COMPLETE GUIDE · SIX ADD-ONS, SETUP AND EVERY SCREEN

POS and Retail Add-ons for Odoo 19

Receipt printers, cash drawer, scale and pole display without an IoT Box, delivery drivers at the till, website table booking, a self-service price checker, barcode scanning for receiving, picking and counts, and a stock aging report that finds the money sitting on the shelf. Every screen and every step, shown on a live demo.

START

About this guide

Standard Odoo 19 Community already runs a till, a floor plan and a warehouse. These six add-ons fill the gaps that a cafe or a shop runs into in the first week: the printer that needs an IoT Box, the delivery rider nobody recorded, the table booked twice, the customer asking how much something costs, the stock count that went in twice, and the stock that has not moved since last winter. This guide walks through each one, screen by screen. You do not need to have used Odoo before.

Who it is for

The owner or manager setting up the tills, the shift lead at the counter, the host taking bookings, the person in the stockroom with a scanner, and anyone being shown the system for the first time.

How to read it

Each add-on has its own part, marked with its badge. Read Part 1 to see which ones you need, Part 3 to set them up, then the part for each add-on. Every part opens with what you will learn and a short thing to try on the live demo.

The live demo

Ember & Oak Coffee Co., an invented cafe with a retail pantry next door in Fitzroy, Melbourne. Two tills, five drivers, a dining room with four zones, three sittings, a stockroom with six locations and a hundred days of trade. Open it and follow along.

HOW IT WORKS

The demo

Address	**pos-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Business	Ember & Oak Coffee Co. Pty Ltd · Cafe Counter (restaurant till) and Pantry Shop (retail till), prices in AUD with 10% GST
Runs on	Odoo 19, Community edition, with Point of Sale, Restaurant, Inventory, Website and Invoicing

Every company, person, phone number and document reference on the demo is invented. The demo is shared and is reset from time to time, so anything you change may be changed back or seen by the next person. Times on the demo are Melbourne time.

PART 13 Reports and printed documents

PART 14 A 15-minute demo, and the questions people ask

PART 15 The menu map

PART 1 The six add-ons and the gap each one fills

What standard Odoo does, what it does not, and which add-on covers the difference.

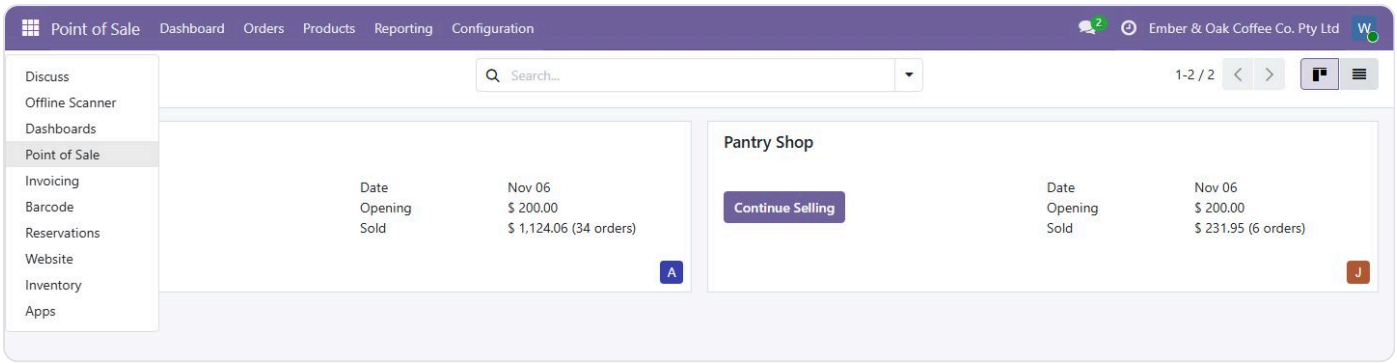

IN THIS PART YOU WILL LEARN

- What each add-on does in one paragraph
- What each costs and what it needs
- How they sit together on one database

ADD-ON	TECHNICAL NAME	PRICE	NEEDS	FILLS THIS GAP
POS HARDWARE BRIDGE	wt_pos_bridge	USD 129	Point of Sale	Community POS can only talk to printers, drawers and scales through an IoT Box or an Epson ePOS printer. The bridge drives USB, serial and network ESC/POS printers, the cash drawer, a serial scale and a 2×20 pole display through a free Windows agent on the till PC.
POS DELIVERY	wt_odoo_pos_delivery	USD 60	Point of Sale	The till has no idea who took an order out. This adds drivers with vehicles, a Delivery button that adds the fee, a driver picked at payment, the driver on the receipt and orders and sales per driver.
TABLE RESERVATION	wt_pos_table_reservation	USD 49	Point of Sale, Website	Community has a floor plan but no booking book. This adds zones, tables, sittings, a booking engine that combines tables and paces the kitchen, a host view, reminder emails and website booking pages.
PRICE CHECKER KIOSK	wt_barcode_scanner_offline	USD 15	Inventory	A full screen page for a tablet on the shop floor: scan a barcode and see the name, code and price. It caches the catalogue in the browser and keeps working when the Wi-Fi drops.
BARCODE FOR INVENTORY	wt_barcode_warehouse	USD 149	Inventory, Barcodes	Community has no barcode app. This adds a handset screen for receipts, deliveries, internal moves and stock counts, where every scan carries its own reference so a resend can never book stock twice.
STOCK AGING	wt_stock_aging	USD 25	Inventory	Odoo shows how much you hold, not how long you have held it. This adds aging buckets, a carrying cost estimate, fast, normal, slow and dead classes, monthly snapshots, a write-off wizard and a PDF.

Each add-on is bought and installed on its own and none of them depends on another. On the demo all six are installed together on one Odoo 19 Community database, which is how a cafe with a retail corner would run them.

Where each one lives

The app menu on the demo. Reservations, Barcode and Offline Scanner are new apps. The bridge and the drivers sit inside Point of Sale, the aging report inside Inventory.

> The bridge needs the free WT POS Bridge agent on each Windows till PC (way4tech.com/posbridge). Without it the till still works and falls back to the browser print dialog. On the shared demo no agent is installed, so the printer icon in the till shows red. That is the expected state.

PART 2 Sign in and find your way

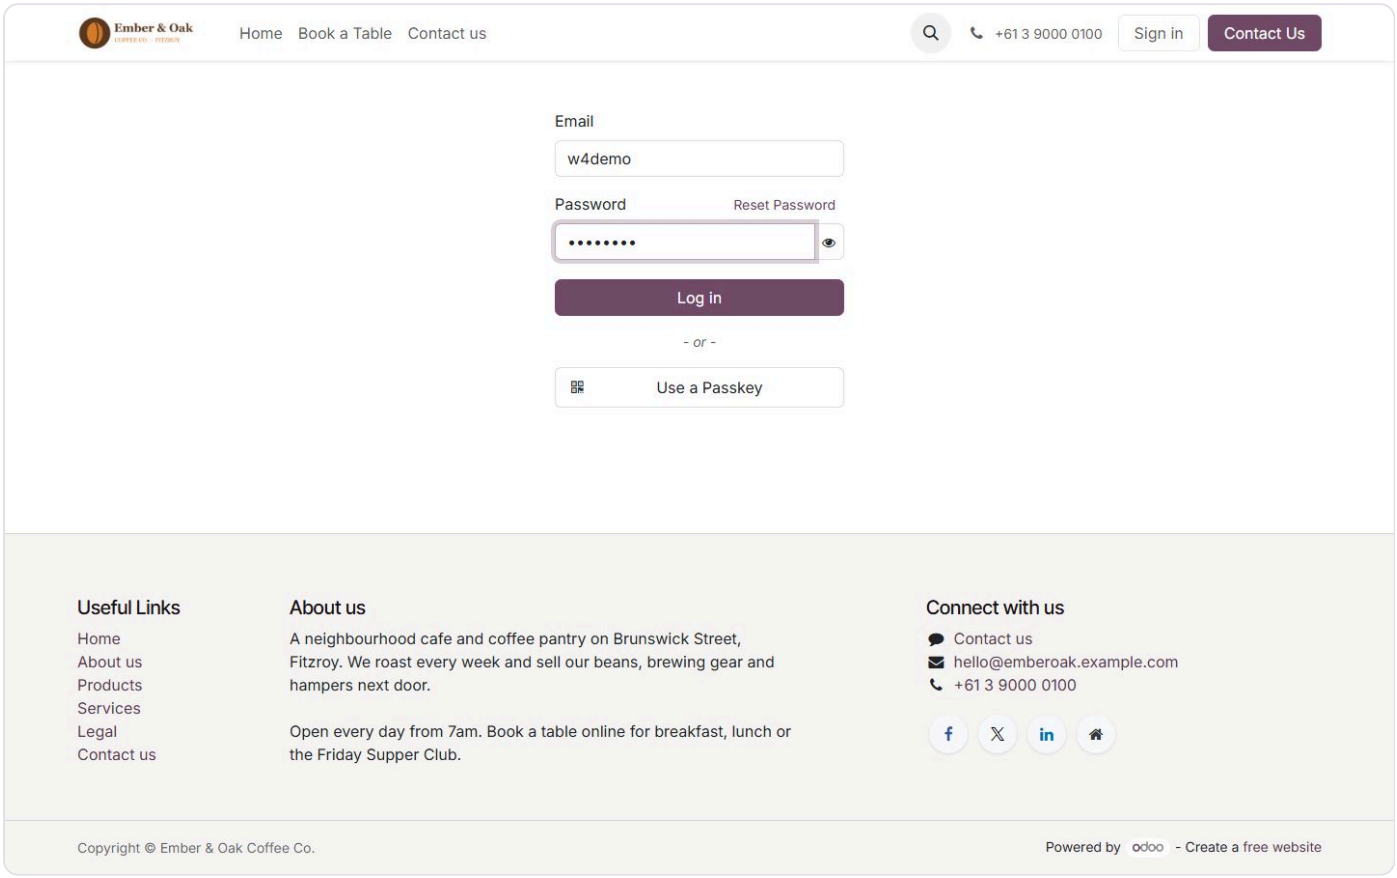

The demo opens like any Odoo 19 database.

TRY IT YOURSELF ON THE DEMO

1. Open pos-demo.way4tech.com and sign in
2. Open the app menu at the top left
3. Open Point of Sale, then the Dashboard

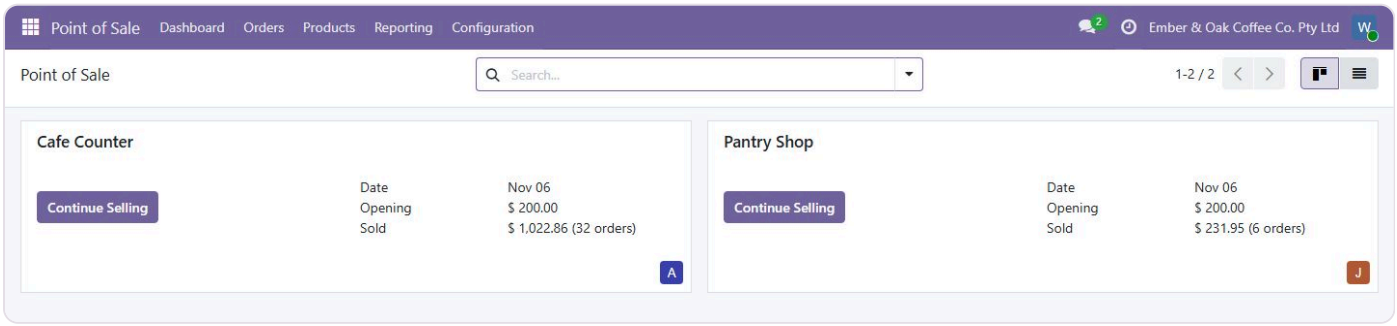

1 Sign in

Go to the demo address, type **w4demo** and **Demo2026**, then Log in. The page behind it is the cafe's website, with Book a Table in its menu.

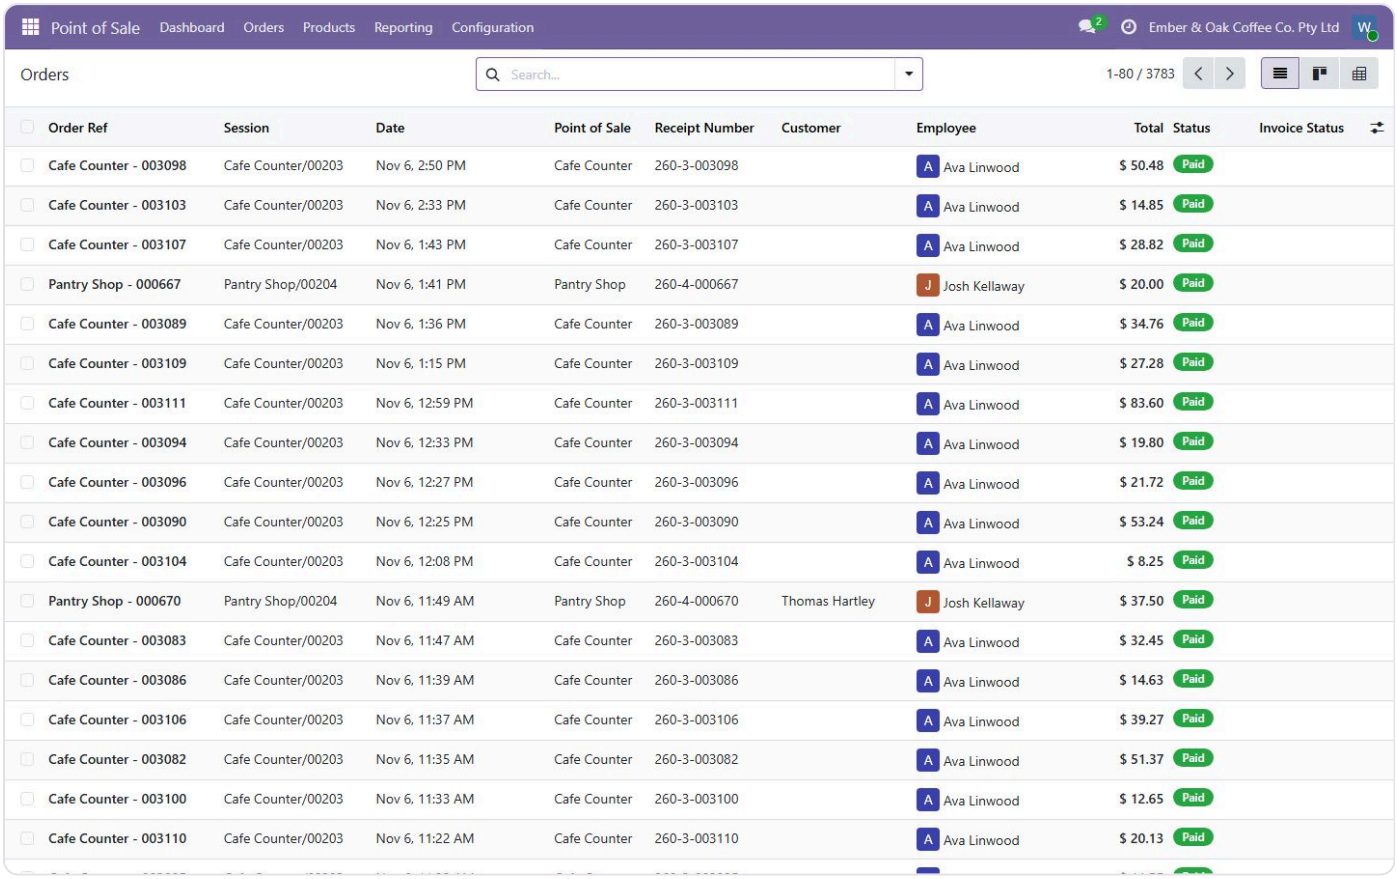

2 The Point of Sale dashboard

Both tills have a session open today. Continue Selling opens the till in its own screen. The figures under each till are today's opening float and sales.

3 Orders and sessions

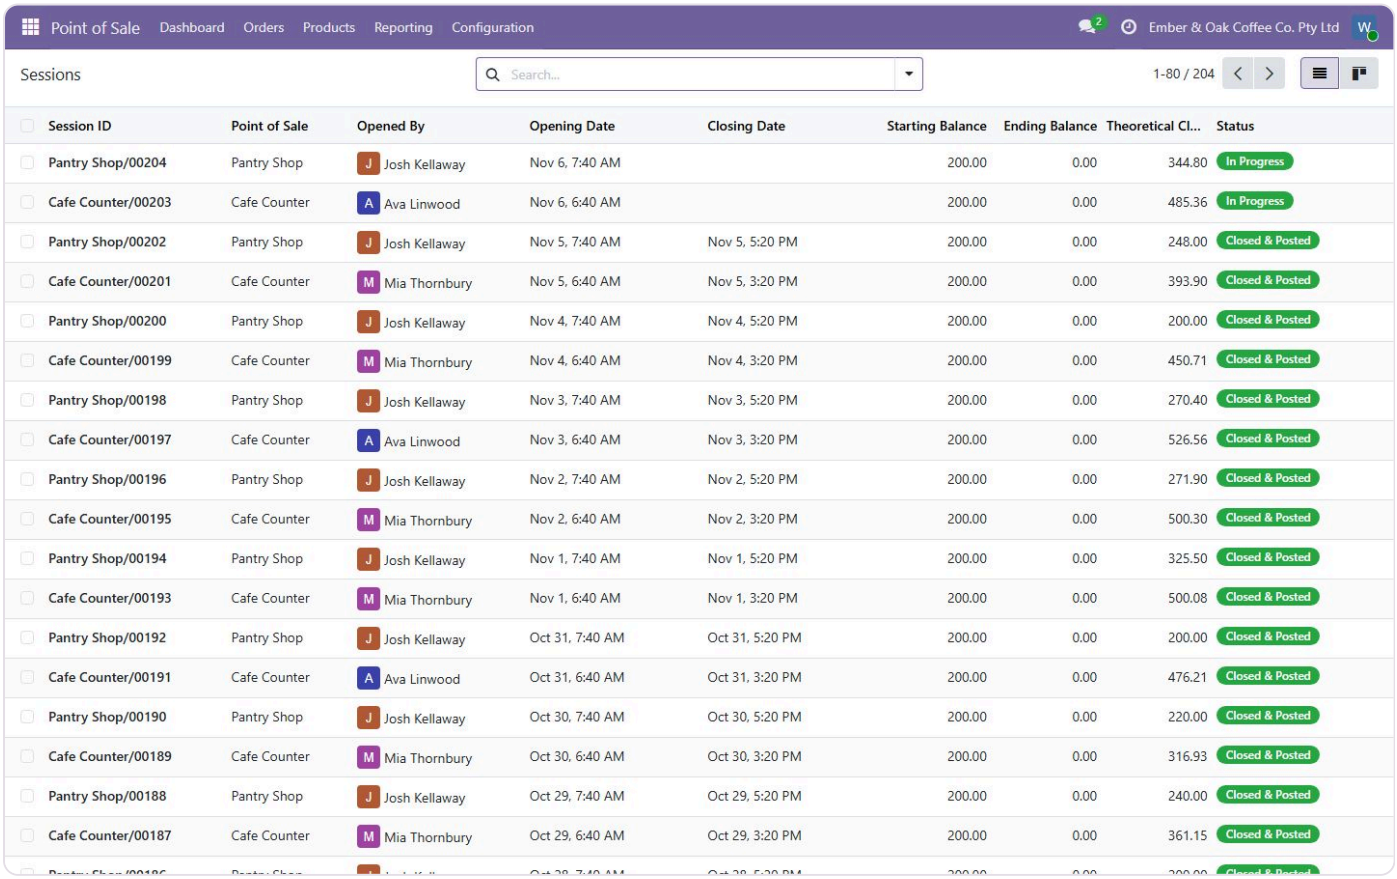

Point of Sale, Orders lists every ticket: about 3,800 over a hundred days, dine-in, takeaway and delivery. Sessions are closed and posted each evening.

Order Ref	Session	Date	Point of Sale	Receipt Number	Customer	Employee	Total	Status	Invoice Status
Cafe Counter - 003098	Cafe Counter/00203	Nov 6, 2:50 PM	Cafe Counter	260-3-003098		Ava Linwood	$ 50.48	Paid

PART 3 Setup from zero

Everything that has to be in place before the first sale, booking or scan, in the order to do it.

IN THIS PART YOU WILL LEARN

- The settings each add-on adds and where they are
- Who can do what: the access groups
- The order to set things up

The order to work in

A first day of setup

1. **Install** the add-ons you bought
2. **Tills** payment methods, floors
3. **Bridge** agent on each PC, pair
4. **Drivers** and the delivery fee
5. **Dining room** zones, tables, sittings
6. **Barcodes** products and locations
7. **Aging** buckets and thresholds

Every setting the add-ons add

WHERE	SETTING	WHAT IT DOES
POS Settings, Connected Devices BRIDGE	Use WT POS Bridge	Turns the bridge on for the till chosen at the top of the page.
	Agent address	Where the agent listens. Only http://127.0.0.1, localhost or [::1] with a port from 1024 to 65535 is accepted.
	Receipt printer, printer name	Print receipts through the bridge; "receipt" means the receipt printer chosen in the agent.
	Cash drawer / Scale / Customer pole display	Open the drawer on cash, read weighed products, show the last line and total on a 2×20 display.
	Browser print when the bridge is down	If the agent cannot be reached, print with the browser and show a notice.
Preparation printer BRIDGE	Use a printer on WT POS Bridge, Bridge printer name	Kitchen and bar tickets go to a named printer in the agent.
User preferences BRIDGE	Silent printing, Windows printer for reports	Back-office PDFs print straight to a printer instead of downloading.
POS till form DELIVERY	Require Driver Before Payment	A delivery order cannot be paid until a driver is chosen.
	Delivery Fee Product	The product added when Delivery is switched on. It must be available in the POS.
	Delivery Drivers, Auto-assign All Active Drivers	Which drivers this till offers.
Sitting form RESERVATION	Hours, slots, held, turnaround, covers, party, notice, book ahead, confirm, reminder, no show	All the booking rules, per sitting. See Part 6.

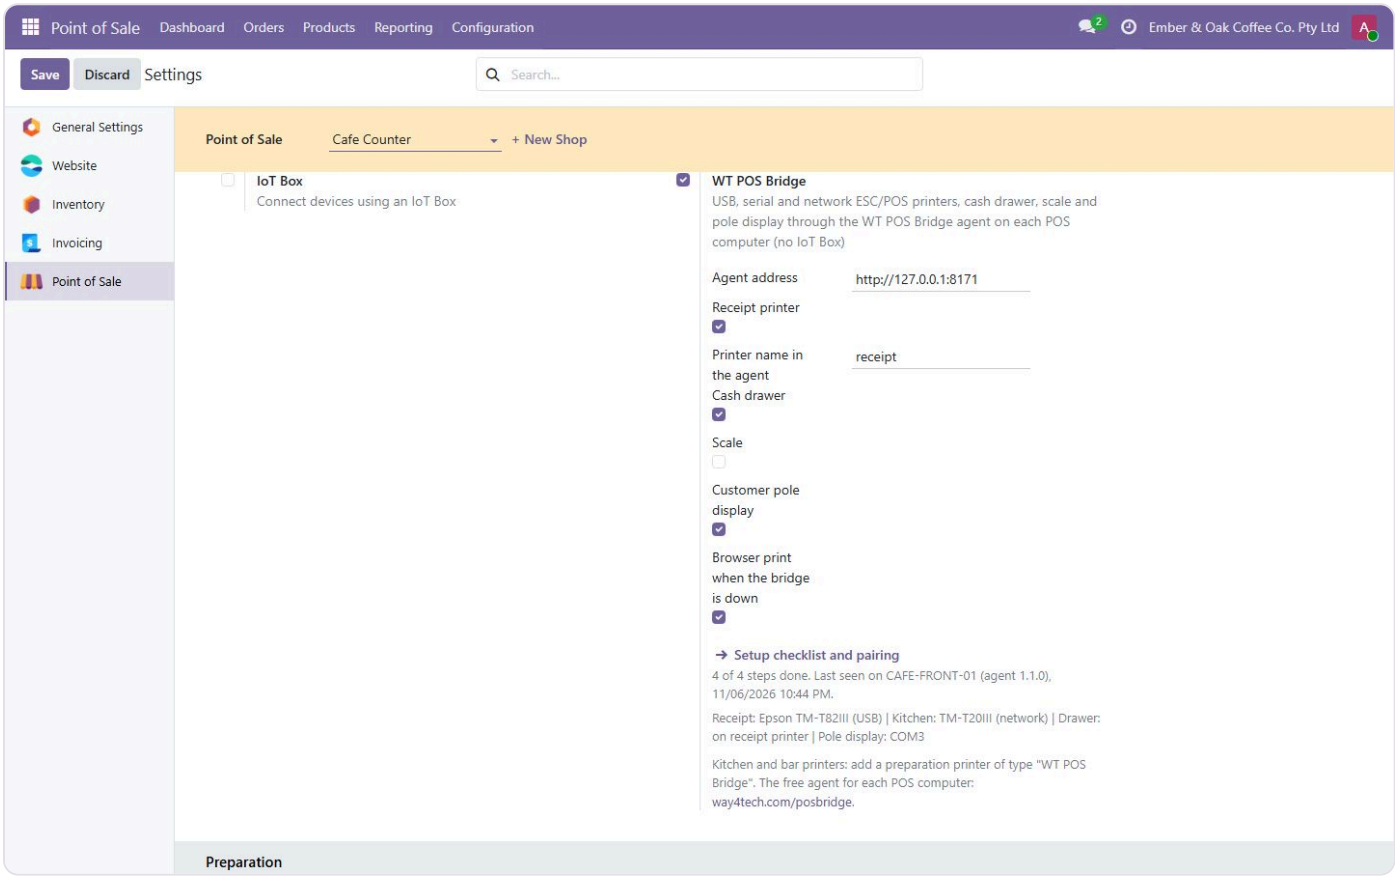

Operation type BARCODE	Allow Over-picking, Allow Unplanned Products	Whether a scan may go past the demand, and whether a product not on the transfer may be added.
Inventory settings AGING	Aging buckets, carrying cost %, slow and dead days, valuation field, weekly digest and recipients	How stock is bucketed and classed. See Part 12.

1 The bridge block in POS Settings

POS HARDWARE BRIDGE

Point of Sale, Configuration, Settings, Connected Devices. The till is picked at the top of the page. The grey line under the switches is the setup progress the checklist reports, here 4 of 4 steps on the Cafe Counter PC.

Settings need an administrator. The demo login cannot open them, so this screen is shown read only.

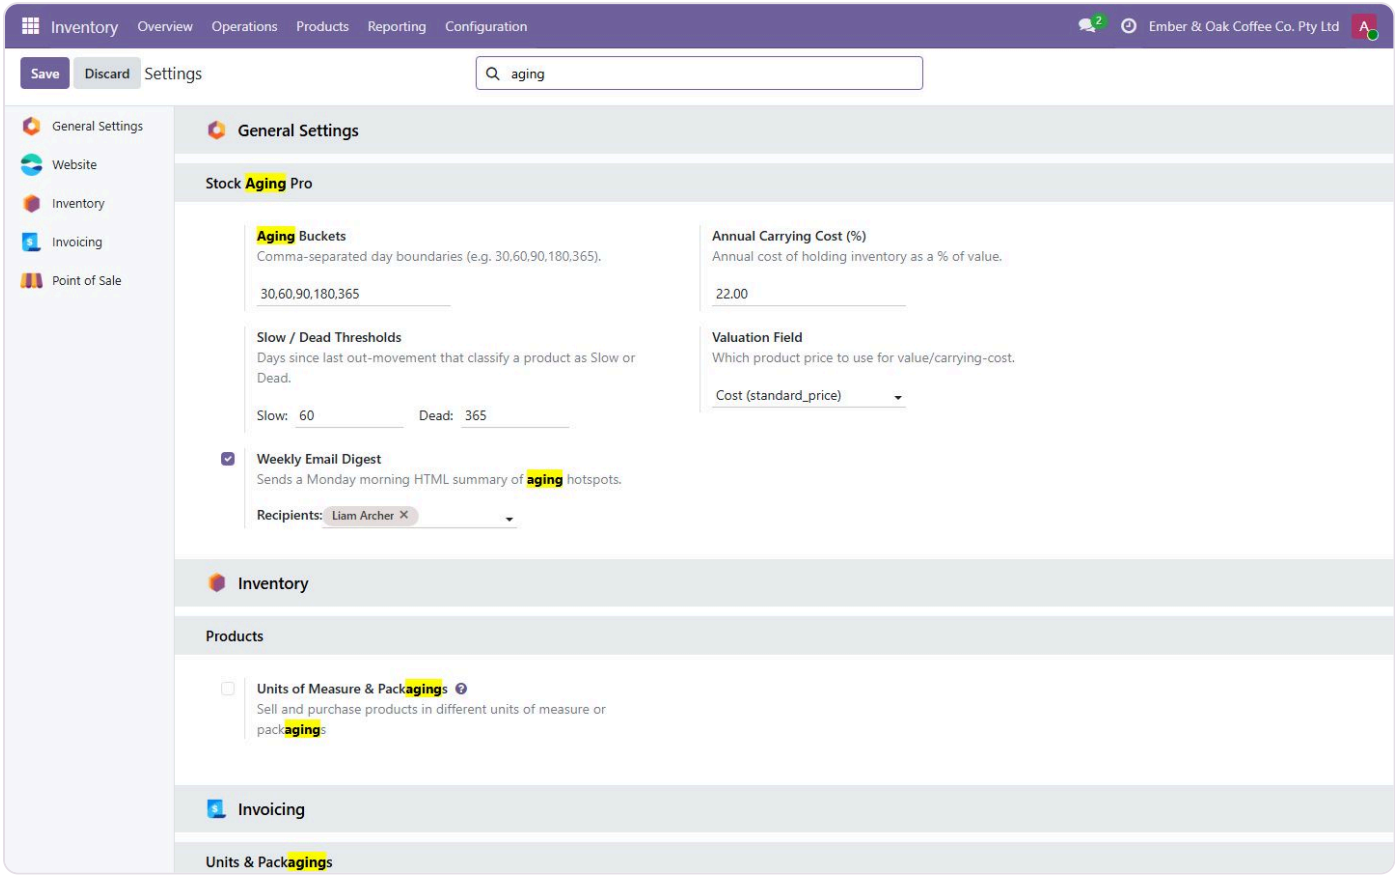

2 The aging settings

STOCK AGING

Search the Settings for aging. The demo uses buckets 30, 60, 90, 180 and 365, a 22% carrying cost, slow after 60 days and dead after 365.

In this release the block is drawn under General Settings rather than under Inventory, so search for it.

Who can do what

ADD-ON	GROUP	CAN
Reservation	Take Reservations	Use the book, the today view and the availability check.
	Configure Reservations	Also zones, tables and sittings.
Barcode	Scan Transfers and Count	Use the scanner, book quantities, record counts. Sees own and unclaimed counts.
	Manage Counts	Also apply counts to stock, see every count and the scan ledger. Carries Inventory Administrator.
Aging	Stock Aging User / Manager	Run the report and see snapshots; the manager is the default digest recipient.
Delivery	POS Manager	Create and edit drivers. POS users can only read them.
Bridge	POS Manager / POS User	Managers open the setup menu; any POS user can report the setup from the till PC.
Price Checker	Any internal user	Open the kiosk page. Portal and public users are refused.

PART 4

Printers, drawer, scale and pole display without an IoT Box

POS HARDWARE BRIDGE

In Community the till can only reach hardware through an IoT Box or an Epson ePOS printer on the network. WT POS Bridge is a small Windows program on each till PC. The till talks to it on the PC itself, and it talks to the USB, serial and network devices.

IN THIS PART YOU WILL LEARN

- How the till, the agent and the devices fit together
- The four step setup checklist and pairing
- Kitchen printers and silent printing of back-office PDFs
- What happens when the agent is not running

TRY IT YOURSELF ON THE DEMO

1. Open Point of Sale, Configuration, WT POS Bridge setup
2. Open Cafe Counter and click the red printer icon
3. Open your Preferences and find the WT POS Bridge section

HOW IT WORKS

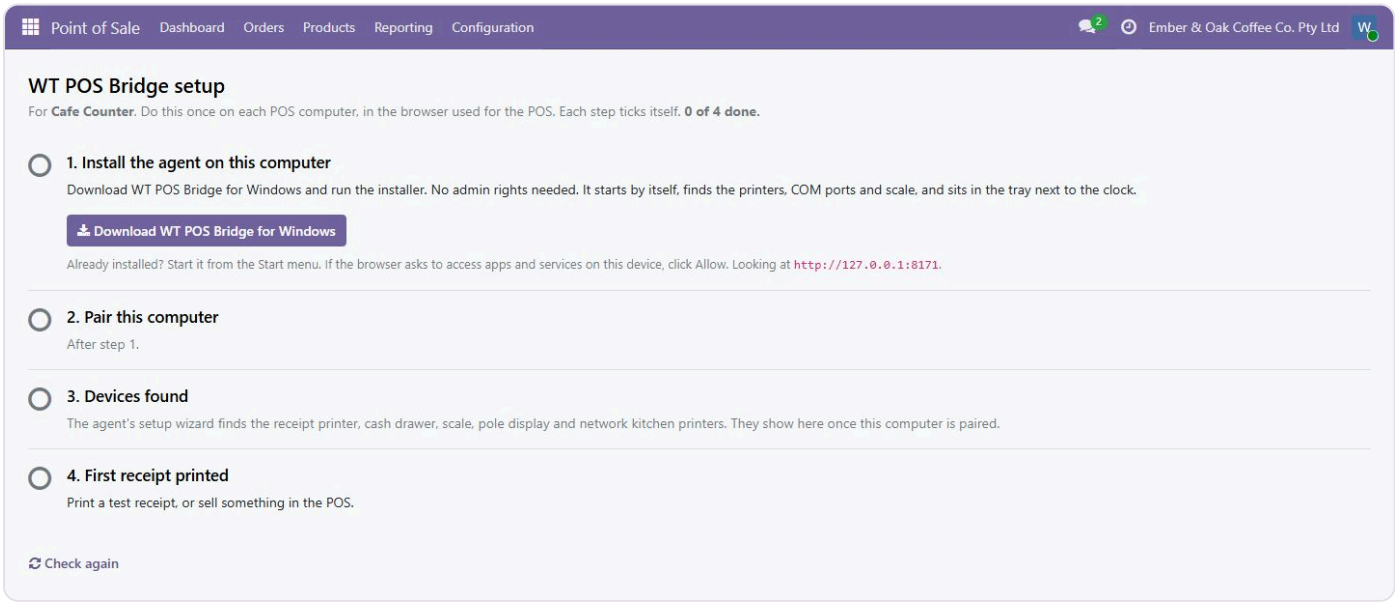

Where the work happens

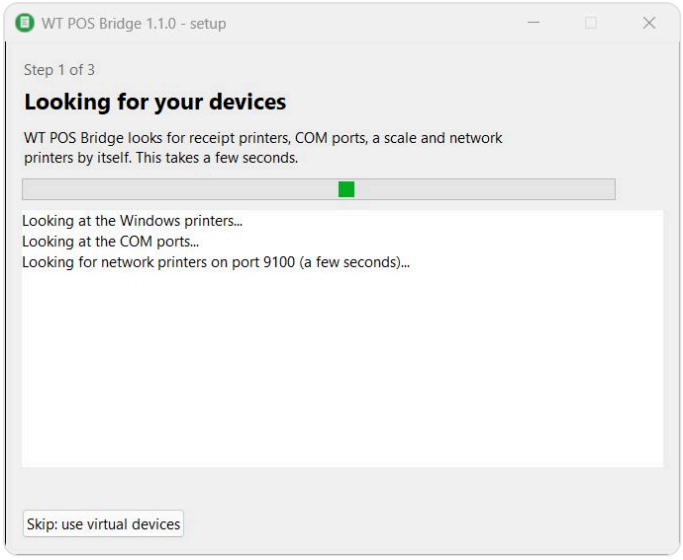

The browser running the till sends each receipt to the agent at **http://127.0.0.1:8171**, the same computer. The receipt is printed as an image in ESC/POS, so any language and any logo prints the same. The agent opens the drawer on cash payments and on cash in or out, reads the scale for weighed products and shows the last line and the total on a 2×20 pole display. Odoo never connects to the PC; the address must be 127.0.0.1, localhost or [::1], and anything else is refused when you save.

1 The setup checklist

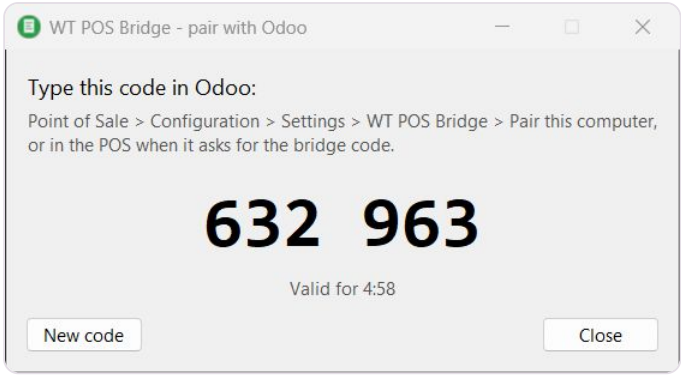

POS HARDWARE BRIDGE

Point of Sale, Configuration, **WT POS Bridge setup** (managers). Open it on the till PC itself. Four steps: install the agent (with a download button), pair this computer, devices found, first receipt printed. Each step ticks itself from what the agent answers, and Check again reads it once more. The same checklist opens from the Setup checklist and pairing link in POS Settings.

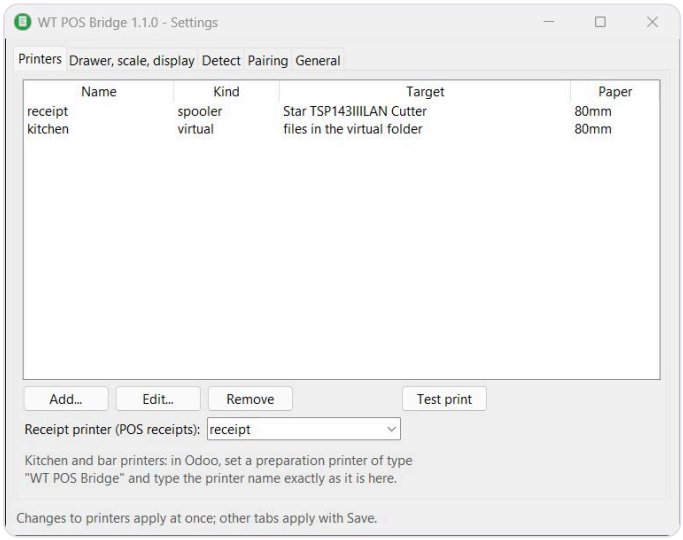

The agent looks for Windows printers, COM ports, a scale and network printers on port 9100.

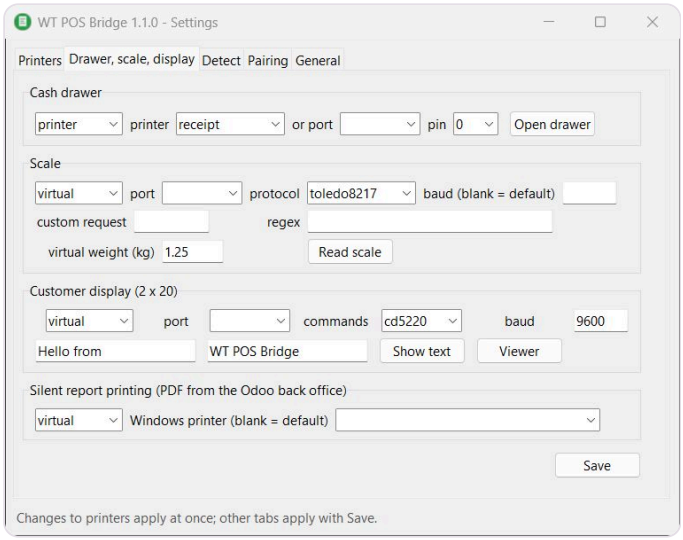

Pairing: the agent shows a code to type into Odoo, valid for five minutes.

Pairing ties the agent to this Odoo. The agent only accepts a pairing after the person at the PC clicks Allow, and only from the Odoo that asked. Once paired, the checklist records the agent version, the computer name, the devices and the time of the first receipt on the till, and POS Settings shows them as a progress line.

The agent's printers: the receipt printer and named printers such as "kitchen".

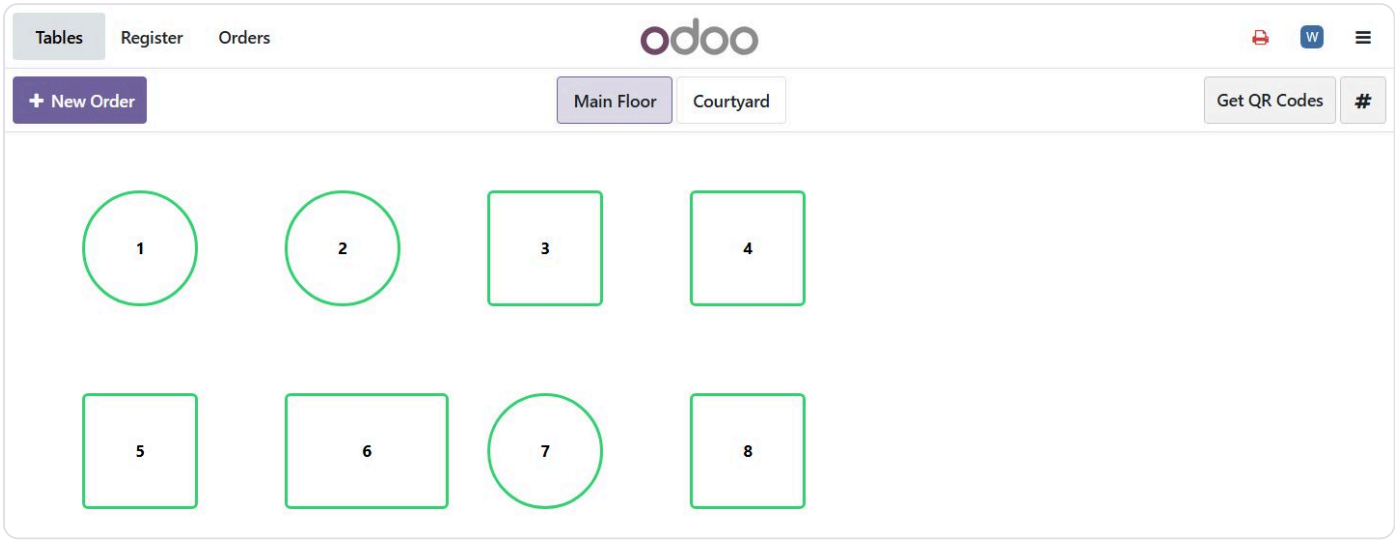

Drawer, scale protocol and port, pole display and the printer for back-office PDFs.

2 The status button in the till

POS HARDWARE BRIDGE

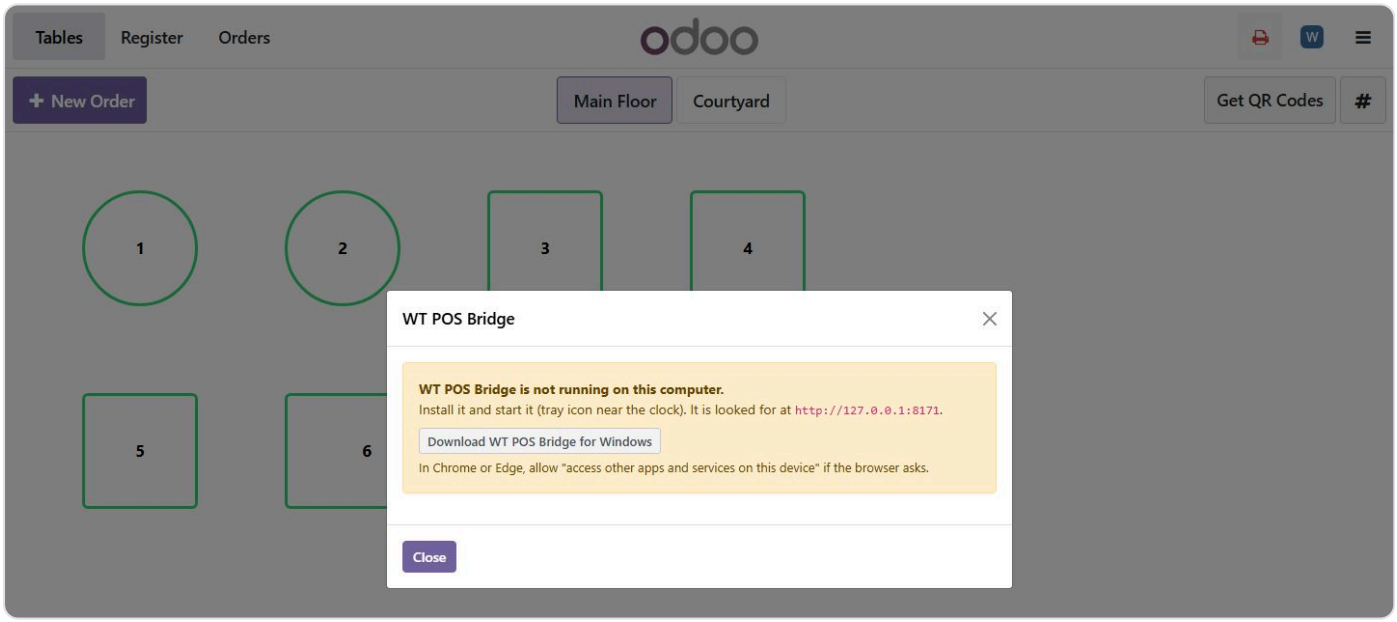

With the bridge on, a printer icon sits in the top bar of the till. Green means the agent answered, red that it did not. On the demo it is red because no agent runs on your computer.

3 The bridge dialog

POS HARDWARE BRIDGE

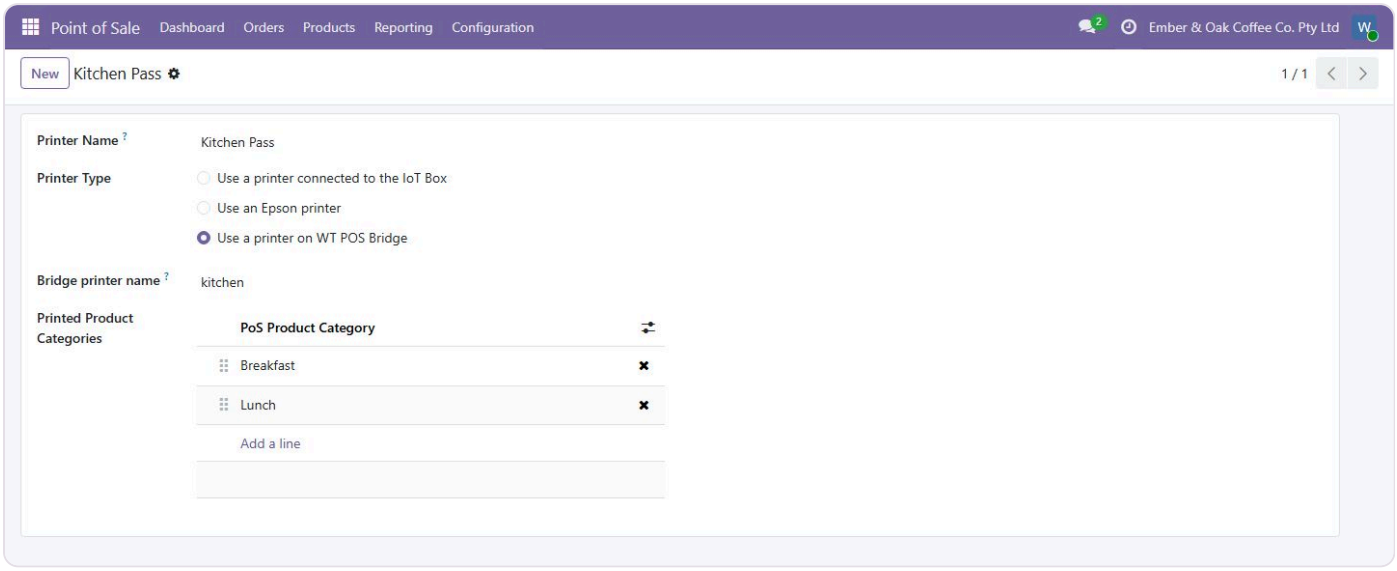

Click the icon. When the agent is missing it says so, offers the download and reminds you that Chrome or Edge may ask to allow access to other apps on this device. With the agent running the same dialog pairs and runs test prints.

4 Kitchen and bar printers

POS HARDWARE BRIDGE

Add a preparation printer with type **Use a printer on WT POS Bridge** and the printer name exactly as it is in the agent. On the demo, Kitchen Pass takes Breakfast and Lunch items and is linked to Cafe Counter.

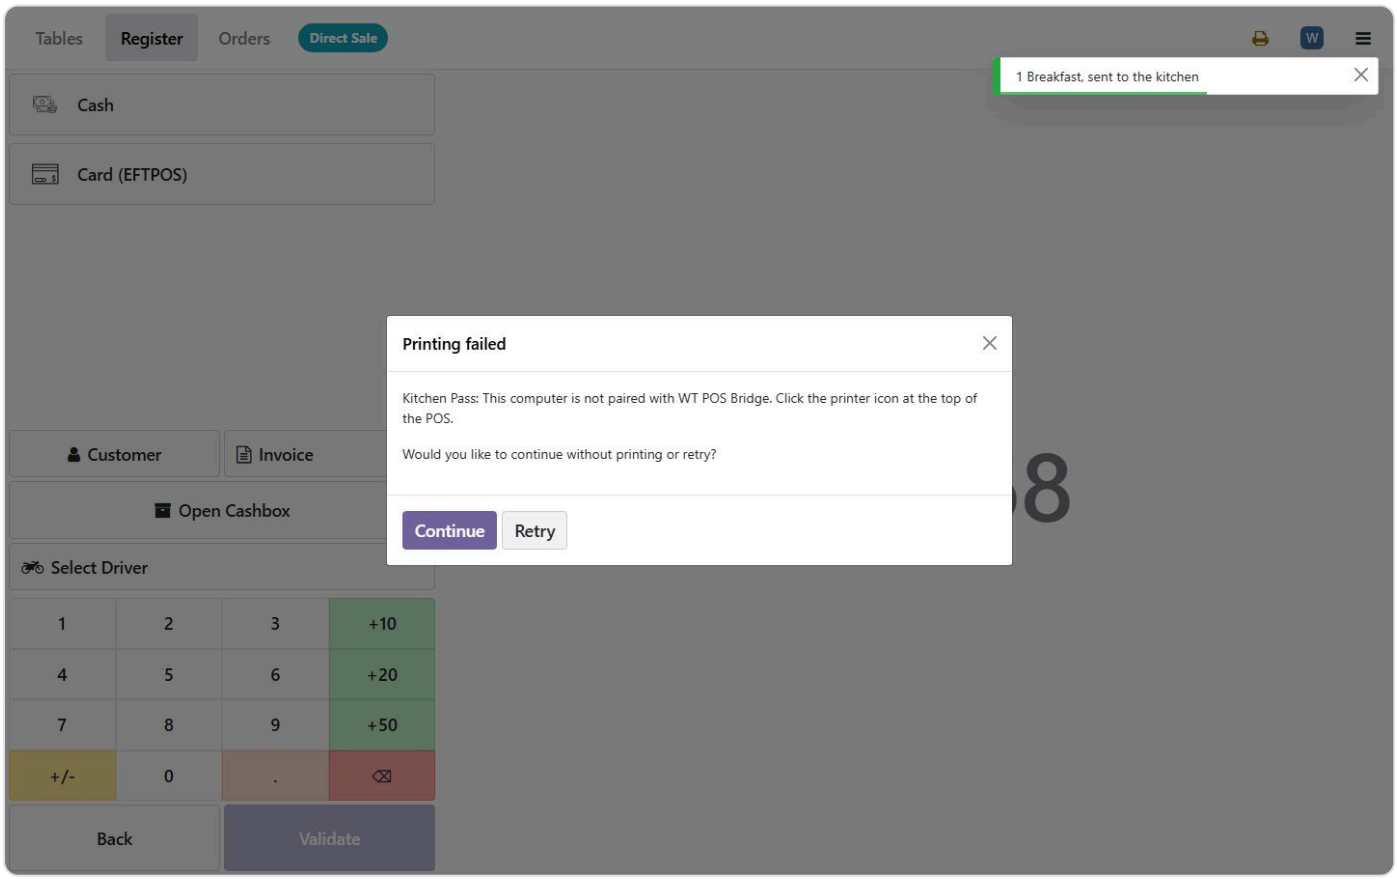

5 When a print cannot go out

POS HARDWARE BRIDGE

If the agent cannot be reached the till does not stop. A kitchen ticket shows Printing failed with Continue and Retry, and a receipt falls back to the browser print dialog when Browser print when the bridge is down is on.

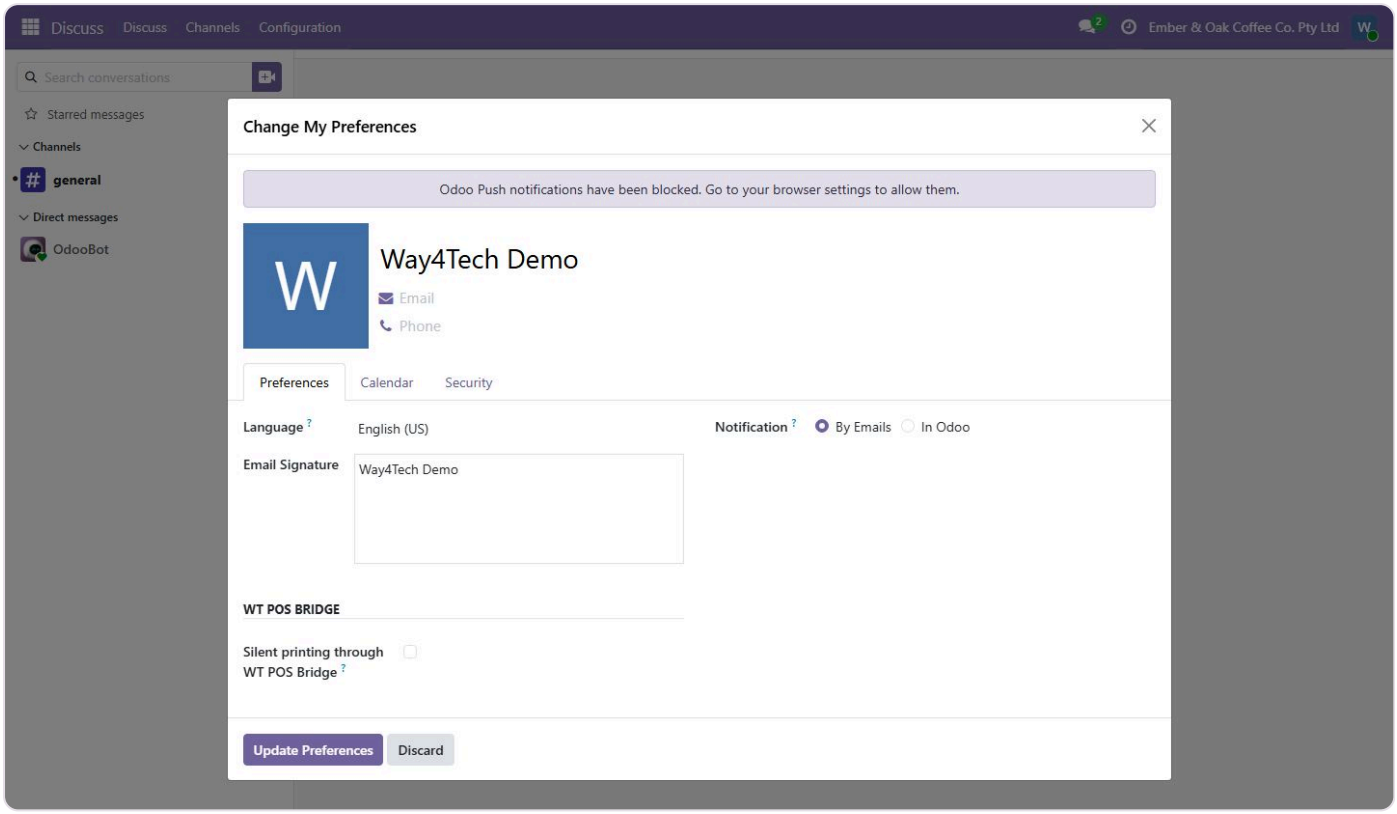

The message names the printer and tells the cashier where to click, so a shift lead can sort it without a call.

6 Silent printing from the back office

POS HARDWARE BRIDGE

Each user can turn on **Silent printing through WT POS Bridge** in their Preferences and name a Windows printer. Invoices, delivery slips and other PDF reports then go straight to that printer on their own PC instead of downloading. Pair this computer opens the same pairing screen.

7 The pole display

POS HARDWARE BRIDGE

The last line scanned and the order total, on a 2×20 customer display or the agent's on-screen viewer.

> The agent is a free Windows program. There is no Mac or Linux agent, and a tablet till cannot run it.

PART 5 Delivery orders and drivers

POS DELIVERY

A delivery order is an ordinary till order with a fee line and a driver. The add-on puts both on the till and keeps the totals per driver.

IN THIS PART YOU WILL LEARN

- Drivers, vehicles and which till offers them
- The Delivery button and the fee
- Picking the driver at payment and the driver on the receipt
- Orders and sales per driver, and the Driver Summary

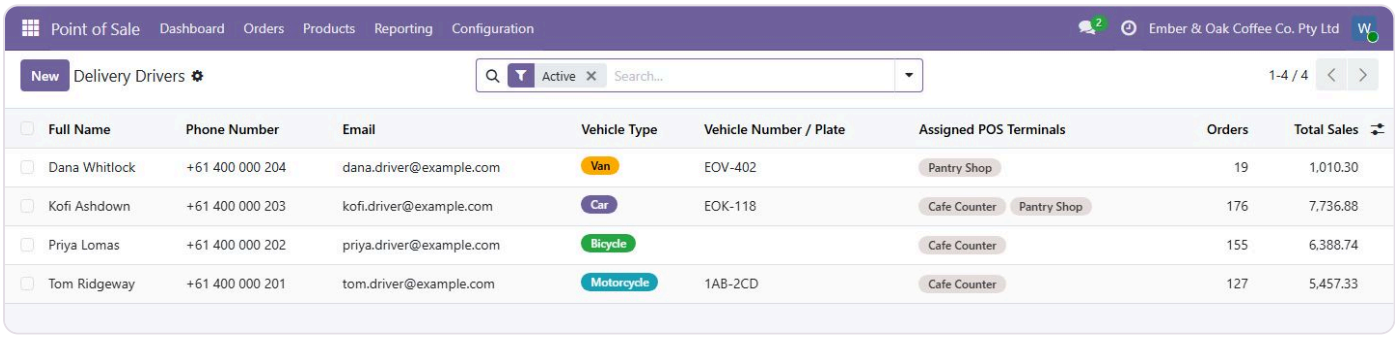

TRY IT YOURSELF ON THE DEMO

1. Open Point of Sale, Configuration, Delivery Drivers
2. Open Kofi Ashdown and click Orders
3. In the Cafe Counter till, start a New Order, add two coffees and press Delivery

1 Delivery Drivers

POS DELIVERY

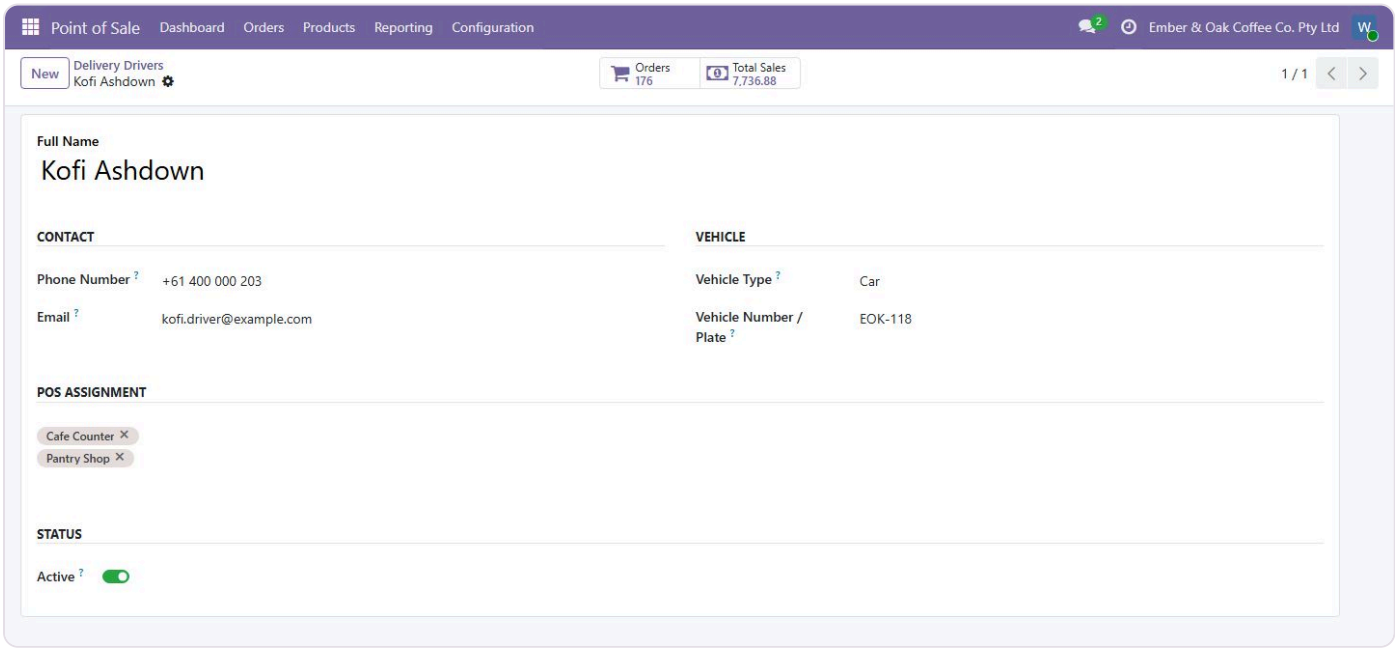

Point of Sale, Configuration, Delivery Drivers (managers). Name, phone, email, vehicle type (motorcycle, car, bicycle, van, other), plate and the tills each driver works. Filters for vehicle type, Has Orders and Archived; the list can be edited in place. The demo has four active drivers and one archived.

2 A driver

POS DELIVERY

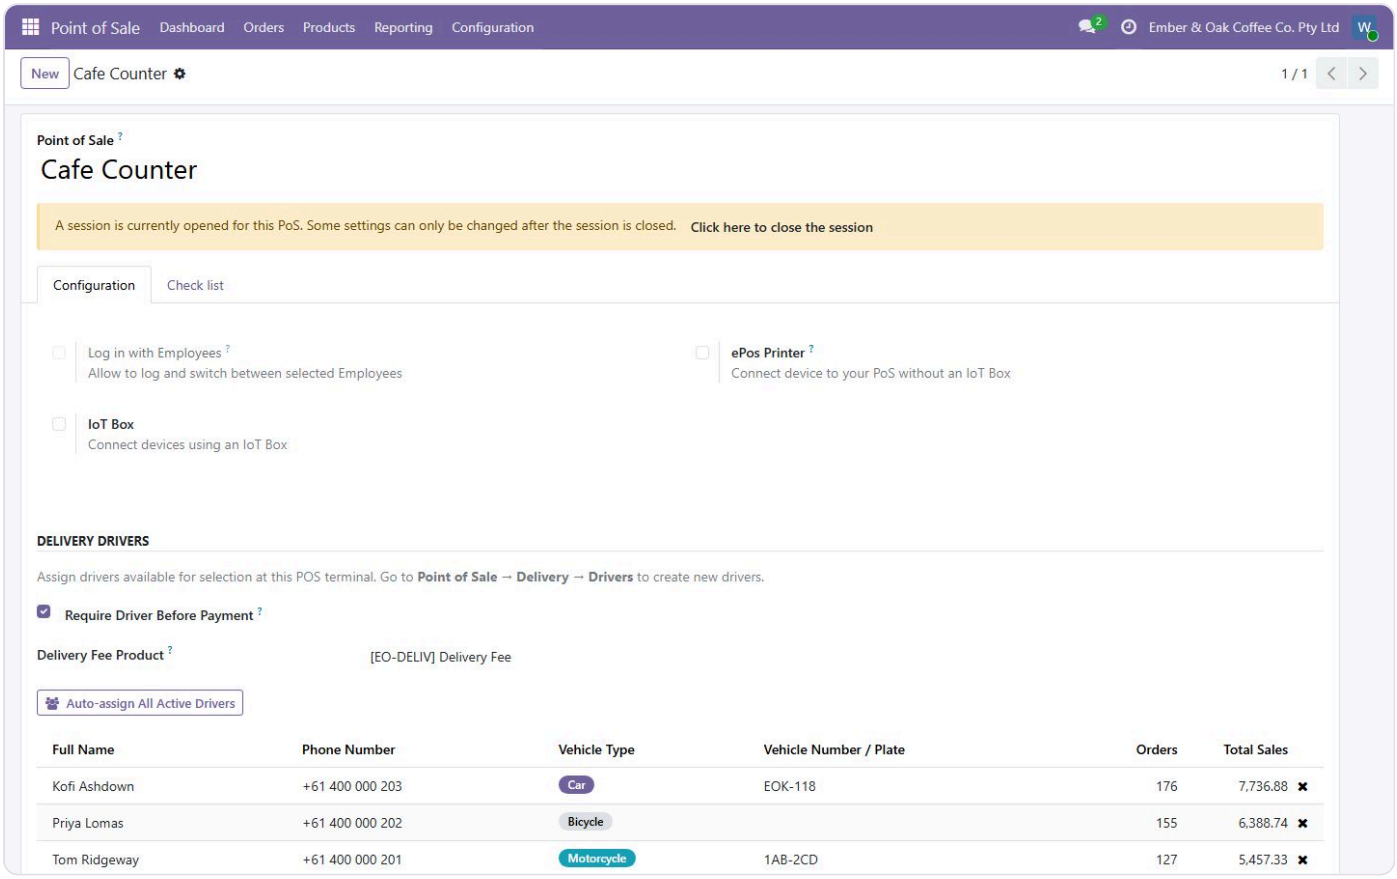

Two buttons at the top count the paid orders and the total sales for this driver. Archived drivers disappear from the till.

3 The till settings

POS DELIVERY

Open the till (Point of Sale, Configuration, Point of Sales). The Delivery Drivers section at the bottom has Require Driver Before Payment, the Delivery Fee Product and the drivers this till offers. Auto-assign All Active Drivers puts every active driver on the till in one click. Cafe Counter offers the motorcycle, bicycle and car; Pantry Shop the car and the van for hampers.

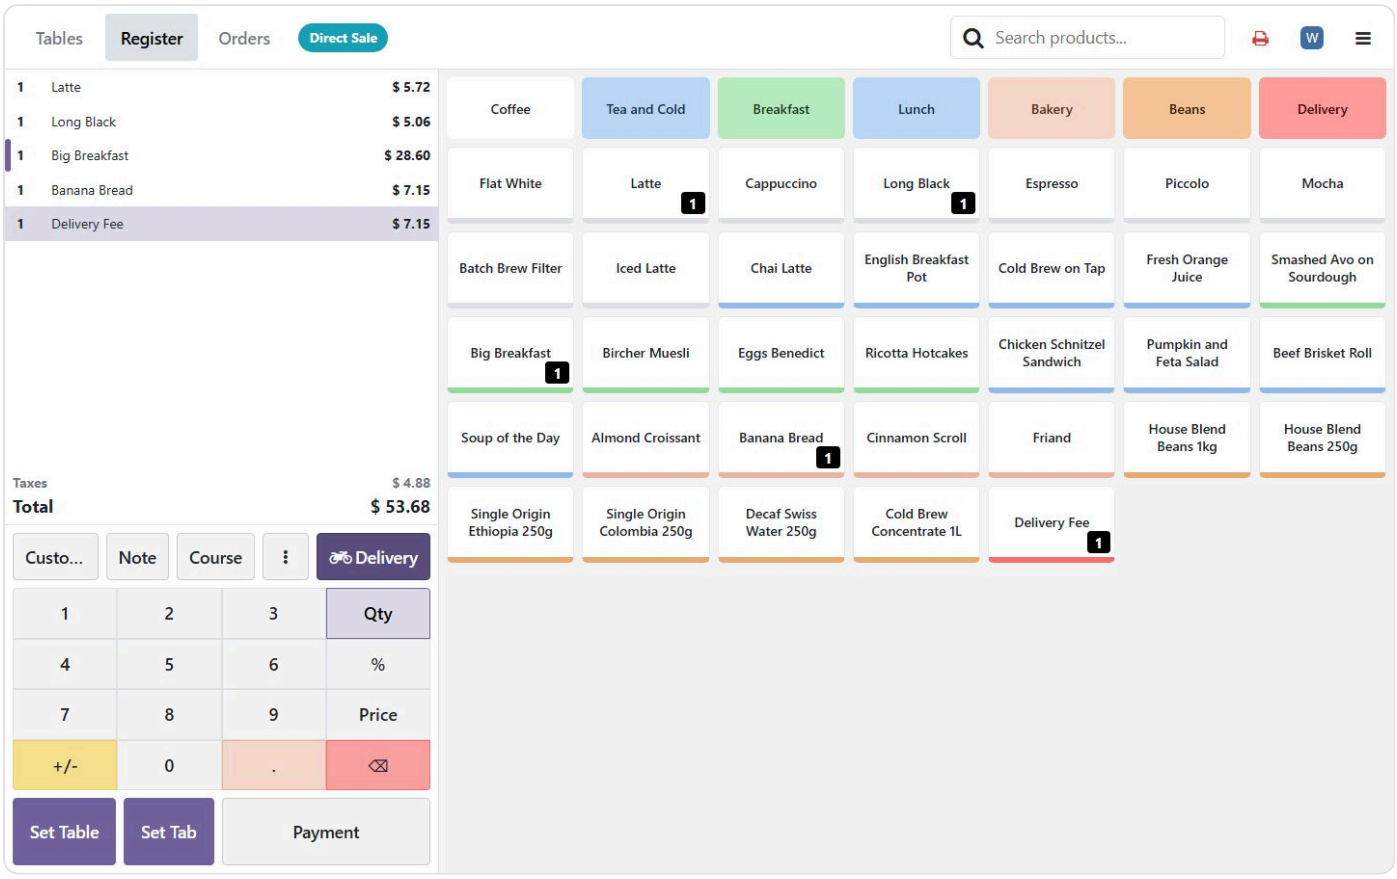

At the till

4 Press Delivery

POS DELIVERY

The Delivery button sits with the other order buttons and only shows when the till has drivers. Pressing it marks the order as a delivery and adds the fee line, here 6.50 plus GST. Press it again to take both off.

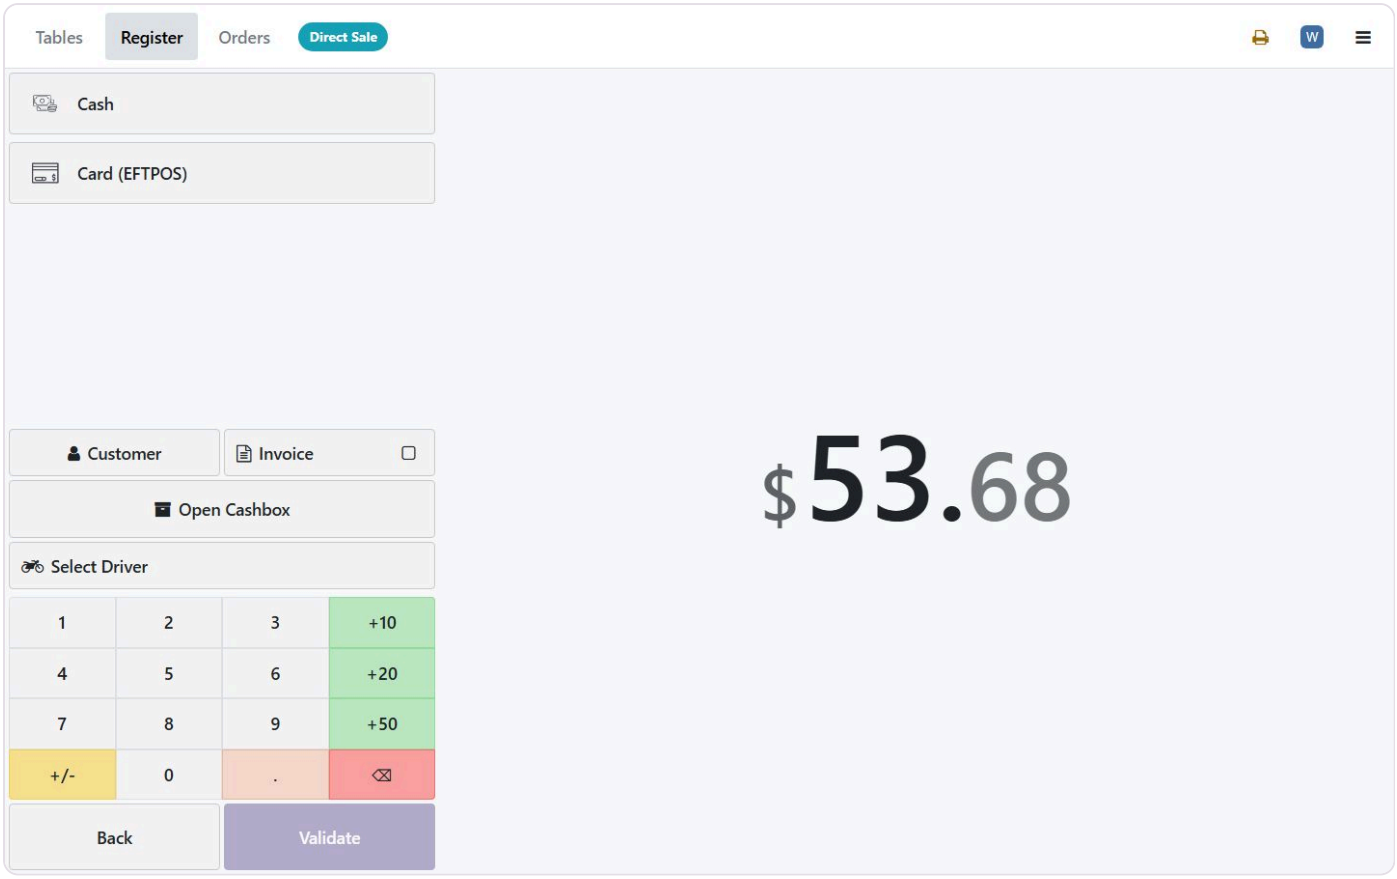

The fee product must be available in the till. If the till only shows some categories, put the fee in one of them, or the button marks the order but no fee is added.

5 Payment

POS DELIVERY

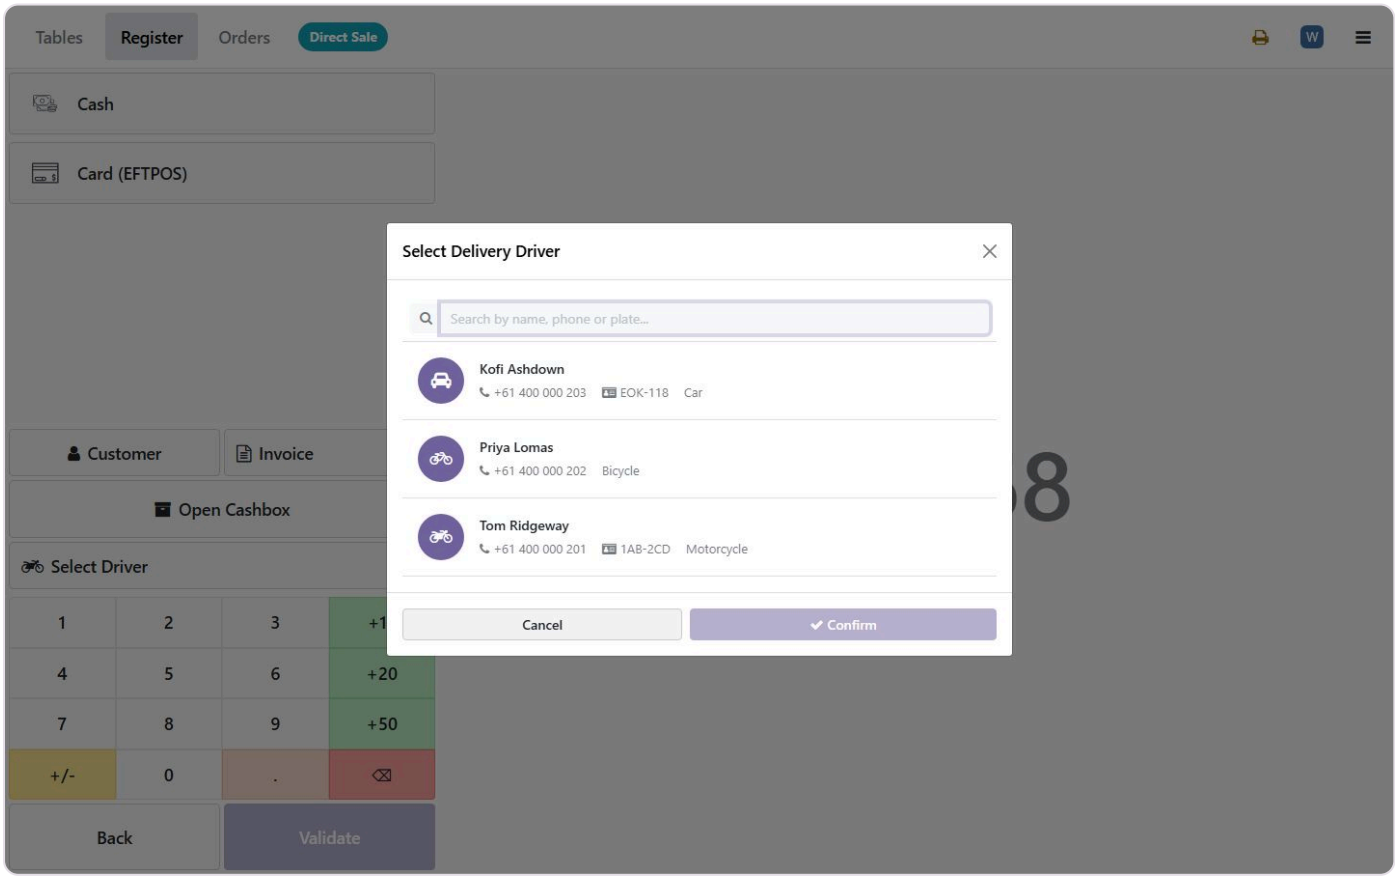

On the payment screen a Select Driver button appears under Customer and Invoice.

6 Pick the driver

POS DELIVERY

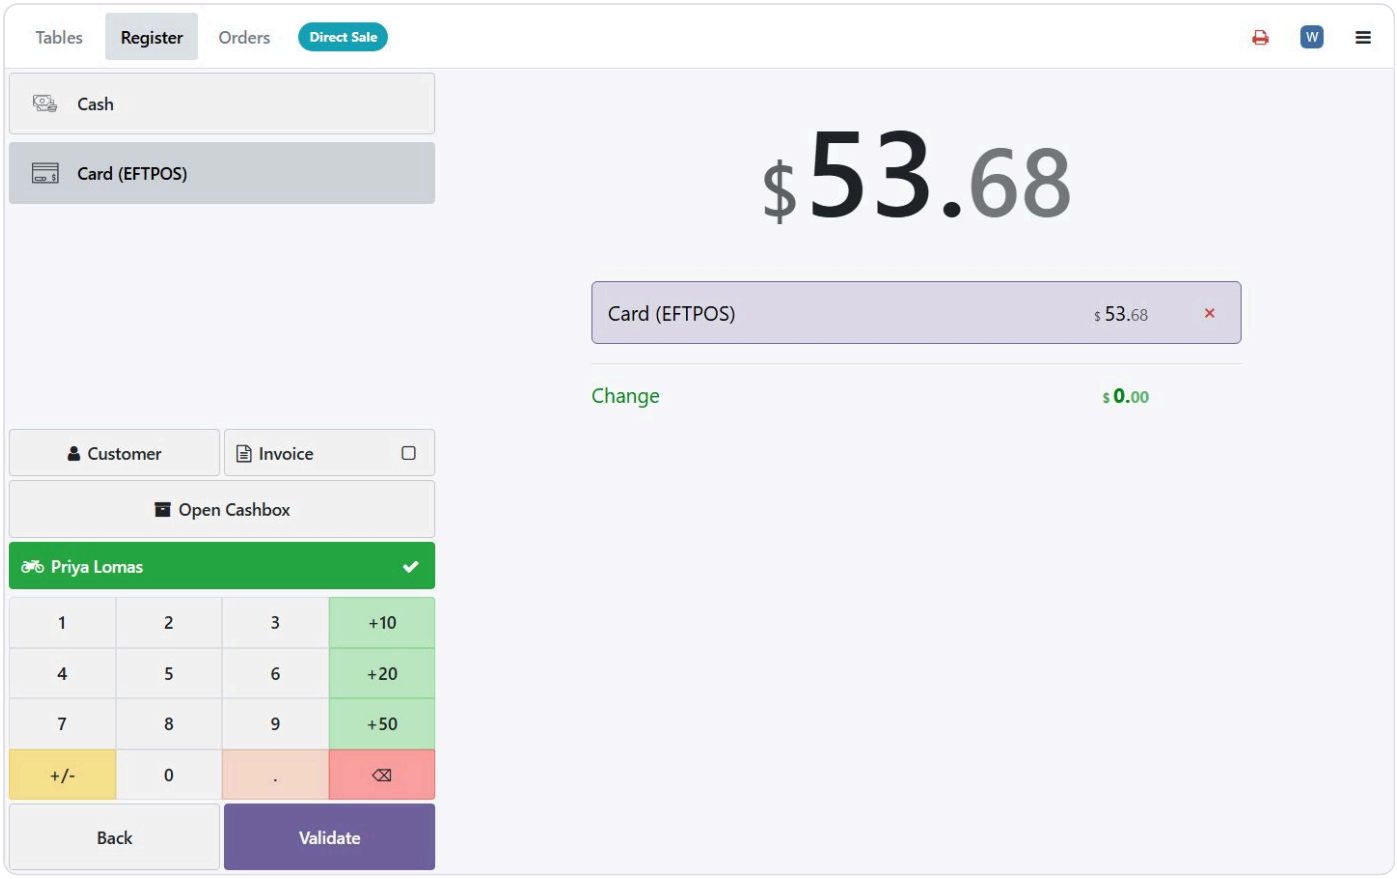

The list shows this till's active drivers with phone, plate and vehicle, and searches by name, phone or plate. Pick one and Confirm.

7 The driver is on the order

POS DELIVERY

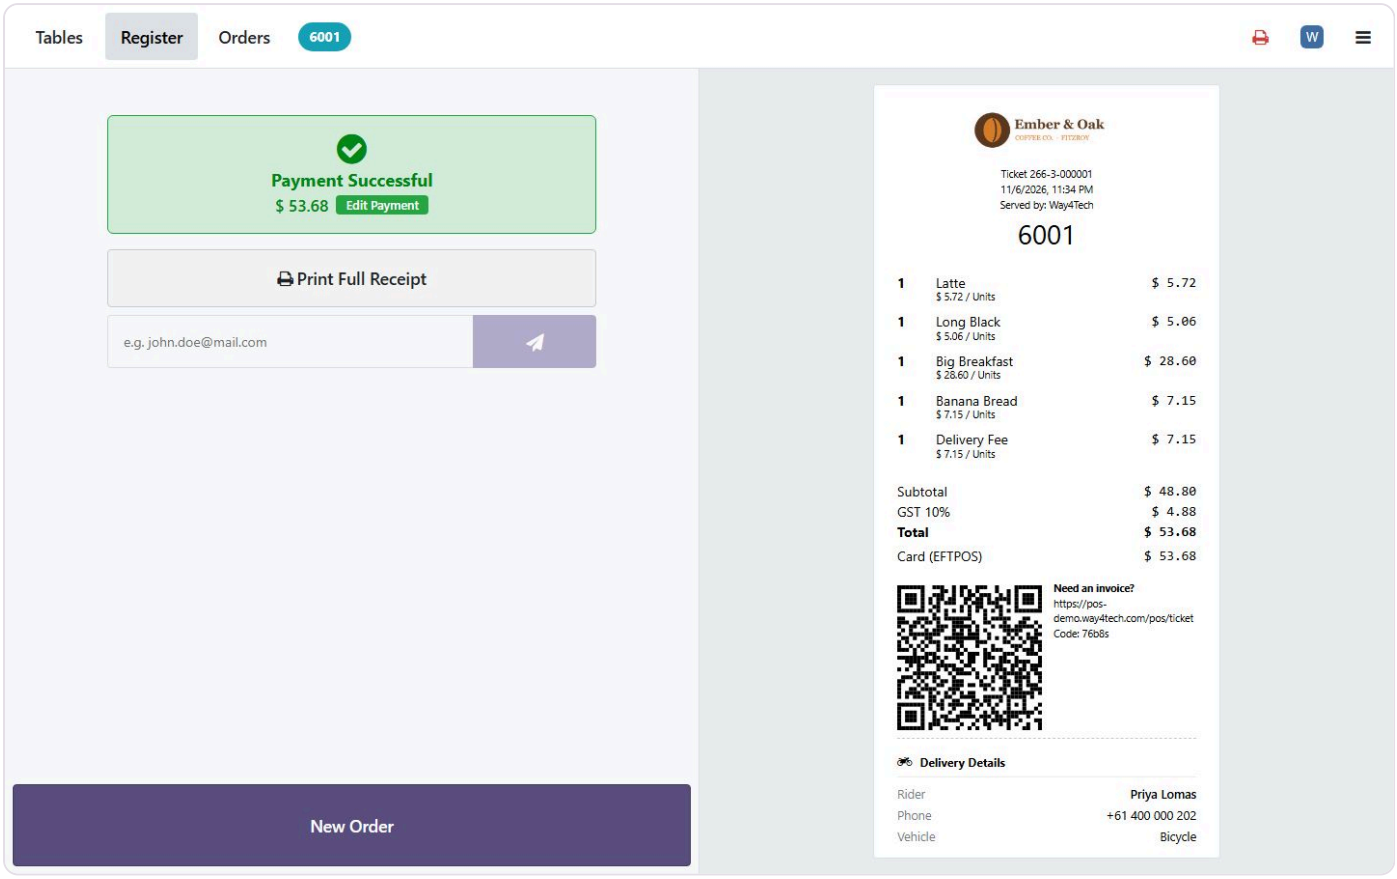

The button turns green with the driver's name. With Require Driver Before Payment on, Validate refuses a delivery order that has no driver.

8 The receipt

POS DELIVERY

Delivery Details at the foot of the receipt: rider, phone, vehicle and plate, so the kitchen and the customer both know who is coming.

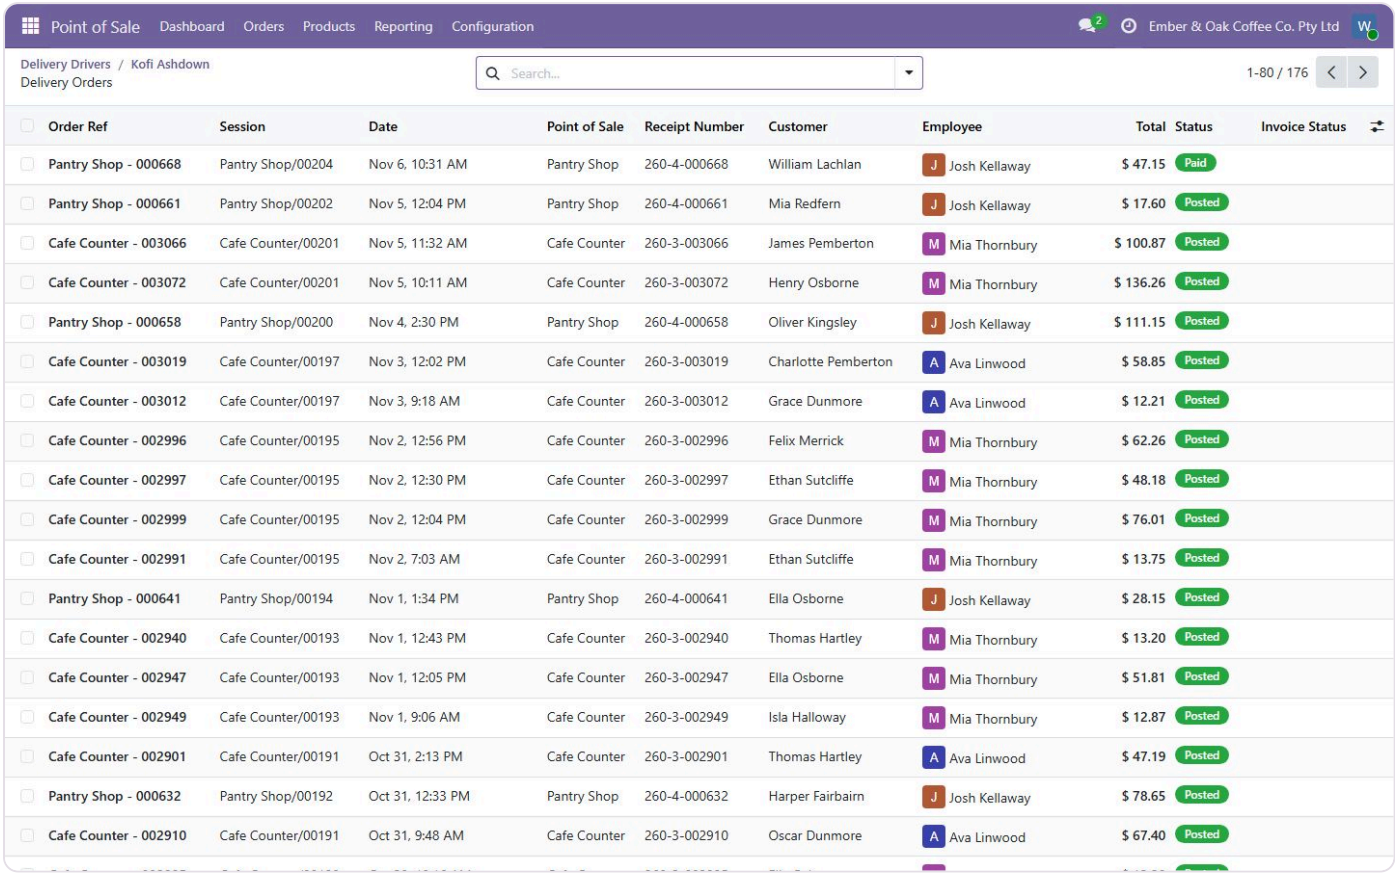

After the shift

9 Orders per driver

POS DELIVERY

The Orders button on a driver opens every till order they took, with session, customer and total.

The order form in the back office does not show the driver field, and the driver counts only refresh when the driver's tills change. Use the driver's Orders button or the Driver Summary for the figures.

PART 6 The dining room and the sittings

TABLE RESERVATION

Before a table can be booked, the add-on needs to know what tables there are, where they are, and when the restaurant takes bookings and on what rules.

IN THIS PART YOU WILL LEARN

- Zones and why they matter to the engine
- Tables: seats, smallest party, combining
- Sittings: hours, slots, how long a table is held, pacing the kitchen
- How the engine picks tables

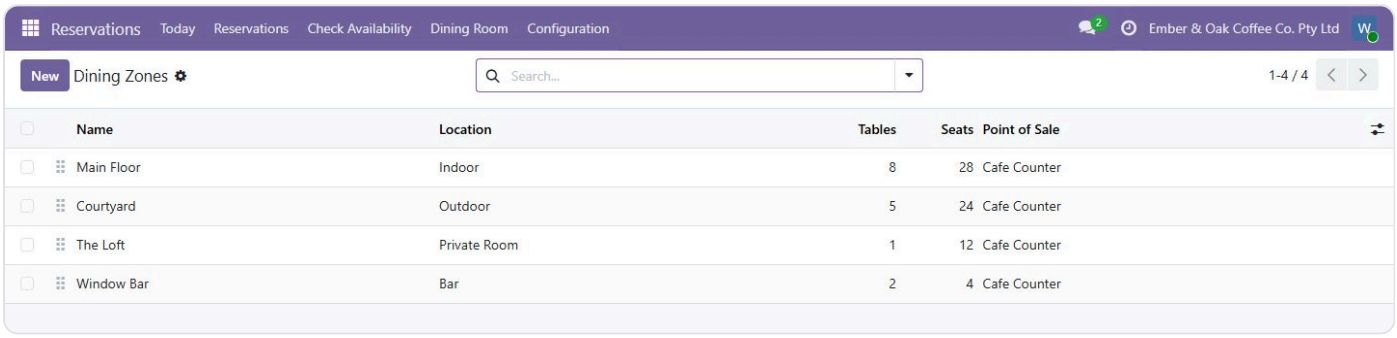

TRY IT YOURSELF ON THE DEMO

1. Open Reservations, Dining Room, Zones, then Main Floor
2. Open Configuration, Sittings, then Lunch
3. Open Friday Supper Club and compare its rules

1 Zones

TABLE RESERVATION

Reservations, Dining Room, Zones. A zone is a part of the room: Main Floor (indoor), Courtyard (outdoor), The Loft (private room) and Window Bar (bar). Each shows its tables and seats and can be tied to the till that rings up its bills.

Name	Location	Tables	Seats	Point of Sale
Main Floor	Indoor	8	28	Cafe Counter
Courtyard	Outdoor	5	24	Cafe Counter
The Loft	Private Room	1	12	Cafe Counter
Window Bar	Bar	2	4	Cafe Counter

2 A zone

TABLE RESERVATION

The tables are edited right on the zone. The location is shown to the guest so they know whether they are booking inside or out.

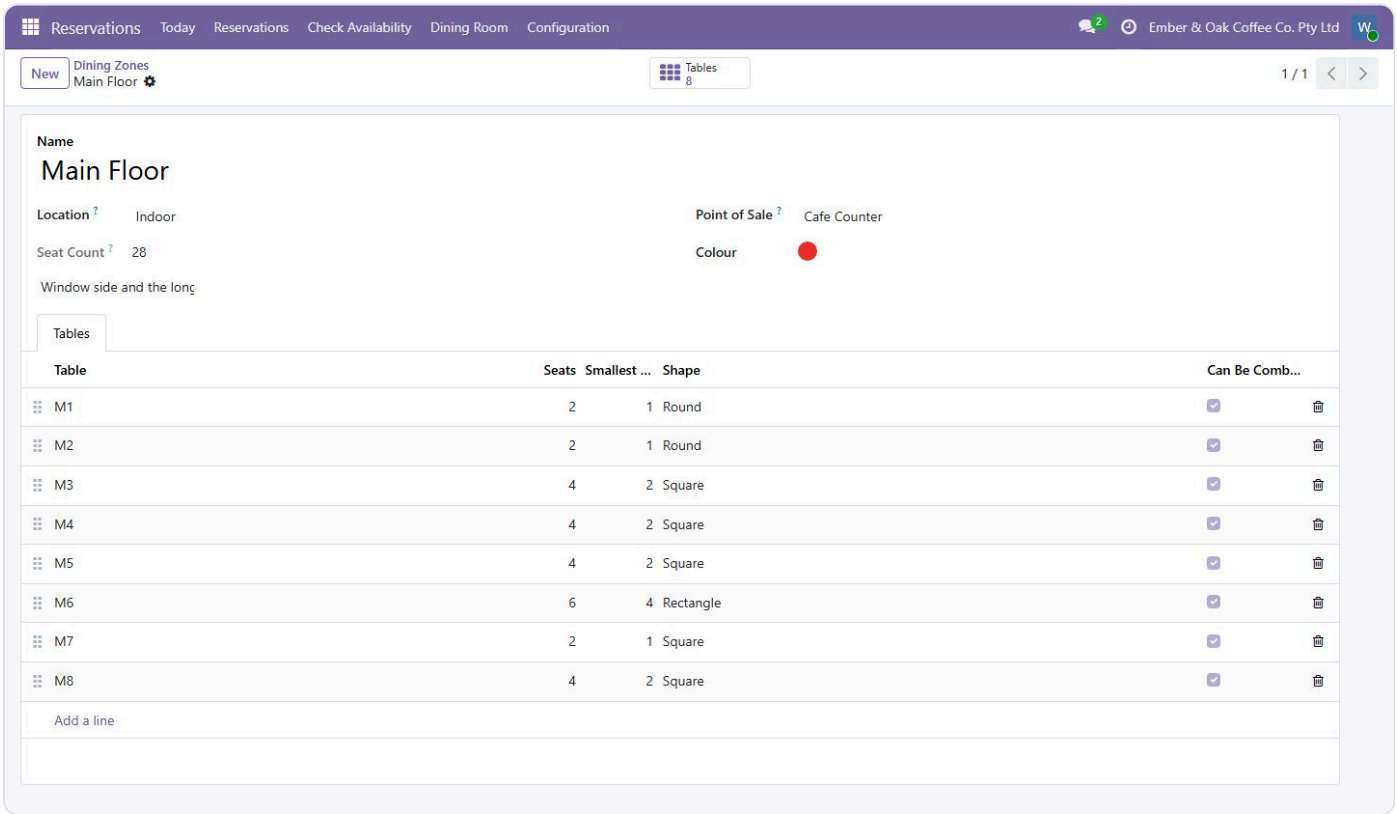

Table	Seats	Smallest ...	Shape	Can Be Comb...
M1	2	1	Round	
M2	2	1	Round	
M3	4	2	Square	
M4	4	2	Square	
M5	4	2	Square	
M6	6	4	Rectangle	
M7	2	1	Square	
M8	4	2	Square	

Add a line

3 Tables

TABLE RESERVATION

Dining Room, Tables. **Seats** is what the engine books against. **Smallest Party** keeps a large table away from a couple while a smaller one is free; it is still used rather than turning the booking away. **Can Be Combined** lets a table be pushed together with others in the same zone. The booth, the bar stools and the Loft table cannot.

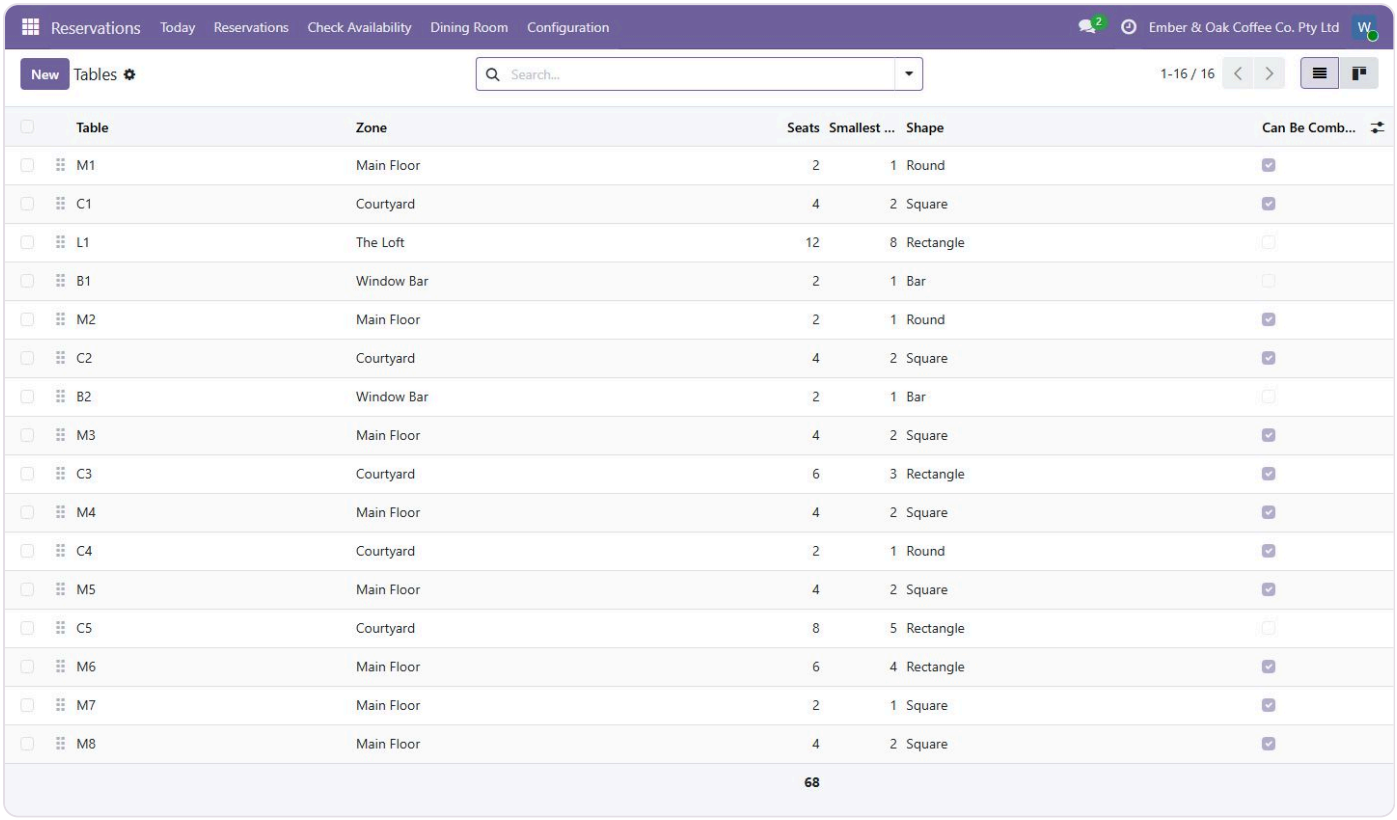

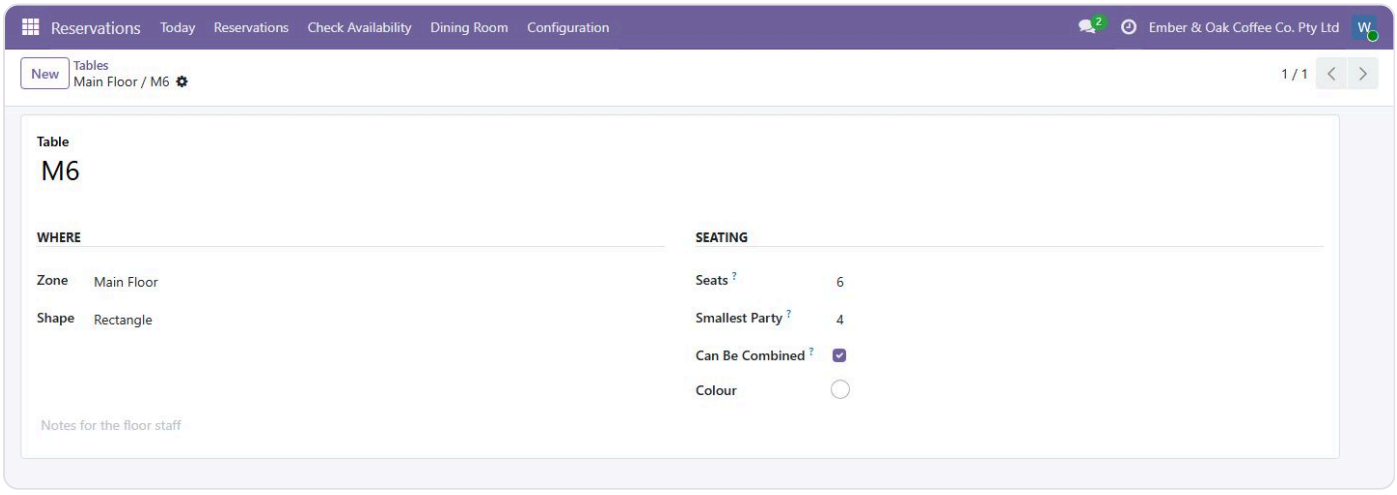

Table	Zone	Seats	Smallest ...	Shape	Can Be Comb...
M1	Main Floor	2	1	Round	☑
C1	Courtyard	4	2	Square	☑
L1	The Loft	12	8	Rectangle	☐
B1	Window Bar	2	1	Bar	☐
M2	Main Floor	2	1	Round	☑
C2	Courtyard	4	2	Square	☑

4 A table

TABLE RESERVATION

M6: six seats, rectangle, parties of four or more, can be combined.

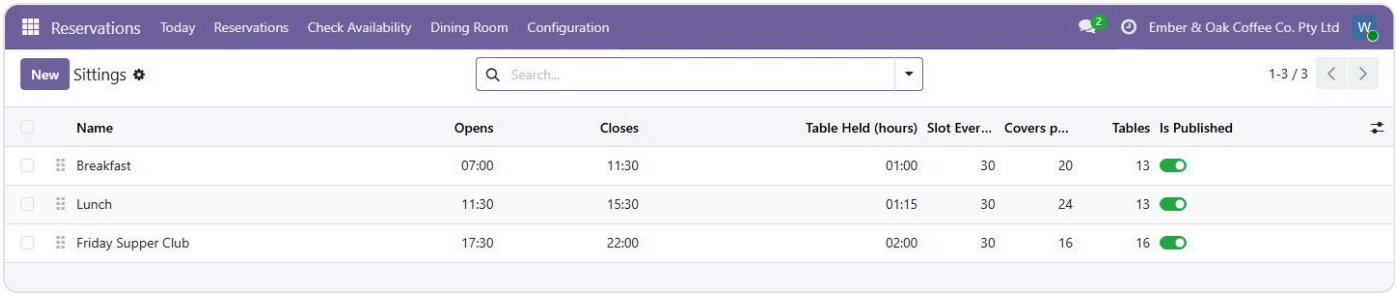

> The kanban view of Tables shows an error in this release (the card reads a field it does not load). Use the list.

5 Sittings

TABLE RESERVATION

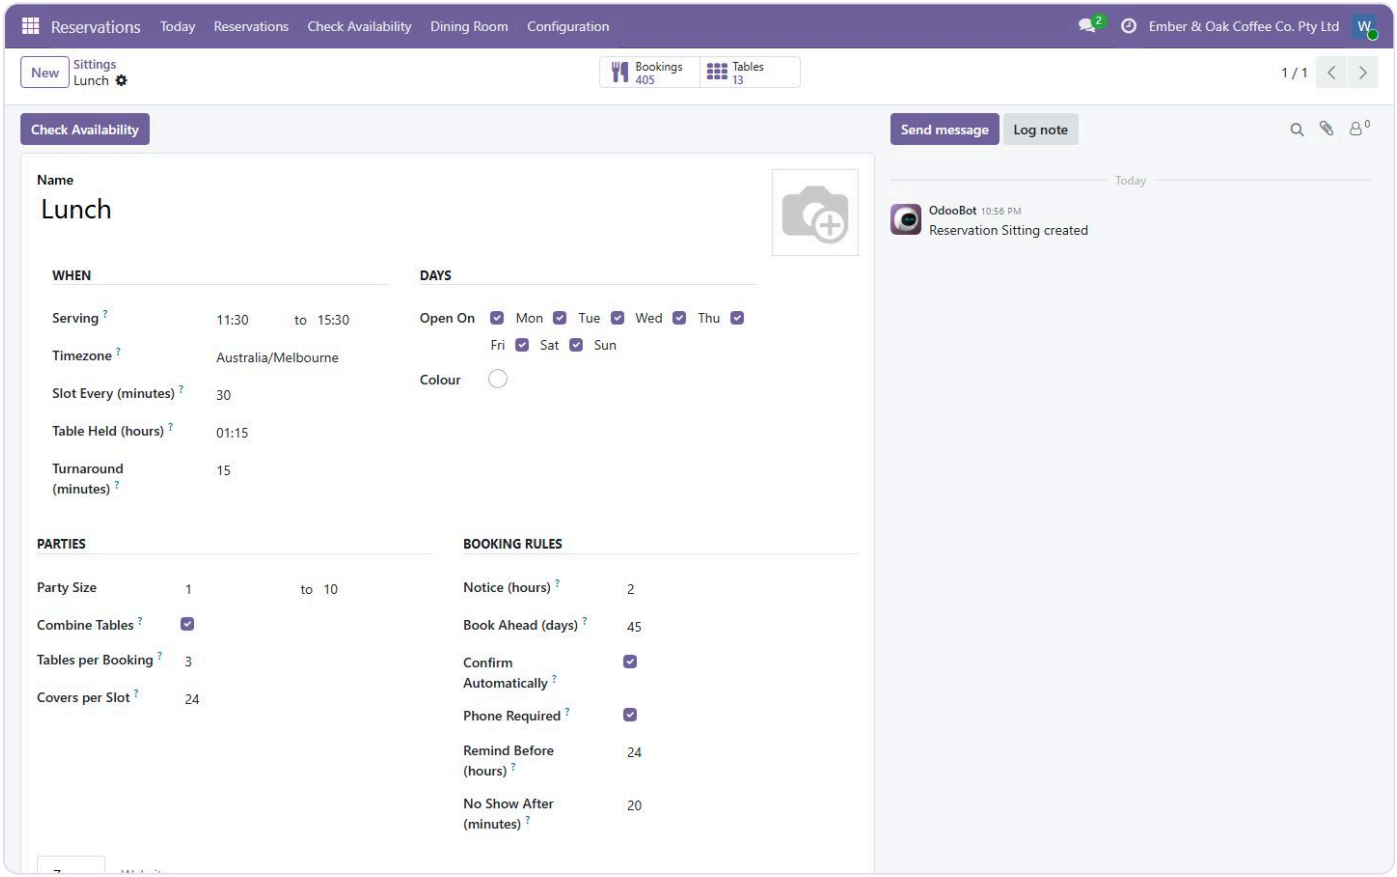

Configuration, Sittings. A sitting is a service with its own rules: Breakfast, Lunch and the Friday Supper Club on Friday and Saturday nights. Each has a Published switch for the website.

6 A sitting

TABLE RESERVATION

Lunch: 11:30 to 15:30 in Melbourne time, a slot every 30 minutes, the table held for 1 h 15, 15 minutes turnaround, 24 covers per slot, parties of 1 to 10, combining up to three tables, 2 hours notice, bookings 45 days ahead, confirmed automatically, phone required, a reminder 24 hours before, and a no show after 20 minutes.

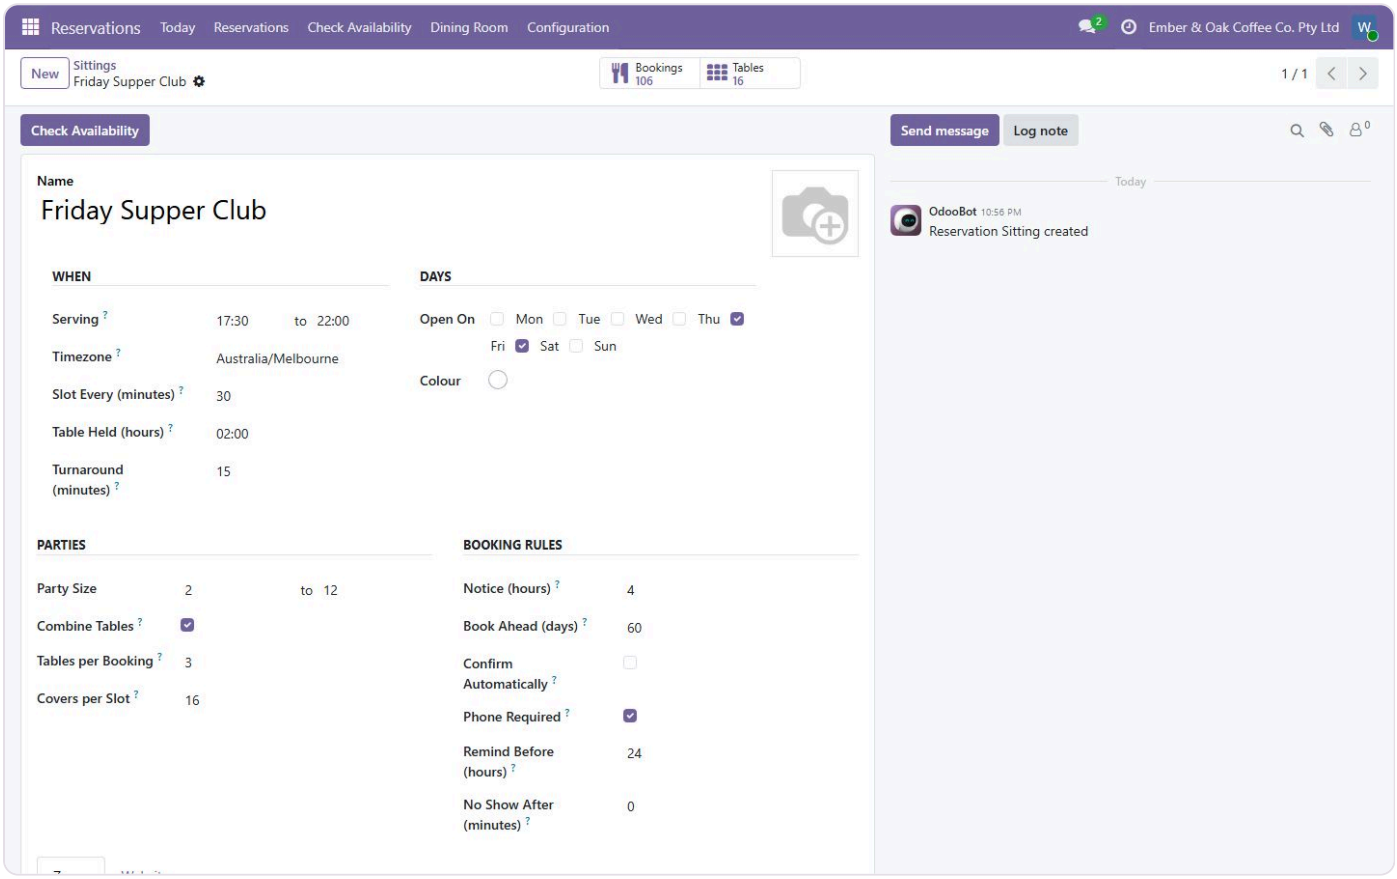

FIELD	WHAT IT MEANS
Serving, Timezone	Opening and the time the table must be free again, read in the restaurant's own zone. The last slot is the closing time less the time held.
Slot Every	How far apart the times offered are.
Table Held, Turnaround	How long the party has the table, and the gap kept before the next party on it.
Covers per Slot	The most guests arriving in one slot, whatever tables are free. Zero is no limit. This paces the kitchen.
Party Size, Combine Tables, Tables per Booking	Who can book online, and whether a big party may be seated across tables.

Notice, Book Ahead	How close to now and how far ahead the website takes bookings.
Confirm Automatically	Website bookings land Confirmed. Off, they land Pending for a call back.
Phone Required	Ask for a phone number on the website form.
Remind Before	Hours before the booking to send the reminder email. Zero turns it off.
No Show After	Minutes after the time to mark an unarrived booking as a no show. Zero leaves it to the floor.

7 A sitting that confirms by phone

TABLE RESERVATION

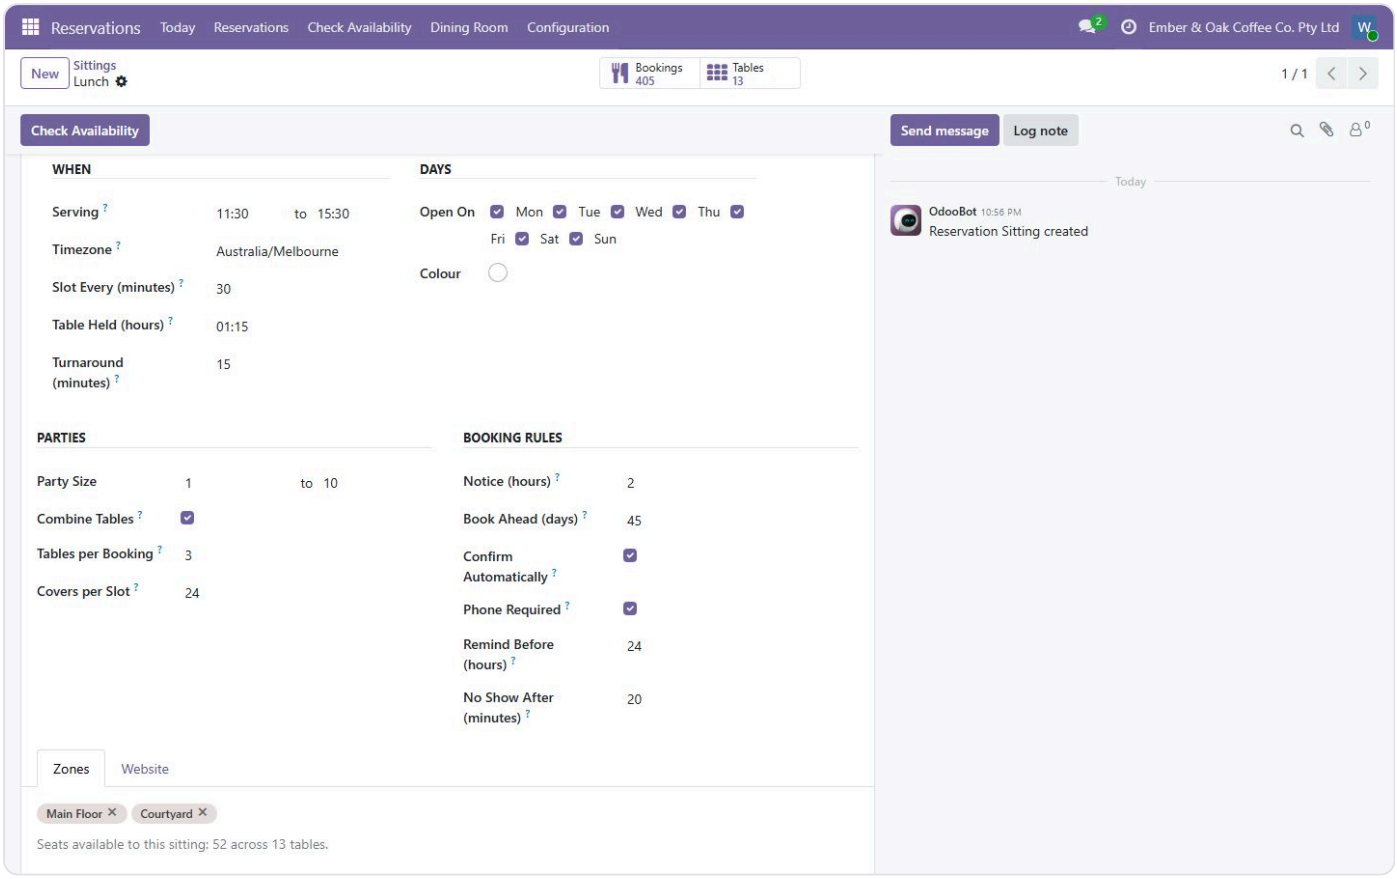

The Supper Club runs Friday and Saturday only, holds the table two hours, takes 16 covers a slot, is not confirmed automatically and never marks no shows on its own.

8 Zones and website text

TABLE RESERVATION

The Zones tab limits where a sitting may seat; empty means every zone. The Website tab holds the text shown above the booking form. Breakfast and Lunch seat inside and in the Courtyard, the Supper Club anywhere.

HOW IT WORKS

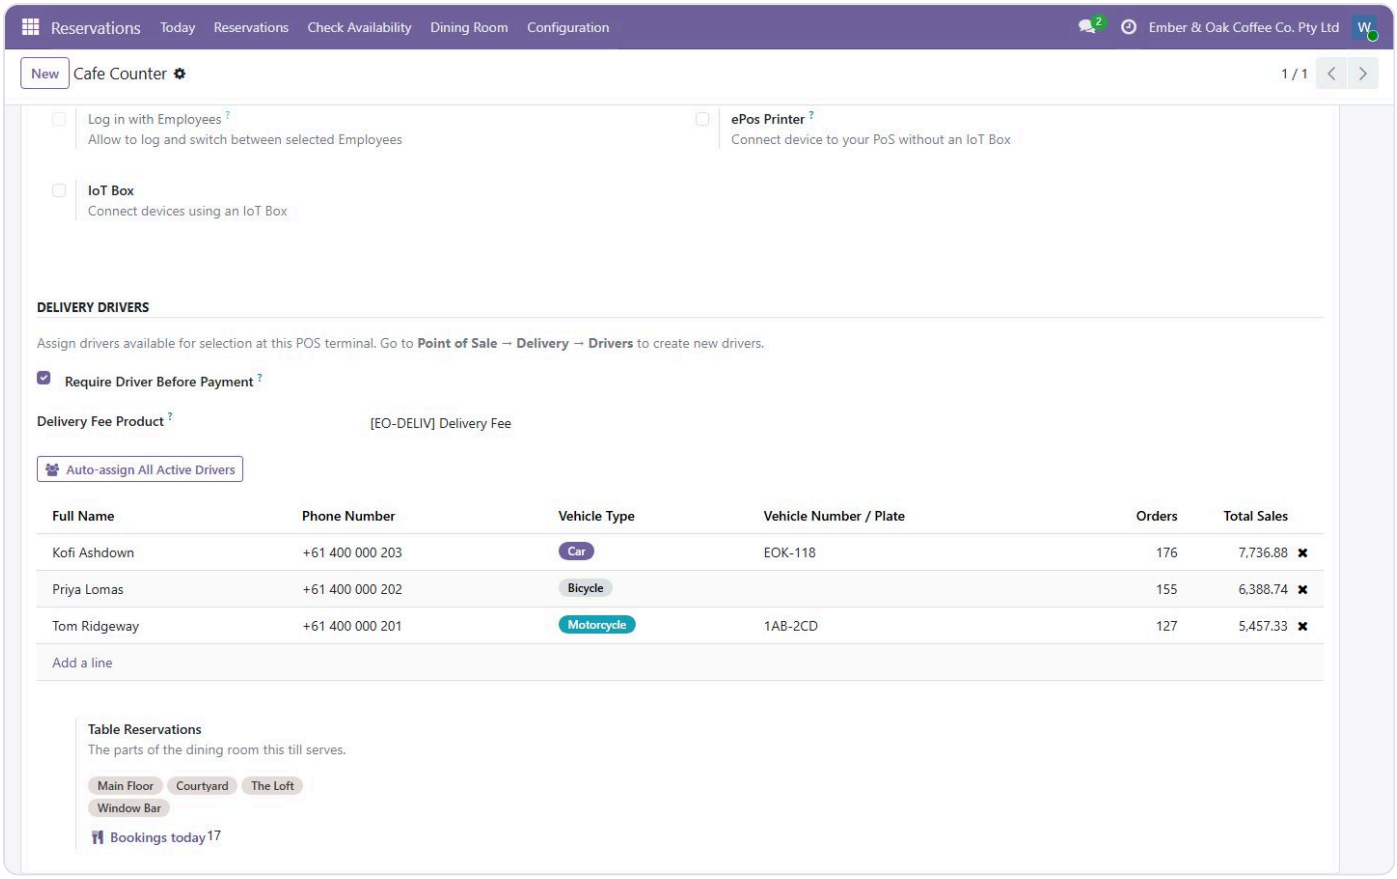

How the engine picks a table

For a party at a time, the engine finds every table that is free for the whole time held, plus turnaround. It takes the smallest single table that fits. If none fits and combining is allowed, it tries sets of tables **inside one zone** and takes the set that wastes the fewest seats, up to the limit per booking. It counts the covers already arriving in that slot against the kitchen cap. While it writes, it holds the sitting so two guests clicking the last table at once cannot both be told yes, and a check in the database refuses any table held by two live bookings at the same time, whether the booking came from the website, the host, an import or a script.

9 From the till

TABLE RESERVATION

On the till form the Table Reservations box lists the zones it serves and a Bookings today button with tonight's count.

PART 7 Taking and running the bookings

TABLE RESERVATION

The host's day: the phone rings, a party walks in, a table is late. Everything happens on the booking and is kept in its chatter.

IN THIS PART YOU WILL LEARN

- The Today view
- Taking a booking from the phone with Check Availability
- Confirm, seat, no show, cancel
- The calendar, pivot and graph
- The printed service sheet

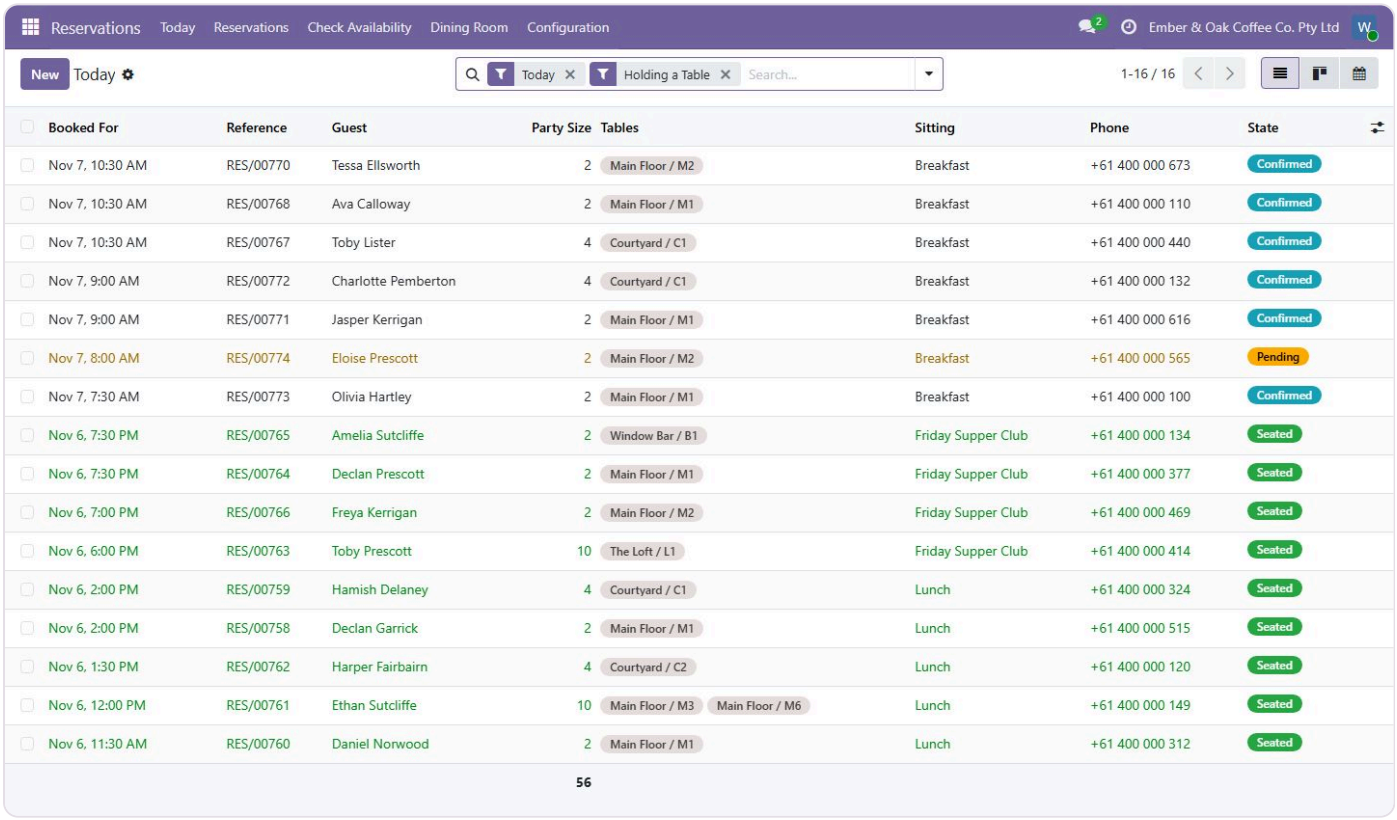

TRY IT YOURSELF ON THE DEMO

1. Open Reservations, Today
2. Open Check Availability and set the party to 6
3. Open the Reservations calendar in week view

1 Today

TABLE RESERVATION

Reservations, Today opens on the day's parties in the order they are due, filtered to bookings that still hold a table. Seated ones show in green.

2 Today as cards

TABLE RESERVATION

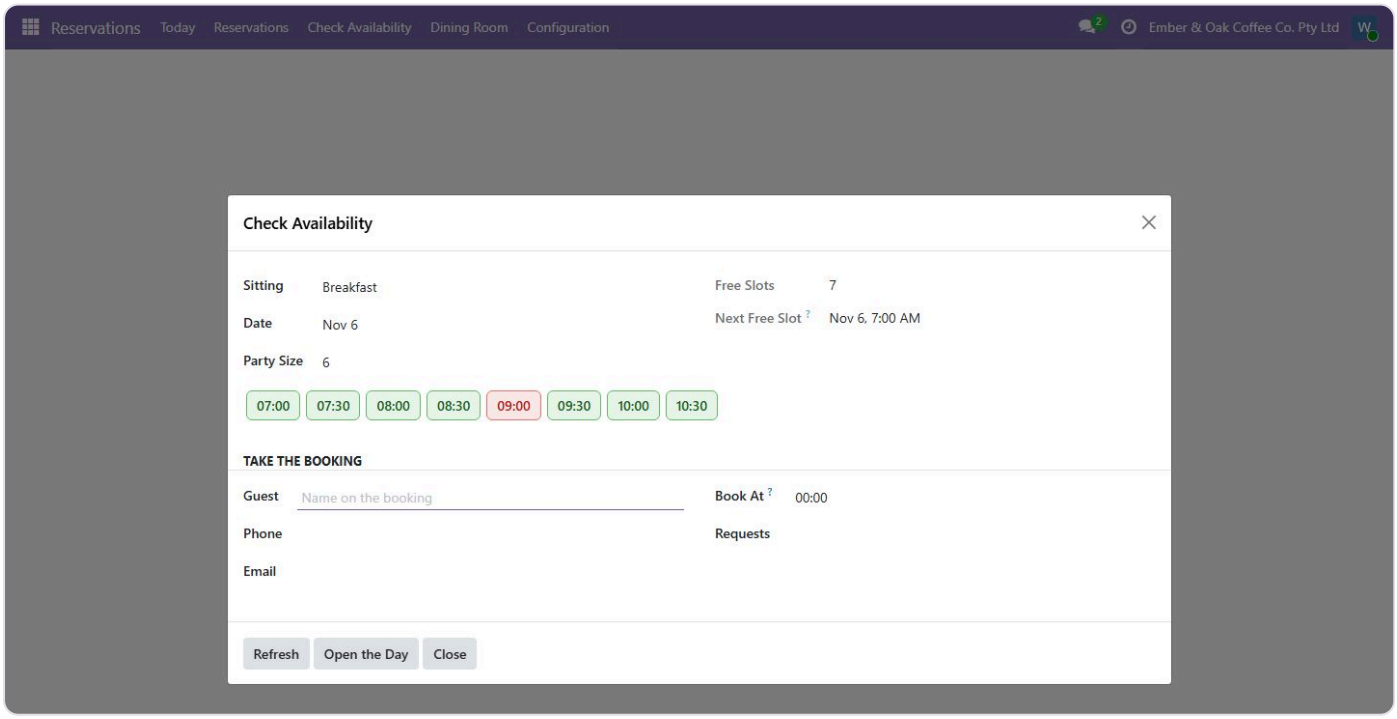

The same bookings by state: Confirmed, Pending, Seated.

3 Check Availability

TABLE RESERVATION

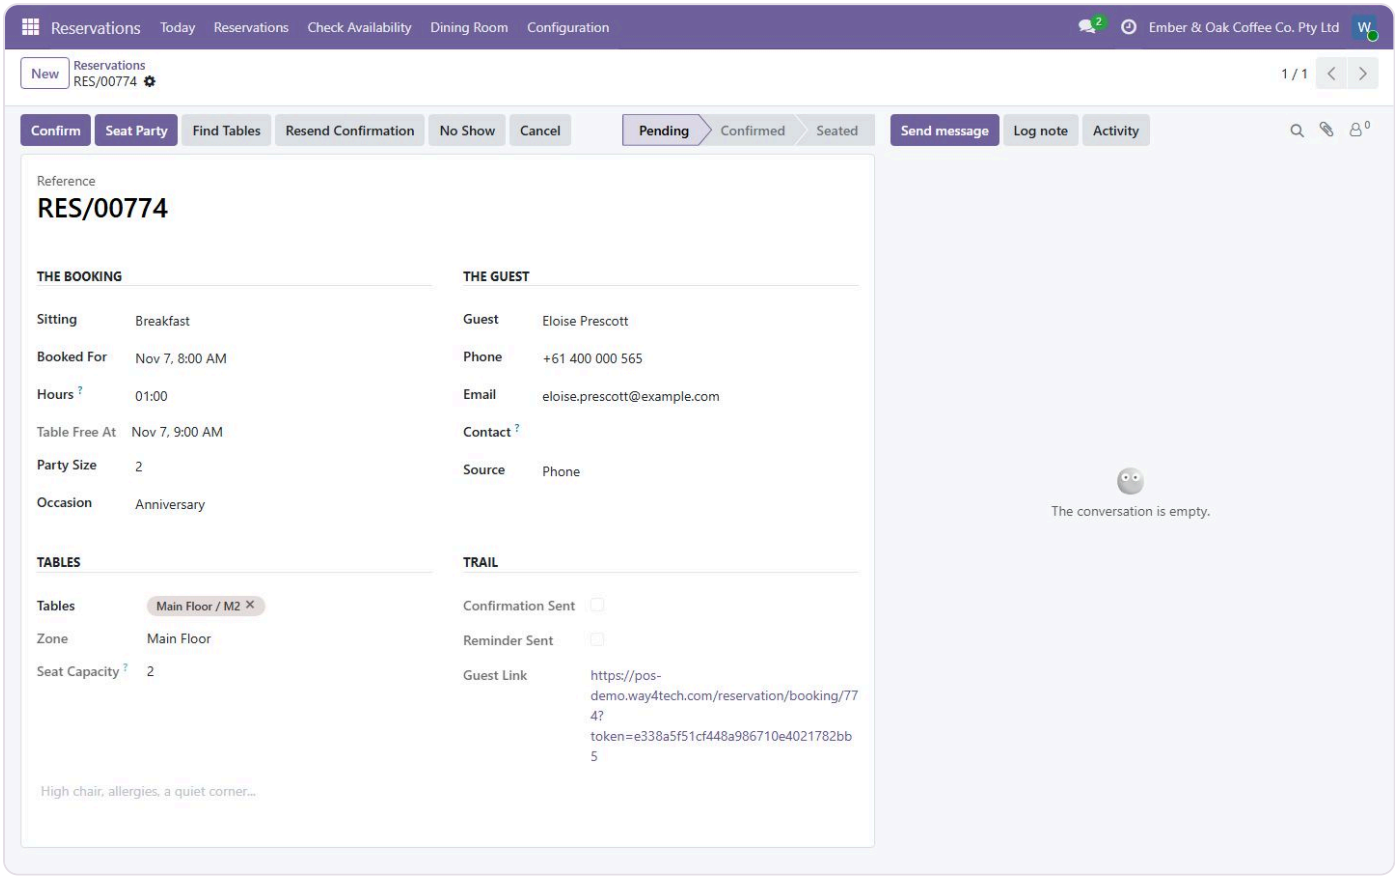

Pick the sitting, the date and the party size. Every slot shows green when free and struck when not, with the free slot count and the next free slot. Fill in the guest, pick the time and the booking is taken from the dialog. Open the Day jumps to that day's bookings.

4 A pending booking

TABLE RESERVATION

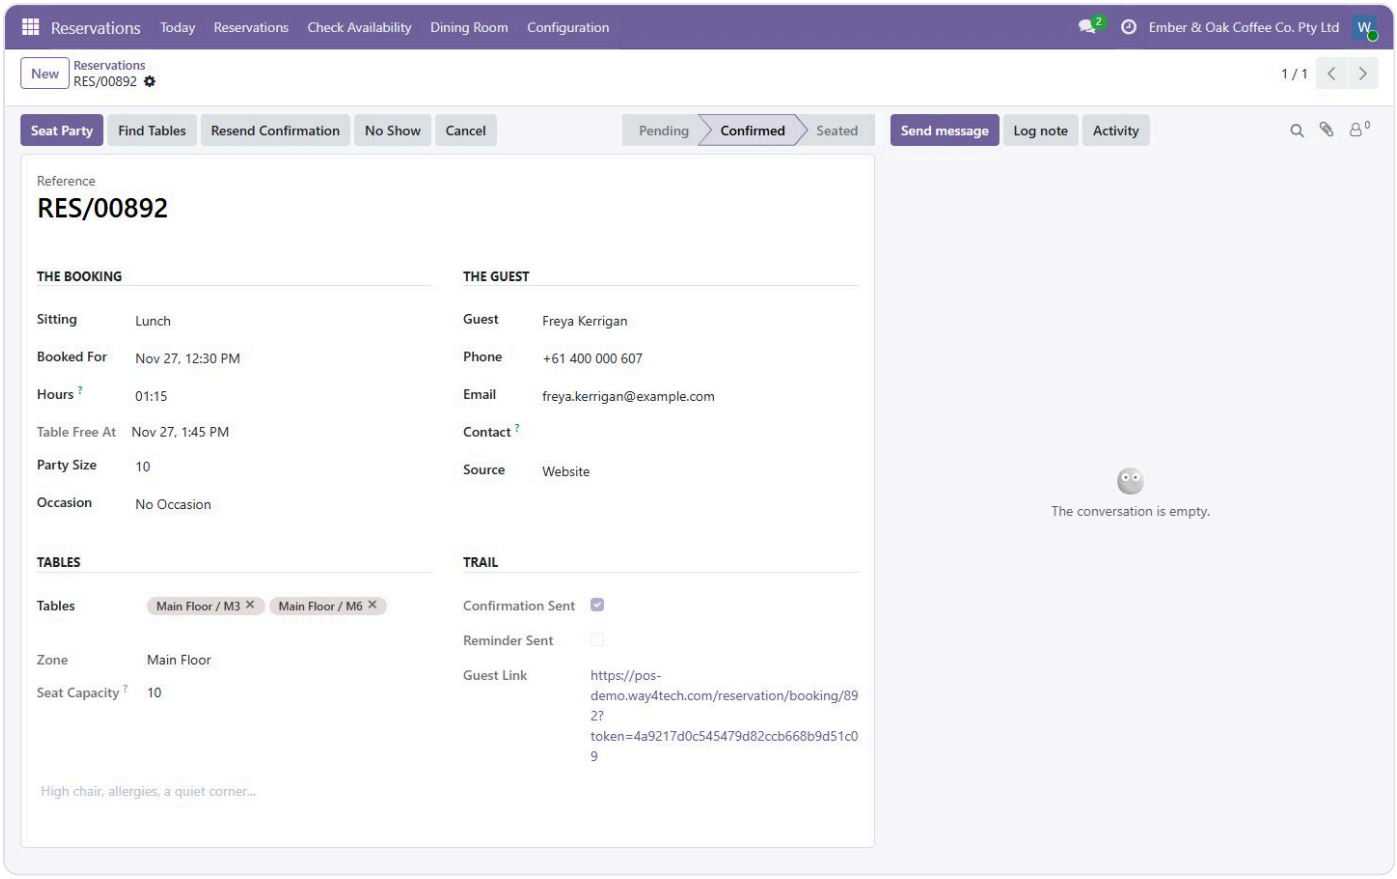

Reference, sitting, the time booked for, hours held and when the table is free again, party size and occasion. The guest as typed (the person booking is not always the contact on file), the tables, zone and seats, and the trail: confirmation and reminder sent, guest link. Buttons: **Confirm**, **Seat Party**, **Find Tables**, **Resend Confirmation**, **No Show**, **Cancel**.

5 A large party on two tables

TABLE RESERVATION

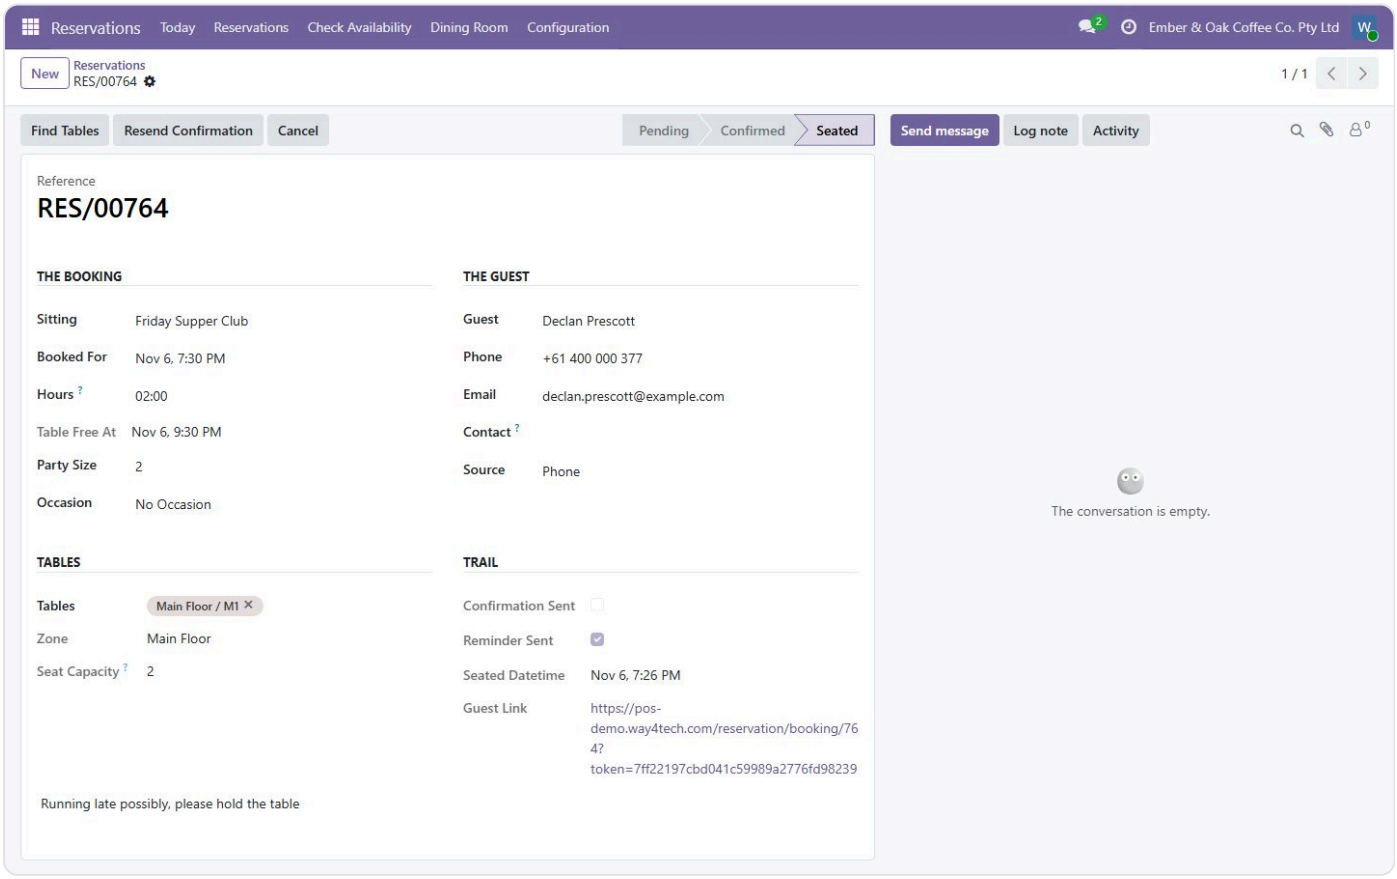

Ten people at lunch on M3 and M6, pushed together on the Main Floor. The seat capacity is the total across the tables.

6 Seated

TABLE RESERVATION

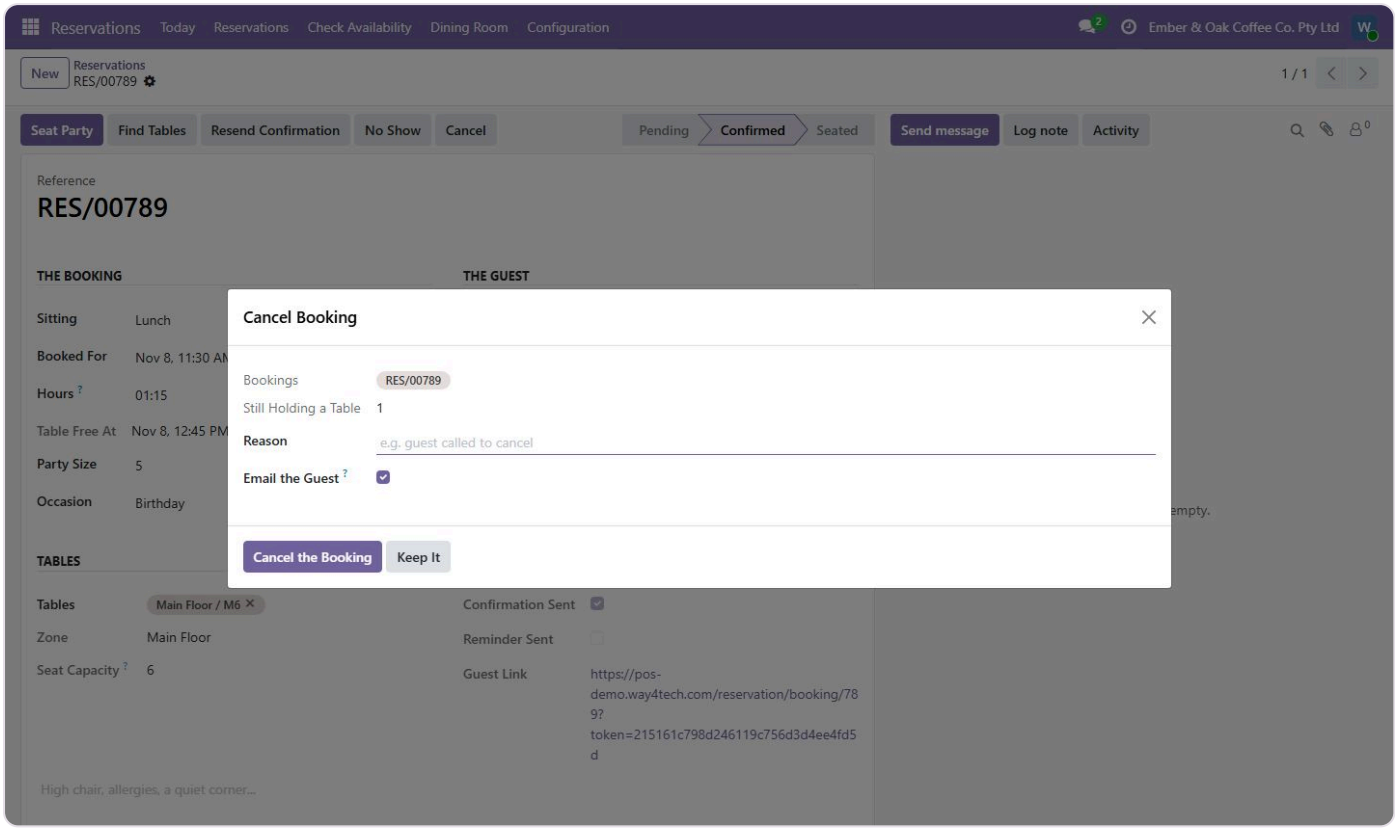

Seat Party stamps the time they sat down. A seated booking keeps its tables until the time held runs out.

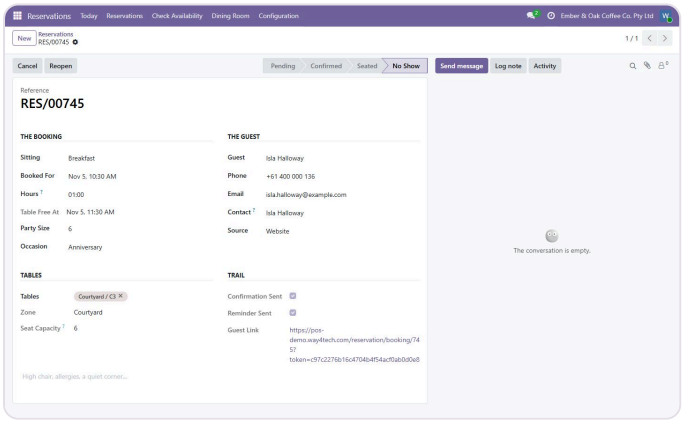

7 Cancel with a reason

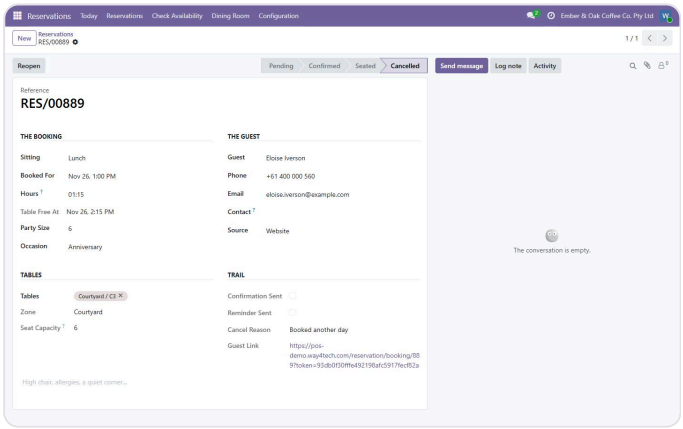

TABLE RESERVATION

Cancel asks for a reason and whether to email the guest, then gives the tables straight back.

A no show: the table went back to the engine.

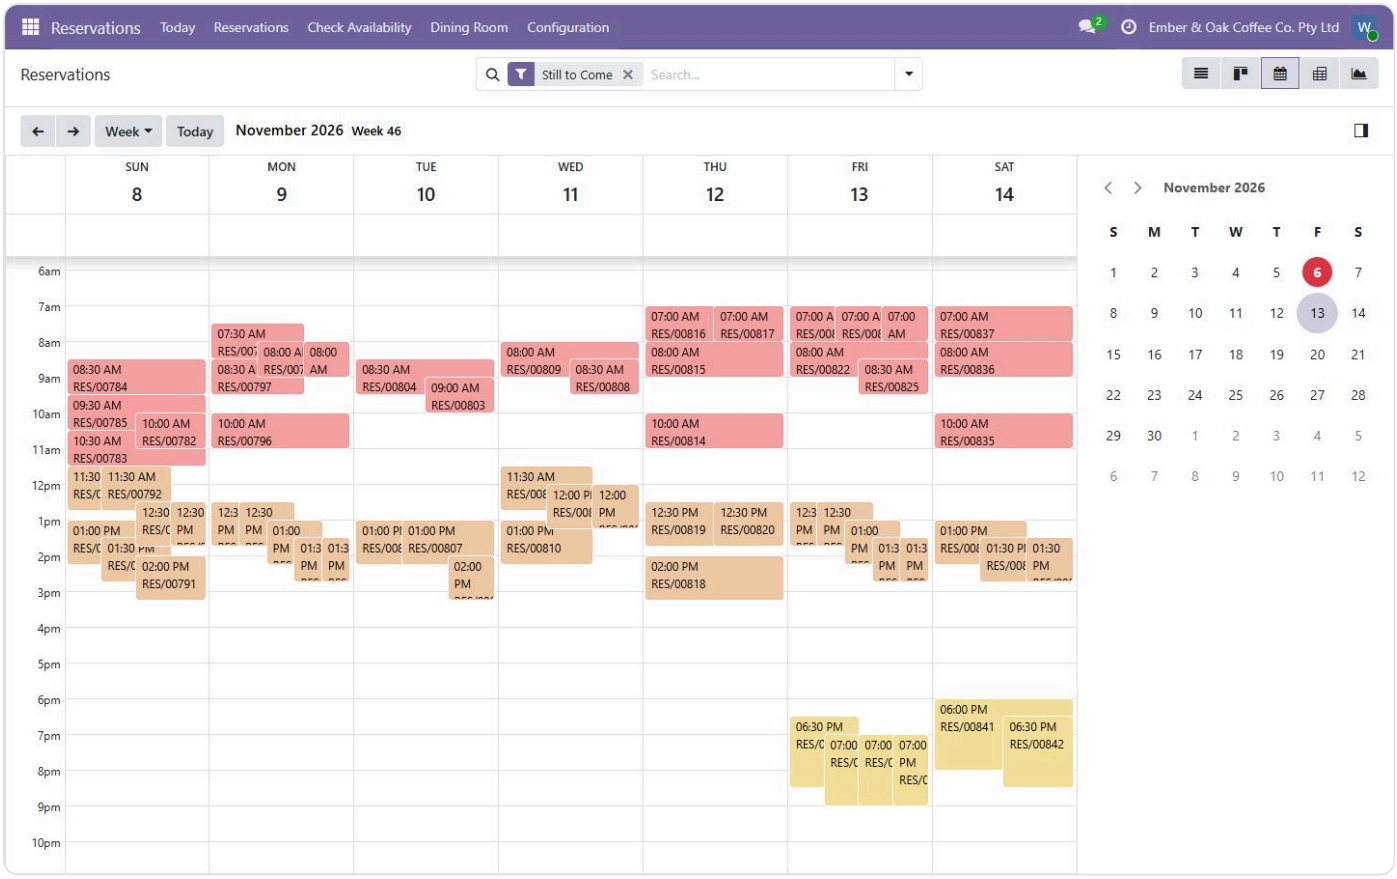

A cancelled booking with its reason. Reopen puts it back to Pending and finds tables again.

STATE	HOLDS A TABLE	HOW IT GETS THERE
Pending	Yes	Taken by staff, or online when the sitting does not confirm itself
Confirmed	Yes	Confirm, or online with Confirm Automatically
Seated	Yes	Seat Party
No Show	No	No Show, or the scheduled job after the grace period
Cancelled	No	Cancel with a reason, or the guest from the website

8 The calendar

TABLE RESERVATION

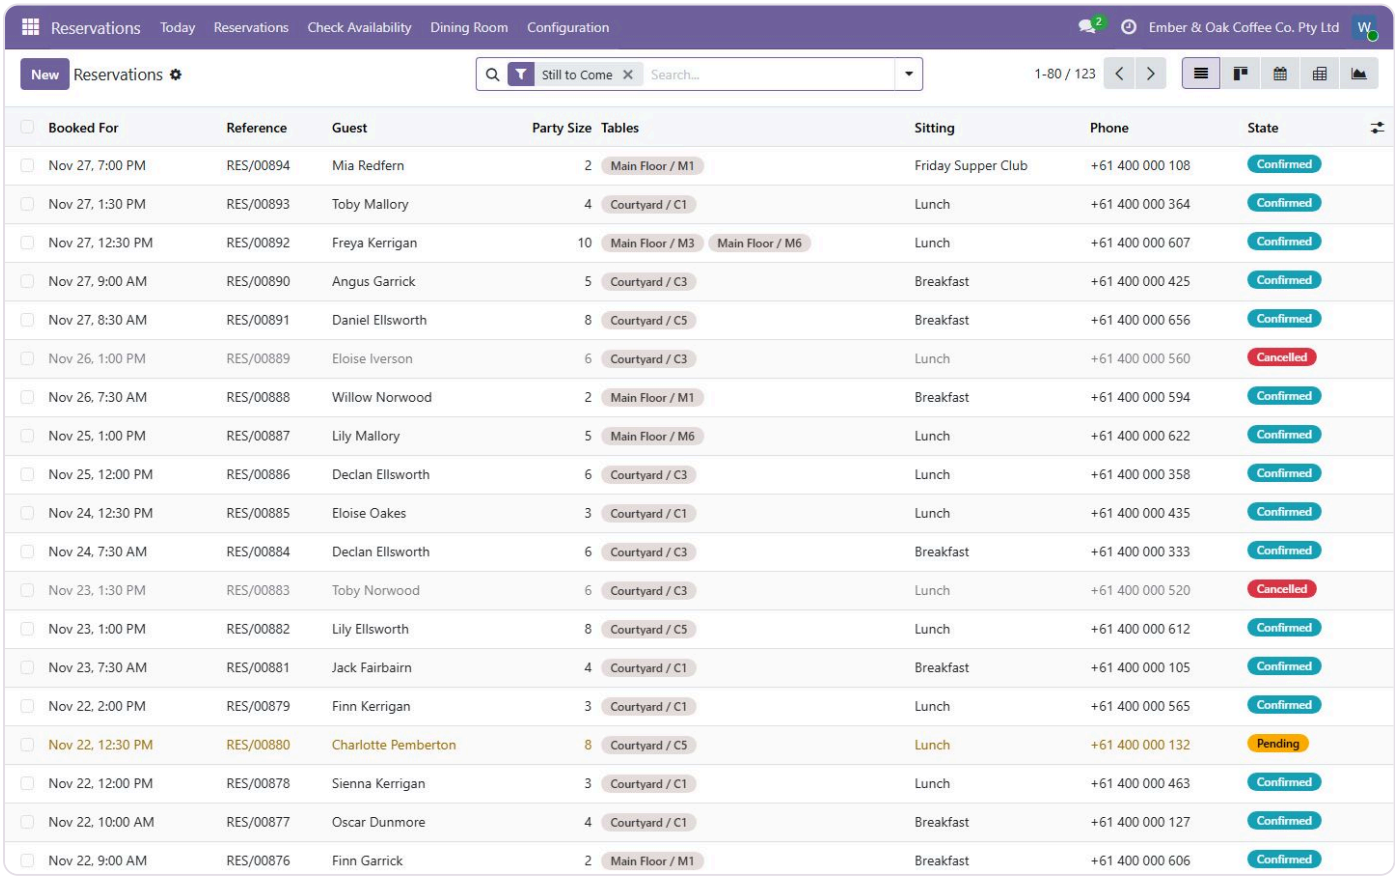

Reservations in calendar view, here a week, each booking coloured by its state.

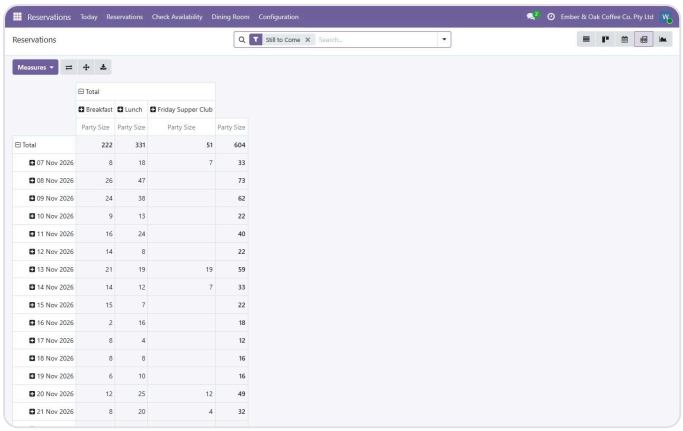

9 The list and its filters

TABLE RESERVATION

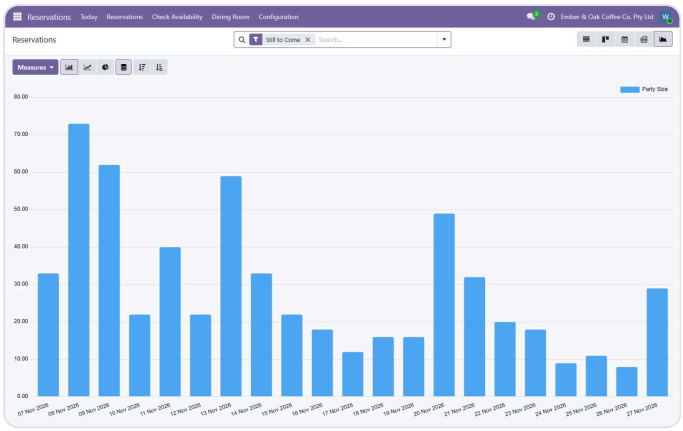

Filters: Today, Tomorrow, Still to Come, Pending, Confirmed, Holding a Table, No Shows, Booked Online, No Table Yet, Six or More. Group by Status, Sitting, Date and Booked Through.

Two scheduled jobs TABLE RESERVATION

Reservations: send the reminder emails runs every hour and emails each pending or confirmed booking inside its sitting's reminder window, once. **Reservations: free the tables nobody turned up for** runs every 15 minutes and marks a booking No Show once its sitting's grace period has passed. It only looks back two days, so turning a grace period on never rewrites old bookings.

PART 8 Booking on the website

TABLE RESERVATION

Guests book on the restaurant's own website. The pages are plain server pages with a form post, so they work on any phone.

IN THIS PART YOU WILL LEARN

- The booking pages a guest sees
- What is checked before a booking is written
- The emails and the guest page with cancel

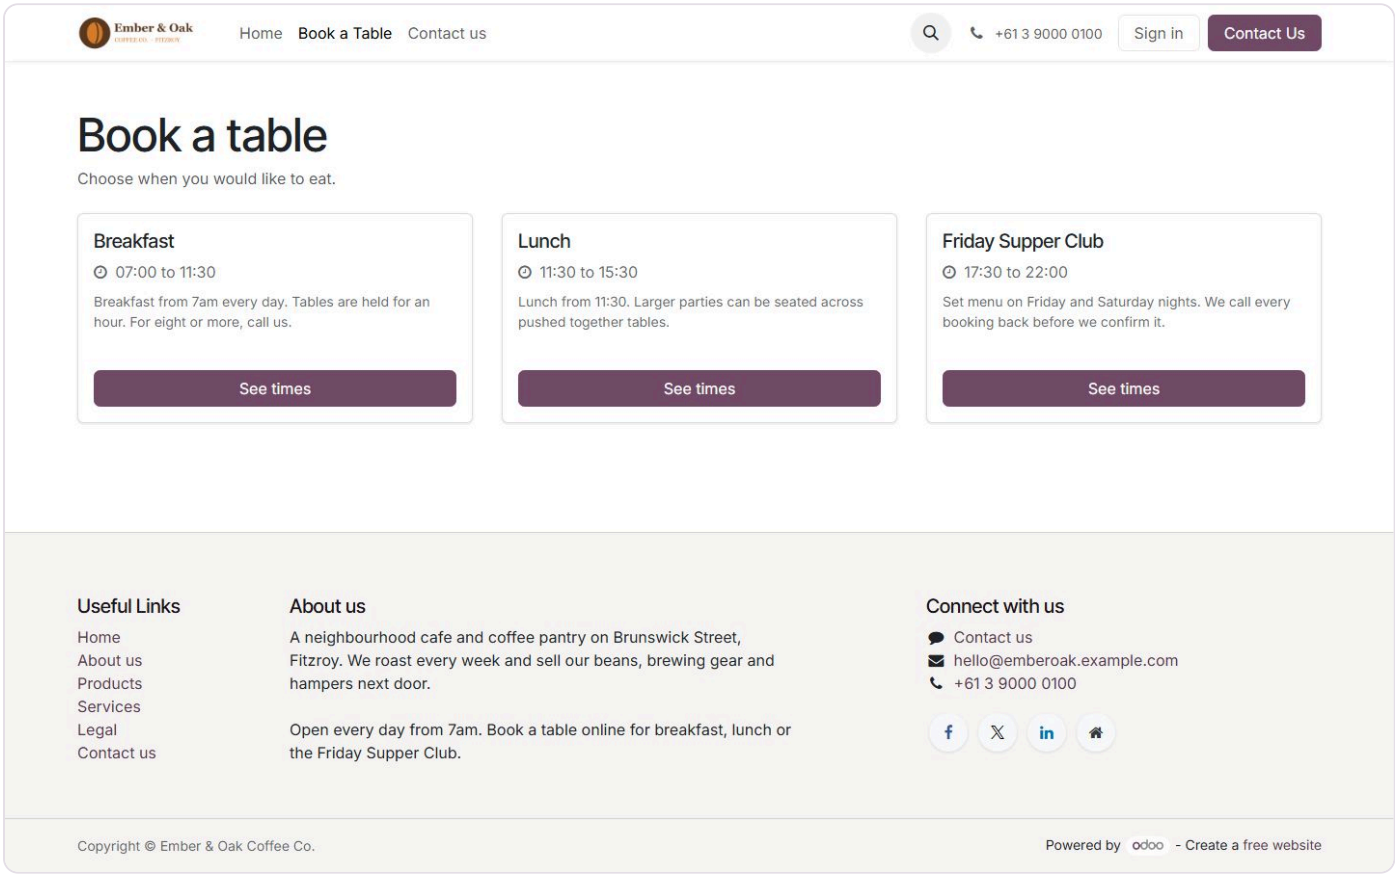

TRY IT YOURSELF ON THE DEMO

1. Open pos-demo.way4tech.com/reservation in a private window
2. Pick Lunch, then four people on Sunday
3. Stop at the details form; please do not submit on the shared demo

1 Book a table

TABLE RESERVATION

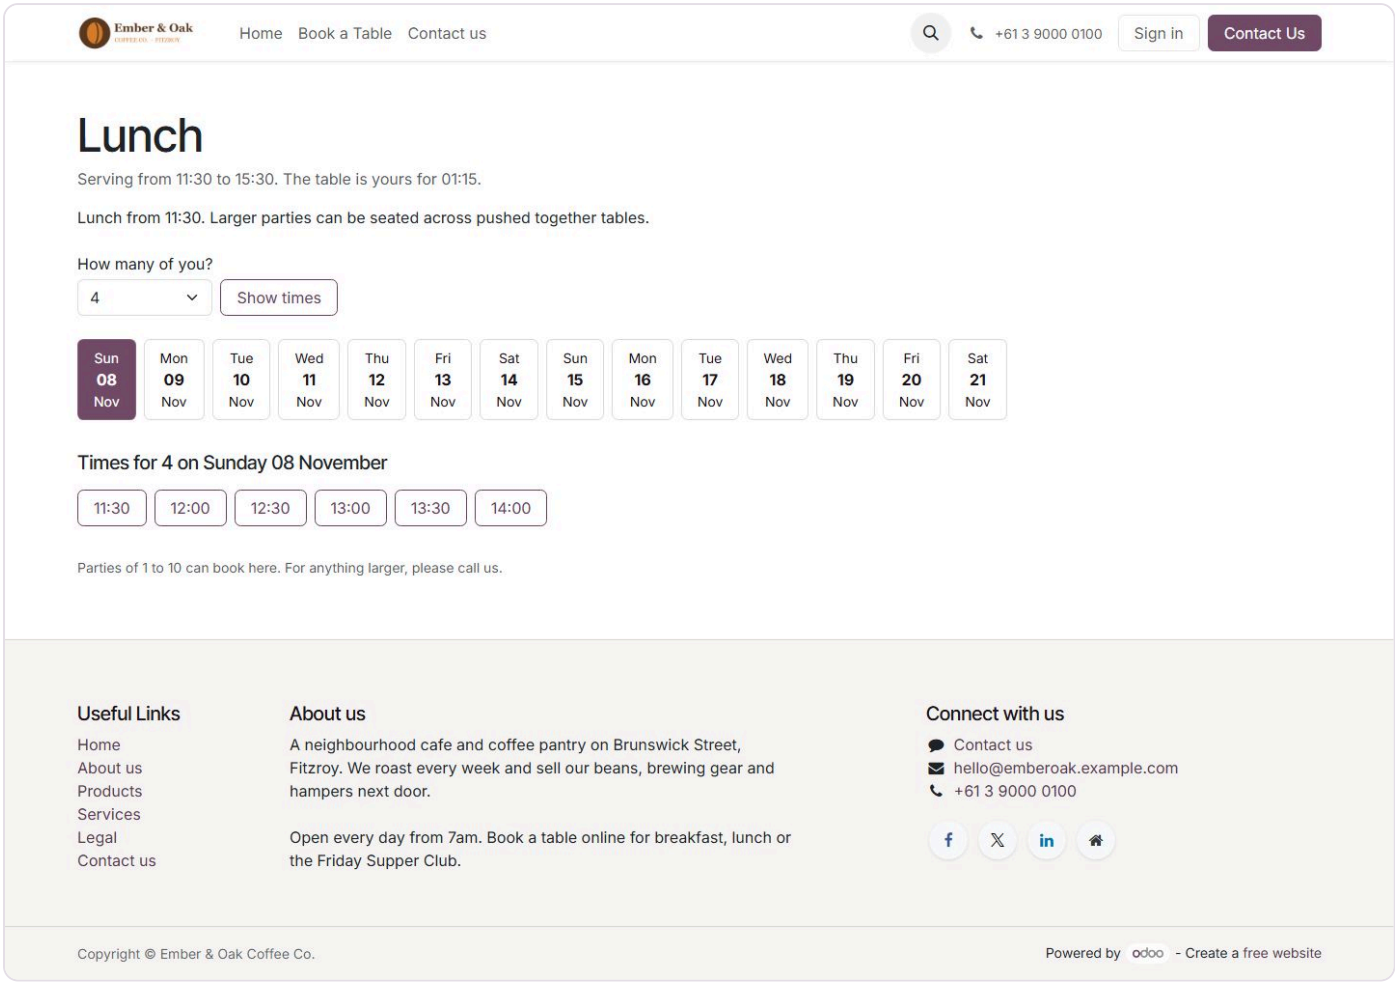

/reservation, linked as Book a Table in the website menu, lists the published sittings with their hours and text. With only one sitting it goes straight to it.

2 The times

TABLE RESERVATION

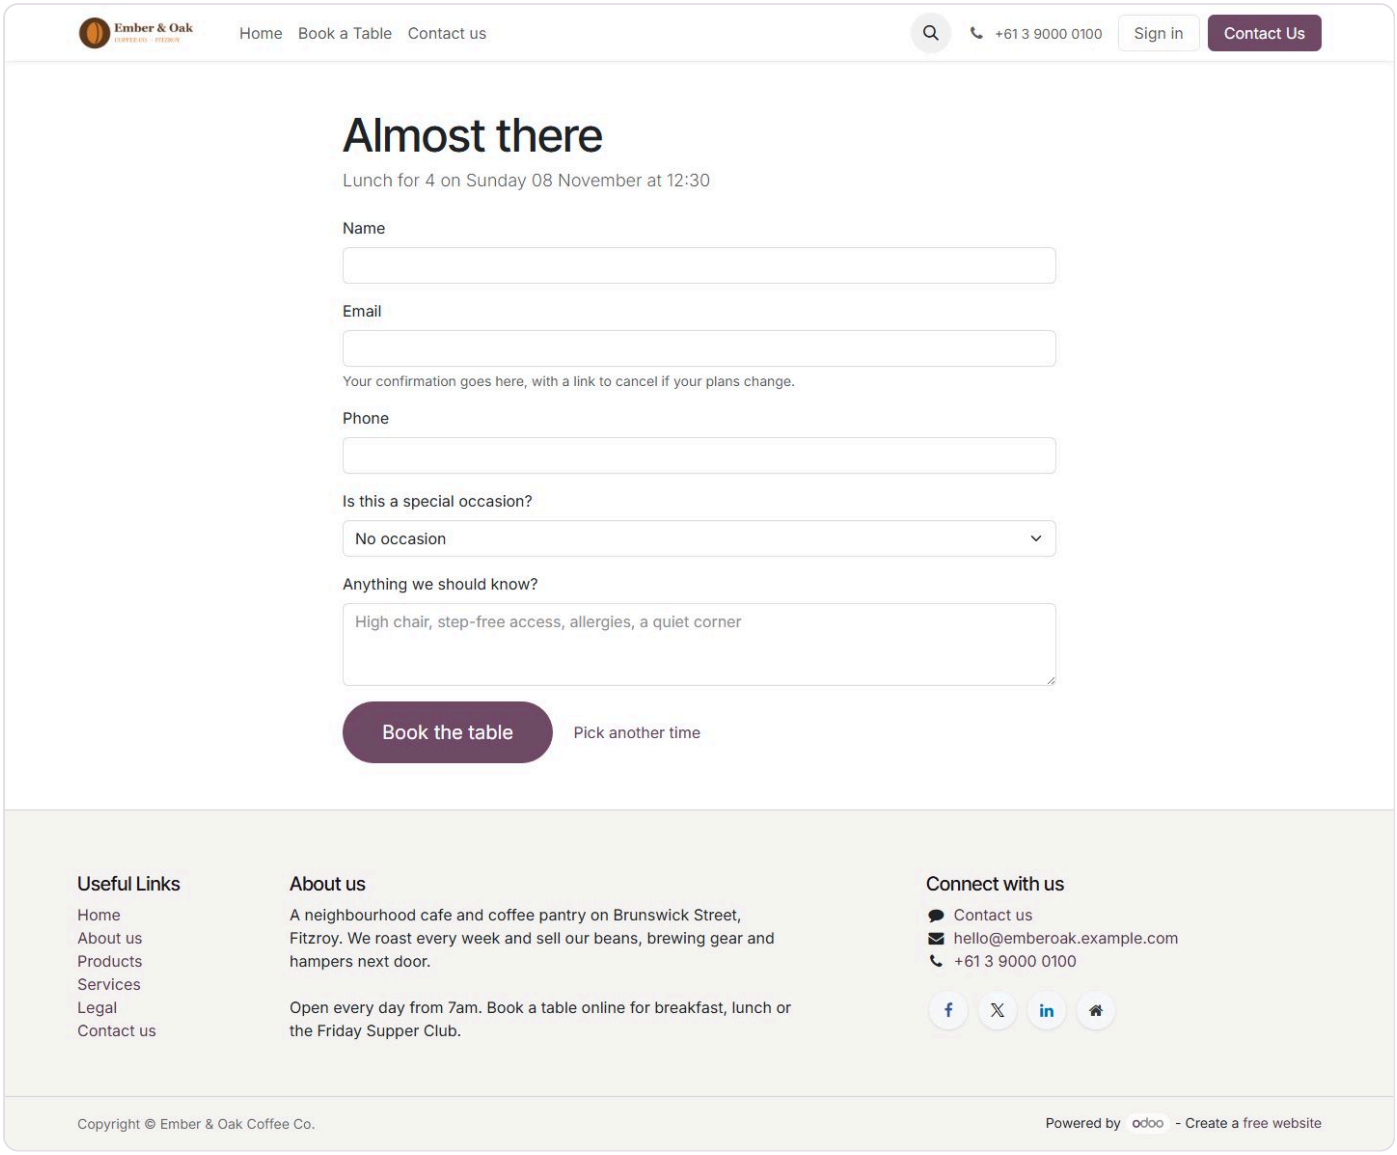

A date strip for the next two weeks, a party size from the sitting's smallest to largest party, and only the times that are actually free for that party. Times already gone are struck.

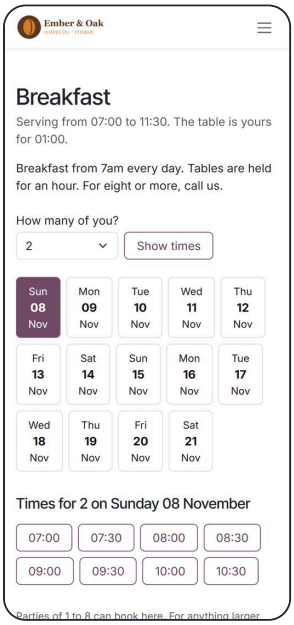

3 The details

TABLE RESERVATION

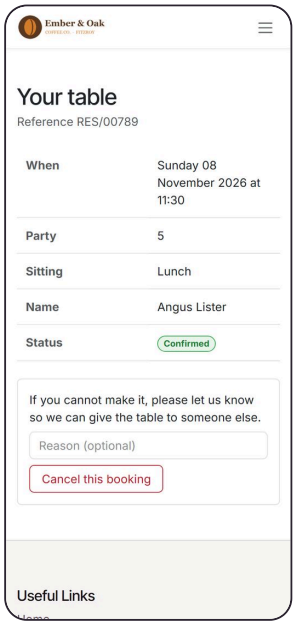

Name, email, phone (required when the sitting says so), occasion and requests. Book the table runs the engine again before anything is written, so a page left open cannot take a table someone else took.

4 On a phone

The same pages on a phone: the strip wraps and the times become buttons.

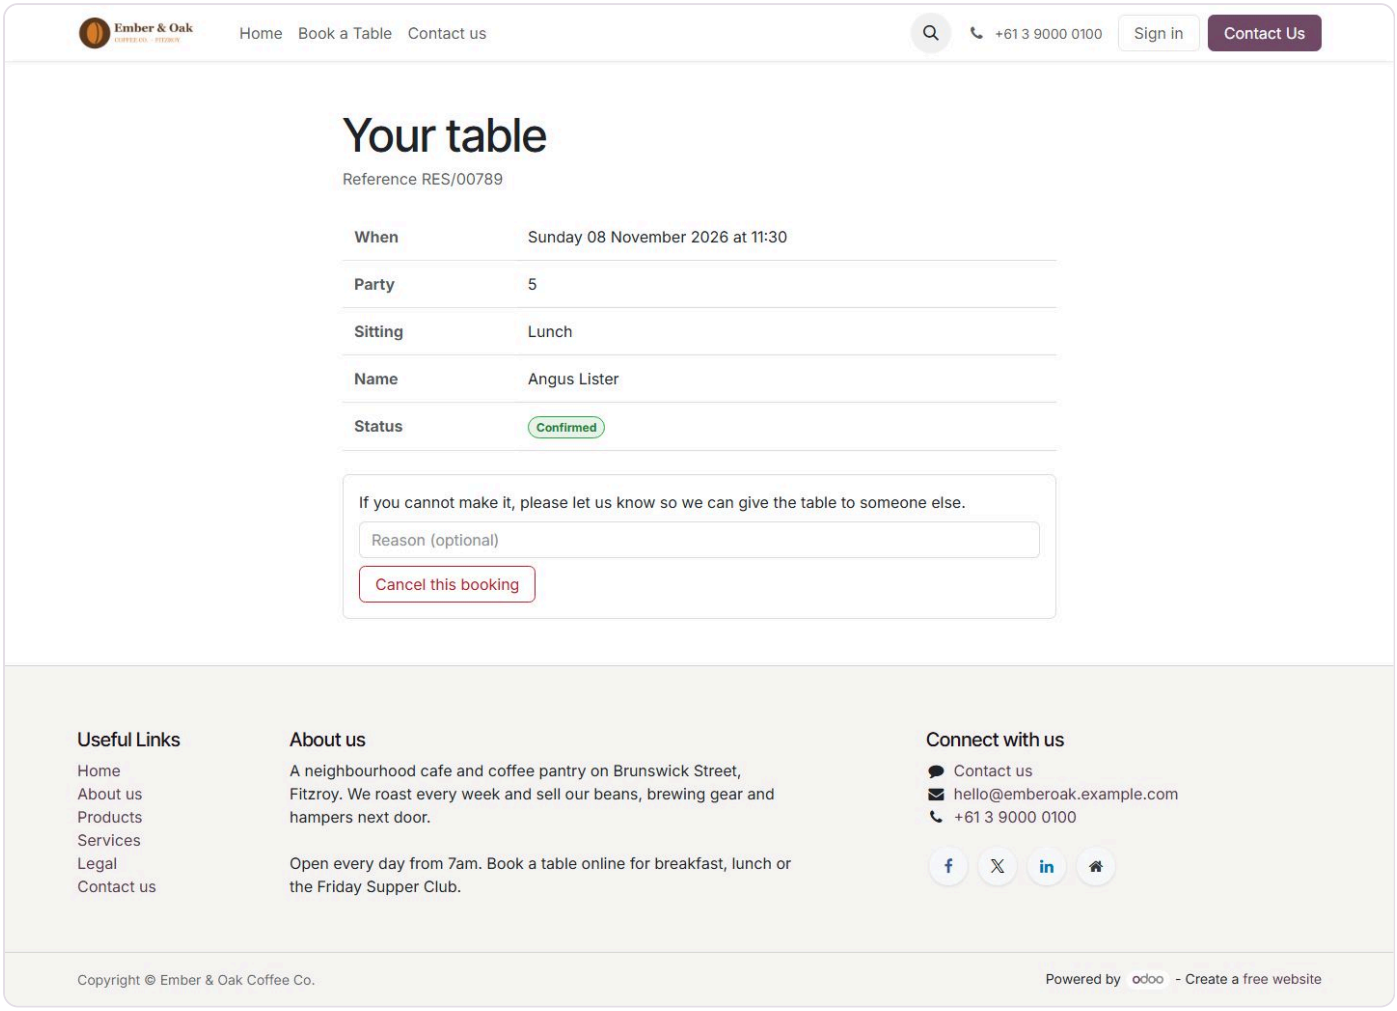

5 The guest page

From the email link: when, party, sitting, name and status, with a box to give the table back.

6 Your table

TABLE RESERVATION

The guest page opens with a private token and needs no account. A guest can cancel until the time of the booking while it is pending or confirmed; after that it is a phone call. Cancelling sends the cancellation email and notes it on the booking.

EMAIL	SENT WHEN
Confirmation	A booking is confirmed (automatically online, or Confirm by staff), with the reference and the guest link
Reminder	The hourly job, inside the sitting's Remind Before window
Cancellation	The guest cancels online, or staff cancel with Email the Guest ticked

A refused slot gives the guest a plain sentence: the restaurant is closed then, too close to now, too far ahead, the party is too small or too large and should call, the kitchen is full at that time, or every table is taken. Mail failures never stop a booking; they are logged.

PART 9 The price checker kiosk

PRICE CHECKER KIOSK

A tablet on the wall by the bean shelf. A customer scans a bag and sees what it is and what it costs, and nobody has to leave the counter to tell them.

IN THIS PART YOU WILL LEARN

- Opening the kiosk
- What a scan shows
- Working offline and keeping the cache fresh

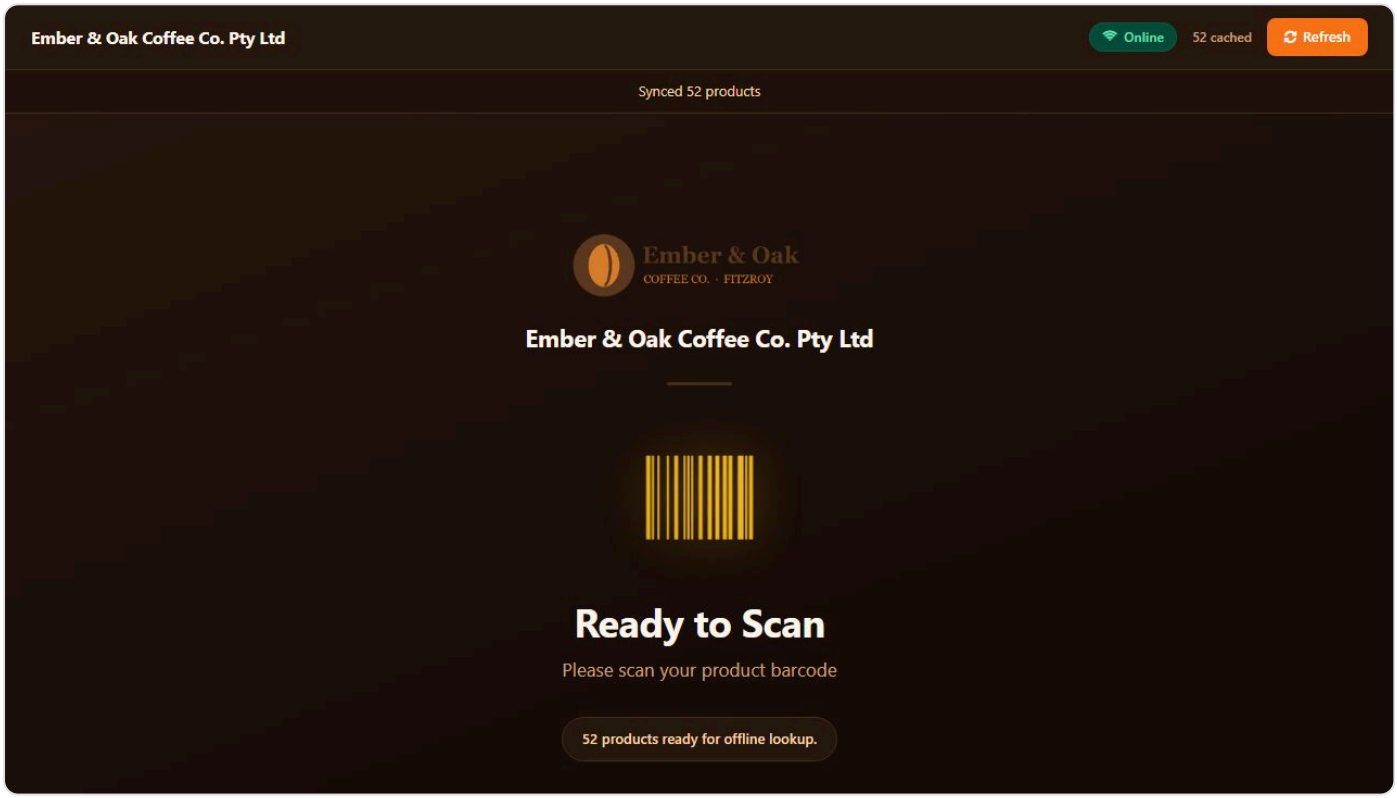

TRY IT YOURSELF ON THE DEMO

1. Open the Offline Scanner app, Launch Scanner
2. Type 9300044100287 and press Enter
3. Type a made up code and press Enter

1 Ready to Scan

PRICE CHECKER KIOSK

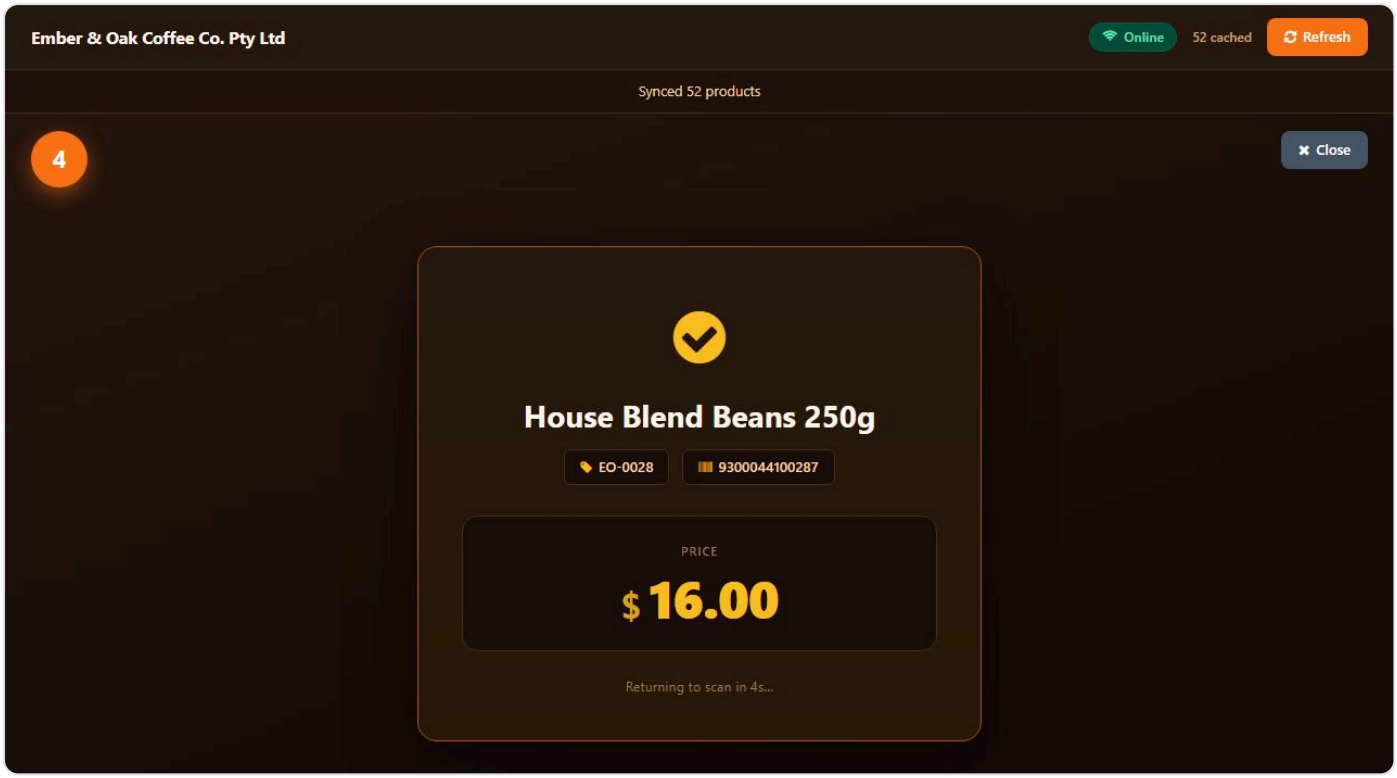

Offline Scanner, Launch Scanner opens /wt_barcode_scanner in its own tab, full screen, with the company name, logo and the number of products cached. A hidden field keeps the focus, so a USB or Bluetooth scanner that types like a keyboard works without anyone tapping the screen.

2 A product

PRICE CHECKER KIOSK

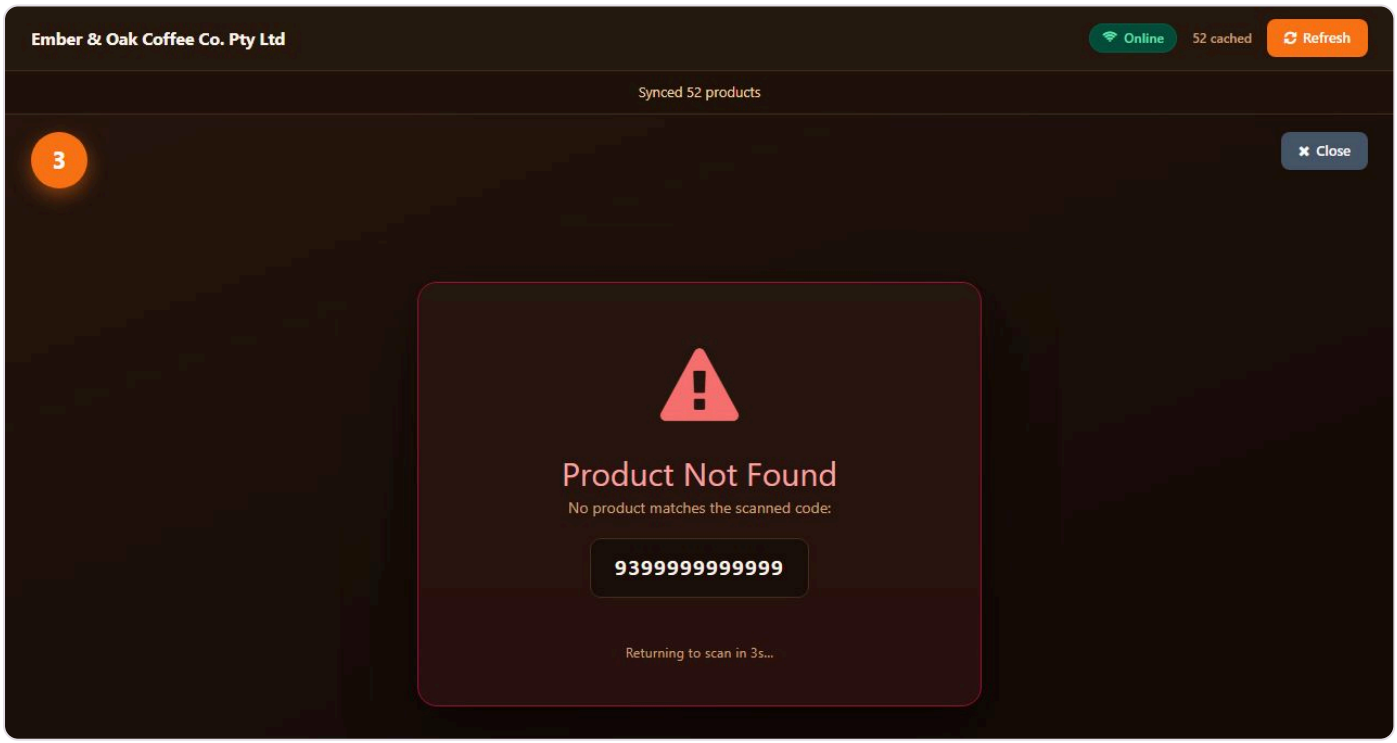

Name, internal reference, barcode and the sales price in the company currency, then a countdown back to the scan screen. Close returns at once.

3 Not found

PRICE CHECKER KIOSK

A barcode that matches nothing says so, shows the code and returns after a few seconds.

HOW IT WORKS

Offline

On first open the page loads every active product that can be sold into the browser's own storage (IndexedDB): name, code, barcode, price, unit and category. Lookups are then instant and carry on if the Wi-Fi drops; the badge at the top shows Online or Offline. When the connection is back it syncs again in the background, and Refresh forces it. A barcode that is not in the cache is looked up on the server by barcode or internal reference and cached. A cache that is damaged or locked is rebuilt by itself.

The page needs a signed in internal user, so the tablet stays logged in as a staff account. The data loaded includes stock on hand, but this release shows the price only, not the stock figure.

PART 10

Scanning receipts, deliveries and moves

BARCODE FOR INVENTORY

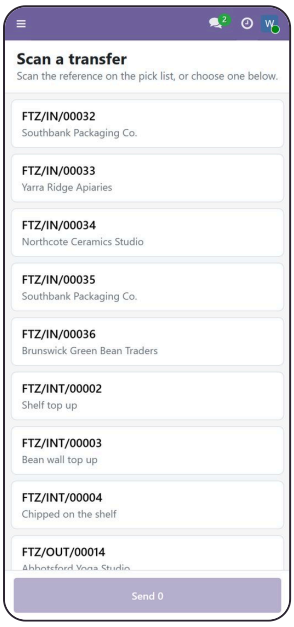

A handset in the stockroom loses signal behind the racking and the operator presses send again. Every scan this add-on sends carries its own reference, so the repeat lands on the first one and changes nothing.

IN THIS PART YOU WILL LEARN

- The scan screen on a handset
- Scanning a receipt, lots included
- The rules on the operation type
- Validating with or without a backorder
- The scan ledger

TRY IT YOURSELF ON THE DEMO

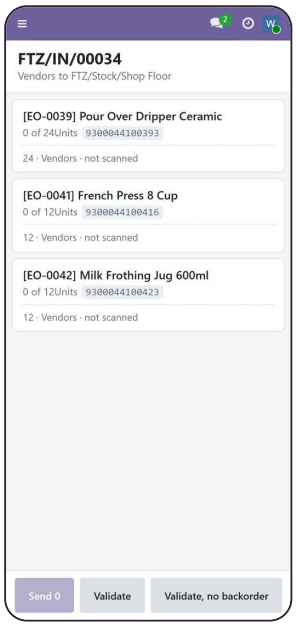

1. Open Barcode, Scan on your phone
2. Open the Northcote Ceramics Studio receipt
3. Open Reporting, Scan Commands and filter Rejected

1

Scan a transfer

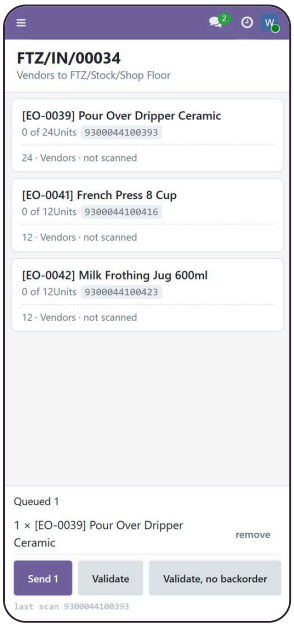

Barcode, Scan. Scan the transfer's reference or tap one from the list of transfers ready to work.

2

The lines

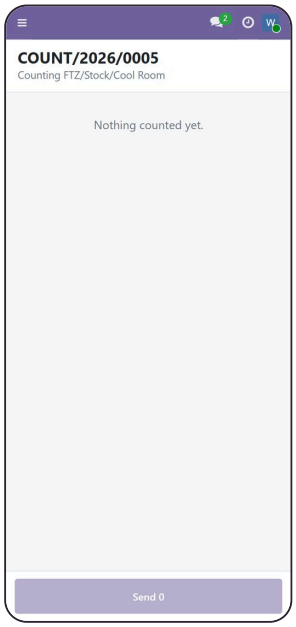

Each product with its barcode, the demand, how much is booked, the source or destination, and the lots once scanned.

3

Scans queue

A scan joins the queue at the foot of the screen. Send posts the whole batch in one go. Validate, or Validate, no backorder.

4

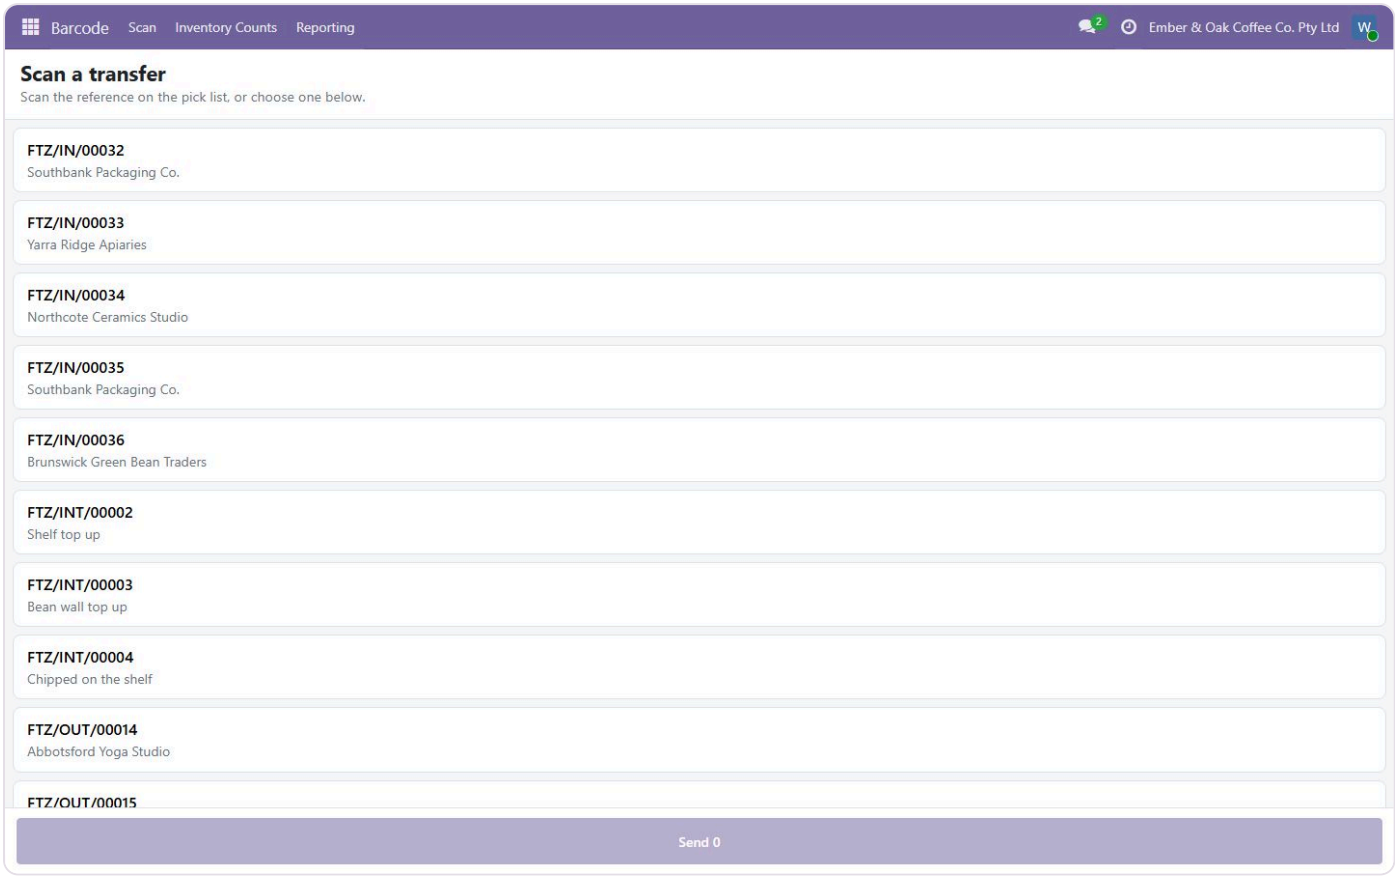

A count

The same screen opened from a count. Blind counts hide the figures on record.

5 On a desktop or a USB scanner

BARCODE FOR INVENTORY

The same screen at full width. It has a hidden input that keeps the focus for a keyboard wedge scanner.

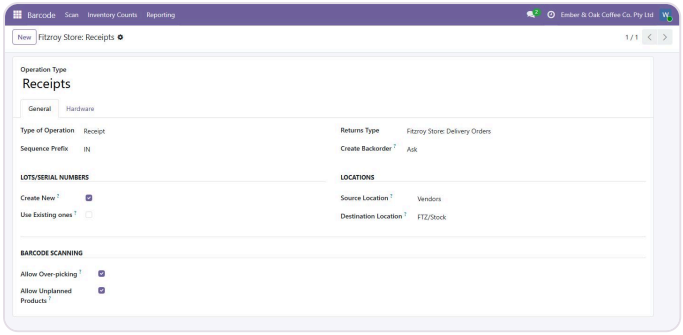

HOW IT WORKS

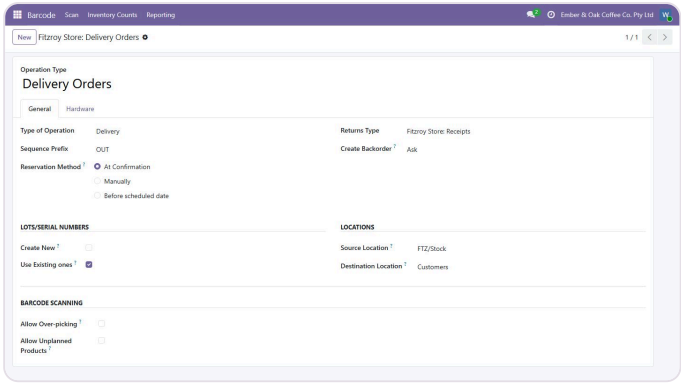

What a barcode means

One call to the server turns a barcode into a typed answer, narrowest first: a transfer, a location, a package, a product or its packaging, then a lot. The company barcode nomenclature is read first, so weight embedded and aliased barcodes work the way the warehouse set them up. A lot number is only ever matched against the product just scanned, because lot numbers are not unique between products. The screen draws what the server sends; nothing about what a barcode means is decided in the browser.

RULE	WHERE IT IS SET	WHAT THE SCAN DOES
Allow Over-picking	Operation type, Barcode Scanning	Off: a scan that would go past the demand is refused, saying by how much.
Allow Unplanned Products	Operation type, Barcode Scanning	Off: only products already on the transfer can be scanned. On: a new move is raised.
Create New / Use Existing lots	Operation type (standard)	An unknown lot is created only where the type allows it, otherwise refused in a plain sentence.
Serial numbers	Product tracking	A serial is one unit and cannot be scanned twice onto one transfer.
Locations	The transfer	A scanned source or destination must belong to the transfer.

Receipts on the demo: over-picking and unplanned products allowed.

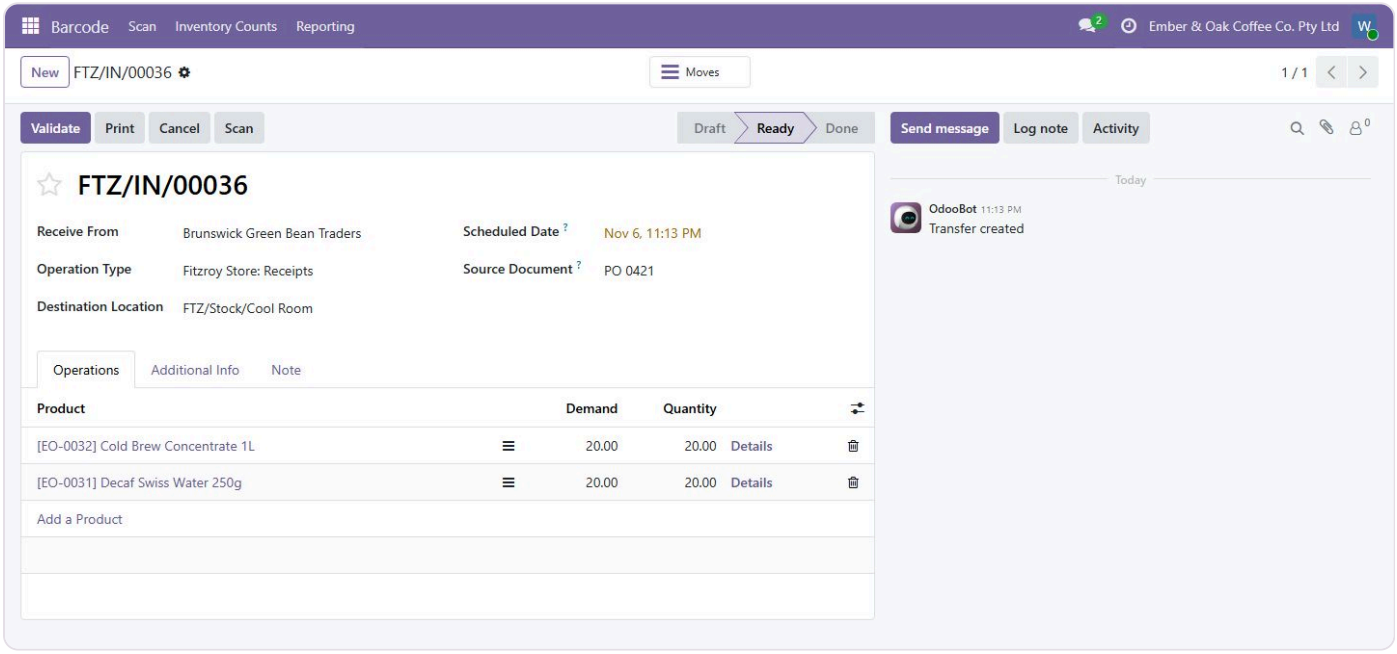

Delivery Orders: both off, so a wholesale order ships exactly what was ordered.

6 A receipt ready to scan

BARCODE FOR INVENTORY

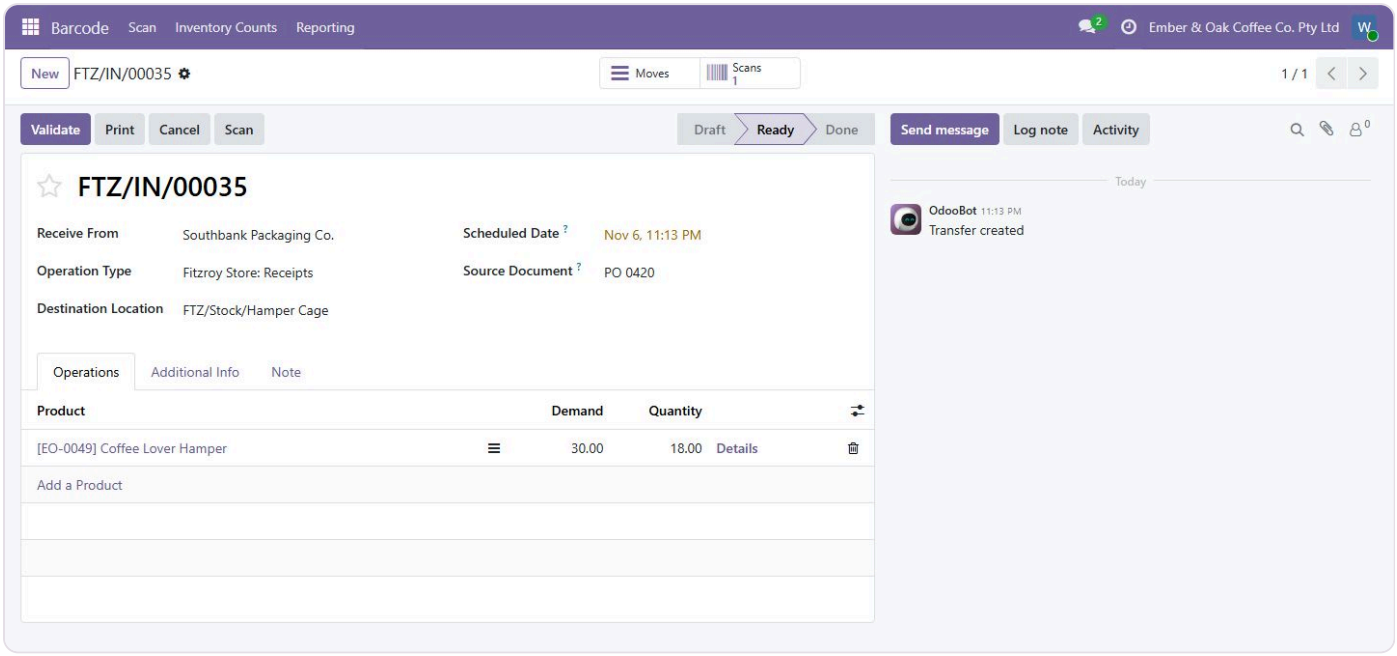

Transfers from the scanner are ordinary Odoo transfers. The form gains a **Scan** button that opens it in the scanner and a Scans count. The transfer search has a Scanned filter.

7 Part scanned

BARCODE FOR INVENTORY

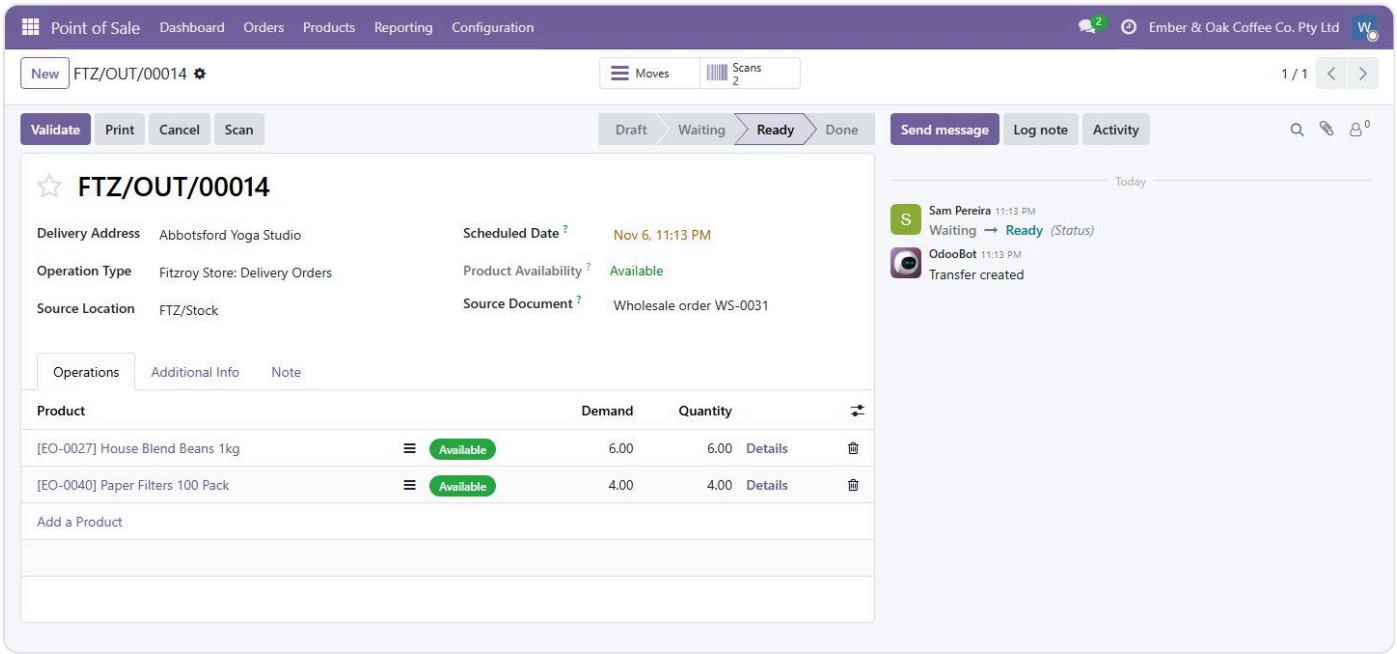

18 of 30 hampers booked so far by Sam in the stockroom.

8 Validated from the handset

BARCODE FOR INVENTORY

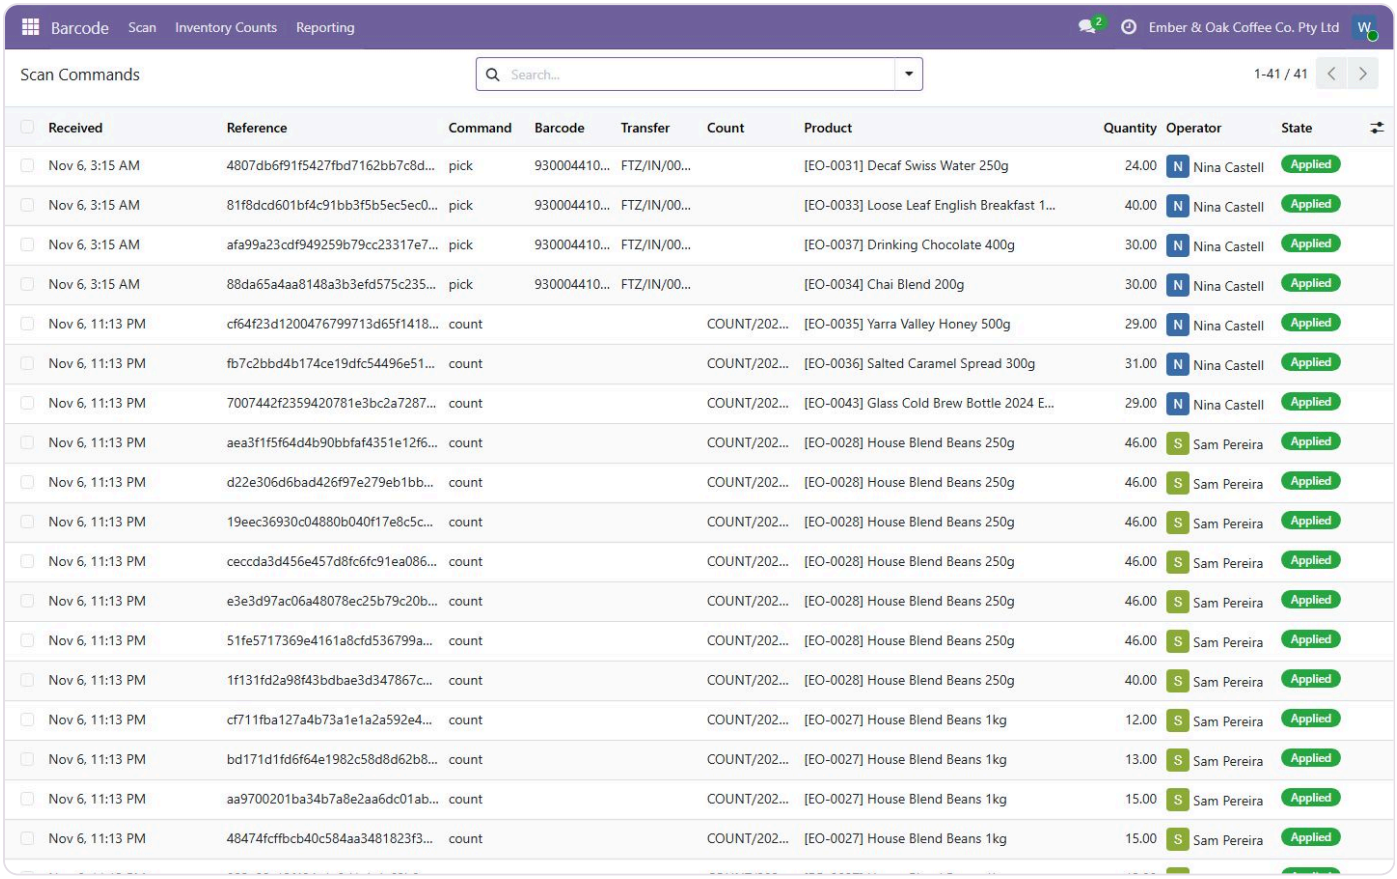

A wholesale order picked and validated from the scanner. The backorder question is answered up front by the button pressed on the handset, so the scanner never stops to ask.

9 Scan Commands

BARCODE FOR INVENTORY

Barcode, Reporting, Scan Commands (managers). Every command a handset sent: its reference, the command, barcode, transfer or count, product, quantity, outcome and operator. Filters: Applied, Rejected, Never Finished, Today.

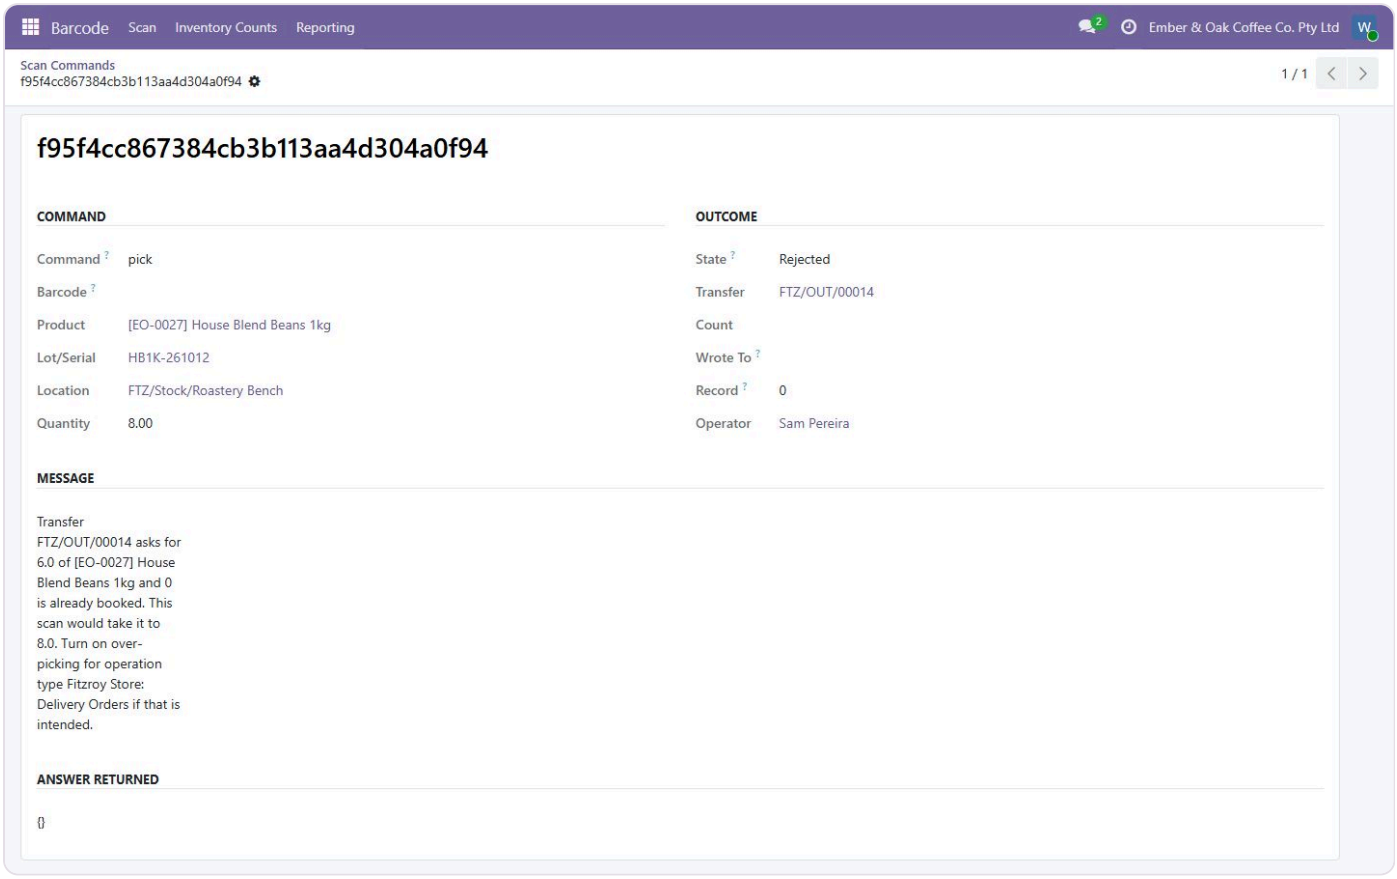

Received	Reference	Command	Barcode	Transfer	Count	Product	Quantity	Operator	State

10 A refused scan

BARCODE FOR INVENTORY

Eight bags scanned against an order for six, on a type that does not allow over-picking. The scan was refused, the message kept, and the next scan of six went through.

A batch of scans is applied in one transaction: it lands whole or not at all. The ledger only needs to remember a reference as long as a handset might resend it, so the weekly job **Barcode: clear old scan references** removes rows older than 180 days, keeping any for a transfer or count still open.

PART 11

Stock counts that survive a shift change

BARCODE FOR INVENTORY

A count is a record. It is started, scanned against, put down, picked up by somebody else and applied when a manager is happy with it. Applying writes the stock once.

IN THIS PART YOU WILL LEARN

- Raising a count and blind counting
- Review and the differences
- Applying to stock, once
- The count sheet

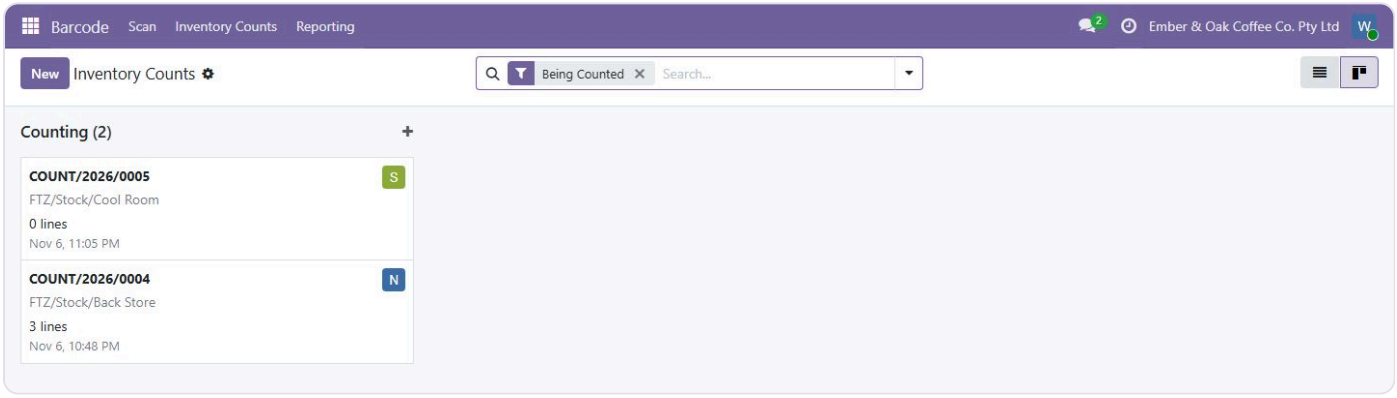

TRY IT YOURSELF ON THE DEMO

1. Open Barcode, Inventory Counts and switch to kanban
2. Open COUNT/2026/0003 (in review)
3. Open Reporting, Count Differences in pivot

1 Inventory Counts

BARCODE FOR INVENTORY

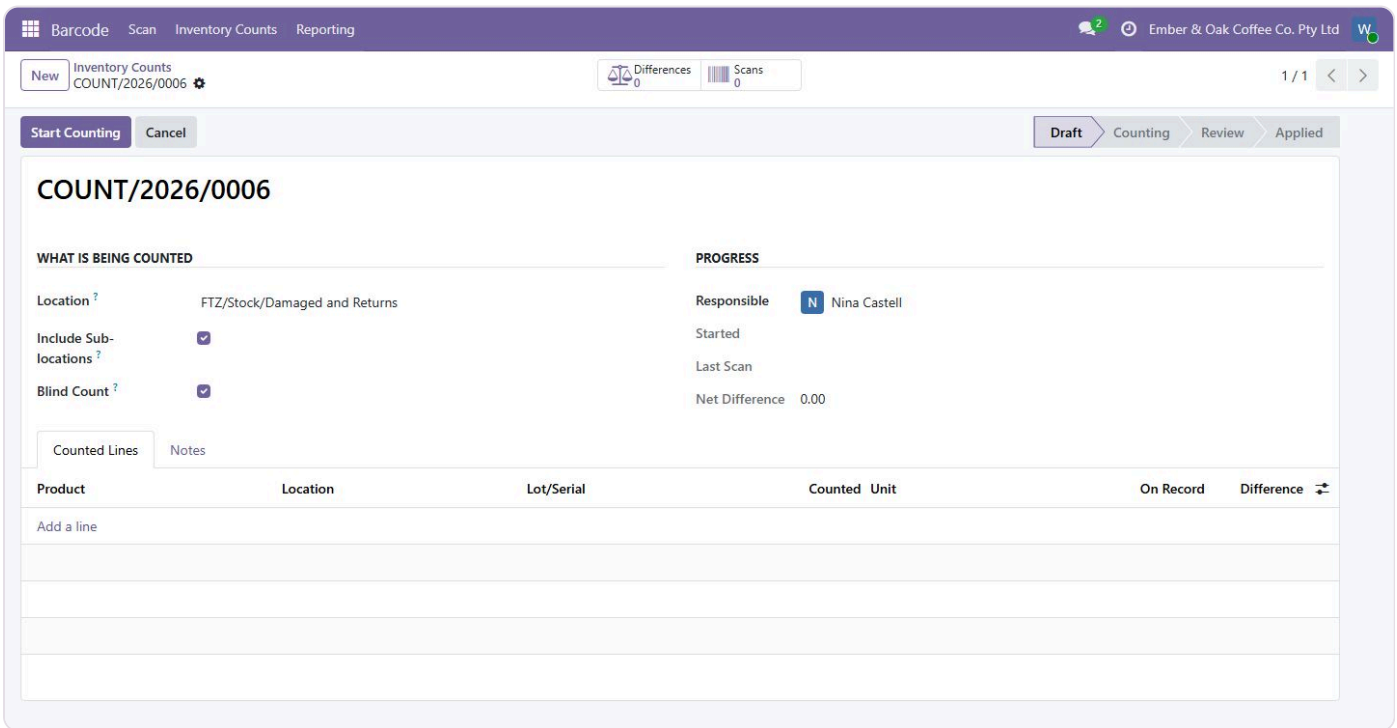

Draft, Counting, Review, Applied and Cancelled. Filters Being Counted, Waiting for Review, Applied, My Counts and Started This Month. Operators see their own counts and unclaimed ones; managers see all.

2 A new count

BARCODE FOR INVENTORY

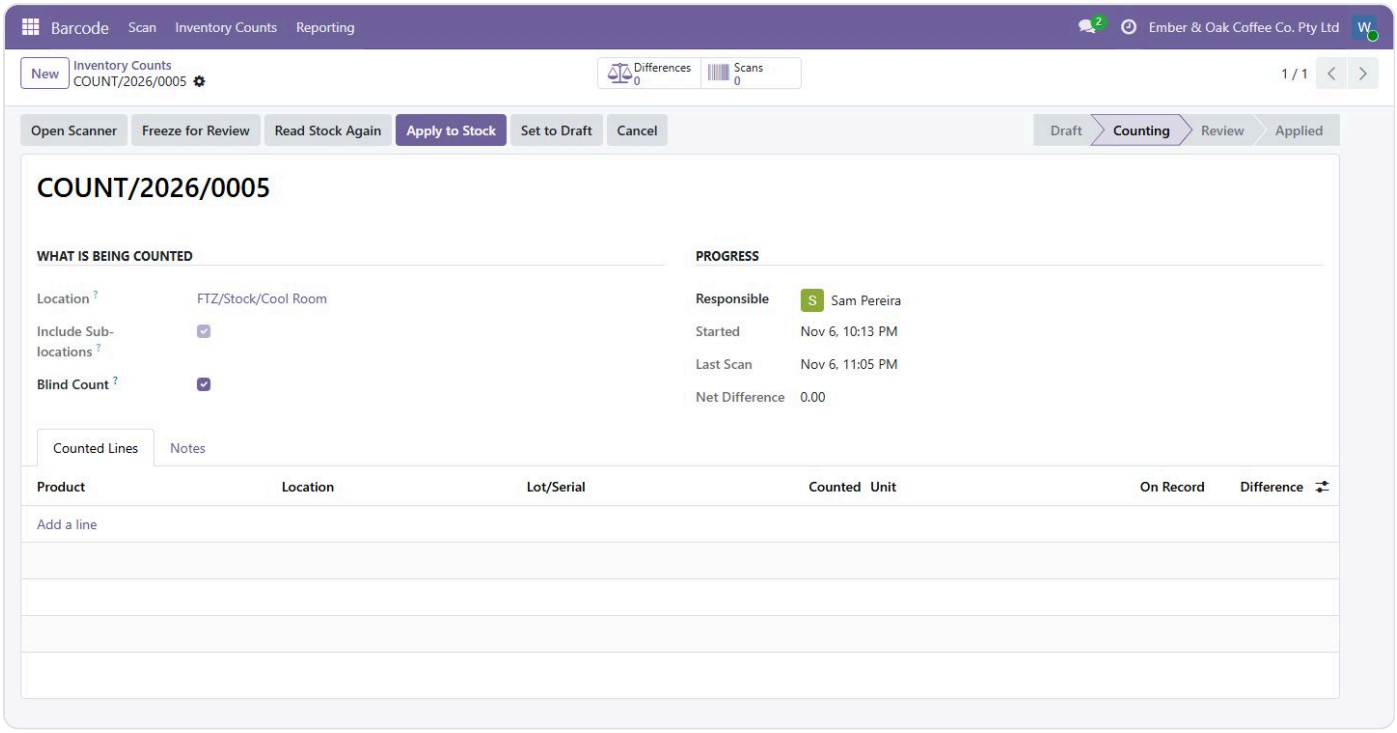

Pick a location, whether sub-locations are included, a responsible person and Blind Count. Start Counting opens it.

3 Counting, blind

BARCODE FOR INVENTORY

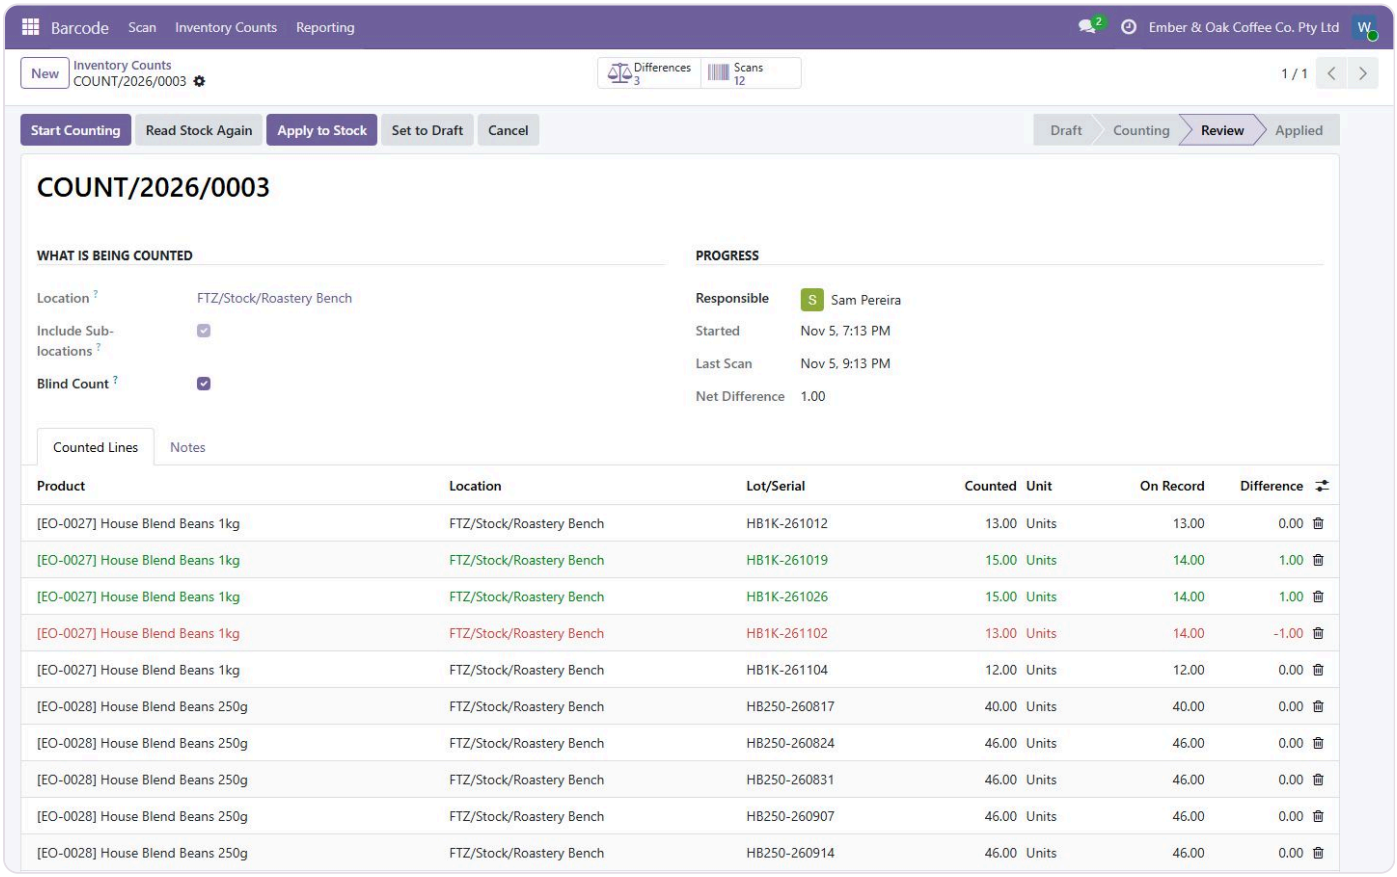

A blind count keeps the figure on record off the handset so the counter cannot just agree with it. Open Scanner goes to the handset screen; Freeze for Review stops the counting.

4 In review

BARCODE FOR INVENTORY

Freeze for Review reads stock again so the reviewer sees today's figures. Each line shows counted, on record and the difference, green over and red short. Read Stock Again refreshes; Set to Draft and Start Counting reopen it.

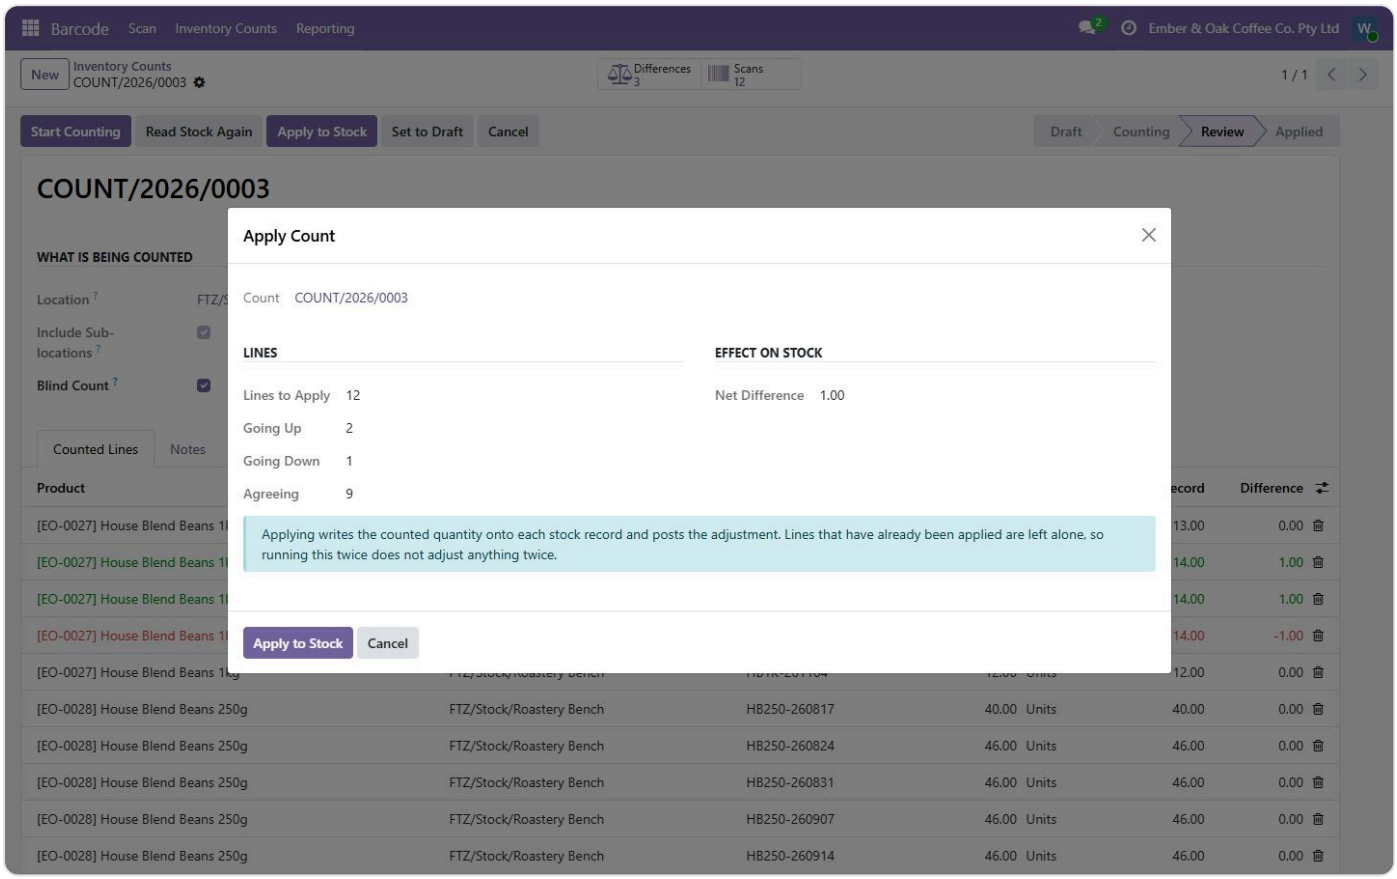

5 Apply to Stock

BARCODE FOR INVENTORY

Apply to Stock shows how many lines go up, go down and agree, and the net difference. Applying writes each counted figure onto its stock record and posts the adjustment. A line already applied is never written again, so pressing the button twice changes nothing.

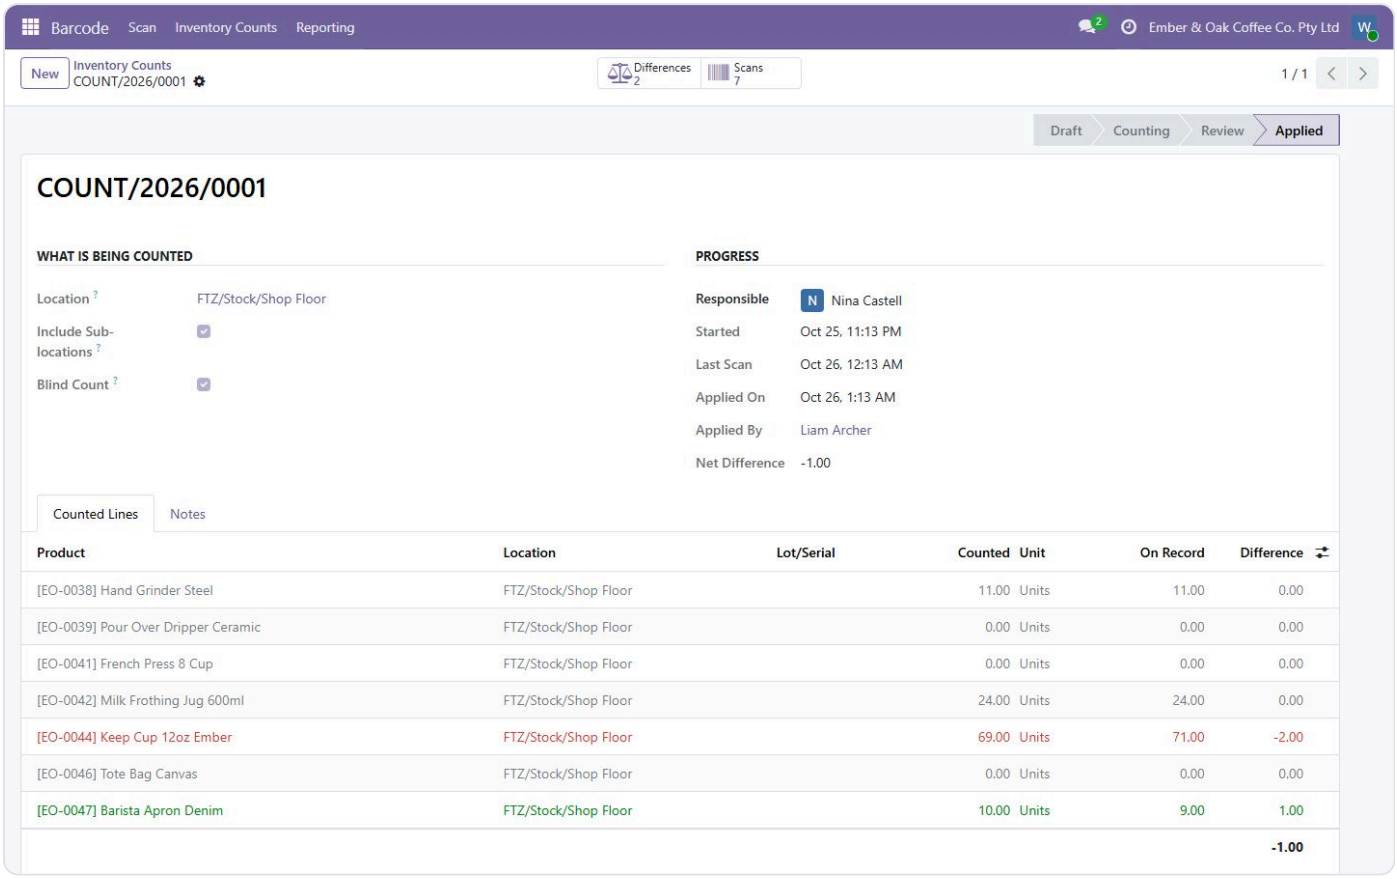

Applying needs Manage Counts. Counting is a floor job; changing stock is not.

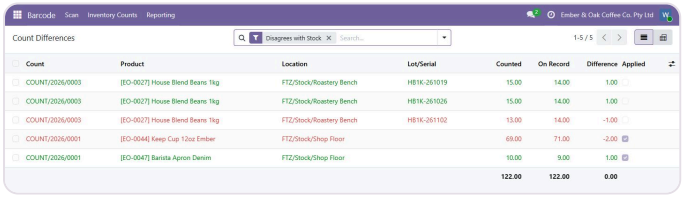

6 Applied

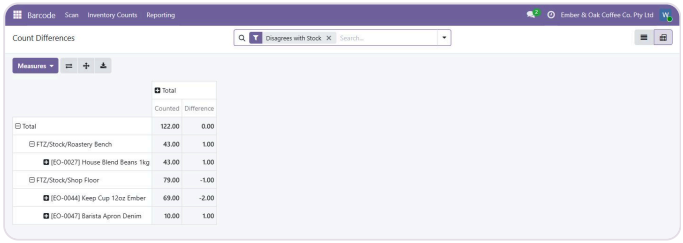

BARCODE FOR INVENTORY

The shop floor count: two Keep Cups short, a tote short and an apron over. Applied By and Applied On are kept.

Count Differences: lines that disagree with stock. Filters Short, Over, Not Applied Yet.

The same in a pivot by location and product.

7 The count sheet

BARCODE FOR INVENTORY

Print, Count Sheet: location, status and responsible, every line with lot, on record, counted and difference, totals and signature lines.

[EO-0028] House Blend Beans 250g	FTZ/Stock/Roastery Bench	HB250-260928	46.00	46.00	0.00

Lines counted: 12
Lines disagreeing with stock: 3

Net difference: 1.00

Counted by _____

Checked by _____

> Counting never invents a lot number. A lot that is not in the system is refused on a count, because it is a question for a manager, not a data entry.

PART 12

Stock aging: what has been sitting there, and what it costs

STOCK AGING

Odoo tells you how many hampers you hold. It does not tell you that the Winter Hamper 2025 has not sold since August last year, or what holding it is costing.

IN THIS PART YOU WILL LEARN

- Buckets, classes and the carrying cost
- Running the report and reading it
- Writing off dead stock
- Monthly snapshots and the weekly digest
- The aging fields on products and stock

TRY IT YOURSELF ON THE DEMO

1. Open Inventory, Reporting, Aging Analysis, Run Report and press Run
2. Press Open Pivot/Graph
3. Open Monthly Snapshots in graph view

HOW IT WORKS

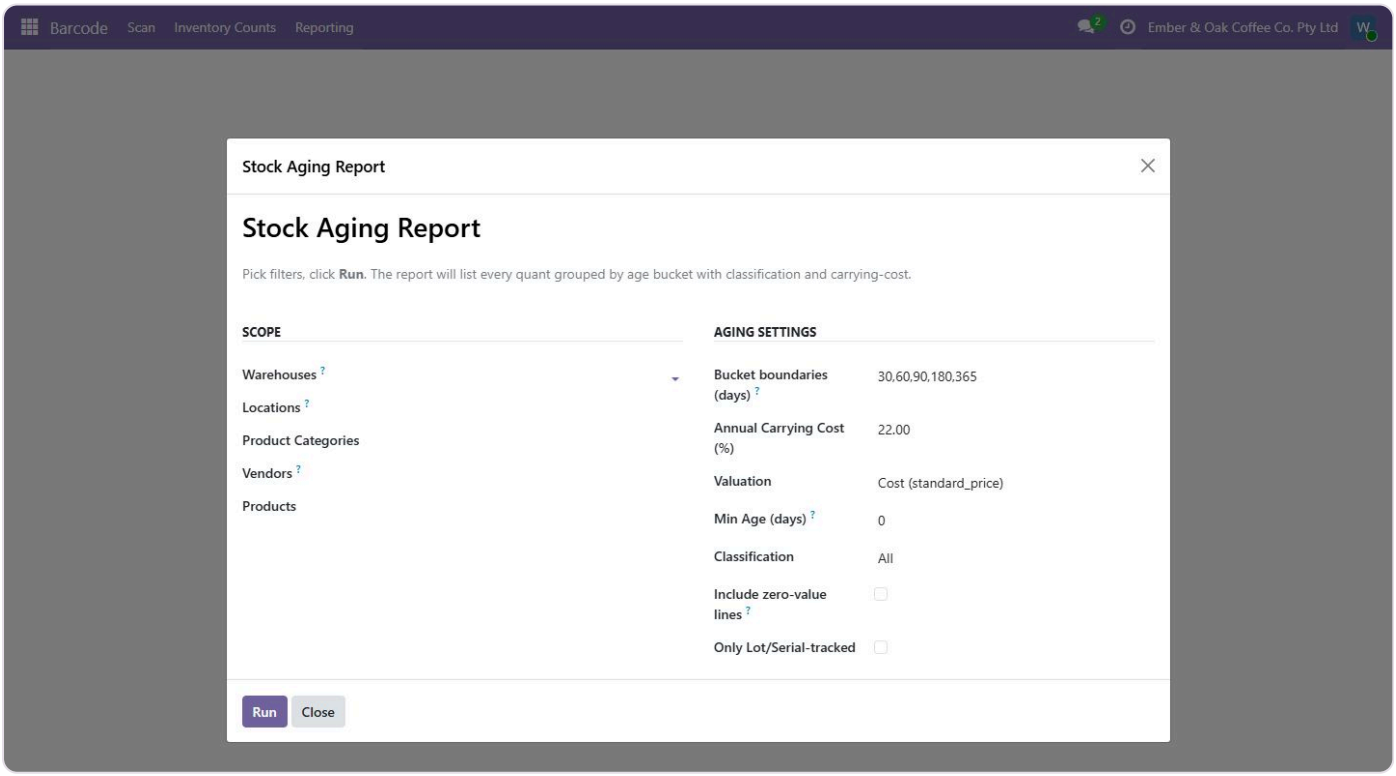

Age and class are two different things

Age is per stock record: days since it came into that location (the stock's in date). It puts each line in a bucket, 0-30, 31-60, 61-90, 91-180, 181-365 and 365+ on the demo. **Class** is per product: days since its last outgoing movement. Within 30 days it is a Fast Mover, within the slow threshold Normal, within the dead threshold Slow, beyond it Dead; stock that never moved out is Slow, and no stock is No Stock. A daily job refreshes the classes. So an apron bought in January can be 291 days old and still a Fast Mover, because one sold last week.

1 Run Report

STOCK AGING

Inventory, Reporting, Aging Analysis, Run Report. Narrow by warehouse, location, category, vendor or product, a minimum age, a class (slow and dead, dead only, everything but fast), lots only or zero value lines. The bucket boundaries, carrying cost % and valuation (cost or sales price) come from Settings and can be changed for this run.

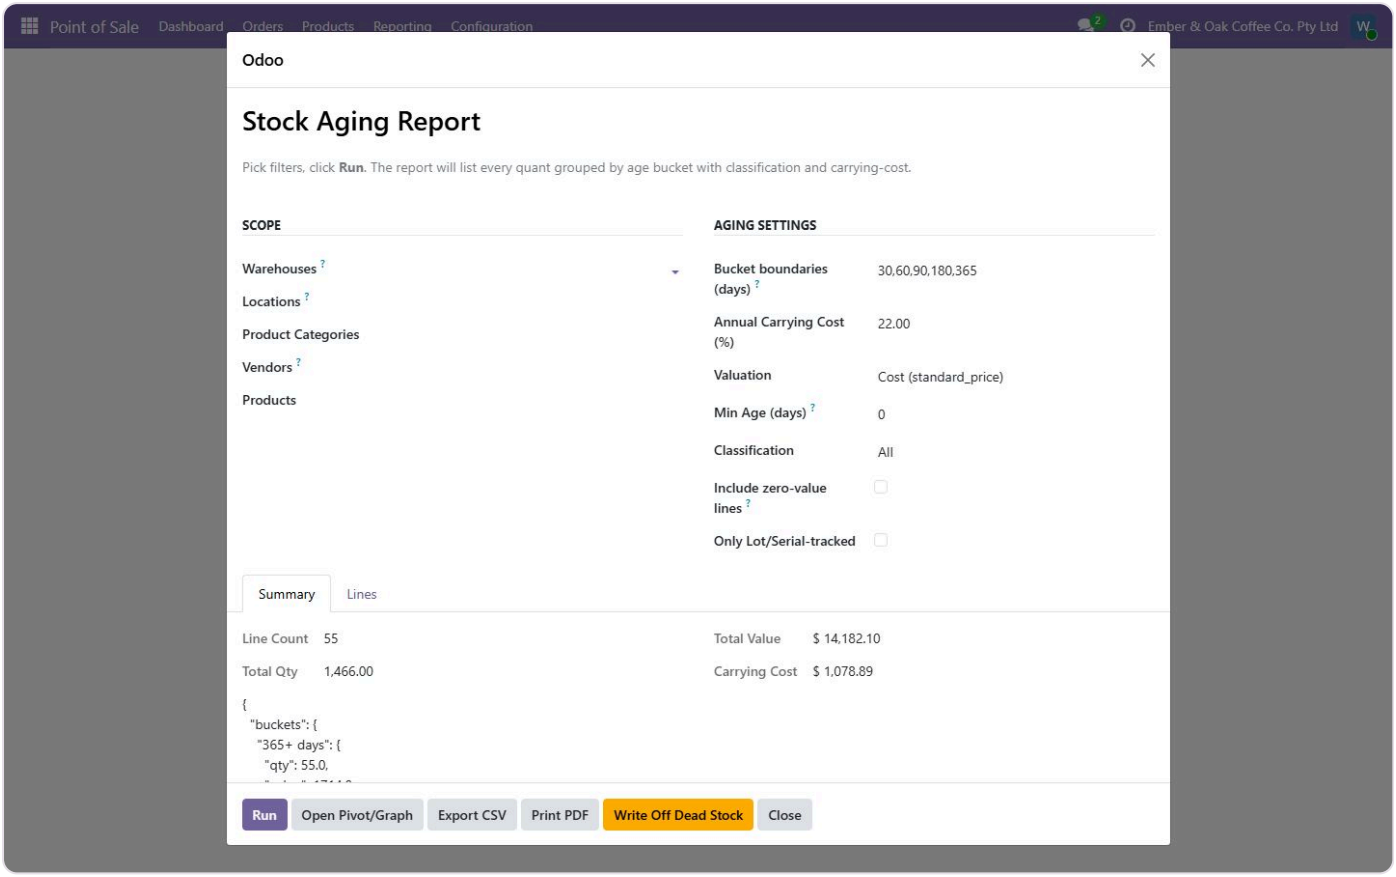

2 The result

STOCK AGING

55 lines, 1,466 units, 14,182.10 at cost, carrying cost 1,078.89. Buttons: Open Pivot/Graph, Export CSV, Print PDF and Write Off Dead Stock.

Carrying cost per line is value x carrying % x age / 365: what holding that stock for that long has cost so far.

3 The lines

STOCK AGING

Product, warehouse, location, lot, quantity, value, age, bucket, class and carrying cost, oldest first. Dead stock in red.

[EO-0029] Single Origin Ethiopia 250g	FTZ/Stock/Roastery Bench	16.00	$ 152.00	0	0-30 days	fast	$ 0.00

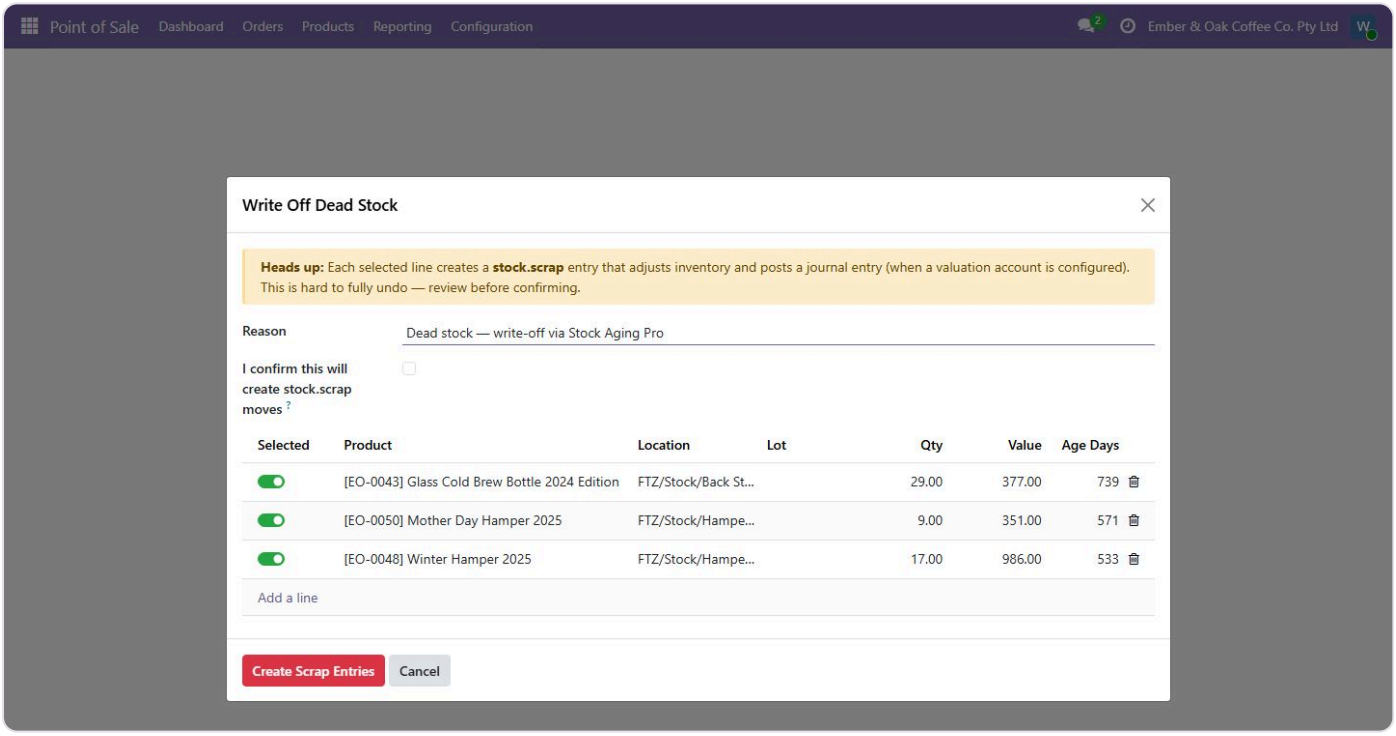

Showing top 60 of 55 lines. Use the CSV export for the full set.

5 Write Off Dead Stock

STOCK AGING

Opens with every dead line ticked: the 2024 cold brew bottles and both 2025 hampers. Untick what you keep, give a reason, tick the confirmation and Create Scrap Entries. One scrap per product, location and lot is validated and a note goes on each product.

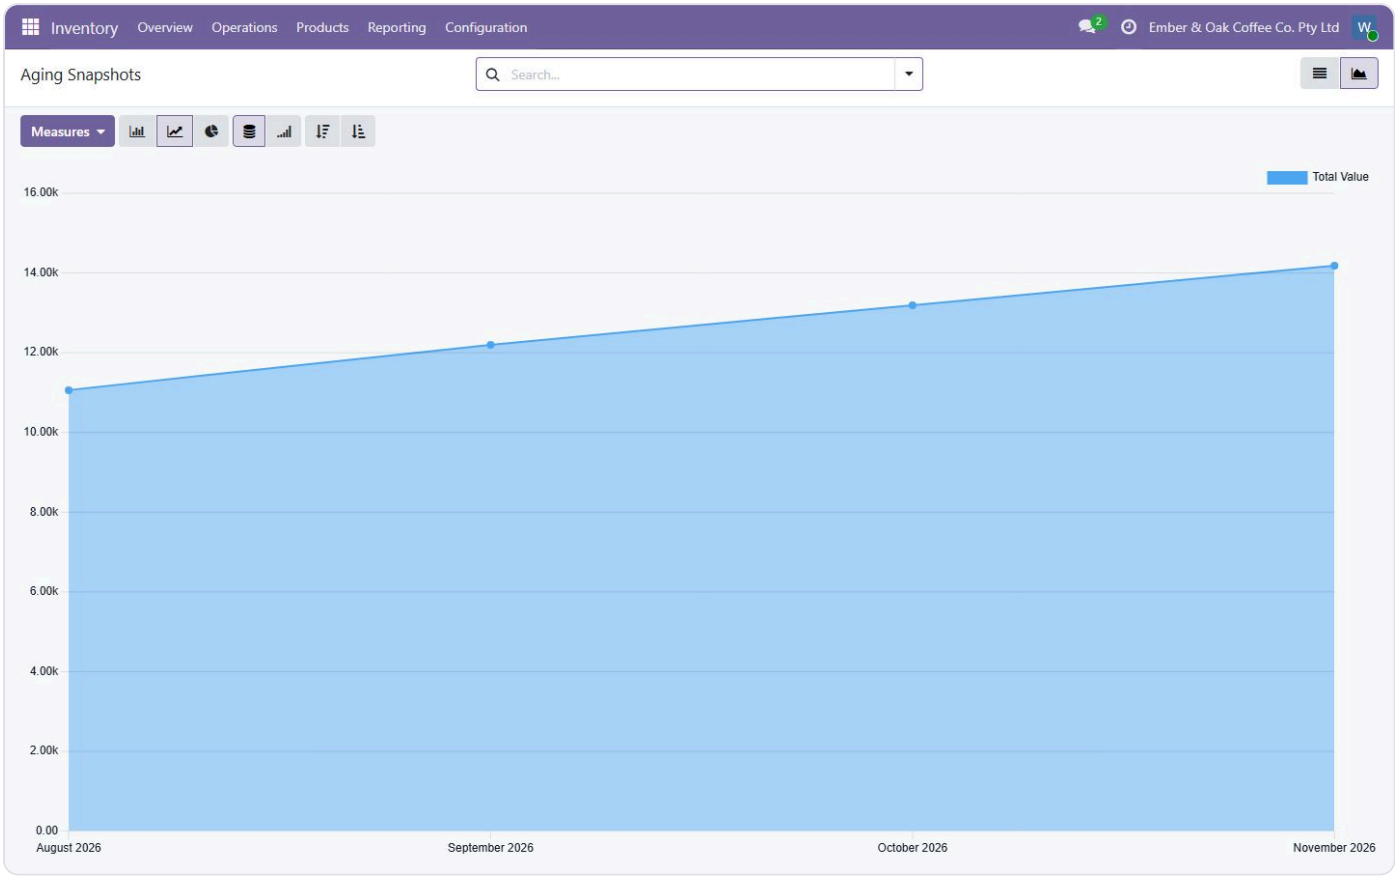

The demo leaves these unscrapped so the next visitor sees them.

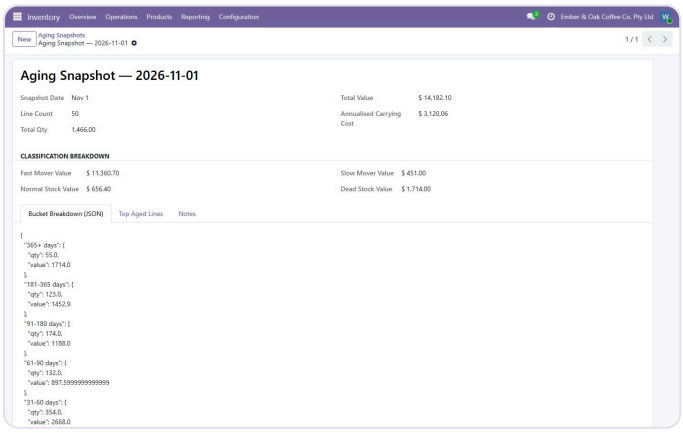

6 Monthly Snapshots

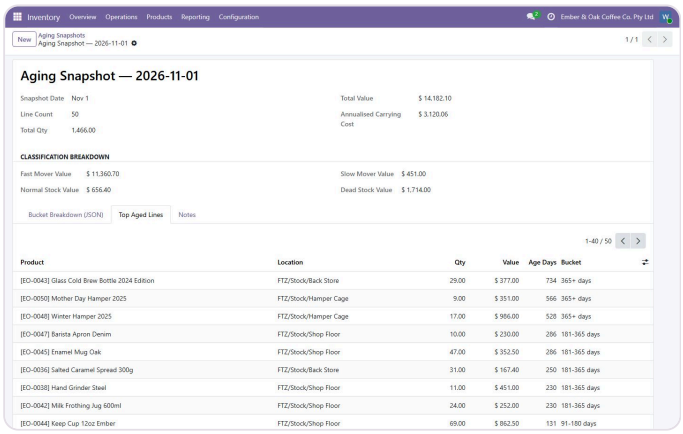

STOCK AGING

On the first of each month a scheduled job stores the totals, the value per class and per bucket and the 50 oldest lines. The graph shows the trend; the demo has August to November.

A snapshot: totals, carrying cost and the class breakdown.

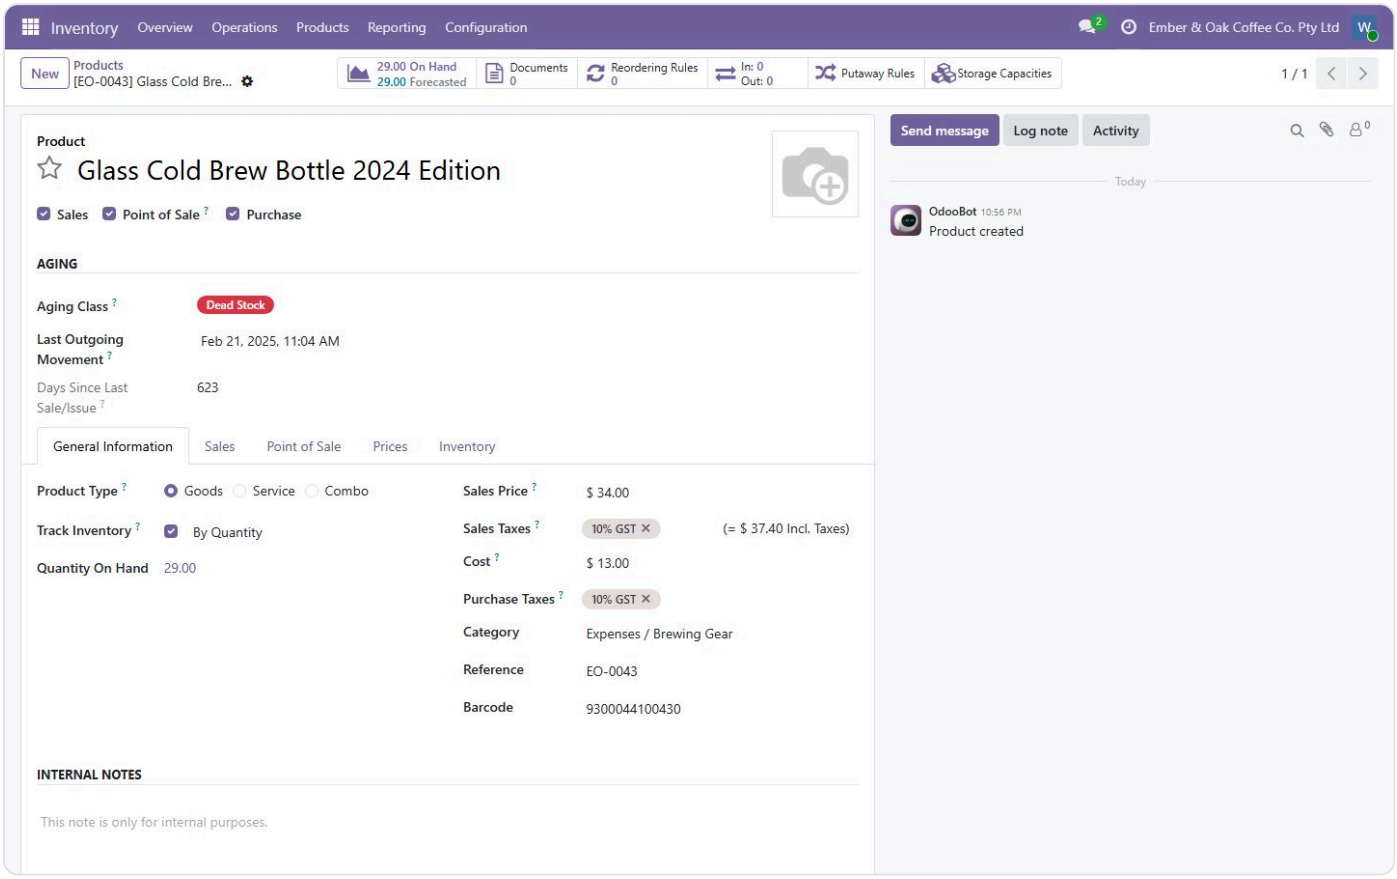

Top Aged Lines kept with the snapshot.

7 On the product

STOCK AGING

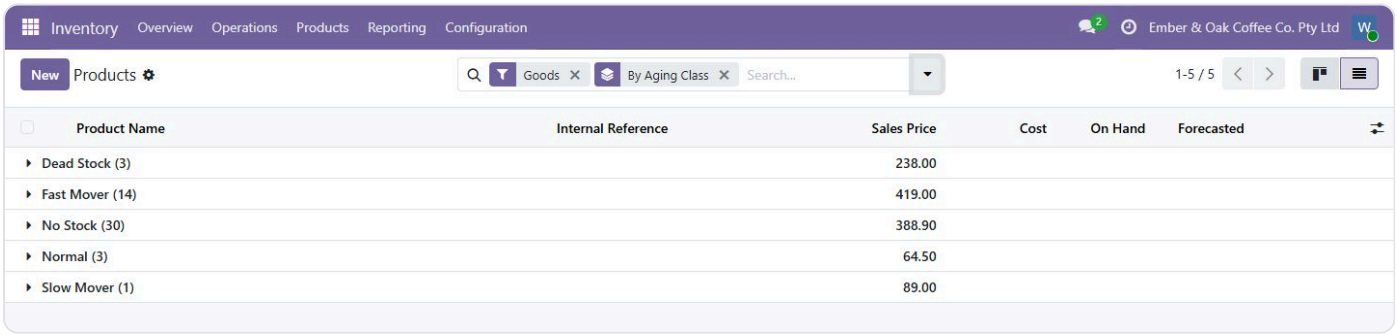

The product form shows Aging Class, Last Outgoing Movement and Days Since Last Sale/Issue. The class can be overridden by hand until the next daily refresh.

8 Product filters

STOCK AGING

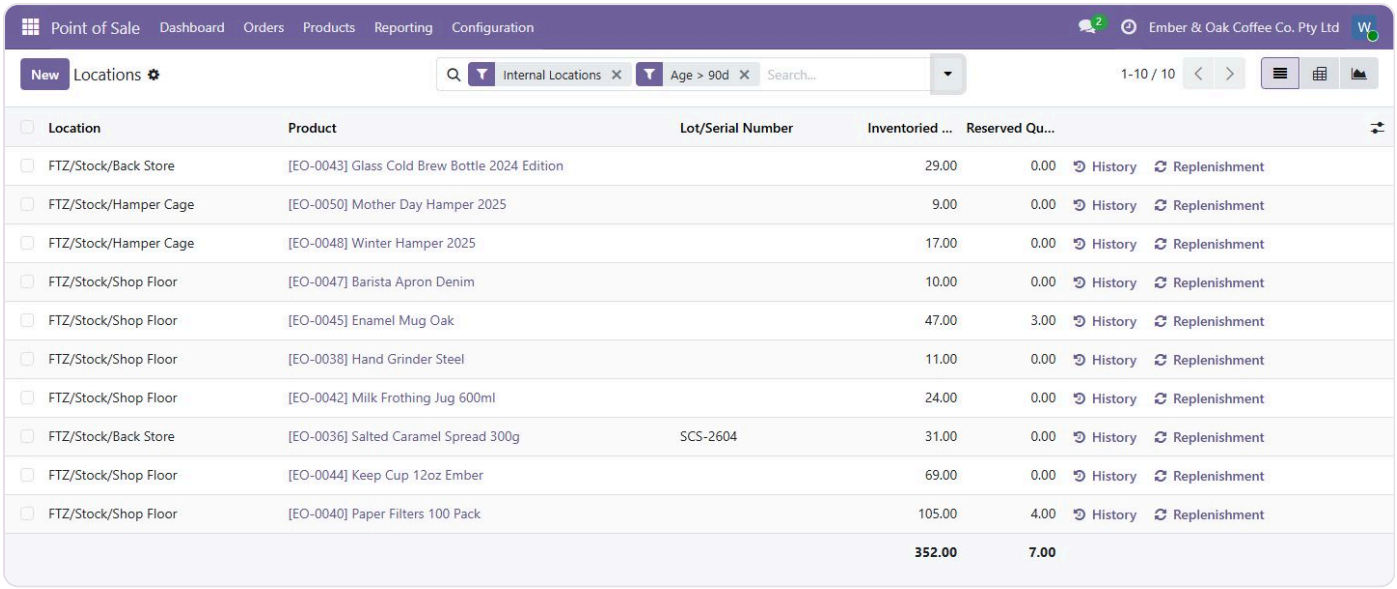

Inventory, Products gains Slow Movers, Dead Stock, Fast Movers and No Stock filters and a By Aging Class grouping.

9 Stock filters

STOCK AGING

On stock records: Slow, Dead and Fast Movers and Age over 30, 90, 180 or 365 days. Here everything older than 90 days.

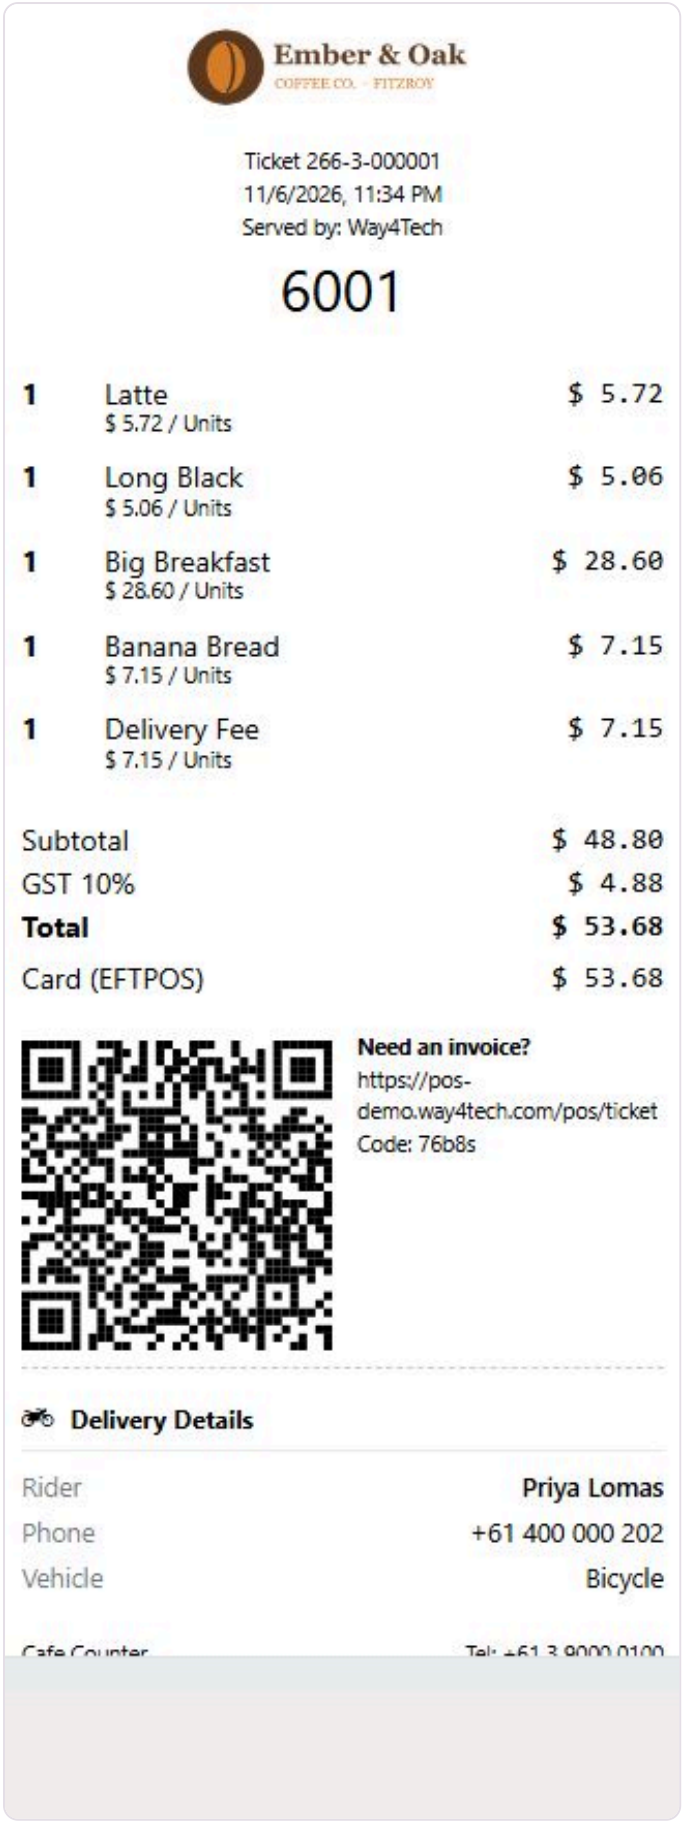

SCHEDULED JOB	WHEN	WHAT
Stock Aging, Recompute Classifications	Daily	Last outgoing date and class on every product with stock or history
Stock Aging, Monthly Snapshot	Monthly	Stores a snapshot with the top 50 aged lines
Stock Aging, Weekly Email Digest	Every 7 days	Emails the totals and class breakdown to the recipients set in Settings, or the Stock Aging managers

Three things to know in this release: a count that finds no difference still counts as an outgoing movement, so counting a dead line moves it back to Fast; the weekly digest also stores a snapshot row each week; and the snapshot carrying cost is total value x %, while the report weights each line by its age.

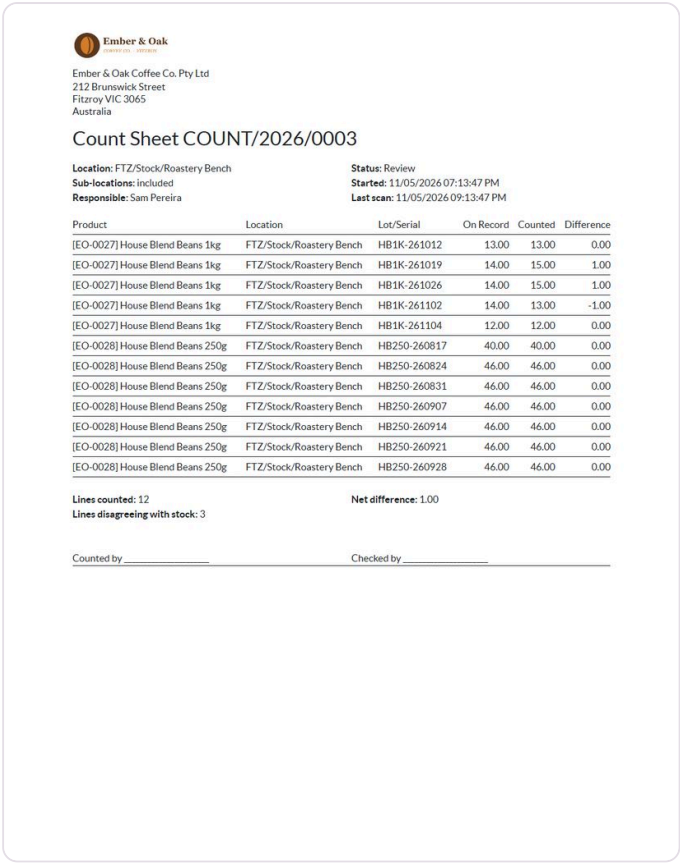

PART 13 Reports and printed documents

Everything the six add-ons print or report, in one place.

DOCUMENT OR REPORT	ADD-ON	WHERE	SHOWS
Receipt with Delivery Details	DELIVERY	The till, after payment	Rider, phone, vehicle, plate
Driver Summary (PDF)	DELIVERY	Driver, Print	Contact, vehicle, tills, orders and sales, order history
Kitchen and bar tickets	BRIDGE	Preparation printer of type WT POS Bridge	The standard Odoo ticket, printed through the agent
Service Sheet (PDF)	RESERVATION	Bookings, Print	Time, guest, covers, tables, phone, requests, state
Reservations pivot and graph	RESERVATION	Reservations, view switcher	Covers by day, sitting, source, state
Count Sheet (PDF)	BARCODE	Count, Print	Lines with lot, on record, counted, difference, signatures
Count Differences	BARCODE	Barcode, Reporting	Short and over lines, list and pivot
Scan Commands	BARCODE	Barcode, Reporting	Every scan and its outcome
Stock Aging Report (PDF, landscape)	AGING	Run Report, Print PDF	Totals, buckets, top aged lines
Aging lines, CSV export	AGING	Run Report	Pivot, graph and a CSV file
Monthly Snapshots, Weekly Digest email	AGING	Aging Analysis	The trend and the Monday email

The receipt with Delivery Details.

Counted by _____ Checked by _____

The count sheet.

PART 14 A 15-minute demo, and the questions people ask

The order to show the demo in, with what to point at.

#	OPEN	POINT AT
1	Point of Sale, Dashboard	*Two tills, sessions open today.*
2	Cafe Counter, Continue Selling	*The floor plan and the printer icon in the top bar.*
3	Click the printer icon	*The bridge dialog: no IoT Box, a free agent on the PC.*
4	New Order, two coffees and a breakfast, press Delivery	*The fee line appears.*
5	Payment, Select Driver	*Drivers with phone and plate. Validate and show the receipt.*
6	Configuration, Delivery Drivers, Kofi Ashdown	*Orders and sales, then Print, Driver Summary.*
7	Reservations, Today	*The parties due, then Check Availability for six people.*
8	Reservations, calendar, a large party	*Two tables pushed together inside one zone.*
9	pos-demo.way4tech.com/reservation	*The guest side: free times only.*
10	Offline Scanner, Launch Scanner	*Scan 9300044100287: name and price.*
11	Barcode, Scan on a phone	*A receipt ready at the dock; the queue and Send.*
12	Barcode, Inventory Counts, COUNT/2026/0003	*In review, differences, Apply to Stock.*
13	Inventory, Aging Analysis, Run Report	*Buckets, the three dead lines and Write Off.*
14	Monthly Snapshots, graph	*The trend month by month.*

Questions people ask

QUESTION	ANSWER
Do these need Odoo Enterprise?	No. All six run on Odoo 19 Community.
Do I need an IoT Box for my printer?	Not with the bridge. It drives USB, serial and network ESC/POS printers, the drawer, a serial scale and a pole display through a free Windows agent on the till PC.
Does the bridge work on a Mac or a tablet?	No. The agent is for Windows. Without it the till prints through the browser.
Can a driver be required before payment?	Yes, per till, with Require Driver Before Payment.
Does the delivery add-on track the driver on a map?	No. It records who took the order, prints them on the receipt and totals their orders and sales.
Can a guest book online without an account?	Yes. The booking pages are public and the guest page opens from a token in the email.
Can two people book the last table at once?	No. The sitting is held while the booking is written and the database refuses a table held twice.

Can a big party be seated across tables?	Yes, inside one zone, up to the sitting's tables per booking, choosing the set that wastes fewest seats.
Does the price checker work offline?	Yes, once it has loaded the catalogue in that browser.
Can a scanner resend book stock twice?	No. Every scan carries its own reference held behind a unique index; a repeat returns the first answer.
Can a counter change stock?	No. Applying a count needs the Manage Counts group.
Does stock aging post the write-off to accounting?	It creates and validates stock scraps; the journal entry follows your product category valuation, as for any scrap.

PART 15

The menu map

Every screen the six add-ons add, on one page.

Point of Sale

Dashboard	Tills, Continue Selling
Orders, Sessions	Standard Odoo
Configuration, Delivery Drivers	Drivers, vehicles, terminals
Configuration, WT POS Bridge setup	Four step checklist
Configuration, Settings	WT POS Bridge block

Reservations

Today	Tonight in the order due
Reservations	List, kanban, calendar, pivot, graph
Check Availability	Free slots, take the booking
Dining Room, Tables	Seats, smallest party, combine
Dining Room, Zones	Indoor, outdoor, private, bar
Configuration, Sittings	Hours, pacing, rules

Offline Scanner

Launch Scanner	Price checker in its own tab

Barcode

Scan	Transfers and counts on a handset
Inventory Counts	Draft to Applied
Reporting, Count Differences	Short and over lines
Reporting, Scan Commands	Every scan, managers only

Inventory

Reporting, Aging Analysis, Run Report	Buckets, carrying cost, write off
Reporting, Aging Analysis, Monthly Snapshots	The trend
Products	Aging Class filters
Operation types	Over-picking, unplanned products

Website

/reservation	Book a table
/reservation/booking/...	The guest page with cancel

Want this for your shop or cafe?

We install the add-ons you need on your Odoo 19, set up the tills, the printers and the drivers, load your tables and sittings, put barcodes on your products and locations, and train the counter and the stockroom. Each add-on is sold on its own, so you only pay for what you use.
