COMPLETE GUIDE · FIVE MODULES, SETUP AND EVERY SCREEN

Community Accounting Tools for Odoo 19

Fixed assets and depreciation, budgets with commitment control, nine financial reports, bank statement import and payment follow-up: the pieces Odoo Community leaves out. Every screen and every step, shown on a live demo with a year of books.

FIXED ASSETS | BUDGETS | FINANCIAL REPORTS | BANK IMPORT | PAYMENT FOLLOW-UP

START

About this guide

Odoo Community keeps a proper double entry ledger, raises invoices and bills and records payments. What it does not do is the work around the ledger that an accountant expects: a fixed asset register, a budget that knows about purchase orders, a balance sheet with a comparison column, a bank file import and a polite chase for late payers. This guide covers the five Way4Tech modules that add those, one screen at a time, on a demo company with a year of books in it.

Who it is for

The bookkeeper or finance manager running Odoo Community, the owner who wants month end figures without exporting to a spreadsheet, and anyone being shown the modules before buying.

How to read it

Parts 1 to 3 are the background and the setup. Then each module has its own parts, marked with a coloured badge. Each part opens with what you will learn and a short thing to try on the demo, then walks every field and button.

The live demo

Halden Pike Trading Ltd, an invented wholesaler of timber, paint, fixings and garden lighting in Bristol. Sterling, UK VAT chart, books from November 2025 to today, thirteen fixed assets going back to 2021.

HOW IT WORKS

The demo company

Address	**accounting-demo.way4tech.com**
Sign in	**w4demo / Demo2026**
Company	Halden Pike Trading Ltd · 14 Quayside Row, Bristol · GBP · UK chart of accounts and VAT
Runs on	Odoo 19 Community with Invoicing (account), Purchase and the five modules

Every company, person, bank account and number on the demo is invented, and the e-mail addresses end in example.com. The demo is shared and is reset from time to time, so treat it as a set of books to walk around rather than your own.

What is in the guide

PART 21 A fifteen minute walk-through, and questions people ask

PART 22 The menu map

PART 1 What Odoo Community leaves out, and the five modules

Odoo sells its full accounting app as part of Enterprise. Community ships the Invoicing app: the ledger, customers and vendors, taxes, payments and bank statements, but not the reports and tools built on top. Each of the five modules fills one of those gaps and needs nothing but the Community accounting module underneath.

IN THIS PART YOU WILL LEARN

- What Community already does, so you know where the modules start
- Which module covers which job, and what each one costs
- How the badges in this guide tell you which module a screen belongs to

What you get in Community without them

Customer invoices, vendor bills, credit notes, payments, a chart of accounts with your country's taxes, journals, analytic accounts, and bank statements you type in by hand. All of it is real double entry, which is why the modules can read from it rather than keep their own figures.

THE JOB	IN COMMUNITY ON ITS OWN	WITH THE MODULE
Fixed asset register and depreciation	None. Kept in a spreadsheet and posted by hand	Asset types, boards, automatic posting, revaluation, disposal
Budget against actual	None	Budgets by analytic account and account group, with committed spend from purchase orders
Balance sheet, P&L, ledgers, aged balances	Only the journal item lists	Nine reports with comparison, filters, PDF and Excel
Reading the bank's file	Statements typed line by line	OFX, QIF, CAMT.053 and CSV import with duplicate protection
Chasing late payers	Send the invoice again by hand	Rules by days overdue, four e-mail templates, a daily run

The five modules

BADGE	MODULE	TECHNICAL NAME	PRICE
FIXED ASSETS	Fixed Asset Management	wt_account_asset	USD 89
BUDGETS	Budget Management	wt_budget_control	USD 99
FINANCIAL REPORTS	Dynamic Financial Reports	wt_dynamic_financial_reports	USD 149
BANK IMPORT	Bank Statement Import	wt_bank_statement_import	USD 79
PAYMENT FOLLOW-UP	Payment Follow-Up and Dunning	wt_late_payment_reminder	USD 10

They are independent. Each depends only on Odoo's accounting module (Payment Follow-Up also uses mail, which every database has), so you can buy one and add the others later. Budget Management reads purchase orders when the Purchase app is installed and simply shows zero committed when it is not.

None of the five replace a localisation. VAT returns, e-invoicing and statutory filings for your country still come from Odoo's own localisation modules or your accountant. The Tax Report in Part 15 lists tax per tax code; it is not a filed return.

PART 2 Signing in, the menus and who can do what

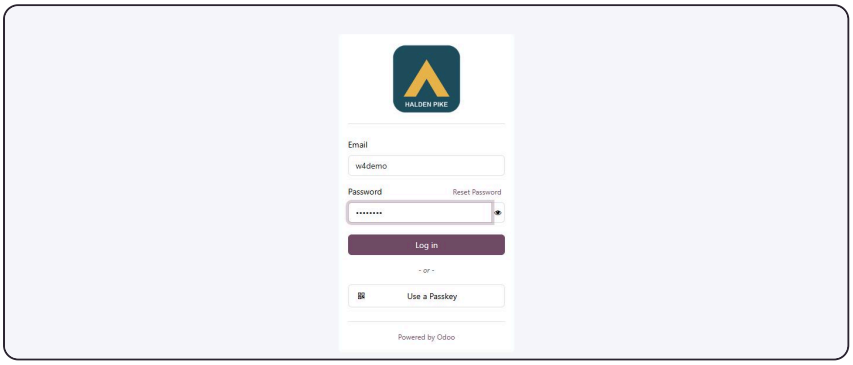

The five modules add four apps to the apps menu and a few entries inside the Invoicing app. This part shows where each one lives and which access group opens it.

IN THIS PART YOU WILL LEARN

- How to sign in to the demo
- Which app each module adds
- The access groups, and which Odoo accounting roles already include them

TRY IT YOURSELF ON THE DEMO

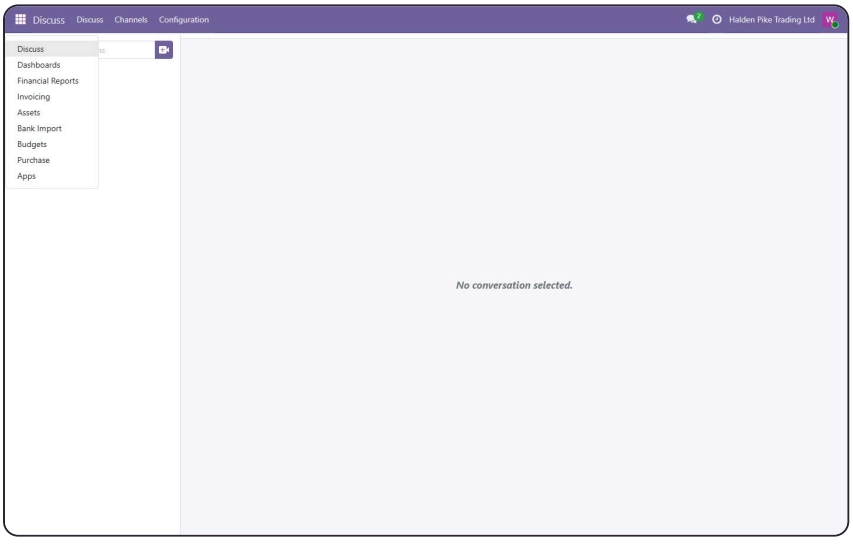

1. Sign in as w4demo / Demo2026.
2. Open the apps menu (top left) and find Assets, Budgets, Financial Reports and Bank Import.
3. Open Invoicing, Configuration and find Late Payment Rules.

1

Sign in

Open accounting-demo.way4tech.com and sign in with **w4demo** and **Demo2026**. The demo user has the accounting administrator rights a finance manager would have, without access to the technical settings.

2

The apps menu

The grid icon at the top left lists the apps. Four of the modules are apps of their own: **Assets**, **Budgets**, **Financial Reports** and **Bank Import**. Payment Follow-Up has no app; it sits inside Invoicing, on the invoice form and under Configuration.

Access groups

MODULE	GROUPS IT ADDS	WHO GETS THEM AUTOMATICALLY
Fixed Assets	Manage Assets; Configure Assets (adds the Asset Types menu)	Accounting users get Manage, accounting administrators get Configure
Budgets	Prepare Budgets; Approve Budgets (confirm, close, reset, the block and tolerance fields)	Nobody by default except the administrator; give the approver group to the person who signs budgets off
Financial Reports	Run Financial Reports; Configure Financial Reports (edit structures)	Read only accounting users can run them, accounting administrators can configure them

Bank Import	Import Statements; Configure Import Mappings	Accounting administrators get both
Payment Follow-Up	None of its own	The Send Reminder Now button needs the invoicing group; the rules menu sits under accounting configuration

Every record the modules create carries its company, and a multi-company rule on each model keeps one company's assets, budgets, imports and report structures out of the other's view.

PART 3 Setting up from zero

On a new database the modules install in a few seconds and most of them work straight away. This part is the short list of things to set before you rely on the figures, in the order we set them on the demo.

IN THIS PART YOU WILL LEARN

- What each module needs before its first real use
- Which scheduled actions the modules add and what they do
- The one setting you should check in Invoicing before turning reminders on

#	WHERE	WHAT TO SET	MODULE
1	Apps	*Install the modules you bought. Install Purchase too if you want committed spend in budgets.*	all
2	Invoicing, Configuration, Settings	*Turn on Analytic Accounting so budget lines can watch departments or projects.*	BUDGETS
3	Invoicing, Configuration, Chart of Accounts	*Check you have a cost and an accumulated depreciation account per asset family, and a depreciation expense account. Add account groups (code ranges) for the budget families.*	FIXED ASSETS BUDGETS
4	Assets, Configuration, Asset Types	*One type per family: accounts, journal, method, number and length of periods, prorata, Confirm Automatically, Post Entries Automatically. Put the type on its fixed asset account so bills raise assets.*	FIXED ASSETS
5	Assets, Assets	*Enter the existing register, or post the vendor bills that bought the assets.*	FIXED ASSETS
6	Financial Reports, Configuration	*Run the Balance Sheet and check every account lands on a line. Adjust a structure only if your chart uses account types oddly.*	FINANCIAL REPORTS
7	Invoicing, Configuration, Journals	*Put the bank account number on each bank journal so files find their journal.*	BANK IMPORT
8	Bank Import, Configuration, CSV Mappings	*One mapping per bank that gives you CSV only.*	BANK IMPORT
9	Budgets, Budgets	*Create the year's budget, refresh it, have the approver confirm it and decide on the block and tolerance.*	BUDGETS
10	Invoicing, Configuration, Late Payment Rules and Settings	*Read the four rules and their e-mail wording, set the sender address and the minimum amount, then leave the master switch on.*	PAYMENT FOLLOW-UP

Scheduled actions the modules add

SCHEDULED ACTION	RUNS	WHAT IT DOES
Assets: post depreciation that has come due	Daily	Posts every board line that has come due on a running asset whose type has automatic posting on.
Budgets: refresh actual and committed	Daily	Refreshes every confirmed budget whose period includes today and sends the over budget notice, at most once a day per budget.
Bank Statement Import: remove history older than a year	Weekly	Deletes import log records older than a year. The statements themselves stay.
Late Payment Reminder, daily sweep	Daily	Sends the next reminder due on every overdue customer invoice, unless the master switch is off.

> Reminders go out by e-mail as soon as the module is installed and the daily run reaches an overdue invoice. On a database with years of old unpaid invoices, switch the master switch off first, tidy the ledger, then switch it on.

PART 4

Asset types: the defaults behind every asset

FIXED ASSETS

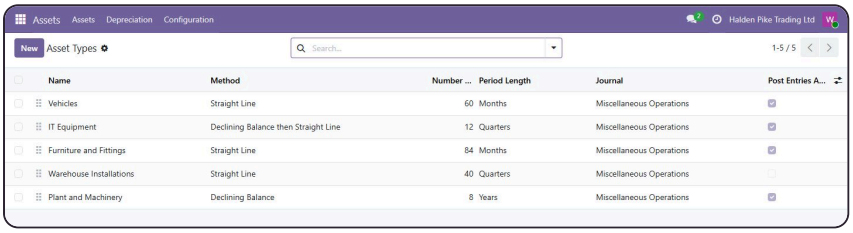

An asset type holds everything an asset needs in order to depreciate: the accounts, the journal, the method and the length of its life. With the types right, a new van or laptop is three fields: the type, the price and the date it was bought.

IN THIS PART YOU WILL LEARN

- What each field on an asset type controls
- The three depreciation methods and when to use each
- How a type on a fixed asset account turns vendor bills into assets

TRY IT YOURSELF ON THE DEMO

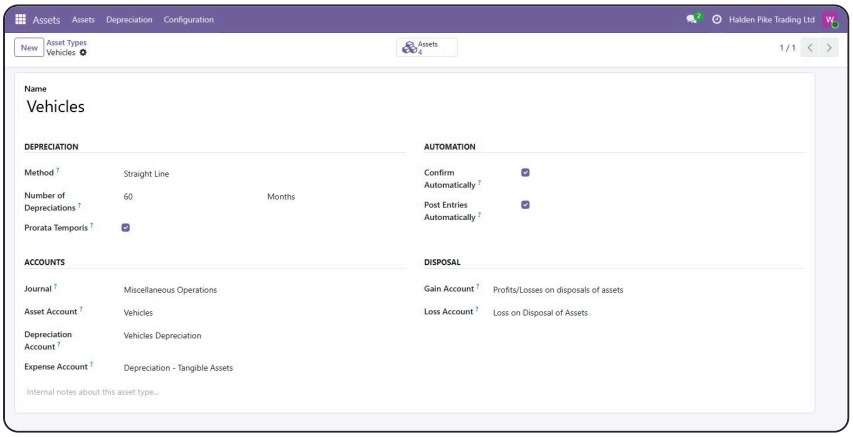

1. Open Assets, Configuration, Asset Types.
2. Open Vehicles and read the Accounts and Automation groups.
3. Open Warehouse Installations and see why its entries wait for a person.

1

The list of types

Assets, Configuration, **Asset Types**. The demo has five: Vehicles, IT Equipment, Furniture and Fittings, Warehouse Installations and Plant and Machinery. The list shows the method, the number and length of periods, the journal and whether entries post themselves. Drag the handle to change the order.

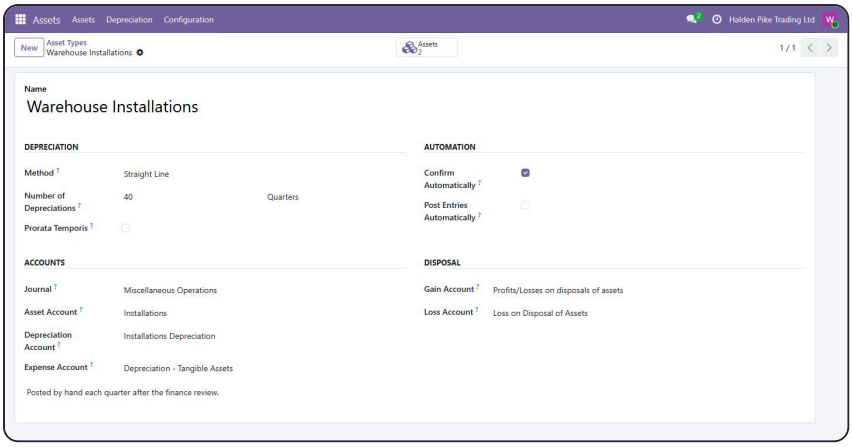

2

A type, field by field

Depreciation: method, number of depreciations, period (months, quarters or years), the declining factor when a declining method is chosen, and Prorata Temporis. **Automation**: Confirm Automatically makes an asset raised from a bill start running straight away; Post Entries Automatically lets the daily scheduled action post each line when it falls due. **Accounts**: journal (a miscellaneous journal), the asset account that holds the cost, the accumulated depreciation account and the expense account charged each period. **Disposal**: where a gain or a loss on sale or scrapping goes. The Assets button at the top opens the assets of this type.

The asset account and the depreciation account must be different, or the entries would cancel out; the type refuses to save if they are the same.

3

A type that waits for a person

Warehouse Installations has Post Entries Automatically off. Its assets build the same board, but nothing posts until somebody presses Post. The demo uses it for the racking and the lighting retrofit, which the finance team reviews each quarter.

The three methods

METHOD	HOW EACH PERIOD IS WORKED OUT	FITS
Straight Line	(gross less salvage) divided by the number of depreciations, the same every period	Vehicles, furniture, buildings, most things
Declining Balance	(book value less salvage) times the factor, scaled to the period length, so it falls each period	Plant that loses most of its value early
Declining Balance then Straight Line	Whichever is higher each period: the declining figure or what is left spread evenly over the periods left	IT equipment, where a pure declining board never quite reaches zero

Prorata Temporis: with it on, an asset bought mid-period depreciates from the day it was bought, and the part-period at the front pushes one extra line onto the end of the board. With it off, the first period is charged in full. Periods are anchored to the calendar: a quarterly board posts on 31 March, 30 June, 30 September and 31 December.

Raising assets from bills

Open the fixed asset account itself (Invoicing, Configuration, Chart of Accounts, for example 005000 Vehicles) and set its **Asset Type**. From then on, every vendor bill line posted to that account creates an asset of that type when the bill is posted. On the demo every asset came in that way, which is why each one shows its vendor and links back to its bill.

> A type is copied onto an asset when the asset is created. Changing a type later does not rewrite the assets that already use it.

PART 5 The asset register

FIXED ASSETS

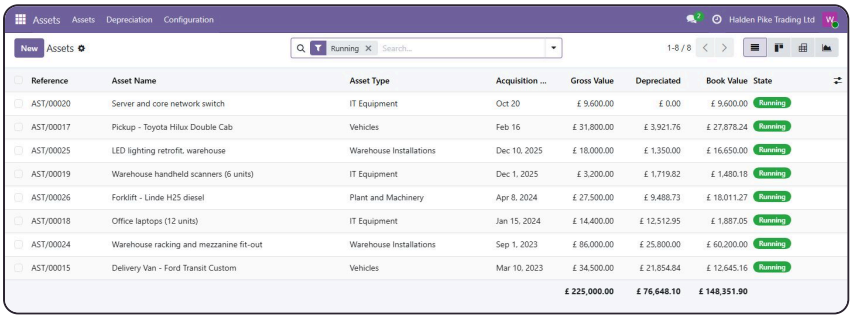

The register is the list your auditor asks for: what you own, what it cost, how much has been written off and what it is worth on the books today. Every figure on it comes from posted entries, so it always agrees with the balance sheet.

IN THIS PART YOU WILL LEARN

- The four states an asset moves through
- Every field on the asset form
- How an asset is created from a vendor bill

TRY IT YOURSELF ON THE DEMO

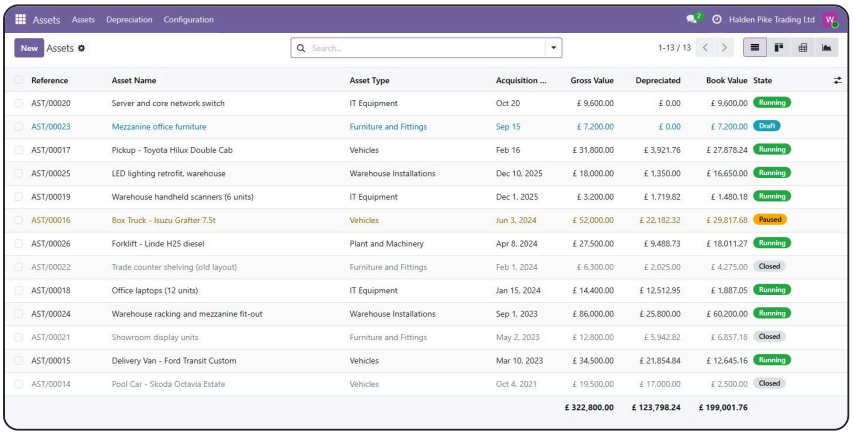

1. Open Assets, Assets. Remove the Running filter to see every state.
2. Open AST/00015, the Ford Transit, and read its value and depreciation groups.
3. Open the Hilux and press Entries to see its journal entries.

1

The register

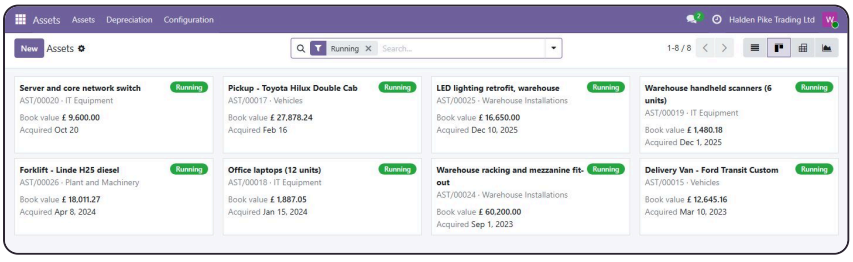

Assets, **Assets** opens on the running assets with totals for gross value, depreciated and book value. On the demo: eight running assets, GBP 225,000 at cost and GBP 148,352 on the books.

2

Every state

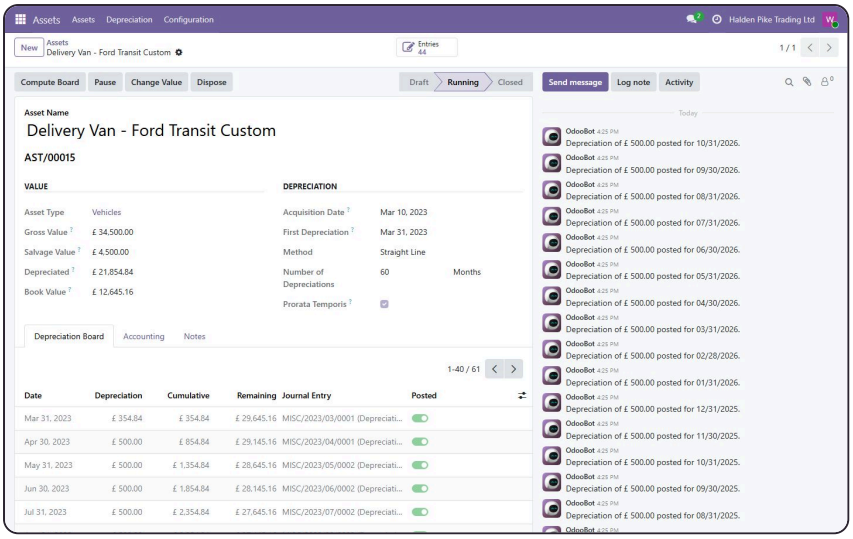

Clear the filter to see the draft, paused and closed assets as well. The search panel has filters for Draft, Running, Paused and Closed and the acquisition date, and groups by asset type, status or acquisition month.

3

Kanban and analysis

The kanban shows each asset as a card with its book value. There are also pivot and graph views for book value by type or by year bought.

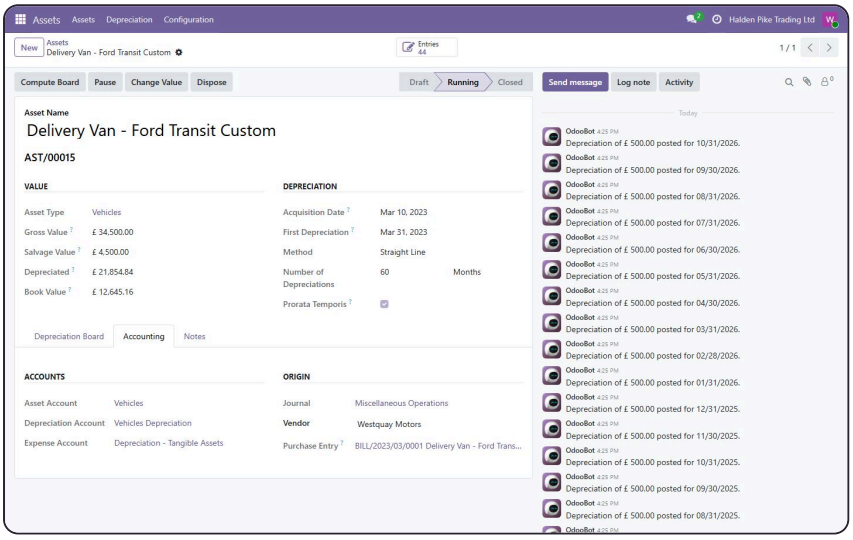

4

The asset form

Value: asset type, gross value, salvage value (what it will be worth at the end), depreciated so far and book value. **Depreciation**: acquisition date, first depreciation date (the end of the period it was bought in), method, number and length of periods, prorata. Once the asset is running the method fields are locked. The Entries button counts the posted lines and opens the journal entries.

Gross value must be above zero and the salvage value below it, otherwise there is nothing to depreciate.

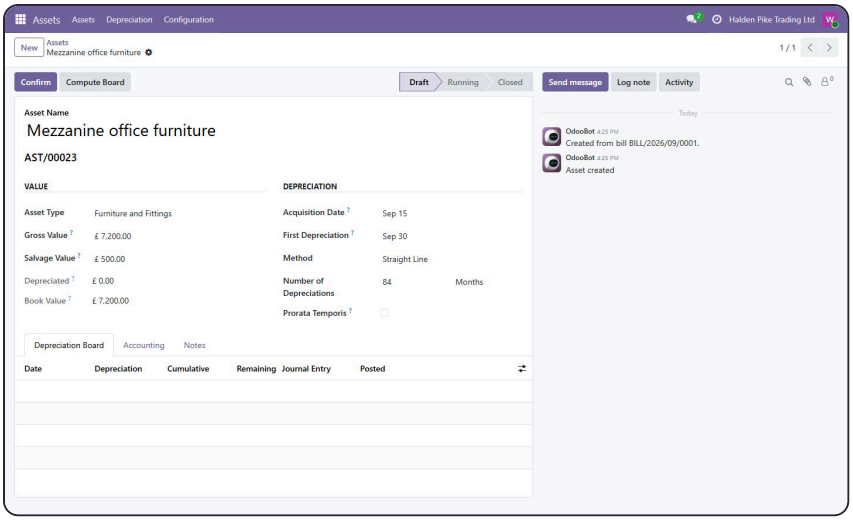

5

The Accounting tab

The three accounts copied from the type, the journal, the vendor, the bill line it came from and, once disposed of, the disposal entry.

The four states

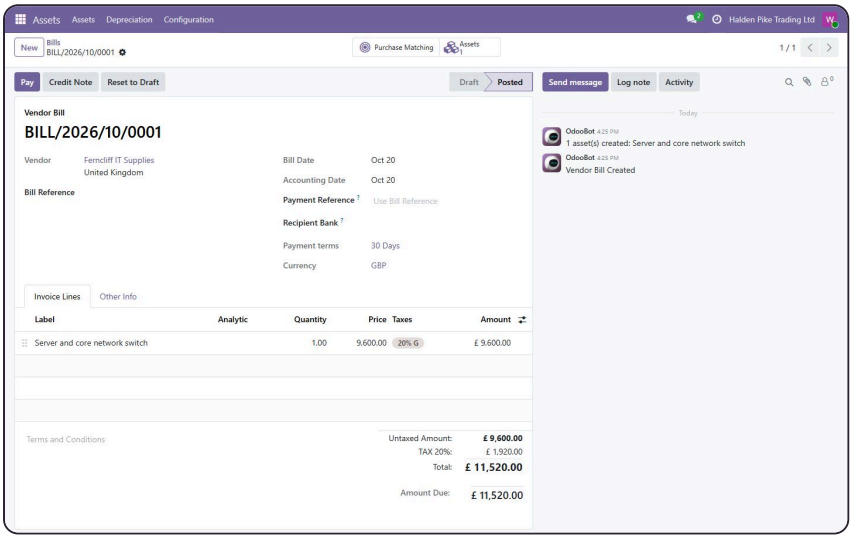

STATE	MEANING	ON THE DEMO
Draft	Being checked. No board yet, nothing posted. Compute Board shows the board before you confirm.	Mezzanine office furniture (Furniture type does not auto confirm)
Running	Confirmed. The board exists and its lines post as they fall due.	The van, the Hilux, the forklift, the laptops, the scanners, the server, the racking, the lighting
Paused	Out of service. Nothing is posted until Resume.	The box truck, off the road for a gearbox rebuild
Closed	Fully depreciated, sold or scrapped.	The pool car (fully depreciated), the showroom units (sold), the old shelving (scrapped)

6

A draft asset

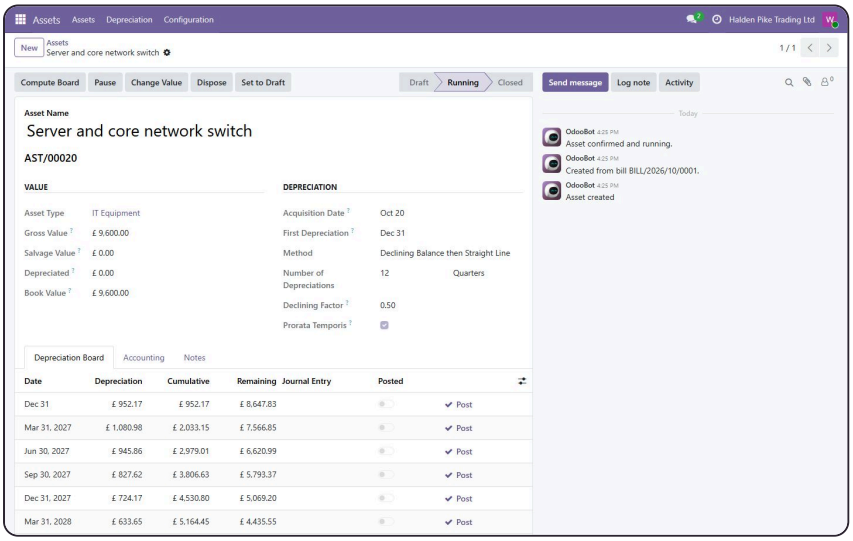

The mezzanine furniture came in from a bill in September. Its type does not auto confirm, so it waits in draft. Check the values, press **Compute Board** to preview, then **Confirm**. Set to Draft takes a confirmed asset back only while nothing has been posted.

7

Created from a bill

The server and network switch was bought on a bill in October. The bill line was posted to 001000 Technology, which carries the IT Equipment type, so posting the bill created AST/00020 and confirmed it. The **Assets** button on the bill opens it. On the bill lines there is an optional Asset Type column: clear it on a line to post that cost straight to the profit and loss instead.

8

The asset it raised

Name, vendor, value and date all came from the bill line. It is quarterly and declining then straight line, so the first line falls on 31 December.

PART 6 The depreciation board and posting

FIXED ASSETS

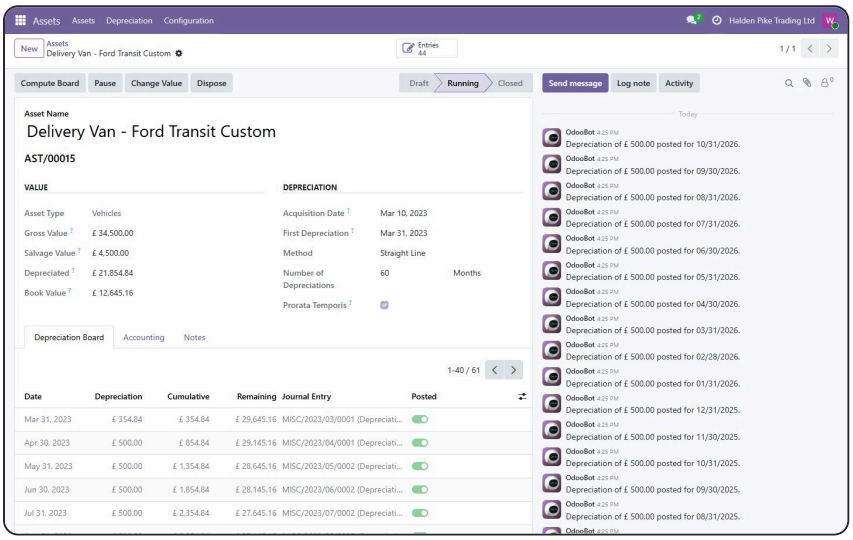

The board is the asset's plan: one line per period, with the amount, the running total and what is left. Each line becomes a real journal entry when it is posted, and a posted line is never changed again.

IN THIS PART YOU WILL LEARN

- How to read a board
- Posting by hand, and letting the scheduled action post
- What the Depreciation menu is for

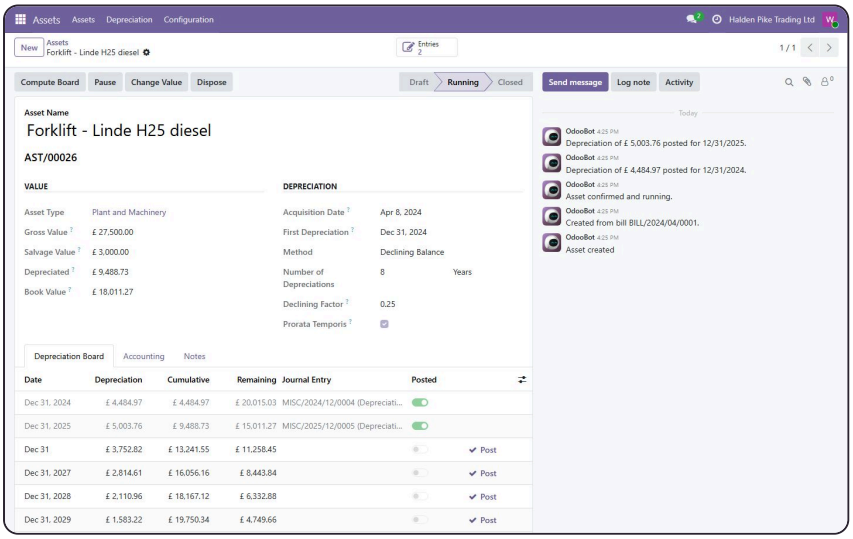

TRY IT YOURSELF ON THE DEMO

1. Open the Ford Transit, Depreciation Board tab, and page through 61 lines.
2. Open Assets, Depreciation. The Due filter shows the lines waiting for a person.
3. Open the forklift's board and watch the amounts fall each year.

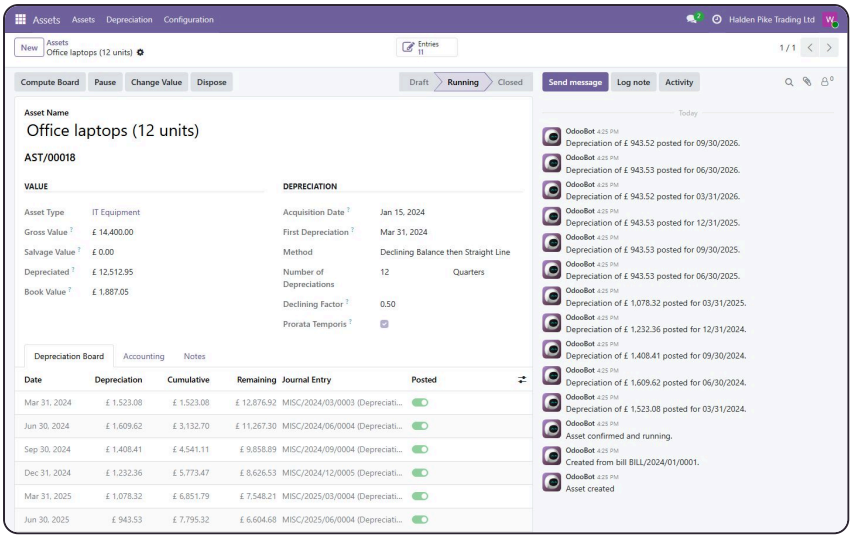

1 Reading the board

The van cost GBP 34,500 with GBP 4,500 salvage, straight line over 60 months, bought on 10 March 2023 with prorata on. March 2023 is a part month (GBP 354.84), then GBP 500 a month, and the part month pushes a 61st line onto the end. Each line shows the date, the amount, the cumulative depreciation, what is left and its journal entry. Posted lines have the toggle on. The chatter logs every posting.

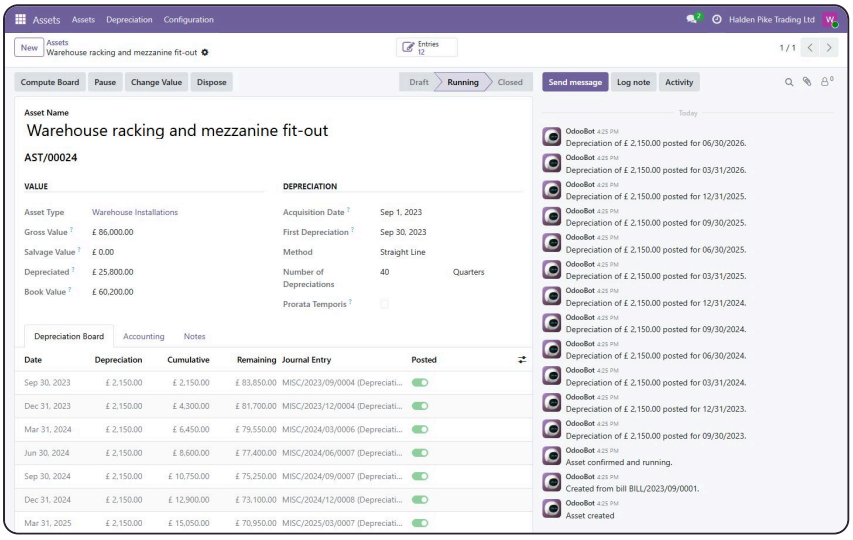

2 A declining board

The forklift uses declining balance at 25% a year over 8 years. Each year's charge is a quarter of what is left above salvage, so the amounts fall, and the last line takes whatever remains so the board ends exactly at the salvage value.

3 Declining then straight line

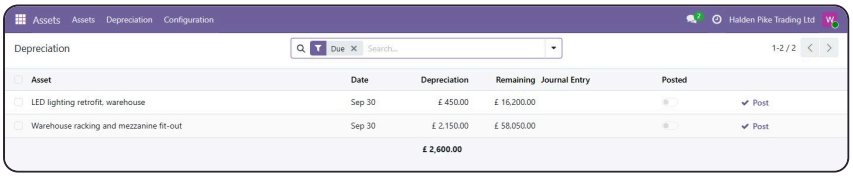

The laptops are quarterly, declining at 50% a year until the straight line figure for the periods left is higher, then straight line to the end.

4 Posting by hand

The warehouse racking belongs to a type with Post Entries Automatically off. Its lines up to June are posted; the September line is due and waiting. Press **Post** on the line to create and post its journal entry: debit the depreciation expense, credit accumulated depreciation.

A line can only post once, and only on a running asset. A paused or draft asset refuses.

5 Assets, Depreciation

Every board line of every asset in one list. It opens on the **Due** filter: lines dated today or earlier that are not posted. On the demo that is the two Warehouse Installations lines for September, GBP 2,600 between them. Select them and post, or post one at a time.

The scheduled action

"Assets: post depreciation that has come due" runs daily. It posts every line dated today or earlier on a running asset whose type has Post Entries Automatically on, one asset after another; an asset that fails to post is skipped and the rest carry on. When the last line of a board is posted the asset closes itself. On the demo the scheduled action posted every month since 2021 for the auto posting types.

When something changes on an asset, Compute Board rebuilds only the lines not yet posted, from what is left after the posted ones. Deleting a journal entry that belongs to a board line is refused, so the ledger and the register cannot drift apart.

PART 7

Revaluing, pausing and disposing of an asset

FIXED ASSETS

Assets do not always run quietly to the end of their board. They get damaged, laid up, sold early or thrown away. Each of those has a button, and each posts its own entry.

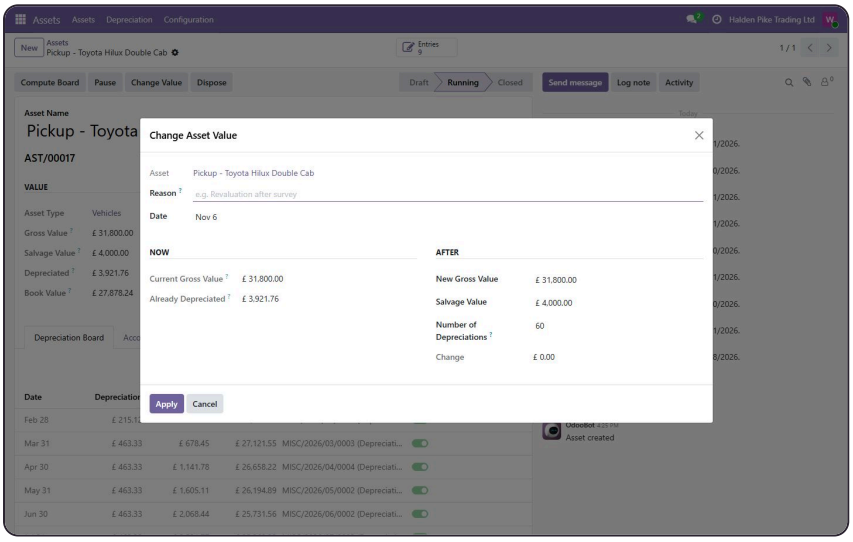

IN THIS PART YOU WILL LEARN

- Changing an asset's value with an entry for the difference
- Pausing and resuming depreciation
- Selling or scrapping, with the gain or loss worked out

TRY IT YOURSELF ON THE DEMO

1. Open the handheld scanners (AST/00019) and read the chatter about the impairment.
2. Open the Hilux, press Change Value, look, then Cancel.
3. Open the Hilux, press Dispose, switch between Scrapped and Sold, then Cancel.

Change Value

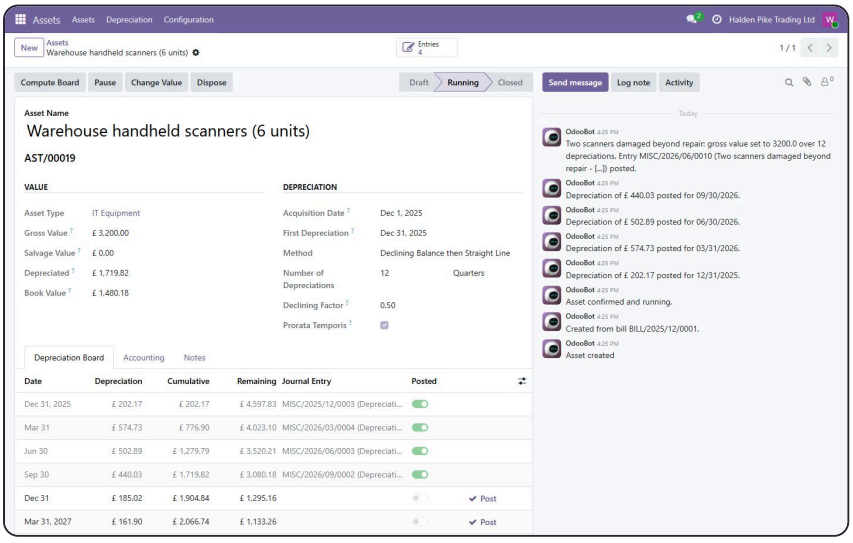

1

The Change Asset Value window

Reason (used as the entry reference), date, the current gross value and what is already depreciated, then the **new gross value**, the salvage value, the total number of depreciations, a journal and a **counterpart account**: a revaluation reserve for an increase, an impairment expense for a decrease. Apply posts the difference against the asset account and rebuilds the rest of the board from the new value.

The new value cannot go below what has already been depreciated, and the number of depreciations has to be more than the ones already posted.

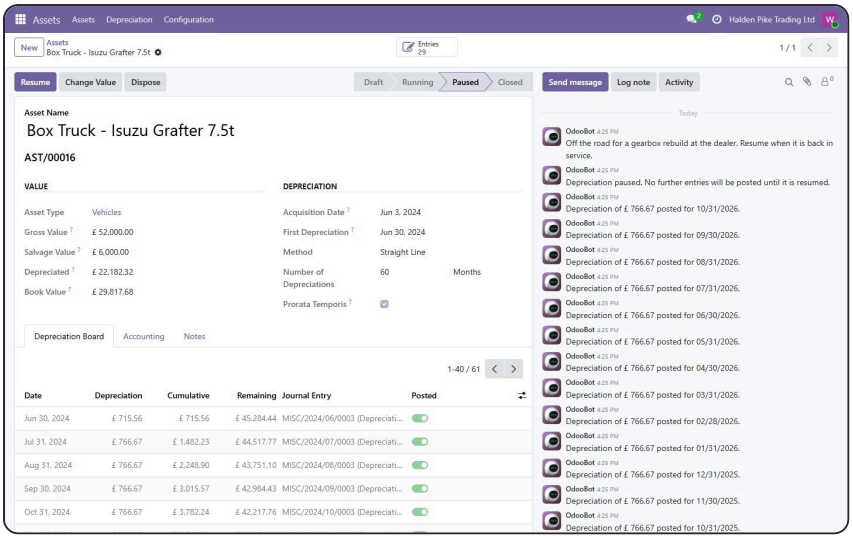

2

An impairment on the demo

Two of the six scanners were damaged in June. The gross value went from GBP 4,800 to GBP 3,200 with the GBP 1,600 charged to 800200 Impairment of Fixed Assets, and the remaining board was rebuilt on the lower value.

Pause and Resume

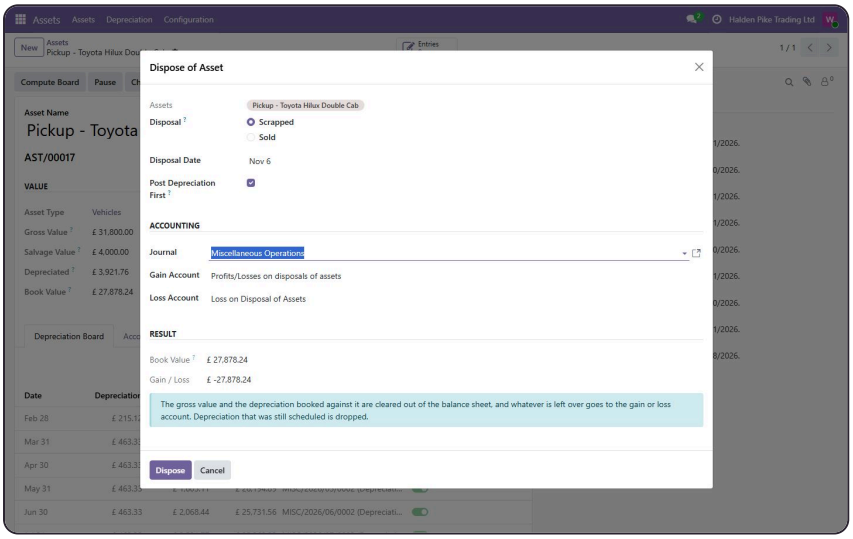

3

A paused asset

The box truck is in the workshop. **Pause** stops the scheduled action from posting anything for it; the lines stay on the board. **Resume** puts it back to Running and rebuilds the unposted part of the board. Only a running asset can be paused.

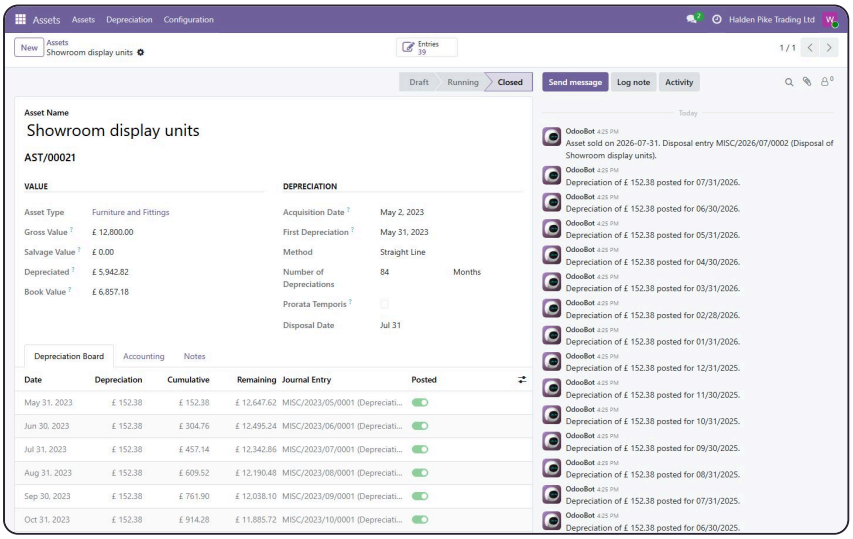

Dispose

4

The Dispose of Asset window

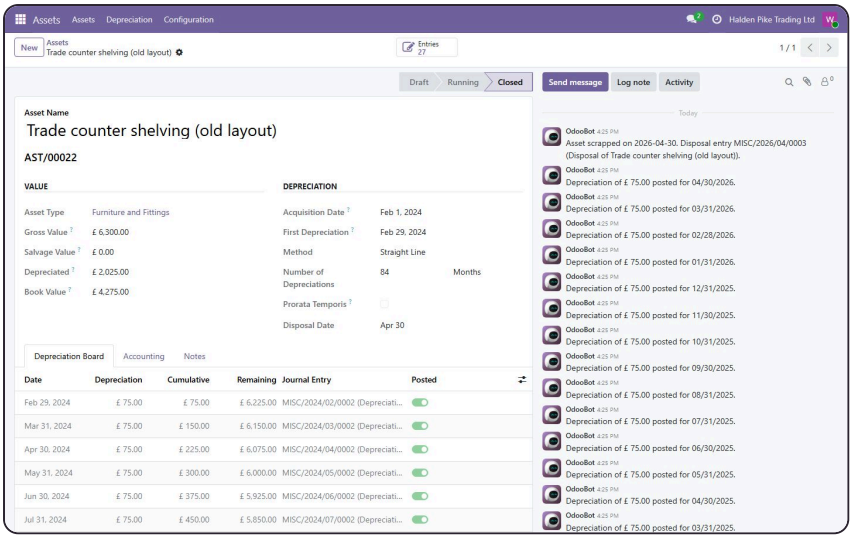

Choose **Scrapped** or **Sold** and the date. For a sale, enter the sale price and the proceeds account (the customer's receivable or a bank account). **Post Depreciation First** posts anything still due up to the disposal date so the book value is right. The journal and the gain and loss accounts come from the type. The Result group shows the book value and the gain or loss before you press Dispose.

5

Sold

The showroom display units were sold on 31 July 2026 for GBP 7,500 against a book value of GBP 6,857.18. The disposal entry clears the cost and the accumulated depreciation, debits the proceeds and credits the GBP 642.82 gain. The asset is Closed and the chatter names the entry.

6

Scrapped

The old trade counter shelving was taken down in April with no resale value, so the whole book value went to 900100 Loss on Disposal of Assets.

Depreciation that was still scheduled after the disposal date is dropped. The disposal window can take several assets, but the only way into it is the Dispose button on one asset's form, so in practice assets are disposed of one at a time.

PART 8 The depreciation schedule

FIXED ASSETS

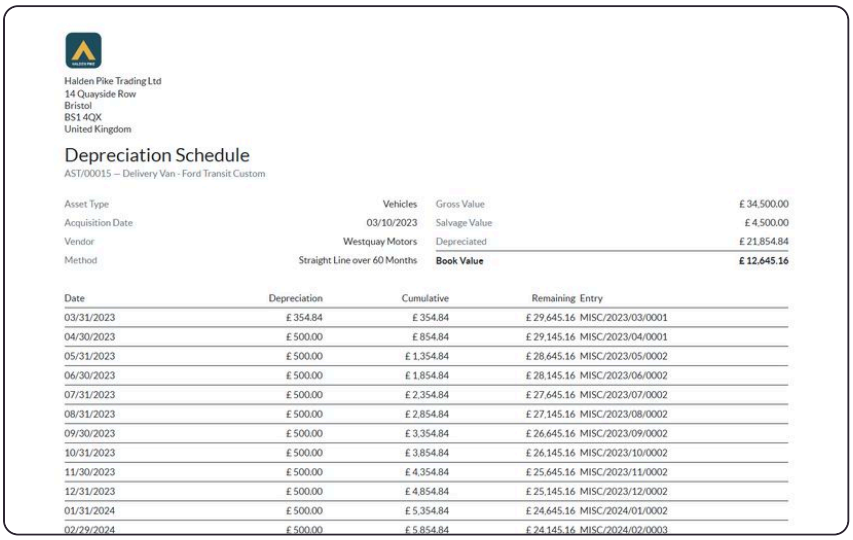

The printed schedule is what you hand to an auditor or attach to the year end file: the asset, its terms and every line of the board with the entry behind it.

IN THIS PART YOU WILL LEARN

- Printing the schedule for one asset or a whole selection
- What it shows

TRY IT YOURSELF ON THE DEMO

1. Open the Ford Transit, press the gear icon, Print, Depreciation Schedule.
2. From the asset list select several assets and print them together.

Halden Pike Trading Ltd

02/29/2024	£ 500.00	£ 5,854.84	£ 24,145.16	MISC/2024/02/0003

2

Several at once

Select assets in the list and print: each asset gets its own schedule in one PDF, which is the usual year end pack.

There is no separate register summary report with one row per asset. For that, use the asset list with its totals, the pivot view, or export the list to a spreadsheet.

PART 9 Building and approving a budget

BUDGETS

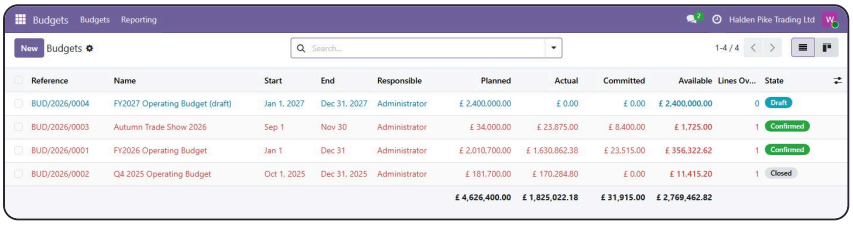

A budget here is a period, a company and a set of lines. Each line watches an analytic account (a department or a project), an account group (a family of ledger accounts), or the overlap of the two, and has a planned figure. Everything else on it is read from the books.

IN THIS PART YOU WILL LEARN

- The fields of a budget and of a budget line
- Choosing between an analytic account, an account group or both
- Who can confirm, close and reset a budget

TRY IT YOURSELF ON THE DEMO

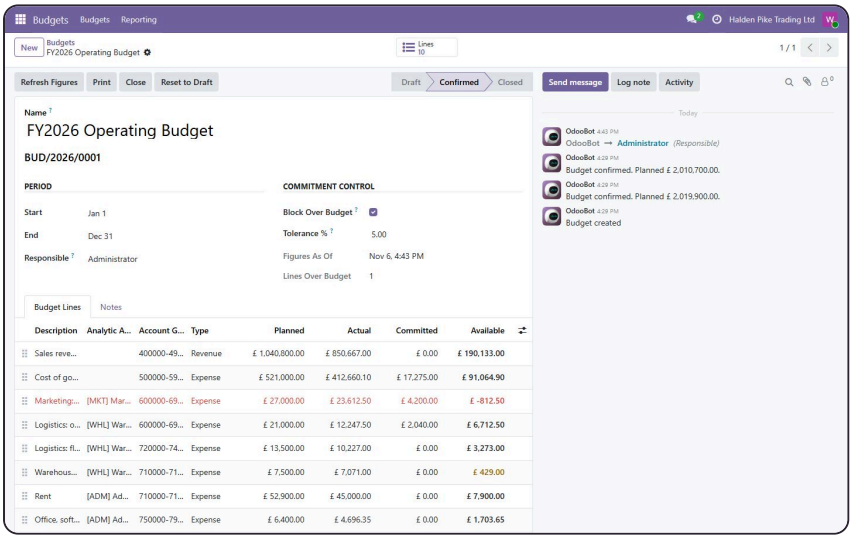

1. Open Budgets, Budgets, FY2026 Operating Budget.
2. Find the red Marketing line and the amber Warehouse energy line.
3. Open the Q4 2025 budget (Closed) and the FY2027 draft.

1

The budgets

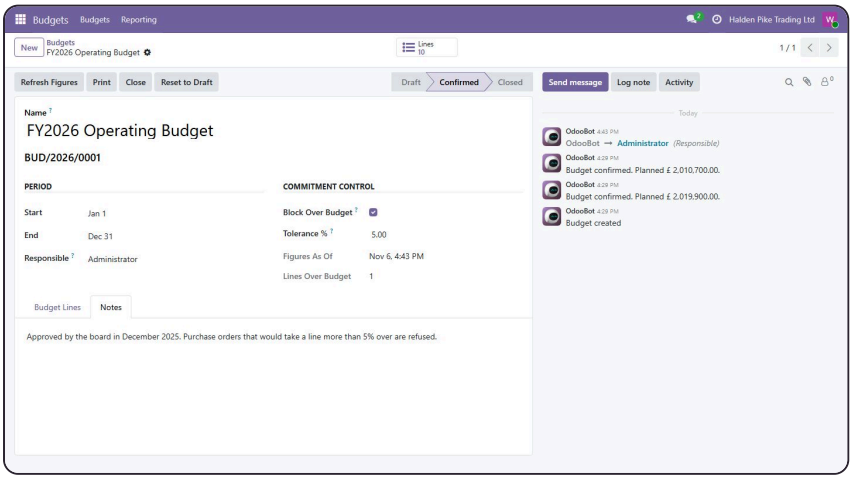

Budgets, **Budgets**. The demo has four: the FY2026 operating budget (confirmed, with the purchase block on), the Autumn Trade Show 2026 (confirmed), Q4 2025 (closed) and FY2027 (draft). The list shows planned, actual, committed and available totals and how many lines are over budget.

2

The budget form

Period: start, end and the responsible person, who receives the over budget notice.
Commitment Control: Block Over Budget and the tolerance percentage, the time the figures were last refreshed and the number of lines over budget. The **Budget Lines** tab holds the lines. A line turns amber once its consumption passes its warning threshold and red once it goes negative.

3

Notes

Free text for the approval note or the assumptions behind the figures.

What a line watches

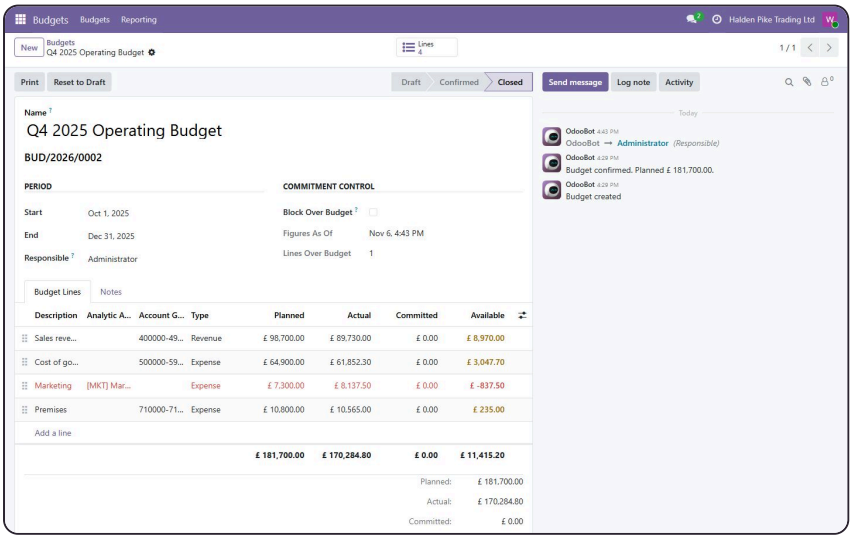

SET ON THE LINE	WHAT IT READS	DEMO EXAMPLE
Account group only	Every posted item on accounts in that code range (and its sub groups)	Payroll, all departments: 700000 to 709999
Analytic account only	Every analytic item tagged to it, on any account, expense or revenue	Autumn Trade Show: everything tagged Marketing, payroll included
Both	Only the items on those accounts that carry that analytic account	Marketing: advertising and shows = Marketing analytic on 600000 to 699999

Type is Expense or Revenue. Expense counts debits as consumption; Revenue counts credits, so a sales target reads as a positive figure (the demo's Sales revenue target line). **Warning At %** (90 by default) only colours the line; it has no effect on the block. Two lines on one budget cannot watch the same analytic account, account group and type.

> Account groups are code ranges on the chart of accounts (Invoicing, Configuration, Account Groups, visible in developer mode). A fresh Community chart often has none, so create them first; the demo has eight (Revenue 400000 to 499999, Cost of Sales, Selling and Distribution, Staff Costs, Premises, Vehicles and Travel, Office and Administration, Depreciation). An analytic account with nothing narrowing it reads revenue and expense alike.

The approval steps

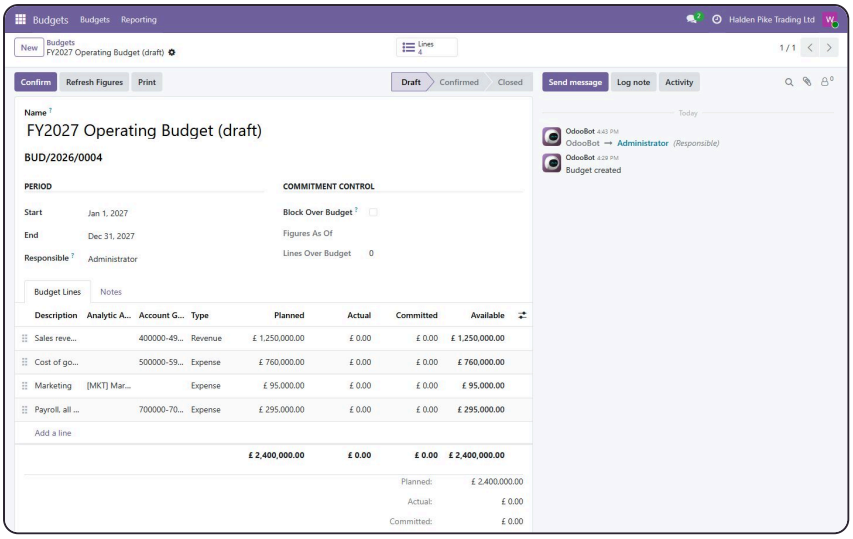

BUTTON	WHO	WHAT HAPPENS
Confirm	Approve Budgets	Needs at least one line. Refreshes the figures, sets Confirmed and logs the planned total in the chatter. From now on the budget can block orders.
Refresh Figures	Anyone with budget access	Recomputes actual and committed from the ledger and open orders now.
Print	Anyone	The budget report PDF for this budget (Part 11).
Close	Approve Budgets	Only from Confirmed. Refreshes one last time and sets Closed. A closed budget is history and blocks nothing.
Reset to Draft	Approve Budgets	Back to Draft for changes.

4

A closed budget

Q4 2025 shows the final figures for October to December 2025, kept for comparison.

5

A draft budget

FY2027 is being prepared: lines and planned figures but no actuals yet, because no entries fall in 2027. A draft budget never gets in anyone's way.

The state, the block and the tolerance can only be changed by the Approve Budgets group, including through imports or the list view, so a preparer cannot quietly switch off the block. A budget that is not in draft cannot be deleted.

PART 10

Actual, committed and the purchase order block

BUDGETS

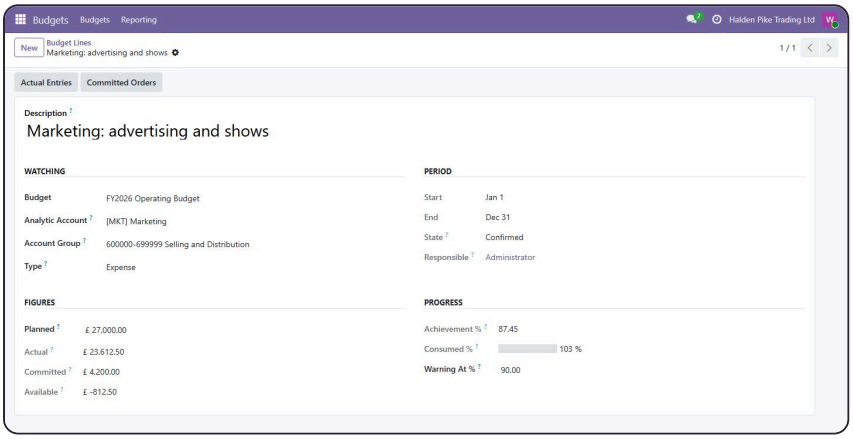

Most budgets look healthy right up to the week the invoices land. Once a purchase order is confirmed the money is promised, even though no bill has arrived. This module counts that promise as committed and, if you ask it to, stops an order that would take a line over.

IN THIS PART YOU WILL LEARN

- Where actual and committed come from
- Drilling from a line to the entries and orders behind it
- How the block decides, and what the buyer sees

TRY IT YOURSELF ON THE DEMO

1. Open Budgets, Reporting, Budget Lines and open Marketing: advertising and shows.
2. Press Committed Orders to see the print order counted against it.
3. Open Purchase, Orders, P00007 and press Confirm Order. Read the message, then Close.

1

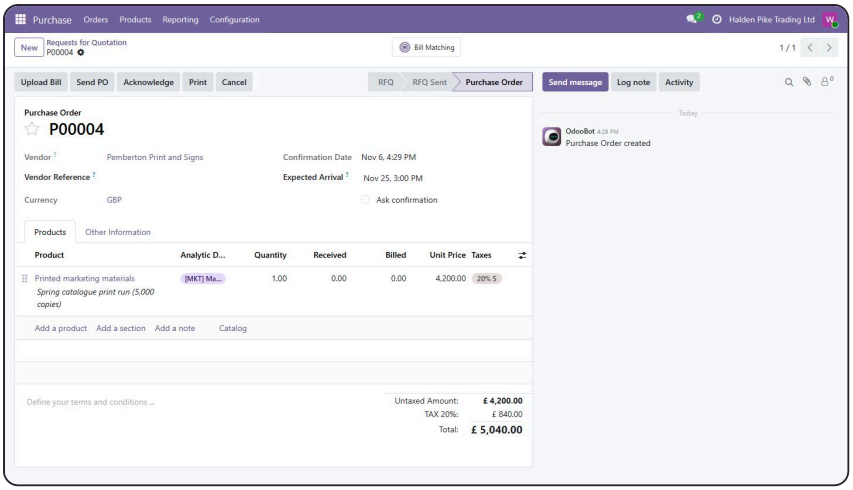

A line in detail

Planned GBP 27,000, actual GBP 23,612.50, committed GBP 4,200 (the spring catalogue print run, ordered and not yet billed), available GBP -812.50. Achievement (actual against planned) is 87%, consumption (actual plus committed against planned) 103%, so the line is over budget. **Actual Entries** opens the journal items behind the actual; **Committed Orders** opens the purchase order lines behind the committed figure.

How the figures are read

FIGURE	SOURCE
Actual	Posted journal items dated inside the budget period. With an analytic account, the analytic items carry the share, so a bill line split 60/40 between two departments adds 60% to one line and 40% to the other. Tax, payment term and note rows are ignored.
Committed	Lines of purchase orders in Purchase Order or Locked state whose planned date falls in the period, counting only the quantity not yet billed, converted to the company currency. The account is the product's expense account.
Available	Planned less actual less committed.
Over Budget	Available below zero.

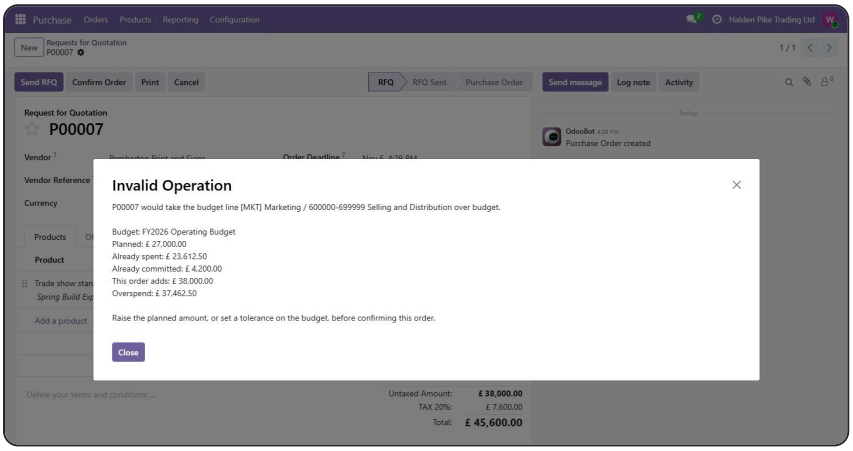

The figures are stored so the lines can be grouped, pivoted and sorted. A daily scheduled action and the Refresh Figures button bring them up to date; editing a line recomputes it at once.

2

A committed order

P00004 to Pemberton Print and Signs, GBP 4,200 for the spring catalogue, tagged to the Marketing analytic account, planned for 25 November. Confirmed, not billed, so all of it is committed. On the demo the open purchase orders add GBP 23,515 committed to the FY2026 budget.

3

The block

P00007 is a GBP 38,000 trade show stand. FY2026 has Block Over Budget on with a 5% tolerance. Confirm Order is refused with a message naming the budget line, the planned figure, what is already spent and committed, what the order adds and the overspend. The order is not changed; it simply stays a request for quotation.

To let it through, the approver raises the planned amount or the tolerance. The block reads the figures fresh at that moment, not the stored ones.

RULE OF THE BLOCK	DETAIL
Only confirmed budgets	Draft and closed budgets never block.
Only budgets with the box ticked	Block Over Budget on the budget.
Tolerance	The order passes while the line stays within planned times (1 + tolerance %). 5% lets a GBP 27,000 line reach GBP 28,350.
Expense lines only	Revenue lines are never touched by purchase orders.
Only the order's lines in the period	Lines with a planned date outside the budget period are ignored.
Re-confirming	An order that was already confirmed once is not blocked by its own amount.

The over budget notice

Once a day the scheduled action "Budgets: refresh actual and committed" refreshes every confirmed budget whose period includes today. If a budget has any line over budget it e-mails the responsible person, using the "over budget" template, at most once a day per budget.

> Without the Purchase app installed the module still works, and committed simply reads zero. The block also needs Purchase, since it guards the purchase order Confirm button.

PART 11 Budget reporting

BUDGETS

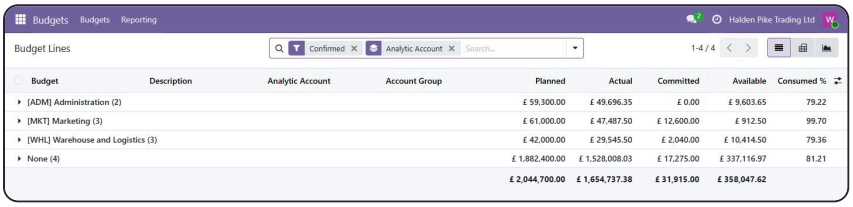

Three ways to read the budgets: the lines list grouped by department, the pivot and graph over the same figures, and a printed report for the board.

IN THIS PART YOU WILL LEARN

- The Budget Lines list, pivot and graph
- The Budget Report window and the PDF

TRY IT YOURSELF ON THE DEMO

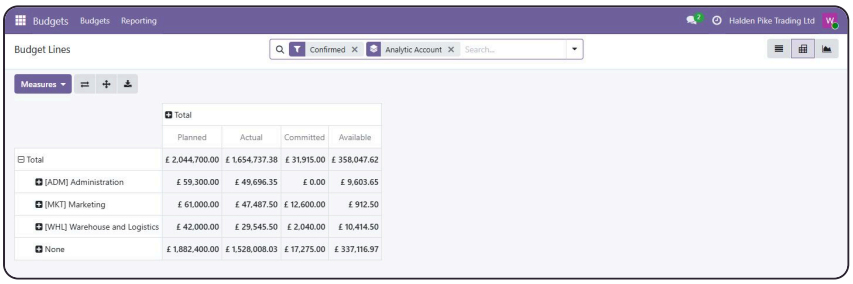

1. Open Budgets, Reporting, Budget Lines and expand Marketing.
2. Switch to the pivot view.
3. Open Budgets, Reporting, Budget Report and press Open Lines.

1

Budget Lines

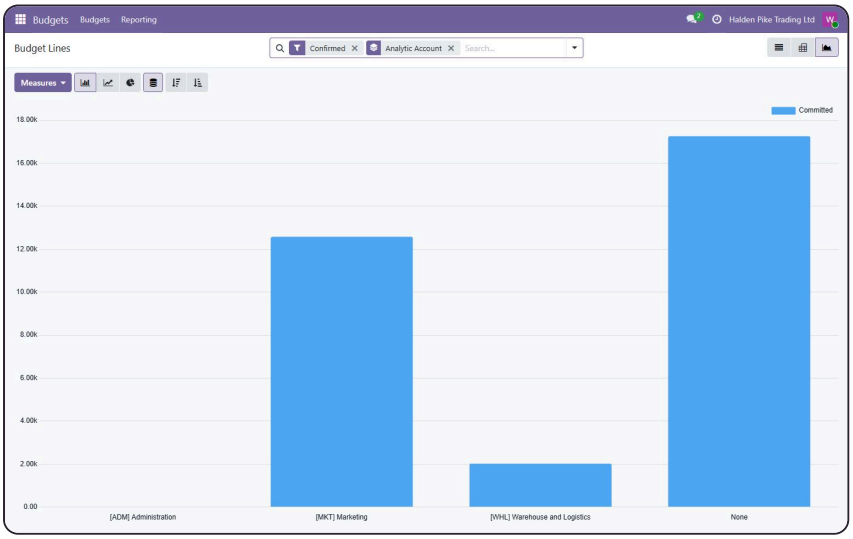

Reporting, **Budget Lines** opens on confirmed budgets grouped by analytic account, with planned, actual, committed, available and consumption side by side. Marketing is at 99.7% across its three lines; lines with no analytic account sit under None.

2

Pivot

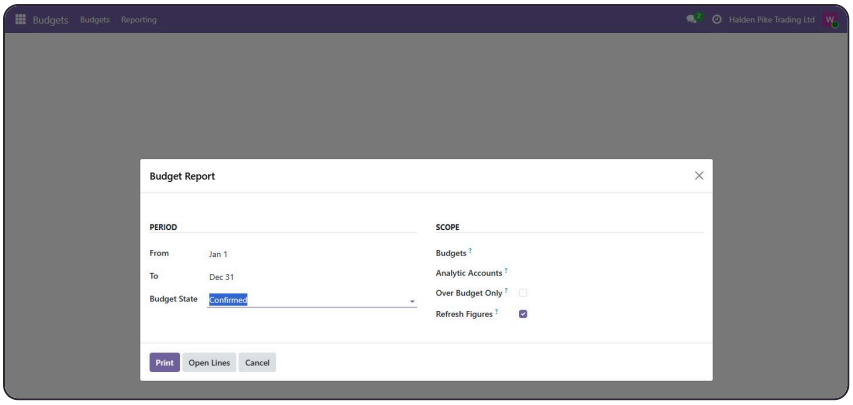

The same figures in a pivot, ready to swap rows and columns: budget against analytic account, or account group against month.

3

Graph

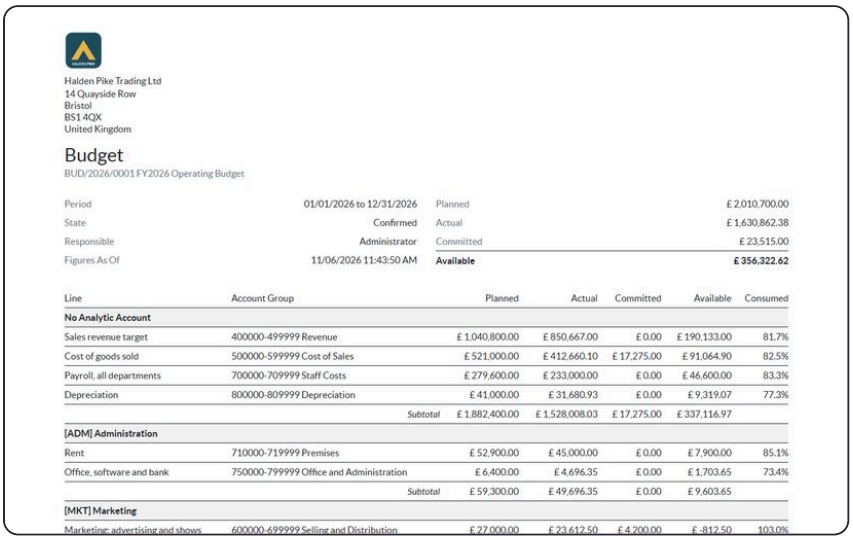

A bar chart of the same measures.

4

The Budget Report window

Reporting, **Budget Report**. A period, a budget state (Confirmed by default), optional budgets and analytic accounts, **Over Budget Only** and **Refresh Figures** (on by default, so the printed figures are current). **Print** makes the PDF for every budget that overlaps the period; **Open Lines** opens the matching lines on screen.

Budget

BUD/2026/0001 FY2026 Operating Budget

Period	01/01/2026 to 12/31/2026	Planned	£ 2,010,700.00
State	Confirmed	Actual	£ 1,630,862.38
Responsible	Administrator	Committed	£ 23,515.00
Figures As Of	11/06/2026 11:43:50 AM	**Available**	**£ 356,322.62**

Line	Account Group	Planned	Actual	Committed	Available	Consumed
No Analytic Account						
Sales revenue target	400000-499999 Revenue	£ 1,040,800.00	£ 850,667.00	£ 0.00	£ 190,133.00	81.7%
Cost of goods sold	500000-599999 Cost of Sales	£ 521,000.00	£ 412,660.10	£ 17,275.00	£ 91,064.90	82.5%
Payroll, all departments	700000-709999 Staff Costs	£ 279,600.00	£ 233,000.00	£ 0.00	£ 46,600.00	83.3%
Depreciation	800000-809999 Depreciation	£ 41,000.00	£ 31,680.93	£ 0.00	£ 9,319.07	77.3%
	Subtotal	£ 1,882,400.00	£ 1,528,008.03	£ 17,275.00	£ 337,116.97	
[ADM] Administration						
Rent	710000-719999 Premises	£ 52,900.00	£ 45,000.00	£ 0.00	£ 7,900.00	85.1%
Office, software and bank	750000-799999 Office and Administration	£ 6,400.00	£ 4,696.35	£ 0.00	£ 1,703.65	73.4%
	Subtotal	£ 59,300.00	£ 49,696.35	£ 0.00	£ 9,603.65	
[MKT] Marketing						
Marketing: advertising and shows	600000-699999 Selling and Distribution	£ 27,000.00	£ 23,612.50	£ 4,200.00	£ -812.50	103.0%

5

The PDF

One section per budget, lines grouped under their analytic account with a subtotal for each, and the budget's planned, actual, committed and available totals.

PART 12 Running a report: the filter window

FINANCIAL REPORTS

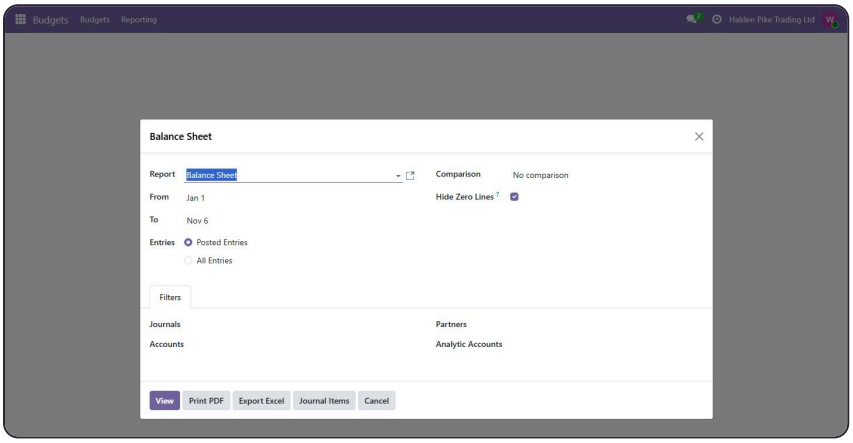

All nine reports run through the same window. You pick the dates and the filters, then view the report on screen, print it, download it as a spreadsheet or jump to the journal items behind it.

IN THIS PART YOU WILL LEARN

- Every field in the filter window
- The four buttons and what each produces
- Where the reports live in the menus

TRY IT YOURSELF ON THE DEMO

1. Open Financial Reports, Statements, Balance Sheet.
2. Press View, then go back and press Journal Items.
3. Open Invoicing, Reporting, Dynamic Financial Reports and change the report in the first field.

1

The window

Report: which of the nine (the menu entry fills it in). **From** and **To**: the 1st of January of this year to today by default. **Entries**: Posted Entries, or All Entries to include drafts (cancelled entries are always left out). **Comparison**: no comparison, previous period, same period last year, or a custom range with its own dates. **Hide Zero Lines** drops accounts and partners with no activity and no balance. On the **Filters** tab: journals, accounts, partners and analytic accounts. For the Partner Ledger there is also **Unreconciled Only**.

BUTTON	WHAT YOU GET
View	The report on screen, in Odoo, with a Print button at the top.
Print PDF	The same report as a PDF, with the company, period and filters in its header.
Export Excel	A real .xlsx workbook with the same rows and columns, downloaded by your browser.
Journal Items	The journal item list behind the filters you set: same company, dates, entry state, journals, accounts and partners.
Cancel	Closes the window.

Where they are

The **Financial Reports** app has three menus: Statements (Balance Sheet, Profit and Loss, Cash Flow Statement), Ledgers (Trial Balance, General Ledger, Partner Ledger) and Receivables and Payables (Aged Receivable, Aged Payable, Tax Report), plus Configuration for the report structures. Invoicing, Reporting, **Dynamic Financial Reports** opens the same window with no report chosen, for people who live in Invoicing.

> The drill down is the Journal Items button: it opens the items behind the whole report as filtered. The rows of the report on screen are not clickable.

PART 13

Balance Sheet, Profit and Loss and Cash Flow

FINANCIAL REPORTS

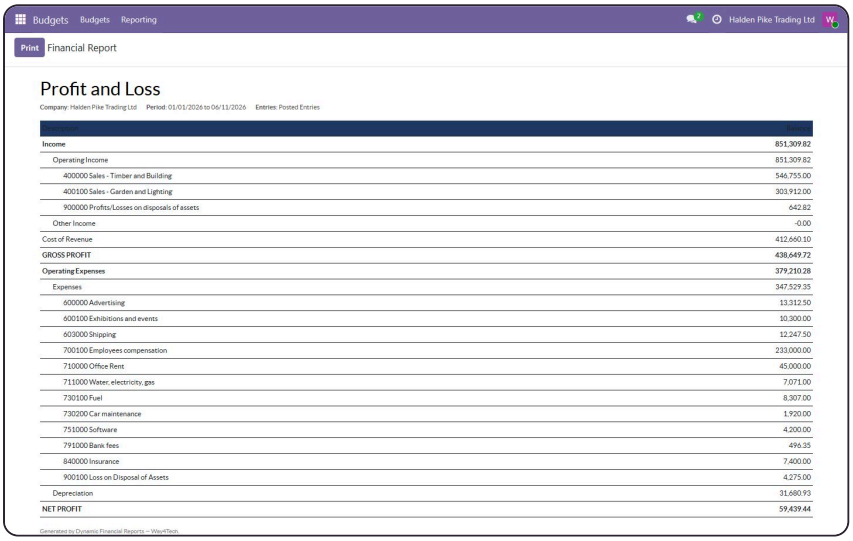

The three statements are built from an editable line structure, so they come out right for any chart of accounts whose accounts carry the usual Odoo account types. On the demo they run on the UK chart.

IN THIS PART YOU WILL LEARN

- How each statement is put together
- Comparing with last year
- Why the balance sheet always balances

TRY IT YOURSELF ON THE DEMO

1. Run the Profit and Loss with Comparison set to Same period last year.
2. Run the Balance Sheet and check Total Liabilities and Equity against Assets.
3. Run the Cash Flow Statement and compare Net Movement in Cash with the bank lines under it.

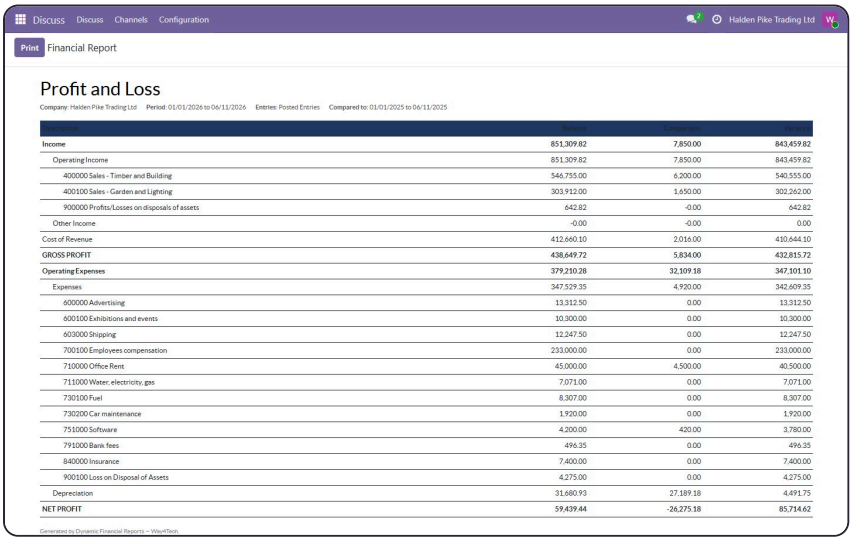

Income	851,309.82
Operating Income	851,309.82
400000 Sales - Timber and Building	546,755.00
400100 Sales - Garden and Lighting	303,912.00
900000 Profits/Losses on disposals of assets	642.82
Other Income	-0.00
Cost of Revenue	412,660.10
GROSS PROFIT	438,649.72
Operating Expenses	379,210.28
Expenses	347,529.35
600000 Advertising	13,312.50
600100 Exhibitions and events	10,300.00
603000 Shipping	12,247.50
700100 Employees compensation	233,000.00
710000 Office Rent	45,000.00
711000 Water, electricity, gas	7,071.00
730100 Fuel	8,307.00
730200 Car maintenance	1,920.00
751000 Software	4,200.00
791000 Bank fees	496.35
840000 Insurance	7,400.00
900100 Loss on Disposal of Assets	4,275.00
Depreciation	31,680.93
NET PROFIT	59,439.44

Generated by Dynamic Financial Reports — Way4Tech

1 Profit and Loss

Income (operating and other), Cost of Revenue, **Gross Profit**, Operating Expenses (expenses, then depreciation), **Net Profit**. Lines with Expand Accounts on list every account under them. On the demo, 1 January to 6 November 2026: income GBP 851,310, cost of revenue GBP 412,660, gross profit GBP 438,650, net profit GBP 59,439 after GBP 31,681 of depreciation posted by the asset module.

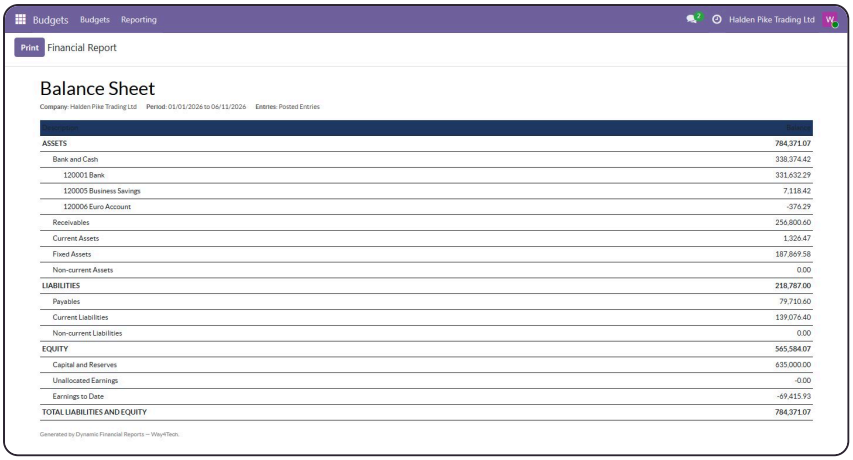

Income	851,309.82	7,850.00	843,459.82
Operating Income	851,309.82	7,850.00	843,459.82
400000 Sales - Timber and Building	546,755.00	6,200.00	540,555.00
400100 Sales - Garden and Lighting	303,912.00	1,650.00	302,262.00
900000 Profits/Losses on disposals of assets	642.82	-0.00	642.82
Other Income	-0.00	-0.00	0.00
Cost of Revenue	412,660.10	2,016.00	410,644.10
GROSS PROFIT	438,649.72	5,834.00	432,815.72
Operating Expenses	379,210.28	32,109.18	347,101.10
Expenses	347,529.35	4,920.00	342,609.35
600000 Advertising	13,312.50	0.00	13,312.50
600100 Exhibitions and events	10,300.00	0.00	10,300.00
603000 Shipping	12,247.50	0.00	12,247.50
700100 Employees compensation	233,000.00	0.00	233,000.00
710000 Office Rent	45,000.00	4,500.00	40,500.00
711000 Water, electricity, gas	7,071.00	0.00	7,071.00
730100 Fuel	8,307.00	0.00	8,307.00
730200 Car maintenance	1,920.00	0.00	1,920.00
751000 Software	4,200.00	420.00	3,780.00
791000 Bank fees	496.35	0.00	496.35
840000 Insurance	7,400.00	0.00	7,400.00
900100 Loss on Disposal of Assets	4,275.00	0.00	4,275.00
Depreciation	31,680.93	27,189.18	4,491.75
NET PROFIT	59,439.44	-26,275.18	85,714.62

Generated by Dynamic Financial Reports — Way4Tech

2 With a comparison

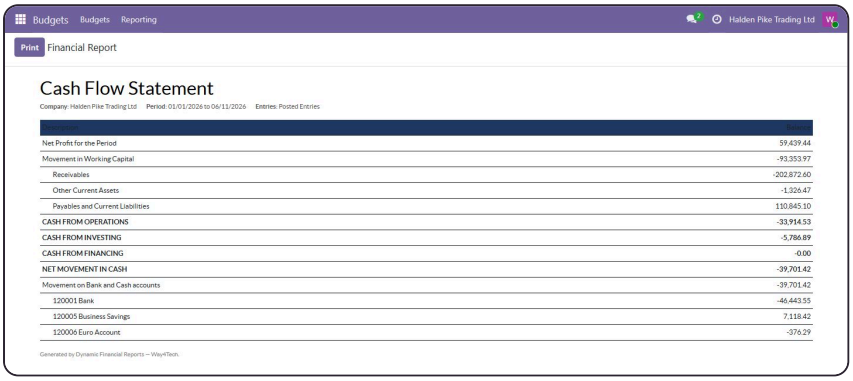

Choose a comparison and every line gets a Comparison column and a Variance column, and the header names the comparison range. On the demo, the same dates in 2025 hold only the first days of trading and the depreciation, so the variance is nearly the whole year. Previous period takes the same length of time just before; same period last year shifts both dates back a year; custom uses Compare From and Compare To.

3

Balance Sheet

Assets (bank and cash, receivables, current, fixed and non-current), Liabilities (payables, credit cards, current and non-current) and Equity (capital and reserves, unallocated earnings and earnings to date). The balance sheet is cumulative: it reads everything up to the To date, whatever the From date says. Earnings to Date carries the profit and loss of every year not yet closed to equity, which is what makes Assets equal Liabilities plus Equity.

4

Cash Flow Statement

Indirect method: net profit for the period, then the movement in receivables, other current assets and payables gives cash from operations; movement on fixed assets gives investing; equity and long term liabilities give financing. Net movement in cash is checked against the actual movement on the bank and cash accounts listed underneath.

On the demo the earlier years hold only the asset purchases and their depreciation, because trading starts in November 2025. That is why Earnings to Date on the balance sheet is negative while 2026 itself shows a profit. In the column headers of the on-screen report the titles are dark on dark blue and hard to read; the PDF and the Excel file are not affected.

PART 14

Trial Balance, General Ledger and Partner Ledger

FINANCIAL REPORTS

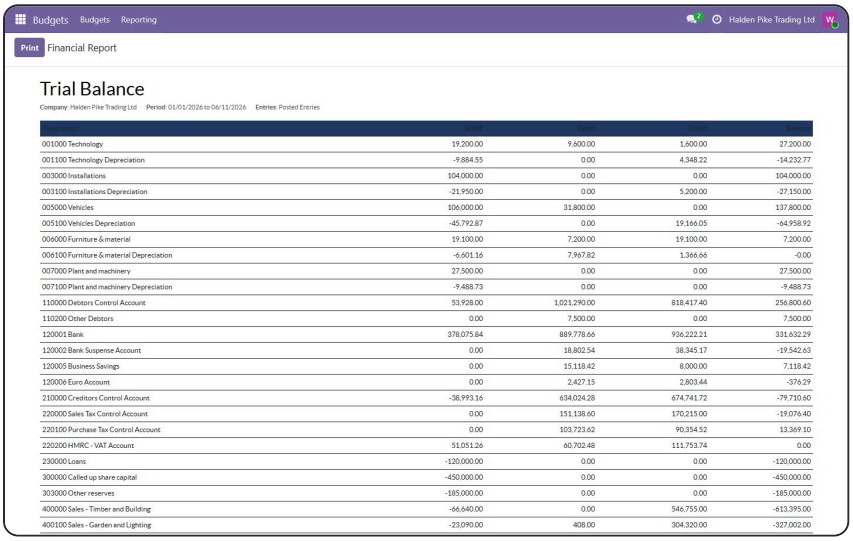

The ledgers are the working papers: every account with its opening balance and movement, every entry in date order with a running balance, and every customer and vendor with their items.

IN THIS PART YOU WILL LEARN

- What each ledger shows
- Narrowing a ledger to one account, journal or partner

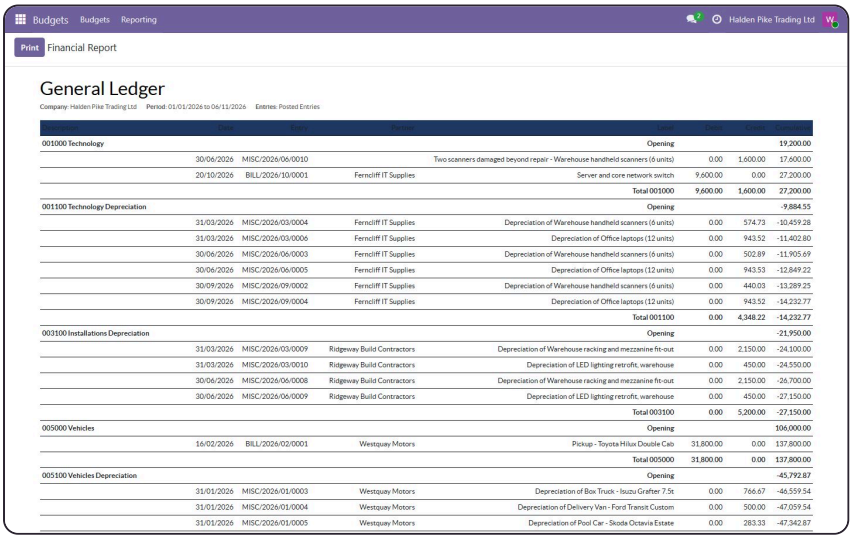

TRY IT YOURSELF ON THE DEMO

1. Run the Trial Balance for this year and find 120001 Bank.
2. Run the General Ledger with Accounts set to 005100 Vehicles Depreciation.
3. Run the Partner Ledger with Unreconciled Only ticked.

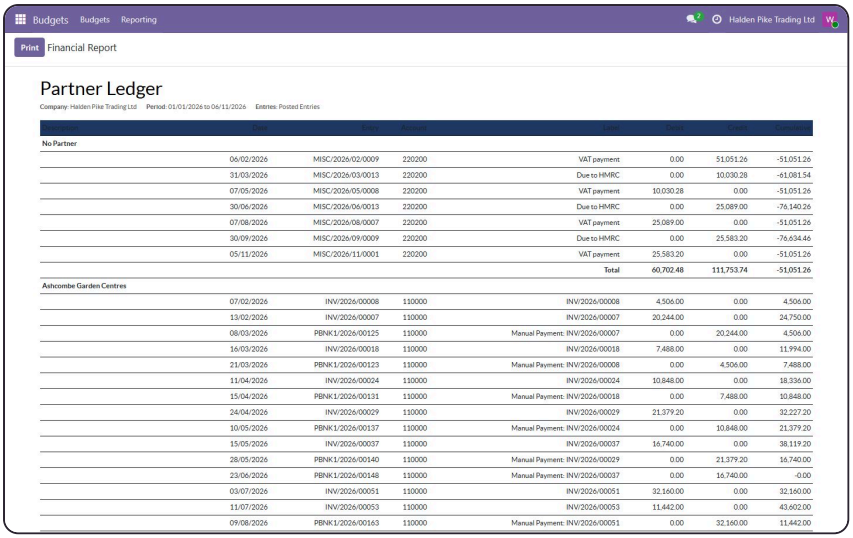

1 Trial Balance

One row per account: **Initial** (the balance before the From date), Debit and Credit in the period, and the closing **Balance**. Initial balances are what make a mid-year trial balance agree with the balance sheet.

2 General Ledger

Per account: the opening balance, then every journal item in the period with date, entry number, partner, label, debit, credit and a running **Cumulative** balance, and a total per account. The depreciation entries posted by the asset module are here with the asset's name in the label.

3

Partner Ledger

Receivable and payable items by partner, with the same running balance. Unreconciled Only hides items that are fully matched, which leaves what is still open.

Every ledger takes the filters from the window: one account, a few journals, a list of partners or an analytic account. Hide Zero Lines leaves out accounts with nothing on them.

PART 15

Aged Receivable, Aged Payable and the Tax Report

Who owes you, who you owe, and how old it is. Then the tax charged and paid in the period, tax by tax.

IN THIS PART YOU WILL LEARN

- The age buckets
- What the tax report adds up
- A known limit of the aged reports

TRY IT YOURSELF ON THE DEMO

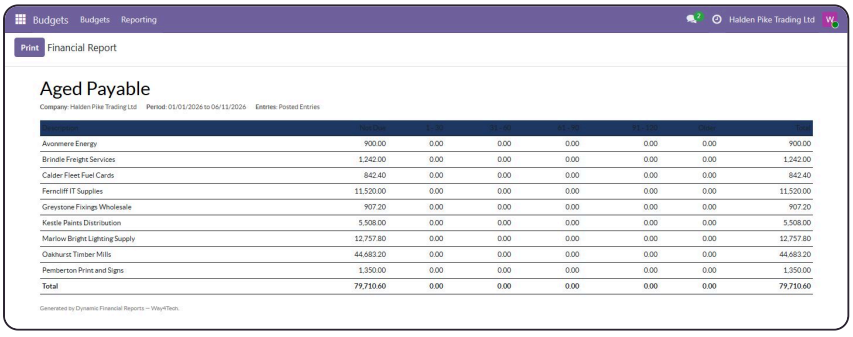

1. Run Aged Receivable and find Quillon Office Supplies.
2. Run Aged Payable.
3. Run the Tax Report for the third quarter.

1

Aged Receivable

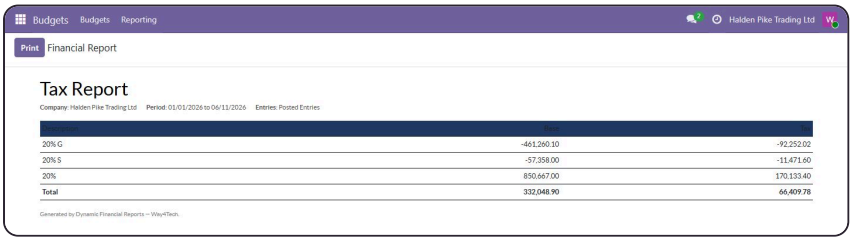

One row per customer with columns **Not Due**, 1 to 30, 31 to 60, 61 to 90, 91 to 120 and **Older** days past the due date, and a total. On the demo GBP 256,800 is owed, GBP 84,872 of it more than 120 days old: those are the invoices the reminders in Part 20 are chasing.

2

Aged Payable

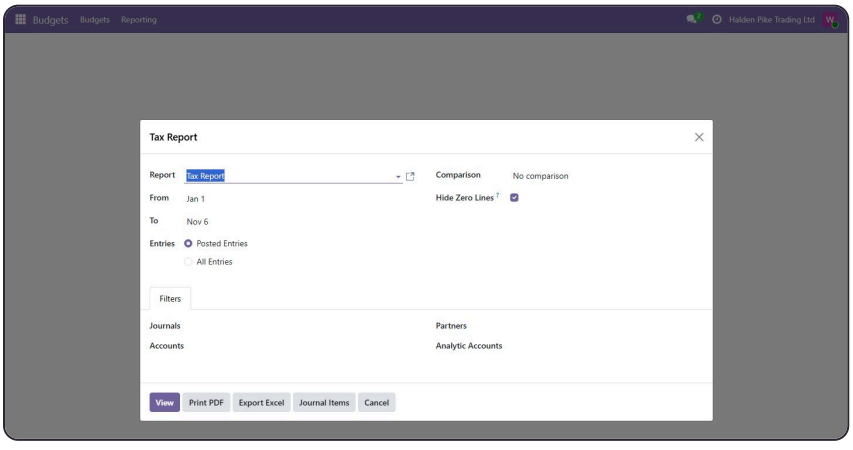

The same for vendors, from the payable accounts.

3

Tax Report

One row per tax, with the **base** (the net amount the tax was charged on) and the **tax** itself, sales taxes first, then purchase taxes, and a total.

4

The tax report window

Set From and To to the VAT quarter. The usual filters apply, so the report can be run for one journal.

The aged reports place each open journal item by its own due date and use its full amount. An invoice that is partly paid therefore shows at its original amount in its bucket, and the part payment shows as a negative amount in the payment's bucket. The total per customer is right; the split between buckets is not. The Tax Report is a list of tax per tax code, not a VAT return.

PART 16

Editing the report structures

FINANCIAL REPORTS

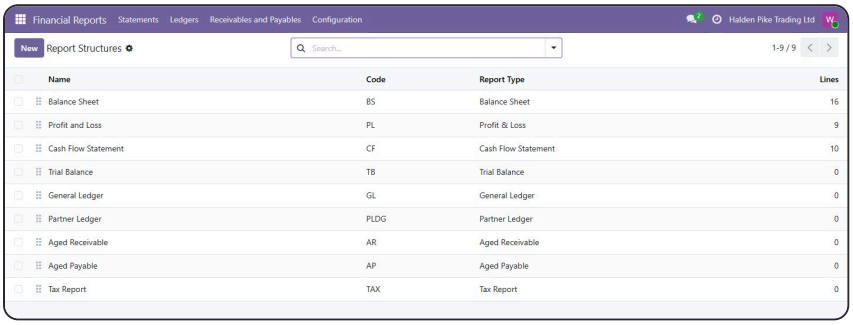

The Balance Sheet, Profit and Loss and Cash Flow are trees of lines you can edit from the screen. That is how a chart of accounts from any country is mapped without code.

IN THIS PART YOU WILL LEARN

- The fields of a report and of a report line
- The five ways a line gets its figure
- Signs, totals and hiding empty lines

TRY IT YOURSELF ON THE DEMO

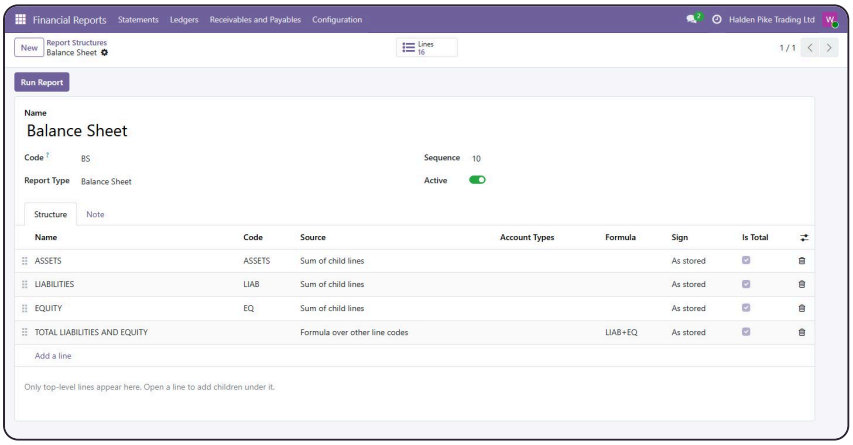

1. Open Financial Reports, Configuration, report structures, Balance Sheet.
2. Open a line and read its source and account types.
3. Open Profit and Loss and find the NET line's formula.

1

The nine reports

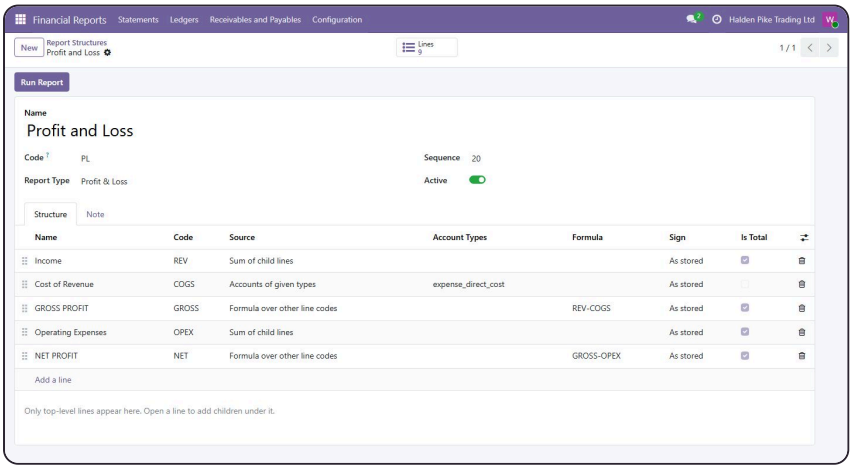

Configuration lists all nine. The six ledger style reports have a fixed shape; only the three statements have lines. Each report has a unique code, a type, an optional company (empty means every company) and an internal note. **Run Report** opens the filter window on it.

2

A structure

The Balance Sheet's lines, nested: ASSETS with its children, LIABILITIES, EQUITY and the total. The Lines button opens every line flat.

3

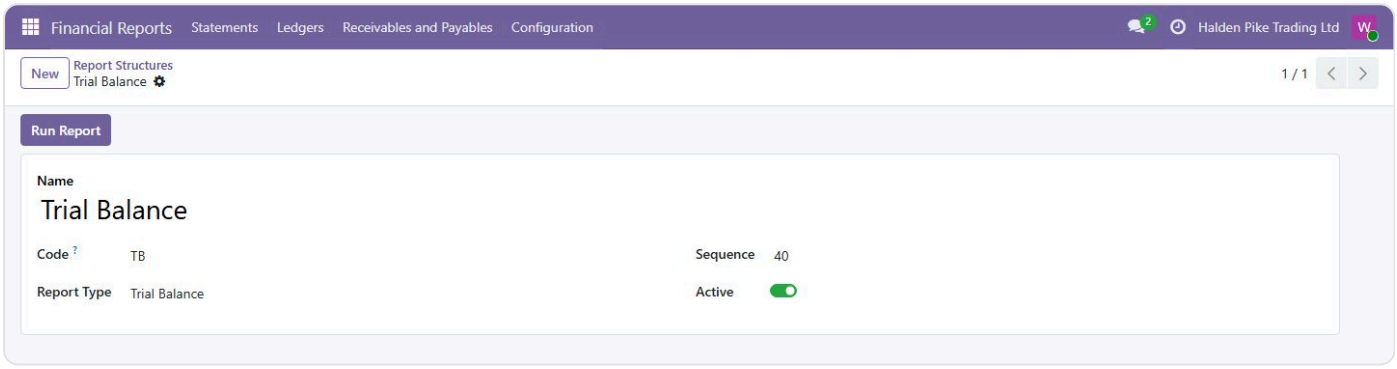

The P&L structure

REV, COGS, GROSS, OPEX and NET, where GROSS and NET are formulas over the other codes.

SOURCE	THE LINE ADDS UP
Sum of child lines	Its children (the default for headings)

Accounts of given types	Accounts whose type is in a comma separated list, for example asset_current,asset_prepayments
Accounts whose code starts with	Code prefixes, for example 40,41,42
A hand-picked list of accounts	Exactly the accounts chosen
Formula over other line codes	Codes joined by + and -, for example REV-COGS. Nothing else is allowed, so it is safe to evaluate

Each line also has a **Sign** (as stored, or reversed so income and liabilities read as positive), **Hide If Zero**, **Is Total** (bold with a rule above) and **Expand Accounts** (list every account under the line). A line cannot be its own parent. The Trial Balance structure (fr_struct_tb below) shows how a ledger report has no lines to edit.

A ledger type report: type, code and note, no structure.

PART 17 Importing a bank file

BANK IMPORT

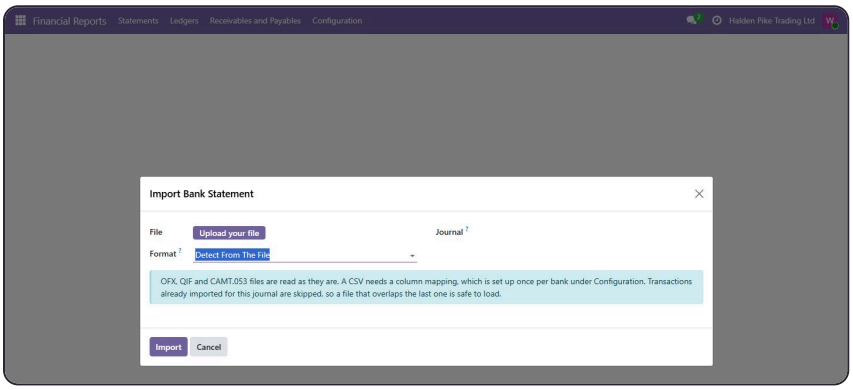

Odoo Community can hold a bank statement but cannot read one, so statements get typed in line by line. This module reads the file your bank gives you and creates the statement and its lines.

IN THIS PART YOU WILL LEARN

- The four formats and what each looks like
- How the journal and the currency are found
- What the wizard tells you when a file is wrong

TRY IT YOURSELF ON THE DEMO

1. Open Bank Import, Import A File and look at the Format list (then Cancel).
2. Open Bank Import, Imports and read the formats of the ten imports.
3. Open Invoicing, Configuration, Journals, Current Account, and find Import Bank Statement under Actions.

1

The import window

Bank Import, **Import A File** (or the bank journal's Actions menu, which opens the same window with the journal filled in). Upload the file, leave Format on **Detect From The File** or pick one, and choose a journal if the file does not name its account. For a CSV, pick the column mapping; the window offers the mapping attached to the journal. Press **Import**.

The four formats

FORMAT	WHAT IT IS	REFERENCE USED AGAINST DUPLICATES
OFX	Open Financial Exchange, both the older SGML flavour most banks still send and OFX 2 XML. Read by the module itself, no extra library.	The bank's FITID on each transaction
QIF	Quicken Interchange Format: one line per field, prefixed D (date), T (amount), P (payee), M (memo), ^ to end the record.	A fingerprint made from the transaction, since QIF has no reference
CAMT.053	ISO 20022 end of day statement in XML, read whichever schema version the bank uses. Carries opening and closing balances and the counterparty's IBAN.	The bank's entry reference
CSV	Whatever columns the bank exports, read through a mapping you set up once (Part 19).	A bank reference column if the mapping has one, otherwise a fingerprint

The right journal and the right currency

If you do not pick a journal, the account number in the file is matched against the bank account on your bank journals, including files that print only the last digits. On the demo the OFX and CAMT files carry GB33BUKB20201555555555 and find the Current Account journal on their own. If no journal or more than one matches, the wizard says so and asks you to pick one. A file in a currency the journal does not keep (a euro file into a sterling journal) is refused before anything is written.

When the file is not a statement

YOU UPLOAD	THE WIZARD SAYS
A camt.052 intraday report	It is an intraday report, ask the bank for the camt.053 end of day file
A camt.054 credit notification	It is a notification, ask for the camt.053 file
A PDF statement	Ask the bank for OFX, QIF, CAMT.053 or CSV
An Excel workbook	Save it as CSV and import that with a mapping
Anything else	The supported formats, and that a CSV needs a mapping

After the import

The window switches to its result: how many lines were imported and how many skipped, with buttons **Open Statement**, **Import Detail** (the import record, Part 18), **Import Another** and Close. The statement lines then sit in the bank journal like any other statement.

> The module reads the file and creates the statement. It does not reconcile the lines with your invoices and bills: in Community that matching is still done from the bank journal by hand.

PART 18 Import history, duplicates and partners

BANK IMPORT

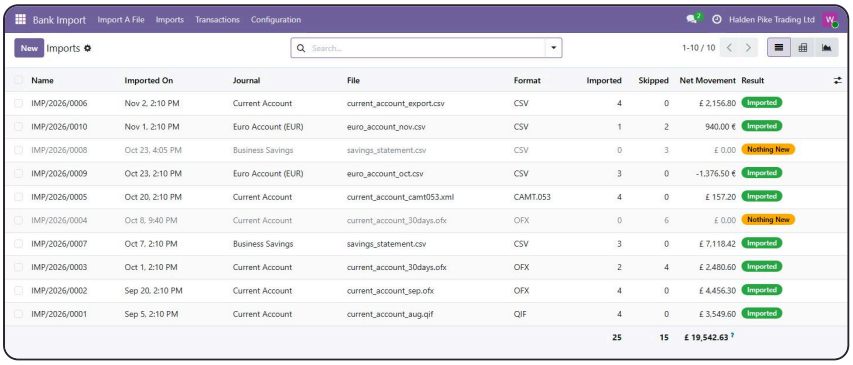

Every file you import leaves a record: what was in it, what was created, what was skipped and who ran it. That is what answers the question "why is this payment not in Odoo".

IN THIS PART YOU WILL LEARN

- Reading an import record
- Why overlapping files are safe
- How counterparties are matched to partners

TRY IT YOURSELF ON THE DEMO

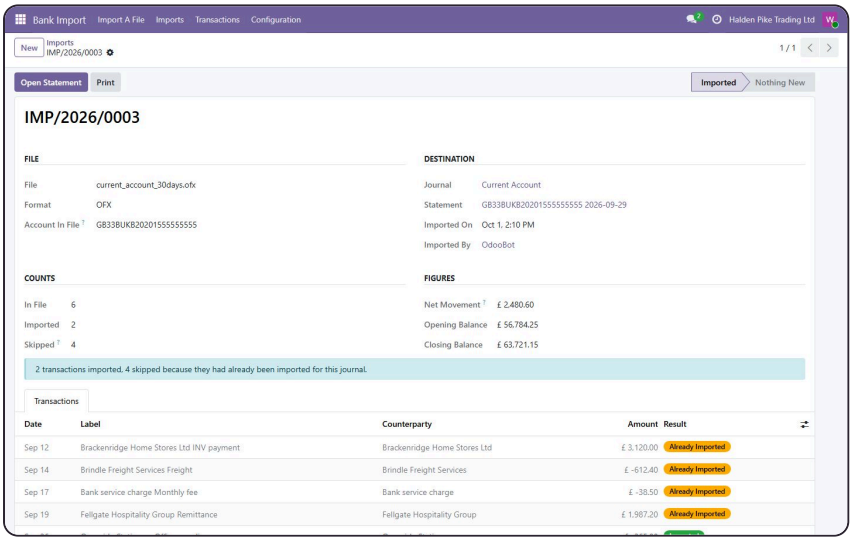

1. Open Bank Import, Imports, IMP/2026/0003 and read the counts.
2. Open IMP/2026/0004, the same file again: Nothing New.
3. Open Bank Import, Transactions and filter Skipped.

1

The imports

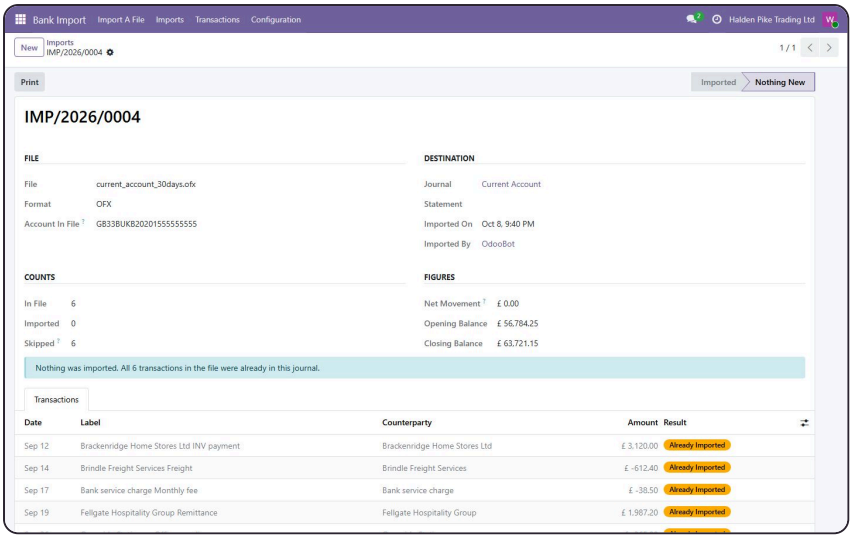

Bank Import, **Imports**: ten imports on the demo across the Current Account (QIF, two OFX, CAMT.053 and CSV), Business Savings (a debit and credit CSV, twice) and the Euro Account (two decimal comma CSVs). Each shows the file, format, journal, imported and skipped counts and its state: **Imported** or **Nothing New**.

2

An overlapping file

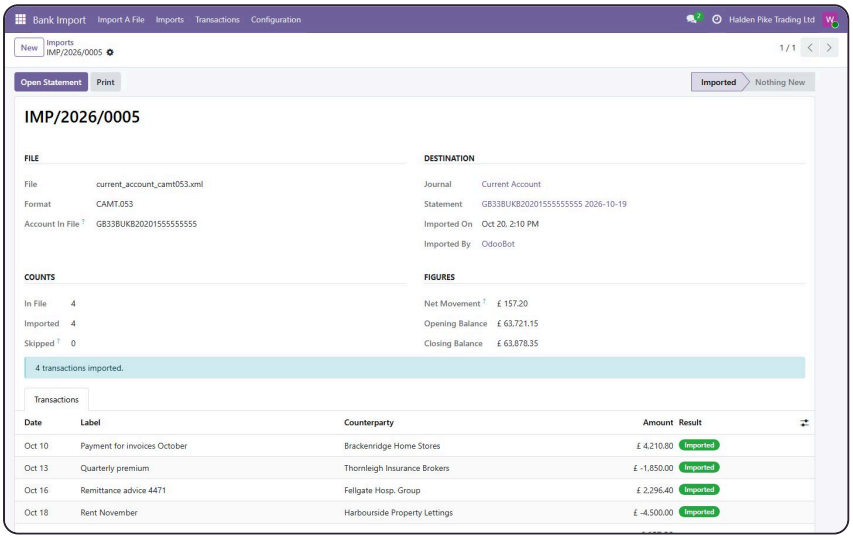

IMP/2026/0003 is a 30 day OFX download taken a week after the previous one. Six transactions in the file, four already imported, two new. File, format and the account number in the file; the journal, statement, date and user; the net movement and the opening and closing balances; then every transaction with its result.

3

Nothing new

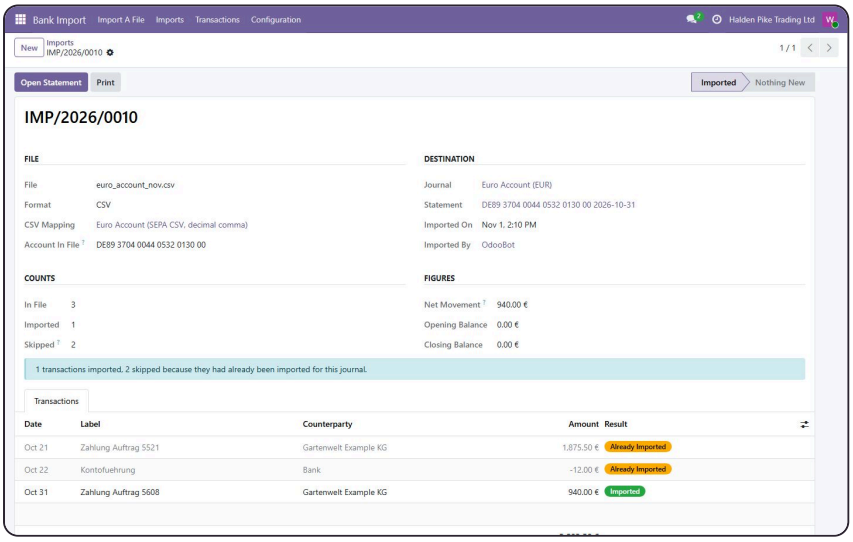

The same file imported again a week later creates nothing. The record still exists, so you can see that somebody tried.

4

A CAMT.053 file

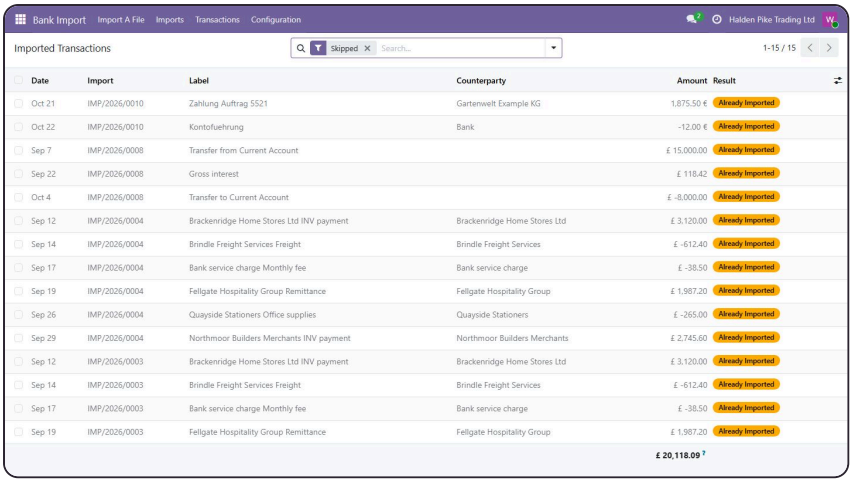

The CAMT import carries the counterparties' IBANs, which is what matches partners most reliably.

5

A euro file

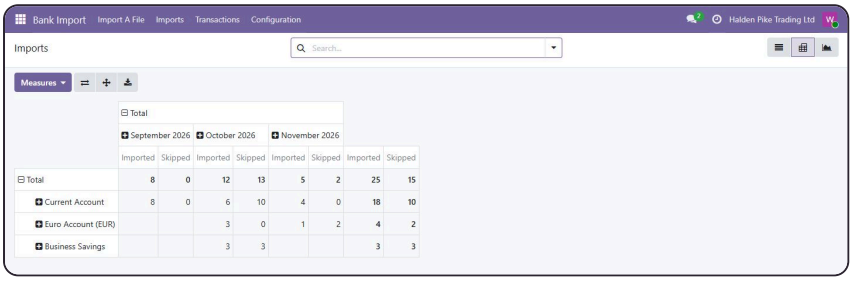

The euro account's second CSV overlapped the first: one new payment, two skipped.

6

Transactions

Bank Import, **Transactions**: every line of every file, with date, import, label, counterparty, amount and result. The Skipped filter lists what was already in Odoo, which is how you prove a payment arrived.

7

Analysis

Pivot and graph views count imports and transactions by journal, format or month.

8

The audit trail PDF

Print on an import record gives the Import Audit Trail: the file, the journal, the balances and every transaction with its result.

How duplicates are caught

Every statement line keeps the reference it was imported under, and that reference is unique per journal. Before anything is written, every transaction in the file is checked against the journal. Banks' "last 30 days" downloads overlap all the time, so this is the normal case, not the exception. QIF and most CSV exports carry no reference, so the module builds a fingerprint from the transaction itself and the same file still imports nothing the second time.

Partners

Each line is matched to a partner by the counterparty account number first (an account number belongs to one person, a name on a bank line can be anything), then by name, and only when exactly one partner has that name. On the demo the CAMT file's "Fellgate Hosp. Group" still finds Fellgate Hospitality Group through its IBAN.

A weekly scheduled action deletes import records older than a year; the statements and their lines stay.

> The Failed state exists on the import record but nothing in the import ever sets it: a file that cannot be read stops with a message and leaves no record.

PART 19 CSV mappings, one per bank

BANK IMPORT

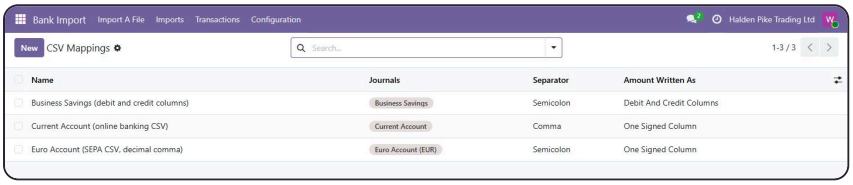

Every bank's CSV is different: commas or semicolons, day first or month first, one amount column or two, a decimal comma. A mapping describes one layout once, and is attached to the journals that use it.

IN THIS PART YOU WILL LEARN

- Every setting on a mapping
- Matching columns by heading or by position
- The three layouts on the demo

TRY IT YOURSELF ON THE DEMO

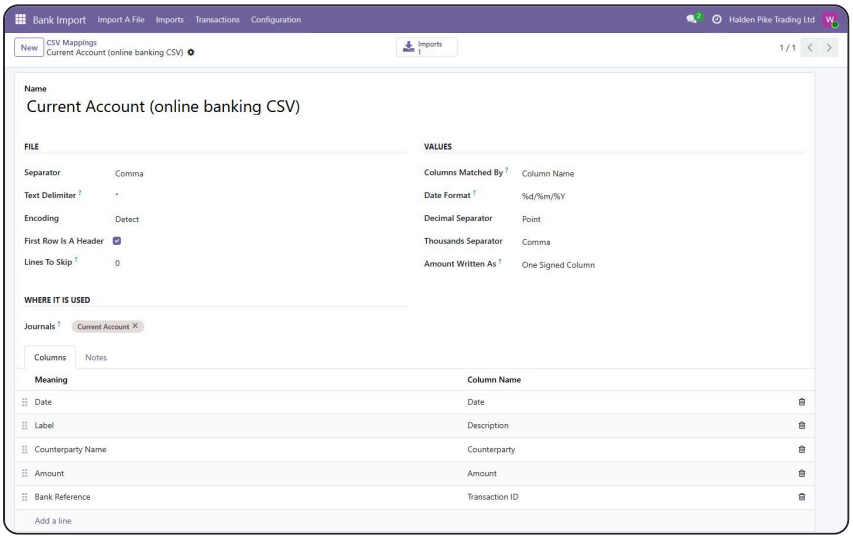

1. Open Bank Import, Configuration, CSV Mappings.
2. Compare the Current Account mapping (headings) with the Business Savings one (positions).
3. Open the Euro Account mapping and read its separators.

1

The mappings

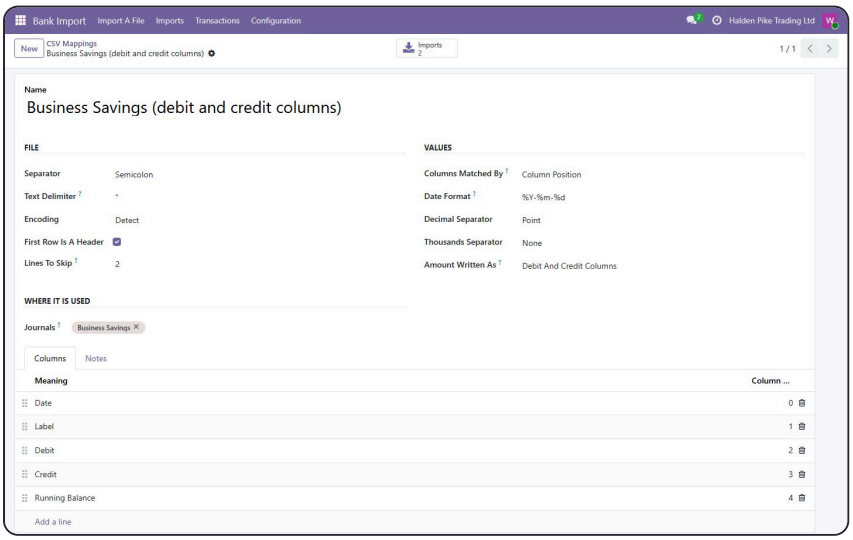

Bank Import, Configuration, **CSV Mappings**. Three on the demo, one per bank account. The Imports button on each counts the files read with it.

2

Columns by heading

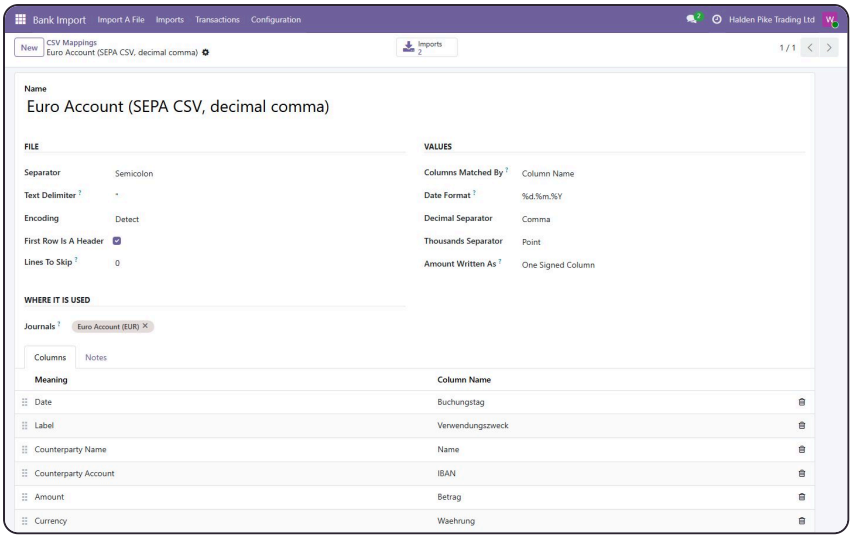

The Current Account export: comma separated, a header row, dates as day/month/year, point decimals and comma thousands, one signed Amount column. Columns are found by their heading: Date, Description, Counterparty, Amount and Transaction ID, the last one mapped to **Bank Reference** so duplicates are caught by the bank's own ID.

3

Columns by position

The savings export starts with two lines of account details, so **Lines To Skip** is 2. Columns are read by position (0 is the first), and money in and money out are separate positive columns, so the amount mode is **Debit And Credit Columns**.

4

A decimal comma

The euro export writes 1.234,56: thousands separator Point, decimal separator Comma, dates day.month.year, and an IBAN column mapped to Counterparty Account.

SETTING	CHOICES
Separator	Detect, comma, semicolon, tab, pipe
Text delimiter	The quote character, usually a double quote
Encoding	Detect, UTF-8, Windows-1252 and others
First row is a header, lines to skip	For files with a title block above the data
Columns matched by	Column name (the heading) or column position
Date format	Python style, for example %d/%m/%Y
Decimal and thousands separators	Detect, point, comma (thousands also none or space)
Amount written as	One signed column, or a debit column and a credit column
Columns	Date, Label, Counterparty Name, Amount, Debit, Credit, Reference, Counterparty Account, Bank Reference, Currency, Running Balance
Journals	The journals this mapping belongs to; the import window offers it for them

The mapping is checked on save: it needs a Date column, a single amount mapping needs an Amount column, a debit and credit one needs both, no field can be mapped twice, and matching by name needs a header row.

PART 20

Payment follow-up: reminders for late payers

PAYMENT FOLLOW-UP

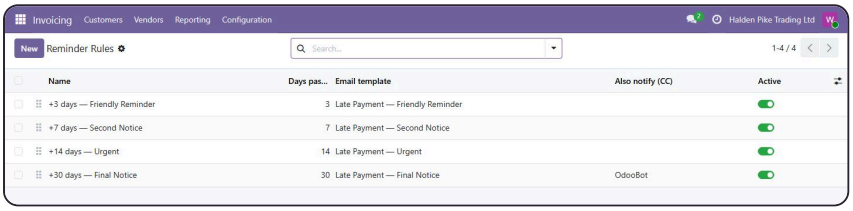

Odoo Enterprise has a follow-up module; Community has nothing, so overdue invoices get chased by hand or not at all. This module sends the right reminder e-mail at 3, 7, 14 and 30 days past due, once each, and writes every one into the invoice's chatter.

IN THIS PART YOU WILL LEARN

- The four rules and how the next one is picked
- Sending a reminder now, and taking an invoice out of the run
- The settings that pause, sign and filter the run

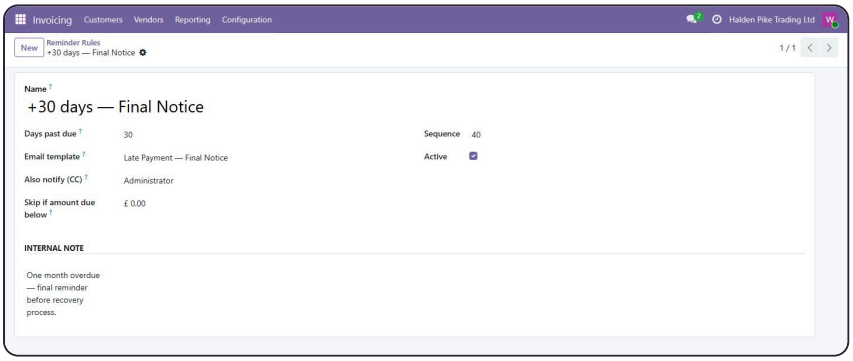

TRY IT YOURSELF ON THE DEMO

1. Open Invoicing, Configuration, Late Payment Rules and open +30 days.
2. Open invoice INV/2026/00039 and read the reminders in its chatter.
3. In the invoice list, open Filters and choose Overdue (follow-up due).

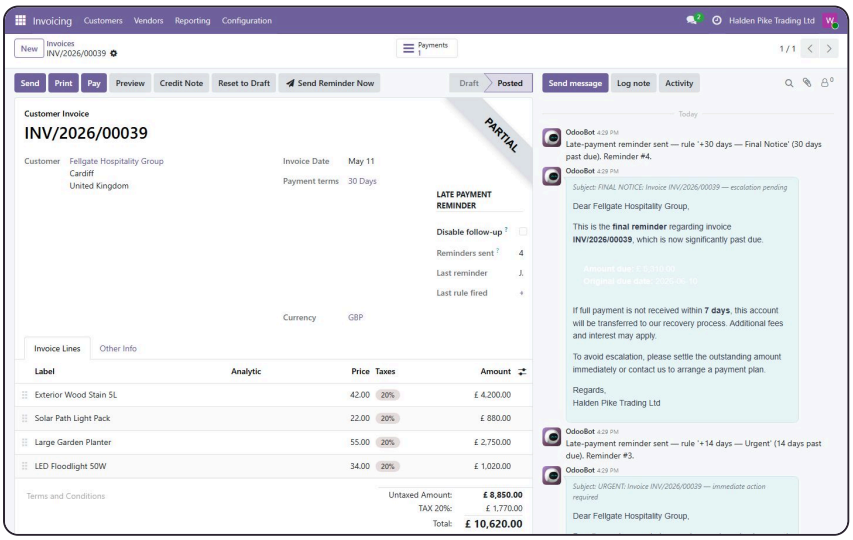

1 The rules

Invoicing, Configuration, **Late Payment Rules**. Four ship with the module: +3 days friendly reminder, +7 days second notice, +14 days urgent and +30 days final notice, each with its own e-mail template.

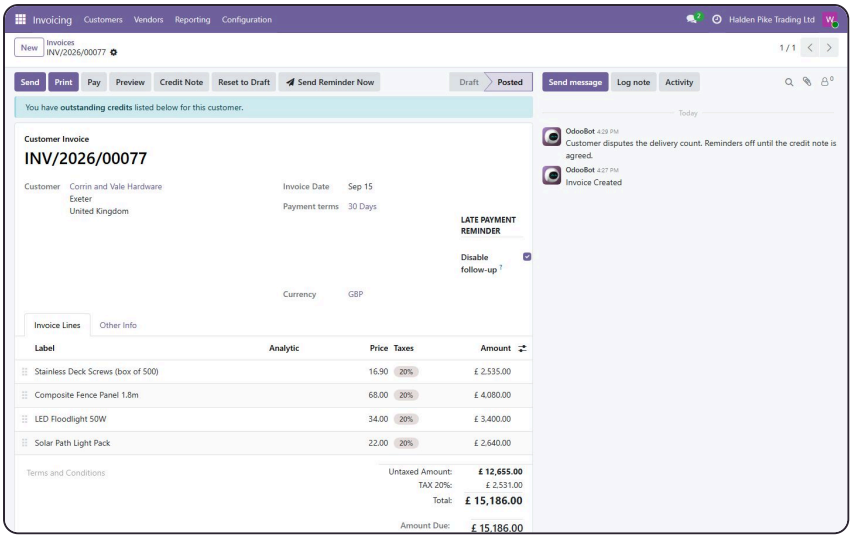

2 A rule

Days past due, the **e-mail template**, **Also notify (CC)** an internal user (the demo copies the final notice to the finance manager), **Skip if amount due below** for this rule, sequence, active and an internal note. The demo skips the friendly reminder below GBP 50.

3 An invoice that has been chased

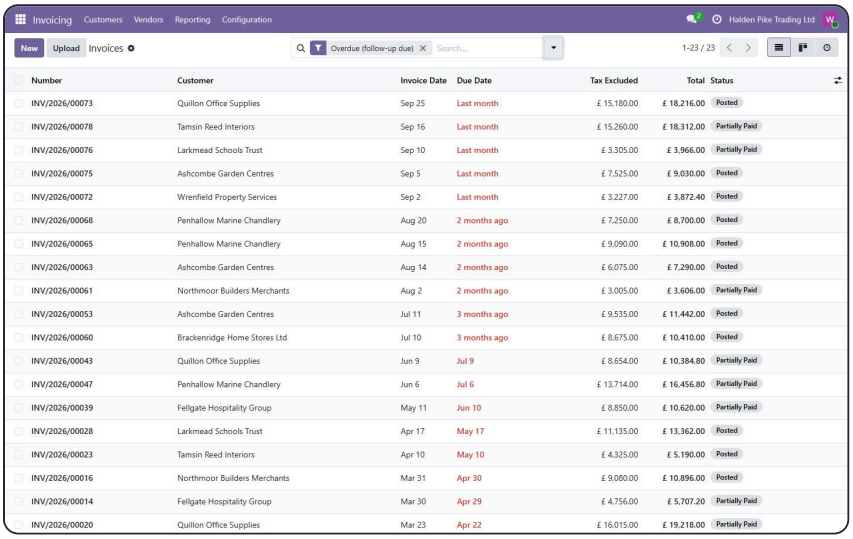

INV/2026/00039 to Fellgate Hospitality Group was due on 10 June and is partly paid. The **Late Payment Reminder** group on the invoice shows reminders sent (4), when the last one went and the last rule fired. The chatter holds each e-mail and a log line for each. **Send Reminder Now** sends the next rule due straight away, without waiting for the morning run.

4

Taking an invoice out

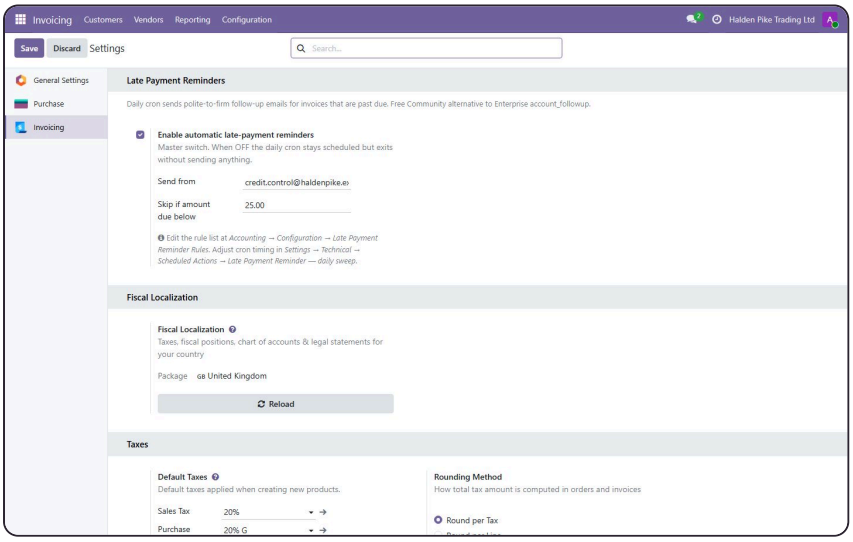

INV/2026/00077 is disputed, so **Disable follow-up** is ticked and the run skips it. The note in the chatter says why.

5

Who is due a reminder

Three filters in the invoice search: **Overdue (follow-up due)** lists posted, unpaid, past due invoices still in the run (23 on the demo), **Reminders already sent** lists the ones already chased and **Follow-up disabled** the ones taken out.

6

Settings

Invoicing, Configuration, Settings, **Late Payment Reminders**: the master switch, the sender address (the demo uses credit.control@haldenpike.example.com) and a global minimum amount due (GBP 25 on the demo).

How the next reminder is picked

The daily scheduled action "Late Payment Reminder, daily sweep" looks at every posted customer invoice that is not paid or partly paid, has a due date, an amount left and follow-up not disabled. For each one it takes the highest rule whose days past due the invoice has reached and that is higher than the last rule already sent. So an invoice 20 days late that has had the 7 day reminder gets the 14 day one next, and an invoice that has had the 30 day notice gets nothing more. With the master switch off the run does nothing.

SKIPPED WHEN	SET WHERE

The amount left is below the global minimum	Settings
The amount left is below the rule's minimum	The rule
Disable follow-up is ticked	The invoice
Every rule up to its age has been sent	Automatic

> The rule names and the e-mail subjects as shipped use long dashes, and the coloured amount box in the e-mail body shows as pale text on a pale background in the chatter. Read the four templates and reword them in your own voice before the first run: they go to your customers.

PART 21 A fifteen minute walk-through, and questions people ask

If you have the demo open and fifteen minutes, this path shows all five modules. It is also the order to show them to somebody else in.

#	DO THIS	AND NOTICE
1	Financial Reports, Profit and Loss, View	*GBP 851k income, GBP 438k gross profit, GBP 59k net profit, depreciation on its own line.*
2	Same report, Comparison: Same period last year	*A second column, and why it is thin: trading started in November 2025.*
3	Balance Sheet, then Journal Items	*Assets equal liabilities plus equity; one click to the items behind it.*
4	Aged Receivable	*GBP 257k owed, GBP 85k of it over 120 days.*
5	Invoicing, an overdue invoice	*Four reminders in the chatter and the counters on the form.*
6	Assets, Assets, the Ford Transit	*The 61 line board, every posted line linked to its entry.*
7	Assets, Depreciation (Due)	*Two quarterly lines waiting for a person.*
8	The Hilux, Dispose (then Cancel)	*Book value and gain or loss worked out before anything posts.*
9	Budgets, FY2026 Operating Budget	*Marketing in red at 103%, warehouse energy amber.*
10	Purchase, P00007, Confirm Order	*Refused, with the planned, spent, committed and overspend figures.*
11	Bank Import, Imports, IMP/2026/0003 and 0004	*Two new, four skipped; then the same file, nothing new.*
12	Bank Import, Configuration, CSV Mappings	*Three banks, three layouts, one of them decimal comma.*

Questions people ask

QUESTION	ANSWER
Do these need Odoo Enterprise?	No. All five run on Odoo 19 Community and need only the accounting (Invoicing) module. They also install on Enterprise, where Odoo has its own versions of most of them.
Can I buy just one?	Yes. They do not depend on each other.
Do the assets post real journal entries?	Yes. Each board line becomes a posted entry in the journal on the asset type, and the register reads its figures from those entries.
Can I bring in an existing asset register?	Yes. Create each asset with its original cost and date, confirm it, and post the history up to your cut-off date; or import the assets and confirm them.
Does the budget need the Purchase app?	Only for committed spend and the purchase block. Actual against planned works without it.
Will the block stop orders for everyone?	Only orders that would take a line of a confirmed budget with Block Over Budget ticked past its planned amount plus tolerance.
Is the Tax Report my VAT return?	No. It lists base and tax per tax code for the period. The return itself comes from your localisation or your accountant.

Does the bank import reconcile the lines?	No. It creates the statement and its lines, matched to partners where it can. Matching them to invoices and bills is still done in Odoo.
What if I import the same file twice?	Nothing is created the second time, and the import record says Nothing New.
Can reminders be paused at month end?	Yes. Turn the master switch off in Settings; the run stays scheduled and does nothing.
Do the reports export to Excel?	Yes, all nine, as real .xlsx files.

PART 22

The menu map

Every screen the five modules add, on one page.

Assets

Assets	The register: gross, depreciated, book value, state
Depreciation	Every board line, posted or waiting
Configuration, Asset Types	Accounts, method, periods, automation

Budgets

Budgets	Period, lines, block and tolerance, approval
Reporting, Budget Lines	Planned, actual, committed, available
Reporting, Budget Report	Pick budgets, print or open the lines

Financial Reports

Statements	Balance Sheet, Profit and Loss, Cash Flow
Ledgers	Trial Balance, General Ledger, Partner Ledger
Receivables and Payables	Aged Receivable, Aged Payable, Tax Report
Configuration, Report structures	Lines, sources, formulas, signs
Accounting, Reporting	Dynamic Financial Reports: the same window for any report

Bank Import

Import A File	OFX, QIF, CAMT.053 or CSV into a statement
Imports	One record per file: counts, balances, detail
Transactions	Every line read, imported or already there
Configuration, CSV Mappings	One layout per bank
Bank journal, Actions	Import Bank Statement with the journal filled in

Accounting (Payment Follow-Up)

Configuration, Late Payment Rules	Days past due, template, CC, minimum
Configuration, Settings	Late Payment Reminders: switch, sender, minimum
Customers, Invoices	Send Reminder Now, reminders sent, last rule, opt out

Want these on your own books?

We install the five modules on your Odoo 19 Community database, map your chart of accounts into the statements, set up your asset types and bring your existing register across, load this year's budget, build a CSV mapping for each of your banks and word the reminders in your own voice. Each module can also be bought on its own.
