COMPLETE GUIDE · THE TRADE, SETUP AND EVERY SCREEN

Veterinary Clinic Management for Odoo 19

Patients by species and breed, SOAP consultations with vitals, vaccination courses and reminders, prescriptions with withdrawal periods, lab requests, boarding, grooming and pet insurance claims. Every screen and every step, shown on a live demo. No Odoo background needed.

START

About this guide

A veterinary practice has two customers in every room: the animal it treats and the owner who pays. This guide walks the whole module one screen at a time, from an empty database to a practice that has been seeing patients for four months. You do not need to have used Odoo before.

Who it is for

The practice manager setting a clinic up, the vets and nurses who use it in the consulting room, reception, the boarding team, and anyone being shown the system for the first time.

How to read it

Front to back the first time. Each part opens with what you will learn and a short thing to try on the live demo, then walks every field and every button.

The live demo

Hollowmere Veterinary Centre, an invented mixed practice in the UK with three vets, a nurse, a groomer, two dozen patients from dogs to a dairy cow, and four months of consultations, vaccinations, stays and claims.

HOW IT WORKS

The demo practice

Address	**vet-demo.way4tech.com**
Sign in	**w4demo** / **Demo2026**
Practice	Hollowmere Veterinary Centre: two consulting rooms, a theatre, isolation, five kennels and a cattery
Currency	Pound sterling (GBP), UK chart of accounts and VAT
Runs on	Odoo 19 with Inventory and Invoicing. The module itself needs only Community.

Every practice, person, animal and number on the demo is invented. The demo is shared and is reset from time to time, so anything you change may be changed back or seen by the next person.

What is in the guide

PART 1	How a veterinary practice runs	PART 2	The practice at a glance
PART 3	Open the demo and sign in	PART 4	Setting up from zero
PART 5	The patient record	PART 6	Consultations
PART 7	Vaccinations and reminders	PART 8	Prescriptions, controlled drugs and withdrawal
PART 9	Lab requests	PART 10	Boarding, day care, hospital and grooming
PART 11	Pet insurance claims	PART 12	Reporting
PART 13	Printed documents, emails and scheduled jobs	PART 14	A 15-minute demo
PART 15	Questions people ask	PART 16	Menu map

PART 1 How a veterinary practice runs

Five minutes on the trade, so the screens make sense.

IN THIS PART YOU WILL LEARN

- Why the patient and the client are two different records
- The SOAP consultation and the vitals that go with it
- Vaccination courses, boosters and the reminder that brings the client back
- Controlled drugs and withdrawal periods on farm animals
- Boarding, day care and grooming beside the clinical work

Pets, not customers

In Odoo a customer is a contact. In a practice the record that matters is the animal: its species, breed, sex, neuter status, age, microchip, weight and history. The owner is the contact who pays and who is reminded. One owner may have three dogs, and a farm has a whole herd under one account. So the module keeps a **patient** for each animal, linked to its **owner**.

The consultation

Vets write notes in the SOAP format every vet school teaches: **S**ubjective (what the owner reports), **O**bjective (what the examination found), **A**ssessment (the working diagnosis) and **P**lan. Alongside go the vitals: weight, temperature, heart rate, respiration, a body condition score from 1 to 5 and a pain score.

Preventive care

A puppy or kitten gets a primary course of vaccinations a few weeks apart, then a booster every year or every few years. The batch number of every dose has to be traceable. A practice lives on clients coming back for these, which is why the reminder before a dose falls due matters as much as the dose.

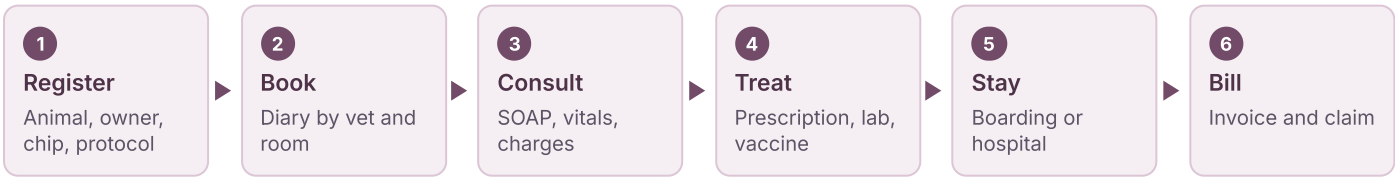

Medicines

Some veterinary medicines are controlled drugs, such as methadone for pain, and an inspector expects to see a record of every use. On food-producing animals there is a second rule: after certain medicines, meat or milk cannot be sold until a **withdrawal period** has passed.

Beyond the consulting room

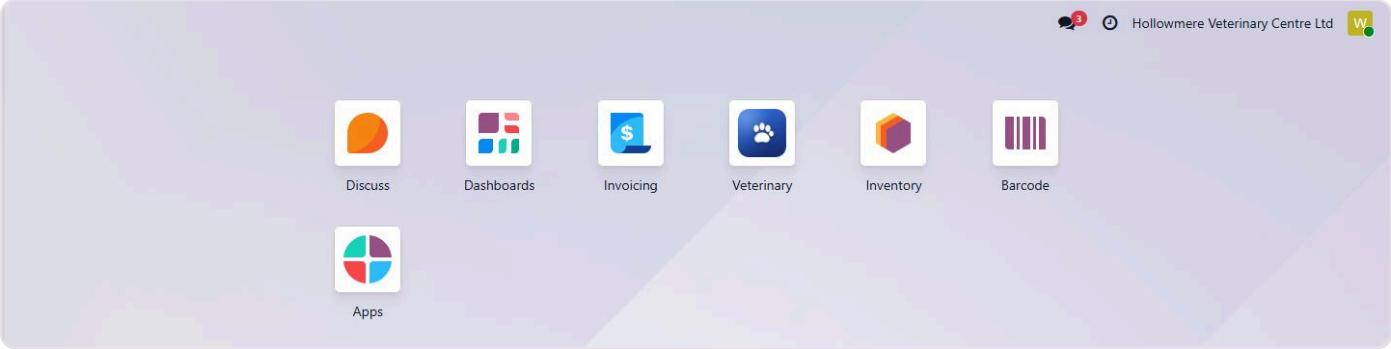

Many practices also board animals, run day care, keep in-patients in kennels and offer grooming. Each needs a kennel, a feeding and medication plan, and a bill by the night or the session.

A patient through the practice

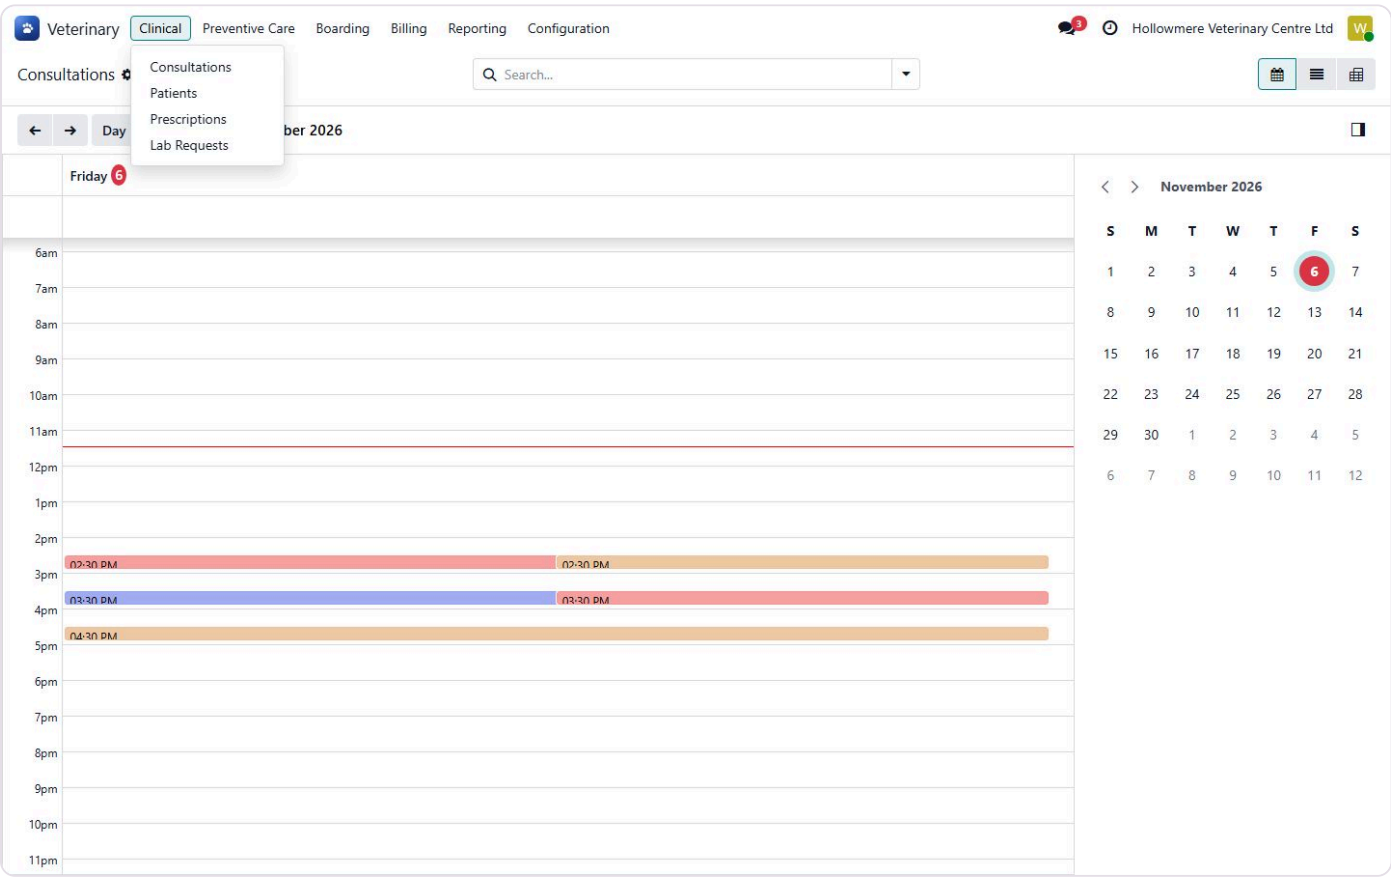

PART 2 The practice at a glance

The module adds one app, Veterinary, with six menus, and three roles that decide who sees what.

The Veterinary app on the Odoo home screen.

MENU	WHAT IS UNDER IT
Clinical	Consultations, Patients, Prescriptions, Lab Requests
Preventive Care	Vaccinations, Overdue, Weights
Boarding	Stays, Grooming, Kennels
Billing	Insurance Claims
Reporting	Practice Revenue, Controlled Drug Register
Configuration	Settings, Clinics, Rooms, Team, Species, Breeds, Vaccination Protocols, Specialities

The Clinical menu open.

Reception and Nursing

Books appointments, admits boarders, records weights and raises invoices. Cannot sign a prescription or read the confidential clinical notes.

Veterinary Surgeon

Full clinical access: consultations, prescriptions, controlled drugs and lab results.

Practice Manager

Everything, plus clinics, pricing, protocols and reporting. The administrator gets this role on install.

> The demo login w4demo has the Practice Manager role, so you can see every screen in this guide except Settings, which needs an administrator. The Settings screen in Part 4 was taken as one.

PART 3 Open the demo and sign in

Everything in this guide can be followed on the live demo.

TRY IT YOURSELF ON THE DEMO

1. Open vet-demo.way4tech.com in any browser
2. Sign in with w4demo and Demo2026
3. Click Veterinary on the home screen
4. Open Clinical, Consultations: the diary opens on this week

1

Go to the practice

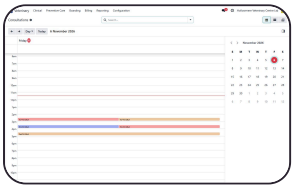

Open **vet-demo.way4tech.com**. The sign-in screen is the standard Odoo one.

2

Sign in

User `w4demo`, password `Demo2026`.

The demo is shared, so look at everything and expect changes to be put back.

3

The diary

Clinical, Consultations opens as a calendar: every appointment by vet and room. Switch to the list, the form or the revenue pivot from the view buttons.

PART 4 Setting up from zero

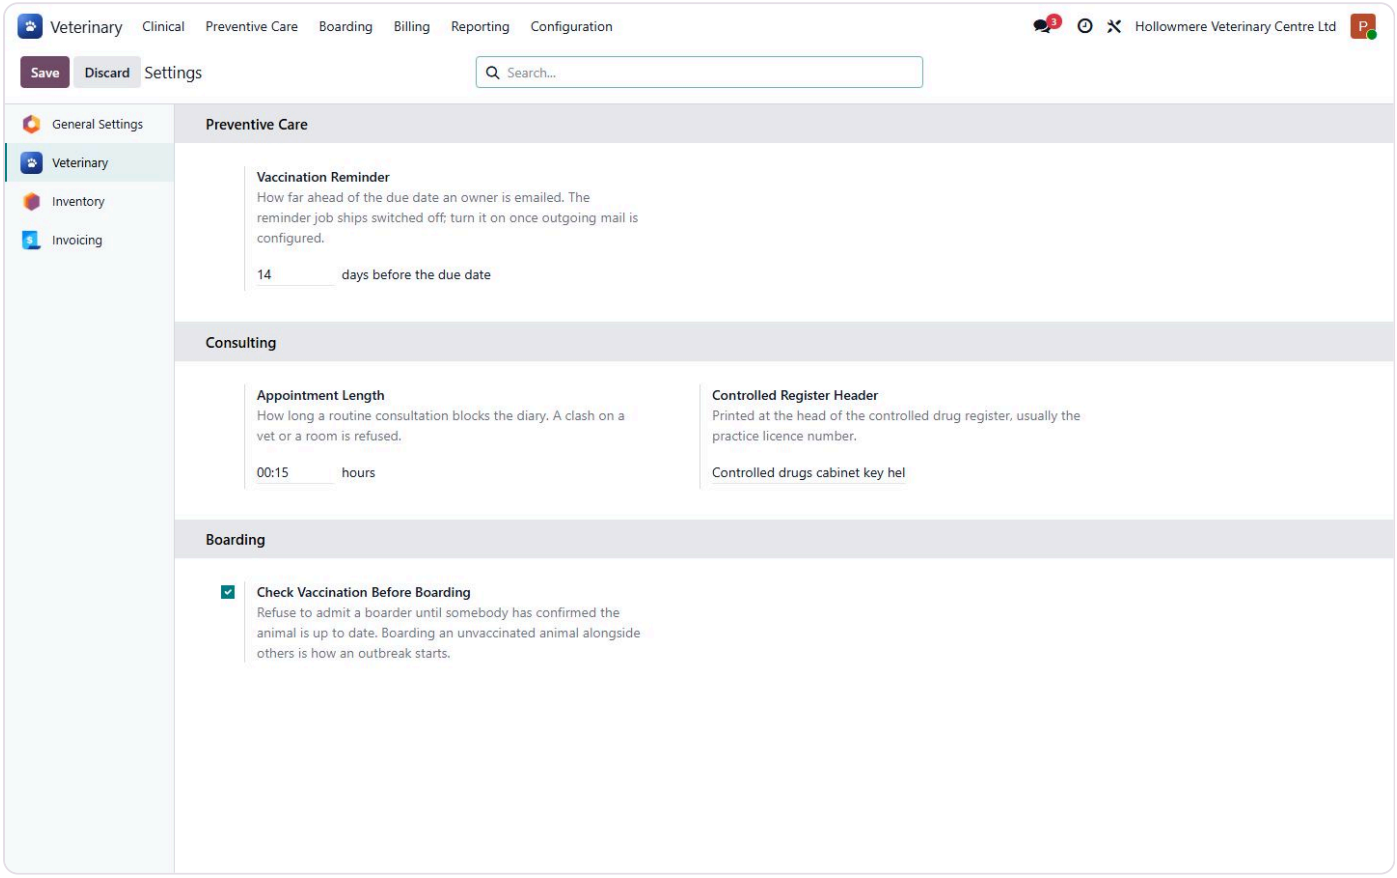

The practice, its rooms and team, the species it sees, and the vaccination protocols it follows. Do it in this order.

IN THIS PART YOU WILL LEARN

- The four veterinary settings
- A clinic with its rooms, team and dispensary location
- Team members, registration and who may prescribe
- Species, breeds and vaccination protocols
- The veterinary flags on a product

TRY IT YOURSELF ON THE DEMO

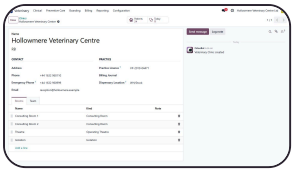

1. Open Configuration, Clinics and look at the Rooms and Team tabs
2. Open Configuration, Vaccination Protocols and the puppy course
3. Open Configuration, Species and check which are food producing

Settings, Veterinary.

SETTING	DEFAULT	WHAT IT DOES
Vaccination Reminder	14 days	How far ahead of a due date the reminder email goes to the owner
Appointment Length	0.25 h	The default length of a new consultation in the diary
Controlled Register Header	empty	A note meant for the controlled register
Check Vaccination Before Boarding	on	Meant to switch the vaccination check on boarding admission

> In this version Controlled Register Header and Check Vaccination Before Boarding are stored but not read anywhere. Boarding and day care always require the Vaccination Checked tick, whatever the setting says.

1

The clinic

Configuration, Clinics. Name, code (it prefixes patient and visit numbers), address, phone, an **emergency phone** printed on discharge notes, the practice licence number, the sales journal, and the **Dispensary Location** that prescriptions take stock from. The Rooms and Team tabs list both.

Without a dispensary location, dispensing a prescription takes nothing out of stock.

2

Rooms

Configuration, Rooms: consulting room, operating theatre, prep or treatment, imaging, isolation, laboratory. Two consultations cannot be booked into the same room at the same time.

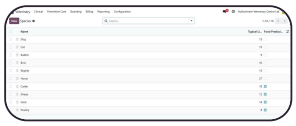

3

The team

Configuration, Team: vets, nurses, technicians and groomers, each with a role, registration number and expiry, **Can Prescribe**, specialities, consultation fee and a short biography. A vet cannot be double-booked: a second consultation overlapping the first is refused.

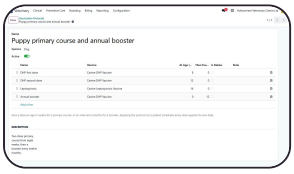

Only a team member with Can Prescribe may sign a prescription.

4

Species and breeds

Configuration, Species ships with dog, cat, rabbit, bird, reptile, horse, cattle, sheep, goat and poultry, each with a typical lifespan (used to flag senior patients) and a **Food Producing** tick. **Breeds** carry a watch-out note shown on the patient.

5

Vaccination protocols

Configuration, Vaccination Protocols: one per course and species. Each dose has a vaccine, an age in weeks and, for boosters, **Then Every (months)**; a rabies dose is flagged. The demo has a puppy course, a kitten course and a rabbit course.

Products carry veterinary fields that mark a **medicine**, a **controlled drug**, a **vaccine**, the default route and the **withdrawal days** for food-producing animals. Specialities (surgery, orthopaedics, dermatology, dentistry, exotics, farm animal) are a simple list to tag the team with.

> The product form has no screen for those veterinary fields in this version. They are set when the product is loaded or imported; the demo products came with them. Withdrawal days can be changed on each prescription line.

PART 5 The patient record

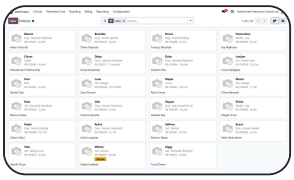

One record per animal, with the owner behind it and every piece of its history a tab away.

IN THIS PART YOU WILL LEARN

- The animal, the owner and the alerts that show on every screen
- Weight history and the growth chart
- Insurance details on the patient
- Senior, deceased and food-producing animals

TRY IT YOURSELF ON THE DEMO

1. Open Clinical, Patients and switch to the list
2. Filter Vaccination Overdue
3. Open Juniper and read the Clinical tab

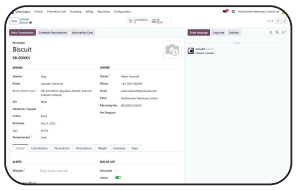

1

The patients

Clinical, Patients opens as cards: photo, name, species and breed, owner, and an overdue flag. The list shows the patient number, age, owner, last visit, next vaccination and current weight, with overdue patients in red.

Filters: Vaccination Overdue, Insured, Senior, Under Withdrawal, Alive, Deceased.

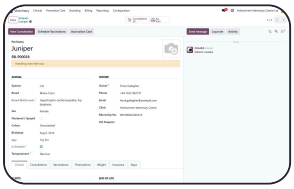

2

The animal and the owner

Animal: species, breed (with its watch-out note), sex, neutered, colour, date of birth and age, temperament (calm, nervous, handle with care, muzzle required), microchip and pet passport. **Owner**: the contact, phone and email. A farm animal also has a herd or flock reference.

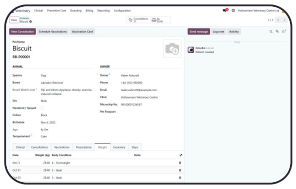

The patient number comes from the clinic code and a sequence.

3

Clinical

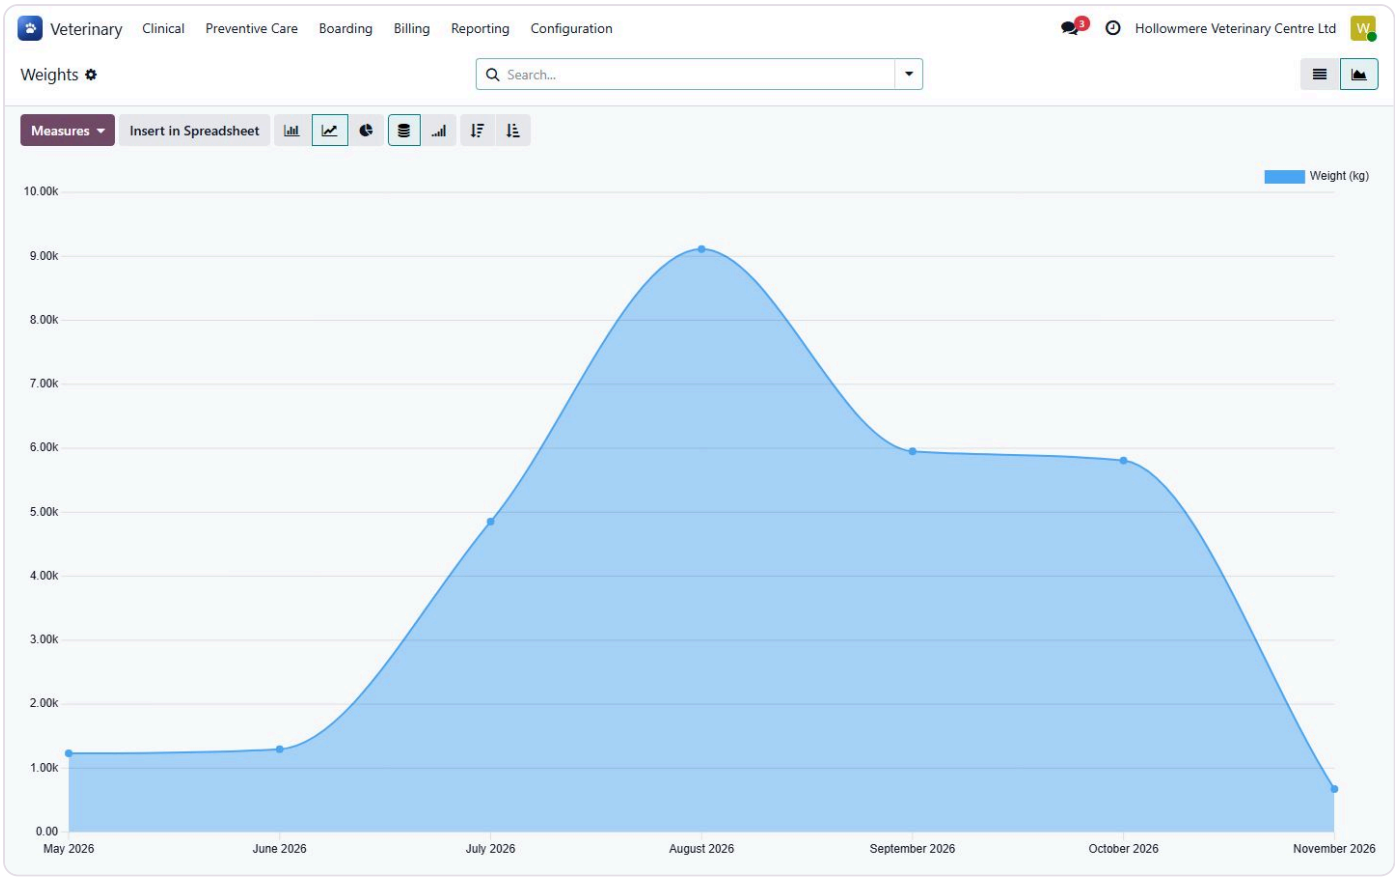

Alerts: allergies, chronic conditions and a diet note, the things a vet must see before treating. **End of Life**: deceased and the date. A food-producing animal under a withdrawal period shows **Withheld Until**.

4

Weight

Every weight, with the body condition score and the consultation it was taken at. Finishing a consultation with a weight on it adds a row here. **Preventive Care, Weights** shows the same as a line chart per patient.

Preventive Care, Weights as a graph: the trend is visible rather than remembered.

The **Insurance** tab holds the insurer, policy number and expiry; **Insured** is worked out from them. The Consultations, Vaccinations, Prescriptions and Stays tabs list the history. Buttons on the form: **New Consultation** opens a visit for this animal, **Schedule Vaccinations** applies the species protocol, and **Vaccination Card** prints it. A patient past three quarters of the typical lifespan for its species is flagged **Senior**.

PART 6 Consultations

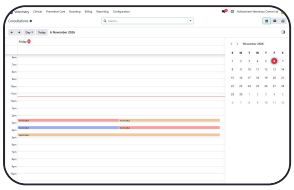

The appointment, the clinical notes, the vitals and the bill, on one record that moves from booked to invoiced.

IN THIS PART YOU WILL LEARN

- Booking in the diary, and the clash rules for vets and rooms
- The seven states of a consultation
- SOAP notes, vitals and charges
- Invoicing and the discharge note

TRY IT YOURSELF ON THE DEMO

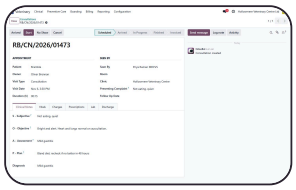

1. Open Clinical, Consultations and look at today in the calendar
2. Switch to the list and filter Open
3. Open an invoiced consultation and read the Vitals tab

1

The list

Number, date, patient, species, owner, vet, type and state, emergencies in red. Filters: Today, Open, To Invoice, Emergencies.

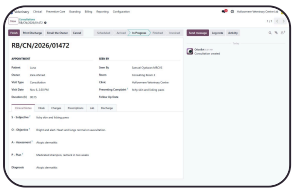

2

Scheduled

Patient, owner, clinic, vet, room, date and duration, and the type: consultation, vaccination, follow-up, emergency, surgery, dental, grooming or euthanasia. A vet or a room already busy at that time is refused.

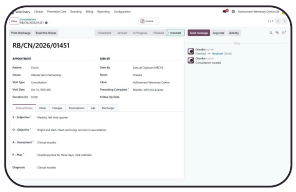

The default length comes from Appointment Length in the settings.

3

Arrived, then Start

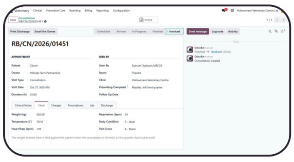

Arrived when the client checks in, **Start** when the vet calls them in. **No Show** and **Cancel** sit beside them.

4

Clinical notes

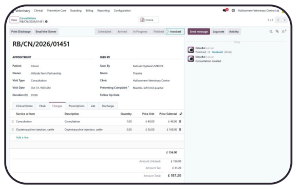

Presenting complaint, then **S**, **O**, **A** and **P**, the diagnosis and the follow-up date.

5

Vitals

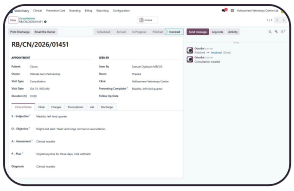

Weight, temperature, heart rate, respiration, body condition score (1 to 5) and pain score. A temperature outside 20 to 50 C, or a negative reading, is refused.

6

Charges

Each line is a product, description, quantity, price, discount and taxes. Prescriptions and lab requests made at the visit sit on their own tabs.

7

Finish and Invoice

Finish closes the notes, files the weight on the patient and, if a follow-up date is set, puts a to-do on the vet for that day.
Invoice raises the owner's invoice from the charges, with the patient and diagnosis in the notes.

A consultation on a posted invoice cannot be cancelled; credit the invoice instead.

Going Home

RB/CN/2026/01451

Patient
Clover
Cattle
Owner: Hillside Farm Partnership

Seen
10/31/2026 09:00:00 AM
By Samuel Oyelaran MRCVS
Diagnosis: Clinical mastitis

> Oxytetracycline for three days, milk withheld

Medicines sent home

Medicine	Dose	Frequency	Days
Oxytetracycline injection, cattle	10 mg/kg	Once daily (SID)	3

Out of hours: +44 1632 960999

Print Discharge: patient, owner, vet, diagnosis, home care instructions, follow-up date and the emergency number. Email the Owner sends the same.

PART 7 Vaccinations and reminders

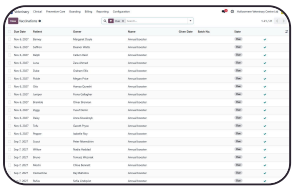

Protocols schedule the course, every dose is recorded with its batch, and the booster schedules itself.

IN THIS PART YOU WILL LEARN

- Scheduling a course from the species protocol
- Due, overdue, given and skipped
- Recording a dose with batch, expiry and site
- The booster that follows, the card and the reminder email

TRY IT YOURSELF ON THE DEMO

1. Open Preventive Care, Overdue
2. Open a given vaccination and read its traceability
3. Open a patient and press Vaccination Card

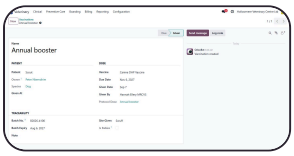

1 Vaccinations

Preventive Care, Vaccinations: patient, species, dose, due date, given date, batch and state. Filters: Due, Overdue, Given, Rabies.

2 Overdue

Preventive Care, Overdue: due doses whose date has passed. This is the list reception rings through.

3 Record as Given

Fill the batch number (required), batch expiry, the site (left or right fore or hind, scruff, oral, intranasal), who gave it and the certificate number for rabies, then **Record as Given**. A batch that had expired on the day is refused. The next dose in the course, or the booster after the interval, is scheduled at once.

Skip marks a dose not given.

Applying a protocol to an older animal records doses that fell due more than 120 days ago as **Skipped**, with a note, so a nine year old dog does not arrive with a puppy course owing.

The Vaccination Card: patient, species, breed, sex, date of birth, microchip, owner, then every dose with the date given, batch, site and vet, and the next due date.

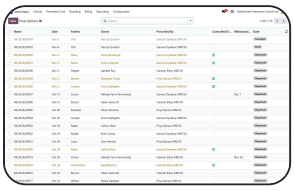

The job **Veterinary: vaccination reminders** runs daily and emails the owner of every due dose inside the reminder window, once per dose. It ships switched off. The card is the only vaccination document; there is no separate rabies certificate layout.

PART 8 Prescriptions, controlled drugs and withdrawal

A prescription records what was given and takes it out of the dispensary stock. Controlled drugs and withdrawal periods follow from the product.

IN THIS PART YOU WILL LEARN

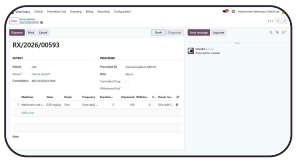

- Writing and dispensing a prescription
- What dispensing checks and what it moves in Inventory
- The controlled drug register
- Withdrawal periods on food-producing animals

1

Prescriptions

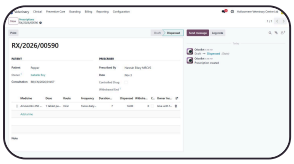

Clinical, Prescriptions: number, patient, species, prescriber, date, controlled flag, withdrawal end and state. Filters: Draft, Dispensed, Controlled Drugs, Under Withdrawal.

2

Draft

Patient, consultation, prescriber (only team members who may prescribe), date, then a line per medicine: dose, route, frequency (SID, BID, TID, QID, every other day, weekly, single dose, as needed), days, quantity dispensed, unit, withdrawal days and the owner's instructions.

3

Dispense

Dispense checks the patient's allergy note for the medicine's name, then posts a stock move from the clinic's dispensary location to the customer for each storable medicine, and marks it Dispensed. If stock cannot be moved, the prescription is still dispensed and the chatter says why.

The allergy check is a text match on the product name in the allergy note, so write allergies using the product name.

Reporting, Controlled Drug Register: every dispensed prescription that includes a controlled drug, here methadone given at surgery and dental work.

> The register is a filtered list of dispensed prescriptions. It does not keep a running balance or a witness signature.

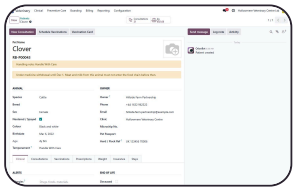

Withdrawal

4

A farm prescription

Oxytetracycline for a dairy cow with 28 withdrawal days. The line works out the last day from the date, the days of treatment and the withdrawal, the prescription shows the latest, and dispensing posts the date in the chatter.

5

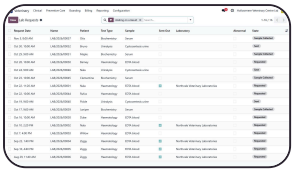

On the animal

The patient shows **Withheld Until**, and the Under Withdrawal filter on patients and prescriptions finds every animal whose meat or milk cannot be sold yet.

Cancel retires a draft prescription. A dispensed one cannot be cancelled; record a return instead.

PART 9 Lab requests

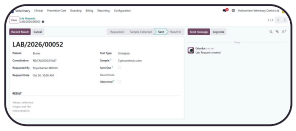

In-house or sent out, a request moves from the sample to the result.

1

Lab Requests

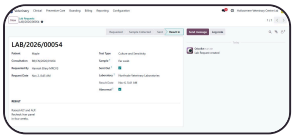

Clinical, Lab Requests: patient, test (haematology, biochemistry, urinalysis, cytology, histopathology, parasitology, culture and sensitivity, serology, imaging, other), sample, external flag, lab and state, abnormal results in red. Filters: Waiting on a Result, Abnormal, Sent Out.

2

Sample Taken, Send

Sample Taken records the sample. **Send** marks it sent; an external request needs the lab named before it can be sent.

3

Record Result

Type the result, tick **Abnormal** if it is, and press **Record Result**.

A result with no text is refused. Recording a result already ticked Abnormal fails with an error in this version when the requesting vet has an Odoo user; record the result first, then tick Abnormal.

PART 10 Boarding, day care, hospital and grooming

One record for every animal that stays: boarding, day care, an in-patient or a grooming slot, each in a kennel with a plan and a bill.

IN THIS PART YOU WILL LEARN

- Kennels, their sizes and states
- Booking, checking in and checking out
- Care plans, belongings and extras
- Invoicing a stay, and the overdue check-out job

TRY IT YOURSELF ON THE DEMO

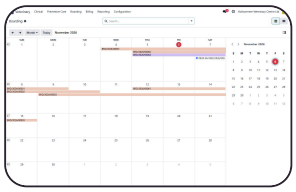

1. Open Boarding, Kennels and see who is in
2. Open Boarding, Stays and filter In House
3. Open Boarding, Grooming in the calendar

1

Kennels

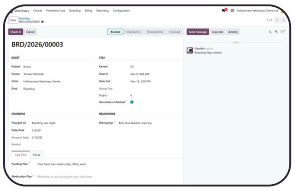

Boarding, Kennels grouped by size (small, medium, large, walk-in run): each kennel's species, isolation flag, daily rate and state (free, occupied, cleaning, out of use). Checking a guest out leaves the kennel in **Cleaning** until somebody marks it free.

2

Stays

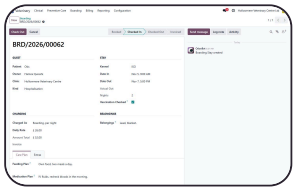

Boarding, Stays opens as a calendar from date in to date out. Filters: In House, Arriving Today, Leaving Today, To Invoice.

3

Booked

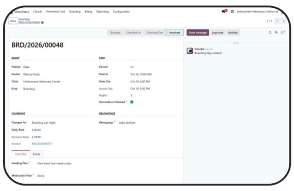

Patient, owner, clinic, kennel, kind (boarding, day care, hospitalisation, grooming), dates, the product and nightly rate, **Vaccination Checked**, and the care plan: feeding, medication and belongings. A kennel cannot hold two stays at once or a species it is not set up for.

4

Check In

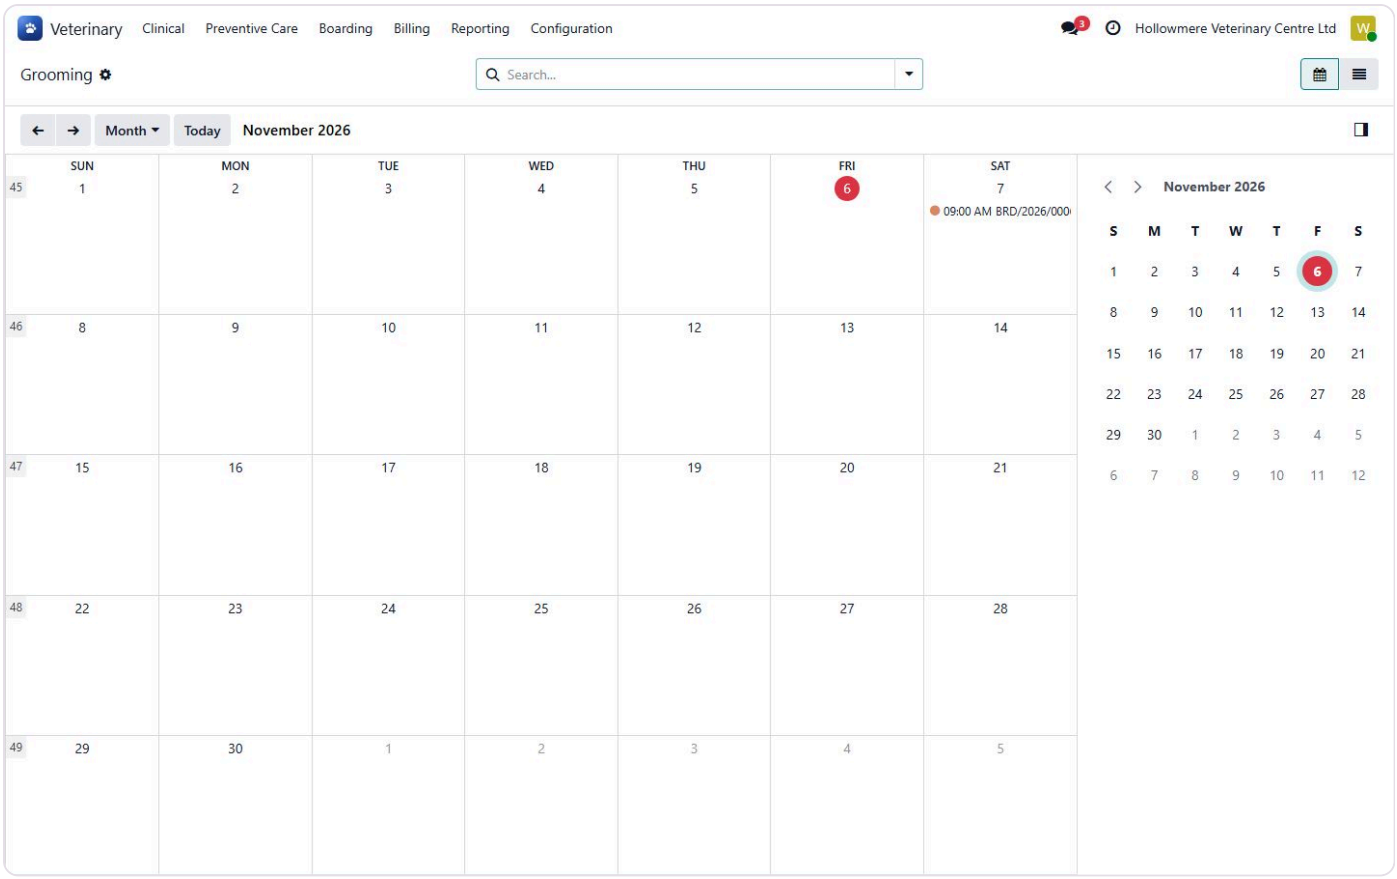

Check In needs a kennel and, for boarding and day care, the Vaccination Checked tick. The kennel becomes Occupied.

5

Check Out and Invoice

Check Out stamps the actual time out. **Invoice** bills the nights at the daily rate plus any extras (a bath, medication given, a groom) to the owner.

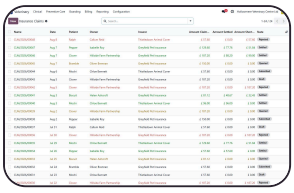

Boarding, Grooming: the same record with kind Grooming, in its own calendar and list.

Cancel frees the kennel; an invoiced stay cannot be cancelled. The job **Veterinary: chase overdue boarding checkouts** runs every six hours and puts a to-do on any guest still in after their date out. It is the one job that ships switched on.

PART 11 Pet insurance claims

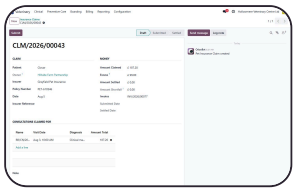

A claim records what was sent to the insurer, the excess the owner pays, and what the insurer settled.

1

Insurance Claims

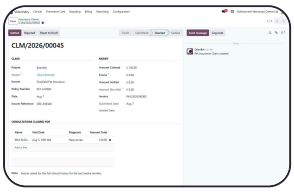

Billing, Insurance Claims: number, patient, owner, insurer, date, claimed, settled, shortfall and state.

2

Draft

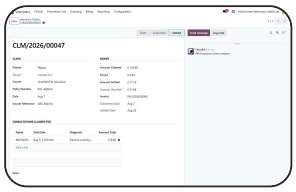

Patient (the insurer and policy number come from the patient), date, the consultations claimed for, the invoice, the amount claimed and the excess.

3

Submitted and Queried

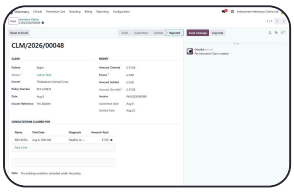

Submit stamps the submitted date. **Queried** records that the insurer came back with a question.

4

Settled

Enter what the insurer paid and press **Settled**. The shortfall, claimed less settled, is what the owner still owes. Settled for more than claimed is refused.

5

Rejected

Rejected leaves the whole claim as shortfall. **Reset to Draft** reopens any claim.

> Claims are tracked by hand. Nothing is sent to an insurer, and the insurer is an ordinary contact rather than a configured payer.

PART 12 Reporting

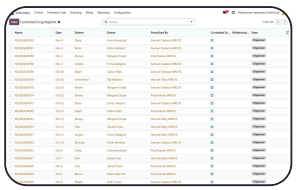

1

Practice Revenue

Reporting, Practice Revenue: invoiced consultations by vet and month with the total amount. Group by type or species to see what the practice earns from what.

It counts consultations only; boarding and grooming invoices are not in it.

2

Controlled Drug Register

Reporting, Controlled Drug Register, covered in Part 8.

The clinic form shows the number of patients and today's consultations; each team member's form counts their consultations.

PART 13 Printed documents, emails and scheduled jobs

DOCUMENT	FROM	WHAT IS ON IT
Vaccination Card	Patient, Vaccination Card	The animal, the owner, every dose with batch, site and vet, next due
Prescription	Prescription, Print	Each medicine with dose, route, frequency, days, instructions, prescriber registration, withdrawal end
Discharge Note	Consultation, Print Discharge	Diagnosis, home care, follow-up date, emergency phone

EMAIL	SENT WHEN
Vaccination due	The reminder job, inside the reminder window
Going home (discharge note)	Email the Owner on a consultation

SCHEDULED JOB	RUNS	SHIPPED
Veterinary: vaccination reminders	daily	off
Veterinary: chase overdue boarding checkouts	every 6 hours	on

PART 14 A 15-minute demo

MINUTE	SHOW	SAY
0 to 2	Clinical, Consultations calendar	The diary by vet and room; double booking is refused
2 to 5	An invoiced consultation: notes, vitals, charges	SOAP and vitals on one record, the invoice in one click
5 to 7	A patient: alerts, weight chart, history tabs	Allergies and conditions in front of the vet every time
7 to 9	Preventive Care, Overdue, then a Vaccination Card	Courses schedule themselves; batches are traceable
9 to 11	The dairy cow and her prescription	Withdrawal date worked out and shown on the animal
11 to 13	Boarding, Kennels and Stays	Who is in, where, and what they eat
13 to 15	Insurance Claims, then Practice Revenue	Excess and shortfall per claim; revenue by vet and month

PART 15 Questions people ask

QUESTION	ANSWER
Does it need Odoo Enterprise?	No. It runs on Odoo 19 Community with Inventory and Invoicing.
Is there online booking for clients?	No. Appointments are booked by the practice in the diary. There is no client portal or website booking.
Does it send SMS reminders?	It sends email reminders through the vaccination job. SMS is not built in.
Does it take medicines out of stock?	Yes, when the clinic has a dispensary location: dispensing posts a stock move for each storable medicine.
Farm animals?	Yes: herd or flock reference, food-producing species, withdrawal periods and the Under Withdrawal filter.
Several clinics?	Yes. Each clinic has its own rooms, team, code and journal; records are kept per company by record rules.
Does it connect to a lab or an insurer?	No. Lab results and claims are recorded by hand.

PART 16

Menu map

Clinical

Consultations	Diary, SOAP notes, vitals, charges, invoice
Patients	The animal, the owner, alerts, history
Prescriptions	Dispense from stock, controlled, withdrawal
Lab Requests	In-house or sent out, to the result

Preventive Care

Vaccinations	Due, given, skipped, with batch
Overdue	Due doses past their date
Weights	Weight history and the growth chart

Boarding

Stays	Boarding, day care, hospital
Grooming	Grooming sessions
Kennels	Sizes, species, state

Billing

Insurance Claims	Claimed, excess, settled, shortfall

Reporting

Practice Revenue	Invoiced consultations by vet and month
Controlled Drug Register	Dispensed prescriptions with controlled drugs

Configuration

Settings	Reminder window, appointment length
Clinics	Code, licence, journal, dispensary
Rooms	Consulting, theatre, isolation and more
Team	Vets, nurses, groomers, who may prescribe
Species and Breeds	Lifespan, food producing, watch-outs
Vaccination Protocols	Courses and boosters per species
Specialities	Tags for the team

Want this for your practice?

We set it up from your rooms and your team, load your clients and their animals, your vaccination protocols and price list, connect invoicing to your accounts and VAT, and train reception, the vets and the kennel team. The same module runs one clinic or several.

way4tech.com · info@way4tech.com
