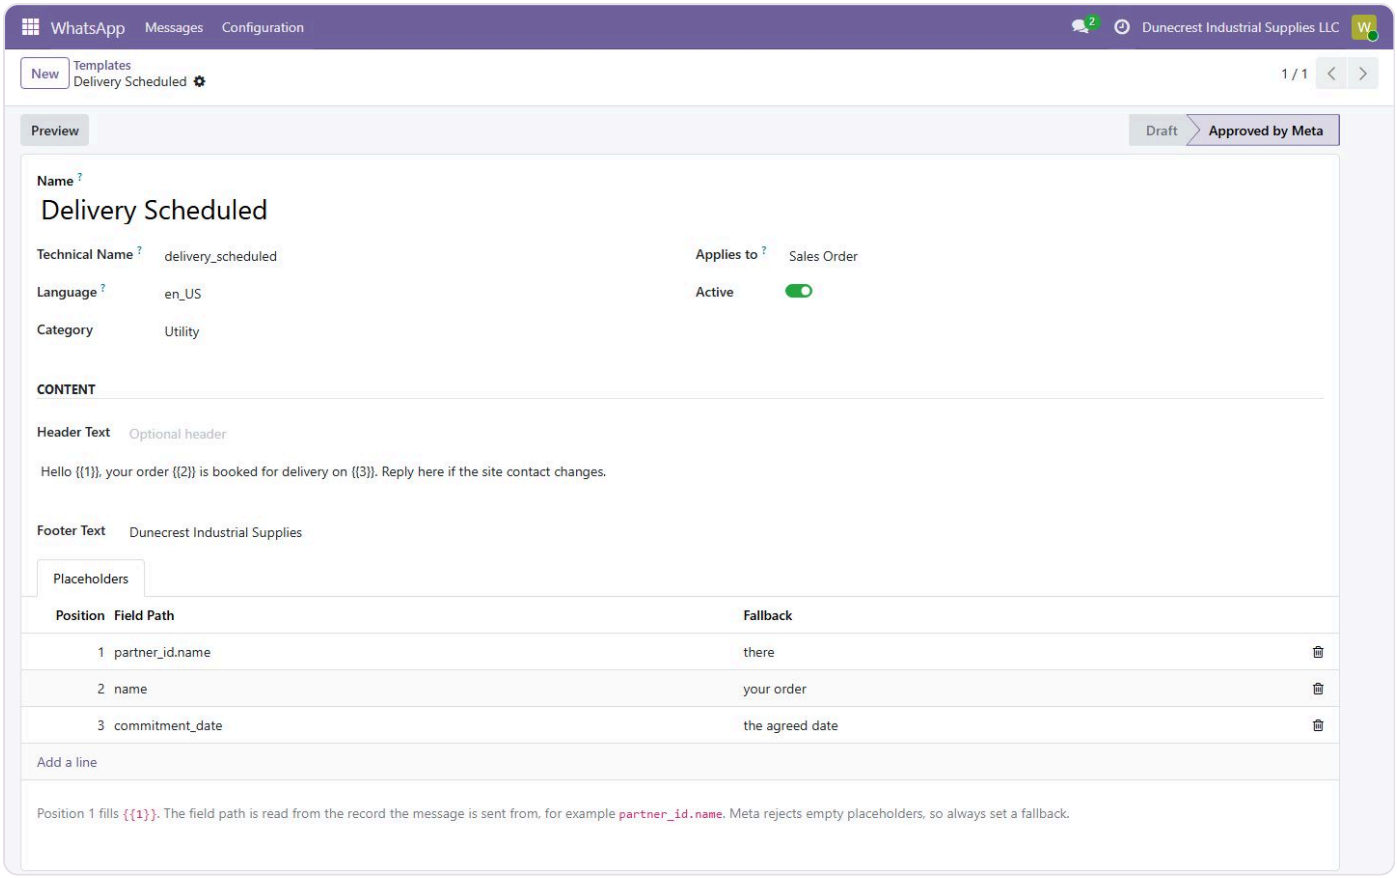

5

Map the placeholders

On the **Placeholders** tab each row says which field fills which position: position 1 fills {{1}} and so on, numbered from 1 with no gaps (the module refuses gaps). Field Path is a dotted path read from the record, such as partner_id.name or amount_total. **Fallback** is used when the field is empty, because Meta rejects an empty placeholder.

Amounts and dates are formatted the way Odoo shows them, so a customer reads 21,798.00 AED with the currency, not a bare 21798.0.

Preview on the template fills the placeholders from the first record of the model and shows the result in a notification, so you can check the mapping without sending.

3.4 The webhook: replies and receipts WHATSAPP

Each account shows a **Webhook URL** (your Odoo address plus /wt_whatsapp/webhook) and a random **Webhook Verify Token**. In Meta you register that URL, paste the verify token and subscribe to the messages field. Meta first calls the URL with the token; the module answers only if the token belongs to one of its accounts.

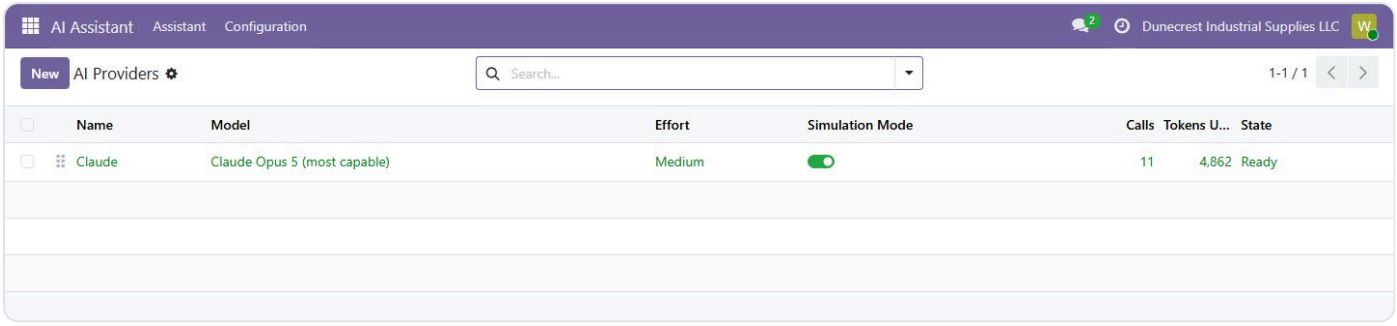

After that Meta posts every reply and every status change to the same URL. The module checks the X-Hub-Signature-256 header against the account's App Secret before writing anything. **Without an App Secret every inbound call is refused**, so replies and read receipts never arrive; set it before you go live. A signed call is routed to the account that owns the receiving number. Status updates move a message to Sent, Delivered, Read or Failed. A reply becomes an Incoming message, matched to a contact on the last nine digits of the phone number, so +971 50 555 3001 and 971505553001 match the same person.

> The demo has no App Secret and no Meta app pointing at it, so it receives nothing live. The replies you see in its inbox were stored as records when the demo was built.

3.5 The AI provider AI ASSISTANT

Providers

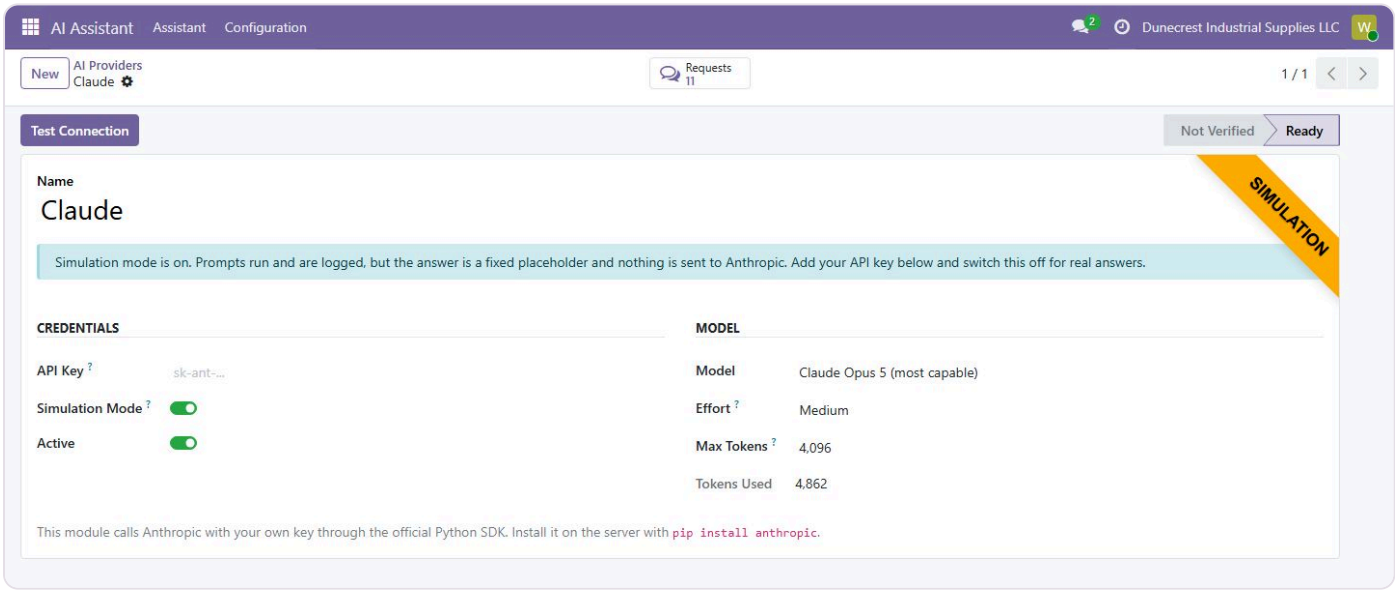

6 AI Assistant > Configuration > Providers. One provider is created at install, named Claude, in simulation mode. A provider belongs to a company; the first one for the current company is used.

The provider form

7 **API Key** is your Anthropic key; the field is restricted to the Configure the Assistant group, so other users cannot read it even through an export. **Model** is Claude Opus 5 (the default), Claude Sonnet 5 or Claude Haiku 4.5. **Max Tokens** caps the length of an answer (4096). **Effort** is low, medium (the default) or high, sent to the Opus and Sonnet models only. The form counts requests and tokens used.

Simulation Mode returns a fixed text that starts "[Simulation mode] No request was sent to Anthropic". It is also what you get if the key is empty, so a missing key never costs anything.

Test Connection in simulation mode marks the provider Ready without calling Anthropic. With a key and simulation off it asks Claude for one word; an error turns the provider to Error with the message. Live calls need the Python package anthropic on the server; if it is missing, the request fails with a message saying so.

PART 4 WhatsApp day to day: inbox, sending from documents, receipts and reminders

WHATSAPP

In the Gulf, and in most of Asia and Africa, a customer who ignores three emails will answer a WhatsApp message in ten minutes. This part is how a salesperson or the accounts team sends from the quotation or invoice they are looking at, what comes back, and how overdue invoices get chased without anybody remembering to.

IN THIS PART YOU WILL LEARN

- Read the inbox and the full message log, and filter it
- Send a quotation or invoice on WhatsApp with a template
- Write to contacts or loose numbers from the composer
- Read a message's status, a failure and resend it
- Switch on automatic overdue invoice reminders

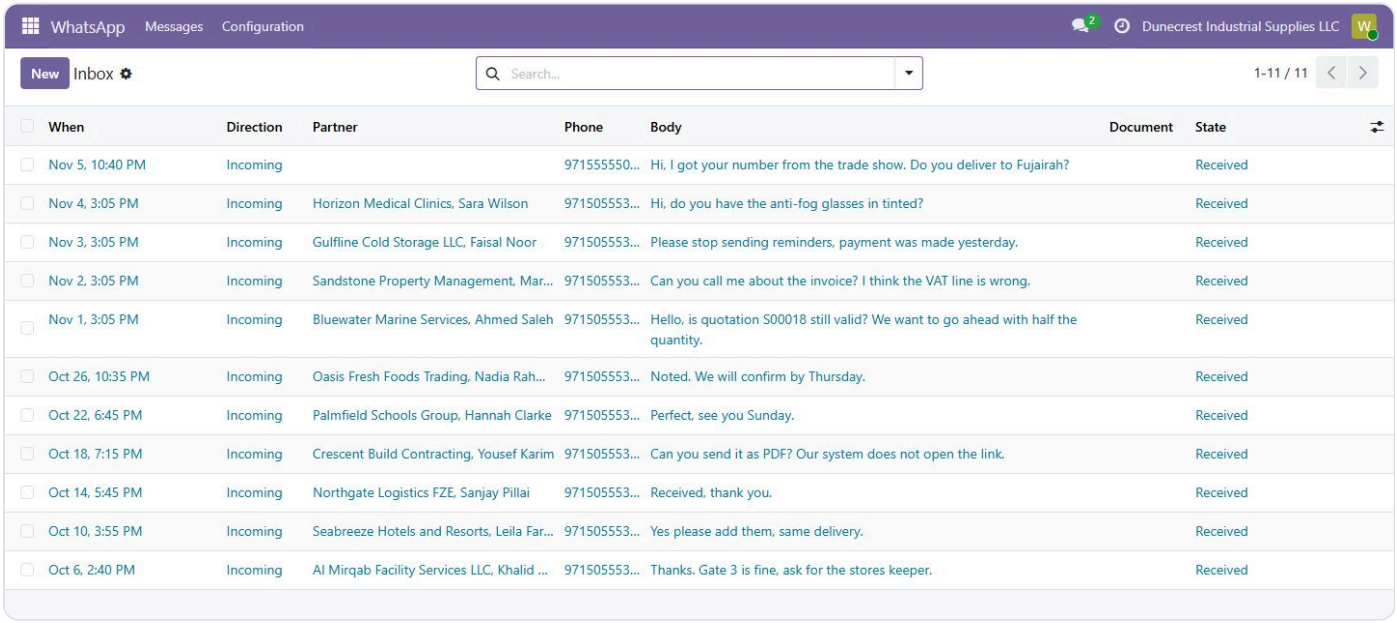

TRY IT YOURSELF ON THE DEMO

1. Open WhatsApp > Messages > Inbox and find the customer asking about S00018
2. Open quotation S00015 and click Send on WhatsApp, then Cancel
3. Filter All Messages by Failed and open the failed payment reminder

4.1 The inbox and the message log WHATSAPP

Inbox

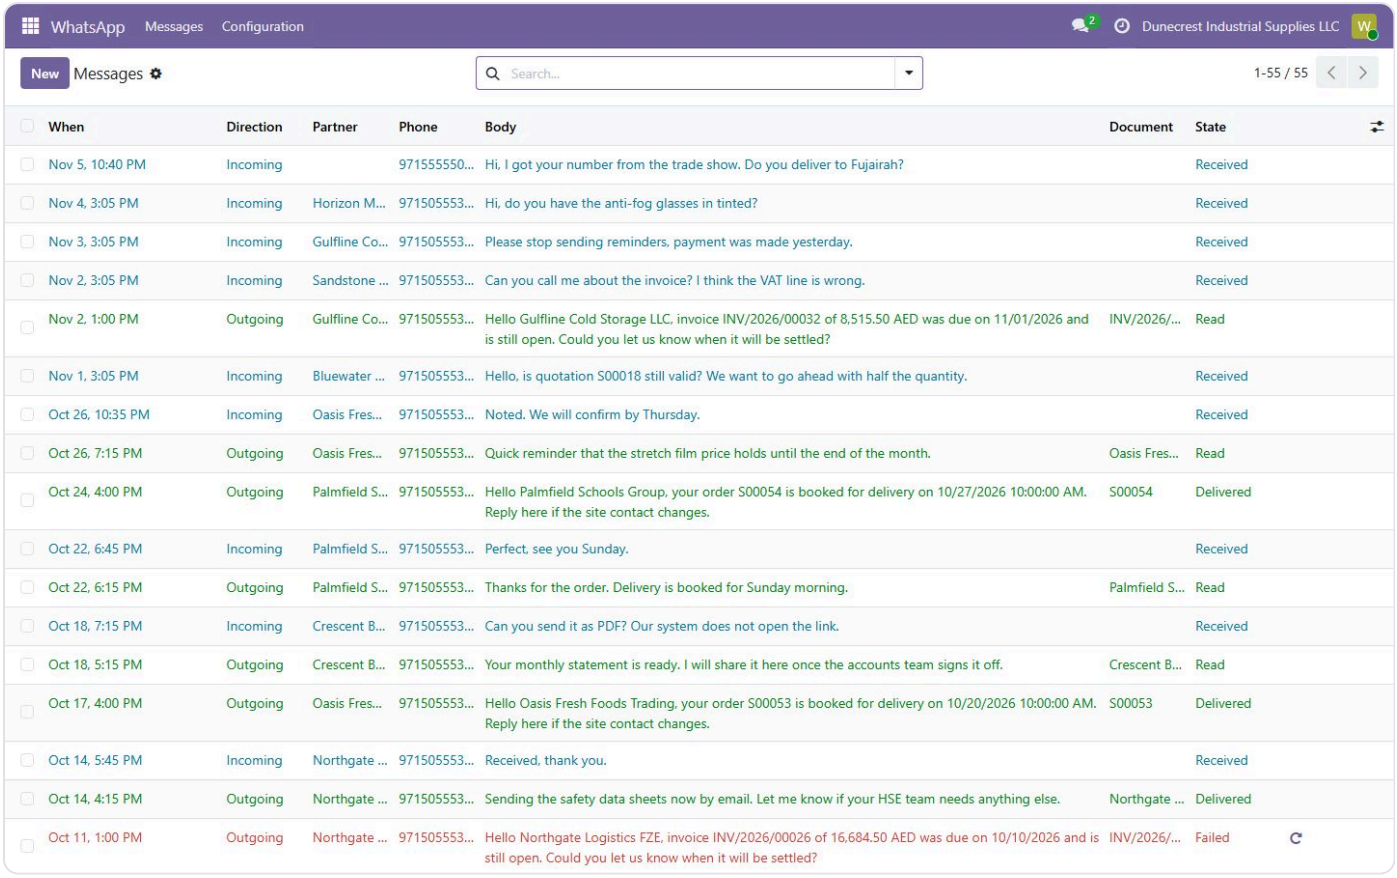

1 WhatsApp > Messages > Inbox shows incoming messages only, newest first. Each one is matched to a contact by the last nine digits of the number. The top one on the demo came from a number nobody has saved, so it has no partner: create the contact and later messages from that number land on it.

When	Direction	Partner	Phone	Body	Document	State
Nov 5, 10:40 PM	Incoming		971555550...	Hi, I got your number from the trade show. Do you deliver to Fujairah?		Received

State	Meaning	Set by
Draft	Created, not yet pushed	Odoo
Sent	Accepted by Meta (or logged, in simulation)	Odoo, on send
Delivered	Reached the customer's phone	Meta receipt through the webhook
Read	Opened by the customer (if read receipts are on for them)	Meta receipt
Failed	Refused or undeliverable, with Meta's error kept on the message	Odoo or Meta receipt
Received	An incoming message	Webhook

4.2 Sending from a quotation, an invoice or a contact WHATSAPP

Send on WhatsApp from a quotation

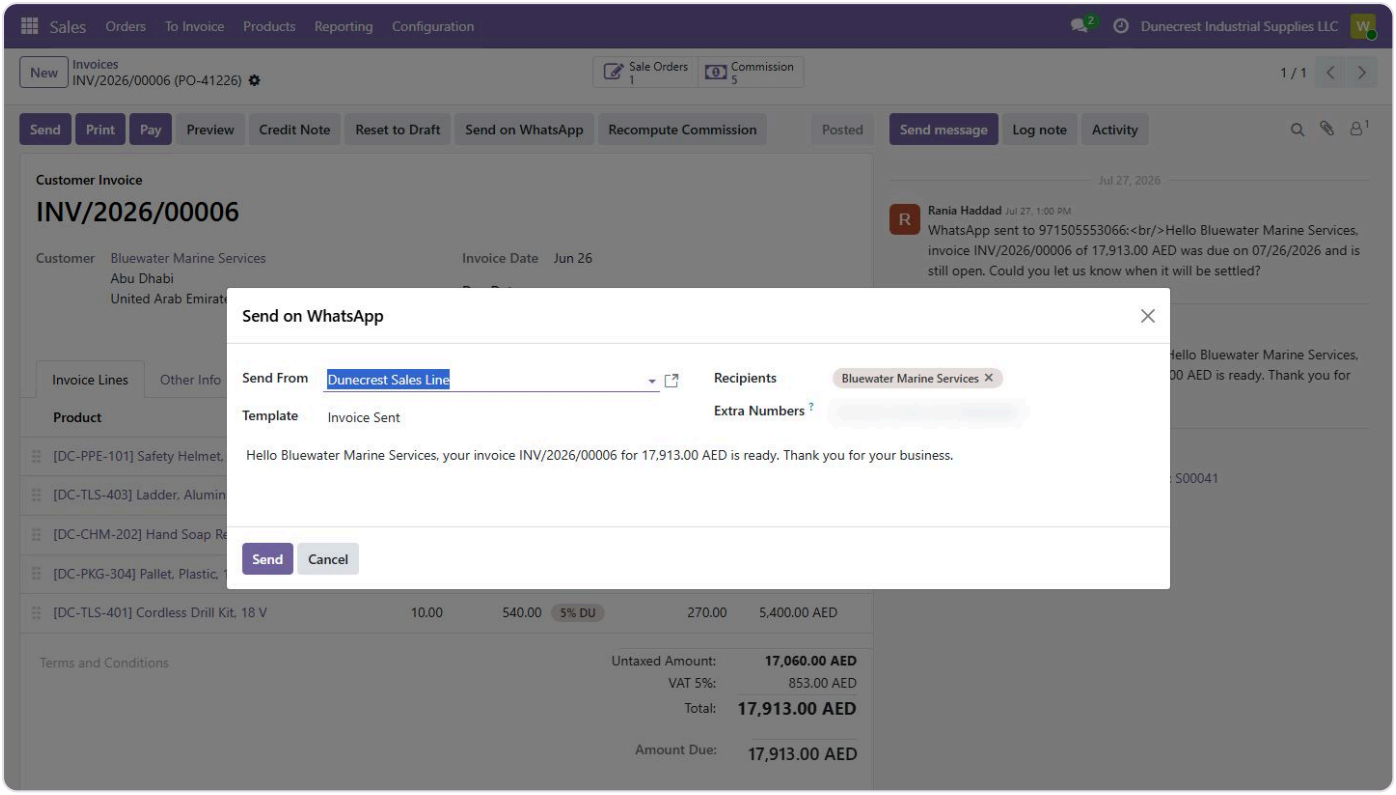

4 Open a quotation and click **Send on WhatsApp** in the header. The dialog opens with the default account, the customer as recipient and the first template that applies to quotations, already filled from the record. Change the template and the text is rebuilt; edit the text if you need to. **Extra Numbers** takes comma separated numbers of people who are not contacts yet.

The template offered first is simply the first one for that model in alphabetical order, so on the demo a quote opens with Delivery Scheduled. Pick Quotation Sent from the list.

From an invoice

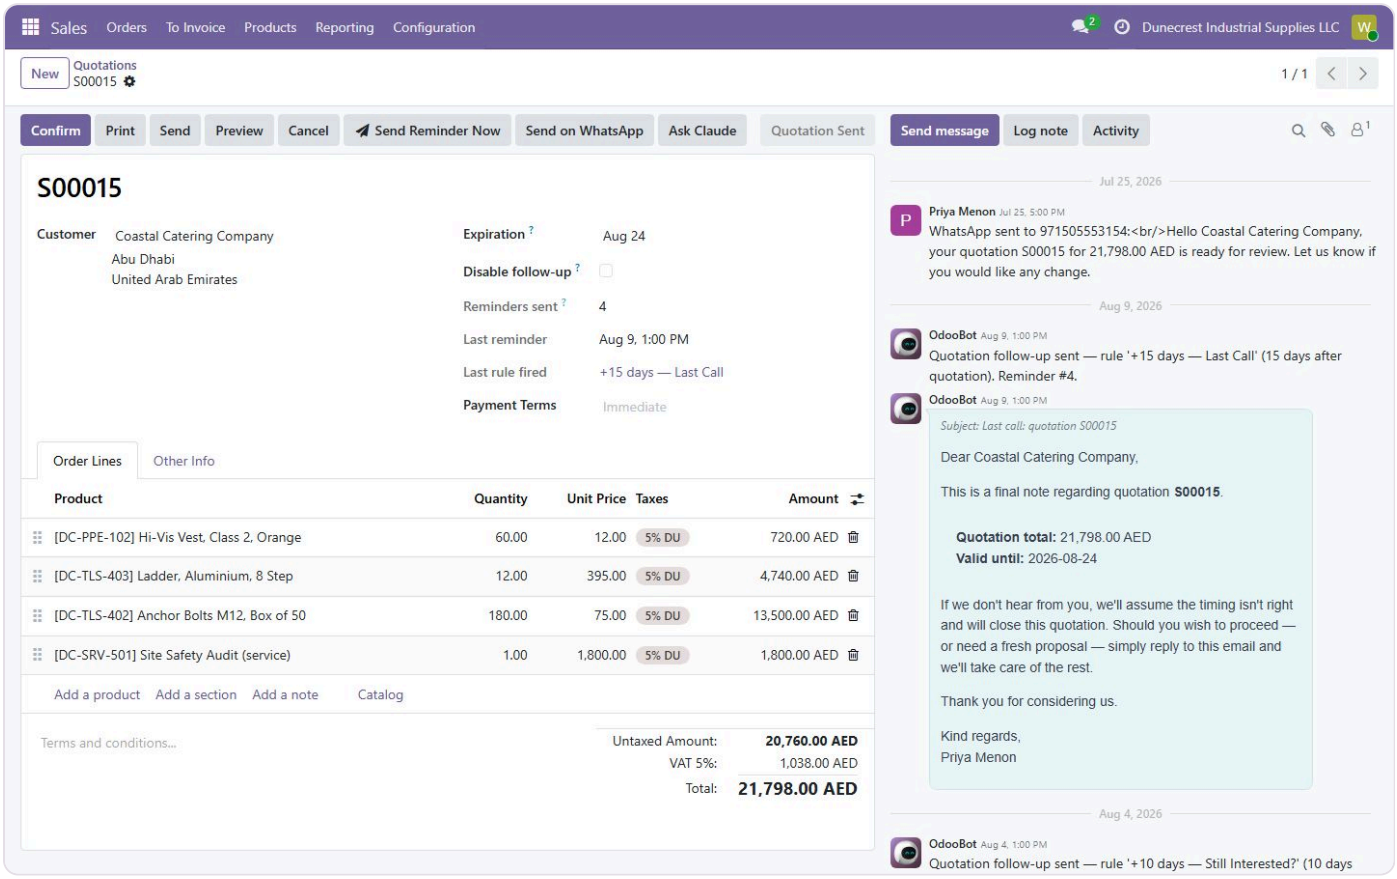

5 Customer invoices have the same button. The demo's invoice templates are Invoice Sent (customer, number, total) and Payment Reminder (customer, number, amount still due, due date).

What the document keeps

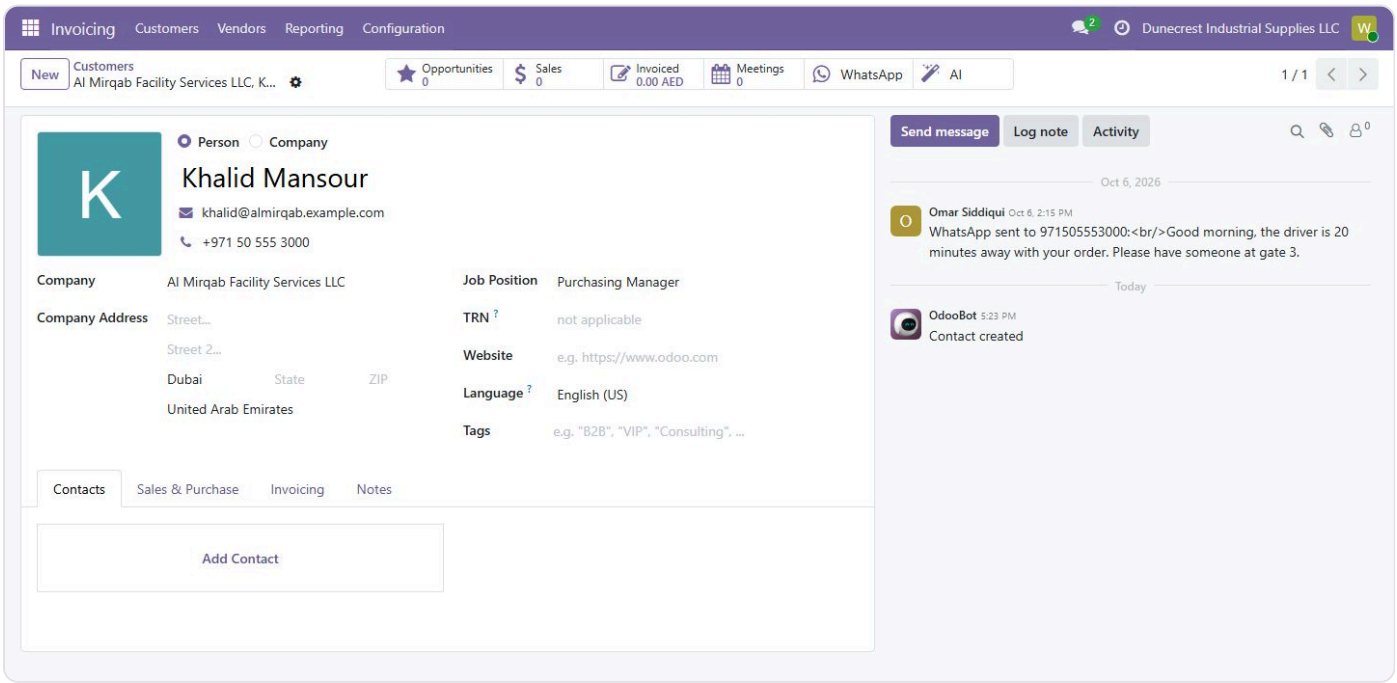

6 Each send writes a note in the chatter of the quote or invoice: who sent it, to which number and the text. The demo quote S00015 shows the WhatsApp note next to the follow-up reminders from Part 11.

The chatter note shows a literal
 between the number and the text. That is a known display bug in this version, the message itself is not affected.

From a contact

7 A contact form gets a **WhatsApp** button in its button box that lists every message to and from that contact. To write to a contact, use New Message (below) and pick them as the recipient.

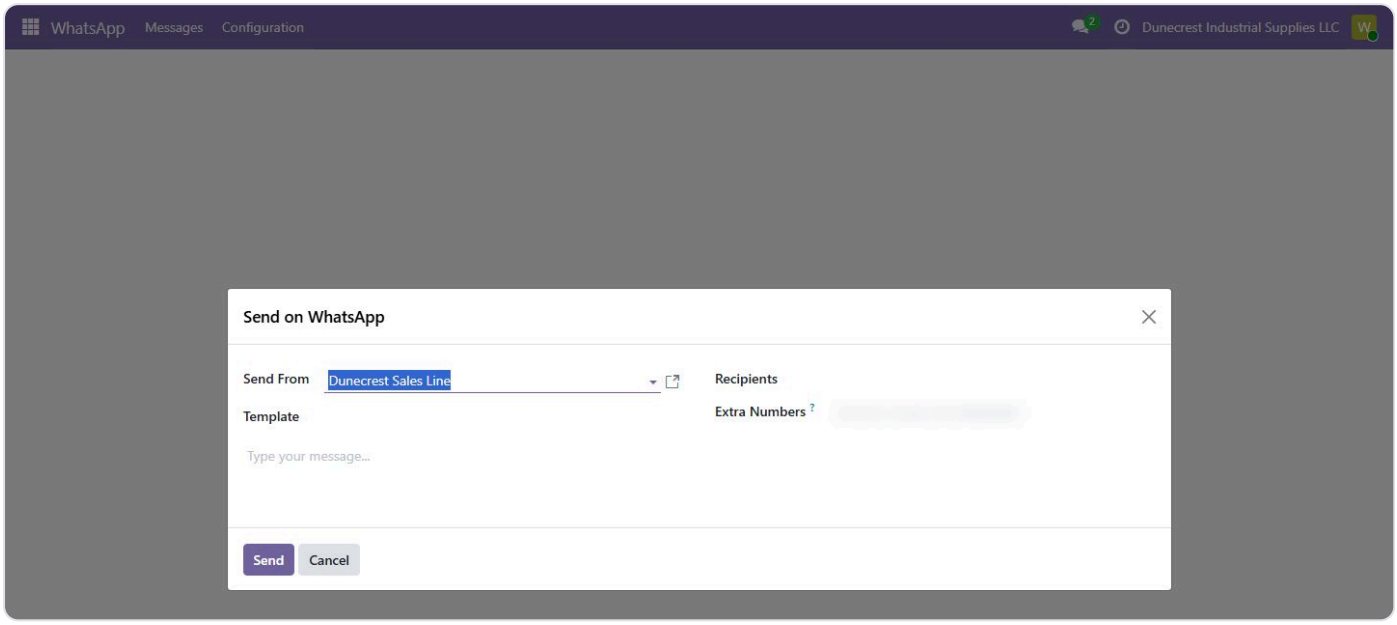

4.3 The composer from the menu WHATSAPP

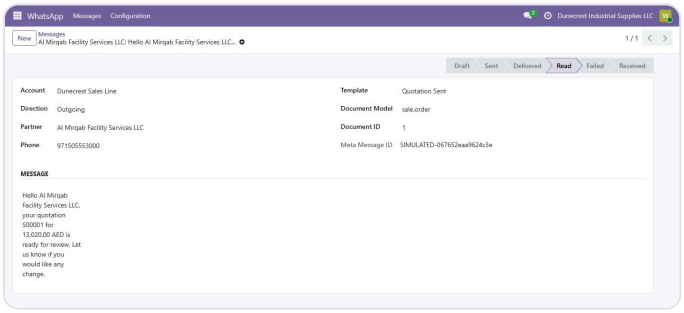

New Message

8 WhatsApp > Messages > New Message opens the same dialog with no document behind it. Pick recipients from contacts, add extra numbers, choose a template or type free text, and Send. A warning lists any chosen contact with no phone number; numbers are cleaned to digits and duplicates are dropped before sending.

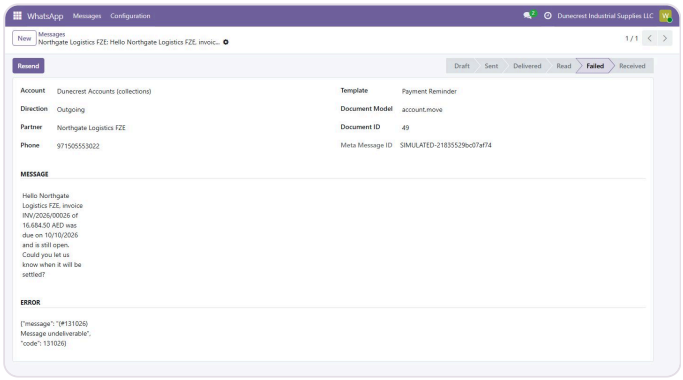

Free text only goes through inside Meta's 24 hour customer service window. To open a conversation, use an approved template.

4.4 Reading one message, failures and resending WHATSAPP

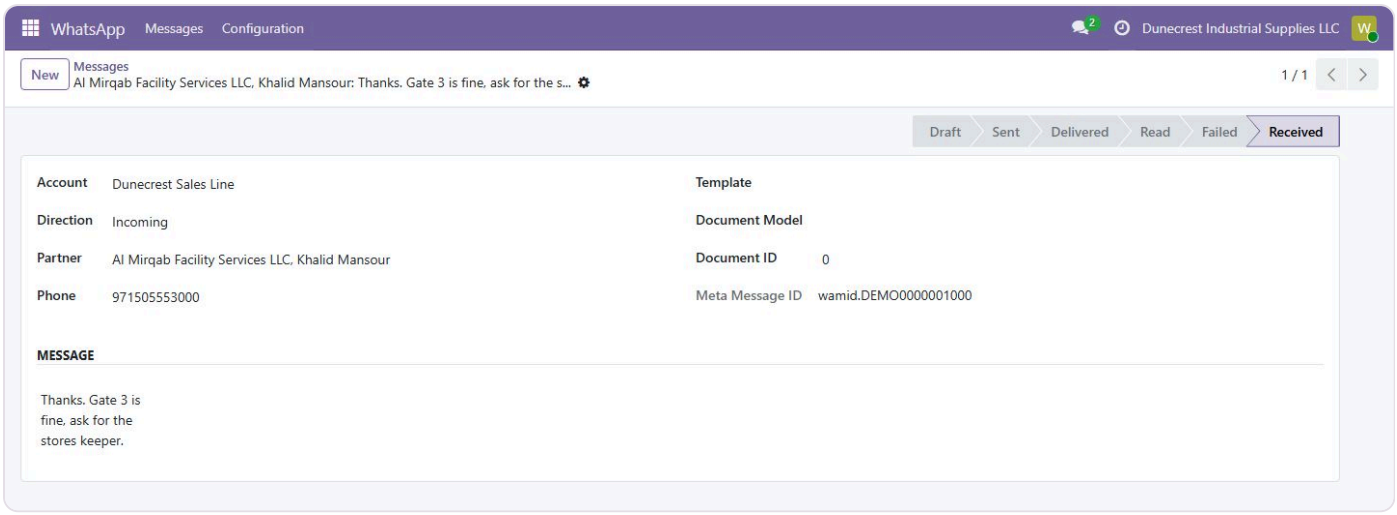

An outgoing quote message that was read. The Meta Message ID starts with SIMULATED because the demo is in simulation mode.

A failed payment reminder with Meta's error code 131026, message undeliverable.

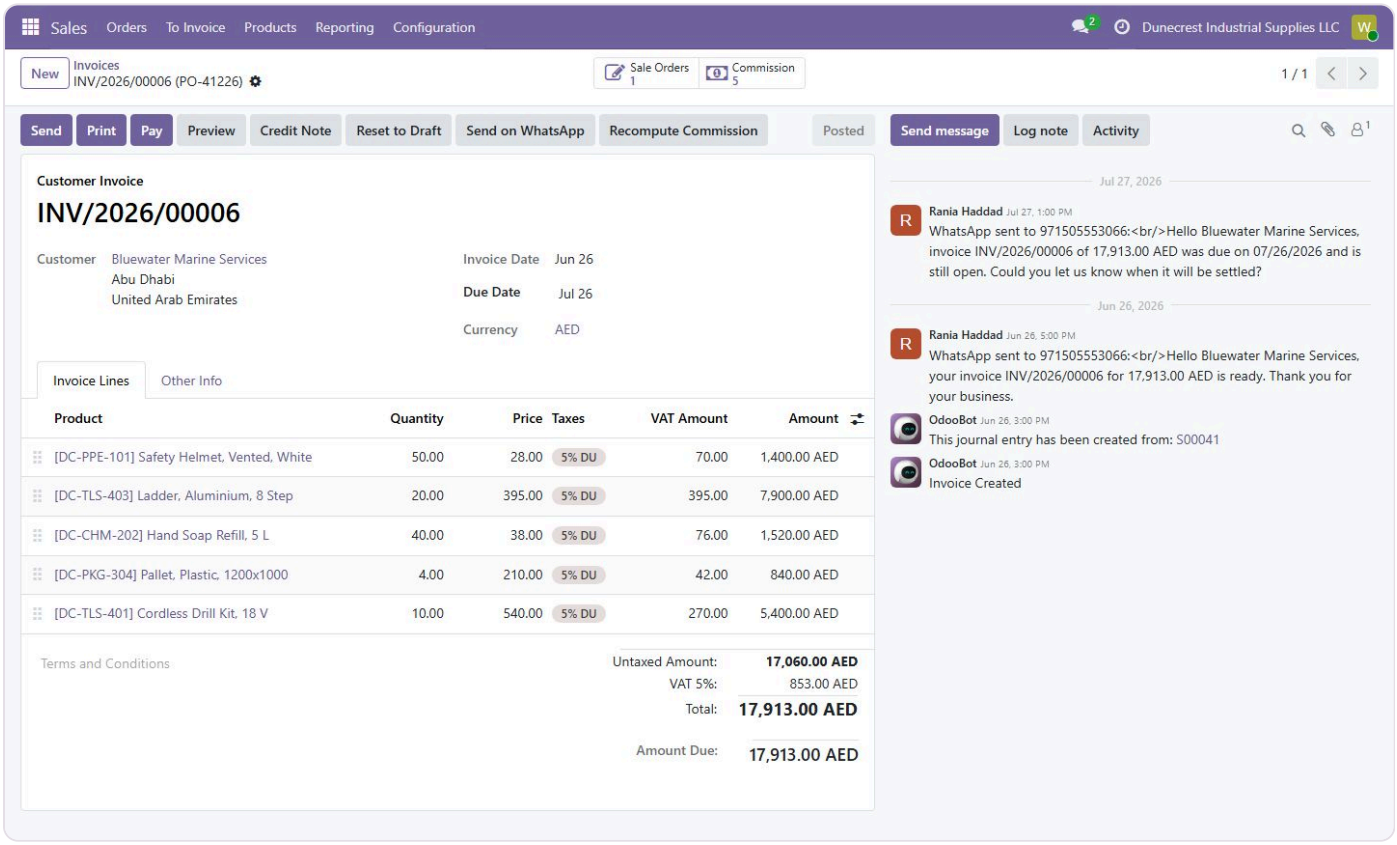

The message form shows the account, direction, partner, phone, template, the document it belongs to, Meta's message id and the error, if any. **Send** pushes a draft. **Resend** puts a failed message back to draft and sends it again with the same template and the same values. A send never raises an error on screen: a refusal is written onto the message, so one bad number does not stop a batch.

An incoming message: direction Incoming, state Received, matched to the contact by phone number.

4.5 Automatic overdue invoice reminders WHATSAPP

Turn on **Automatic Payment Reminders** in Settings (or activate the scheduled action "WhatsApp: overdue invoice reminders"). Once a day it looks for posted customer invoices that are not paid or partly paid and whose due date has passed, up to 200 at a time, and sends each one the Payment Reminder template from the default account. An invoice that already had an outgoing WhatsApp message in the last 24 hours is skipped, so nobody gets two in a day.

An overdue demo invoice. The Send on WhatsApp button is in the header; the reminders it received are in the chatter.

> The reminder repeats every day until the invoice is paid; there is no maximum number of reminders and no gap setting. Customers who ask to stop (one does on the demo) need the reminder switched off or the invoice settled. It is off at install so nobody is messaged the moment the module goes in.

PART 5 WhatsApp codes on website signup

WHATSAPP OTP

If customers create their own portal or shop accounts, a fake phone number costs you a follow-up call that never connects. WhatsApp OTP Verification adds a phone field and a six digit code to Odoo's signup page, sends the code by WhatsApp and only creates the account once the code matches.

IN THIS PART YOU WILL LEARN

- Where the settings are and what each does
- What the customer sees on the signup page
- How the code is checked, and when it expires
- What the module does with existing contacts

TRY IT YOURSELF ON THE DEMO

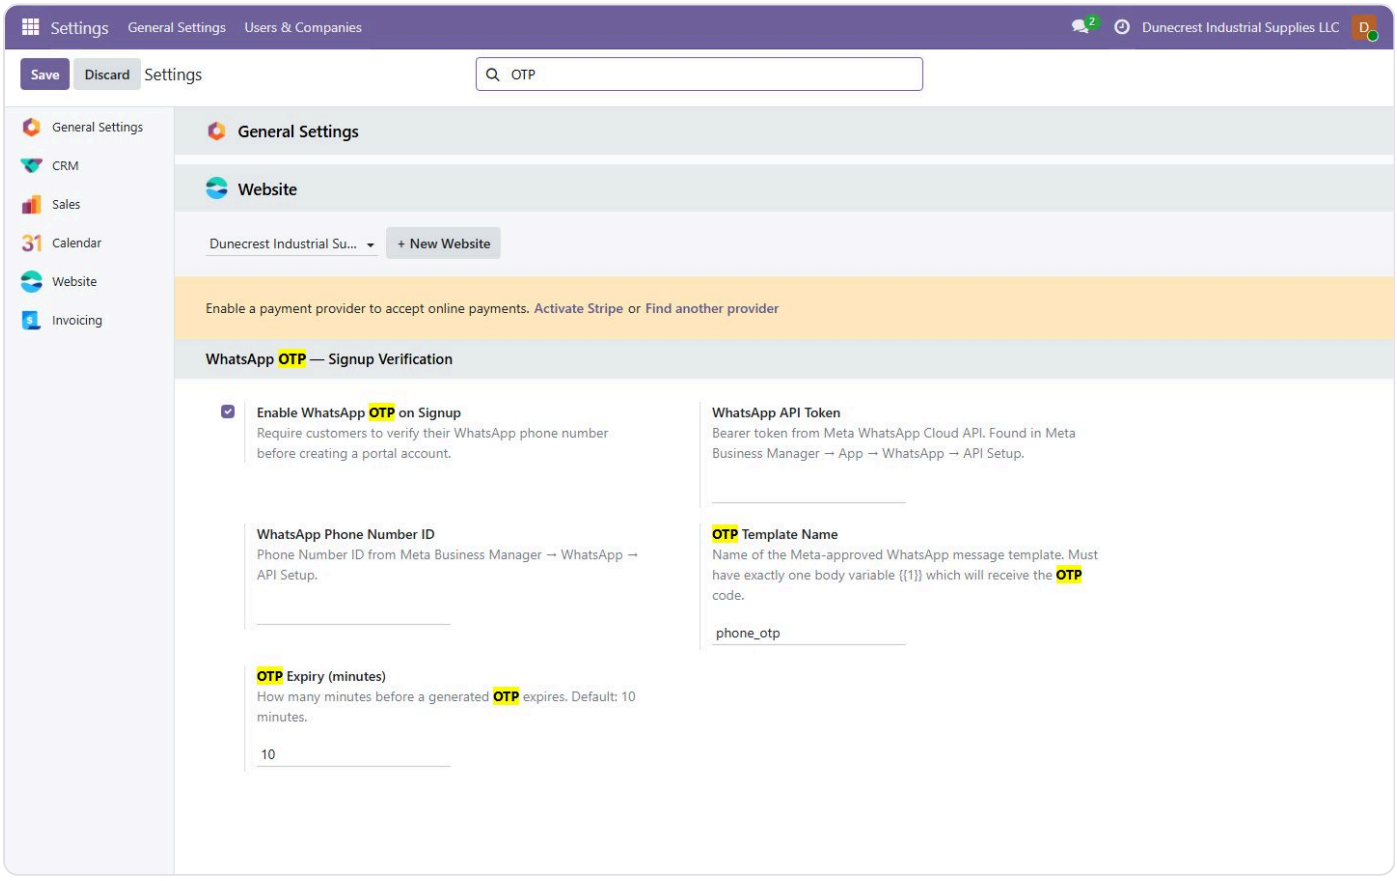

1. The demo has public signup switched off, so this part is read, not tried. Look at the screenshots.

5.1 Settings WHATSAPP OTP

Settings › Website

1 The block **WhatsApp OTP, Signup Verification** sits in the Website settings. Tick **Enable WhatsApp OTP on Signup** and four more fields appear: the WhatsApp API Token and Phone Number ID from Meta, the OTP Template Name (default phone_otp) and the OTP Expiry in minutes (default 10).

These credentials are separate from the WhatsApp Integration account in Part 3. The module does not need WhatsApp Integration installed.

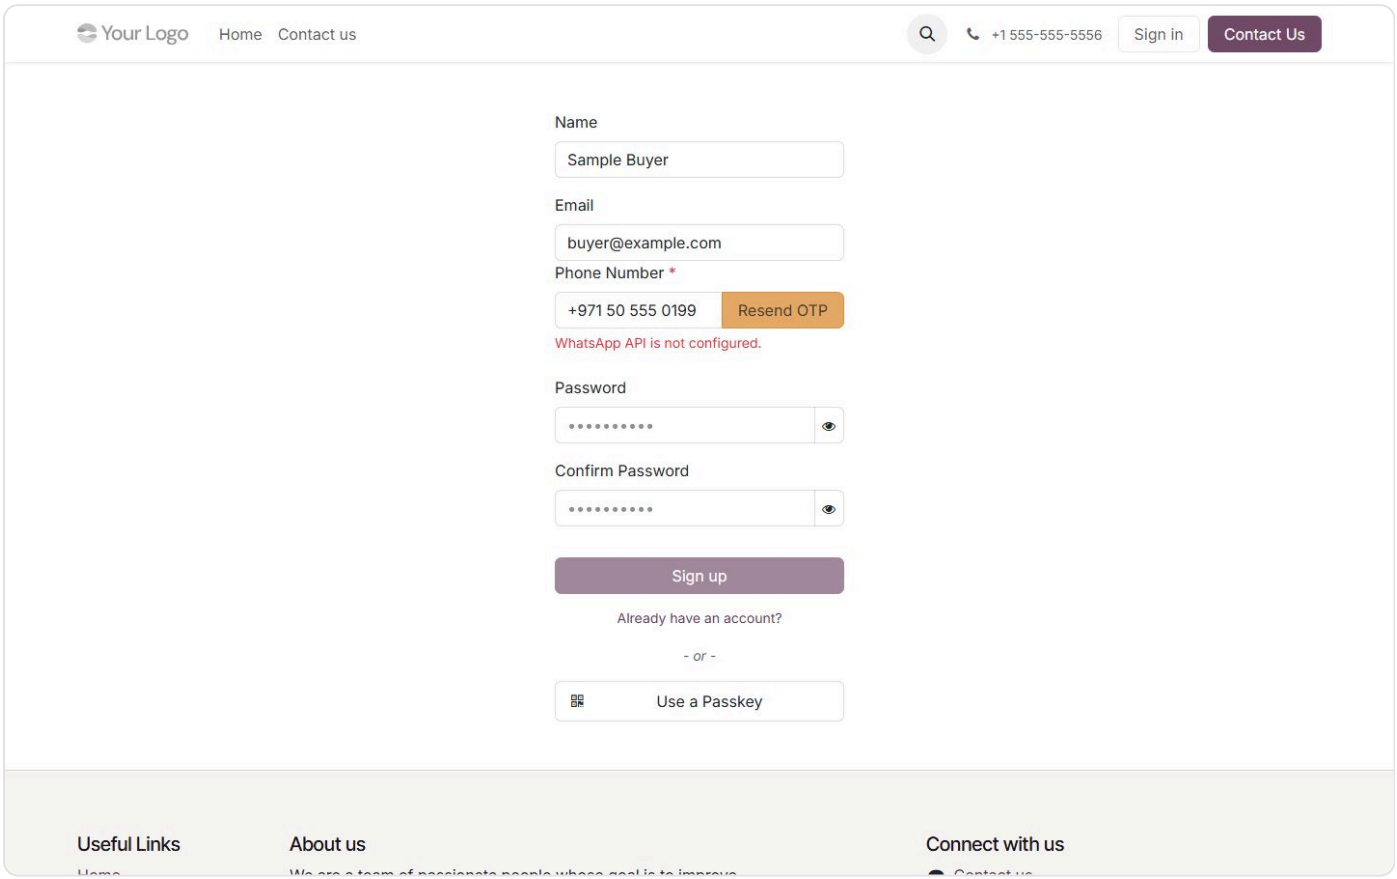

Create the template in Meta first, in the Authentication category, with exactly one body placeholder for the code. The module sends it in en_US. Public signup itself must be allowed (the Customer Account setting on free sign up), otherwise the signup page is never shown.

5.2 What the customer sees WHATSAPP OTP

The signup page

2 Under the email field the customer gets a required phone field with a **Send OTP** button, and the Sign up button is greyed out. Send OTP calls the server, which makes a fresh six digit code, cancels any older code for that number and sends the template by WhatsApp. A code field with a **Verify** button then appears; once the code checks out, Sign up is enabled. The server checks the code again on submit.

This screenshot was taken with signup switched on for a minute and switched off again. With no Meta token set, Send OTP answers "WhatsApp API is not configured.", which is what a visitor would see on a half set up site.

5.3 What happens on submit WHATSAPP OTP

Check	Result
No phone number	Phone number is required for WhatsApp verification.
Phone but no code	Please verify your phone number via WhatsApp OTP before signing up.
Wrong or expired code	Invalid or expired OTP. Please request a new code.
Code matches and is not used	The code is marked used and the normal Odoo signup continues

If a contact with the same email already exists and has no user, the module links the new account to that contact instead of creating a duplicate. Codes are stored on a small table (phone, code, expiry, used) with no menu; a scheduled action, "WT WhatsApp OTP: Cleanup Expired OTPs", deletes codes more than an hour past expiry, every hour.

Known limits in this version, read from the code: a failed WhatsApp send is ignored, so the page says the code was sent even when Meta refused it; the verified number is meant to be saved on the new contact but the write also sets a mobile field that Odoo 19 no longer has, so it fails quietly and the phone is not saved; there is no limit on how often a visitor can request or try a code; and the setting is stored as the text False at install, which Odoo reads as switched on. Switch it off and save once if you do not want it.

PART 6 Drip campaigns: audience, flow, steps and testing

DRIP CAMPAIGNS

A drip campaign sends the right next message without anybody watching the calendar: a welcome email the day a lead comes in, the price list three days later, a call for the salesperson if the price list was never opened. Marketing Automation runs that over any Odoo model, leads and contacts on the demo, from one hourly scheduled action.

IN THIS PART YOU WILL LEARN

- The three states of a campaign and what each allows
- How the audience filter picks who joins, and when
- The five triggers and four actions a step can have
- How to build the welcome flow the demo runs
- How to test a campaign on one record without waiting days

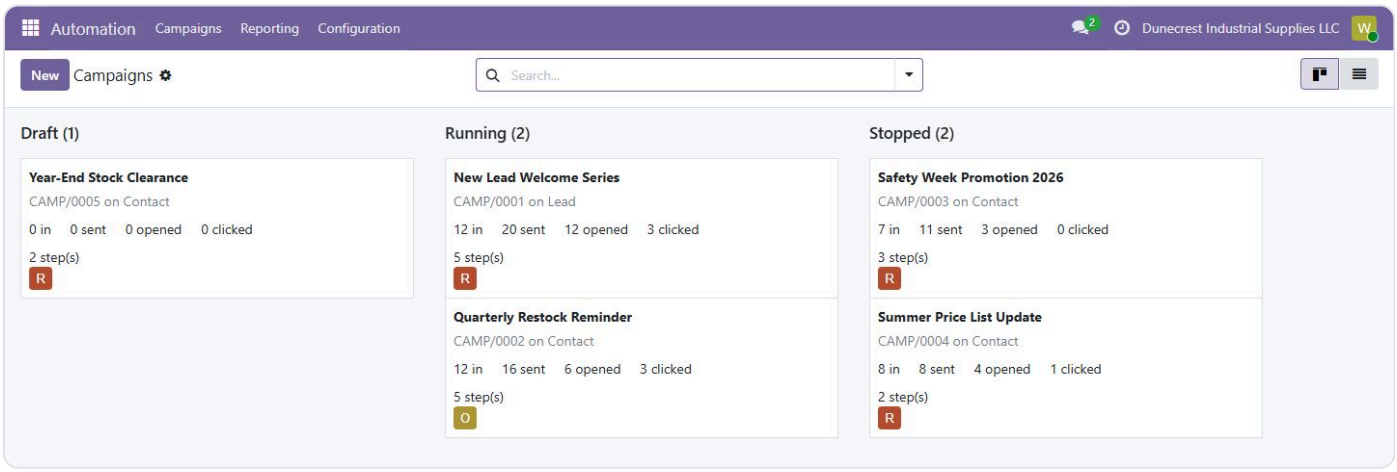

TRY IT YOURSELF ON THE DEMO

1. Open Automation > Campaigns and switch between kanban and list
2. Open New Lead Welcome Series and read the Flow tab top to bottom
3. Click Test on the campaign, read the dialog, then Cancel

6.1 The campaign DRIP CAMPAIGNS

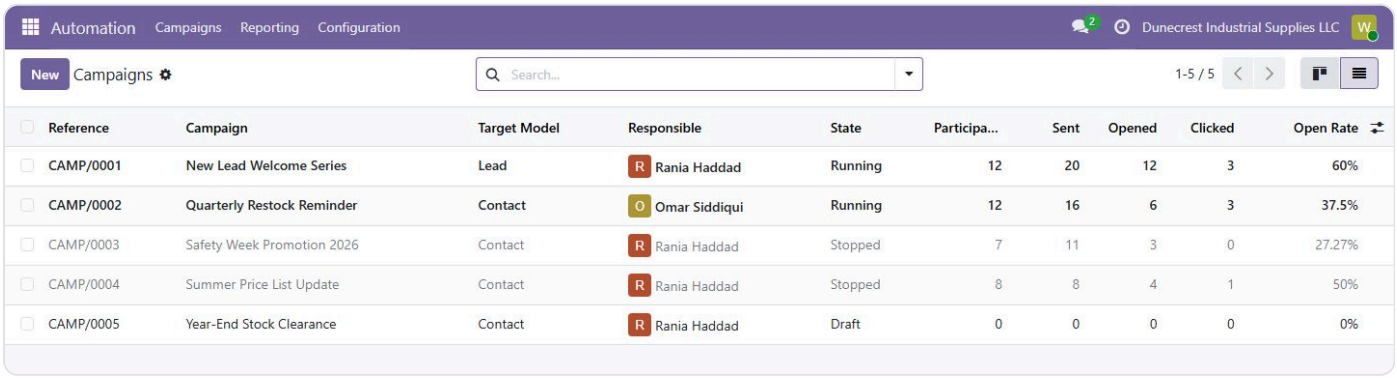

Campaigns by state

1 Automation > Campaigns opens a kanban grouped by state: **Draft** (being built, nothing runs), **Running** (takes on new records and processes what is due) and **Stopped** (everything stays where it is). The demo has two running, two stopped and one draft. There is no Done state on a campaign; a finished campaign is a stopped one whose participants have all completed.

The list

2 The list view gives the reference, model, state, responsible and the participant and result counts side by side.

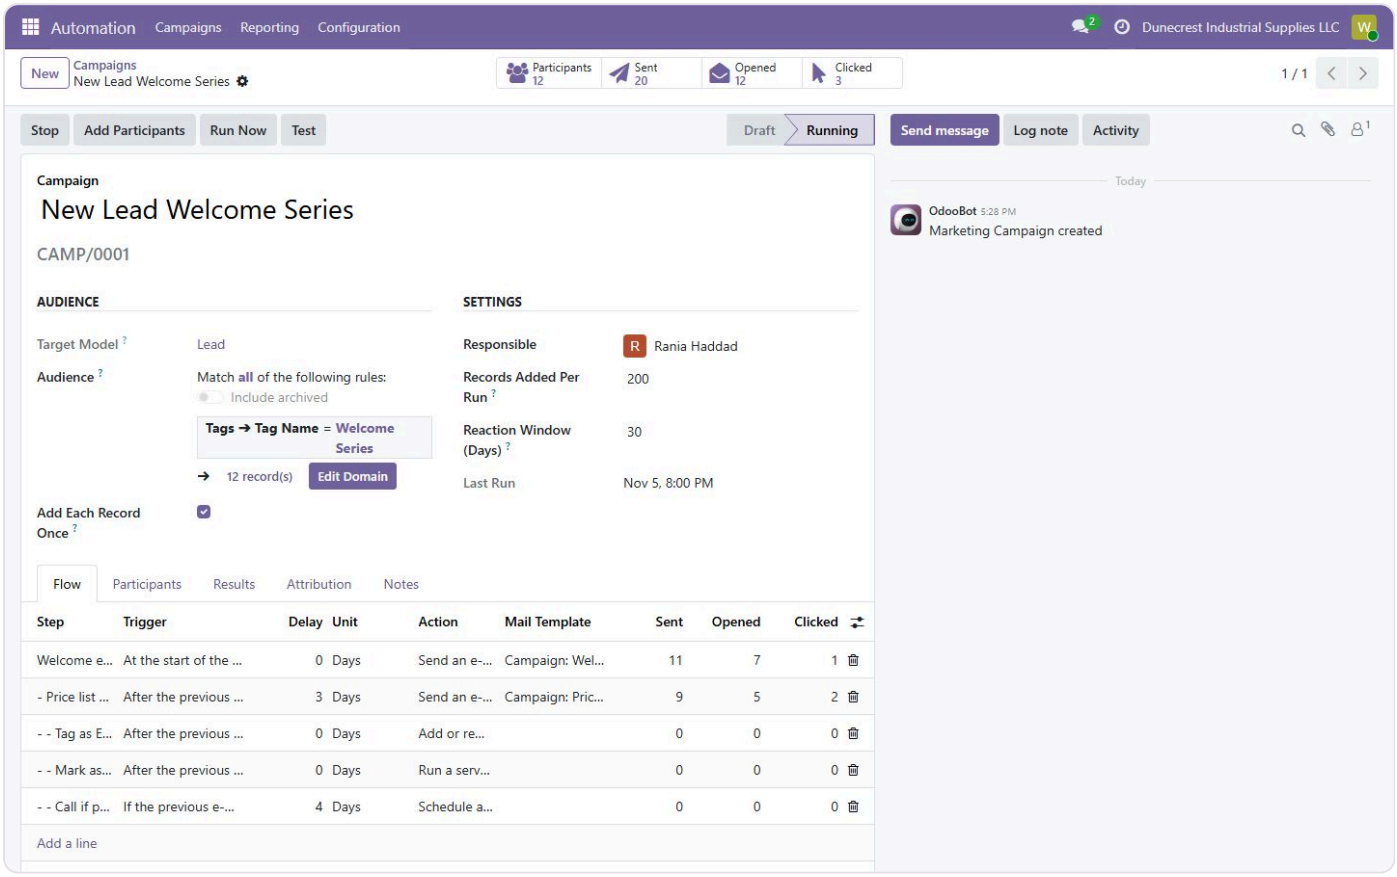

Reference	Campaign	Target Model	Responsible	State	Participa...	Sent	Opened	Clicked	Open Rate
CAMP/0001	New Lead Welcome Series	Lead	Rania Haddad	Running	12	20	12	3	60%
CAMP/0002	Quarterly Restock Reminder	Contact	Omar Siddiqui	Running	12	16	6	3	37.5%
CAMP/0003	Safety Week Promotion 2026	Contact	Rania Haddad	Stopped	7	11	3	0	27.27%
CAMP/0004	Summer Price List Update	Contact	Rania Haddad	Stopped	8	8	4	1	50%
CAMP/0005	Year-End Stock Clearance	Contact	Rania Haddad	Draft	0	0	0	0	0%

The campaign form

3 **Target Model** is the model the campaign works on (Lead here). **Audience** is a filter on that model; the demo uses a tag, so every lead tagged Welcome Series joins. **Add Each Record Once** stops a record from going through twice. **Records Added Per Run** caps how many join in one pass (1,000 by default). **Reaction Window** is how many days an email is watched for an open or click. Smart buttons count participants, sent, opened and clicked.

The audience is re-read on every run. A lead tagged next month joins next month, without anybody pressing anything.

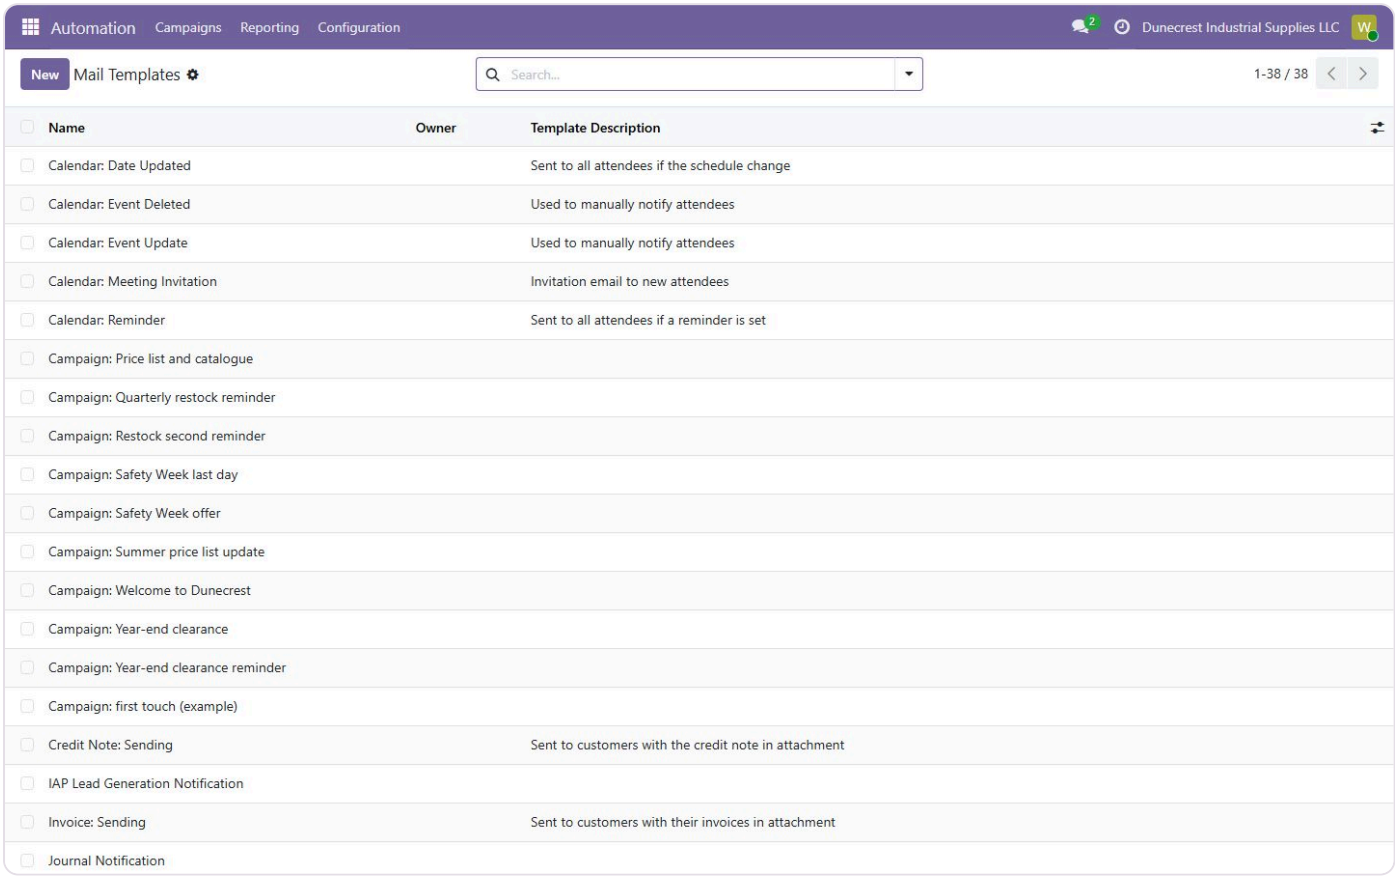

The header buttons: **Start** (refuses if no step is triggered at the start), **Stop**, **Back to Draft** (only from Stopped), **Add Participants** (join whatever matches now and say how many), **Run Now** (do what the hourly run would do, for this campaign only) and **Test** (6.4). A running campaign cannot be deleted; stop it first. Once a campaign has participants its target model is locked, so duplicate it instead of repointing it.

> Only the Configure Campaigns group can change the target model or the audience. The engine reads the audience as superuser, so a user who could rewrite the filter could point a campaign at any table and read its record names off the participant list. That is why the field is locked to managers.

6.2 The emails DRIP CAMPAIGNS

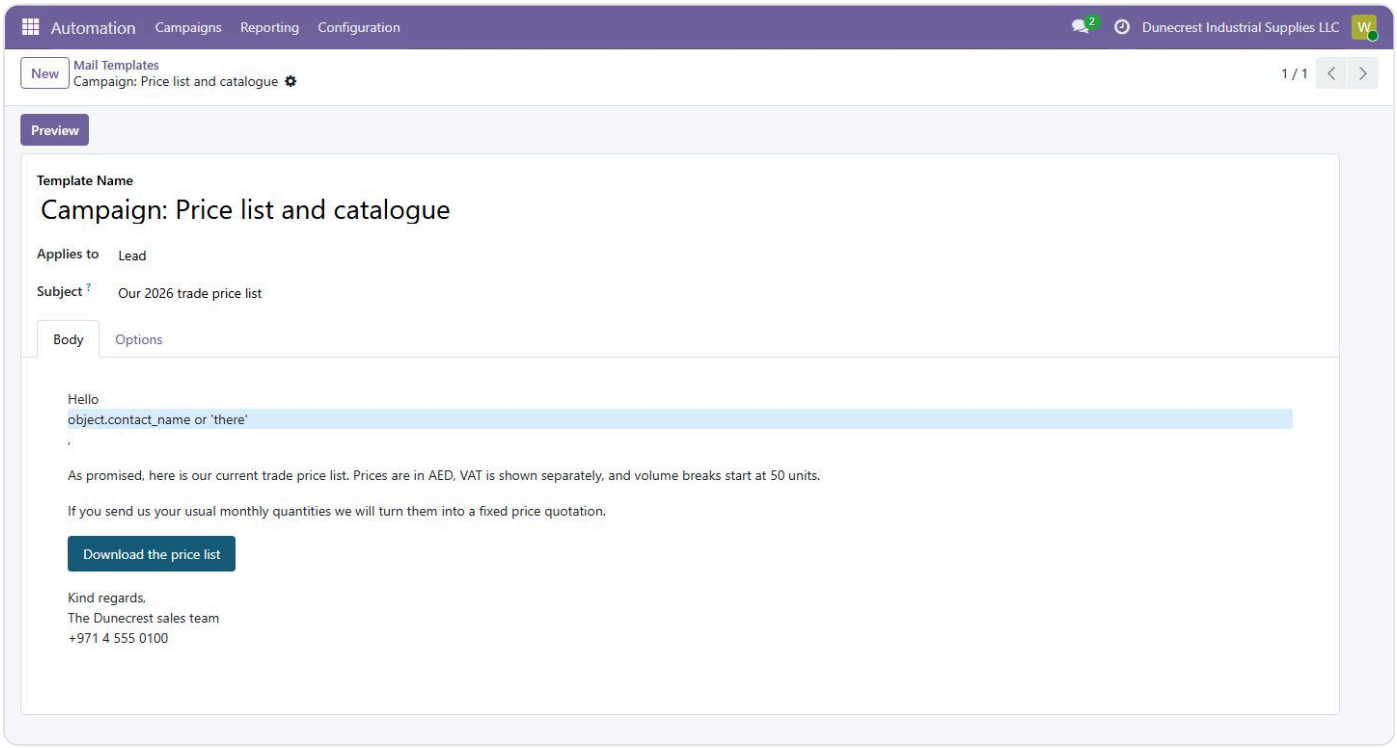

Mail templates

4 Automation > Configuration > Mail Templates lists ordinary Odoo email templates. A step can only use a template made for the campaign's model. The module ships one example on contacts, "Campaign: first touch (example)", meant to be copied, not sent as it is.

A campaign email

5 Subject, body, sender and recipient work as in any Odoo template. For leads the recipient is the lead's email, for contacts the contact itself. Every web link in the body is tracked automatically when the email goes out.

6.3 Steps: trigger, delay, action DRIP CAMPAIGNS

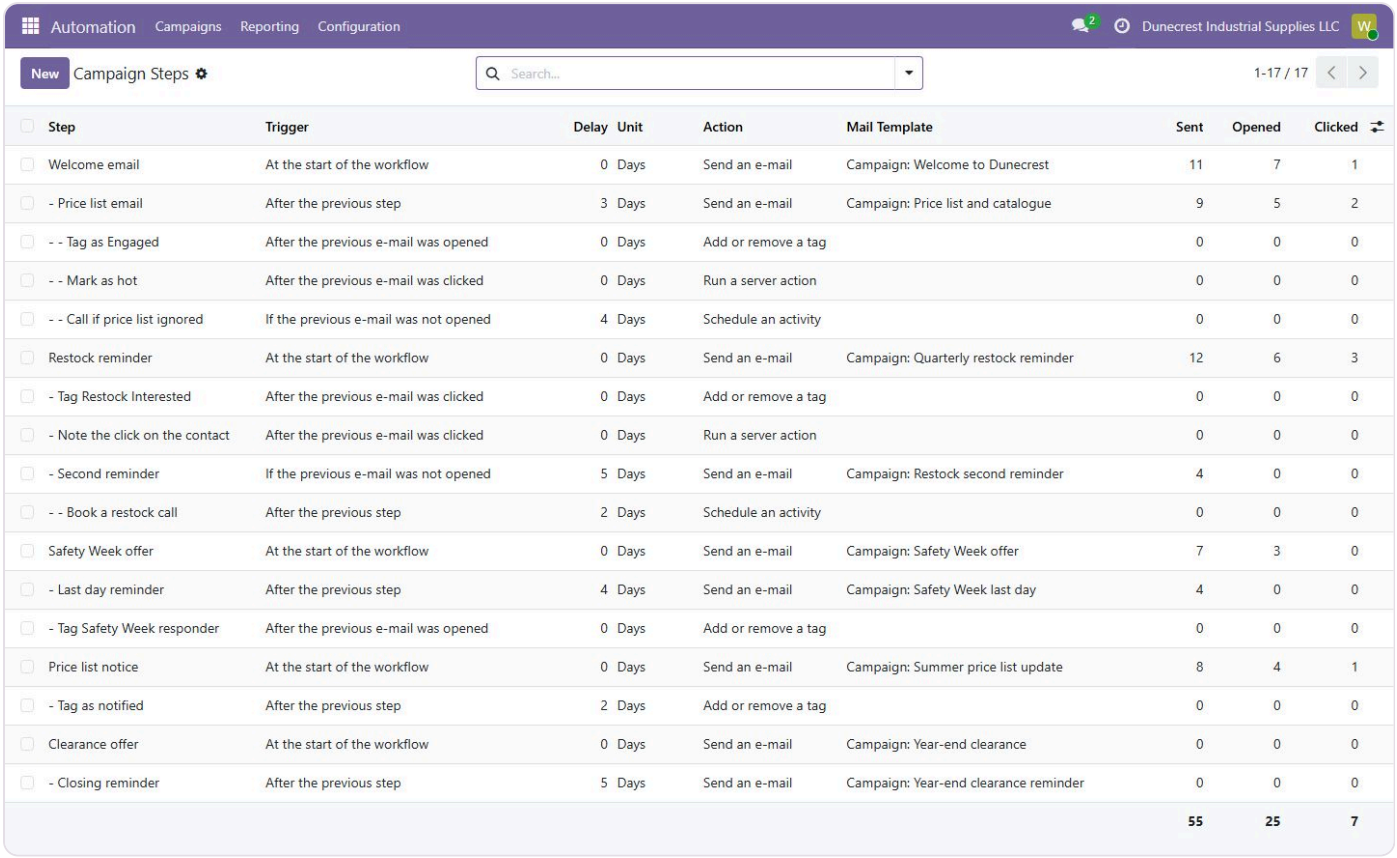

The Flow tab is a tree. A step with no previous step fires when a record joins; every other step hangs off a previous one and fires relative to it. The list is indented so you can read the tree. Flows can be up to ten steps deep and cannot loop.

Trigger	Fires	Needs
At the start of the workflow	When the record joins, plus the delay	No previous step
After the previous step	The delay after the previous step ran	Any previous step
After the previous e-mail was opened	The delay after the open	Previous step sends an email
After the previous e-mail was clicked	The delay after the click	Previous step sends an email
If the previous e-mail was not opened	After the delay, only if no open by then	Previous step sends an email

Action	What it does	Rejected when
Send an e-mail	Queues the template for the record, with tracked links and an open pixel	No template, no address
Schedule an activity	Creates an activity on the record: type, summary, note, due in N days, assigned to a user or the campaign's responsible	The model has no activities
Run a server action	Runs a server action of the same model on the record	No action chosen
Add or remove a tag	Adds or removes a tag on a many2many tag field (creates the tag on add if needed)	The tag cannot be found on remove

All steps

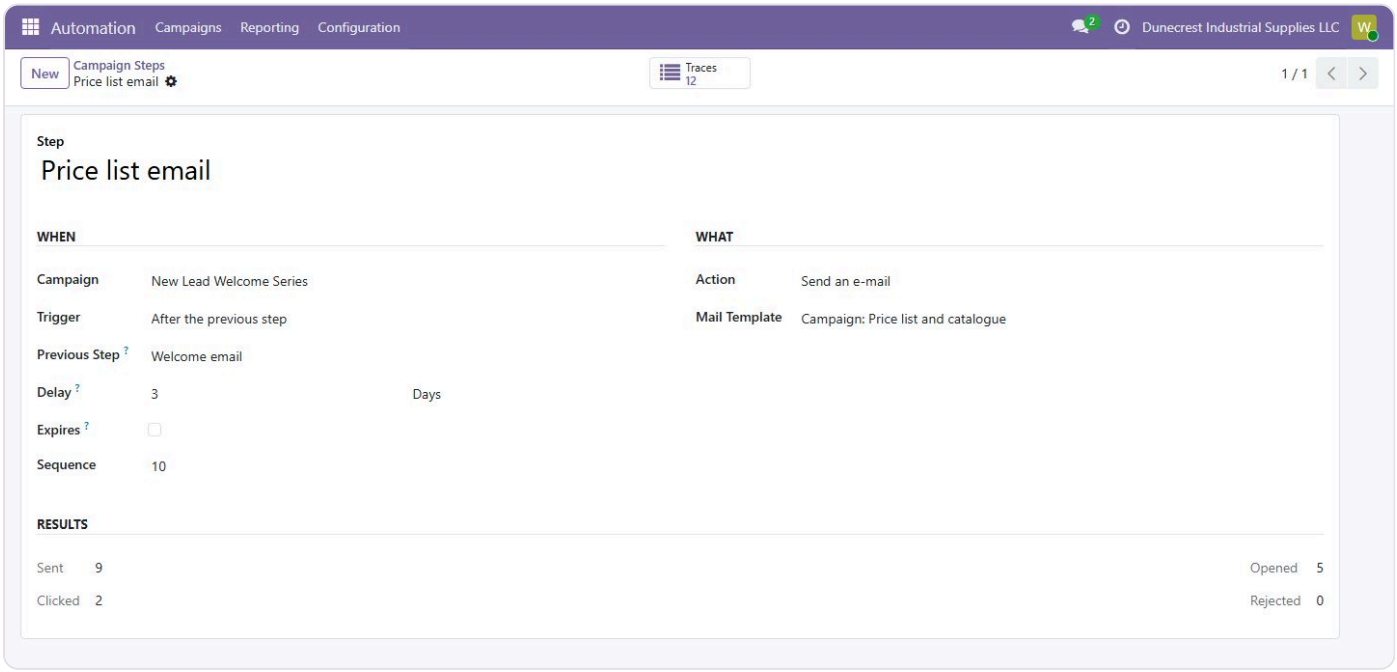

6 Automation > Configuration > Campaign Steps lists every step of every campaign with its trigger, delay, action and counts. Filters: Sends an e-mail, Entry steps, Archived.

Step	Trigger	Delay	Unit	Action	Mail Template	Sent	Opened	Clicked
Welcome email	At the start of the workflow	0	Days	Send an e-mail	Campaign: Welcome to Dunecrest	11	7	1
- Price list email	After the previous step	3	Days	Send an e-mail	Campaign: Price list and catalogue	9	5	2
- - Tag as Engaged	After the previous e-mail was opened	0	Days	Add or remove a tag		0	0	0
- - Mark as hot	After the previous e-mail was clicked	0	Days	Run a server action		0	0	0
- - Call if price list ignored	If the previous e-mail was not opened	4	Days	Schedule an activity		0	0	0
Restock reminder	At the start of the workflow	0	Days	Send an e-mail	Campaign: Quarterly restock reminder	12	6	3
- Tag Restock Interested	After the previous e-mail was clicked	0	Days	Add or remove a tag		0	0	0
- Note the click on the contact	After the previous e-mail was clicked	0	Days	Run a server action		0	0	0
- Second reminder	If the previous e-mail was not opened	5	Days	Send an e-mail	Campaign: Restock second reminder	4	0	0
- - Book a restock call	After the previous step	2	Days	Schedule an activity		0	0	0
Safety Week offer	At the start of the workflow	0	Days	Send an e-mail	Campaign: Safety Week offer	7	3	0
- Last day reminder	After the previous step	4	Days	Send an e-mail	Campaign: Safety Week last day	4	0	0
- Tag Safety Week responder	After the previous e-mail was opened	0	Days	Add or remove a tag		0	0	0
Price list notice	At the start of the workflow	0	Days	Send an e-mail	Campaign: Summer price list update	8	4	1
- Tag as notified	After the previous step	2	Days	Add or remove a tag		0	0	0
Clearance offer	At the start of the workflow	0	Days	Send an e-mail	Campaign: Year-end clearance	0	0	0
- Closing reminder	After the previous step	5	Days	Send an e-mail	Campaign: Year-end clearance reminder	0	0	0
						55	**25**	**7**

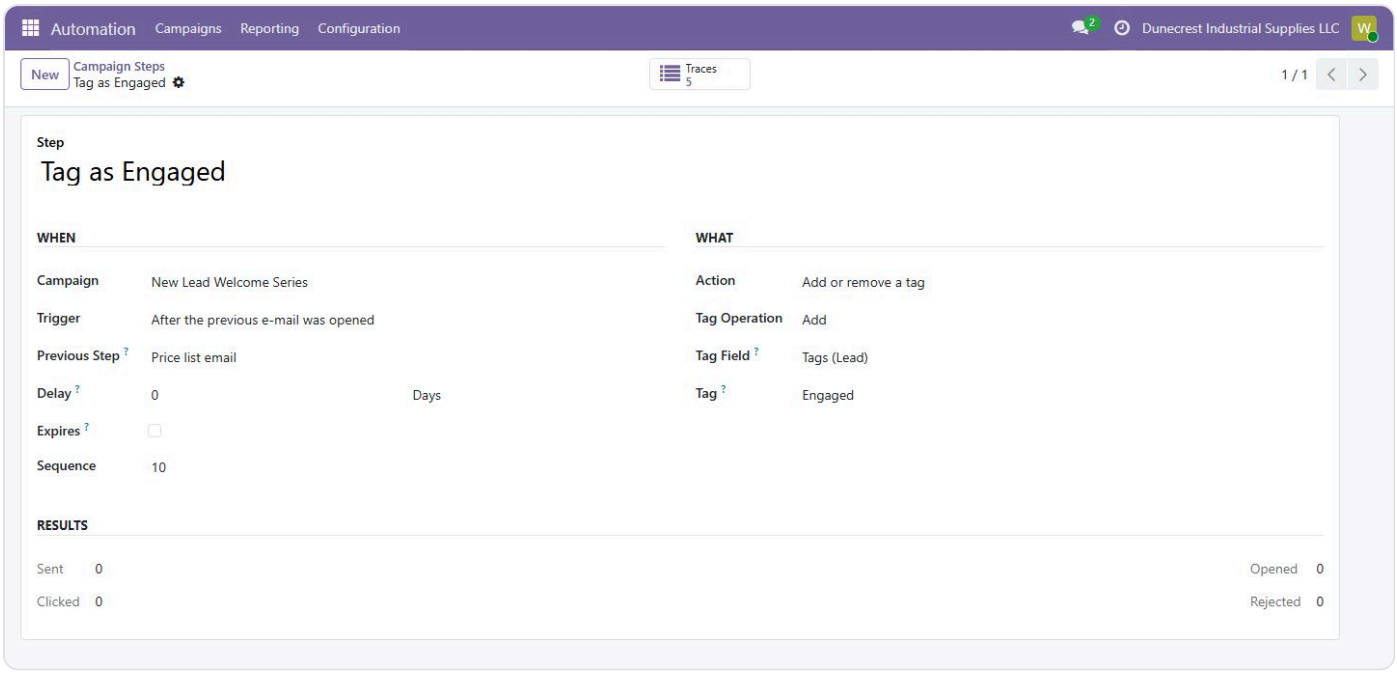

An email step

7 The demo's second step: after the previous step, 3 days, send the price list. **Expires** with a validity drops a step that could not run in time, for messages that only make sense on the day. The Traces button opens what this step did.

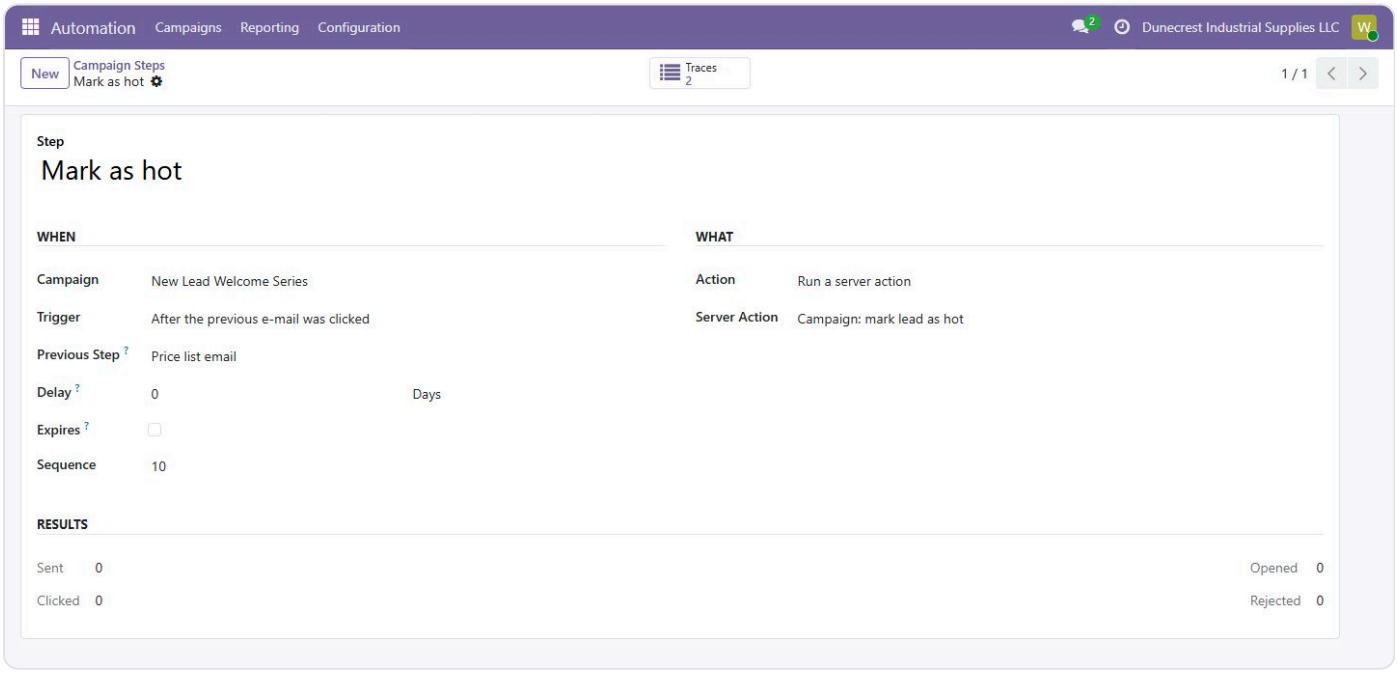

8 A tag step

Fires when the price list is opened and adds the tag Engaged to the lead's Tags field.

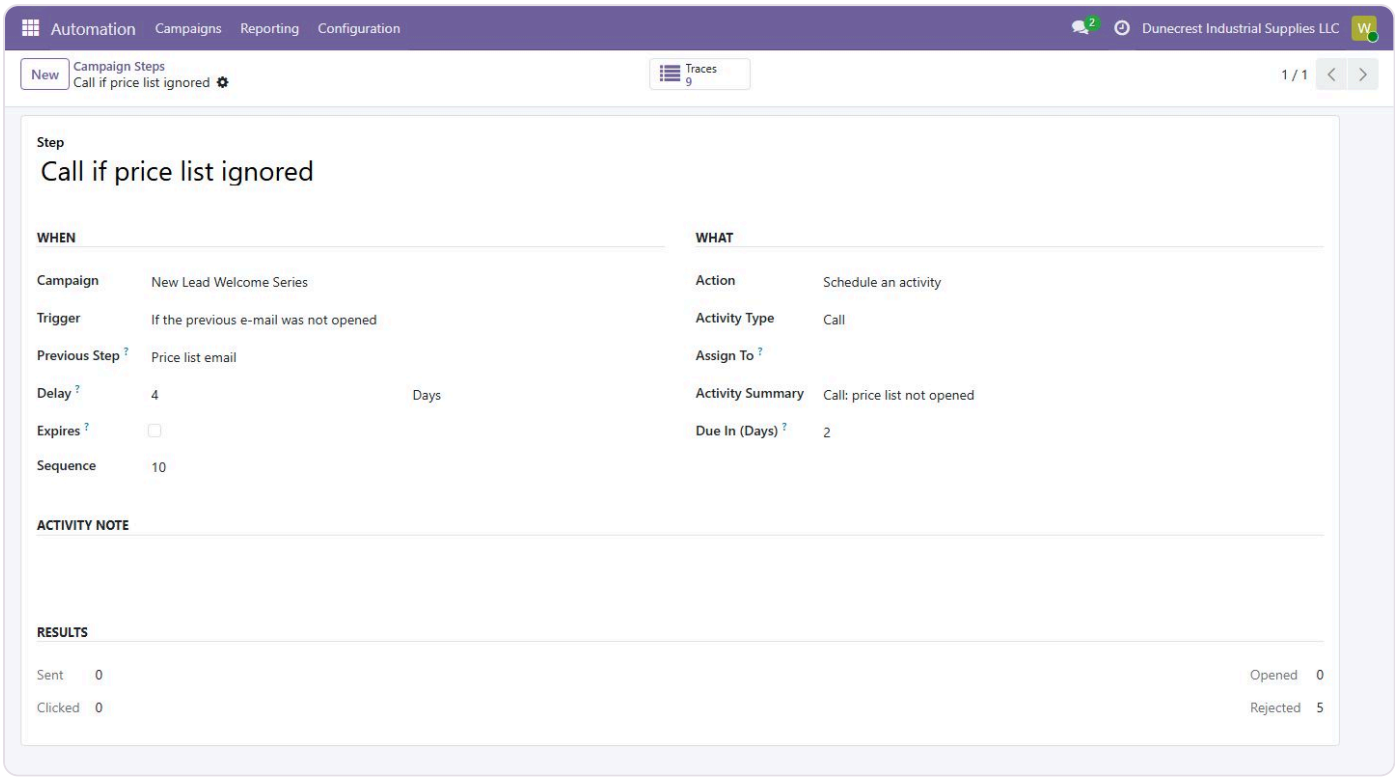

9 A server action step

Fires on a click and runs a server action that marks the lead as hot and writes a note on it.

10 An activity step

If the price list was not opened within 4 days, a Call activity is scheduled for the account manager, due 2 days later.

Build the welcome flow yourself DRIP CAMPAIGNS

11 Create the campaign

Campaigns > New. Name it, set Target Model to Lead and the Audience to Tags contains Welcome Series. Keep Add Each Record Once ticked.

12 Add the entry step

On the Flow tab add a line: trigger At the start of the workflow, delay 0, action Send an e-mail, template Welcome.

13 Add the follow-ups

Add Price list email after the previous step, 3 days. Under it add Tag as Engaged on open, Mark as hot on click, and a Call activity if not opened after 4 days.

14 Set attribution

On Attribution pick a UTM campaign, source and medium. They are added to every tracked link, so web visits can be traced back to the campaign.

15 Test, then Start

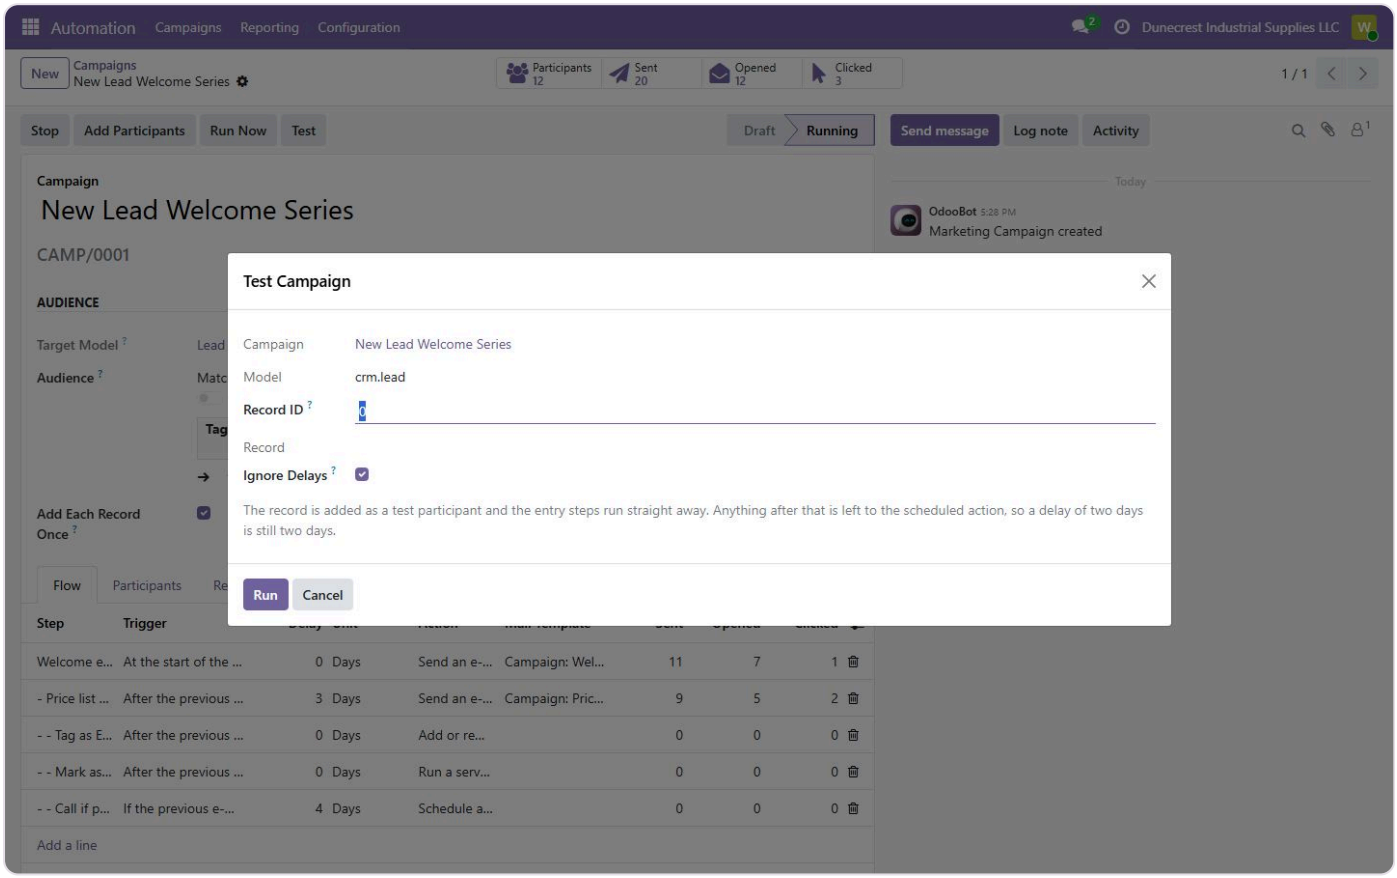

Use Test (below) on one lead, check the email in its chatter, then Start. From the next hourly run, tagged leads join on their own.

6.4 Testing on one record DRIP CAMPAIGNS

Test Campaign

16 Test asks for a Record ID (read it off the address bar of the record) and shows the record's name. With **Ignore Delays** ticked, the entry steps are queued for now and run straight away; everything after that is left to the hourly run, as for a real participant. The participant is flagged as a test.

With Add Each Record Once on, a record that has already been through the campaign cannot be tested again. Duplicate the campaign to test twice.

6.5 The engine DRIP CAMPAIGNS

The scheduled action "Marketing: run campaigns that are due" runs every hour as OdooBot. For each running campaign, inside its own savepoint so one broken campaign cannot stop the others, it: adds new matching records (up to the per run limit), reads bounces back from the outgoing mail, queues the open and click reactions that happened since the last run, processes up to 1,000 due steps, and marks participants Completed once nothing is scheduled and nothing can still react. Each step is locked before it runs and a database rule allows one trace per person per step, so two workers can never send the same email twice.

> The emails are queued in Odoo's normal outgoing mail queue; they go out with whatever outgoing mail server the database uses. On the demo no mail server is connected, so new campaign emails wait in the queue and never leave the server. The history you see was stored when the demo was built.

PART 7 Campaign results: participants, traces and the summary

DRIP CAMPAIGNS

Every person in a campaign is a participant, and every step that person reaches is a trace. Between them they answer the questions a sales manager asks: who got what, who opened, who clicked, what bounced, and what is still waiting.

IN THIS PART YOU WILL LEARN

- Participant states and how to stop or resume one person
- Trace states and the ten reasons a step can be rejected
- How opens, clicks and bounces are recorded
- The calendar, pivot and graph views of the traces

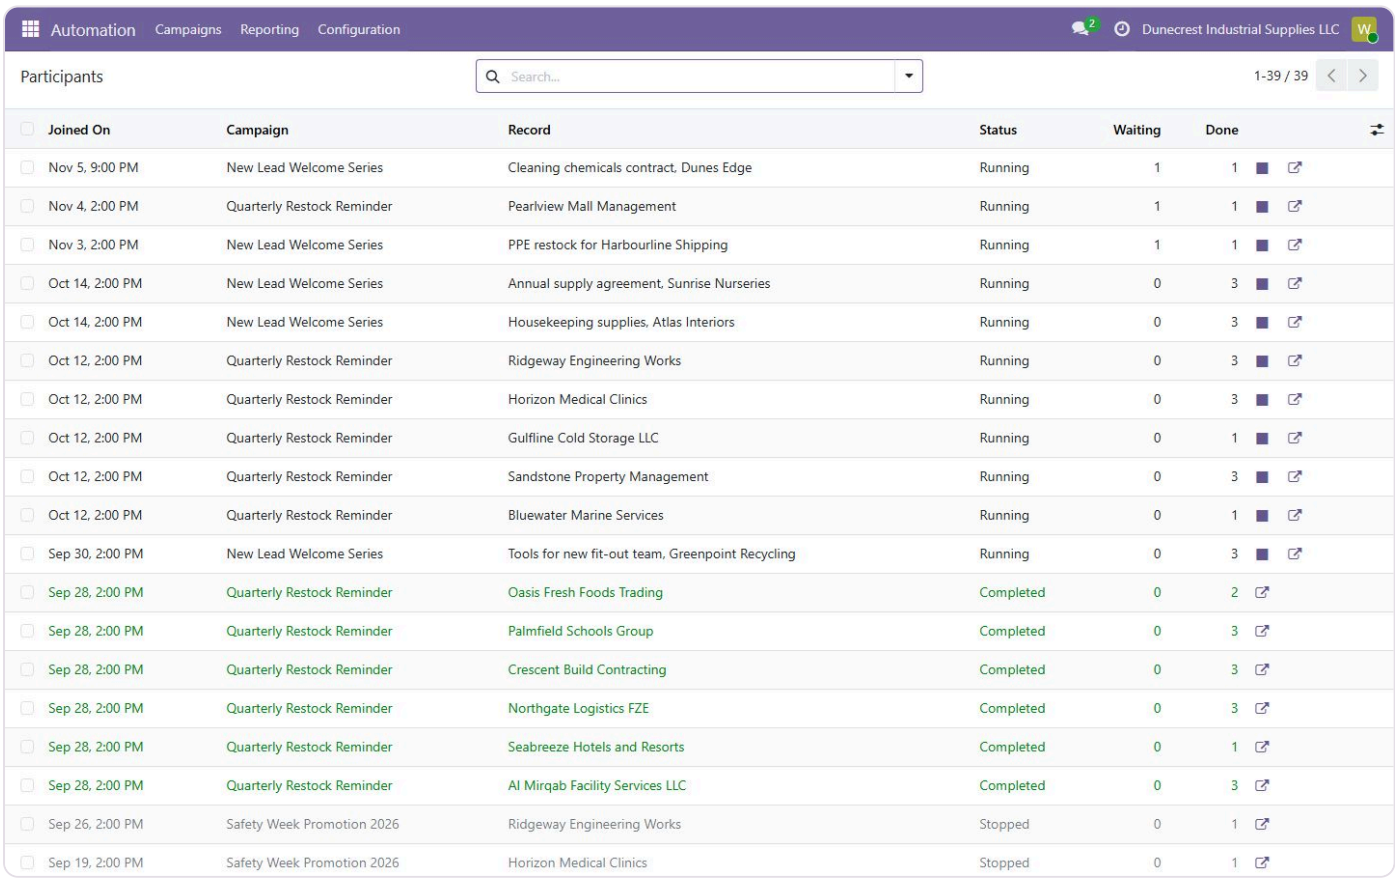

TRY IT YOURSELF ON THE DEMO

1. Open the Welcome Series and read the Results tab
2. Open Reporting > Traces, filter Rejected and group by Reason
3. Switch the traces to calendar to see what went out each day

7.1 Participants DRIP CAMPAIGNS

Reporting > Participants

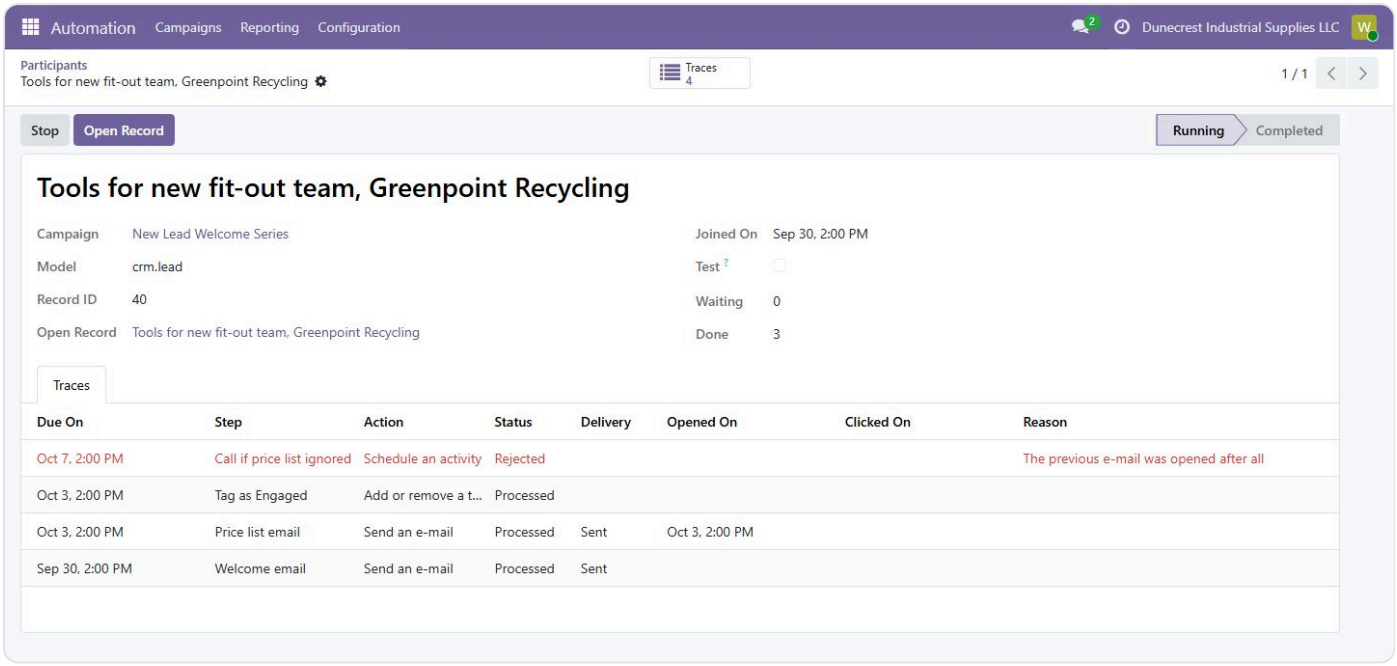

1 One row per record per campaign: the record's name, campaign, when it joined, state and counts of scheduled and processed steps. Filters for Running, Completed, Stopped and Test participants.

Joined On	Campaign	Record	Status	Waiting	Done
Nov 5, 9:00 PM	New Lead Welcome Series	Cleaning chemicals contract, Dunes Edge	Running	1	1
Nov 4, 2:00 PM	Quarterly Restock Reminder	Pearlview Mall Management	Running	1	1
Nov 3, 2:00 PM	New Lead Welcome Series	PPE restock for Harbourline Shipping	Running	1	1
Oct 14, 2:00 PM	New Lead Welcome Series	Annual supply agreement, Sunrise Nurseries	Running	0	3
Oct 14, 2:00 PM	New Lead Welcome Series	Housekeeping supplies, Atlas Interiors	Running	0	3
Oct 12, 2:00 PM	Quarterly Restock Reminder	Ridgeway Engineering Works	Running	0	3
Oct 12, 2:00 PM	Quarterly Restock Reminder	Horizon Medical Clinics	Running	0	3
Oct 12, 2:00 PM	Quarterly Restock Reminder	Gulfline Cold Storage LLC	Running	0	1
Oct 12, 2:00 PM	Quarterly Restock Reminder	Sandstone Property Management	Running	0	3
Oct 12, 2:00 PM	Quarterly Restock Reminder	Bluewater Marine Services	Running	0	1
Sep 30, 2:00 PM	New Lead Welcome Series	Tools for new fit-out team, Greenpoint Recycling	Running	0	3
Sep 28, 2:00 PM	Quarterly Restock Reminder	Oasis Fresh Foods Trading	Completed	0	2
Sep 28, 2:00 PM	Quarterly Restock Reminder	Palmfield Schools Group	Completed	0	3
Sep 28, 2:00 PM	Quarterly Restock Reminder	Crescent Build Contracting	Completed	0	3
Sep 28, 2:00 PM	Quarterly Restock Reminder	Northgate Logistics FZE	Completed	0	3
Sep 28, 2:00 PM	Quarterly Restock Reminder	Seabreeze Hotels and Resorts	Completed	0	1
Sep 28, 2:00 PM	Quarterly Restock Reminder	Al Mirqab Facility Services LLC	Completed	0	3
Sep 26, 2:00 PM	Safety Week Promotion 2026	Ridgeway Engineering Works	Stopped	0	1
Sep 19, 2:00 PM	Safety Week Promotion 2026	Horizon Medical Clinics	Stopped	0	1

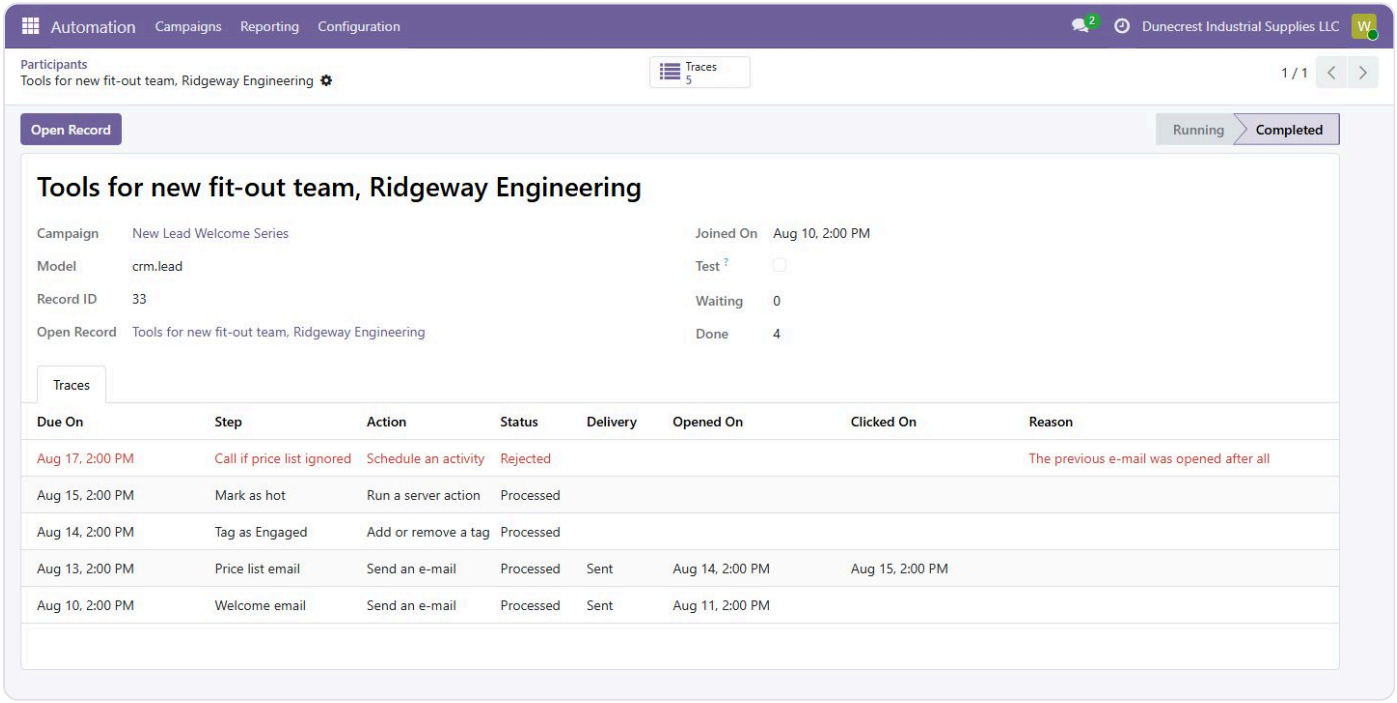

A running participant

2 The Traces tab shows each step this lead reached, its due date, state and reaction. **Stop** cancels everything still scheduled for this one person; **Resume** puts a stopped participant back to running. **Open Record** jumps to the lead or contact.

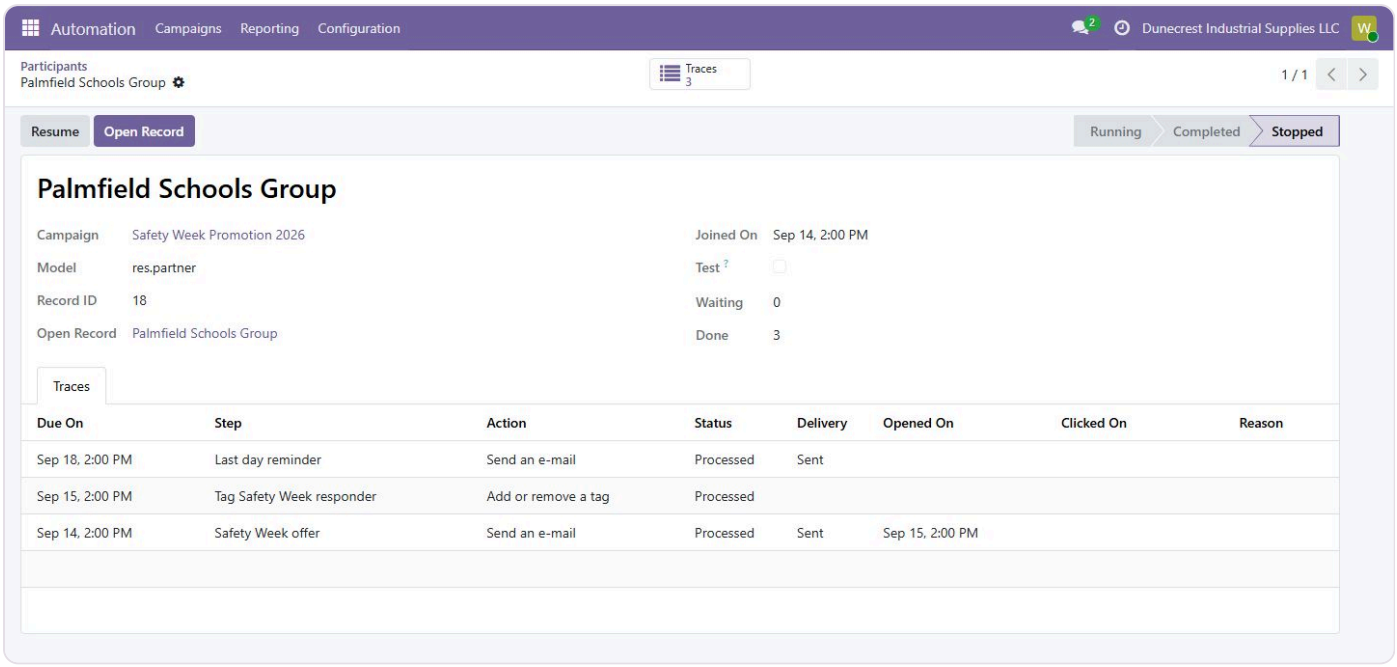

A completed participant

3 Nothing left to run and the reaction window has closed.

4 A stopped participant

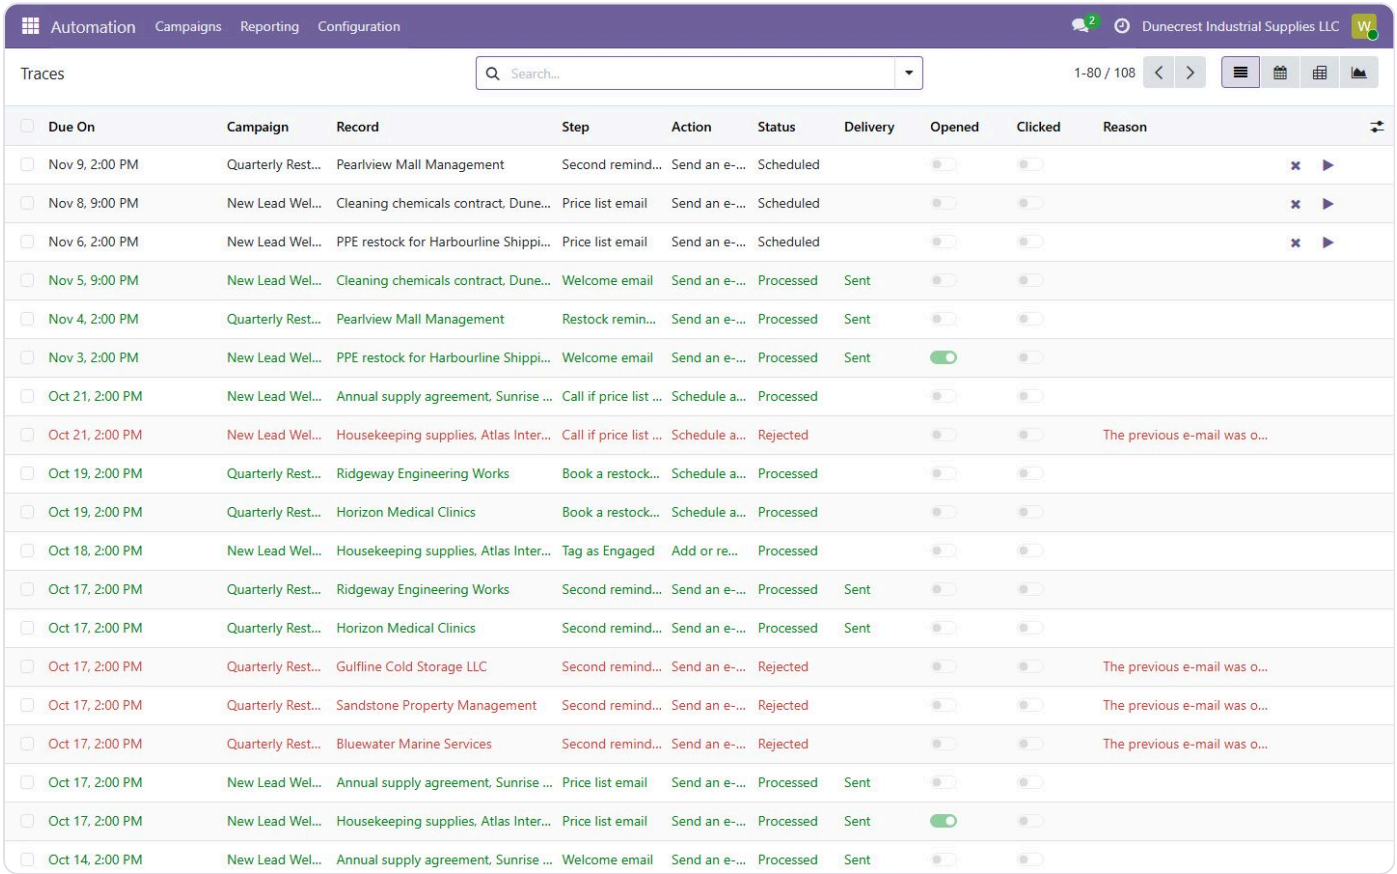

From the Safety Week campaign, stopped with the campaign. Its remaining step was cancelled.

7.2 Traces DRIP CAMPAIGNS

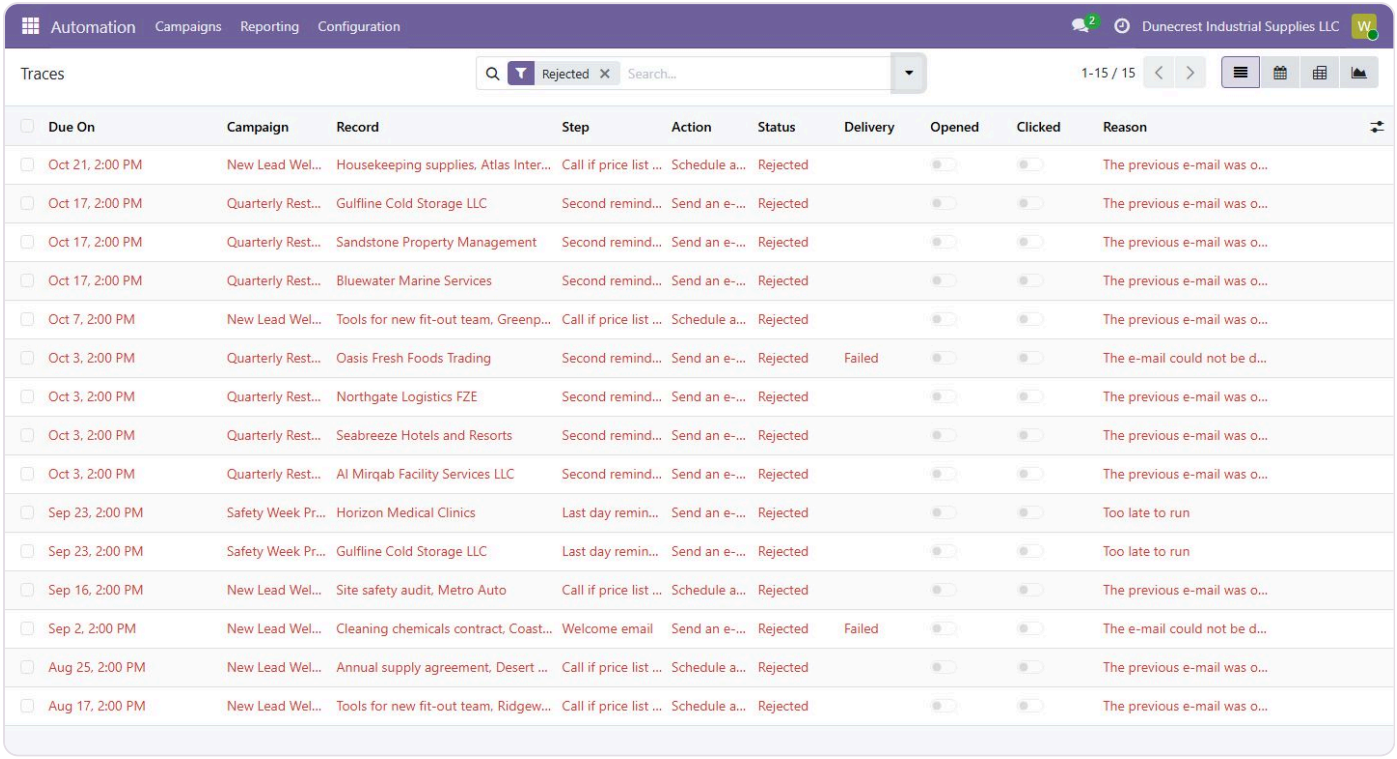

5 Reporting › Traces

Every step for every participant: due on, processed on, status, delivery state of the email, opened, clicked. Filters: Waiting, Processed, Rejected, Opened, Clicked, Due Now.

6 Rejected traces

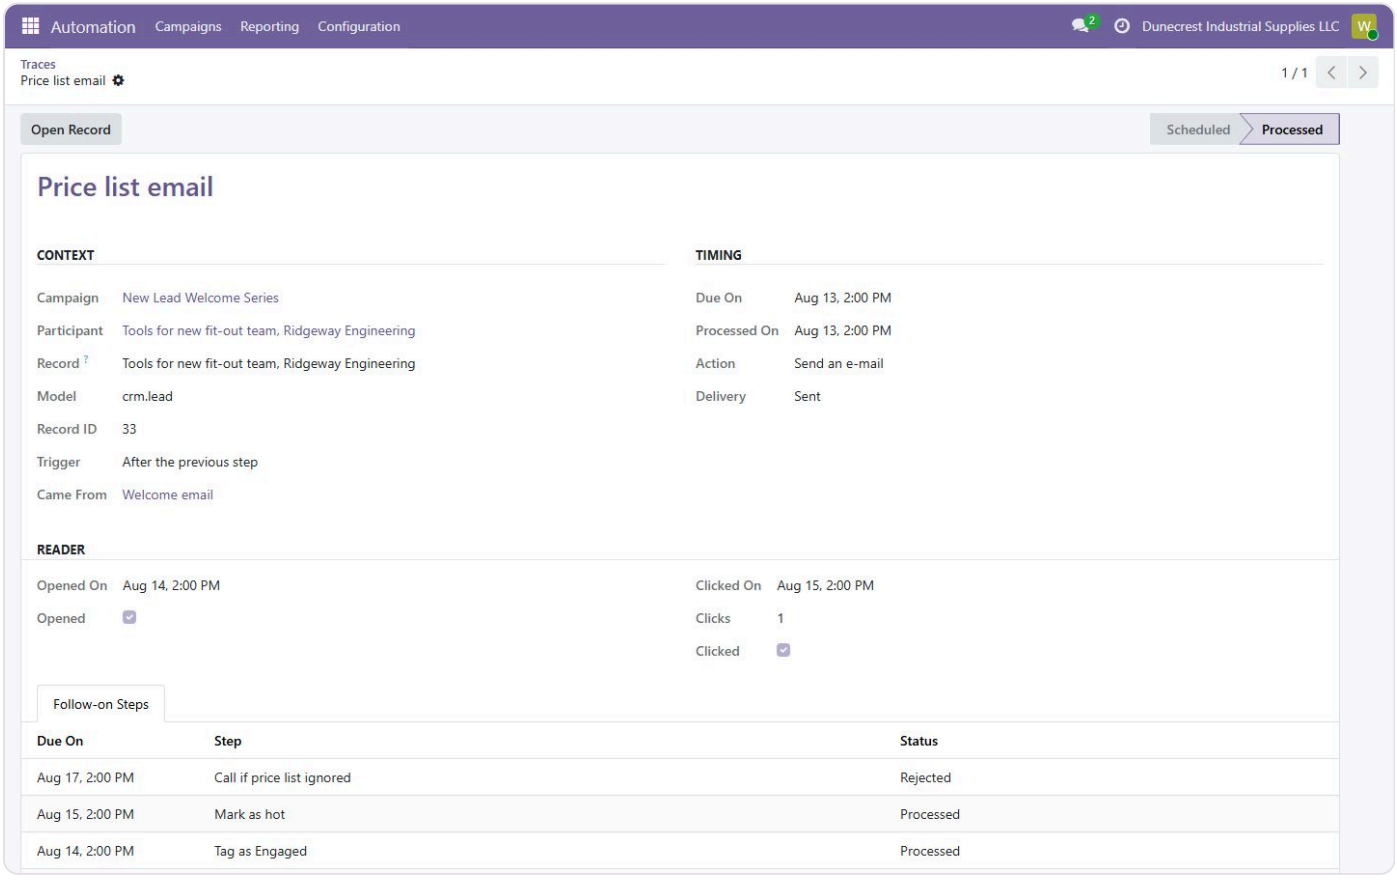

A rejected trace is a step that did not run, with its reason. Most rejections on the demo are the not opened branch being skipped because the email was opened after all, which is correct behaviour.

Due On	Campaign	Record	Step	Action	Status	Delivery	Opened	Clicked	Reason

7 A clicked email

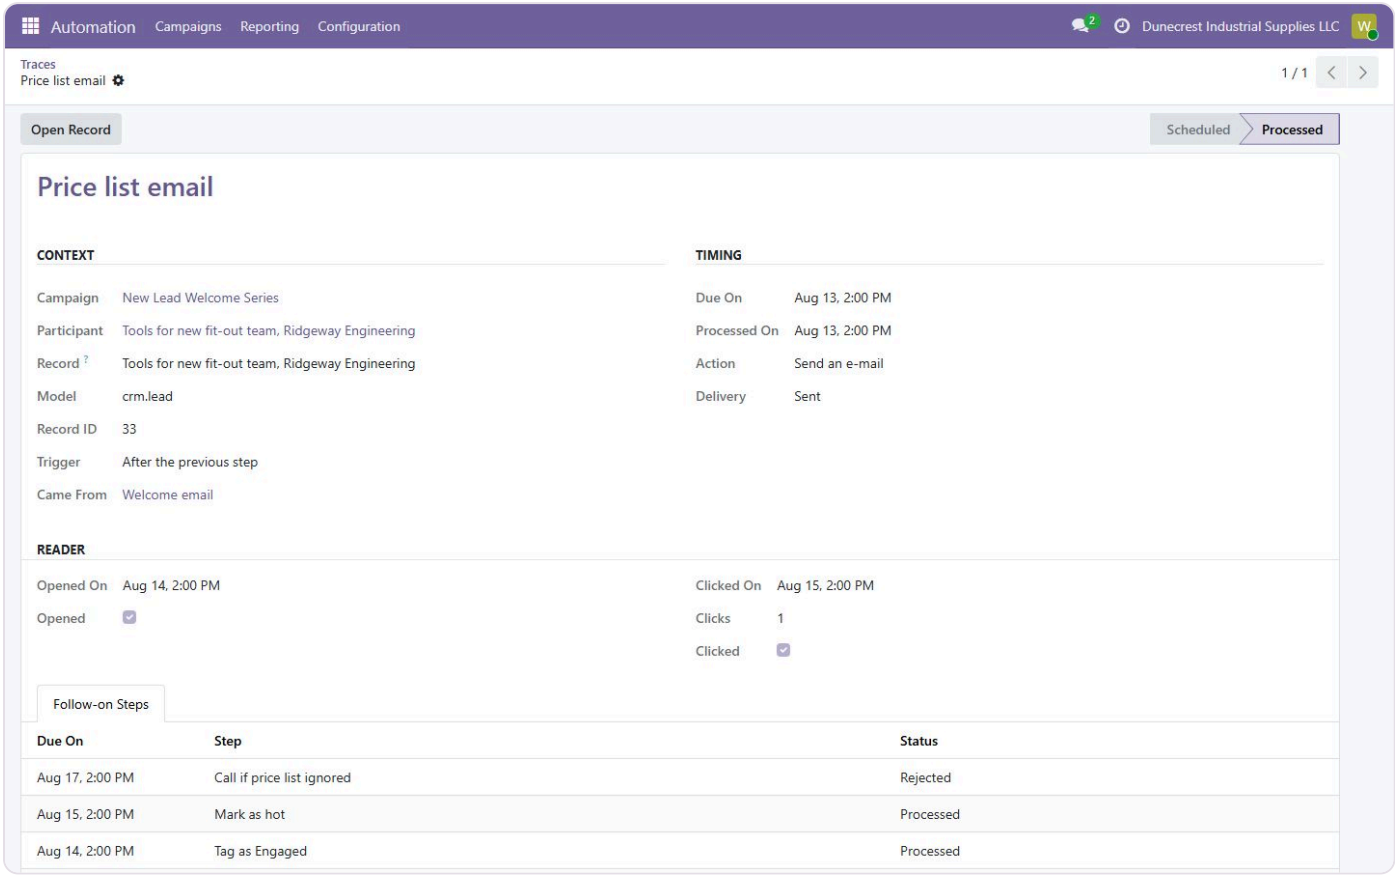

Processed, sent, opened and clicked, with the click count and the time of each. The tracked links are kept on the trace, in the order they appear in the email.

Due On	Step	Status
Aug 17, 2:00 PM	Call if price list ignored	Rejected
Aug 15, 2:00 PM	Mark as hot	Processed
Aug 14, 2:00 PM	Tag as Engaged	Processed

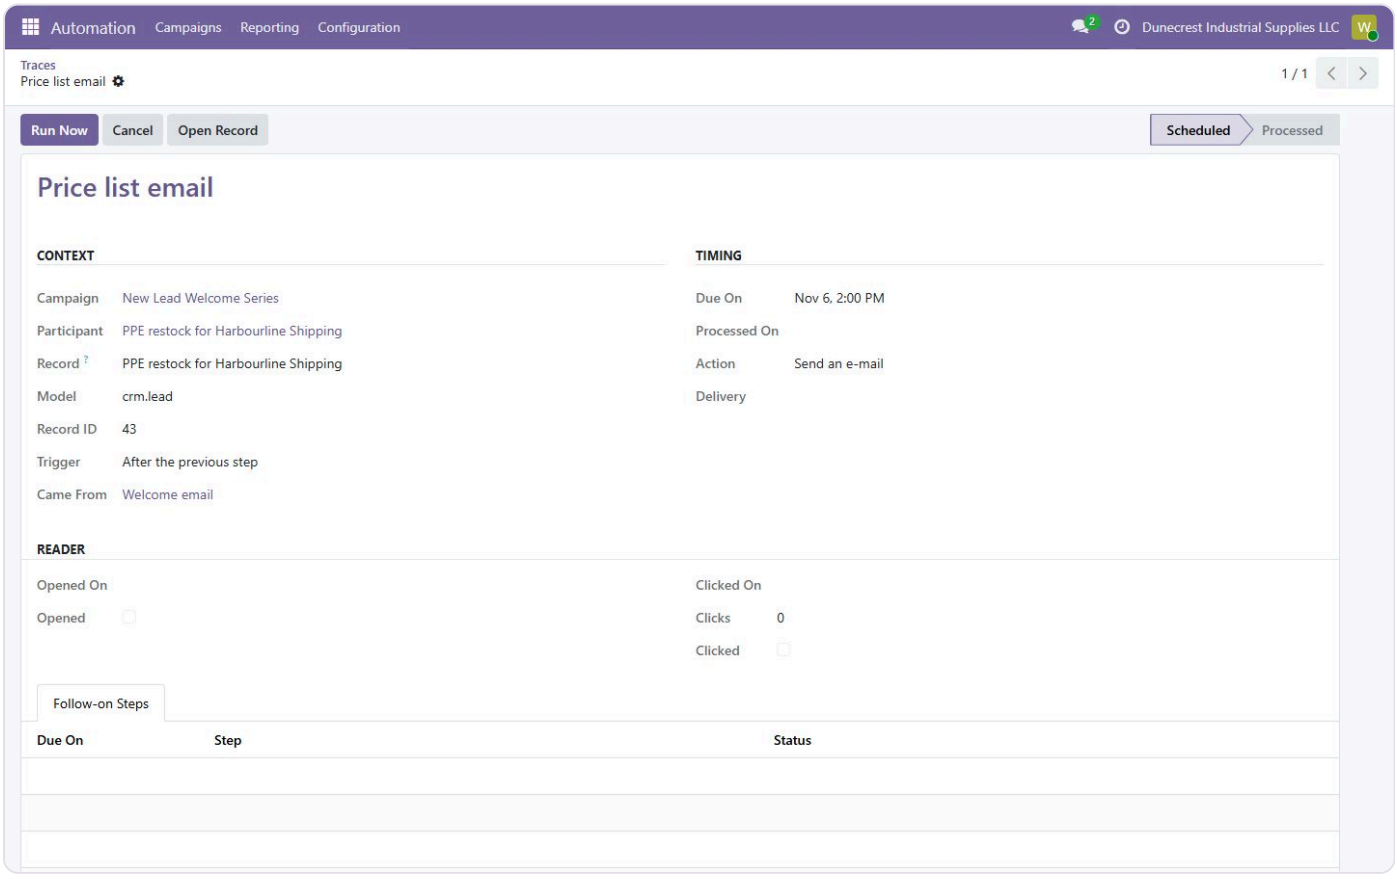

What it led to

8 The Follow-on Steps tab lists the traces this one caused: here the tag and the hot lead action, triggered by the open and the click.

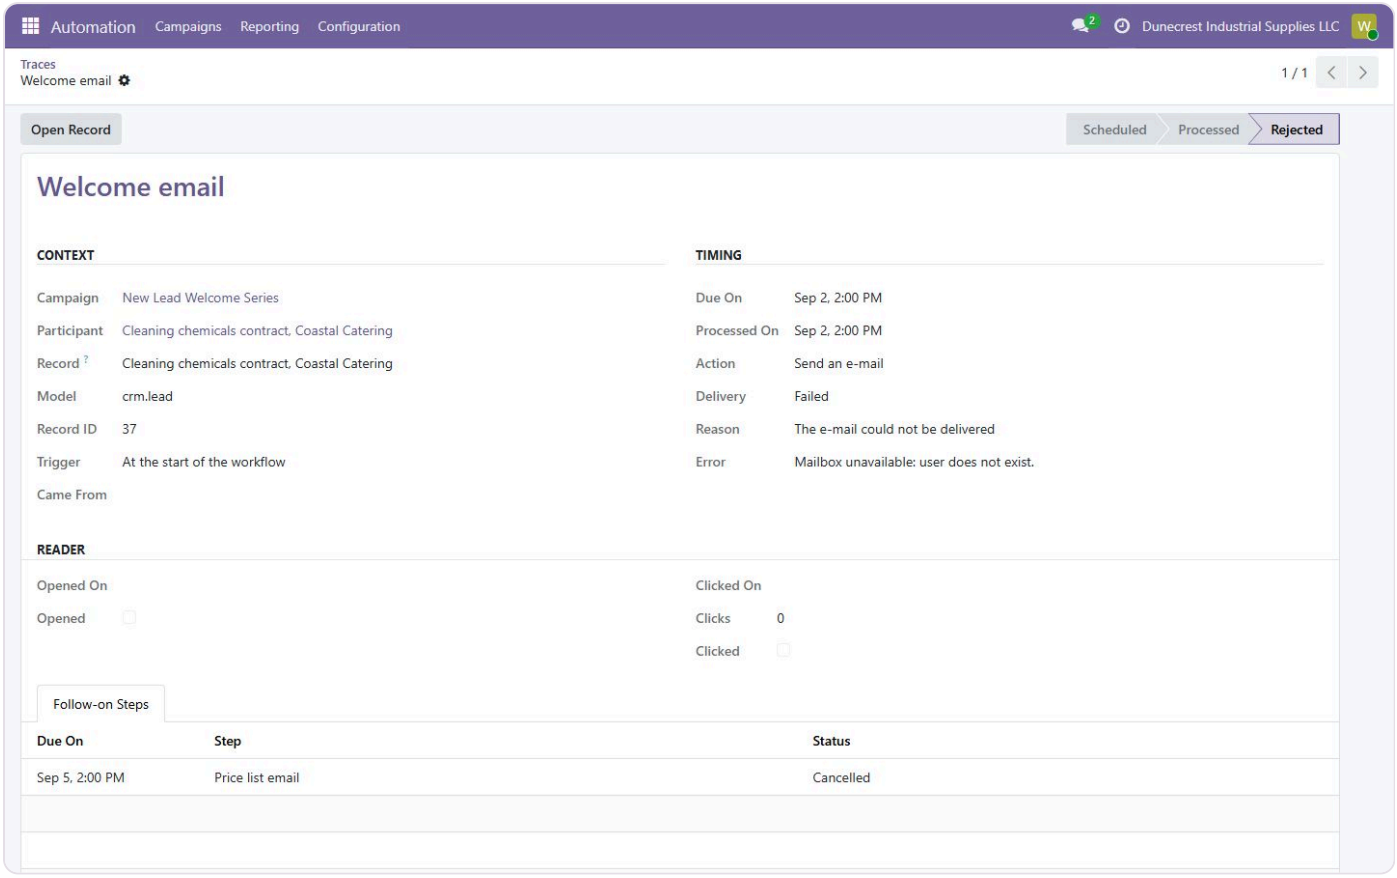

A waiting step

9 Scheduled, with its due date. **Run Now** processes it immediately; **Cancel** drops it.

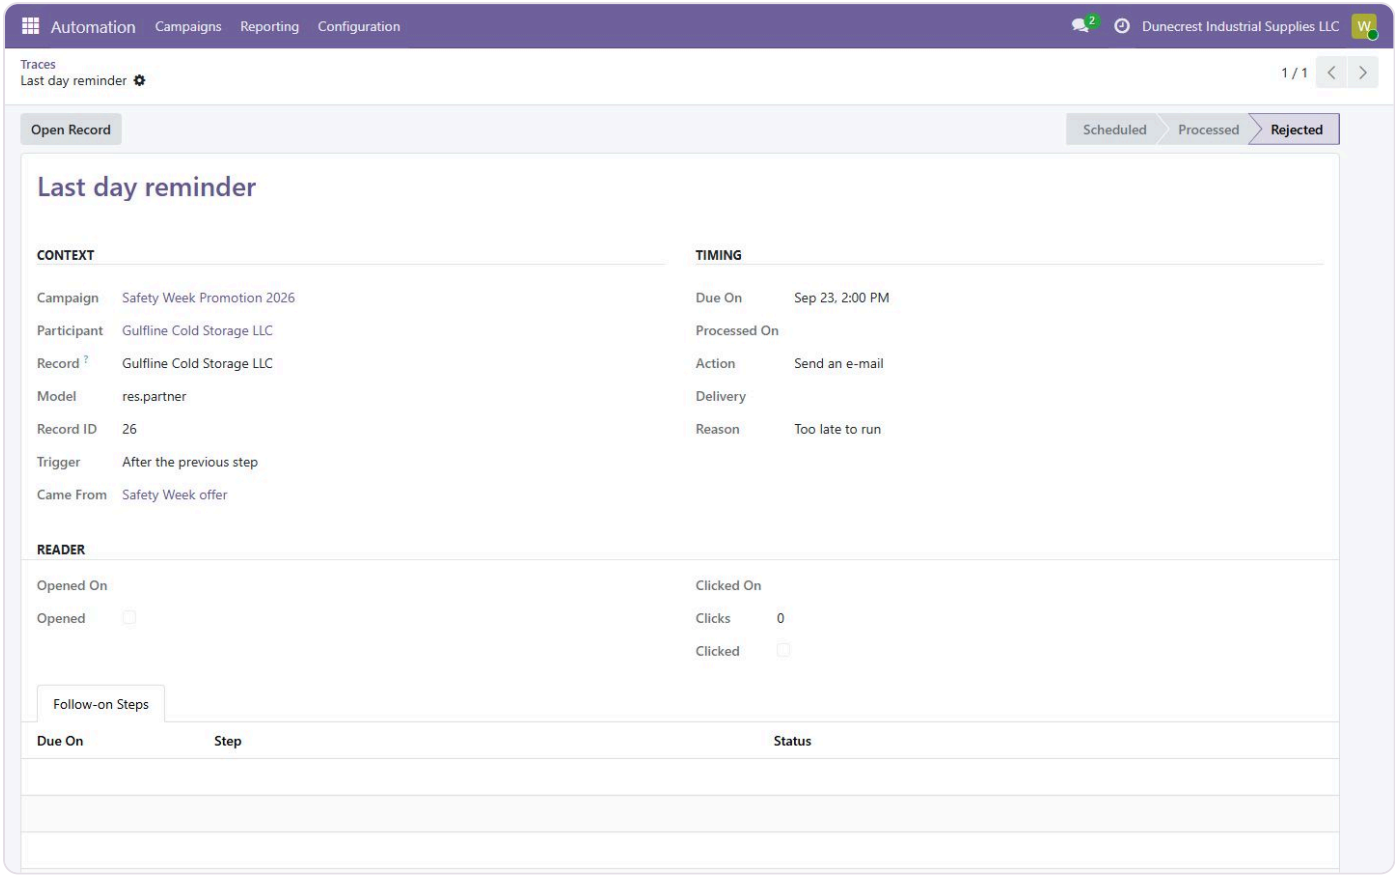

A bounce

10 The welcome email to one lead came back undeliverable. The trace moved to Rejected with reason Bounced and the mail server's message, and the price list queued behind it was cancelled.

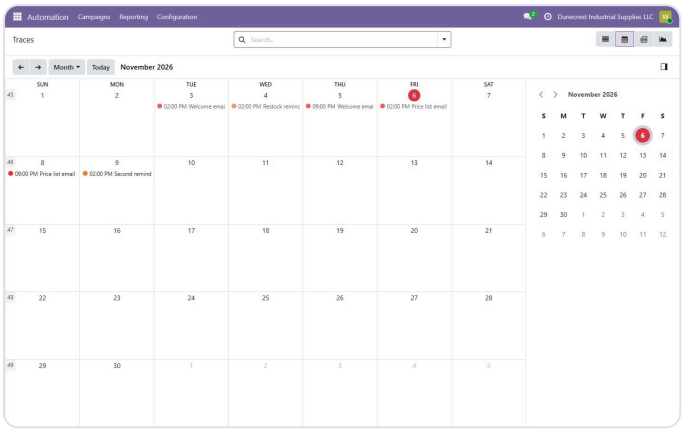

An expired step

11 The Safety Week last day reminder has a one day validity. The scheduled action did not run for two days, so it was dropped as too late rather than sent late.

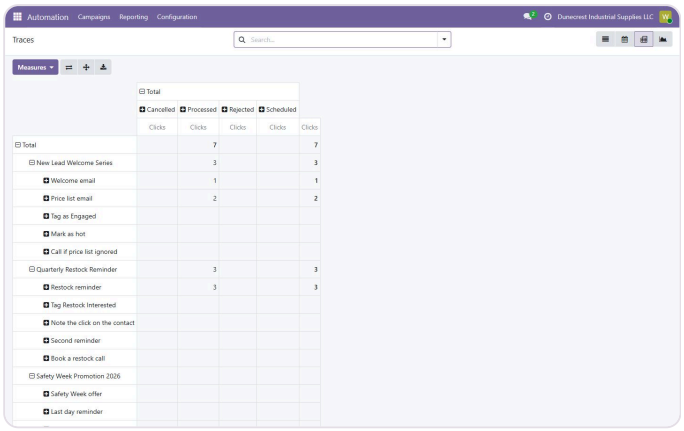

Reason	Meaning
The record no longer exists	Deleted after it joined
No e-mail address	Nothing to send to
The template is missing	Email step with no template
The model does not carry activities	Activity step on a model without activities
The tag could not be resolved	Tag field missing, or a remove of a tag that does not exist
The previous e-mail was opened after all	A not opened step skipped because of an open
The e-mail could not be delivered	Bounce read back from the outgoing mail
Too late to run	Past the step's validity
The participant was stopped	Step reached a stopped participant
The step raised an error	Server action or other step failed; the error is kept

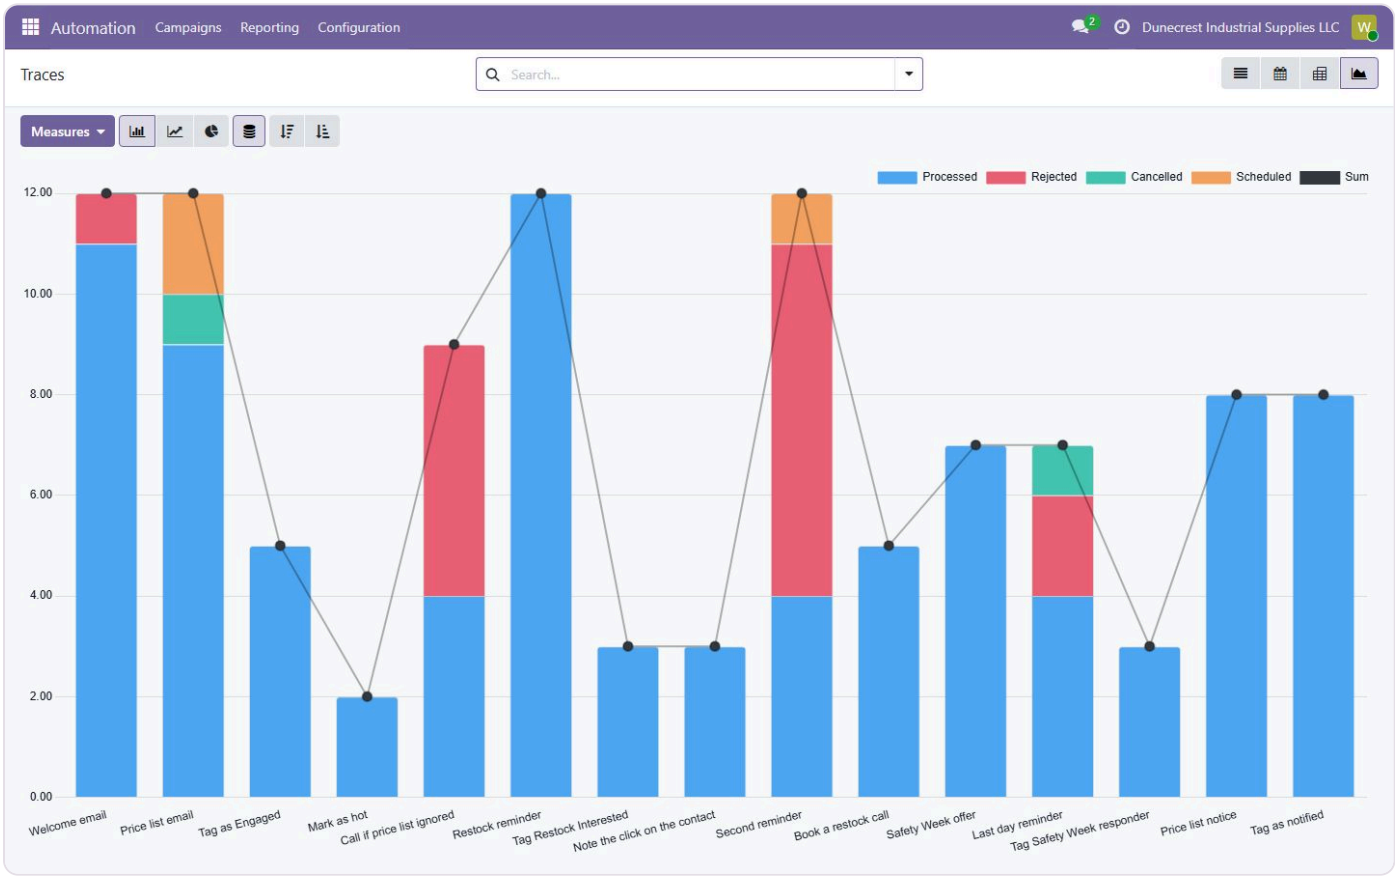

Opens are recorded by a one pixel image in the email, clicks by sending every link through the database first. Both routes take only the trace's random token, so they cannot be used to redirect a reader somewhere else. A click also counts as an open, because many mail clients block images. A trace stops listening once its reaction window has passed.

Calendar of scheduled and processed steps.

Pivot of traces by campaign and status.

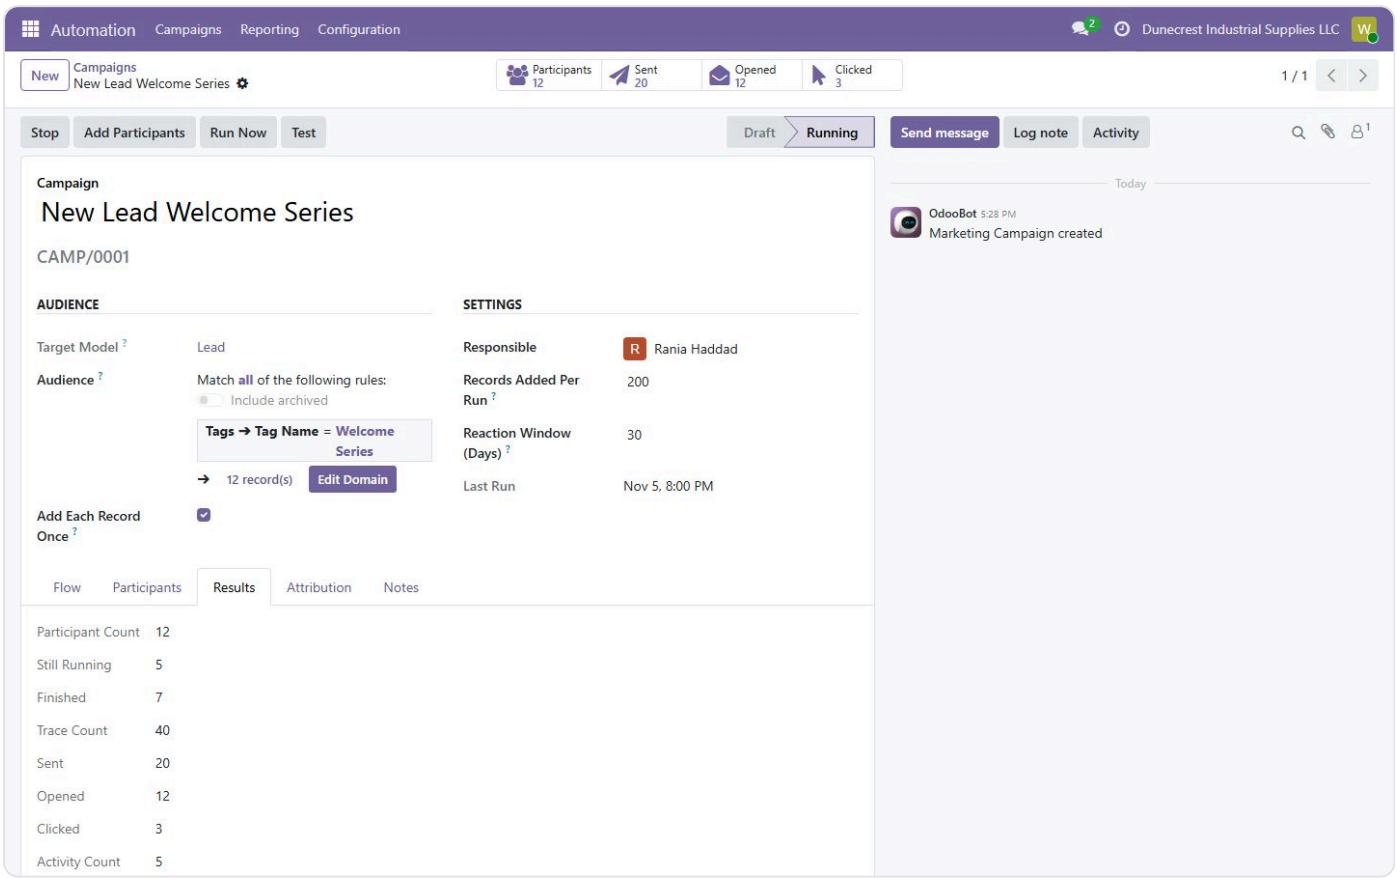

Graph view of campaign results.

7.3 Results on the campaign DRIP CAMPAIGNS

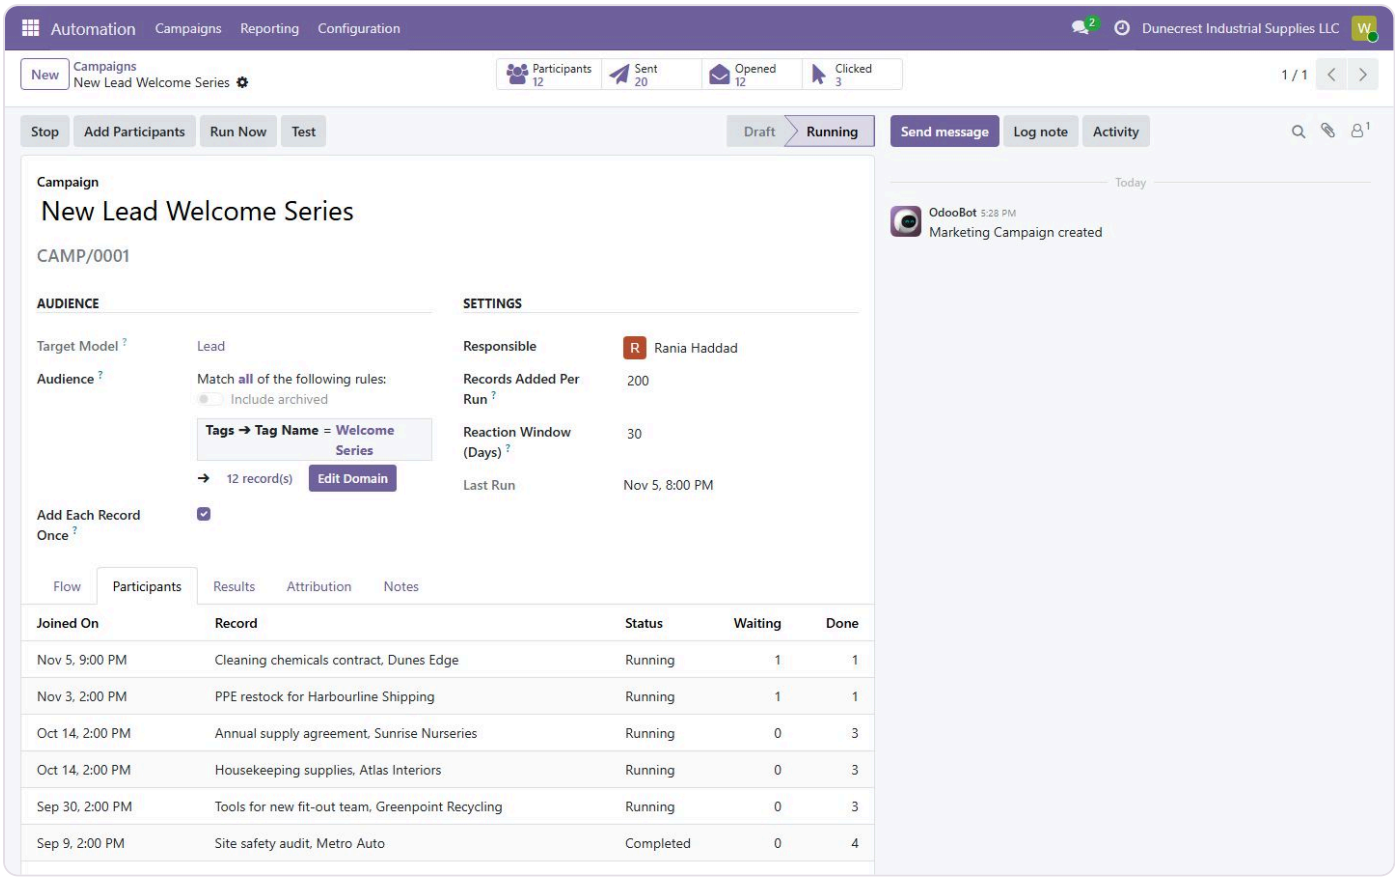

Results tab

12 Counts of traces, sent, opened and clicked, with open rate and click rate, both against emails sent. An email that was opened and then bounced is taken out of the sent figure and the open, so the rate cannot pass 100%.

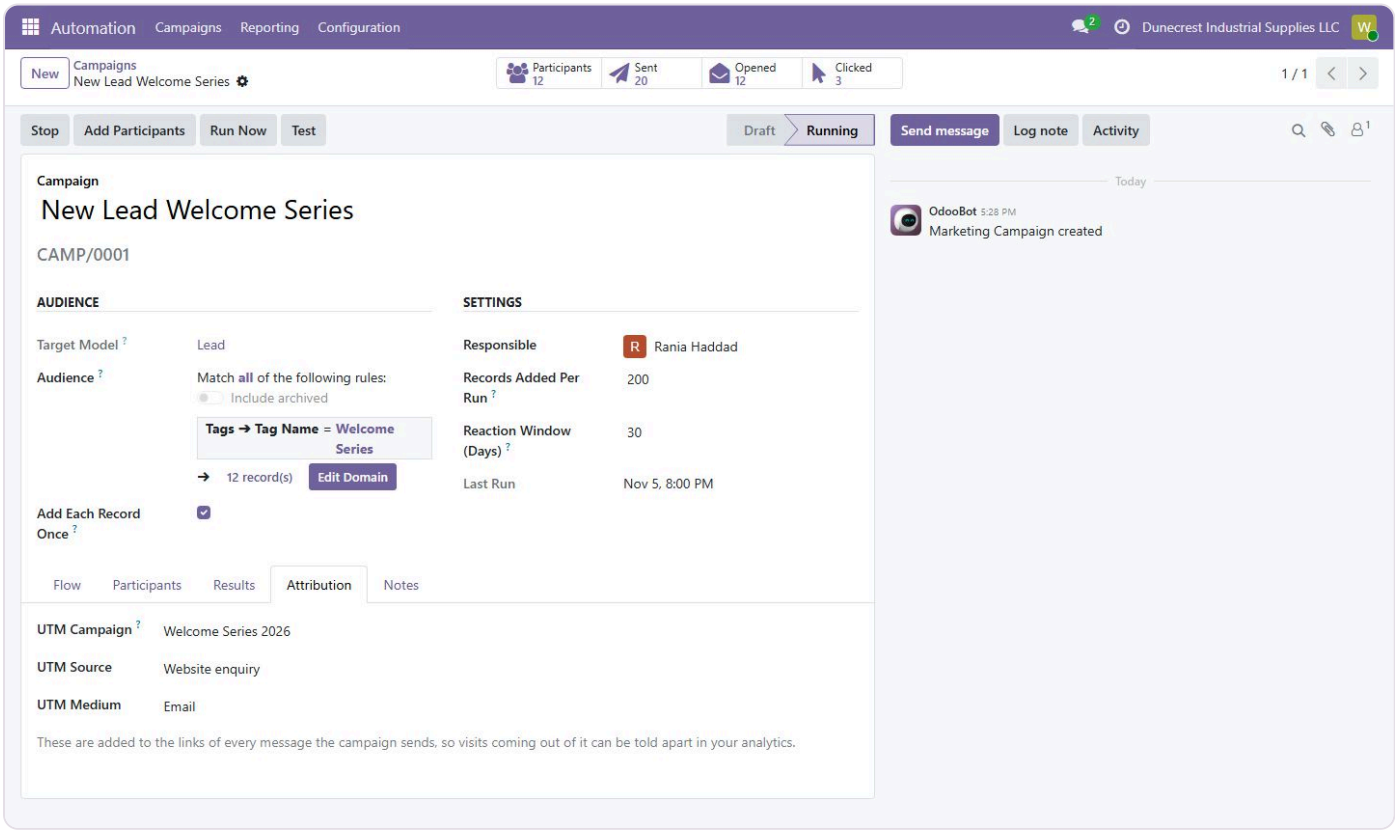

13 Participants tab

The people in this campaign and how far each got.

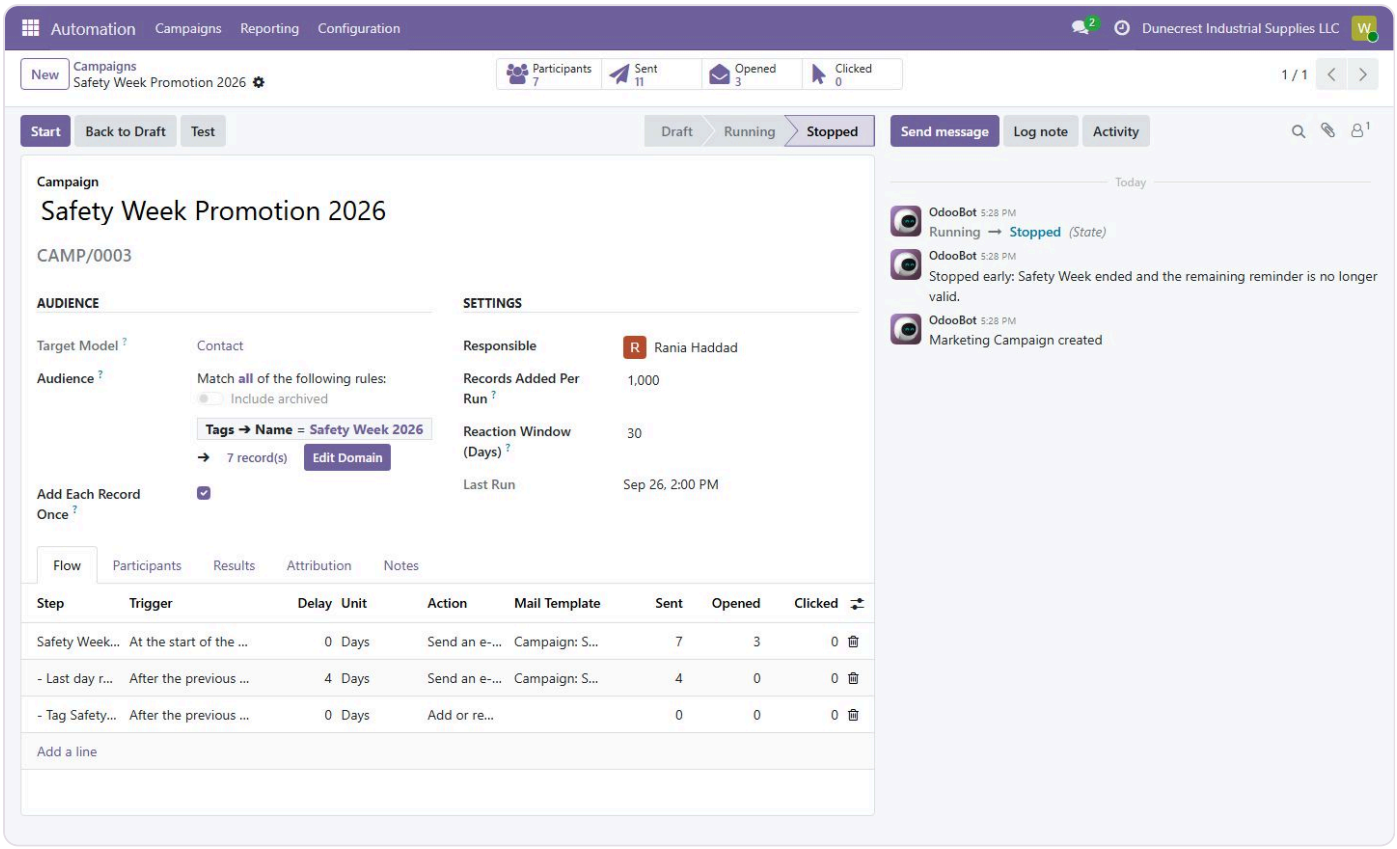

14 Attribution tab

The UTM campaign, source and medium written onto every tracked link.

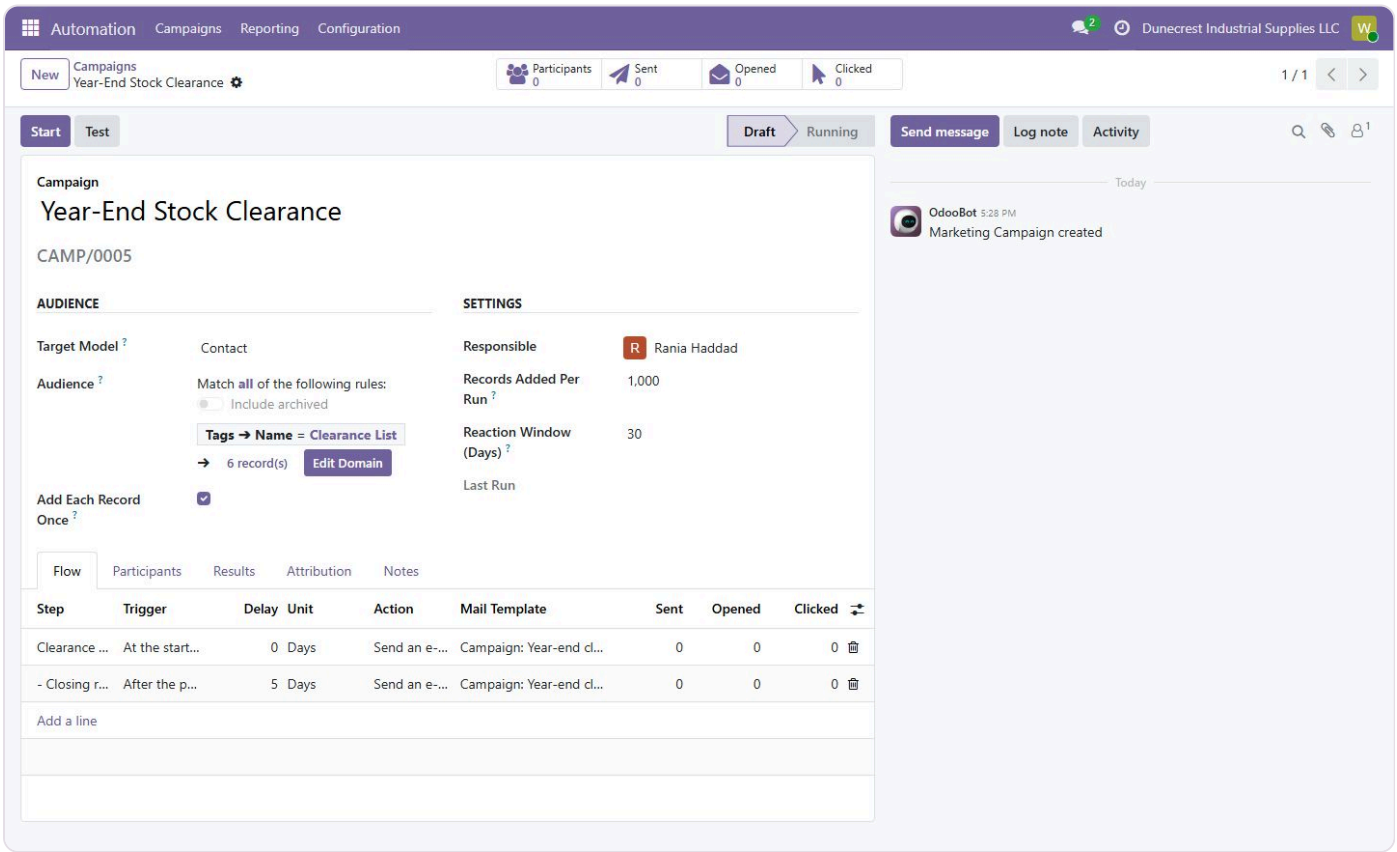

15 A stopped campaign

Safety Week was stopped early. Its stopped participants and cancelled steps stay on record.

16 A draft campaign

The year end clearance is built but not started. Nothing runs until Start.

Print > Campaign Summary on a campaign prints a one page summary of its counts and steps (Part 13).

PART 8 Commission plans: who earns what

COMMISSION

A commission scheme argued about at month end costs more than the commission. Sales Commission puts the scheme into Odoo as plans and rules, so the amount on every invoice line is worked out the same way for everybody, and the salesperson can check it.

IN THIS PART YOU WILL LEARN

- Pay on invoice or only once the customer pays
- The five ways a rule can calculate
- How rules are matched, first match wins
- How to make a salesperson, reseller or introducer an agent

TRY IT YOURSELF ON THE DEMO

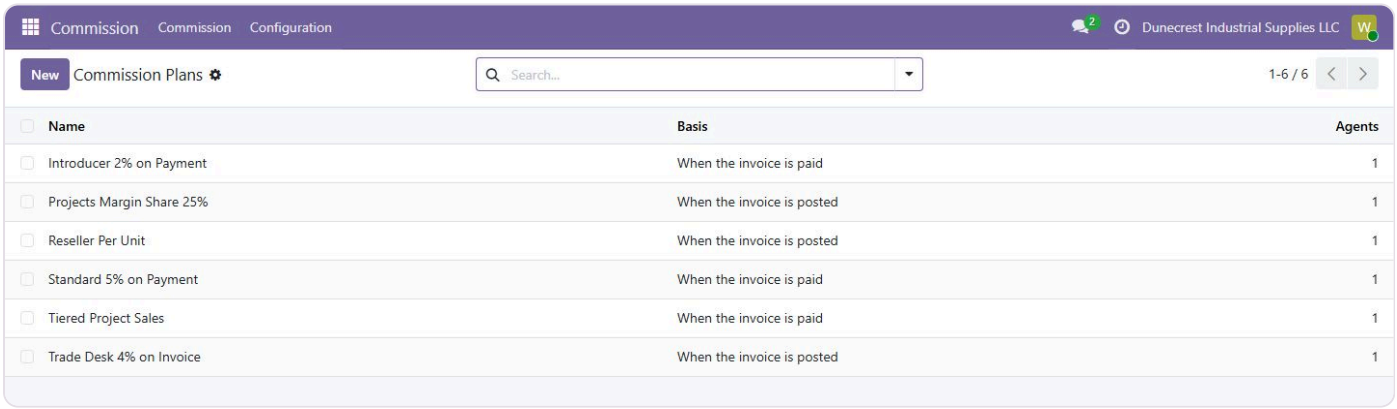

1. Open Commission > Configuration > Commission Plans and compare the six plans
2. Open Tiered Project Sales and click its rule to see the tiers
3. Open the contact Rania Haddad, Sales & Purchase tab

8.1 Plans COMMISSION

The plans

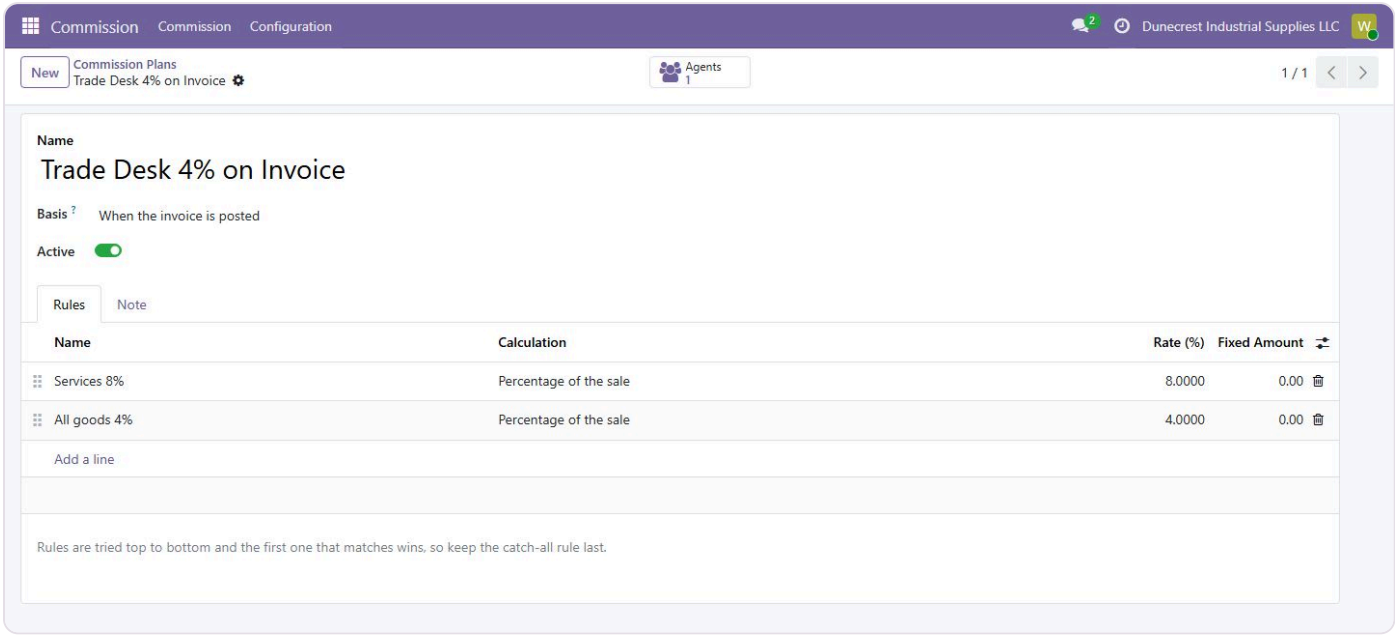

1 Commission > Configuration > Commission Plans. A plan is a named set of rules with one **basis**: **When the invoice is posted** or **When the invoice is paid**. Each agent carries one plan. The module ships Standard 5% on Payment; the demo adds five more.

On payment is the safer choice: nothing is owed until the customer has settled, so a bad debt never pays commission.

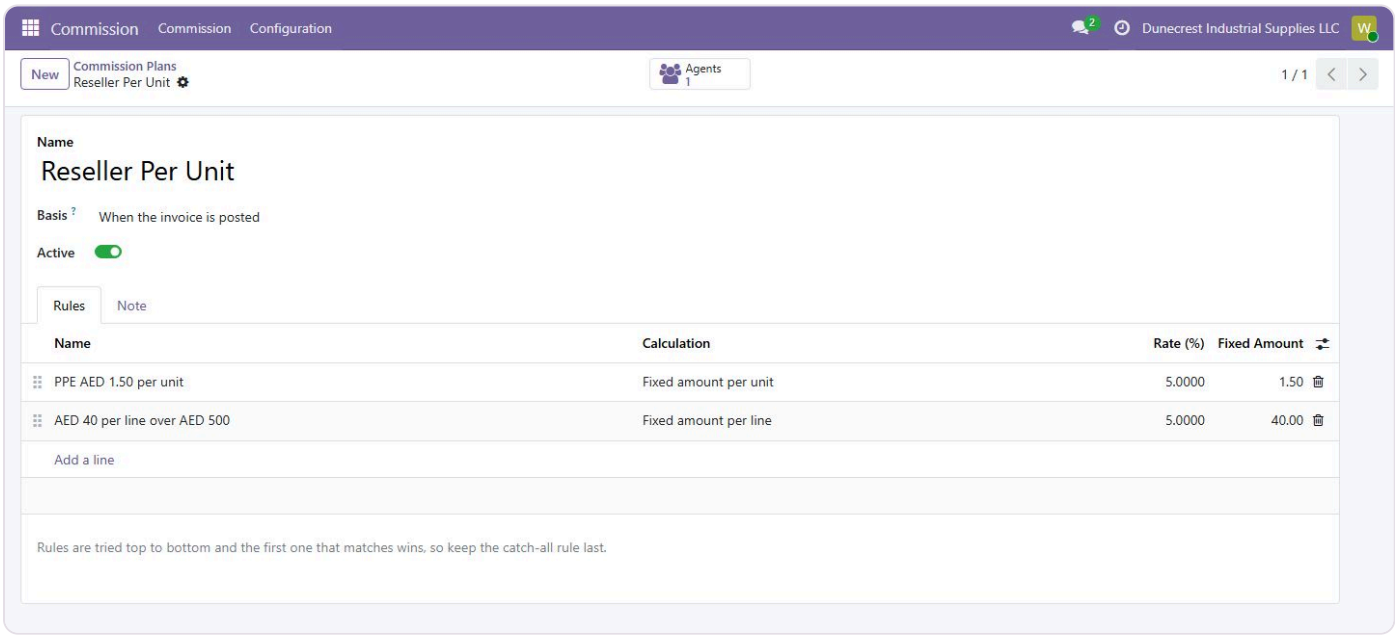

A plan with two rules

2 Trade Desk 4% on Invoice pays 8% on the two service products and 4% on everything else. The services rule has the lower sequence, so it is tried first. The Agents button lists who is on the plan.

A reseller plan

3 Reseller Per Unit pays AED 1.50 per unit on three core PPE products, and a fixed AED 40 on any other line worth at least AED 500.

8.2 Rules and tiers COMMISSION

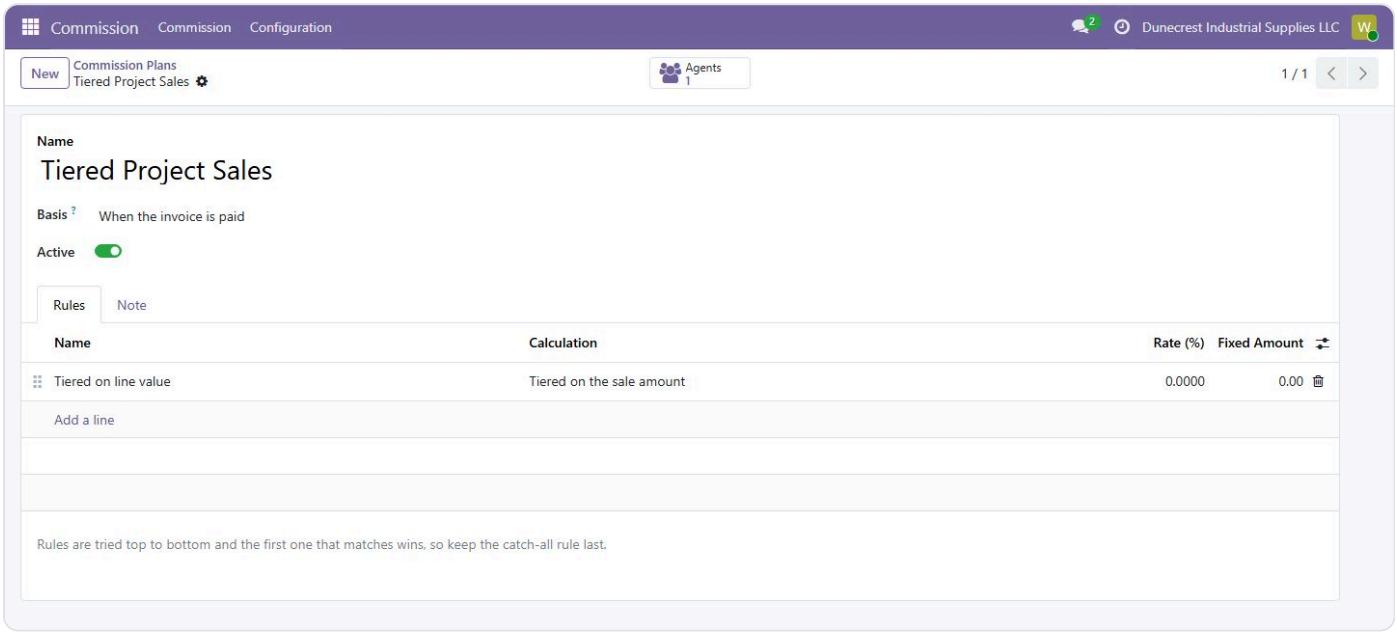

For each invoice line the rules are tried in sequence order. A rule matches when the line passes all its filters: **Products**, **Product Categories**, **Customers** (empty means any) and **Minimum Line Amount**. The first match decides the line; a line no rule matches earns nothing.

Calculation	Amount	Demo example
Percentage of the sale	Line subtotal x rate	Standard 5%, Trade Desk 4% and 8%
Percentage of the margin	(Subtotal - product cost x quantity) x rate. No cost on the product means the full subtotal is the margin	Projects Margin Share 25%

Fixed amount per unit	Fixed amount x quantity	Reseller AED 1.50 per unit
Fixed amount per line	Fixed amount, once per line	Reseller AED 40 per line over AED 500
Tiered on the sale amount	Subtotal x the rate of the tier the line falls in	Tiered Project Sales 2%, 3.5%, 5%

4 A tiered plan

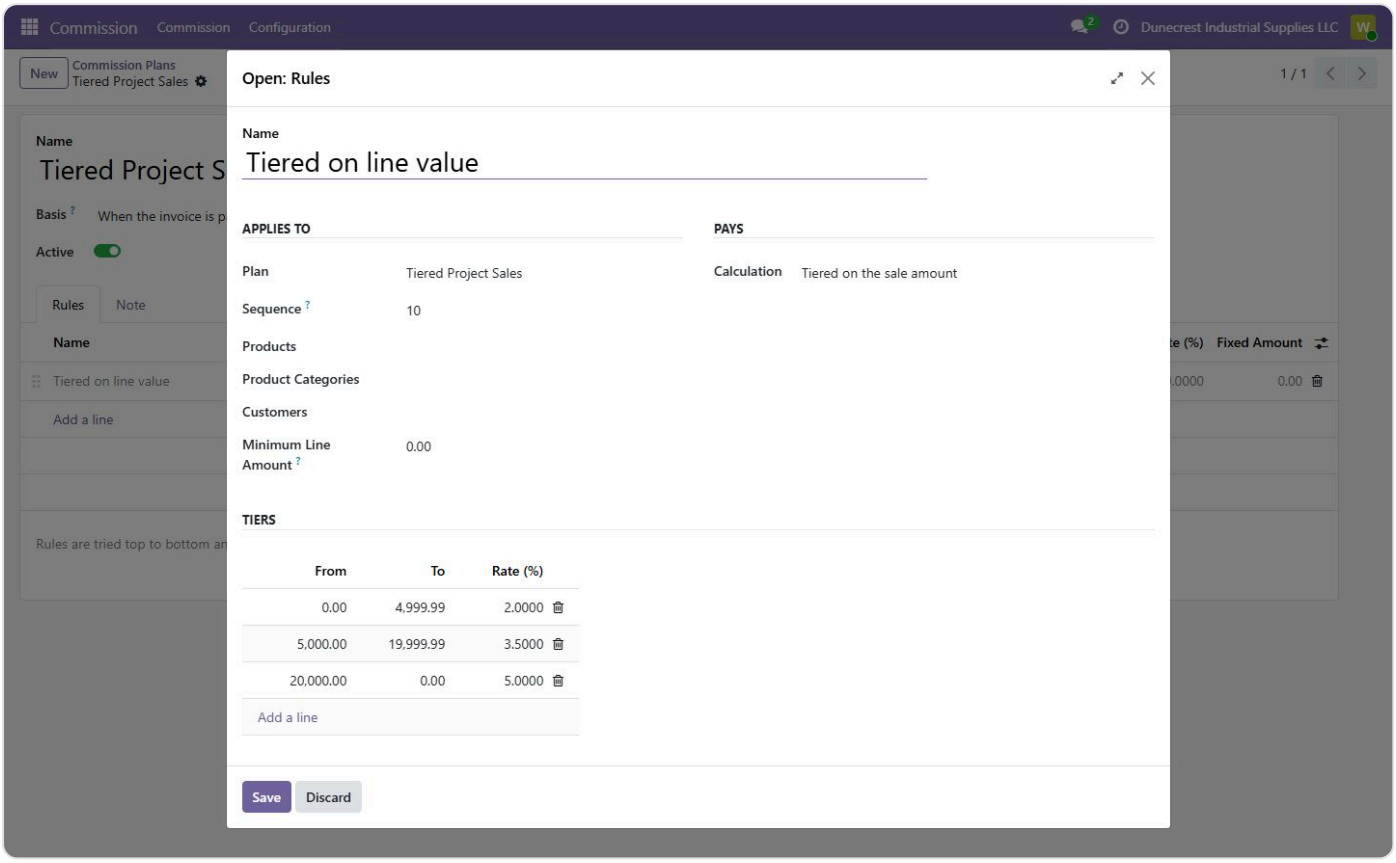

Tiered Project Sales, on payment.

The tiers

5 Open the rule: up to AED 4,999.99 pays 2%, AED 5,000 to 19,999.99 pays 3.5%, from AED 20,000 (To left at zero, no upper bound) pays 5%. A tier cannot end before it starts.

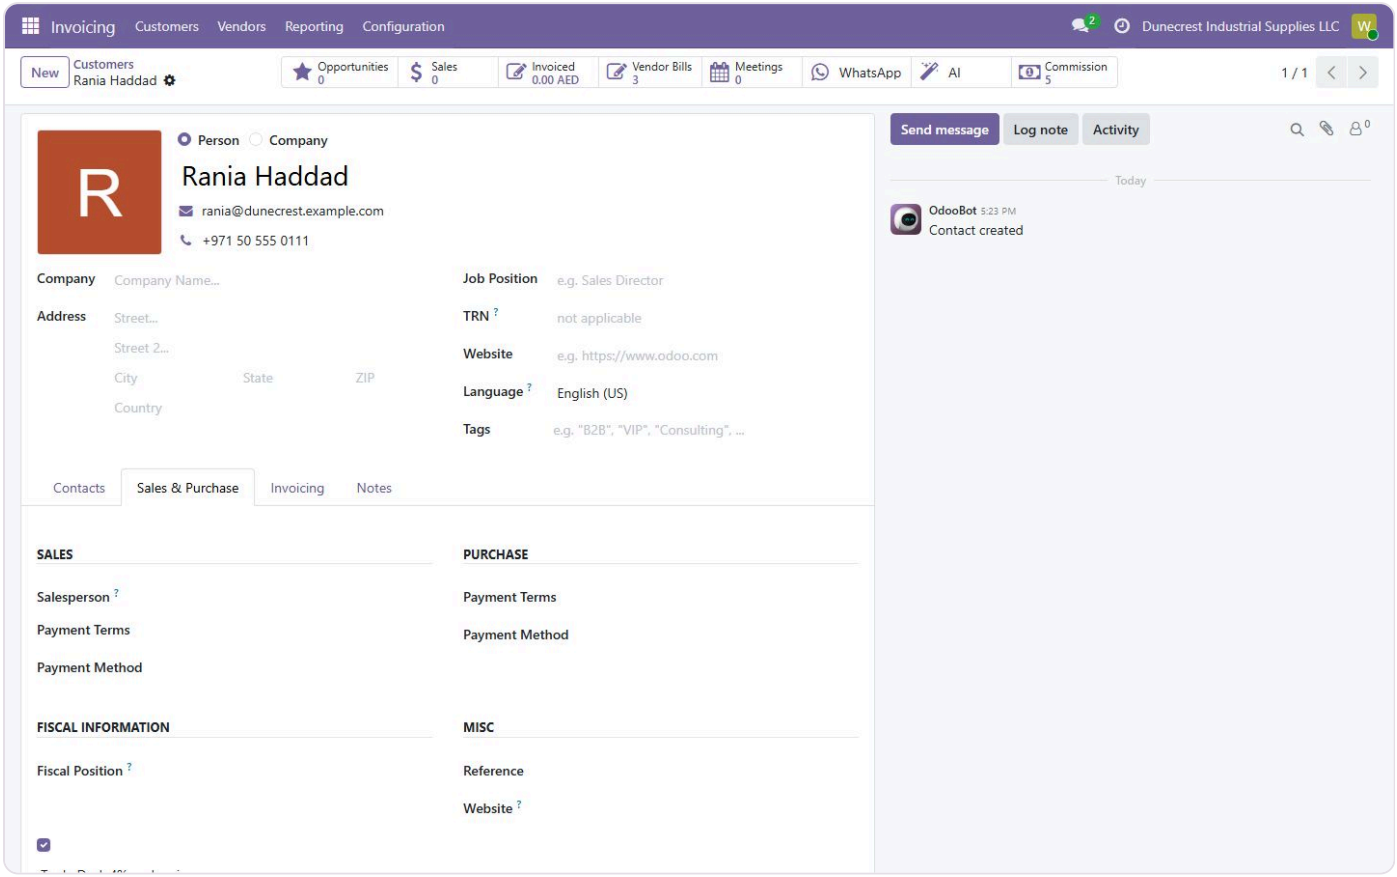

The tier is chosen from each line's own value, not the order or the month total. A big order of many small lines earns the lowest rate on each. If you need volume over a period, that is not what this calculation does.

8.3 Agents COMMISSION

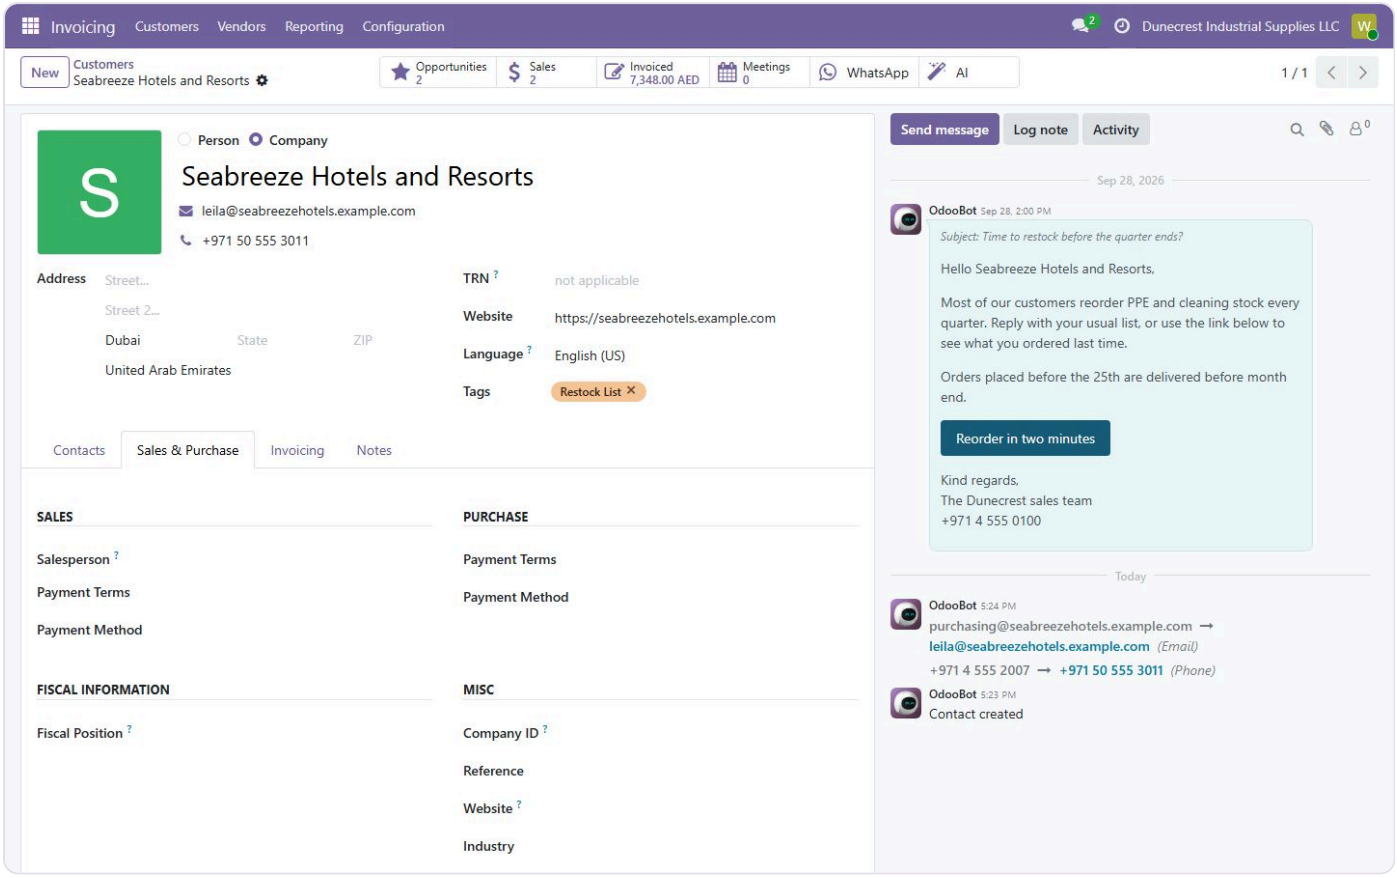

A salesperson as agent

6 On any contact, the Sales & Purchase tab has **Commission Agent** and **Commission Plan**. Salespeople are agents through their own contact. A Commission button on the contact counts their confirmed lines.

A customer with an assigned agent

7 On a customer, **Assigned Agent** names the agent who earns on their invoices when no sales order says otherwise. The demo's introducer, Marina Point Introductions, is assigned to three customers.

PART 9 Commission earned: orders, invoices and commission lines

COMMISSION

Nothing is recorded on a quotation; the module only shows an estimate. Commission becomes real when the invoice is posted or paid, one line per agent per invoice line.

IN THIS PART YOU WILL LEARN

- Who earns on an order: the agents field and its fall backs
- What the estimate on a quotation means
- When lines are created, and how to recompute
- The four states of a commission line

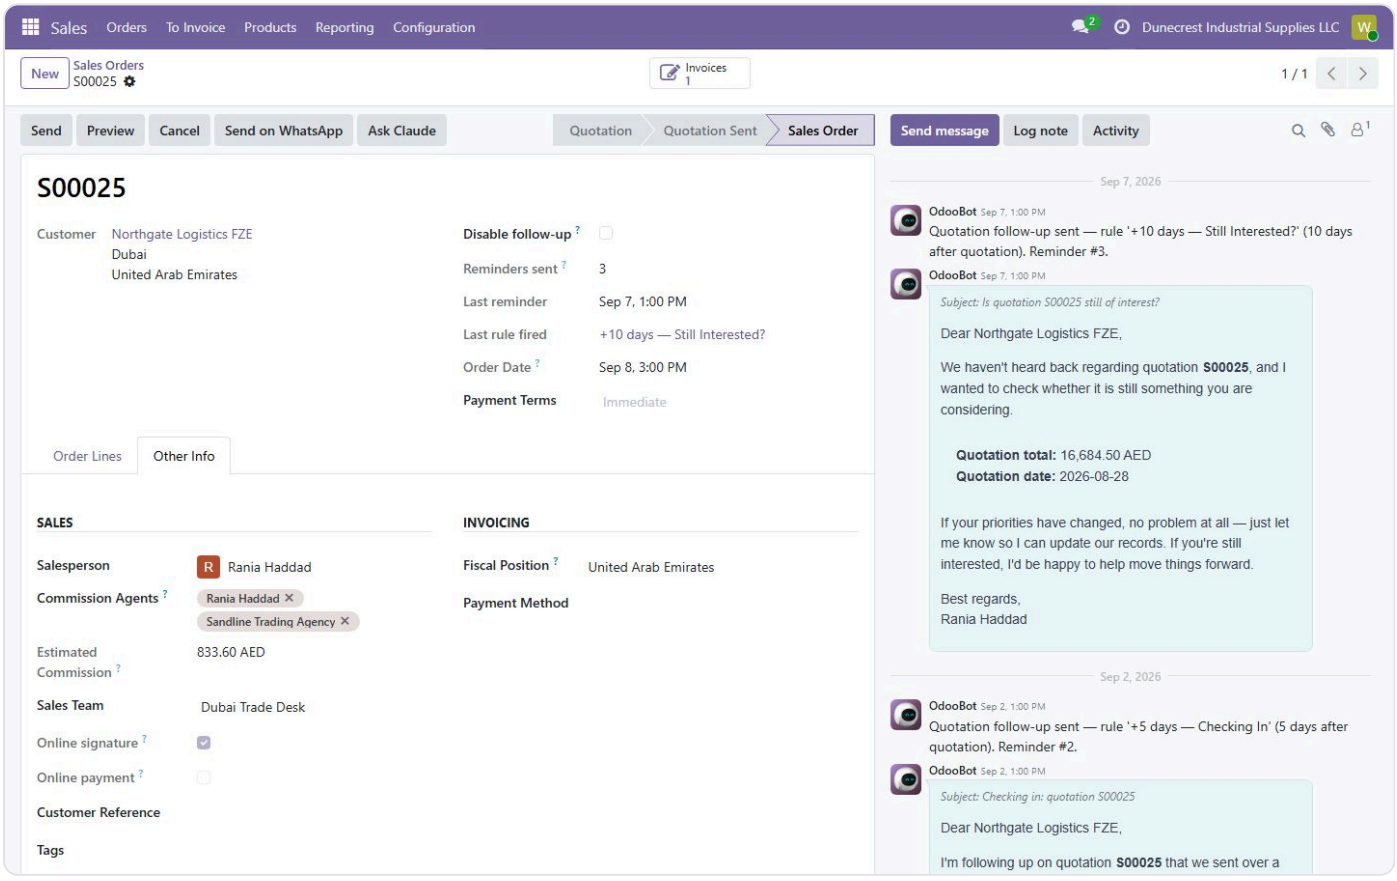

TRY IT YOURSELF ON THE DEMO

1. Open sales order S00025, which has two agents
2. Open invoice INV/2026/00002 and click its Commission button
3. Open Commission Lines, group by Agent

9.1 On the sales order COMMISSION

Commission Agents and the estimate

1 On the Other Info tab, under the salesperson, the order has **Commission Agents** (several allowed) and **Estimated Commission**: what those agents would earn if the whole order were invoiced today. On a new quotation the agents are suggested from the salesperson, if they are an agent, otherwise from the customer's assigned agent. This demo order is shared between the salesperson and the reseller.

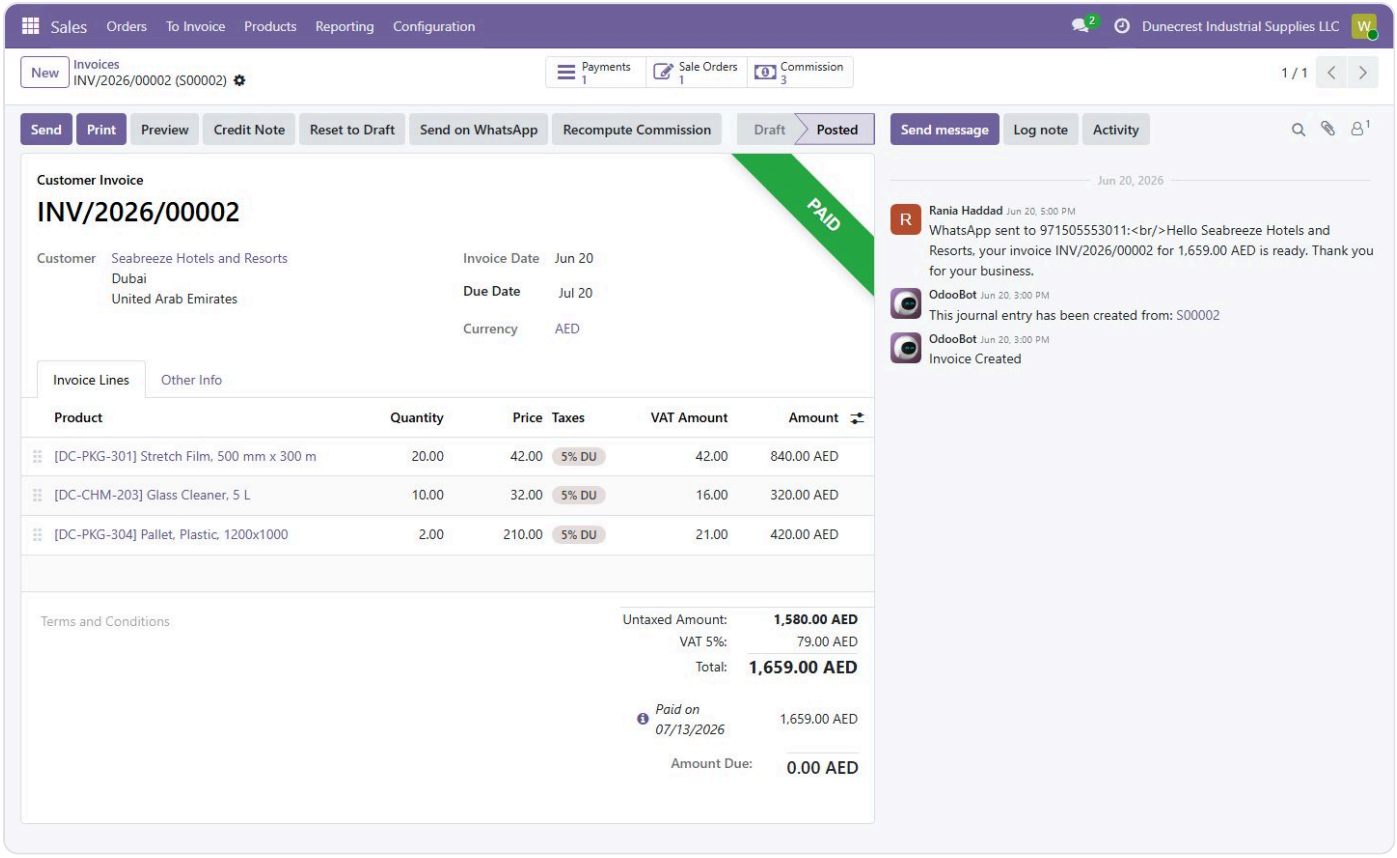

Who earns on an invoice, in order: the agents on the sales orders behind it; if none, the invoice's salesperson if they are an agent; if not, the customer's assigned agent. Only agents with a plan earn.

9.2 On the invoice COMMISSION

The Commission button

2 A posted customer invoice with commission shows a Commission button with the number of lines. **Recompute Commission** in the header runs both bases again for corrections; lines that already exist are never duplicated.

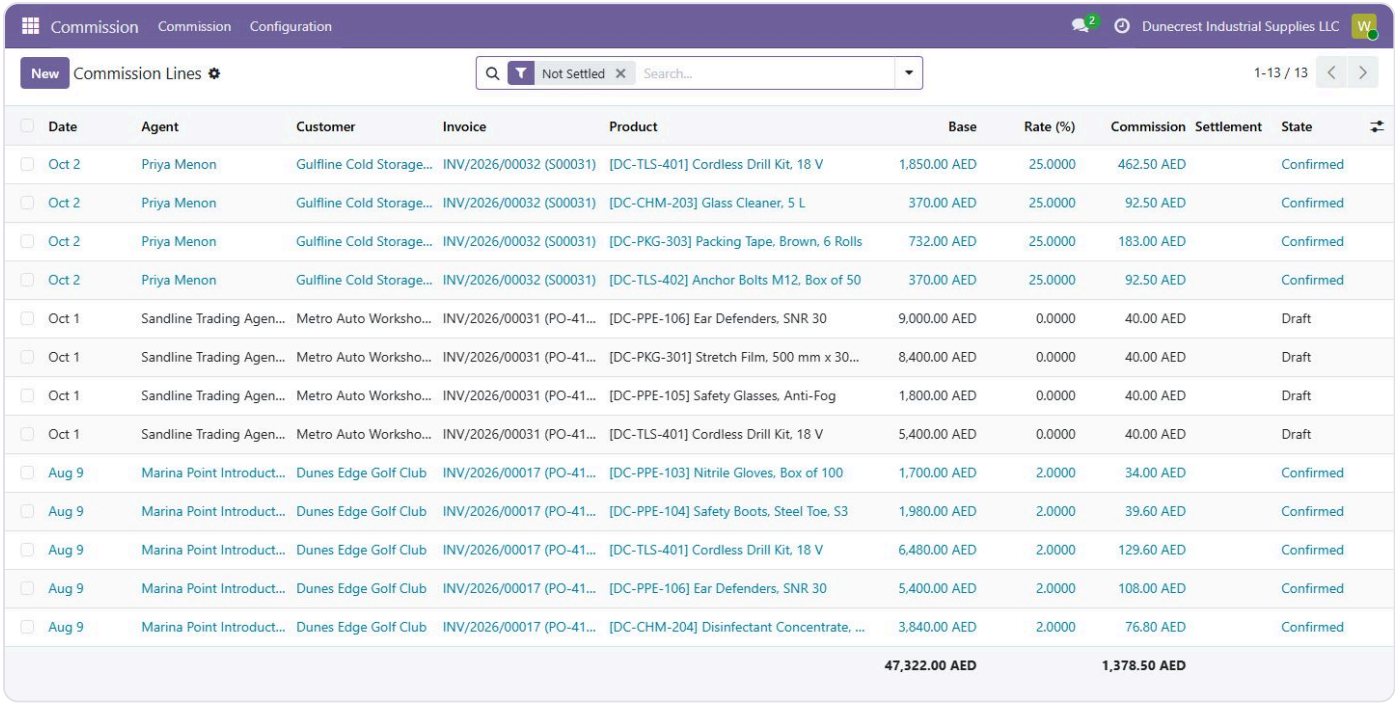

For an on invoice plan, lines are created when the invoice is posted. For an on payment plan, when Odoo marks the invoice fully paid. A credit note creates negative lines. An invoice in another currency is converted to the company currency at the invoice date, so agents are always paid in AED here. Lines are dated with the invoice date.

9.3 Commission lines COMMISSION

3 Commission › Commission Lines

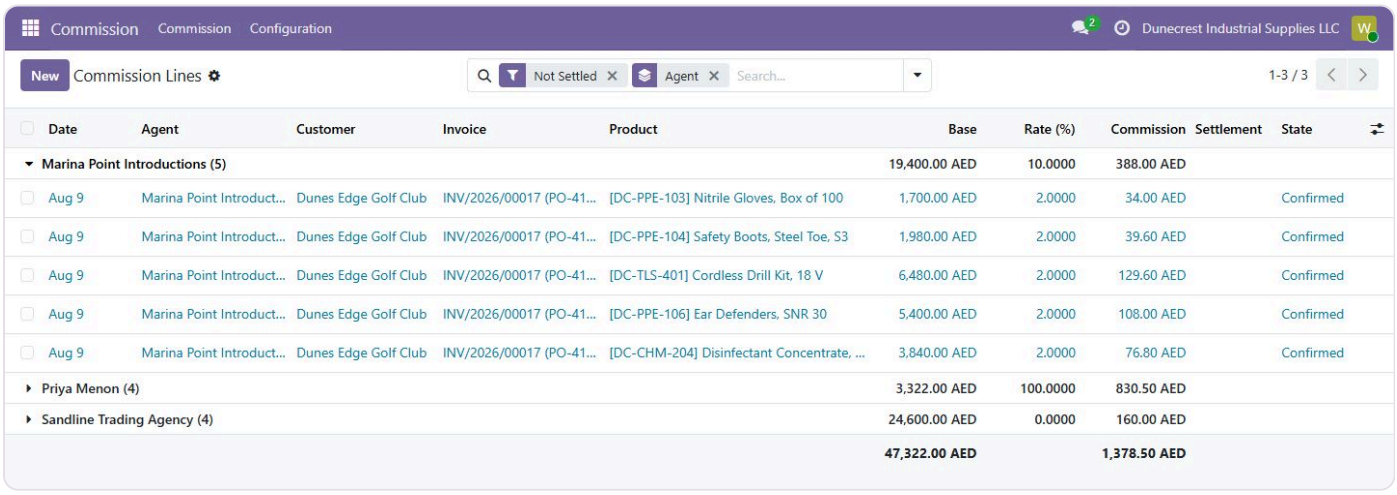

One row per agent per invoice line: date, agent, customer, invoice, product, base, rate, commission and state. Filters: Draft, Confirmed, Not Settled, This Year.

Date	Agent	Customer	Invoice	Product	Base	Rate (%)	Commission	Settlement	State
Oct 2	Priya Menon	Gulfline Cold Storage...	INV/2026/00032 (S00031)	[DC-TLS-401] Cordless Drill Kit, 18 V	1,850.00 AED	25.0000	462.50 AED		Confirmed
Oct 2	Priya Menon	Gulfline Cold Storage...	INV/2026/00032 (S00031)	[DC-CHM-203] Glass Cleaner, 5 L	370.00 AED	25.0000	92.50 AED		Confirmed
Oct 2	Priya Menon	Gulfline Cold Storage...	INV/2026/00032 (S00031)	[DC-PKG-303] Packing Tape, Brown, 6 Rolls	732.00 AED	25.0000	183.00 AED		Confirmed

					47,322.00 AED		**1,378.50 AED**		

A draft line

5 New lines are Draft. **Confirm** makes them payable, **Cancel** takes them out (refused once settled), **Reset to Draft** brings a confirmed or cancelled line back. On the demo, lines up to September are confirmed or settled and some of October and November are still draft for review.

A settled line

6 Settled lines belong to a settlement and are locked.

A salesperson with only the See Commission group sees their own lines and nobody else's. The manager group sees everything. Confirm, cancel and reset lines from the line form.

PART 10 Settlements and vendor bills

COMMISSION

A settlement gathers one agent's confirmed commission for a period and turns it into a vendor bill, so commission is paid through accounts payable like any other supplier, with a statement the agent can check.

IN THIS PART YOU WILL LEARN

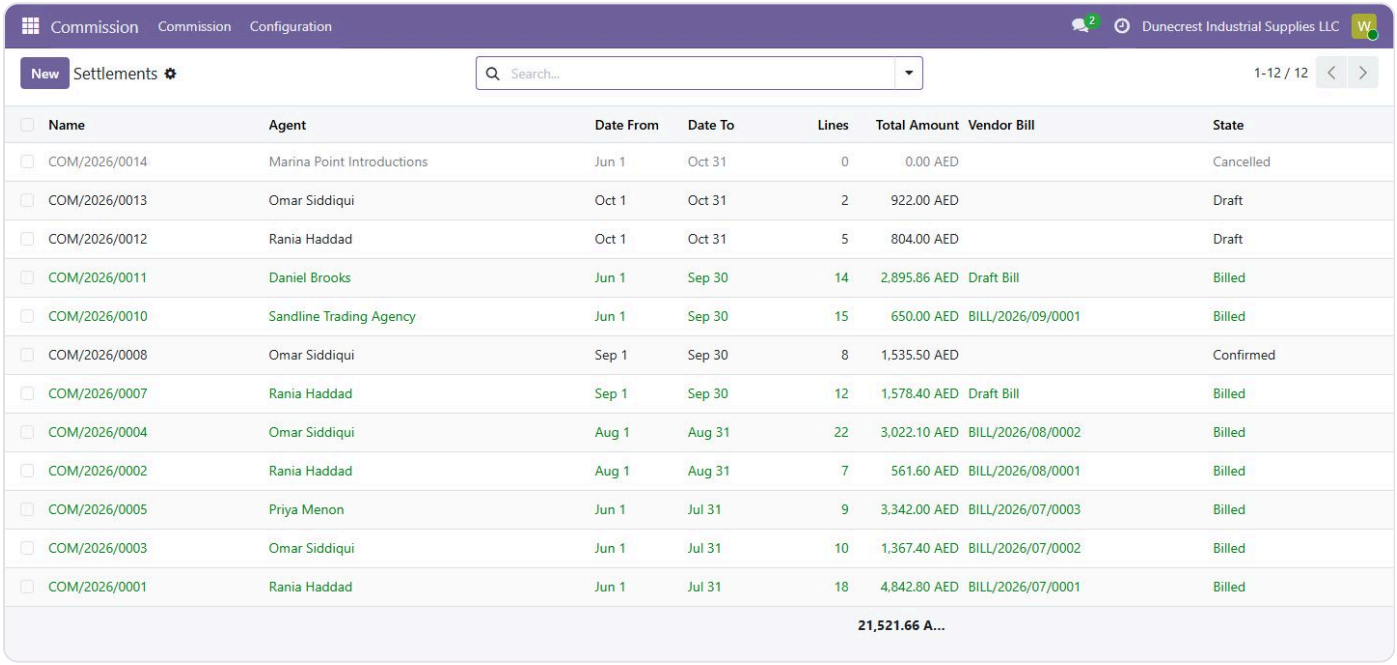

- Collect, confirm and bill a settlement
- The four states and what each locks
- The commission statement

TRY IT YOURSELF ON THE DEMO

1. Open Commission > Settlements and read the states
2. Open COM/2026/0012 (draft) and its lines
3. Open COM/2026/0001 and its vendor bill

1 Settlements

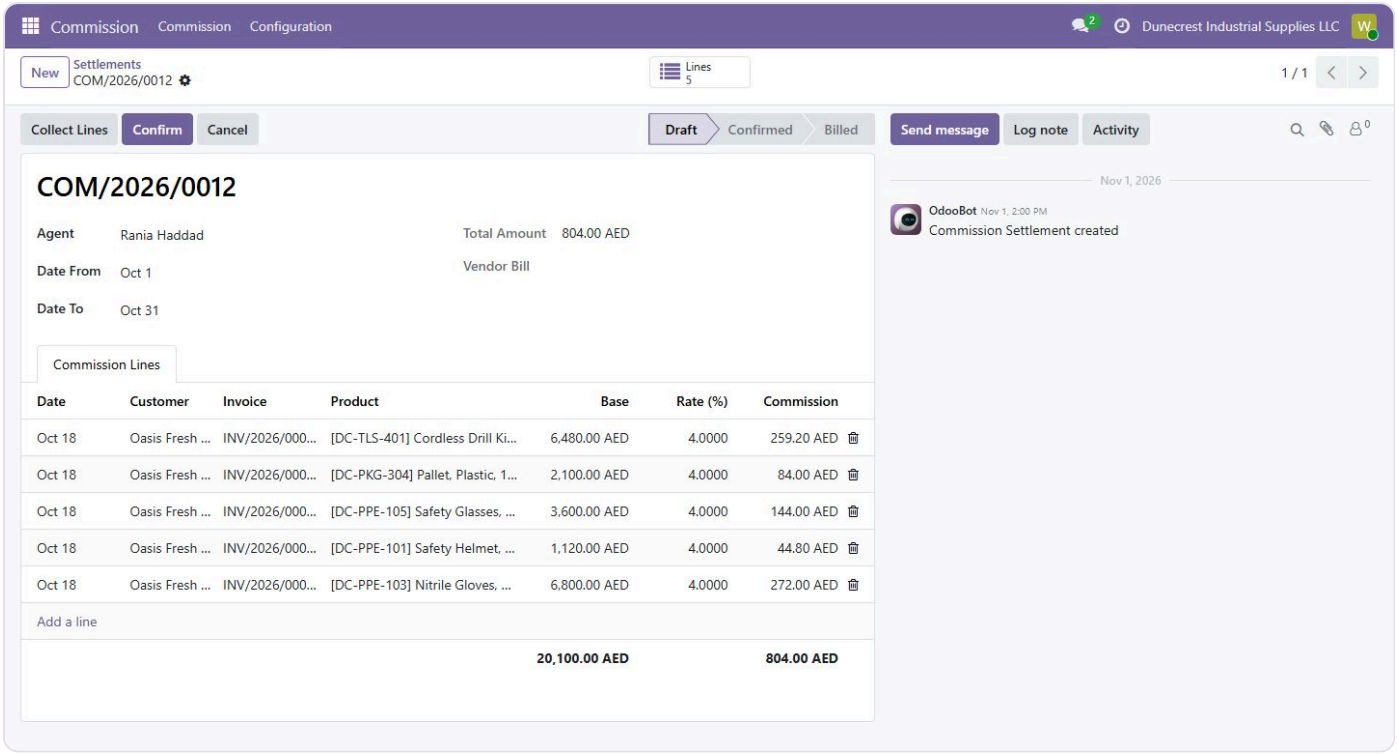

Commission > Commission > Settlements: reference (COM/2026/0001 and on), agent, period, number of lines, total, vendor bill and state.

Name	Agent	Date From	Date To	Lines	Total Amount	Vendor Bill	State
COM/2026/0014	Marina Point Introductions	Jun 1	Oct 31	0	0.00 AED		Cancelled
COM/2026/0013	Omar Siddiqui	Oct 1	Oct 31	2	922.00 AED		Draft
COM/2026/0012	Rania Haddad	Oct 1	Oct 31	5	804.00 AED		Draft

COM/2026/0001	Rania Haddad	Jun 1	Jul 31	18	4,842.80 AED	BILL/2026/07/0001	Billed
					21,521.66 A...		

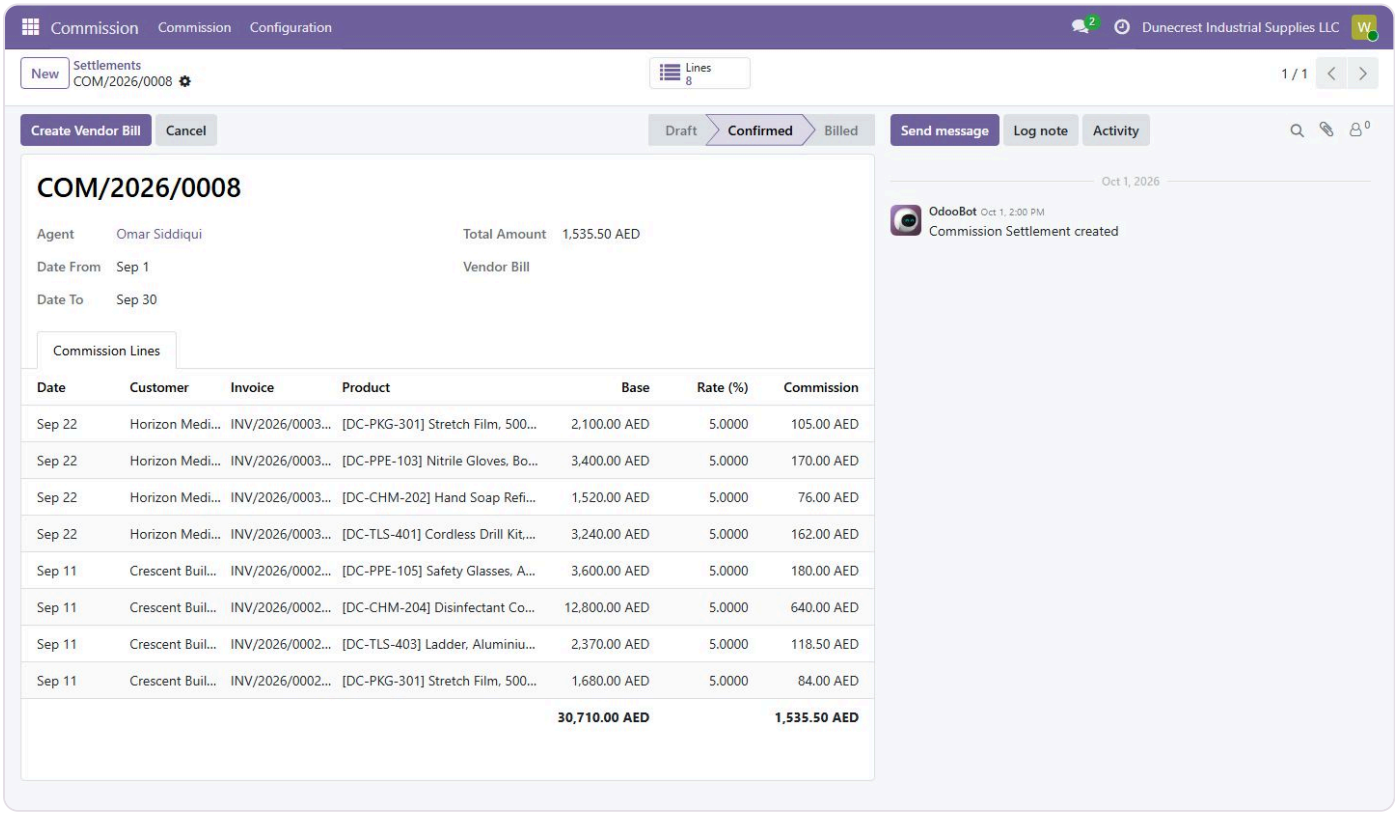

Draft: collect the lines

2 New, pick the agent and the period, then **Collect Lines**. Every confirmed, unsettled line of that agent dated in the period is pulled in; if there are none it says so. Lines can still be removed while the settlement is draft.

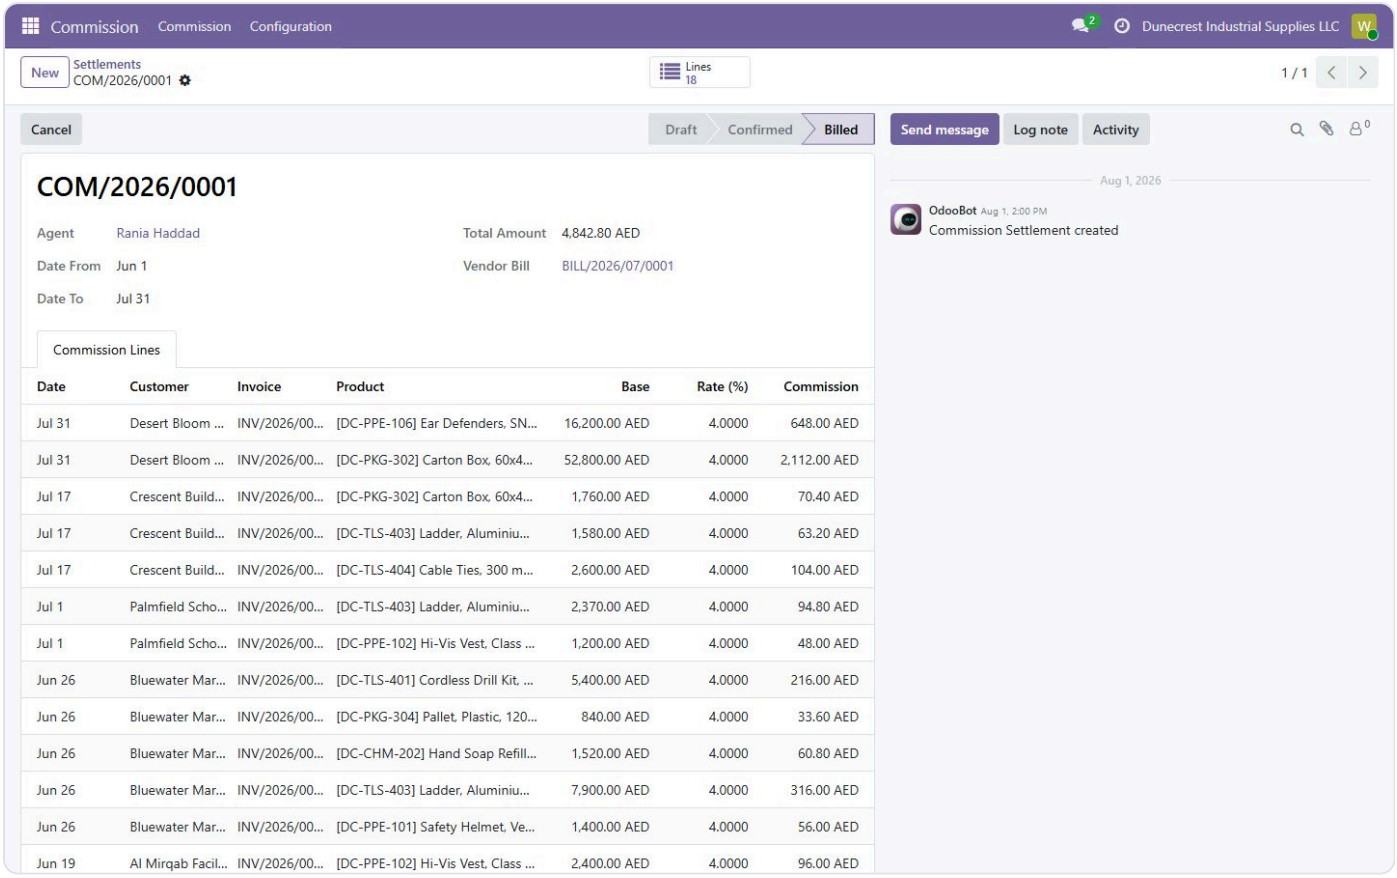

3 Confirmed

Confirm marks every line Settled (collecting first if you skipped it). The total is now fixed.

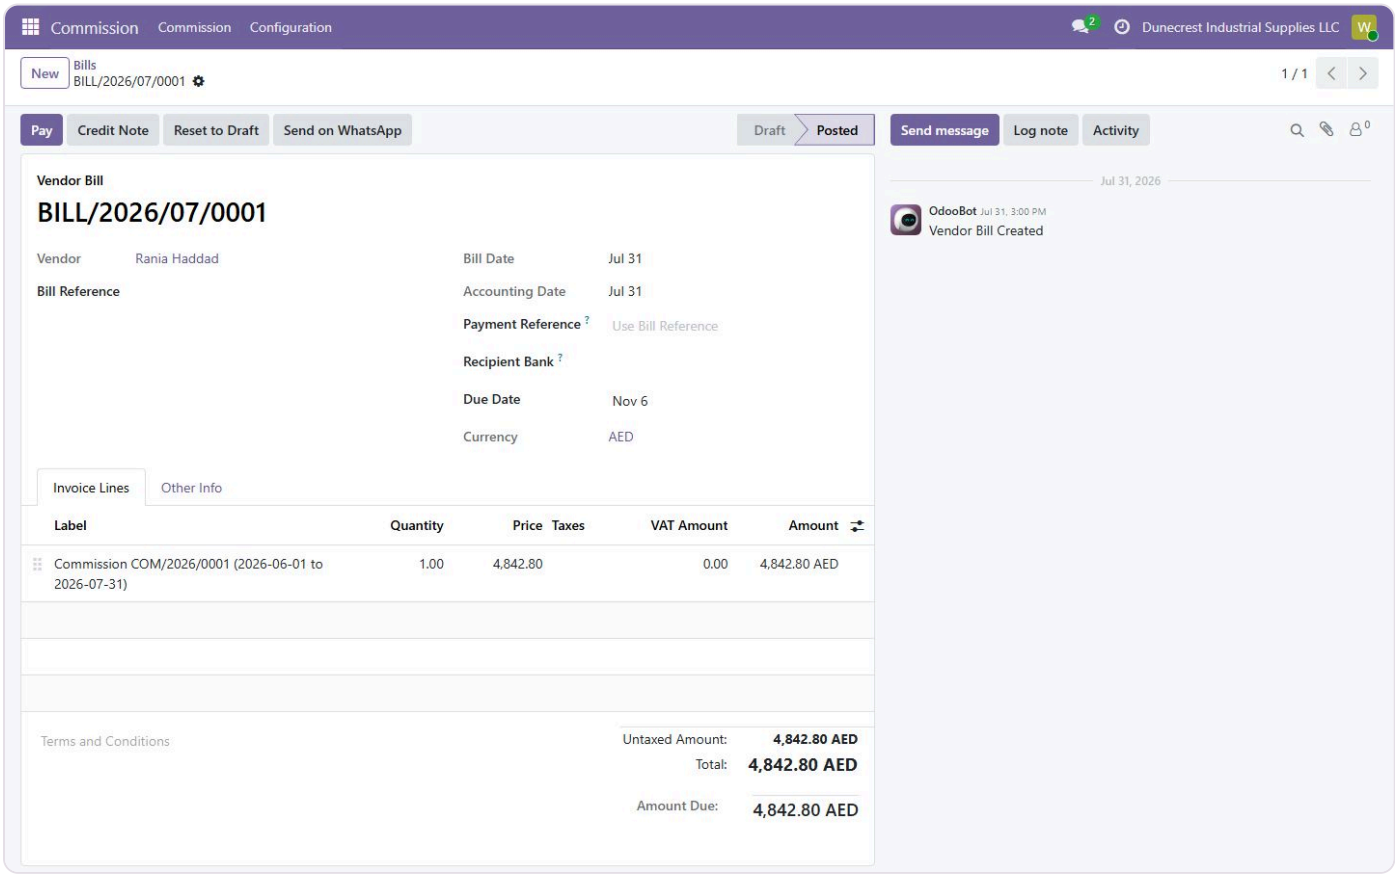

Billed

4 **Create Vendor Bill** raises one vendor bill to the agent, dated the end of the period, with one line for the total on the Sales Commission service product. The settlement turns Billed and links the bill.

The vendor bill

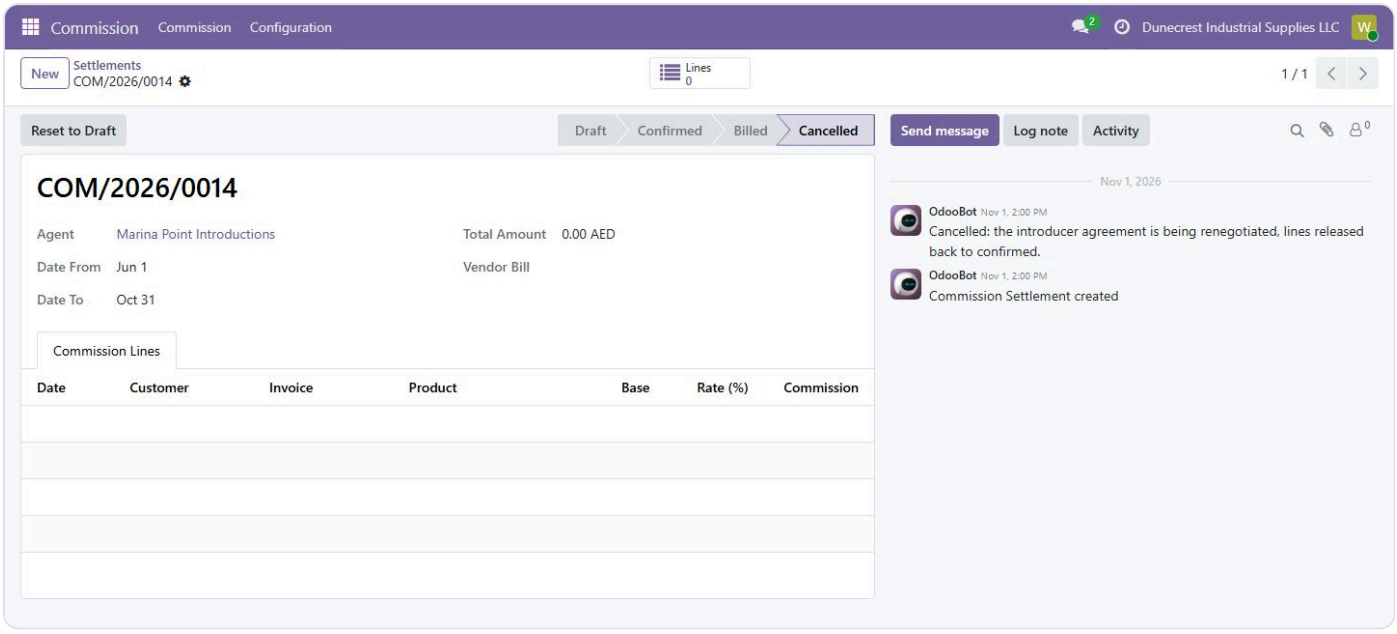

5 An ordinary draft vendor bill. Accounts post and pay it as usual. On the demo the June to August bills are posted.

Cancelled

6 **Cancel** releases the lines back to Confirmed so they can be settled again, and is refused if the vendor bill is already posted. **Reset to Draft** reopens a cancelled settlement.

If you cancel a settlement whose vendor bill is still draft, the bill stays linked, so after a reset Create Vendor Bill refuses with "already has a vendor bill". Delete or unlink the draft bill first.

The commission statement COMMISSION

PART 11 Quotation follow-up reminders

FOLLOW-UP

Most lost quotations are not lost to a competitor; they are forgotten. Quotation Follow Up sweeps every open quotation once a day and emails the customer on a schedule you set, starting with a gentle nudge and ending with a last call, and writes each reminder into the chatter so the salesperson knows.

IN THIS PART YOU WILL LEARN

- The four shipped rules and how the next one is picked
- The fields and the button on a quotation
- The settings and the daily sweep

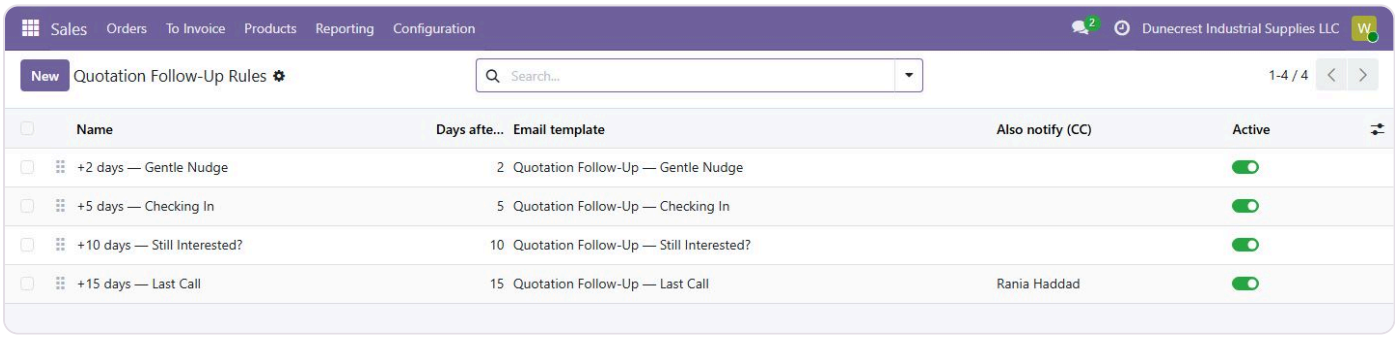

TRY IT YOURSELF ON THE DEMO

1. Open Sales > Configuration > Quotation Follow-Up Rules
2. Filter quotations by Reminders already sent and open S00020
3. Open S00032, where follow-up is disabled

11.1 Rules FOLLOW-UP

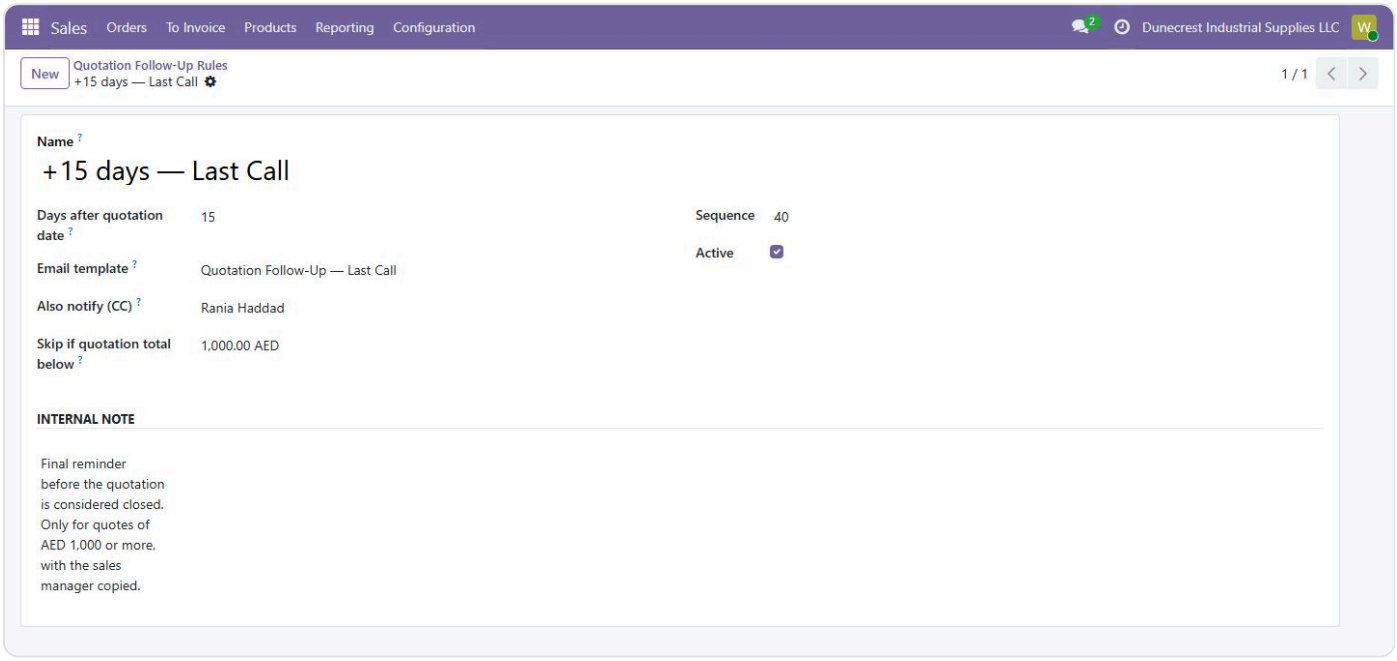

The rules

1 Sales > Configuration > Quotation Follow-Up Rules. Four ship with the module: +2 days Gentle Nudge, +5 days Checking In, +10 days Still Interested?, +15 days Last Call, each with its own email template. Edit them in the list or open a rule. Archive a rule with its toggle to stop it firing.

A rule

2 **Days after quotation date**, the **Email template** (any template on sales orders), **Also notify (CC)** an internal user, **Skip if quotation total below** and an internal note. On the demo the Last Call only goes to quotes of AED 1,000 or more, with the sales manager copied.

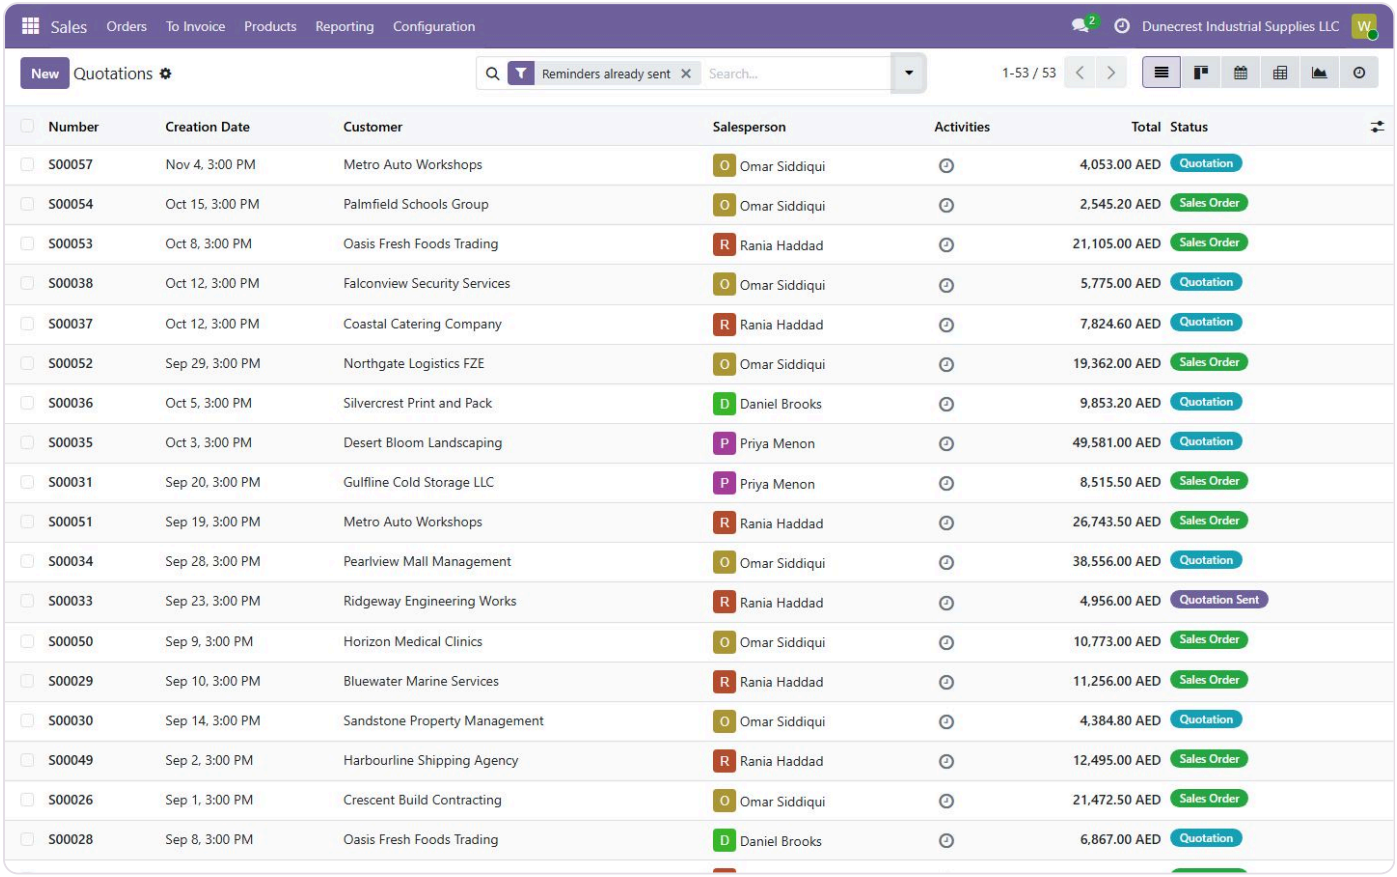

Each day, for each open quotation (Quotation or Quotation Sent), the sweep picks the **latest rule whose day has been reached and that is later than the last rule already sent**. So a quote checked daily gets +2, then +5, then +10, then +15. A quote that was skipped for a while jumps straight to the most recent rule due rather than sending every missed one. Age is counted from the quotation date. A quote under a rule's minimum is skipped for that rule and looked at again the next day.

11.2 On the quotation FOLLOW-UP

Filter the quotes

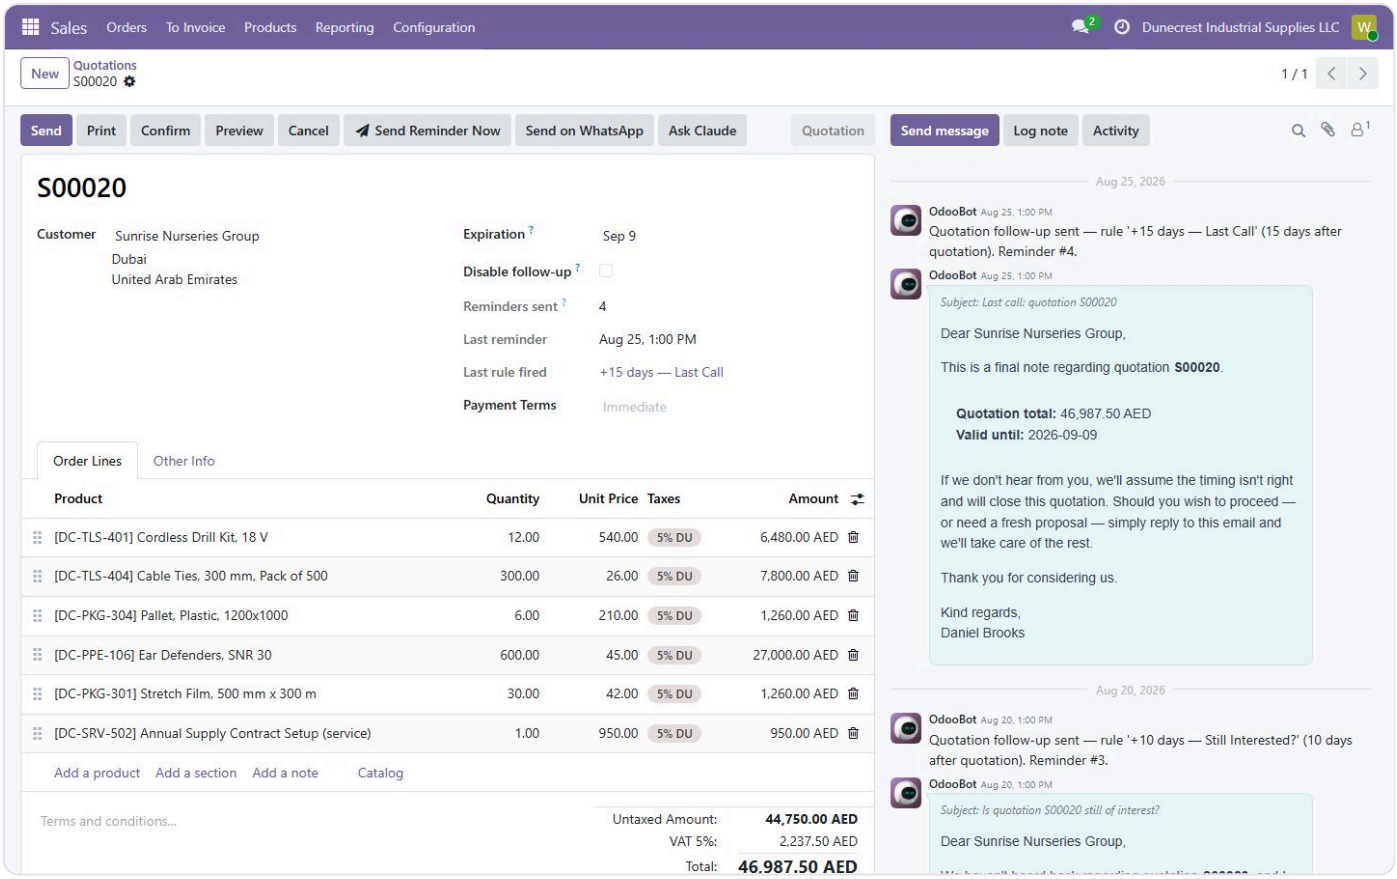

3 Three filters are added to the quotations search: Open quotations (follow-up), Reminders already sent and Follow-up disabled.

Number	Creation Date	Customer	Salesperson	Activities	Total	Status
S00057	Nov 4, 3:00 PM	Metro Auto Workshops	Omar Siddiqui		4,053.00 AED	Quotation
S00054	Oct 15, 3:00 PM	Palmfield Schools Group	Omar Siddiqui		2,545.20 AED	Sales Order

S00049	Sep 2, 3:00 PM	Harbourline Shipping Agency	Rania Haddad		12,495.00 AED	Sales Order
S00026	Sep 1, 3:00 PM	Crescent Build Contracting	Omar Siddiqui		21,472.50 AED	Sales Order
S00028	Sep 8, 3:00 PM	Oasis Fresh Foods Trading	Daniel Brooks		6,867.00 AED	Quotation

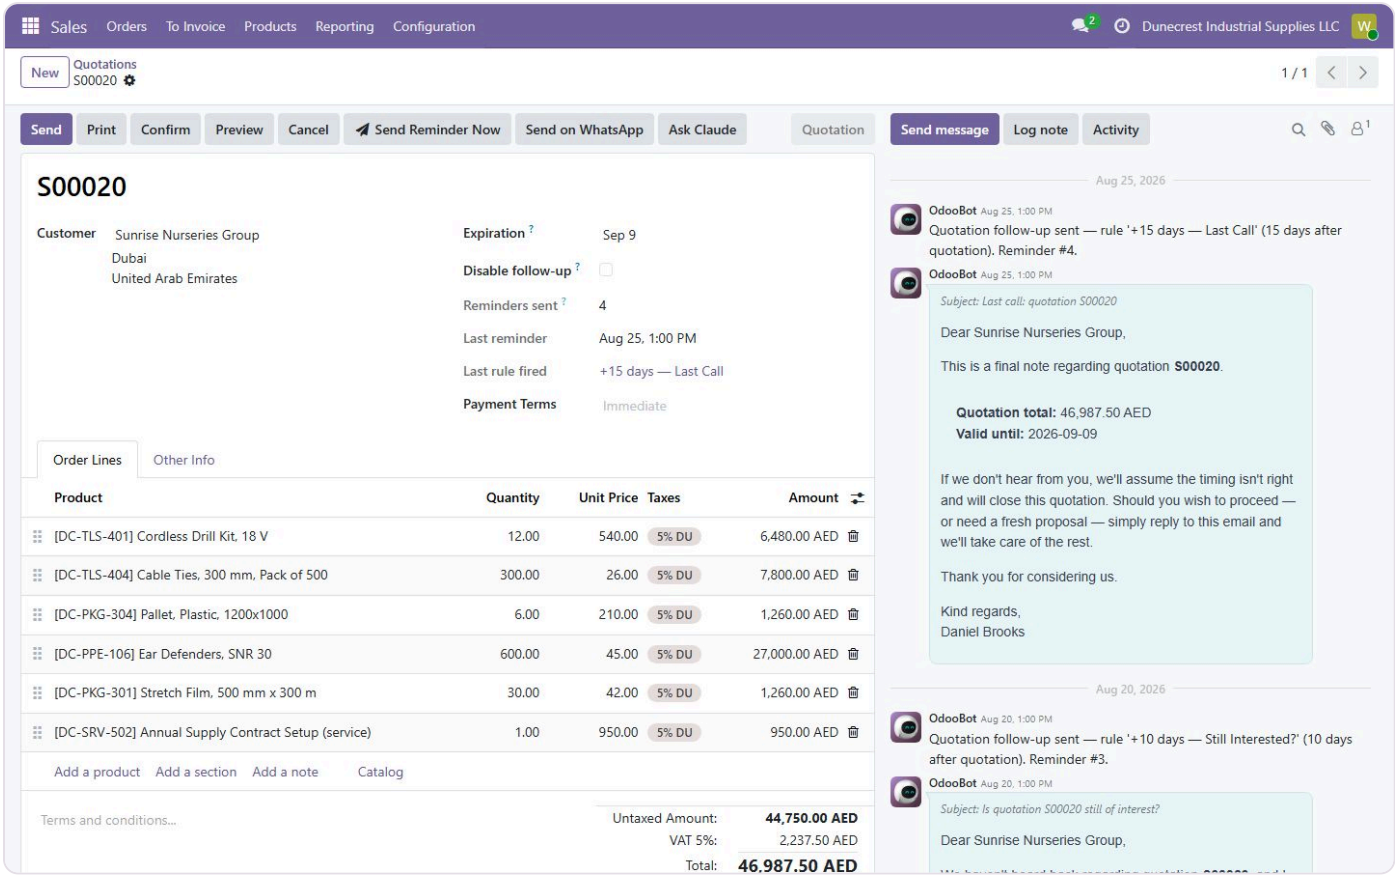

Reminder fields

4 Under the expiry date: **Disable follow-up**, then, once something was sent, **Reminders sent**, **Last reminder** and **Last rule fired**. **Send Reminder Now** in the header picks the next applicable rule and sends it immediately, whatever the time of day.

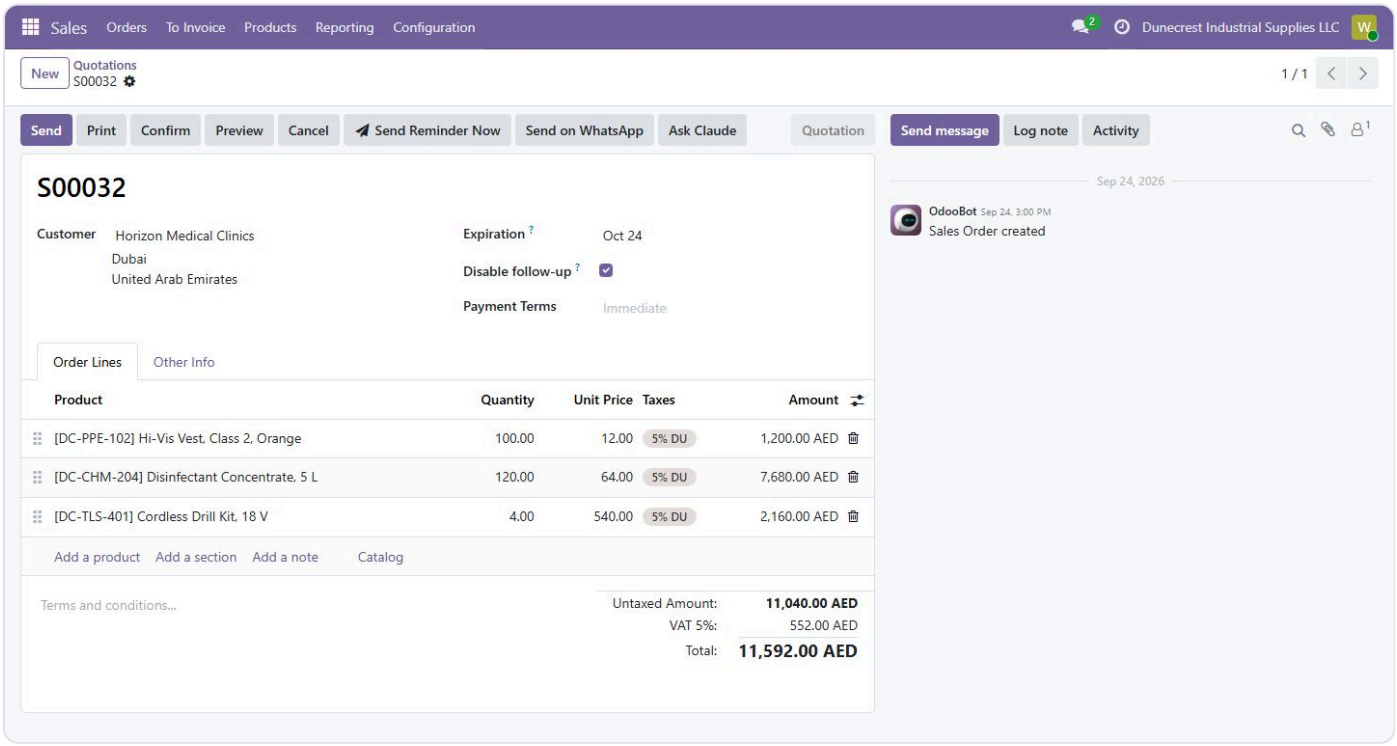

The chatter

5 Every reminder posts the email and a note with the rule name, its day and the reminder number. If no rule applies yet, or every rule has fired, Send Reminder Now says so in the chatter instead of sending.

Follow-up disabled

6 Tick Disable follow-up for a negotiation you are handling by phone, or a customer who asked not to be chased. On the demo, the medical clinic group's quotes are excluded.

11.3 Settings and the sweep FOLLOW-UP

Settings > Sales > Quotation Follow-Up holds the master switch, a **Send from** address that overrides the template's sender, and a global **Skip if total below**. The scheduled action "Quotation Follow-Up, daily sweep" runs once a day. Reminder emails are sent at once rather than queued. A failure on one quote is written in its chatter and the sweep carries on.

> Known limits in this version: unticking the master switch does not stop the sweep. Odoo deletes the setting when it is unticked, and the sweep treats a missing setting as on. To pause reminders, archive the rules or deactivate the scheduled action. The global minimum is only applied by the daily sweep, not by Send Reminder Now. The shipped rule and template names use a long dash, rename them if that matters to you.

PART 12

The AI Assistant: Ask Claude on leads, quotations and products

AI ASSISTANT

Most of a salesperson's writing is the same five jobs: catch up on a lead somebody else worked, decide if a lead is worth a call, answer the last email, explain a quote, and describe a product. The AI Assistant puts those jobs behind one button, using prompts you control and answers you review before anything is written.

IN THIS PART YOU WILL LEARN

- Ask Claude from a lead, a quotation or a product
- Review an answer and keep it, or throw it away
- Read the request log and its token counts
- Write your own prompt with field placeholders

TRY IT YOURSELF ON THE DEMO

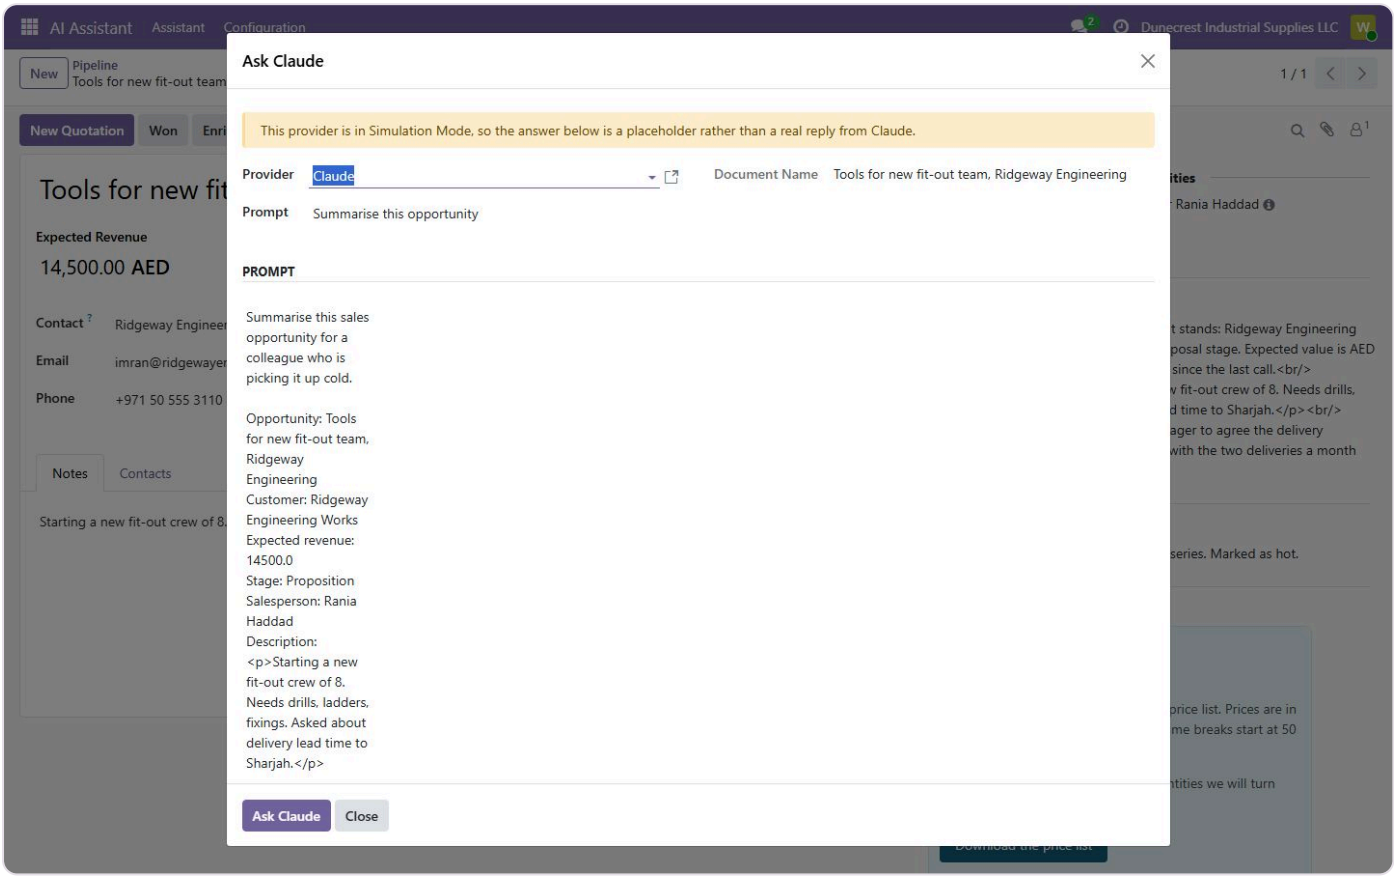

1. Open lead Site safety audit, Metro Auto, click Ask Claude, pick Qualify this lead and ask. Read the simulation answer, then Close
2. Open AI Assistant > AI Requests and open the Draft a reply request
3. Open Configuration > Prompts > Qualify this lead and look at its placeholders

The demo runs in **Simulation Mode** with no Anthropic key. Asking Claude on the demo returns the fixed simulation text and logs a request. The other answers in the request log are example records written when the demo was built, to show what a live answer, an applied answer and a failure look like. They are not output from Claude.

12.1 Asking AI ASSISTANT

Ask Claude on a lead

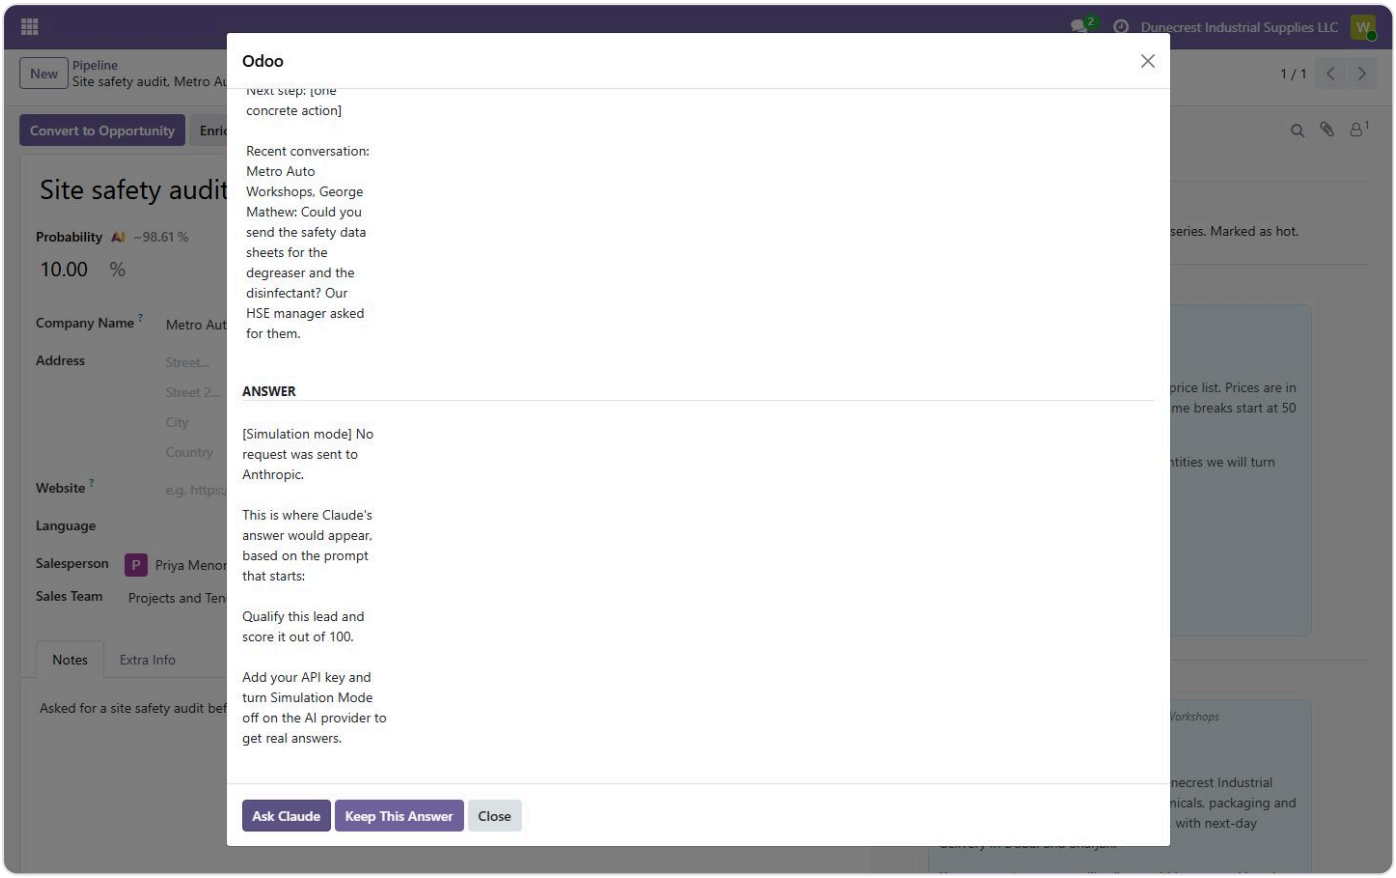

1 Leads and opportunities, quotations and products have an **Ask Claude** button. The dialog opens with the default provider and the first prompt for that kind of record, already filled with the record's values and, for prompts that ask for it, the last few messages from the chatter. You can edit the prompt text before sending. A yellow banner shows while the provider is in simulation mode.

The answer

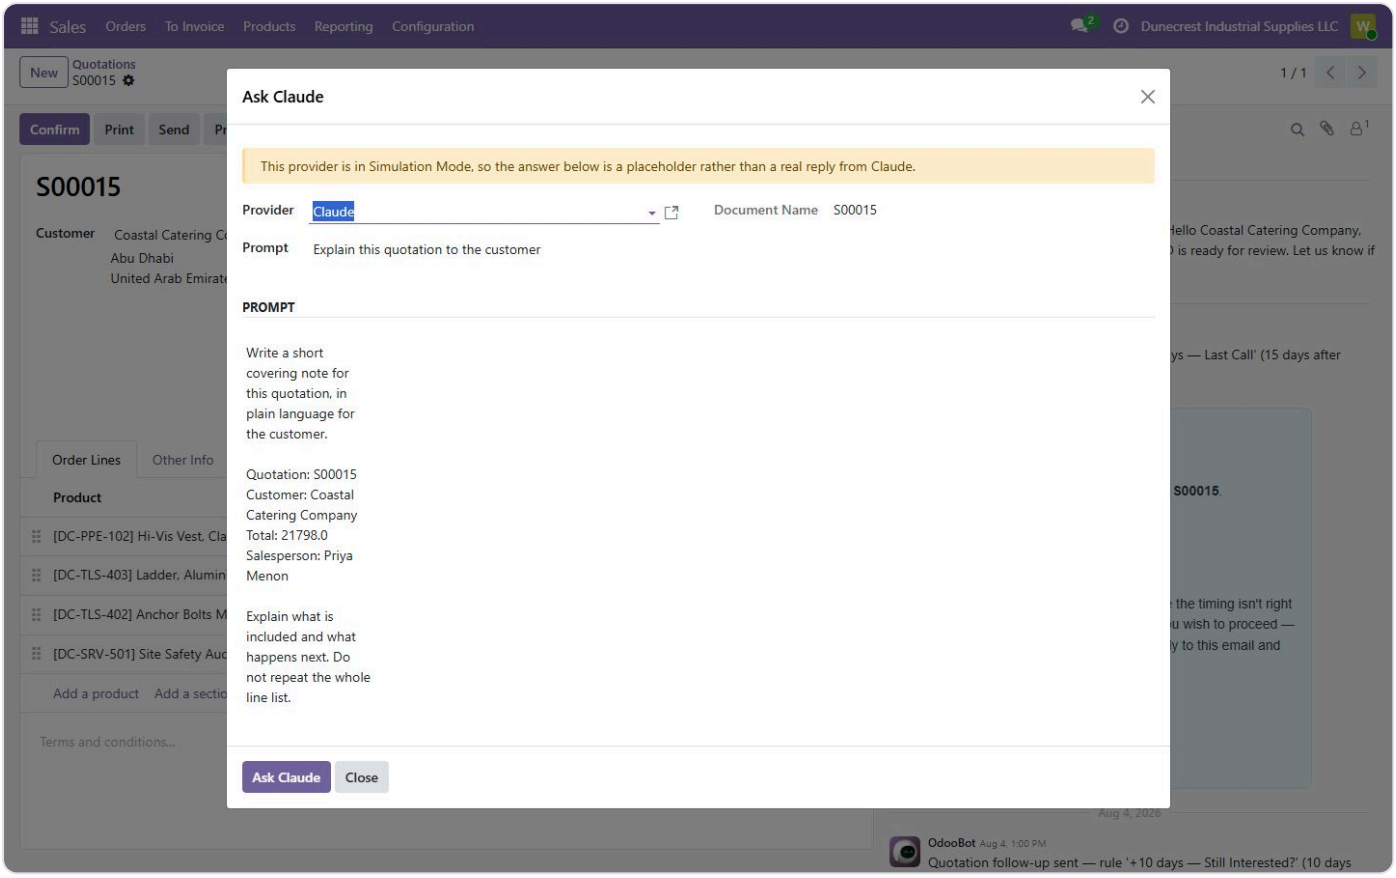

2 **Ask Claude** sends it and shows the answer in the same dialog. **Keep This Answer** applies it to the record; **Close** throws it away. Either way the exchange is logged as a request.

This is the real simulation answer from the demo. With a key and simulation off, Claude's reply appears here instead.

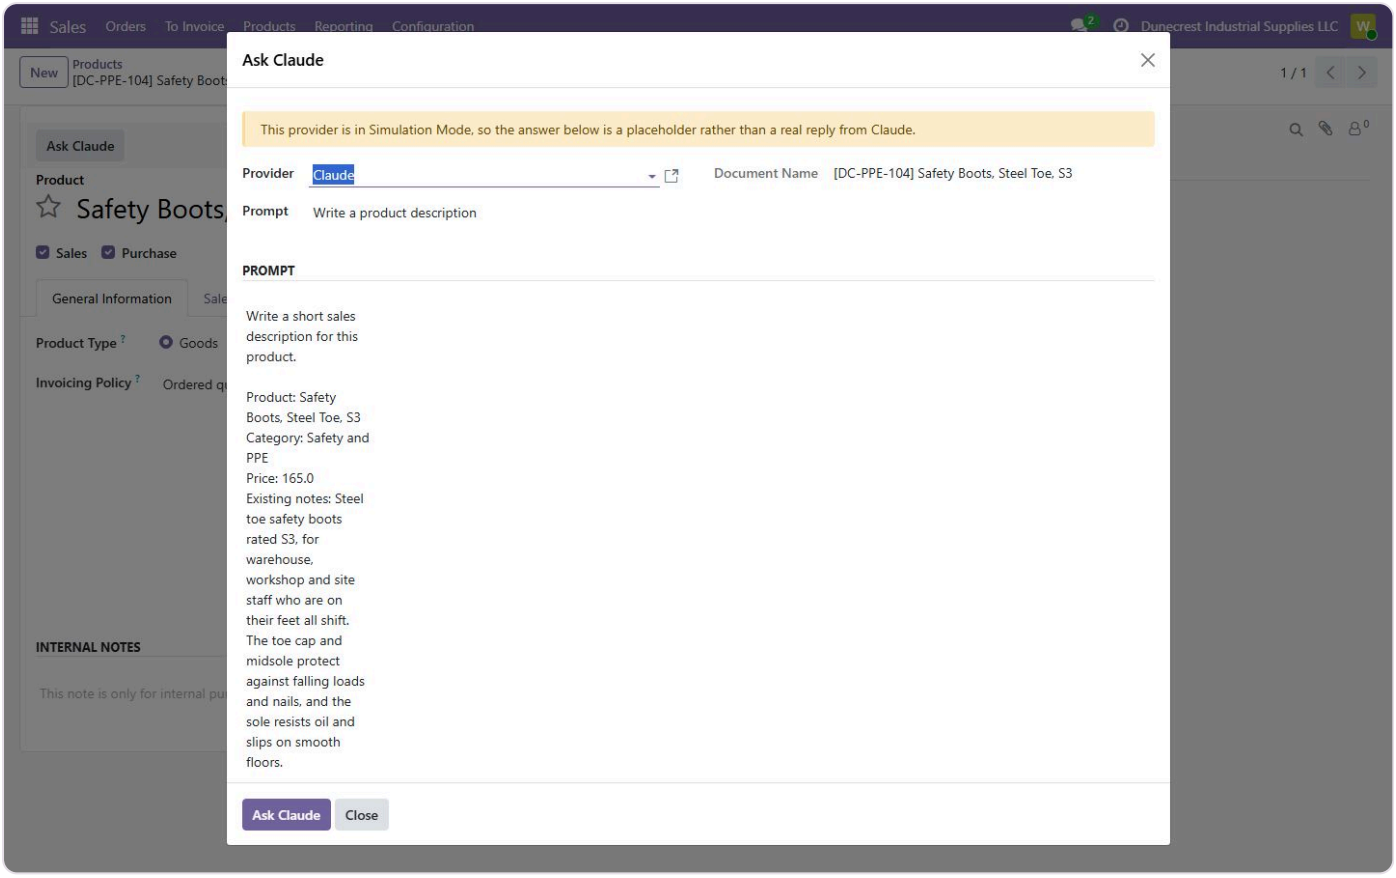

On a quotation

3 The quotation prompt writes a short covering note for the customer from the quote's number, customer, total and salesperson.

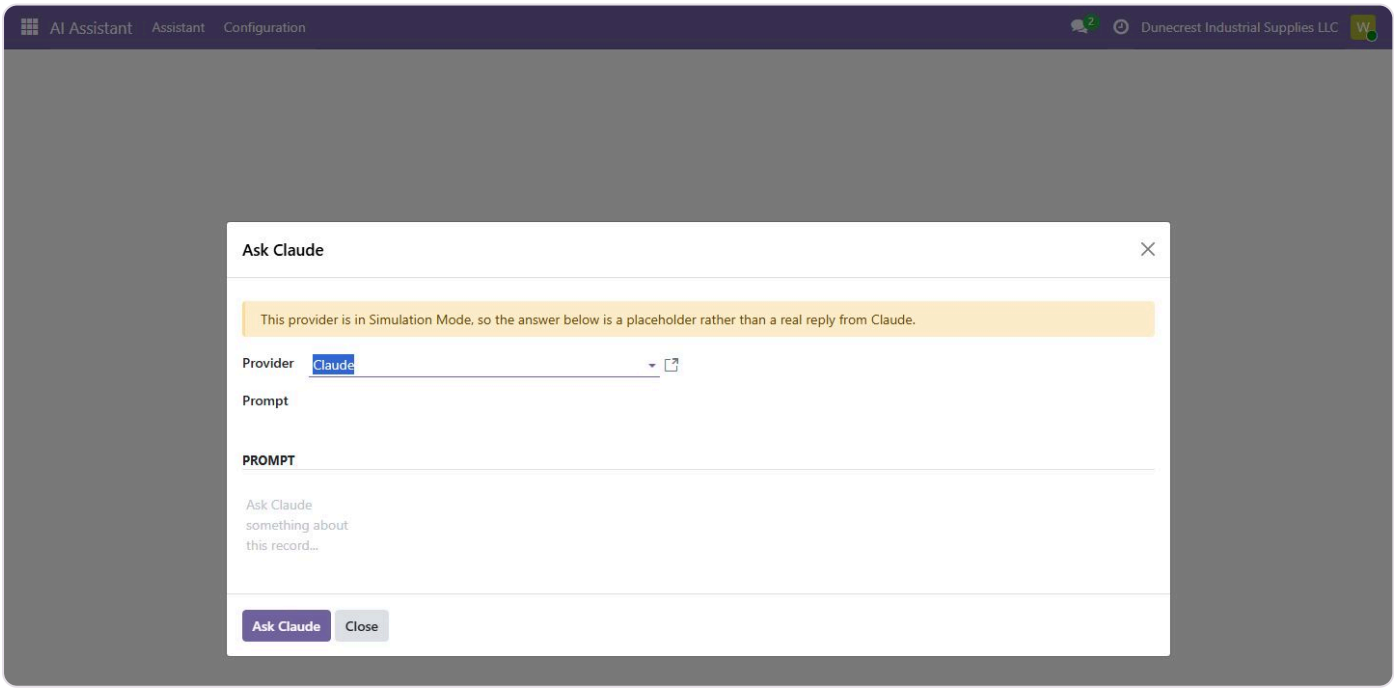

On a product

4 The product prompt writes a sales description from the name, category, price and existing notes. Keeping the answer writes it straight into the product's sales description instead of the chatter.

Ask without a record

5 AI Assistant > Assistant > Ask Claude opens the dialog with no record behind it, for a free question such as subject lines or a translation.

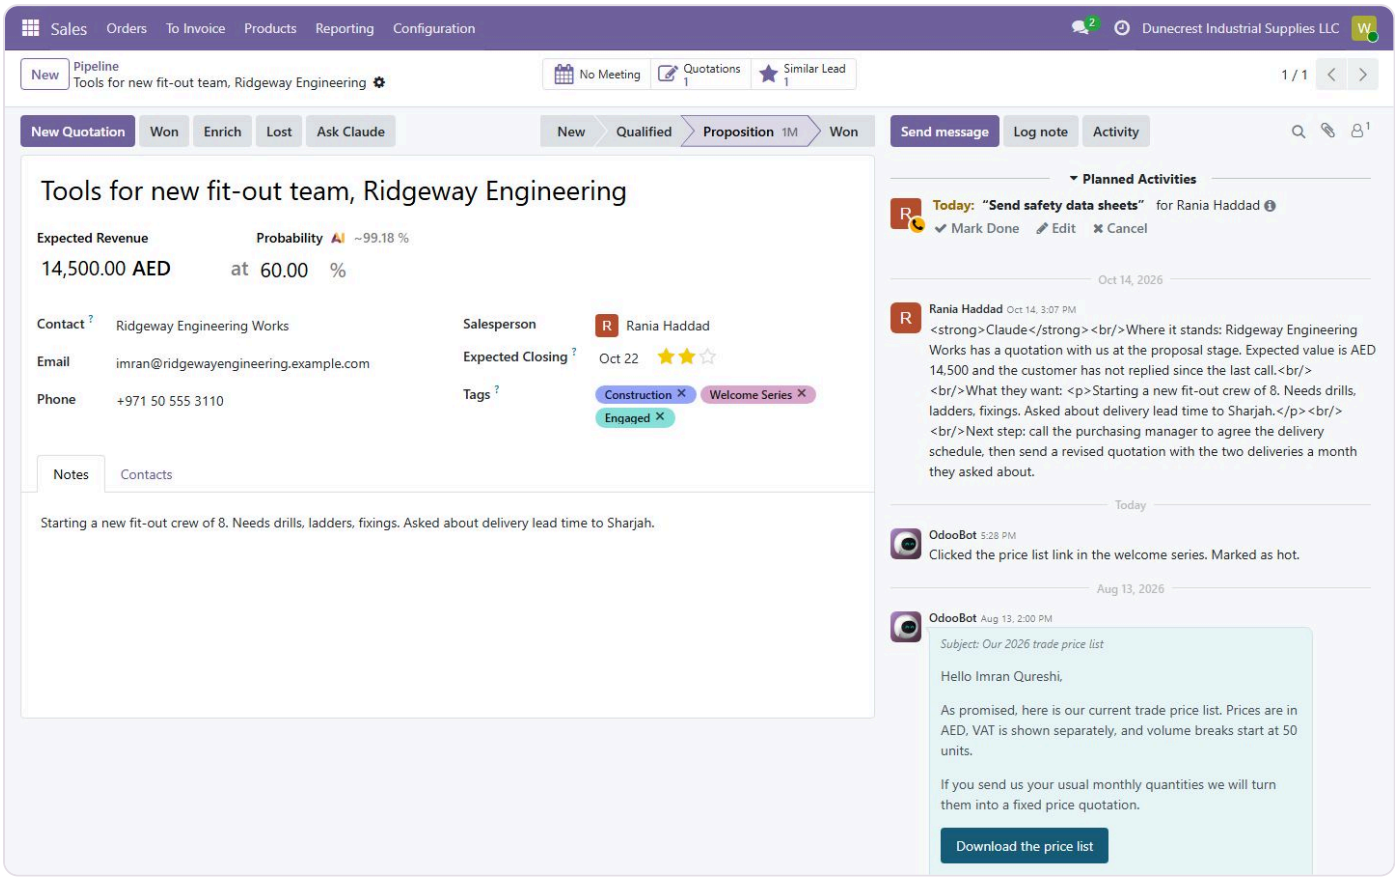

12.2 Keeping an answer and the request log AI ASSISTANT

An applied summary

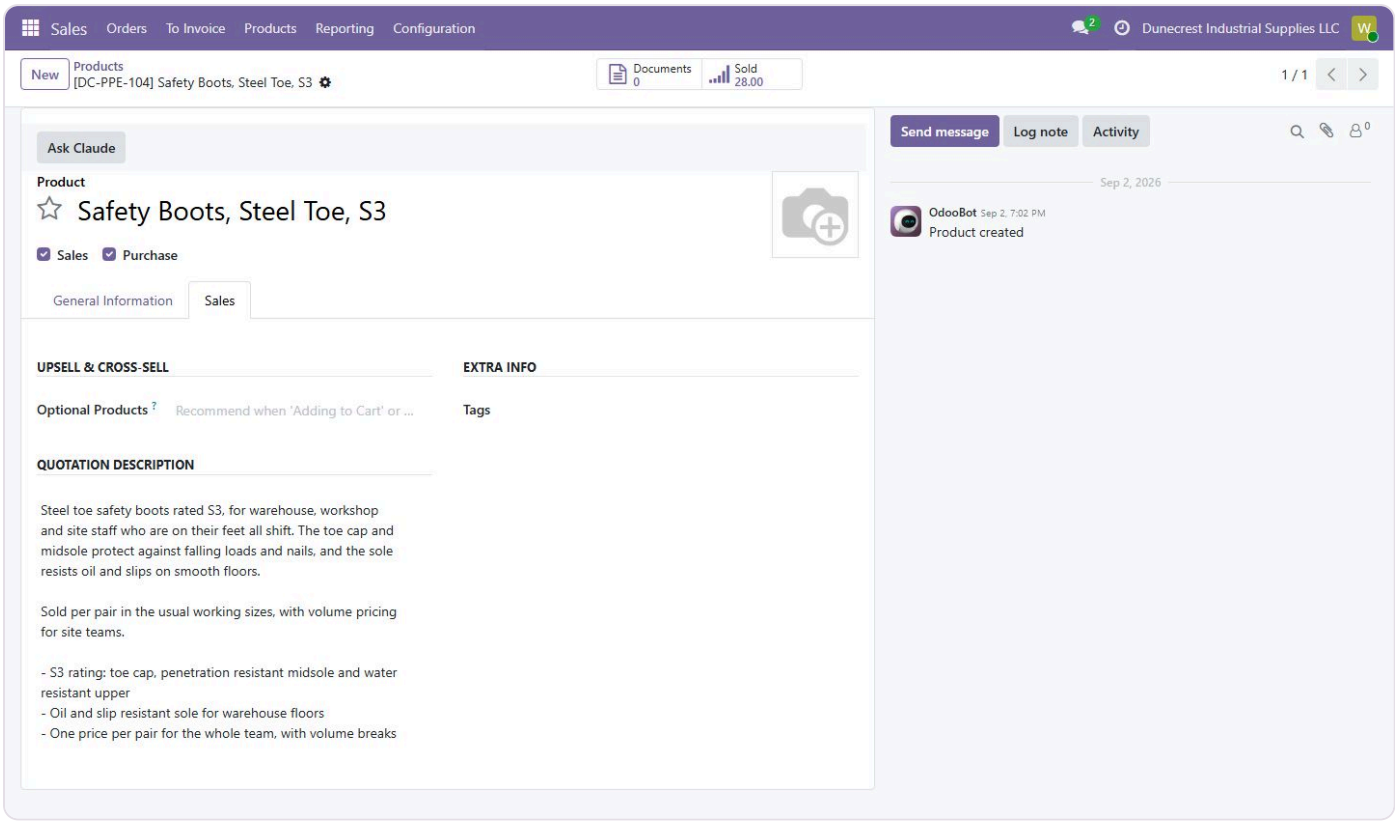

6 An applied answer is posted in the record's chatter under the heading Claude, so the next person sees it.

The note shows literal
 tags between paragraphs. That is a display bug in this version; the text is complete.

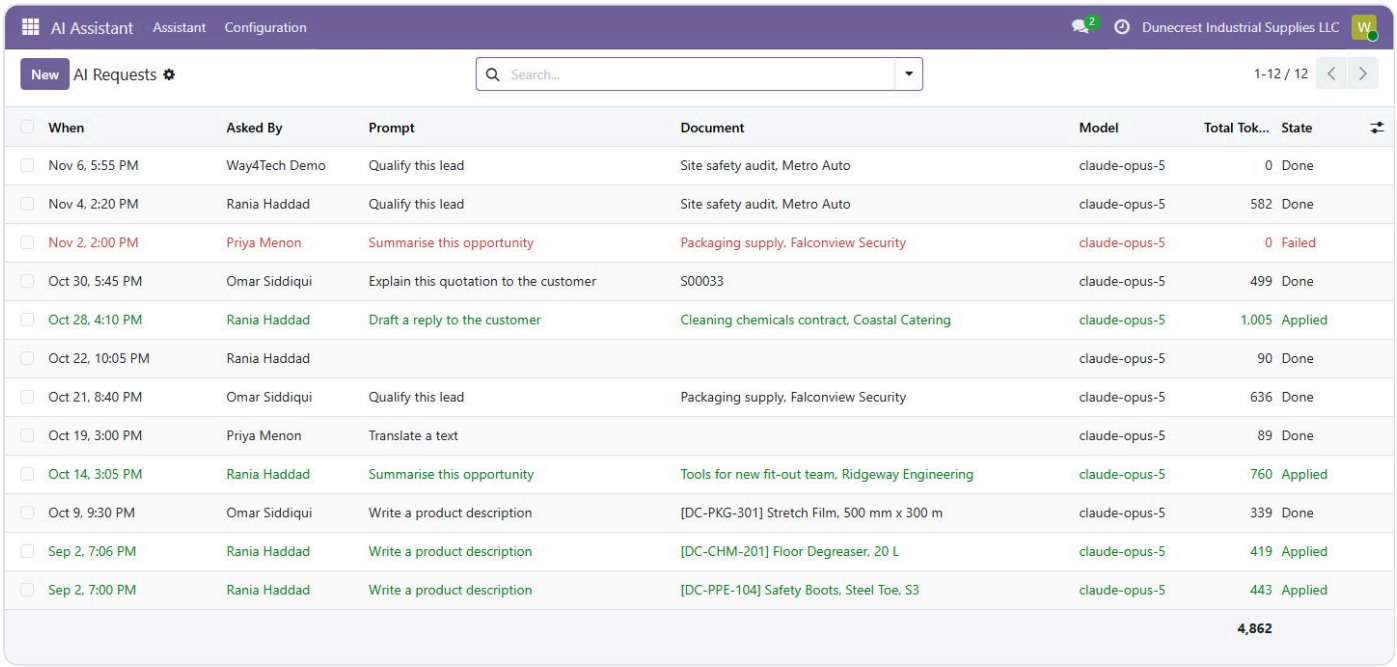

7 An applied product description

The product prompt has **Write Result To** set to the sales description, so applying it replaced that field.

8 AI Requests

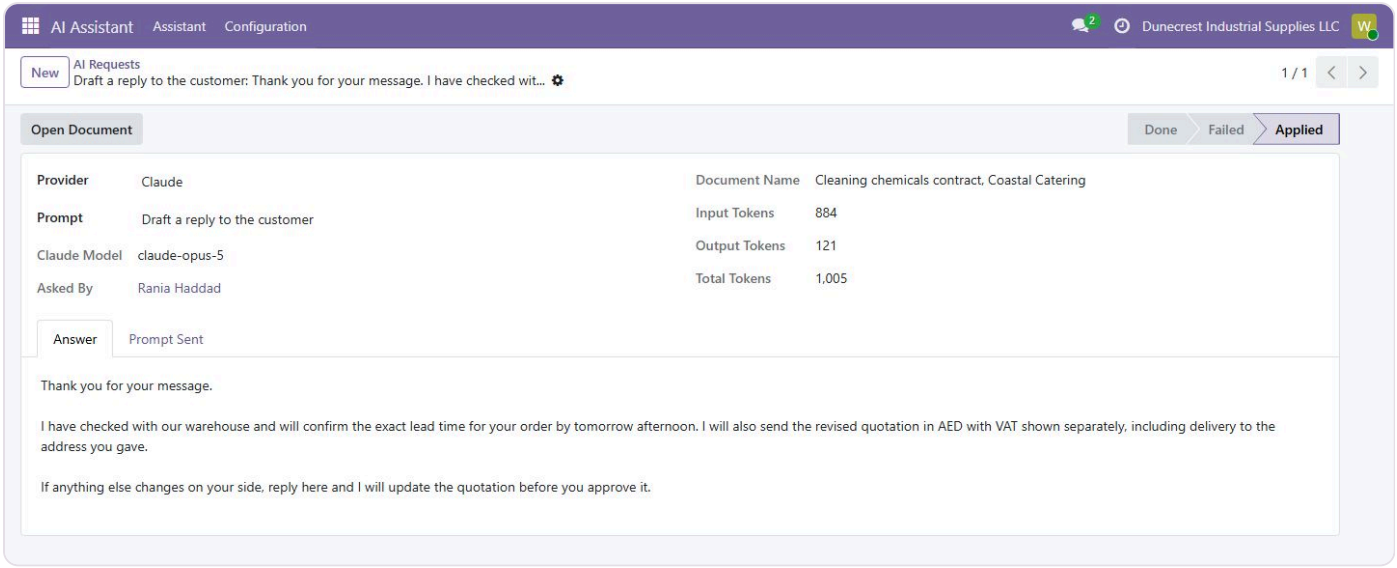

Every exchange: when, who asked, prompt, document, Claude model, total tokens and state (Done, Applied, Failed). Filters My Requests, Failed, Applied; group by Prompt, User or Month. The token total is what Anthropic bills you for.

When	Asked By	Prompt	Document	Model	Total Tok...	State
Nov 6, 5:55 PM	Way4Tech Demo	Qualify this lead	Site safety audit, Metro Auto	claude-opus-5	0	Done
Nov 4, 2:20 PM	Rania Haddad	Qualify this lead	Site safety audit, Metro Auto	claude-opus-5	582	Done
Nov 2, 2:00 PM	Priya Menon	Summarise this opportunity	Packaging supply, Falconview Security	claude-opus-5	0	Failed
Oct 30, 5:45 PM	Omar Siddiqui	Explain this quotation to the customer	S00033	claude-opus-5	499	Done
Oct 28, 4:10 PM	Rania Haddad	Draft a reply to the customer	Cleaning chemicals contract, Coastal Catering	claude-opus-5	1,005	Applied
Oct 22, 10:05 PM	Rania Haddad			claude-opus-5	90	Done
Oct 21, 8:40 PM	Omar Siddiqui	Qualify this lead	Packaging supply, Falconview Security	claude-opus-5	636	Done
Oct 19, 3:00 PM	Priya Menon	Translate a text		claude-opus-5	89	Done
Oct 14, 3:05 PM	Rania Haddad	Summarise this opportunity	Tools for new fit-out team, Ridgeway Engineering	claude-opus-5	760	Applied
Oct 9, 9:30 PM	Omar Siddiqui	Write a product description	[DC-PKG-301] Stretch Film, 500 mm x 300 m	claude-opus-5	339	Done
Sep 2, 7:06 PM	Rania Haddad	Write a product description	[DC-CHM-201] Floor Degreaser, 20 L	claude-opus-5	419	Applied
Sep 2, 7:00 PM	Rania Haddad	Write a product description	[DC-PPE-104] Safety Boots, Steel Toe, S3	claude-opus-5	443	Applied
					4,862	

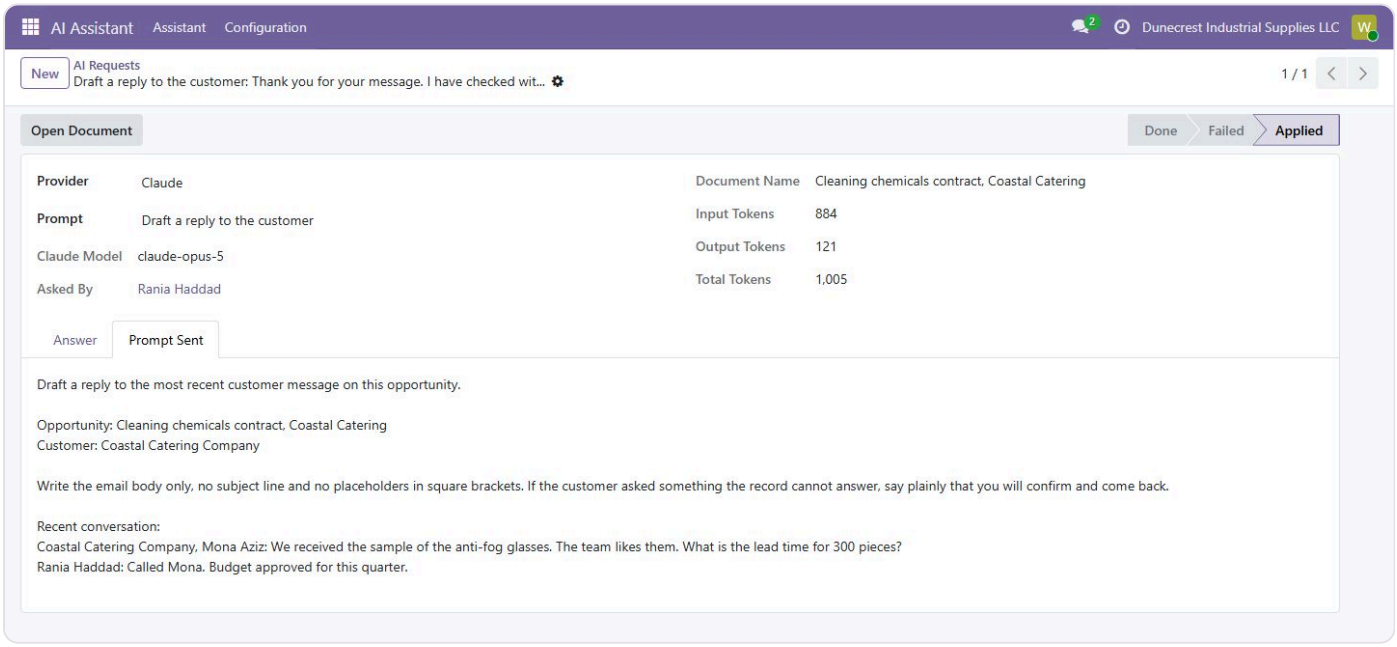

A request

9 The answer, with input and output tokens. **Apply** does what Keep This Answer does, from the log. **Open Document** goes to the record.

Prompt Sent

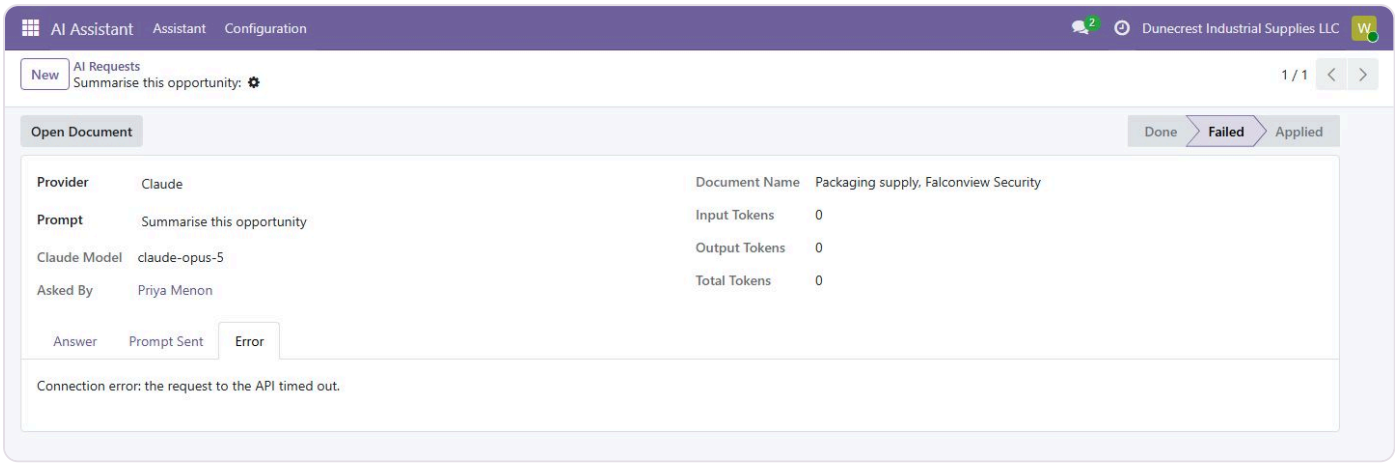

10 The exact text that was sent, after the placeholders were filled and the chatter added. This is what to read when an answer is off.

11

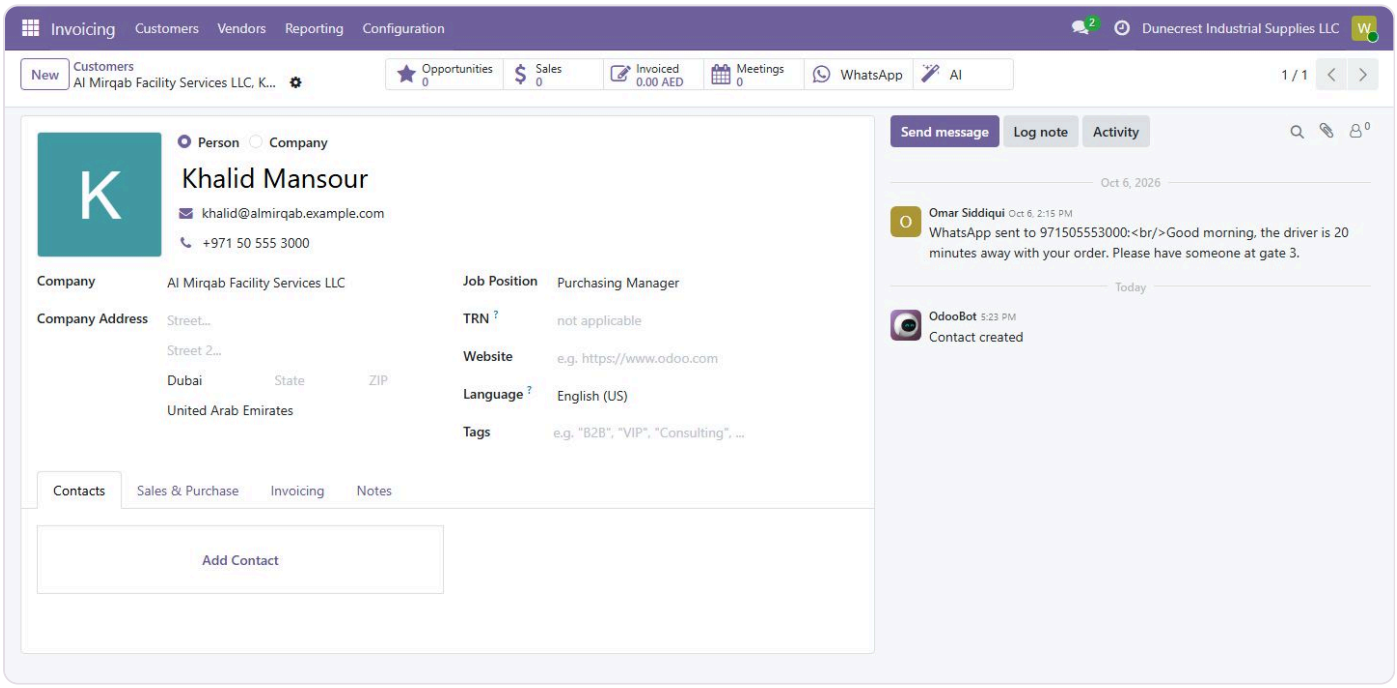

A failure

A failed request keeps the error on its Error tab.

12.3 Who sees what AI ASSISTANT

A user with Use the Assistant sees only their own requests; Configure the Assistant sees everybody's and is the only group that can read the API key. The contact form gets an **AI** button that lists the requests made about that contact.

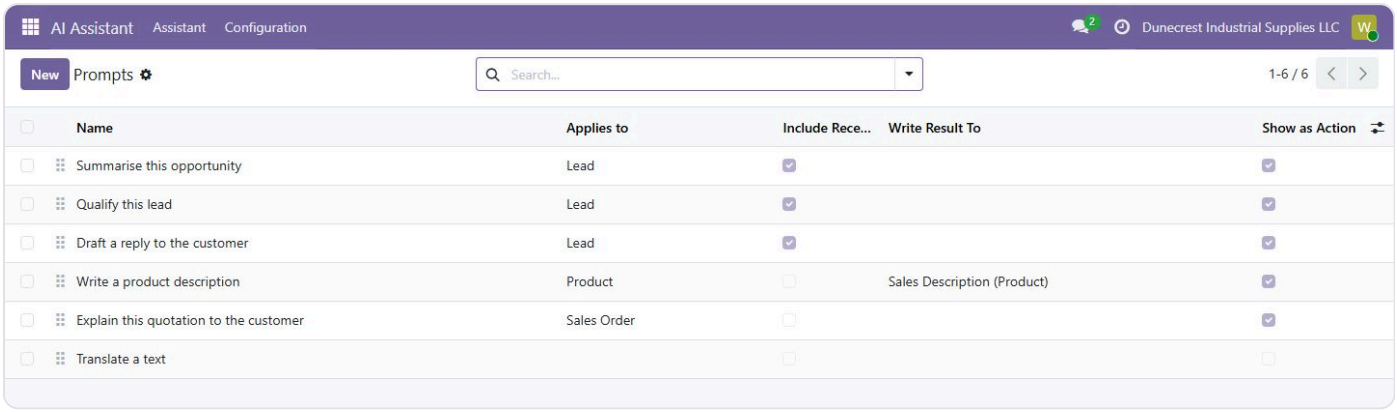

The AI button on a contact.

12.4 Prompts AI ASSISTANT

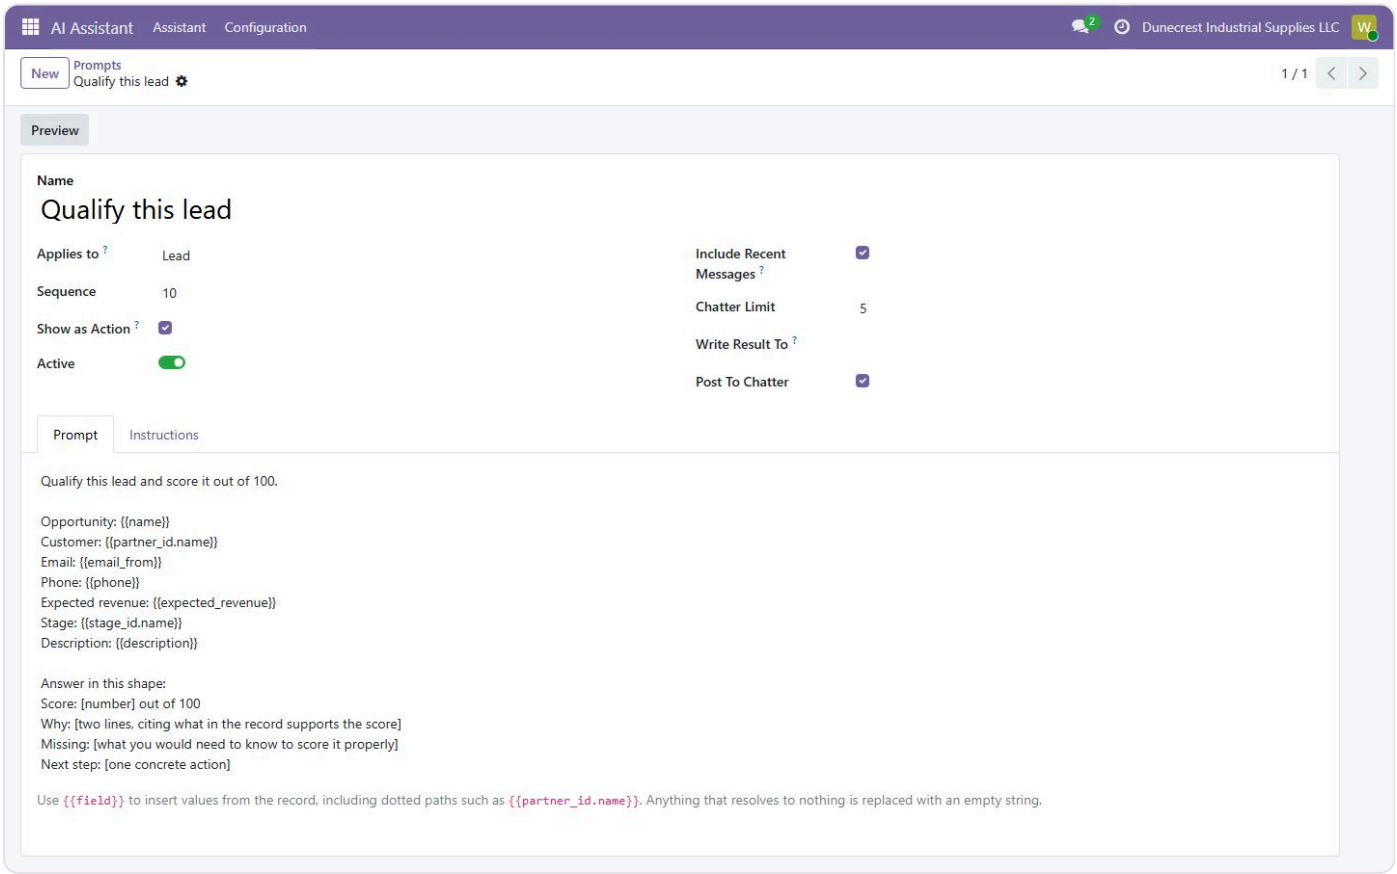

The prompts

12 AI Assistant > Configuration > Prompts. Six ship with the module: Summarise this opportunity, Qualify this lead, Draft a reply to the customer (leads), Write a product description (products), Explain this quotation to the customer (quotations) and Translate a text (not tied to a record).

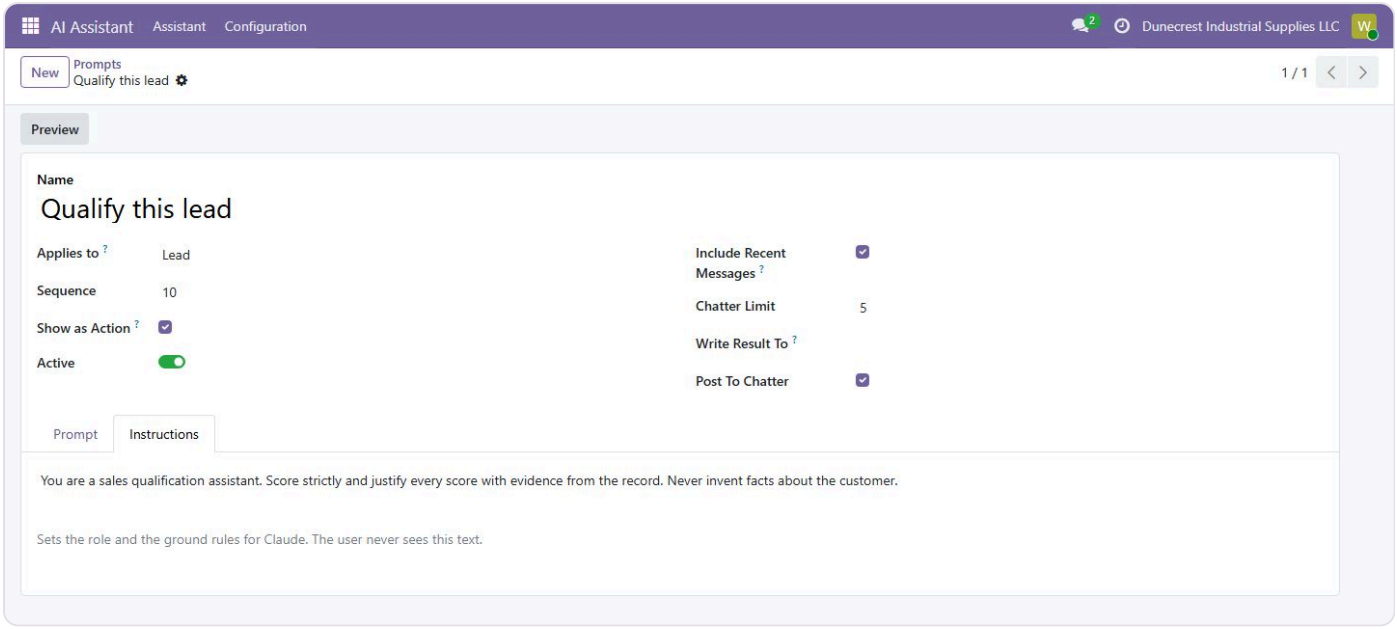

A prompt

13 **Applies to** picks the model. **Prompt** is the question, with {{field}} placeholders filled from the record, dotted paths allowed ({{partner_id.name}}). **Include Recent Messages** adds the last N chatter messages, oldest first. **Write Result To** names a field the answer goes into; **Post to Chatter** also posts it. **Show as Action** offers the prompt in the dialog. **Preview** renders the prompt on the first record of the model so you can check the placeholders without asking anything.

Instructions

14 The Instructions tab sets Claude's role and ground rules for this prompt. It is sent as the system prompt and never shown to the user. The qualify prompt tells Claude to score strictly and never invent facts.

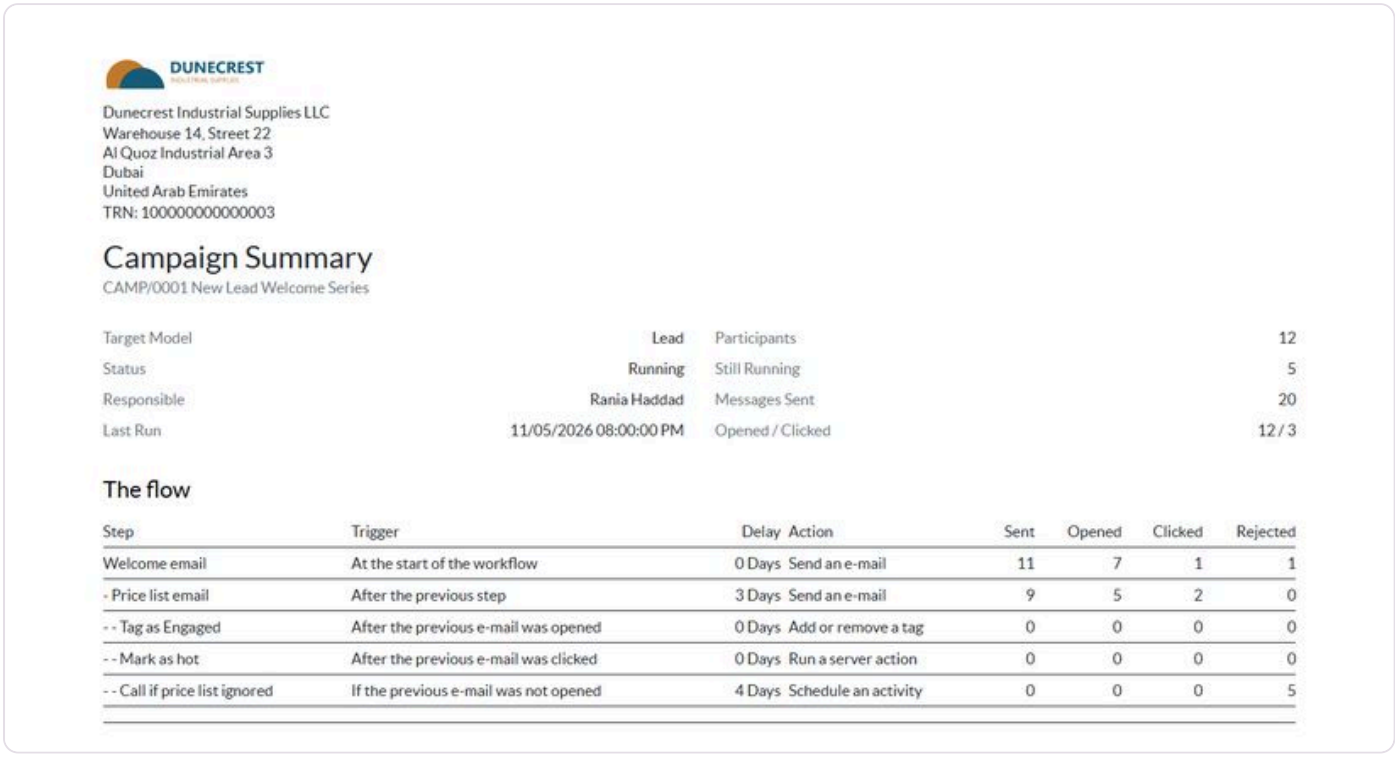

Known limits in this version, read from the code. The lead score is text in the answer ("Score: 72 out of 100"); nothing writes it to a field you can sort or filter on unless you add one and point Write Result To at it. The store listing mentions extracting action points, but no prompt for that ships; write one. Placeholders on HTML fields (a lead's description) pass the HTML tags through, and numbers are not formatted. A user without Odoo's Access Rights group gets an access error when keeping an answer for a prompt with Write Result To set (the product description), so keep those as an administrator for now. A failed call shows its error in the dialog but the failed request is not kept in the log.

PART 13 Printed documents and scheduled actions

DRIP CAMPAIGNS COMMISSION WHATSAPP FOLLOW-UP WHATSAPP OTP

Two printouts come with the modules, and several scheduled actions do the work in the background. This part lists them all in one place.

	Untaxed Amount			20,760.00 AED
	VAT 5%			1,038.00 AED
	Total			**21,798.00 AED**

The standard Odoo quotation print, which the follow-up emails point the customer back to.

Scheduled actions

Scheduled action	Module	Runs	At install	On the demo
WhatsApp: overdue invoice reminders	WHATSAPP	Daily	Off	On, in simulation
WT WhatsApp OTP: Cleanup Expired OTPs	WHATSAPP OTP	Hourly	On	On
Marketing: run campaigns that are due	DRIP CAMPAIGNS	Hourly, as OdooBot	On	On (emails stay queued on the server)
Quotation Follow-Up, daily sweep	FOLLOW-UP	Daily	On	Paused, because the demo has no mail server

Priority	Action Name	Model	Next Execution Date	Interval ...	Interval Unit	Active
5	Account: Post draft entries with auto_post enabled and accounting date up to today	Journal Entry	Nov 7, 7:00 AM	1	Days	☑
3	Base: Auto-vacuum internal data	Automatic Vacuum	Nov 6, 5:17 PM	1	Days	☑
8	Base: Portal Users Deletion	Users Deletion Request	Nov 6, 5:17 PM	1	Days	☑
5	CRM: Lead Assignment	Sales Team	Nov 6, 5:18 PM	1	Days	☐
5	CRM: enrich leads (IAP)	Lead	Nov 6, 5:19 PM	24	Hours	☐
5	Calendar: Event Reminder	Event Alarm Manager	Nov 6, 5:18 PM	1	Days	☑
5	Digest Emails	Digest	Nov 6, 7:18 PM	1	Days	☐
5	Disable unused snippets assets	Website	Nov 6, 5:18 PM	1	Weeks	☑
5	Discuss: channel member unmute	Channel Member	Nov 6, 5:18 PM	1	Days	☑
6	Mail: Email Queue Manager	Outgoing Mails	Nov 6, 5:18 PM	1	Hours	☐
5	Mail: Fetchmail Service	Incoming Mail Server	Nov 6, 5:18 PM	5	Minutes	☐
5	Mail: Post scheduled messages	Scheduled Message	Nov 6, 5:18 PM	1	Days	☑
5	Mail: send web push notification	Push Notifications	Nov 6, 5:18 PM	1	Days	☑
5	Marketing: run campaigns that are due	Marketing Campaign	Nov 6, 5:18 PM	1	Hours	☑
5	Notification: Delete Notifications older than 6 Months	Message Notifications	Nov 6, 5:18 PM	1	Months	☑
5	Notification: Notify scheduled messages	Scheduled Messages	Nov 6, 5:18 PM	1	Hours	☑
5	Payment: Post-process transactions	Payment Transaction	Nov 6, 5:18 PM	10	Minutes	☐
5	Predictive Lead Scoring: Recompute Automated Probabilities	Lead	Nov 6, 5:18 PM	1	Days	☐
5	Quotation Follow-Up — daily sweep	Sales Order	Nov 6, 5:19 PM	1	Days	☐

Settings > Technical > Scheduled Actions on the demo (read as admin). Odoo's own mail queue is off on the demo so nothing is delivered.

> Commission has no scheduled action: lines are made when an invoice is posted or paid. The WhatsApp webhook is not scheduled either; Meta calls it.

PART 14 A 15 minute demo script

For showing the six modules to a sales manager on the live demo, in the order a sale happens. Signed in as w4demo.

Min	Show	Say
0-1	Home screen, the four new apps	Six modules on Community, each sold separately, one demo company in Dubai
1-3	Automation > New Lead Welcome Series: Flow tab, Results tab	Every web lead gets the welcome, the price list three days later, and a call if they ignore it. Open rate is on the campaign
3-4	Reporting > Traces, calendar view, then a bounced trace	Every step for every lead is on record, bounces stop the flow
4-6	Lead Site safety audit, Metro Auto: Ask Claude, Qualify this lead	Claude scores the lead from what is in the record and says what is missing. The demo is in simulation, show the request log for an example answer
6-8	Quotation S00015: reminder fields, chatter, Send on WhatsApp dialog (Cancel)	Four reminders went out on their own at +2, +5, +10 and +15 days, and the quote also went out on WhatsApp
8-9	WhatsApp > Inbox, then All Messages grouped by status	Replies come back into Odoo against the right contact; you can see who read the quote
9-10	A failed payment reminder	Overdue invoices are chased every day; failures are visible and can be resent
10-12	Sales order S00025, then Commission Lines grouped by agent	Two agents on one order, commission worked out per invoice line from their plans
12-14	Settlements: draft, confirmed, billed, then the vendor bill and the statement	Commission is paid like a supplier bill, with a statement for the agent
14-15	Commission Plans > Tiered Project Sales	Five ways to calculate, on invoice or only once paid

> Do not press Start, Run Now or Send on the demo when showing it to somebody else: other visitors share it. Opening dialogs and cancelling is safe.

PART 15 Questions people ask

Question	Answer
Do I need Odoo Enterprise?	No. All six run on Odoo 19 Community. They depend only on standard apps: Discuss, Invoicing, Sales, CRM, Website and the signup module.
Can I buy just one?	Yes. Each is a separate module on the Odoo Apps store. WhatsApp OTP does not need WhatsApp Integration.
Is this the official WhatsApp API?	Yes, the Meta WhatsApp Cloud API, called directly with your own token. There is no reseller or gateway in between, and Meta bills you for conversations.
Can a customer reply on WhatsApp and the reply land in Odoo?	Yes, once the webhook is registered in Meta and the App Secret is set on the account. Replies arrive in the inbox, matched to the contact by phone number.
Can I send WhatsApp to a whole list at once?	Yes, pick several recipients in the composer. Each gets their own message and status. For a real campaign the recipients must have agreed to hear from you, which is Meta's rule.
Do drip campaigns work on leads only?	No, on any model with records. The demo runs them on leads and on contacts. Email steps need a template for that model and an address on the record.
Can a campaign send WhatsApp?	Not directly; a step sends email, schedules an activity, runs a server action or changes a tag. A server action can call the WhatsApp module, but that is custom work.
When does commission count, invoice or payment?	Per plan. On payment means the line is only created once the invoice is fully paid.
Can two salespeople share an order?	Yes, put both in Commission Agents. Each earns on their own plan.
How is commission paid?	A settlement per agent and period becomes a vendor bill, paid through accounts payable.
Will the follow-up email a customer who already said no?	Only if the quote is still open. Cancel the quote, or tick Disable follow-up.
Which AI does the assistant use, and what does it cost?	Anthropic Claude (Opus 5, Sonnet 5 or Haiku 4.5), with your own API key. Anthropic bills you per token; the request log shows the tokens per request.
Does the AI change records on its own?	No. Every answer is shown first and only written when you keep it.
Is customer data sent to Anthropic?	Only what the prompt includes: the fields named in it and, if switched on, the recent chatter messages. Read the Prompt Sent tab to see exactly what went.

PART 16 Menu map

Every menu the six modules add, by app. Items marked admin need Odoo's Settings rights.

WhatsApp

Messages > Inbox	Replies and new chats coming in
Messages > All Messages	Every message in or out, with its status
Messages > New Message	Write to contacts or loose numbers
Configuration > Accounts	Numbers, Meta ids, token, webhook, simulation
Configuration > Templates	Approved wording and placeholder mapping

Automation

Campaigns	Drip campaigns by state, flow, results
Reporting > Participants	Who is in which campaign, and how far
Reporting > Traces	Every step for every person, calendar, pivot, graph
Configuration > Campaign Steps	All steps of all flows
Configuration > Mail Templates	The emails the campaigns send

Commission

Commission > Commission Lines	What each agent earned, line by line
Commission > Settlements	A period per agent, paid as a vendor bill
Configuration > Commission Plans	Rules, tiers, basis, agents

Sales (added items)

Configuration > Quotation Follow-Up Rules	Days after quote, template, CC, skip below
Quotation form	Send Reminder Now, Send on WhatsApp, Ask Claude, agents, estimate
Settings > Quotation Follow-Up	Master switch, sender, global minimum

AI Assistant

Assistant > Ask Claude	Ask a free question
Assistant > AI Requests	Every question, answer and token count
Configuration > Providers	Key, model, effort, simulation mode
Configuration > Prompts	Reusable prompts with field placeholders

Settings (admin)

General Settings > WhatsApp	Default account, automatic payment reminders
Website > WhatsApp OTP	Signup verification, token, template, expiry

Want these tools on your own Odoo?

We install the modules on your Odoo 19 Community database, connect your own WhatsApp Business number and your own Anthropic key, load your commission agreements as plans, rewrite the follow-up and campaign emails in your voice, and train the sales team. Each module can be bought on its own.
